Triangle Lake = August 15 call(s)
State = ready to go out week of Aug 29
call = using ATSDR protocol
1:00 pm w/ Sheila & Elizabeth and Scott = looking for consistency of general information w/ goals and protocol
= DOH would like environmental sampling done shortly after the biologic (urine) sampling (still want pre-/and post spray sampling)
= we'll want to do environmental sampling right after Labor Day = unless we'll do air sampling.
Exposure = air (spray & volatilization)
= soil / water
= plants are likely to be less

* Governor's rep brokered an agreement w/ land owners to change sampling plan from pre & post to pre only. All 4 state agencies, but primarily DOH, have been ... (informed? ordered? involved?)

3:00 call w/ State agencies, ATSDR, EPA

State recruitment 1.5 mile radius of 2010/2011 clearcuts
- Weyerhauser is probably the only company considering spray events and it's not clear that they'll hold off from spraying

* Noon → Aug 22 next call → over for 8/22 notes

12th floor Columbia

Aug 22 → EPA will do sampling week of Sept. 19
1-2 weeks
drinking water, other environmental media
→ DEQ is not asking EPA for the lat/long data
- Seneca
- Roseburg
major companies
Weyerhauser agreed to hold off aerial application until Sept. 1 → question is where & for how long will industry hold off on aerial spray.

→ PIOs should get together w/new talking points

* Transparent, technically credible, scientific exposure study
→ In order to make any decisions there needs to be ~~data~~ scientifically credible data.

EPA & ATSDR vs State studies – only *real* difference is the "trigger" & the air sampling.

* Share plans w/public
