1.0 INTRODUCTION

At the request of the project contacts, no site introduction is included in this report.

2.0 PROJECT TASKS AND PROCEDURES

The following tasks and procedures were used by the Contract Evidence Audit Team (CEAT-TechLaw) to perform a review of waste volumes, assist in preparation of a certified mailing, and develop the American Chemical Services Site Correspondence Tracking Database for the Environmental Protection Agency (EPA).

Task 1: Review Documents, Databases, and Database Reports

From January 7, 1994 to January 11, 1994, the CEAT reviewed copies of the project documents provided by the project contacts, and databases and database reports generated by the potentially responsible parties (PRPs) to determine the types of information contained within them.

Task 2: Conduct Project Setup Meeting

The CEAT Project Managers participated in a project setup meeting via telephone with the project contacts on January 12, 1994 to discuss the findings of the document, database, and database report reviews. In addition, the work schedule was established and work products were determined.

Task 3: Organize Documents

The documents were organized alphabetically by generator name. Section 3.0 discusses the specific procedures followed when organizing the documents.

Task 4: Convert Database

The databases created by the PRPs using Lotus 1-2-3 software and provided to the EPA were converted into the dBASE III Plus format in preparation for data review, certified mailing, and correspondence tracking. The fields in the converted database were designed not only to incorporate the Lotus 1-2-3 database provided by the project contacts, but also to reflect project information requirements. Programs were written to produce the required work products.

Task 5: Verify Database Conversion

The database conversion was verified by testing to ensure that the integrity of the data had been maintained during the conversion process.

Task 6: Conduct Data Review of Waste Volumes

The CEAT reviewed the waste volumes in the converted database to the volumes indicated on the original project documents to verify the accuracy of the data and determine a total volume count for the generators. As directed by the project contacts and approved by the National Enforcement Investigations Center (NEIC), waste volumes for one of every ten generators for the 1980-1990 time frame and one of every 20 generators for the 1955-1979 time frame were reviewed. Section 4.0 discusses the specific procedures followed in the data review.

Task 7: Extract and Enter Data Review Information

The total volume count from the data review was extracted from documentation provided by the project contacts and entered directly into the converted database.

Task 8: Conduct Inspection of Data Review

Standard CEAT inspection procedures were used to ensure the accuracy, completeness, and consistency of the data obtained during the data review. Information in the database was compared to information on copies of original project documents to verify accuracy, completeness, consistency of extraction and data entry conducted during data review. Errors discovered during the inspection process were corrected by the individual performing the inspection.

Task 9: Develop Mailing List

The CEAT developed a mailing list (see Appendix A) which used existing mailing lists developed by the PRPs, addresses provided by the project contacts, addresses obtained from Resource Conservation and Recovery Act (RCRA) manifests, and library research of corporate addresses. All addresses were added to the database for generation of the mailing labels. A comments field was added to the database to track additional comments about the PRPs. A report that listed the PRP name and added comments was generated for the project contacts (see Appendix B).

Task 10: Conduct Inspection of Mailing List

A standard CEAT inspection procedure was used to ensure the accuracy, completeness, and consistency of the mailing list. Addresses obtained from the project documents were compared to the documents; errors discovered during the inspection process were corrected by the individual performing the inspection. Database searches were performed to ensure an address for each generator was located. For those generator records that did not list an address, a library search of the Directory of Corporate Affiliations, American Business diskettes, and the Dun & Bradstreet Locator was conducted. Addresses located were entered into the database.

Task 11: Prepare Mailing

The CEAT prepared documentation for mailing to approximately 1,900 PRPs. The mailing consisted of a letter and Administrative Order provided by the project contacts and a data review report sorted alphabetically by generator developed by the CEAT. Each generator in the mailing was assigned a postal certified return receipt number to facilitate tracking of the mailing (see Appendix C).

Task 12: Extract and Enter Correspondence Tracking Information

Information from PRP responses to the mailing was extracted and entered directly into the database using project-specific input screens. Information was entered into the correspondence tracking database using the following fields:

Letter Type - For the purpose of this mailing, the letter type *administrative order* was entered into this field.

Certified Return Receipt Number - The unique number assigned each PRP was entered into this field.

Date Sent - The date the mailing was sent was entered into this field.

Date Received - The date the PRP received the mailing was entered into this field. This information was obtained from the return receipt cards. A report indicating the PRP name and date received was generated for the project contacts (see Appendix D).

Estimated Date - An estimated date the PRP received the mailing was entered into this field. This field was used for those PRPs whose return receipt card was signed, but no date was indicated.

Date Due - The due date for a response from the PRP to the EPA was entered into this field.

Extension Date - The extension date the PRP was granted regarding reply to the EPA was entered into this field.

Response Date - The date the PRPs responded to the letter was entered into this field.

Reason for Return - If the mailing was returned, the reason was entered into this field. A report indicating the PRP name and reason was generated for the project contacts (see Appendix E). An appropriate match file was developed for coding repetitive reasons returned.

Task 13: Conduct Correspondence Tracking Data Inspections

Standard CEAT inspection procedures were used to ensure the accuracy, completeness, and consistency of the data entered into the correspondence tracking database. Information in the database was compared to information on PRP response documents to verify accuracy, completeness, and consistency of extraction and data entry processes. Errors discovered during the inspection process were corrected by the individual performing the inspection.

Task 14: Prepare and Deliver Final Work Products

The final American Chemical Services Site Project Procedures Report was prepared. Bound copies of the report were provided to the project contacts for review and approval. The CEAT retained the unbound original report.

The following work products were provided to the project contacts:

- Progress reports for monitoring progress of the work effort (also provided to the NEIC).
- Copies of the project documents.
- American Chemical Services Site Mailing List (one paper copy and one data file on diskette). (see Appendix A).
- One copy of the 1955-1990 Gross Incinerated/Reclaimed Pounds Report, sorted alphabetically by generator (see Appendix F) and providing the following information:

  - Rank
  - Generator
  - 1955-1990 Total Pounds
  - 1955-1975 Pounds
  - 1976-November 10, 1980 Pounds
  - November 11, 1980-1990 Pounds

  The information in the report was obtained from the database and the four pounds columns represent the total gross incinerated/reclaimed pounds each generator contributed to the site.
- Two copies of the 1955-1990 Total *Reduced* Pounds Reports, one sorted by volume of waste (see Appendix G) and one sorted alphabetically (see Appendix H). The alphabetical report is the report included in the mailing. Both copies of the report provide the following information:

  - Rank
  - Generator
  - 1955-1990 Total Pounds
  - 1955-1975 Total
  - 1976-November 10, 1980 Pounds
  - November 11, 1980-1990 Pounds
  - Percent Ranking
  - Final Payment Due

  The information in the reports was obtained from the database and the formulas for calculating the total reduced pounds and the final payment due were obtained from the project contacts.
- Two copies of the 1955-1990 Total *Reduced* Pounds Reports, one sorted by volume of waste (see Appendix I) and one sorted alphabetically (see Appendix J). These reports include the same information as those reports provided in Appendices G and H, except they include an actual cost column and are marked "Attorney Work Products - Do Not Release." The difference between the actual cost column and the final payment due column is that the final payment due column indicates a default amount of $500 for all generators that received an actual cost allocation of $500 or less.

  The information in the reports was obtained from the database and the formulas for calculating the total reduced pounds and the final payment due were obtained from the project contacts.
- One copy of the Certified Return Receipt Numbers Report indicating the certified return receipt mail number assigned to each PRP in the mailing list (see Appendix C).

- One copy of the Letter Return Reason Report indicating the name of the generator, percentage allocation, final payment due, and the reason the mailing was returned to sender (see Appendix E).
- One copy of the Comments Field Report indicating the comments entered into the database and the Generator name. Only those PRPs which comments were added to the database appear in this report (see Appendix B).
- One copy of the Date Mailing Received Report indicating the Generator name and the date they received the certified mailing (see Appendix D).

These work products were treated as attorney work products, and the CEAT's standard operating procedures for security and document control were followed.

3.0 DOCUMENT ORGANIZATION PROCEDURES

The following procedures were used during document organization. All guidelines were developed in consultation with the project contacts. The following organization procedures apply only to the organization of the manifests. No other project documents were organized by the CEAT.

The manifests were organized alphabetically based on generator name. The generator name was that indicated in the "Generator Name" space of the manifest.

- If the generator name appeared to be an individual, alphabetizing was performed by the first name of the individual. For example, *Frank J. Curran* was alphabetized under "F."

- If the generator name was a company, alphabetizing was performed by the first name of the company. For example, *General Electric* was alphabetized under "G." Cities were alphabetized by the first word as written. For example, *City of Naperville* was alphabetized under "C."

Duplicate manifests were handled in the following manner:

- If a manifest was an exact duplicate of another, one was placed in the generator file and the other was placed in a file folder labeled "duplicates."

- If a manifest was not an *exact* duplicate of another, the documents were stapled together and filed in the generator file.

If the manifest was illegible, the CEAT attempted to determine the generator name based on the following criterion:

- The manifest was compared to other manifests located in the same vicinity of the original files provided by the project contacts. If legible writing on the manifests matched, such as generator address, generator telephone number, generator (EPA) ID number, or generator signatures, the illegible manifest was filed under the matching generator name. If no match was found, the manifest was filed in a file folder labeled "illegible."

During the organization, data review of waste volumes, and research of addresses, the CEAT determined that many generators were associated with one another but their generator names appeared in different forms on the project documents. Upon consultation with the project contacts, associated generator's manifests and data in the database were combined.

Appendix K is an alphabetical list of generators and their associated companies. This list cross-references the name which appears in the database and files with the generator with which the name was combined.

The generators were combined based on the following criteria:

- If the manifests or mailing lists referenced other generator names using the designations *DBA* (doing business as), *AKA* (also known as), *FKA* (formerly known as), *NKA* (now known as), or *Subsidiary of*, the documents were place together in one file and their associated data in the database was combined.

  Alphabetizing for generators with these designations was performed as follows:

  - If a generator name listed the designation *DBA*, *AKA*, or *NKA*, the document was filed under the name which appeared before the *DBA*, *AKA*, or *NKA* designation. For example, *Frama Corp. DBA MAACO-Chicago, IL (Pulaski)* was alphabetized under *Frama Corp.*
  - If a generator name listed the designation *FKA*, the document was filed under the most recent generator name. For example, *Henkel Corporation FKA General Mills Chemicals* was alphabetized under *Henkel Corporation.*
  - If a generator name listed the designation *Subsidiary of*, the document was filed under the generator name appearing before the *Subsidiary of* designation. For example, *Bendix Corp. Subsidiary of Allied-Signal Co.* was alphabetized under *Bendix Corp.*

- If the PRPs had previously combined generators in the original databases or mailing lists, the documents for those generators were placed together in one file and their associated data in the database was combined.

- If the PRP challenge documentation requested that specific generators be combined, the documents for those generators were placed together in one file and their associated data in the database was combined.

- If, through address research, it was determined that generators were related, the documents for those generators were placed together in one file and their associated data in the database was combined.

- If manifests referenced another generator name, or had different generator names but one or more of the generator address, generator telephone number, generator (EPA) ID number, or generator signature matched, the documents were place together in one file and their associated data in the database was combined.

  If manifests indicated the same generator name with different addresses but there was no other matching information, the generators were filed separately. For example, the files contain many generators designated as *MAACO*. These generators were filed separately and the record in the database was indicated as *MAACO* followed by the city name which appears in the generator address space on the manifest (for example, *MAACO-Chicago, IL*). If the city name was also the same, they were filed by the street name (for example, *MAACO-Chicago, IL [Broadway]*).

4.0 DATA REVIEW OF WASTE VOLUMES PROCEDURES

The following procedures were used during the data review. All guidelines were developed in consultation with the project contacts. Data review involved tallying the total waste volume a generator contributed to the American Chemical Services site. Project documents were reviewed to locate each document that indicated a generator contributed waste to the site. Unique documentation was used for different time frames of the American Chemical Services Site operations. The following is a description of the data review for each time frame.

1980-1990

- Copies of RCRA manifests were used as source documents.
- Waste volumes were reviewed for one in 10 generators that were picked randomly, and for specific generators as directed by the project contacts.[1]
- Only volumes for waste sent to the site were included in the review. Purchase of recycled material was not.
- Because most manifests listed waste volumes in gallons, the tallying of the total waste volume for each generator was performed in gallons. Volumes listed on the manifests in pounds were converted to gallons using the eight-pound/gallon default calculation. Pounds were used for tallying waste totals only when directed by the project contacts.

  Volumes listed as TT (tank truck) were converted to gallons using a 5,000-gallon/tank truck default calculation.

  Volumes listed in drums were converted to gallons using a 55-gallon/drum default calculation.

November 1972-December 1979

- Copies of the "American Chemical Services Accounts Receivable (A/R) Monthly Trial Balance" reports were used as source documentation.
- Waste volumes were reviewed for one in 20 generators that were picked randomly, and for specific generators as directed by the project contacts.[1]
- For each generator selected, the dollar amounts in the "current" column were added together to determine the total dollar amount of wastes sent to the site. The total dollar amount was then used in the following formula to convert from dollars to total volume in pounds:

(total dollar amount)/($.20/gallon)	=	X gallons
(X gallons) x (8 lbs./gallon)	=	gross volume in lbs.
(gross volume in lbs.)/.80 (80% of gross pounds)	=	total volume in lbs.

August 1955-October 1972

- The "American Chemical Services Transaction Log" was used as source documentation.
- Waste volumes were reviewed for one in 20 generators that were picked randomly, and for specific generators as directed by the project contacts.[1]

[1]As per the project contacts' request, the CEAT performed a data review of specific generators in addition to the initial data review task. This review was performed using the same guidelines as the initial review. A volumetric challenge report was developed and provided to the project contacts indicating the results of this review (see Appendix L).

- The formulas used in calculating the volume in total pounds were acquired from the Thompson, Hine & Flory letter dated December 22, 1993 and the Clean Sites Inc. letter dated January 5, 1987 (see Appendices M and N).

When tallied, the total volumes for each generator selected were entered into the database.

5.0 DOCUMENT SECURITY

Through the duration of the project, the documents were maintained in a secure facility, and access to the documents was limited to authorized personnel. Each member of the CEAT works under a contract-wide confidentiality agreement which prohibits the dispersal of project-specific information to unauthorized personnel.

All reports were marked with the phrase "Privileged - Prepared for Litigation," and were shipped to the project contacts by common carrier using appropriate chain-of-custody procedures.

Appendix B

Comments Listing

GENERATOR: 3M COMPANY
ATTN: JACQUELINE VIDMAR

Comments

THE ADDRESS USED WAS OBTAINED FROM THE AD HOC COMMITTEE.

GENERATOR: A. GOODMAN & CO.

Comments

THE ADDRESS USED WAS OBTAINED FROM A LIBRARY SEARCH. NOTE: THE EPA SPECIAL NOTICE MAILING LIST INDICATED THE ADDRESS FOR A. GOODMAN AS 742 EAST 75TH STREET, CHICAGO, IL 60619. THIS ADDRESS WAS MARKED AS RETURN TO SENDER.

GENERATOR: A.C. ELECTRONICS

Comments

THE ADDRESS USED WAS OBTAINED FROM THE EPA SPECIAL NOTICE MAILING LIST.

GENERATOR: A.J. DAW PRINTING INK CO., AKA A.J. DAW INK CO.
ATTN: J.H. MITCHELL, JR.

Comments

THE ADDRESS USED WAS OBTAINED FROM THE AD HOC COMMITTEE.

ALL GENERATOR NAMES INDICATED APPEAR ON THE MANIFESTS.

GENERATOR: ABBOTT LABORATORIES
ATTN: LAURA J. JONAUS, OFFICE OF GENERAL COUNSEL

Comments

THE ADDRESS USED WAS OBTAINED FROM THE AD HOC COMMITTEE.

GENERATOR: ABITIBI-PRICE CORPORATION
ATTN: B.J. YOUNG

Comments

THE ADDRESS USED WAS OBTAINED FROM THE AD HOC COMMITTEE.

GENERATOR: ABRADING SYSTEMS COMPANY

Comments

THE ADDRESS USED IN THE EPA SPECIAL NOTICE MAILING (2340 WEST WABANSIA, CHICAGO, IL 60647) WAS INDICATED AS RETURN TO SENDER - UNDELIVERABLE AS ADDRESSED. THE CEAT CANNOT LOCATE ANOTHER ADDRESS. LIBRARY SEARCHES HAVE BEEN COMPLETED IN THE AMERICAN BUSINESS DISC AND THE DIRECTORY OF CORPORATE AFFILIATIONS.

GENERATOR: ACCURATE SILK SCREEN SERVICE,
AKA SOODIK PRINTING

Comments

THESE TOTALS INCLUDE SOODIK PRINTING VOLUMES WHICH HAD BEEN ENTERED AS A SEPARATE RECORD IN THE DATABASE PROVIDED BY THF.

GENERATOR: ACID PRODUCTS COMPANY
FISHER CALD

Comments

THE ADDRESS USED WAS OBTAINED FROM THE EPA SPECIAL NOTICE MAILING LIST.

GENERATOR: ACME DIVISION OF GULF AND WESTERN

Comments

7/25/94 (ER) ENVELOPE RETURNED TO SENDER WITH NOTE: MOVED OVER 8 YEARS.

GENERATOR: ACME SOLVENT RECLAIMING, INC.

Comments

THERE WERE TWO RECORDS IN THE DATABASE, PROVIDED BY THF, FOR ACME SOLVENT RECLAIMING, INC. THESE TWO RECORDS WERE COMBINED.

GENERATOR: ACME WELDING SUPPLY, INC.

Comments

THE ADDRESS USED WAS OBTAINED FROM THE EPA SPECIAL NOTICE MAILING LIST.

GENERATOR: ADHERON COATINGS CORPORATION
ATTN: ALBERT W. LINSCHOTEN

Comments

THE ADDRESS USED WAS OBTAINED FROM THE AD HOC COMMITTEE.

ADHERON COATINGS CORPORATION CHALLENGED THE CLEAN SITES REPORT FOR ENTRIES ON 5/31/74, 6/28/74, AND 8/2/74 STATING THAT THE ENTRIES ON 6/28/74 AND 8/2/74 ARE DUPLICATIVE OF THE 5/31/74 ENTRY. THE TOTAL AMOUNT FOR THIS TIME PERIOD SHOULD BE REDUCED FROM 29312 POUNDS TO 12575 POUNDS.

ANOTHER CHALLENGE WAS SUBMITTED AND ACCEPTED BY THE COMMITTEE. THE CEAT CHANGED THE VOLUMES FOR 1976-1979 TO 400776 POUNDS AND 1980-1990 VOLUMES TO 1717000 POUNDS BASED ON DOCUMENTS PROVIDED BY ADHERON.

8/24/96 (ER) - POST MAILING CHALLENGE - CREATED SPREADSHEET FOR CALCULATION OF VOLUME AND PAYMENT DUE. CEAT REVIEW: 83,570.66 TOTAL REDUCED LBS., $314,339.32.

GENERATOR: ADVANCE PROCESS,
AKA AMERICAN SCREEN & EXCELLO COLOR

Comments

* ANV - These generators appear not viable and unable to participate in an American Chemical Services Site settlement. They have sent waste to the site but have not been assigned a percent ranking because their volumes are not included in the total site volume. If these parties are later found to be viable, they may request a settlement with EPA.

** BS - This party partitioned for bankruptcy and pursuant to its bankruptcy settlement with EPA it has resolved its liability at the ACS Site. The total past costs at the site have been reduced by the amount paid by this company.

CEA-2-00541

* - This amount only appears for EPA information and is not included in the actual cost total. If this PRP were included in the total site settlement, this would be their share.

* ANV - These generators appear not viable and unable to participate in an American Chemical Services Site settlement. They have sent waste to the site but have not been assigned a percent ranking because their volumes are not included in the total site volume. If these parties are later found to be viable, they may request a settlement with EPA.

** BS - This party partitioned for bankruptcy and pursuant to its bankruptcy settlement with EPA it has resolved its liability at the ACS Site. The total past costs at the site have been reduced by the amount paid by this company.

Appendix J

1955-1990 Total *Reduced* Pounds
Sorted Alphabetically
(with actual cost)

* - This amount only appears for EPA information and is not included in the actual cost total. If this PRP were included in the total site settlement, this would be their share.

* ANV - These generators appear not viable and unable to participate in an American Chemical Services Site settlement. They have sent waste to the site but have not been assigned a percent ranking because their volumes are not included in the total site volume. If these parties are later found to be viable, they may request a settlement with EPA.

** BS - This party partitioned for bankruptcy and pursuant to its bankruptcy settlement with EPA it has resolved its liability at the ACS Site. The total past costs at the site have been reduced by the amount paid by this company.

Appendix K

List of Generators and Their Associated Companies

CEA-2-00604

LIST OF GENERATORS AND THEIR ASSOCIATED COMPANIES

In consultation with the project contacts, the CEAT determined that many generators were associated with one another, but that their names appeared in different forms on the project documents, in the PRPs' database, on acquired mailing lists, and through research materials. This list may be used to identify a generator and where information regarding that generator may be found in the database and in the project files. The list also cross-references a generator with associated generators, and identifies instances where the files and database records were combined.

- The name which appears before the designations *AKA*, *DBA*, *FKA*, or *NKA* is the name under which the documents are filed and that appears in the database. For example, if the list indicates *A. J. Daw Printing Ink Co. AKA A.J. Daw Ink Co.*, the waste volumes for these generators were combined in the database and the documents are filed under *A.J. Daw Printing Ink Co.*

- If a generator name is followed by the designation *SEE*, the waste volumes in the database and documents can be found under the name listed after the designation *SEE*. For example, if the list indicates *A.J. Daw Ink Co. SEE A.J. Daw Printing Ink Co.*, the volumes were combined in the database and the documents were placed under *A.J. Daw Printing Ink Co.*

- An asterisk (*) denotes a generator record from the database that was combined by the CEAT with another generator record. The generator record marked with the asterisk was then deleted from the database. For example, the entry *Accurate Silk Screen Service AKA Soodik Printing**, *Soodik Printing* had a record in the database and, based on the criteria for combining generator records, the waste volumes for *Soodik Printing* were combined with *Accurate Silk Screen Service*. Because the *Soodik Printing* record was combined with *Accurate Silk Screen Service*, the *Soodik Printing* record was deleted from the database to ensure no duplication of the data occurred.

Attention: Steven M. Siegel

Re: American Chemical Services Site

Dear Mr. Siegel:

As you are aware, the undersigned counsel comprise the Steering Committee of an Ad Hoc group[1] of approximately 150 de minimis PRPs (the "Group"; a list of members is included as Attachment A[2]) at the American Chemical Services Site in Griffith, Indiana (the "ACS Site"). Although de minimis discussions have been ongoing for many months, the Group more formally organized following the dissolution of an earlier PRP group comprised of both major and de minimis PRPs (the "RD/RA Organizational Group"), and is made up of both former members and non-members of the RD/RA Organizational Group.

Over the course of the past few months, the Group has been working together to develop an independent de minimis settlement proposal for consideration by EPA. At our November 3, 1993 meeting, the Steering Committee laid out the parameters of the

---

[1] The Steering Committee does not represent the Group. Rather, each Committee member represents a single or several specific Group members. The Steering Committee serves only to facilitate and assist Group activities.

[2] It is anticipated that additional de minimis PRPs will join the Group. Accordingly, Attachment A may be amended.

Group's de minimis proposal. The purpose of this correspondence is to provide a detailed proposal, including a waste profile for the Site, for a de minimis settlement at the ACS Site. The following is a brief history of the Group's joint effort, a description of the reduced waste-to-the-site calculation which forms the basis of the waste profile which was developed, the waste profile itself and, the other details of the Group's proposal.

The Steering Committee wishes to make clear at the outset, **this proposal is made for purposes of settlement discussion only. Nothing in this proposal should be construed as an admission of liability on the part of any PRP identified in Attachment A, nor a commitment to execute a settlement agreement unless that individual Group member determines that an ultimate settlement is acceptable. In addition, the waste profile developed by the Group was developed solely from publicly available information, and the Group does not seek confidential status for this proposal.** In short, in response to the EPA request for de minimis proposals, the Group offers the following, detailed proposal for consideration.

The enclosed waste profile spreadsheets identify companies alphabetically and by rank. Each spreadsheet is divided into two parts, the first part listing generators having both pre- and post-1980 transactions, and the second part listing generators with post-1980-only transactions. The Steering Committee has not yet shared the second part with the post-1980-only generators. A computer disk containing the data supporting the spreadsheets in Lotus 3.1 format also is enclosed. Nothing in this information may be construed as an admission of liability of any Group member as it is being provided for settlement purposes only. Confidential status is not requested for either the spreadsheets, data, or computer disk.

Background

Through a joint effort, the Ad Hoc Steering Committee has developed an independent waste profile. Only information in the public domain has been utilized in the profile. The pre-1980 Generators have been notified by EPA of their potential liability. Generators are identified in the Clean Sites reports, ACS transaction logs, ACS accounts receivable ledgers, and manifests. The pre-1975 gross waste volumes are contained in the Clean Sites

reports and ACS transaction logs. The post-1975 waste volumes are derived from the ACS accounts receivable ledger, converted to gallons utilizing a .20 per gallon conversion factor and then to pounds utilizing an 8 pounds per gallon conversion factor. The post-1980 waste streams are taken from the manifests which contain gross gallons, which are converted to pounds utilizing an 8 pounds per gallon conversion factor.

The gross waste-to-site volumes were adjusted for several de minimis PRPs from information provided by those PRPs in the independent Ad Hoc challenge rounds.

With the approval of the Ad Hoc Steering Committee, the gross waste-in volumes were reduced in the Group's waste profile by varying factors, depending upon the year involved (see discussion below for detailed description of reduced-waste calculations).

As approved by the Steering Committee, all pre-1975 waste volumes were reduced by 90% for incinerated waste and 80% for reclaimed waste. The 1975 - 1980 waste volumes were reduced by 96.25%. The post-1980 waste volumes were reduced by 99.75%. The total reduced waste volume for all periods for each generator was then calculated and the combined percentage share of all waste to the site was calculated. **This formula is unique to the Ad Hoc Group, and has the consensus approval of the Ad Hoc Group as a whole.**

After calculation of the final combined percentage, each generator's share under the Group's proposal was calculated. A pro rata share of the RI/FS costs were calculated, and a full credit was provided for RI/FS costs previously paid, when known. Information concerning payments made for the RI/FS may be incomplete; there may be additional adjustments to this portion of the profile.

REDUCED WASTE-TO-THE-SITE CALCULATION

As discussed in general terms above, the key component of the Group's proposal is the calculation of the reduced waste-to-the-site volumes for individual PRPs. The following is a detailed description of the reduced waste-to-the-site calculations adopted by the Group.

Operations at the ACS site changed considerably over time, with management practices generally improving. As a result, the Group determined that, in general, waste sent to the site during early years of operation should be weighted more heavily than waste sent during later years. The reduced waste-to-the-site calculation is the mechanism by which the principle is incorporated into the allocation. Accordingly, each shipment of waste is reduced according to the time period in which it was received at the site.

Thus, for purposes of determining how much waste was sent to the site in total, one hundred pounds sent in, for example, 1959 "counts" as much as one hundred pounds sent in 1972. However, for purposes of calculating the relative amount each shipment contributed to contamination at the site (the "waste-in"), the 1959 shipment is reduced less than the 1972 shipment. As a result, the 1959 shipment accounts for a greater amount of "waste-in" than does the 1972 shipment. Similarly, each PRP's final waste-in allocation is a function of the total amount of waste it sent to the site, reduced according to the time period in which it sent each shipment to the site. Thus, in general terms, the final waste-in allocations of two PRPs that sent equal amounts of waste to the site may differ significantly where one PRP's involvement came early in ACS's history and the other's involvement came later.

The Group believes that the use of this approach is consistent with OSWER Directive #9834.7-1D in that it combines available volumetric records information with reasonable estimates of the volume of waste present at the site. The result reflects the Group's understanding of the waste present at the site, although the final calculations are not intended to be precise. The paragraphs below describe the rationale for the reductions applied in each time period.

1. 1955-1975.

Waste sent to the site during this period was either reclaimed or incinerated.[3] For purposes of calculating waste-in to the site, waste which was reclaimed has been reduced 80%, while waste that was incinerated has been reduced 90%. Consequently, the total volume of waste included in the database from this period is 20% of all reclaimed waste and 10% of all incinerated waste.

The 20% figure for reclaimed waste is based upon the report prepared by Clean Sites, Inc. ("CSI"), dated 1-9-87, entitled "American Chemical Services--Material Sent by Companies" ("CSI By Companies Report").[4] That report depicts, for most companies, a calculation for "residue" from solvent recovery of "0.20", i.e., 20% of each shipment of waste to American Chemical Services, Inc. ("ACS"). CSI has explained that the determination of the percentage amount of residue from solvent recovery was made by CSI following its conferences with the former management of ACS, including past presidents George Murphy and James Tarpo, and John Murphy, a member of the firm with knowledge of past manufacturing

---

[3] While Clean Sites, Inc. (see references to Clean Sites, Inc. infra) indicated in its §104(e) responses that there was some waste which was landfilled directly by ACS, without being subject to reclamation or incineration, the Group concluded that such amounts were not subject to corroboration, were not consistently calculated, and were, thus, not easily factored into any uniform allocation profile.

[4] The documentary evidence upon which the CSI By Companies Report's conclusions were based was an American Chemical Services, Inc. ("ACS") transaction log covering the period from 9/15/55 through 10/31/72 and an "Accounts Receivable Trial Balance Ledger" covering the period from 12/31/72 through 12/31/75. CSI modified that information for purposes of calculating gross pounds-in to the ACS site, because the transaction log referenced the volume only of reclaimed solvent, not total waste volume prior to reclamation. (Memorandum dated 1/5/87 from Hazel R. Hoffman, Clean Sites, Inc. to Potentially Responsible Parties of American Chemical Service [sic] (ACS) Superfund Site ("CSI Hoffman Report"), unnumbered pages 1 and 3 of the attachment entitled "American Chemical Services ("ACS") Generation of the Data Base".)

practices and customers.[5] While CSI's calculations of residue from solvent recovery for a few of the PRPs differed from 20%, apparently all calculations were in a range of 0 to 30%, with the vast majority being at 20%. Accordingly, the Group has determined, after consideration of this information, that in calculating the amount of waste to be included in the database for this period, the calculation would entail reducing the total amount of reclaimed waste-in, and, hence, the total amount of reclaimed waste sent to the site by each PRP, by a factor of 80%.

The 90% reduction for waste that was incinerated is derived with reference to the reduction factor assigned to waste that was reclaimed. The Group concluded that a 90% reduction was reasonable, after evaluating the amount of contamination that was likely to result from the incineration process relative to the contamination which was likely to result from the reclamation process. Accounting for spillage and leakage and for the continued on-site operation of Kapica Drum Co.'s drum reconditioning operation during this period[6], the Group concluded that contamination resulting from incineration was roughly half that which resulted from the reclamation. Thus, whereas waste that was reclaimed is reduced 80% (i.e., 20% of the waste is considered waste-in), waste that was incinerated is reduced 90% (i.e., 10% of the waste is considered waste-in).

After determining the relative reductions for reclaimed and incinerated waste, the Group had to derive some means of determining the portion of waste from any given shipment to the site that was reclaimed and the portion that was incinerated. That determination was made referencing the third unnumbered page of the ACS Generation of the Data Base attachment to the CSI Hoffman Report, under the subheading "Incineration History".[7] The percentages are based on an analysis of ACS operations which

---

[5] CSI Hoffman Report, unnumbered page 1 of ACS Generation of the Data Base attachment.

[6] ACS's answers dated 1/18/85 to the CERCLA § 104(e) request of USEPA ("ACS Answers"), No. 29.

[7] Corroborating information regarding the timing of incineration operations is set forth in ACS Answers, No. 15.

considered, for example, the number and efficiency of incinerators in operation during particular time periods. CSI indicates the annual percentages of total waste-in which were subject to incineration as follows:

- 1955 through 5/31/66: 0%
- 6/1/66 through 12/31/67: 50%
- 1/1/68 through 12/31/68: 65%
- 1/1/69 through 12/31/69: 75%
- 1/1/70 through 12/31/70: 90%
- 1/1/71 through 12/31/71: 95%
- 1/1/72 through 12/31/75: 100%

As noted above, the waste which was not incinerated was subject to reclamation. Thus, the percentage of total waste-in subject to reclamation are:

- 1955 through 5/31/66: 100%
- 6/1/66 through 12/31/67: 50%
- 1/1/68 through 12/31/68: 35%
- 1/1/69 through 12/31/69: 25%
- 1/1/70 through 12/31/70: 10%
- 1/1/71 through 12/31/71: 5%
- 1/1/72 through 12/31/75: 0%

Applying these percentages to each transaction during each applicable period, figures for total reclamation pounds-in and total incineration pounds-in were calculated.

2. 1976-1980.

During this period apparently no landfilling of waste and no residue was disposed of at the site[8]. Moreover, in 1978, Kapica Drum Co.'s operation began disposing its wastes in ACS's sludge box for off-site disposal.[9] Records for this period consist of accounts receivable ledgers for the period until November 11, 1980.

---

[8] ACS Answers, No. 8; Miscellaneous CSI Handwritten Notes ("CSI Notes"), Bates No. 88.

[9] ACS Answers, No. 29.

Information from the accounts receivable reports was converted from dollars to pounds using the formula set forth in the CSI Hoffman Report, i.e., a value of $.20/gallon was used as an average disposal charge, and 8 pounds/gallon was used as the default density.[10] The data from the manifests was converted using the 8 pounds/gallon formula. The Group arrived at a consensus waste reduction figure for this period of 96.25%. Again, this figure was reached with reference to the 80% discount applied to all waste-in, and reduced further given the changed circumstances at the site.

3. 1980-1990.

During this period there was apparently no landfilling of waste and no residue was disposed of at the site.[11] In addition, ACS was a RCRA permitted facility during this period, beginning November 11, 1980. Information for this period was obtained from RCRA manifests. Given the increased government supervision represented by RCRA and the cleaner operation run by ACS during this period, the Group arrived at a consensus waste reduction figure for this period of 99.75%.

4. Conclusion

The effect of using the above rationales to derive final waste-in allocations is summarized in the following chart, which illustrates how a shipment totaling ten pounds would be reduced depending upon the period in which it was received at the site.

---

[10] CSI Hoffman Report, unnumbered page 3 of ACS Generation of Data Base attachment; CSI Notes, Bates No. 2.

[11] ACS Answers, No. 8; CSI Notes, Bates No. 88.

Period	Treatment	Waste-In (Pounds)
1955 through 5/31/66	100% Reclaimed (10 pounds reduced 80%)	2.00
6/1/66 through 12/31/67	50% Reclaimed (5 pounds reduced 80%) 50% Incinerated (5 pounds reduced 90%)	1.50
1/1/68 through 12/31/68	35% Reclaimed (3.5 pounds reduced 80%) 65% Incinerated (6.5 pounds reduced 90%)	1.35
1/1/69 through 12/31/69	25% Reclaimed (2.5 pounds reduced 80%) 75% Incinerated (7.5 pounds reduced 90%)	1.25
1/1/70 through 12/31/70	10% Reclaimed (1 pound reduced 80%) 90% Incinerated (9 pounds reduced 90%)	1.10
1/1/71 through 12/31/71	5% Reclaimed (0.5 pound reduced 80%) 95% Incinerated (9.5 pounds reduced 90%)	1.05
1/1/72 through 12/31/75	100% Incinerated (10 pounds reduced 90%)	1.0
1975 through 1980	10 pounds reduced 96.25%	0.375
1980 through 1990	10 pounds reduced 99.75%	0.025

Other Settlement Parameters

The Group proposes that the baseline remedy cost should be $46,800,000; settling de minimis PRPs pay a premium of 2.0 times the PRP's allocation share, as reflected in the waste profile which accompanies this proposal; that there should be no re-openers except statutory re-openers; and, the Group suggests that the de minimis cutoff should be at 0.6% share of waste-to-the-Site, leaving twenty-five (25) PRPs at the Site which would not be de minimis. Those twenty-five (25) PRPs represent approximately sixty-five percent (65%) of the volume at the Site.

The following is a more detailed description of each of these parameters.

Volumetric Cutoff For De Minimis Settlement - The Group proposes a volumetric cutoff for de minimis participation of 0.6% of reduced waste-to-the-site. Establishing the cutoff at 0.6% will reduce the number of non-de minimis PRPs at the Site to a total of approximately twenty-five (25) companies; the majority of which we believe to be financially viable. The de minimis cutoff is identical to the RD/RA Organizational Group determination of an appropriate de minimis cutoff for participation in conducting and funding the Remedial Investigation/Feasibility Study.

Estimated Response Costs To Be Incurred - EPA has estimated a range of response costs at the Site of between $39,800,000 and $46,800,000. Pursuant to OSWER Directive 9834.7-1D, when a range of response costs are estimated, a de minimis settlement should be based upon the high end of the range, or $46,800,000. Accordingly, the Group estimates the response costs to be incurred to be approximately $46,800,000.

Settlement Premium Multiplier - The Group proposes a 2.0X premium multiplier with covenants not to sue and contribution protection, with no re-opener for remedy changes. The 2.0X multiplier is appropriate, taking into account any expected orphan shares, and since there are site-specific factors which mitigate in favor of this premium multiplier as set forth above in the

discussion of the reduced waste-in calculation. This is consistent with OSWER Directive 9834.7-1D, which suggests a range of premium multipliers from 1.5X with re-openers to 2.0X with no re-openers. Since the Group proposes no re-openers, we suggest the 2.0X multiplier. In addition to the factors considered pursuant to OSWER Directive 9834.7-1D, the 2.0X multiplier is appropriate when other sources of funds are considered. The Group understands that the major PRPs have reached a settlement with American Chemical Service, Inc. ("ACS") with regard to insurance proceeds paid to ACS. The Group believes that these sources of funds should amount to approximately 10% of the remedy cost at the Site or, a multi-million dollar pool of funds available for remedy costs. In addition, neither ownership nor transporter liabilities are considered under the OSWER directive. When these factors are considered, the 2.0X premium multiplier is appropriate.

Response Cost Calculation - Among the settling de minimis parties, the Group proposes that response costs be calculated by multiplying a PRP's percentage share of the remedy cost by the estimated total response cost for the Site, then charging a settlement premium as set forth in the discussion of the premium multiplier, above. Further, since many members of the Group were also members of the RD/RA Organizational Group which prepared an RI/FS, several members of the Group have incurred costs for the RI/FS. The cost of the RI/FS was approximately $3 million. Accordingly, the waste profile includes a credit to certain Group members for the pro rata share of RI/FS costs which were incurred.[12]

Minimum Payment - The Group believes that an appropriate minimum payment for de minimis PRPs at the Site is $2,500.00. The minimum payment takes into account the administrative and other transaction costs that settling de minimis PRPs will avoid through settlement.

---

[12] This information is incomplete. It is believed that additional Group members will be entitled to the credit for RI/FS costs.

Release From Liability - As noted above, the Group proposes that a de minimis settlement will include covenants not to sue and contribution protection for settling parties, and a settling premium which provides for no re-opener (except for statutory re-openers), for remedy changes.

The de minimis PRPs believe that this proposal meets the criteria set forth in OSWER Directive 9834.7-1D, as well as including all of the elements set forth in your September 27, 1993 letter to Mr. Perellis, and October 7, 1993 letter to certain de minimis PRPs. We believe that this proposal will form a framework for a settlement acceptable to the de minimis PRPs identified in this letter.

As is noted above, this settlement proposal is the result of literally hundreds of hours of effort aimed at developing a waste profile and allocation model that is responsive to the request of EPA for a comprehensive de minimis proposal for the ACS Site. The Group stands ready to work with EPA to implement an equitable de minimis settlement at the ACS Site, and believes that this proposal meets all of the requirements of law and EPA guidance, while at the same time insuring the health and safety of the public and the environment. Due to the comprehensive nature of the waste profile, we desire to meet with you to explain in further detail its basis, and answer any questions which you might have. The Group appreciates the opportunity to present a workable, equitable de minimis settlement proposal for consideration.

Respectfully submitted,

Clean Sites Inc. Letter Dated January 5, 1987

CLEAN SITES INC

1199 NORTH FAIRFAX STREET / ALEXANDRIA VIRGINIA 22314 / 703-683-8527

RECEIVED 1-8-87

MEMORANDUM

TO: Potentially Responsible Parties at American Chemical Service (ACS) Superfund Site

FROM: Hazel R. Hoffman, Clean Sites, Inc.

DATE: January 5, 1987

SUBJECT: Company-related Data

As you may be aware, Clean Sites, Inc. (CSI) was asked to utilize the data available from the owner/operator of the site and to put that data into a form which could be the basis for an allocation by the ad hoc steering committee.

In carrying out this task CSI was fortunate to receive a Transaction Log and certain accounting records -- which collectively covered the years 1955-1975. Such documentary information is better evidence than often can be found at Superfund sites which date back as far as ACS does. However, this source information was not usable for allocation purposes in the forms which CSI received. The accounting information, for instance, was in the form of monthly summaries of business with ACS's customers; and the Transaction Log recorded the recovery operation in terms of the amount of recovered solvent -- an "after the operation" volume number -- not the gross amount of material received at the plant. Therefore, it has been necessary to use the avaiable information as starting points, rather than as definitive indications of either waste-in to ACS or waste disposited at the Superfund landfill.

The attached explanation, titled "Generation of the Data Base", gives details about the procedures which CSI followed in attempting to make the following definitive determinations: How much of each type of material received from a customer for recovery or reprocessing or any other purpose, found its way to the Superfund landfill?

Generally, material which was sent to the landfill got there in one of the following ways:

(1) it was landfilled directly upon receipt at the site (usually solids or other unrecoverables)

(2) it was a residue from the recovery operation that went to the landfill after the recovery process

(3) it was ash from materials which were incinerated either directly upon receipt at ACS or as residues from the recovery operation.

CHAIRMAN OF THE BOARD/Russell E. Train PRESIDENT/Charles W. Powers BOARD OF DIRECTORS/Peter A.A. Berle, Douglas M. Costle, Louis Fernandez, Sandra S. Gardebring, Edwin A. Gee, Jay D. Hair, Donald Kennedy, Joshua Lederberg, H. Eugene McBrayer, Charles W. Powers, William K. Reilly, Henry B. Schacht

CLEAN SITES INC

1199 NORTH FAIRFAX STREET / ALEXANDRIA VIRGINIA 22314 / 703-683-8522

The attached "Summary Report" is a listing of each company whose material found its way to the landfill, and the number of pounds of its material which went to the landfill in any of the above three ways --directly, as residue, or as ash [see columns (2), (4) and (7)]. Column (9) shows each company's total material landfilled, in accordance with the protocols which had been established and which are explained in "Generation of the Database". The "Summary Report" also shows appropriate percentages.

The report entitled "Material Sent By Companies" is a complete, chronological, transaction by transaction printout of each individual company's waste-related business with ACS over the twenty year period. It is sorted by type of material (Item Description). The reason for such approach is uniformity of treatment of each such material. For example, transactions relative to a certain type of material generally contained a similar percentage of solids or other unrecoverables which were landfilled directly. Hence, that percentage has been applied to all items of similar description which appeared in the records to determine volumes that were landfilled directly. The result is shown as "Lbs. Direct to LF".

Similarly, the other percentage columns represent uniform applications, specific to each company and within each different type of material, of percentages derived from the intensive interviews of the owner/operators. The "Pounds" columns reflect those applications.

The amount of residue which was incinerated has been determined by the date of the transaction. See "Generation of the Database" for an explanation of the availability of incineration services.

In utilizing these reports it should be noted that the percentages and pounds which are shown are derived numbers, and that in a few cases, where special situations existed, the entries to the database are anomalous.

CEA-2-00635

CHAIRMAN OF THE BOARD/Russell E. Train PRESIDENT/Charles W. Powers BOARD OF DIRECTORS/Peter A.A. Berle, Douglas M. Costle, Louis Fernandez, Sandra S. Gardebring, Edwin A. Gee, Jay D. Hair, Donald Kennedy, Joshua Lederberg, H. Eugene McBrayer, Charles W. Powers, William K. Reilly, Henry B. Schacht

AMERICAN CHEMICAL SERVICES
GENERATION OF THE DATA BASE

Two basic documents were used in generation of the "AMCHEM DATA BASE":

I. The Transaction Log covering the period from 9/15/55 through 10/31/72.
This document listed items charged to the customer by product name or service - such as Reclaim Solvent, Drumming Charge, Disposal Charge, Thinner, Alcohol, etc.

Significant column headings were "pounds/price" "gallons/price", "merchandise sales", "industrial service" and "industrial processing"

Both "industrial service" and "industrial processing" were used in the database. (Separation of the two items was of significance to ACS for sales tax purposes.)

II. The "Accounts Receivable Trial Balance Ledger" covering the period from 12/31/72 through 12/31/75.
This document listed "Company Name", "Customer Number", "Balance Outstanding" and "Current Month Transactions".

As discussed in more detail below, utilization of these records involved interpretation of each entry: whether it represented a sale, a recovery, a manufacture or a disposal. In addition, the disposition of the material by landfill or incineration had to be determined. Finally, various percentages had to be determined: directly landfilled, residue from solvent recovery, directly incinerated, and solvent recovery residue incinerated.

These determinations were made following conferences with past and present management of American Chemical Services, including George Murphy, the retired past president, Jim Tarpo, the present president and John Murphy, a member in the firm with knowledge of past manufacturing practices and customers. USEPA and one of their contractors, Roy F. Weston, were represented at the initial two day conference at Griffith Indiana when the "Transaction Log" was first explained.

As the work progressed, H. Hofmaier reviewed the work product with J. Tarpo and J. Murphy to insure that all interpretations of data were in keeping with the best recollections of events as they happened historically.

DATA NOT INCLUDED (NON-WASTE GENERATING)

At the initial conference in Griffith, George Murphy outlined a number of products and companies, each of which represented only manufacturing businesses which generated no landfilled waste. This was subsequently confirmed in a letter which was transmitted by Louis Rundio on July 9, 1986. A copy is attached. In addition, in the course of the several data review sessions, additional non-waste generating items surfaced - such as "drumming charges", "unloading charges", "equipment rental" and "handling charges". These were closely associated with manufacturing operations in the billing process, and generated no landfilled waste. All of these items were treated as "exceptions" and not included in the database.

DATA INCLUDED AS BEING WASTE GENERATING

All volumes and weights for items with charges in the "industrial processing" or "industrial services" categories were included unless George Murphy, Jim Tarpo, or John Murphy had specifically excluded them as non-waste generating, with plausible explanation. [For example, Tarpo and the Murphys knew that some products were manufactured only and generated no waste. Further, certain solvent recovery operations were solely removal of water from an organic (such as ethylene glycol) where the separated water was sewered, and the product cut was all returned to the customer.]

Where entries showed "disposal" rather than a product name, there frequently were no weights or volumes. A calculation was made to derive pounds from the dollar charge. A value of $.09/gallon was used as an average disposal charge; and 8 pounds/gallon was as the default density.

When working with data from the "Accounts Receivable Trial Balance Ledger", in which there were neither material descriptions nor values, it was necessary to work backwards: i.e., to utilize dollar amounts and to calculate volumes based on an average charge per gallon for the types of services that customers utilized. These services were categorized by J. Tarpo as "recovery", "disposal", or "disposal and recovery". Charges per gallon for each of these services were, respectively, $.10, $.20, and $.15. (Tarpo stated what the charges had been per gallon for "recovery" and "disposal". With respect to those customers for whom both recovery and disposal operations were conducted, and for whom there was no way to determine the actual split between the two, Hofmaier and Tarpo agreed that a reasonable approach was the somewhat arbitrary split of 50/50 and an average cost of $.15.)

ESTABLISHMENT OF PERCENTAGES FOR SOLVENT RECOVERY RESIDUES, AMOUNT LANDFILLED DIRECTLY, AND PERCENTAGE OF ASH ON INCINERATION

Following assembly of the data base and after reviewing to assure that all data included therein represented only that from waste generating operations, Jim Tarpo took a data printout and noted the following percentages based on his clear recollection of the individual customer's past business. He first estimated the amount of solid or unrecoverable material in each company's solvents received at ACS for recovery. In addition, he estimated the percentage of solvent residue remaining after completion of the distillation or other recovery process. Finally, he estimated the percentage of ash remaining after incineration. Since there were no dust collectors on these incinerators, ash collection was low, and ash came primarily from high solids content material.

INCINERATION HISTORY

The first incinerator was started in mid-1966. Its operation was initially inconsistent; on-stream time was low as experience was required to properly adjust viscosity and solids content of solvent recovery bottoms for good incinerator on-stream time.

A second incinerator was constructed, and the initial one was modified/rebuilt to provide greater reliability for incinerator operation.

Incinerator operation has been stated to be as follows:

6/1/66 through 12/31/67 - 50% of solvent recovery residue
1/1/68 through 12/31/68 - 65% of solvent recovery residue
1/1/69 through 12/31/69 - 75% of solvent recovery residue
1/1/70 through 12/31/70 - 90% of solvent recovery residue
1/1/71 through 12/31/71 - 95% of solvent recovery residue
1/1/72 through 12/31/75 - 100% of solvent recovery residue

Material accepted for disposal by incineration was always incinerated unless it had solidified or contained rubbish. In either of these cases, a percent "direct to landfill" was stated by Tarpo.

CALCULATION OF SOLIDS TO THE LANDFILL

Since the primary billing that appears in the transaction log refers to recovered solvent volume, it does not represent the actual volume received at ACS. To determine "gross pounds in", it was necessary to calculate back up to total pounds of contaminated or dirty solvent received for recovery. (This was based on Tarpo's estimate of the percent of residue after the recovery operation plus the recovered solvent, as shown in the

log.) Where there was also some portion of the shipment directly landfilled, that further gross-up was calculated from Tarpo's estimate of the percent of unrecoverable or solid material directly landfilled upon receipt.

From the gross material received, the percent landfilled directly, the percent residue after solvent recovery, the percent of solvent recovery residue incinerated (by year), and the percent ash remaining to be landfilled following incineration, the total amount landfilled for each company was calculated by category and in total.

AMERICAN CHEMICAL SERVICES
GENERATION OF THE DATA BASE

Two basic documents were used in generation of the "AMCHEM DATA BASE":

I. The Transaction Log covering the period from 9/15/55 through 10/31/72.
This document listed items charged to the customer by product name or service - such as Reclaim Solvent, Drumming Charge, Disposal Charge, Thinner, Alcohol, etc.

Significant column headings were "pounds/price" "gallons/price", "merchandise sales", "industrial service" and "industrial processing"

Both "industrial service" and "industrial processing" were used in the database. (Separation of the two items was of significance to ACS for sales tax purposes.)

II. The "Accounts Receivable Trial Balance Ledger" covering the period from 12/31/72 through 12/31/75.
This document listed "Company Name", "Customer Number", "Balance Outstanding" and "Current Month Transactions".

As discussed in more detail below, utilization of these records involved interpretation of each entry: whether it represented a sale, a recovery, a manufacture or a disposal. In addition, the disposition of the material by landfill or incineration had to be determined. Finally, various percentages had to be determined: directly landfilled, residue from solvent recovery, directly incinerated, and solvent recovery residue incinerated.

These determinations were made following conferences with past and present management of American Chemical Services, including George Murphy, the retired past president, Jim Tarpo, the present president and John Murphy, a member in the firm with knowledge of past manufacturing practices and customers. USEPA and one of their contractors, Roy F. Weston, were represented at the initial two day conference at Griffith Indiana when the "Transaction Log" was first explained.

As the work progressed, H. Hofmaier reviewed the work product with J. Tarpo and J. Murphy to insure that all interpretations of data were in keeping with the best recollections of events as they happened historically.

DATA NOT INCLUDED (NON-WASTE GENERATING)

At the initial conference in Griffith, George Murphy outlined a number of products and companies, each of which represented only manufacturing businesses which generated no landfilled waste. This was subsequently confirmed in a letter which was transmitted by Louis Rundio on July 9, 1986. A copy is attached. BILLING CODE 6560–50–M

[FRL–5084–3]

Proposed De Minimis Settlement Under Section 122(g) of the Comprehensive Environmental Response, Compensation and Liability Act; In the Matter of American Chemical Services

AGENCY: U.S. Environmental Protection Agency.

ACTION: Request for public comment.

SUMMARY: Notice of *De Minimis* Settlement: in accordance with Section 122(i) of the Comprehensive Environmental Response, Compensation and Liability Act of 1980, as amended ("CERCLA"), notice is hereby given of a *de minimis* settlement concerning past and estimated future response actions at the American Chemical Services (ACS) Site in Griffith, Indiana. U.S. EPA Region 5 has submitted the proposed agreement to the U.S. Department of Justice for review concurrent with this request for public comment. This settlement will not be finalized until the approval process set forth in Section 122(g)(4) of CERCLA has been completed.

DATES: Comments must be provided on or before November 2, 1994.

ADDRESSES: Comments should be addressed to the Docket Clerk, Mail Code MFA–10J, U.S. Environmental Protection Agency, 77 West Jackson Boulevard, Chicago, Illinois, 60604, and should refer to: In the Matter of American Chemical Services.

FOR FURTHER INFORMATION CONTACT: Steven Siegel, Mail Code CS–29A, U.S. Environmental Protection Agency, 77 West Jackson Boulevard, Chicago, Illinois 60604.

SUPPLEMENTARY INFORMATION: 959 Respondents and the State of Indiana executed binding certifications of their consent to participate in the settlement. The settlement may be amended to add additional parties.

The Respondents will pay approximately $23,649,894.84 in settlement payments for response costs related to the American Chemical Services Site, including past response costs incurred by the State of Indiana, if the United States Environmental Protection Agency determines that it will not withdraw or withhold its consent to the proposed settlement after consideration of comments submitted pursuant to this office.

U.S. EPA may enter into this settlement under the authority of Section 122(g) of CERCLA. Section 122(g) authorizes *de minimis* settlements with potentially responsible parties ("PRPs") that contributed hazardous substances to a site where those contributions were small and where the toxicity of the substances contributed is not significantly different from the other substances brought to the site. Pursuant to this authority, the agreement proposes to settle with generator parties whose individual volume of hazardous substances sent to site does not exceed .08% of the total amount of hazardous substances sent to the site. Settling *de minimis* PRPs will be required to pay their fair share of the past and estimated future response costs at the site based on a payment of $3.76 per pound of hazardous substances that the party contributed to the Site. Certain reduction factors were applied in determining the pounds sent by each company based upon the operations of the ACS facility at different time periods. Some participants in the settlement also have presented ability to pay issues and have settled on that basis. The estimated future response costs account for potential cost overruns, the potential for failure of the remedies selected to clean up the site, and other risks.

A copy of the proposed administrative order on consent and additional background information relating to the settlement, including a list of parties to the settlement, are available for review and may be obtained in person or by mail from Steven Siegel, Mail Code CS–29A, U.S. Environmental Protection Agency, 77 West Jackson Boulevard, Chicago, Illinois 60604.

The U.S. Environmental Protection Agency will receive written comments relating to the settlement for thirty days from the date of publication of this notice.

Authority: The Comprehensive Environmental Response, Compensation and Liability Act of 1980, as amended, 42 U.S.C. Sections 9601 *et seq.*

Identification of Documents: Proposed *De Minimis* Settlement: American Chemical Services Site.

William E. Muno,

Director, Waste Management Division.

EQUAL EMPLOYMENT OPPORTUNITY COMMISSION

Agency Report Forms Under OMB Review

AGENCY: Equal Employment Opportunity Commission.

ACTION: Request for comments.

SUMMARY: Under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35), agencies are required to submit proposed information collection requests to OMB for review and approval and to publish a notice in the **Federal Register** notifying the public that the agency has made such a submission. The proposed report form under review is listed below.

DATES: Comments must be received on or before November 17, 1994. If you anticipate commenting on a report form, but find that time to prepare will prevent you from submitting comments promptly, you should advise the OMB Reviewer and the Agency Clearance Officer of your intent as early as possible.

ADDRESSES: Copies of the proposed report form, the request for clearance (Standard Form 83), supporting statement, and other documents submitted to OMB for review may be obtained from the Agency Clearance Officer. Comments on the item listed should be submitted to the Agency Clearance Officer and the OMB Reviewer.

FOR FURTHER INFORMATION CONTACT: EEOC Agency Clearance Officer: Margaret P. Ulmer, Financial and Resource Management Services, Room 2204, 1801 L Street, NW., Washington, DC 20507; Telephone (202) 663–4279.

OMB Reviewer: Joseph Lackey, Office of Information and Regulatory Affairs, Office of Management and Budget, Room 3001, New Executive Office Building, Washington, DC 20503; Telephone (202) 395–7316.

RE: Transmittal of Draft Work Products for the American Chemical Services Site

Dear Mr. Siegel:

At the direction of the National Enforcement Investigations Center (NEIC) the Contract Evidence Audit Team (CEAT-TechLaw) is transmitting under custody seals the following American Chemical Services draft work products:

- Spreadsheet of volumetric review for CECO Corporation
- Copies of documentation for the following companies:
  Handschy Ind./Handschy Chemical AKA St. Claire Pakwell, AKA St. Claire Mfg. Corp.
  American Can Co., AKA American National Can Co., AKA Green Giant
  National Can Co.

If you have any questions regarding this work effort, please contact us at (303) 233-1248.

Sincerely,

Elaine Rippey

RE: Transmittal of Work Plan Amendment #1 for the American Chemical Services Case

Dear Mr. Siegel:

Enclosed is Work Plan Amendment #1 for the Contract Evidence Audit Team (CEAT-TechLaw) services related to the American Chemical Services case. These services were requested through and are provided at the direction of the National Enforcement Investigations Center (NEIC).

Please review the enclosed Work Plan Amendment and provide any comments you may have to the CEAT Alternate Project Officer, Mary Rohrer, at NEIC. She may be contacted at (303) 236-5122 or at the following address:

Environmental Protection Agency
National Enforcement Investigations Center
Building 53, Box 25227

CONTRACT EVIDENCE AUDIT TEAM

WORK PLAN AMENDMENT #1

AMERICAN CHEMICAL SERVICES DATA REVIEW AND CORRESPONDENCE TRACKING SYSTEM

PROJECT CONTACT: ORGANIZATION:	Steve Siegel, Office of Regional Counsel EPA Region V
PROJECT CONTACT: ORGANIZATION:	Lisa Comer, Office of Enforcement EPA Headquarters
NEIC CONTACTS:	Paula Smith, CEAT Project Officer Mary Rohrer, CEAT Alternate Project Officer
CEAT PROJECT NUMBER:	232-877
CEAT PROJECT MANAGERS	Elaine Rippey, Kathy Kaiser
PERIOD OF PERFORMANCE:	August 15, 1994 - September 15, 1994
CEAT REVIEW:	Mary Thompson (signature)

This work is being conducted on behalf of the Environmental Protection Agency's (EPA) National Enforcement Investigations Center (NEIC) under EPA contract 68-W0-0001 for Superfund Site/Spill Identifier **IN J7**.

I. PROJECT OBJECTIVE

The NEIC has given approval for the Contract Evidence Audit Team (CEAT-TechLaw) to extend the project deadline in order to complete the project objectives described in the Work Plan. The CEAT has developed this Work Plan Amendment to describe the tasks necessary to complete this project. The Work Plan is attached for reference.

II. PROJECT TASKS

The work effort will require extracting, entering, and inspecting data from the potentially responsible party (PRP) responses. These tasks are all described in the Work Plan. No additional work hours are required to complete the task.

III. WORK PRODUCTS

Work products described in the Work Plan will be provided to the project contacts. The final project reports will be prepared. Bound copies of the report will be provided to the project contacts for review and approval. The CEAT will retain the unbound original reports until September 30, 1994. After this date, the NEIC may be contacted regarding the location of project materials.

TECHLAW, INC. · 12600 W. COLFAX AVE. · SUITE C310 · LAKEWOOD, CO · 80215 · (303) 233-1248
Printed on Recycled Paper

IV. ESTIMATED WORK TIME SUMMARY

Completion of the tasks described above will not require hours in addition to those reflected in the Work Plan. In addition to the work times reflected, hours will be incurred for project administration activities such as Work Plan Amendment development, budget management, and communication with the project contact and the NEIC. Costs related to these efforts have been incorporated in the cost estimate.

WORK PLAN

AMERICAN CHEMICAL SERVICES

PROJECT CONTACT:	Steven Siegel, Office of Regional Counsel
ORGANIZATION:	EPA Region V
NEIC CONTACTS:	Paula Smith, CEAT Project Officer Mary Rohrer, CEAT Alternate Project Officer
CEAT PROJECT NUMBER:	232-877
CEAT PROJECT MANAGERS:	Kathy Kaiser Elaine Rippey
DATE:	February 28, 1994
CEAT REVIEW:	(signature)

This work is being conducted on behalf of the Environmental Protection Agency's (EPA) National Enforcement Investigations Center (NEIC) under EPA contract 68-W0-0001 for Superfund Site/Spill Identifier **IN J7**.

I. BACKGROUND

The American Chemical Services site is located in Griffith, Indiana and was operated as a chemical recycling facility from 1955 to 1990. In 1975, the company voluntarily stopped using two disposal areas on-site and covered them. The EPA became involved in the site in September 1984 and listed the site on the National Priorities List (NPL) in September 1984. Since its involvement began, the EPA identified potentially responsible parties (PRPs).

Region V requested the NEIC's assistance in performing a review of the transactional data prepared by the PRPs and assistance with a mailing to the PRPs. The NEIC assigned this project to the Contract Evidence Audit Team (CEAT-TechLaw); Kathy Kaiser and Elaine Rippey have been designated as the CEAT Project Managers and Lona Shockley as the CEAT Programmer/Analyst.

II. PROJECT OBJECTIVES

The project objectives are to develop a report which will identify and summarize potential discrepancies between the PRP-generated databases and site documentation, and to provide assistance in the preparation of a mailing to the PRPs.

TECHLAW, INC. · 12600 W. COLFAX AVE. · SUITE C310 · LAKEWOOD, CO · 80215 · (303) 233-1248
Printed on Recycled Paper

III. PROJECT TASKS

The work effort will consist of five phases. All work times reflect the total number of hours that would be required for one person working full time to complete the task.

PHASE I: INITIATE PROJECT

A. Task 1: Review Documents, Databases, and Database Reports

From January 7, 1994 to January 11, 1994, the CEAT reviewed the project documents, databases, and database reports to determine the types of information contained within them.

Work Time: 24 Work Hours

B. Task 2: Conduct Project Setup Meeting

The CEAT Project Managers participated in a project setup meeting with the project contact on January 12, 1994 to discuss the findings of the document, databases, and database report reviews. In addition, the work schedule and the types of work products needed were established.

Work Time: 8 Work Hours

PHASE II: PERFORM REVIEW OF WASTE VOLUMES

C. Task 3: Organize Documents

Approximately 12,000 project documents will be organized alphabetically into generator files. Within each file, all documents will be grouped by year.

Estimated Work Time: 504 Work Hours

D. Task 4: Convert Databases

The Lotus 1-2-3 databases provided to the EPA by the PRPs will be converted into dBASE III Plus format in preparation for data review, mailing, and correspondence tracking. Fields will be added to the database to reflect project information requirements such as mailing addresses and correspondence tracking capabilities. Programs will be written to provide reports as determined by the project contact.

Estimated Work Time: 150 Work Hours

E. Task 5: Verify Database Conversion

The database conversion will be verified by testing it to ensure that the integrity of the data is maintained.

Estimated Work Time: 40 Work Hours

F. Task 6: Conduct Data Review of Waste Volumes

The data review procedures will be to inspect one of every ten records, as directed by the project contact. The inspection process will consist of verifying the data in the database with the data from the original project documents.

Estimated Work Time: 500 Work Hours

G. Task 7: Extract and Enter Data Review Information

Information from the data review will be extracted and entered directly into the database converted from the Lotus 1-2-3 databases, provided to the EPA by the PRPs.

Estimated Work Time: 40 Work Hours

H. Task 8: Conduct Inspection of Data Review

Standard CEAT inspection procedures will be used to ensure the accuracy, completeness, and consistency of the data obtained during the data review. Information in the database will be compared to information on original project documents to verify accuracy, completeness, and consistency of extraction and data entry processes. Errors discovered during the inspection process will be corrected by the individual performing the inspection.

Estimated Work Time: 80 Work Hours

PHASE III: ASSIST IN PREPARATION OF A CERTIFIED MAILING

I. Task 9: Develop Mailing List

Utilizing an existing PRP-developed mailing list and addresses taken from Resource Conservation and Recovery Act (RCRA) manifests, the CEAT will develop a complete mailing list which will be incorporated into the database for use in generating mailing labels.

Estimated Work Time: 40 Work Hours

J. Task 10: Conduct Inspection of Mailing List

A standard CEAT inspection procedure will be used to ensure the accuracy, completeness, and consistency of the mailing list. Information on the mailing list will be compared to information on original documents to verify accuracy, completeness, and consistency of the mailing list. Errors discovered during the inspection process will be corrected by the individual performing the inspection.

Estimated Work Time: 40 Work Hours

K. Task 11: Prepare Mailing

The CEAT will prepare documentation for mailing to approximately 1,900 PRPs. The certified mail, return receipt mailing will consist of a letter and Administrative Order provided by the project contact, and a generator list developed by the CEAT.

Estimated Work Time: 40 Work Hours

PHASE IV: PREPARE CORRESPONDENCE TRACKING DATABASE

L. Task 12: Extract and Enter Correspondence Tracking Information

Information from PRP responses to the mailing will be extracted and entered directly into the database using project-specific input screens. Appropriate match files will be developed for coding repetitive categories of information, such as PRP name and address. Original response documents will be returned to the project contact.

Estimated Work Time: 200 Work Hours

M. Task 13: Conduct Correspondence Tracking Data Inspections

Standard CEAT inspection procedures will be used to ensure the accuracy, completeness, and consistency of the data. Information from the database will be compared to information on original PRP response documents to verify accuracy, completeness, and consistency of extraction and data entry processes. Errors discovered during the inspection process will be corrected by the individual performing the inspections.

Estimated Work Time: 160 Work Hours

PHASE V: PROVIDE WORK PRODUCTS

N. Task 14: Prepare and Deliver Final Work Products

The CEAT will prepare a data review report providing the generator name, total volume of waste, percentage ranking, and a settlement cost. A correspondence tracking report will also be prepared.

The following work products will be provided to the project contact:

- Progress reports for monitoring progress of the work effort (also provided to the NEIC).
- The original project documents.
- Two copies of the American Chemical Services Data Review Report including generator ranking summaries and settlement agreement amounts. One summary will be indexed by percentage ranking by volume of waste and another summary will be alphabetical by generator name.

- *One copy of the American Chemical Services Correspondence Tracking Report.*

These work products will be treated as attorney work products, and the CEAT's standard operating procedures for security and document control will be followed.

Estimated Work Time: 80 Work Hours

Estimated Date of Project Completion: August 15, 1994

RE: Transmittal of Draft Work Products for the American Chemical Services Site

Dear Mr. Siegel:

At the direction of the National Enforcement Investigations Center (NEIC) the Contract Evidence Audit Team (CEAT-TechLaw) is transmitting under custody seals the following American Chemical Services draft work products:

- One diskette containing the American Chemical Services Site mailing list in WordPerfect format
- Spreadsheets and responses to volumetric challenges for the following companies:
  Metropolitan Hospital, AKA Grand Rapids Osteopathic Hospital
  Ford Motor Company
  Lear Siegler AKA SLI Avionic
  Soo Line Railroad
- Two reports (one sorted alphabetically, one sorted by ranking) listing the 446 generators with mail return reasons

The enclosed diskette has been scanned for known viruses using a commercial software, and none were found.

If you have any questions regarding this work effort, please contact us at (303) 233-1248.

RE: Transmittal of Draft Work Products for the American Chemical Services Site

Dear Ms. Comer:

At the direction of the National Enforcement Investigations Center (NEIC), the Contract Evidence Audit Team (CEAT-TechLaw) is transmitting under custody seals the following American Chemical Services draft work products:

- One copy of the Draft American Chemical Services Site Generator Report Sorted Alphabetically.
- One copy of the Draft American Chemical Services Site Generator Report Sorted by Volume.
- One list of generators with multiple addresses, provided in the mailing list received March 28, 1994.
- One list of fields contained in a generic correspondence tracking database system.

The alphabetical generator report is highlighted to indicate generators for which we do not have addresses (yellow) and those for which we only have Friedman & Holman counts (orange). But ? underlying docs.

In addition, the Friedman & Holman volume counts for selected generators are handwritten on the alphabetical report. These are generators for which only Friedman & Holman had indicated volumes, therefore they are not included in the total volume counts and calculations.

Please sign the enclosed chain-of-custody record and return the record in the envelope provided.

If you have any questions regarding this work effort, please contact us at (303) 233-1248.

Sincerely,

Elaine Rippey

RE: Transmittal of Work Plan for the American Chemical Services Case

Dear Mr. Siegel:

Enclosed is the Work Plan for the Contract Evidence Audit Team (CEAT-TechLaw) services related to the American Chemical Services case. These services were requested through and are provided at the direction of the National Enforcement Investigations Center (NEIC).

Please review the enclosed Work Plan and provide any comments you may have to the CEAT Alternate Project Officer, Mary Rohrer, at NEIC. She may be contacted at (303) 236-5122 or at the following address:

Environmental Protection Agency
National Enforcement Investigations Center
Building 53, Box 25227
Denver Federal Center
Denver, Colorado 80225

If you have any questions, please contact us at (303) 233-1248.

WORK PLAN

AMERICAN CHEMICAL SERVICES

PROJECT CONTACT:	Steven Siegel, Office of Regional Counsel
ORGANIZATION:	EPA Region V
NEIC CONTACTS:	Paula Smith, CEAT Project Officer Mary Rohrer, CEAT Alternate Project Officer
CEAT PROJECT NUMBER:	232-877
CEAT PROJECT MANAGERS:	Kathy Kaiser Elaine Rippey
DATE:	February 28, 1994
CEAT REVIEW:	Bill von Schulz (signature)

This work is being conducted on behalf of the Environmental Protection Agency's (EPA) National Enforcement Investigations Center (NEIC) under EPA contract 68-W0-0001 for Superfund Site/Spill Identifier **IN J7**.

I. BACKGROUND

The American Chemical Services site is located in Griffith, Indiana and was operated as a chemical recycling facility from 1955 to 1990. In 1975, the company voluntarily stopped using two disposal areas on-site and covered them. The EPA became involved in the site in September 1984 and listed the site on the National Priorities List (NPL) in September 1984. Since its involvement began, the EPA identified potentially responsible parties (PRPs).

Region V requested the NEIC's assistance in performing a review of the transactional data prepared by the PRPs and assistance with a mailing to the PRPs. The NEIC assigned this project to the Contract Evidence Audit Team (CEAT-TechLaw); Kathy Kaiser and Elaine Rippey have been designated as the CEAT Project Managers and Lona Shockley as the CEAT Programmer/Analyst.

II. PROJECT OBJECTIVES

The project objectives are to develop a report which will identify and summarize potential discrepancies between the PRP-generated databases and site documentation, and to provide assistance in the preparation of a mailing to the PRPs.

not disputes also / Mary 12 on work list.

CEA-2-00675

III. PROJECT TASKS

The work effort will consist of five phases. All work times reflect the total number of hours that would be required for one person working full time to complete the task.

PHASE I: INITIATE PROJECT

A. Task 1: Review Documents, Databases, and Database Reports

From January 7, 1994 to January 11, 1994, the CEAT reviewed the project documents, databases, and database reports to determine the types of information contained within them.

Work Time: 24 Work Hours

B. Task 2: Conduct Project Setup Meeting

The CEAT Project Managers participated in a project setup meeting with the project contact on January 12, 1994 to discuss the findings of the document, databases, and database report reviews. In addition, the work schedule and the types of work products needed were established.

Work Time: 8 Work Hours

PHASE II: PERFORM REVIEW OF WASTE VOLUMES

C. Task 3: Organize Documents

Approximately 12,000 project documents will be organized alphabetically into generator files. Within each file, all documents will be grouped by year.

Estimated Work Time: 504 Work Hours

D. Task 4: Convert Databases

The Lotus 1-2-3 databases provided to the EPA by the PRPs will be converted into dBASE III Plus format in preparation for data review, mailing, and correspondence tracking. Fields will be added to the database to reflect project information requirements such as mailing addresses and correspondence tracking capabilities. Programs will be written to provide reports as determined by the project contact.

Estimated Work Time: 150 Work Hours

E. Task 5: Verify Database Conversion

The database conversion will be verified by testing it to ensure that the integrity of the data is maintained.

Estimated Work Time: 40 Work Hours

F. Task 6: Conduct Data Review of Waste Volumes

The data review procedures will be to inspect one of every ten records, as directed by the project contact. The inspection process will consist of verifying the data in the database with the data from the original project documents.

Estimated Work Time: 500 Work Hours

G. Task 7: Extract and Enter Data Review Information

Information from the data review will be extracted and entered directly into the database converted from the Lotus 1-2-3 databases, provided to the EPA by the PRPs.

Estimated Work Time: 40 Work Hours

H. Task 8: Conduct Inspection of Data Review

Standard CEAT inspection procedures will be used to ensure the accuracy, completeness, and consistency of the data obtained during the data review. Information in the database will be compared to information on original project documents to verify accuracy, completeness, and consistency of extraction and data entry processes. Errors discovered during the inspection process will be corrected by the individual performing the inspection.

Estimated Work Time: 80 Work Hours

PHASE III: ASSIST IN PREPARATION OF A CERTIFIED MAILING

I. Task 9: Develop Mailing List

Utilizing an existing PRP-developed mailing list and addresses taken from Resource Conservation and Recovery Act (RCRA) manifests, the CEAT will develop a complete mailing list which will be incorporated into the database for use in generating mailing labels.

Estimated Work Time: 40 Work Hours

J. Task 10: Conduct Inspection of Mailing List

A standard CEAT inspection procedure will be used to ensure the accuracy, completeness, and consistency of the mailing list. Information on the mailing list will be compared to information on original documents to verify accuracy, completeness, and consistency of the mailing list. Errors discovered during the inspection process will be corrected by the individual performing the inspection.

dated originals

Estimated Work Time: 40 Work Hours

K. Task 11: Prepare Mailing

The CEAT will prepare documentation for mailing to approximately 1,900 PRPs. The certified mail, return receipt mailing will consist of a letter and Administrative Order provided by the project contact, and a generator list developed by the CEAT.

Estimated Work Time: 40 Work Hours

PHASE IV: PREPARE CORRESPONDENCE TRACKING DATABASE

L. Task 12: Extract and Enter Correspondence Tracking Information

Information from PRP responses to the mailing will be extracted and entered directly into the database using project-specific input screens. Appropriate match files will be developed for coding repetitive categories of information, such as PRP name and address. Original response documents will be returned to the project contact. Lisa

Estimated Work Time: 200 Work Hours

M. Task 13: Conduct Correspondence Tracking Data Inspections

Standard CEAT inspection procedures will be used to ensure the accuracy, completeness, and consistency of the data. Information from the database will be compared to information on original PRP response documents to verify accuracy, completeness, and consistency of extraction and data entry processes. Errors discovered during the inspection process will be corrected by the individual performing the inspections.

Estimated Work Time: 160 Work Hours

PHASE V: PROVIDE WORK PRODUCTS

N. Task 14: Prepare and Deliver Final Work Products

The CEAT will prepare a data review report providing the generator name, total volume of waste, percentage ranking, and a settlement cost. A correspondence tracking report will also be prepared.

The following work products will be provided to the project contact:

- Progress reports for monitoring progress of the work effort (also provided to the NEIC).
- The original project documents.
- Two copies of the American Chemical Services Data Review Report including generator ranking summaries and settlement agreement amounts. One summary will be indexed by percentage ranking by volume of waste and another summary will be alphabetical by generator name.

- One copy of the American Chemical Services Correspondence Tracking Report.

not the alphabetical list

These work products will be treated as attorney work products, and the CEAT's standard operating procedures for security and document control will be followed.

Estimated Work Time: 80 Work Hours

Estimated Date of Project Completion: August 15, 1994

Re: American Chemical Services Superfund Site, Griffith, Indiana; Waste-In Documents

Dear Mr. Siegel:

This is to confirm our recent telephone conversation in which you offered to assist in obtaining waste-in documents for the following companies which are allegedly involved with the American Chemical Services Superfund Site in Griffith, Indiana:

Batts, Inc. / John Thomas Batts, Inc 34
Bradford-White Corporation 27
Copy Center, Inc. -4
Electro-Voice, Inc. -2
Flexfab -36
Herman Miller, Inc. 53
Holland Hitch 2
Integrated Metal Technology 6
Knape & Vogt Manufacturing Co. 8
Knape Industries, Inc. 5
Lear Siegler, Inc. (8 divisions) 24
Leigh Products 4
Leon Plastics, Inc.
Lescoa, Inc. (a/k/a The Leslie Metal Arts Co.) 8
Metropolitan Hospital 7
Modar, Inc. 3
Printco 5
U-Rent-It 2
-White Cloud Products 16 (3 duplicate)
X-Rite Incorporated 1

Of course, we are willing to pay for a reasonable search and photocopying costs incurred in the production of these documents. If it appears that these costs are likely to exceed $500, however, please contact me before proceeding.

WORK PLAN

PROJECT NAME: American Chemical Services, Inc.
REGION: V
PROJECT NUMBER: 222-179
PROJECT CONTACTS: David Taliaferro, Joseph Devuono
PROJECT LEADER: Robert Yates
DATE: March 26, 1986

This work is being conducted on behalf of the Environmental Protection Agency's (EPA) National Enforcement Investigations Center (NEIC) under EPA Contract #68-01-7104 for Superfund site no. J7.

I. BACKGROUND

American Chemical Services Company recycled chemicals in Griffith (Lake County), Indiana from 1958 to 1975. In 1975, it voluntarily stopped using two disposal areas on-site and covered them. The site contains buried drums (estimated at 20,000) and sludges (primarily pigment and resins); the amounts, nature, and sources are unknown.

A shallow aquifer beneath the site is reported to be contaminated with various organic compounds. The majority of people within three miles of the site obtain drinking water from a lower aquifer. According to the EPA, no well contamination has been documented.

Past owner and operator of the site is reported by the EPA to be Mr. James Tarpo. Records concerning generators, waste types, and quantities were reported missing shortly after the facility closed.

Region V has identified 216 potentially responsible parties (PRPs) of which addresses for 75 are unknown. Region V, therefore, has requested the assistance of the NEIC in locating the addresses of these 75 PRPs. NEIC has assigned this project to the REACT, and Robert Yates is the designated Project Leader.

TECHLAW, INC. • 12600 W. COLFAX AVE., • SUITE C310 • LAKEWOOD, CO • 80215 • (303) 233-1248

II. PROJECT OBJECTIVES

To assist Region V in locating mailing addresses for 75 potentially responsible parties.

III. PROJECT TASKS

An outline of the tasks and estimated work time to complete each task follows.

Task A: Library Search

Using the Chicago Public Library's business reference section, the REACT will search through a variety of reference sources to locate addresses for 75 PRPs.

Estimated Work Time: 1 work week

Task B: Zip Code Research

Using the U.S. Post Office zip code directory, the REACT will search for zip codes not contained in addresses found at the Chicago Public Library.

Estimated Work Time: 2 work days

IV. REPORTING REQUIREMENTS AND DELIVERABLES

The following deliverables will be provided to David Taliaferro at Region V:

- A list of 216 businesses and addresses of EPA-identified potentially responsible parties.
- A checklist of reference sources used to locate addresses.

The results of this work effort will be treated as a privileged attorney work project, and the CEAT/REACT security and document control standard operating procedures will be followed.
