REMEDIAL INVESTIGATION REPORT
MILLINGTON SITE
MORRIS COUNTY, NEW JERSEY

APPENDIX VOLUME: II

Prepared For:
National Gypsum Company
Dallas, Texas

Prepared By:

Fred C. Hart Associates, Inc.
140 Allen Road
Liberty Corner, N.J. 07938

FEBRUARY 29, 1988

ASB 001 1791

APPENDIX B

SUPPLEMENTAL ANALYTICAL DATA

ASB 001 1792

SECOND SAMPLING ROUND
SURFACE WATER DATA
ORGANIC ANALYSES

ASB 001 1793

QA/QC Review for Organics
on Radian Corp. Jobs 87-06-140
and 87-06-141

Sample Holding Times: All sample holding times were adhered to as per the CLP.

GC/MS Tuning and Performance: All tuning and performance criteria were met.

Blanks: All method blanks were within CLP limits. The VOA reagent blank analyzed on 6/30/87 contained acetone (3 ug/l) and benzene (1 ug/l). The VOA reagent blank analyzed on 7/1/87 contained benzene at 3 ug/l. The BNA reagent blank analyzed on 7/15/87 contained di-n-butyl phthalate at 12 ug/l. For associated samples, results below five times (ten times for common lab contaminants) should be marked as not detected.

Initial and Continuing Calibration: All calibration criteria were met.

Surrogate Recoveries: All volatile surrogate recoveries were within CLP limits. Samples 903-1, SW12-1, SW9-1 and 902-1 all had one surrogate outside CLP limits but above 10% recovery in the base/neutral fraction. The CLP allows for one surrogate outside QC limits but above 10% recovery without any flagging of data.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD): All recoveries for MS/MSD samples were within CLP limits.

Compound Identification: All identification criteria were met.

System Performance: There were not any indications of poor instrument performance.

Overall Assessment: This data is within CLP requirements.

QA/QC Review for Organics
on Enviropact Inc. Data

Sample Holding Times: CLP holding times were exceeded for volatiles and the extraction of the base/neutrals for many of the samples (see attached lists).

GC/MS Tuning and Performance: All tuning and performance criteria were met.

Calibration: Initial and Continuing calibration criteria were exceeded for calibration check compounds in both volatile and base/neutral fractions and for system performance check compounds in the volatile fraction.

Blanks: All base/neutral blanks were within CLP limits. The following volatile blanks had one or more compounds outside CLP limits: A2604, A2616, A2803, A0702, A0604, and A0624.

Surrogate Recoveries: Both volatiles and base/neutrals had many samples with surrogates outside CLP limits (see attached lists).

Matrix Spike (MS)/Matrix Spike Duplicate (MSD): All MS/MSD data was within CLP limits.

Compound Identification: No identification data was supplied.

System Performance: Not enough information provided.

Overall Assessment: There are so many problems with this data that using the results would be very risky.

List of Samples with Volatile Fraction Outside CLP Requirements

INORGANIC ANALYSES

ASB 001 1828

QA/QC Review for Inorganics
on Radian Corp. Jobs 87-06-140
and 87-06-141

Sample Holding Times: All sample holding times were adhered to as per the CLP.

Initial and Continuing Calibration Vertification: All calibration criteria were met.

Blanks: All method blanks were within CLP limits.

ICP Interference Check: ICP interference check results were within CLP limits.

Spike Sample Recoveries: Arsenic, Lead, Selenium, Zinc and Silver had spike recoveries outside QC limits and were marked appropriately.

Duplicates: All duplicates were within QC limits.

Instrument Detection Limits (IDL): All IDL's were at or below CRDL's as required.

Standard Additions: MSA's were run for several samples and all criteria were met.

ICP Serial Dilution: ICP serial dilution for zinc fell outside CLP requirements. Samples were marked appropriately.

P.O. BOX 310
LIBERTY CORNER, NJ 07938-0310

ATTENTION: Mr. Steve Hambos

JOB NUMBER: #87H1421

ANALYSIS: ASBESTOS IN WATER

PROCEDURE:

An aliquot of sample water was filtered through a 47 mm. Metricel GN-6 Membrane (0.45 micron pore size). Due to high interference from suspended solids, the recommended sample volume may be adjusted. An aliquot of deionized water was used as a blank. The filters were dried in a dessicator and analyzed by NIOSH Method P and CAM 239.

INTERPRETATION:

The following are the Detection Limits for various aliquots filtered:

Volume Filtered	Detection Limit	Volume Filtered	Detection Limit
200 ml.	50,000 f/l	25 ml.	400,000 f/l
150 ml.	75,000 f/l	20 ml.	500,000 f/l
100 ml.	100,000 f/l	10 ml.	1,000,000 f/l
50 ml.	200,000 f/l		

RESULTS:

SAMPLE	Mls. Filtered	Fibers/liter
Field Blank 2-1	100	<100,000
Field blank 3-1	100	<100,000
SW 1-1	100	<100,000
SW 2-1	100	<100,000
SW 3-1	100	<100,000

SECOND SAMPLING ROUND
GROUND WATER DATA

ORGANIC ANALYSES

ASB 001 1837

QA/QC Review for Organics
on Radian Corp. Jobs 87-06-140
and 87-06-141

Sample Holding Times: All sample holding times were adhered to as per the CLP.

GC/MS Tuning and Performance: All tuning and performance criteria were met.

Blanks: All method blanks were within CLP limits. The VOA reagent blank analyzed on 6/30/87 contained acetone (3 ug/l) and benzene (1 ug/l). The VOA reagent blank analyzed on 7/1/87 contained benzene at 3 ug/l. The BNA reagent blank analyzed on 7/15/87 contained di-n-butyl phthalate at 12 ug/l. For associated samples, results below five times (ten times for common lab contaminants) should be marked as not detected.

Initial and Continuing Calibration: All calibration criteria were met.

Surrogate Recoveries: All volatile surrogate recoveries were within CLP limits. Samples 903-1, SW12-1, SW9-1 and 902-1 all had one surrogate outside CLP limits but above 10% recovery in the base/neutral fraction. The CLP allows for one surrogate outside QC limits but above 10% recovery without any flagging of data.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD): All recoveries for MS/MSD samples were within CLP limits.

Compound Identification: All identification criteria were met.

System Performance: There were not any indications of poor instrument performance.

Overall Assessment: This data is within CLP requirements.

QA/QC Review for Organics
on Enviropact Inc. Data

Sample Holding Times: CLP holding times were exceeded for volatiles and the extraction of the base/neutrals for many of the samples (see attached lists).

GC/MS Tuning and Performance: All tuning and performance criteria were met.

Calibration: Initial and Continuing calibration criteria were exceeded for calibration check compounds in both volatile and base/neutral fractions and for system performance check compounds in the volatile fraction.

Blanks: All base/neutral blanks were within CLP limits. The following volatile blanks had one or more compounds outside CLP limits: A2604, A2616, A2803, A0702, A0604, and A0624.

Surrogate Recoveries: Both volatiles and base/neutrals had many samples with surrogates outside CLP limits (see attached lists).

Matrix Spike (MS)/Matrix Spike Duplicate (MSD): All MS/MSD data was within CLP limits.

Compound Identification: No identification data was supplied.

System Performance: Not enough information provided.

Overall Assessment: There are so many problems with this data that using the results would be very risky.

GROUND WATER DATA

INORGANIC ANALYSES

ASB 001 1884

QA/QC Review for Inorganics
on Radian Corp. Jobs 87-06-140
and 87-06-141

Sample Holding Times: All sample holding times were adhered to as per the CLP.

Initial and Continuing Calibration Vertification: All calibration criteria were met.

Blanks: All method blanks were within CLP limits.

ICP Interference Check: ICP interference check results were within CLP limits.

Spike Sample Recoveries: Arsenic, Lead, Selenium, Zinc and Silver had spike recoveries outside QC limits and were marked appropriately.

Duplicates: All duplicates were within QC limits.

Instrument Detection Limits (IDL): All IDL's were at or below CRDL's as required.

Standard Additions: MSA's were run for several samples and all criteria were met.

ICP Serial Dilution: ICP serial dilution for zinc fell outside CLP requirements. Samples were marked appropriately.

JOB NUMBER: #87H1421

ANALYSIS: ASBESTOS IN WATER

PROCEDURE:

An aliquot of sample water was filtered through a 47 mm. Metricel GN-6 Membrane (0.45 micron pore size). Due to high interference from suspended solids, the recommended sample volume may be adjusted. An aliquot of deionized water was used as a blank. The filters were dried in a dessicator and analyzed by NIOSH Method P and CAM 239.

INTERPRETATION:

The following are the Detection Limits for various aliquots filtered:

Volume Filtered	Detection Limit	Volume Filtered	Detection Limit
200 ml.	50,000 f/l	25 ml.	400,000 f/l
150 ml.	75,000 f/l	20 ml.	500,000 f/l
100 ml.	100,000 f/l	10 ml.	1,000,000 f/l
50 ml.	200,000 f/l		

RESULTS:

SAMPLE	Mls. Filtered	Fibers/liter
SW 21-1	100	<100,000
SW 22-1	200	<50,000
SW 23-1	150	<75,000
SW 00-1	100	<100,000
901-1	200	<50,000
902-1	200	79,809
903-1	200	88,210
904-1	100	Unreadable
905-1	10	Unreadable

JOB NUMBER: #87H1421

ANALYSIS: ASBESTOS IN WATER

PROCEDURE:

An aliquot of sample water was filtered through a 47 mm. Metricel GN-6 Membrane (0.45 micron pore size). Due to high interference from suspended solids, the recommended sample volume may be adjusted. An aliquot of deionized water was used as a blank. The filters were dried in a dessicator and analyzed by NIOSH Method P and CAM 239.

INTERPRETATION:

The following are the Detection Limits for various aliquots filtered:

Volume Filtered	Detection Limit	Volume Filtered	Detection Limit
200 ml.	50,000 f/l	25 ml.	400,000 f/l
150 ml.	75,000 f/l	20 ml.	500,000 f/l
100 ml.	100,000 f/l	10 ml.	1,000,000 f/l
50 ml.	200,000 f/l		

RESULTS:

SAMPLE	Mls. Filtered	Fibers/liter
906-1	10	Unreadable
907-1	50	Unreadable
908-1	10	Unreadable

Unreadable filters indicate heavy particulate loading with the filtering of a 10 ml. aliquot.

THIRD SAMPLING ROUND
SURFACE WATER DATA
ORGANIC ANALYSES

ASB 001 1910

SW-1, SW-2, SW-3

QA/QC Review of Radian Organics Data for
Report #'s S7-10-112 and S7-10-113

Sample Holding Times: CLP holding times were adhered to for volatile and base/neutral-acid extractable analyses.

GC/MS Tuning and Performance: BFB and DFTPP tuning criteria were met.

Initial and Continuing Calibration: All tuning criteria were met.

Surrogates: TRP BLK 6 had volatile surrogage recovery outside QC limits but above 10%. The surrogate was only 1% outside QC limits, no action required.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD): No volatile data for this report set. BNA MS/MSD data had 0 of 11 RPD's and 0 of 22 were outside QC limits.

Blanks: All method blanks were within CLP limits. Volatile blank had an acceptable level of acetone 18 ug/L, present. The BNA blank had traces of Di-n-Butyl Phthalate, 5 ug/L and Bis(2-Ethylhexyl)phthalate, 1 ug/L.

Compound Identification: Compound identification criteria were met.

System Performance: Only one base/neutral internal standard area was outside QC range. Overall system performance did not indicate any problems.

SW-22

QA/QC Review on Radian Organics Data
for Report #'s S7-10-133 and S7-10-134

Sample Holding Times: Volatile sample holding times were adhered to. Base/neutral-acid extractable holding times exceed CLP requirements but were within requirements set in 40CFR136.

GC/MS Tuning and Performance: All DFTPP tuning criteria were met. BFB tuning criteria on instrument F5 on 10-30-87 @ 0650 were not met, samples SW13-2, SW15-2, and FB3-2 data is unseable because of this.

Initial and Continuing Calibration: Calibration criteria were within QC limits.

Blanks: All method blanks were within CLP limits. Volatile method blank S71013309B had traces of Acetone 12 ug/L, Benezene 2ug/L, 4-Methyl-2-Pentanone 3 ug/L, 2-Hexanone 7 ug/L, and 1,1,2,2,-Tetrachloroethane Volatile method blank S71012404A had traces of Methylene Chloride 2 ug/L. BNA method blank had traces of Di-n-ButylPhthalate 9 ug/l and Bis(2-Ethylhexyl)Phthalate.

Surrogates: BNA surrogates recoveries were within QC limits. FB3-2 had one volatile surrogate outside QC limits but above 10% recovery. Data for this sample should be considered an estimate.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD): BNA had 2 of 11 RPD's and 0 of 22 percent recoveries were outside QC limits. There was no MS/MSD data for volatiles.

Compound Identification: Compound identification criteria were met.

System Performance: Two internal standard areas were outside QC limits. There were no other indications of poor system performance.

SW-00

QA/QC Review of Organics
on Sample SW00-2

Sample Holding Times: All holding times were adhered to.

GC/MS Tuning and Performance: All tuning criteria were met.

Calibration: All calibration criteria were met.

Blanks: Volatiles - Within CLP limits, however trace amounts of acetone (3.0 ug/l) and benzene (1.9 ug/l) were found.

BNA's - No data reported.

Surrogate Recovery: All samples are within QC limits.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD): All samples are within QC limits.

Compound Identification: All identification criteria were met.

RADIAN
CORPORATION

CASE NARRATIVE

Laboratory: RADIAN Report Number(s): S7-10-184

Case Number: HART-7

This data package compiles sample and standard analyses for the following water sample which was received by Radian on 10-29-87:

Laboratory I.D.	Sample I.D.
S710184-01	SW00-2

Clarifications regarding these analyses are as follows:

1. (Volatile Analyses): The matrix spike and matrix spike duplicate analyses in this case is also the QC for Case Number Hart-6 which was sent on 12-18-87.

2. There were no reextractions or reanalyses performed in this case.

Laird H. Gale
Technical Director
Radian Laboratory Services, Sacramento

12/22/87
Date of Signature

RADIAN CORPORATION

CASE NARRATIVE

Laboratory: Radian
Case Number: HART-4

Report Number(s): S7-10-112
S7-10-113

This data package compiles sample and standard analyses for the following water samples received by Radian on 10/21/87:

Laboratory I.D.	Sample I.D.
S710112-01	MW 904-2
S710112-02	MSD-1-2
S710112-03	SW-1-2
S710112-04	SW-2-2
S710112-05	SW-3-2
S710112-06	SW-4-2
S710112-07	SW-5-2
S710112-08	SW-6-2
S710112-09	TRIP BLANK #6
S710112-10	TRIP BLANK #11

Clarifications regarding these analyses are as follows:

1. Sample MW904-2 (Volatile Analysis): Trichlorofluoromethane is reported as a Tentatively Identified Compound on Form IE of the data package. However, this compound is in the standard mixture and thus is not quantitated as a TIC. Because it is not an EPA-CLP target compound, it is not included on Form IA. Also, the program that generates the forms automatically qualifies the TIC compounds with a "J" flag which indicates that it is an estimated value only. In this case, the "J" reporting qualifier does not apply to this compound.

2. Trip Blank #6 (Volatile Analysis): The percent recovery of surrogate D4-1,2-dichloroethane is below the QC limit for this compound. Normally, this sample would have been reanalyzed. However, because it was only 1% below the QC limit and there were no analytes found in this sample, the analyst did not feel that it was necessary to perform a reanalysis.

3. The VOA matrix spike and matrix spike duplicate analyses for this set of samples are batched with the next set of samples in Case Number HART-5. A set of MS/MSD samples were performed every twenty samples.

Laird H. Gale
Technical Director

12/14/87
Date of Signature

RADIAN CORPORATION

CASE NARRATIVE

Laboratory: RADIAN
Case Number: HART-6

Report Number(s): S7-10-133
S7-10-134

This data package compiles sample and standard analyses for the following water samples received by Radian on 10-23-87:

Laboratory I.D.	Sample I.D.
S710133-01	SW16-2
S710133-02	SW19-2
S710133-03	SW20-2
S710133-04	SW21-2
S710133-05	SW22-2
S710133-06	SW23-2
S710133-07	SW12-2
S710133-08	SW13-2
S710134-01	SW15-2
S710134-02	FB3-2
S710134-04	TRIP BLANK A
S710134-05	TRIP BLANK B
S710134-06	TRIP BLANK C

Clarifications regarding these analyses are as follows:

1. (Volatile Analyses): The samples which were sent for the matrix spike and matrix spike duplicate analyses (2-2MS and 2-2MSD) were inadvertently analyzed as regular samples. The matrix spike mixture was not added to these samples before they were analyzed. Thus, the MS and MSD analyses for the next set of samples which were received on 10-29-87 will also apply to this case. The required frequency of MS and MSD analyses is still met.

2. There were no reextractions or reanalyses performed in this case.

RADIAN
CORPORATION

CASE NARRATIVE

Laboratory: Radian
Case Number: HART-3

Report Number(s): S7-10-093, S7-10-102, S7-10-103

This data package compiles sample and standard analyses for the following water samples received by Radian on 10/19/87 and 10/20/87:

Laboratory I.D.	Sample I.D.
S710093-01	GS6-2
S710093-02	GS7-2
S710093-03	GS8-2
S710093-04	GS9-2
S710093-05	FB1-2
S710093-06	TB#3
S710102-01	901-2
S710102-02	902-2
S710102-03	903-2
S710102-04	905-2
S710102-09	FB2-2
S710102-10	906-2
S710102-11	908-2
S710103-01	907-2
S710103-02	TB#4
S710103-03	TB#5

Clarifications regarding these analyses are as follows:

1. Samples 901-2, 905-2, 907-2, and 908-2 had low acid surrogates recoveries. These samples are being reextracted with the exception of Sample 908-2 of which there was not enough sample left to perform a reextraction.

2. Sample 903-2 (VOA) was reanalyzed due to a low surrogate recovery. The reanalysis showed the same results, indicating a matrix effect. Sample 907-2, GS6-2, and GS9-2 also had recoveries which were outside of QC limits. However, these samples were inadvertently not rerun. Had these samples had anything found in them, they would have been flagged as semiquantitative.

Laird H. Gale

Laird H. Gale
Technical Director
Radian Corporation, Sacramento

RADIAN CORPORATION

CASE NARRATIVE

Laboratory: Radian
Case Number: HART-4

Report Number(s): S7-10-112
S7-10-113

This data package compiles sample and standard analyses for the following water samples received by Radian on 10/21/87:

Laboratory I.D.	Sample I.D.
S710112-01	MW 904-2
S710112-02	MSD-1-2
S710112-03	SW-1-2
S710112-04	SW-2-2
S710112-05	SW-3-2
S710112-06	SW-4-2
S710112-07	SW-5-2
S710112-08	SW-6-2
S710112-09	TRIP BLANK #6
S710112-10	TRIP BLANK #11

Clarifications regarding these analyses are as follows:

1. Sample MW904-2 (Volatile Analysis): Trichlorofluoromethane is reported as a Tentatively Identified Compound on Form IE of the data package. However, this compound is in the standard mixture and thus is not quantitated as a TIC. Because it is not an EPA-CLP target compound, it is not included on Form IA. Also, the program that generates the forms automatically qualifies the TIC compounds with a "J" flag which indicates that it is an estimated value only. In this case, the "J" reporting qualifier does not apply to this compound.

2. Trip Blank #6 (Volatile Analysis): The percent recovery of surrogate D4-1,2-dichloroethane is below the QC limit for this compound. Normally, this sample would have been reanalyzed. However, because it was only 1% below the QC limit and there were no analytes found in this sample, the analyst did not feel that it was necessary to perform a reanalysis.

3. The VOA matrix spike and matrix spike duplicate analyses for this set of samples are batched with the next set of samples in Case Number HART-5. A set of MS/MSD samples were performed every twenty samples.

RADIAN CORPORATION

CASE NARRATIVE

Laboratory: RADIAN
Case Number: HART-6

Report Number(s): S7-10-133
S7-10-134

This data package compiles sample and standard analyses for the following water samples received by Radian on 10-23-87:

Laboratory I.D.	Sample I.D.
S710133-01	SW16-2
S710133-02	SW19-2
S710133-03	SW20-2
S710133-04	SW21-2
S710133-05	SW22-2
S710133-06	SW23-2
S710133-07	SW12-2
S710133-08	SW13-2
S710134-01	SW15-2
S710134-02	FB3-2
S710134-04	TRIP BLANK A
S710134-05	TRIP BLANK B
S710134-06	TRIP BLANK C

Clarifications regarding these analyses are as follows:

1. (Volatile Analyses): The samples which were sent for the matrix spike and matrix spike duplicate analyses (2-2MS and 2-2MSD) were inadvertently analyzed as regular samples. The matrix spike mixture was not added to these samples before they were analyzed. Thus, the MS and MSD analyses for the next set of samples which were received on 10-29-87 will also apply to this case. The required frequency of MS and MSD analyses is still met.

2. There were no reextractions or reanalyses performed in this case.

Laird H. Gale
Technical Director
Radian Laboratory Services, Sacramento

REPORT NARRATIVE

The following report contains the results of samples submitted to Century Laboratories, Inc. (CLI) by Fred C. Hart for the National Gypsum project. The sample was received on October 29, 1987 and was analyzed for priority pollutant metals as per EPA-CLP SOW #785.

The following facts should be taken into consideration by the end user of these results:

1. The following ICVS and LCS solutions were used for this report.

ICVS	LCS
ICV #1 0487-ICP Metals	ICV #1-ICP Metals
ICV #3-Sb	ICV #3-Sb
ICV #2(1186)-As,Se	ICV #2(1186)-As,Se
ICV #4(0387)-Pb,Tl	ICV #4(0387)-Pb,Tl
ICV #5-Hg	

2. The raw ICP data is presented in this report for Sample #F2530-05, F2530-05 dup, and F2530-05 spike. This QC is associated with the last six samples of this report. The blanks and CCV's associated with the QC samples are not presented in this report, but are available.

Comments:

ICP interelement and background corrections applied? Yes ✓ No ___.

If yes, corrections applied before ✓ or after ___ generation of raw data.

Footnotes:

NR - Not required by contract at this time

Form 1:

Value - If the result is a value greater than or equal to the instrument detecion limit but less than the contract-required detection limit, report the value in brackets (i.e., [10]). Indicate the analytical method used with P (for ICP), A (for Flame AA) or F (for Furnace AA).

U - Indicates element was analyzed for but not detected. Report with the instrument detection limit value (e.g., 10U).

E - Indicates a value estimated or not reported due to the presence of interference. Explanatory note included on cover page.

S - Indicates value determined by Method of Standard Addition.

N - Indicates spike sample recovery is not within control limits.

* - Indicates duplicate analysis is not within control limits.

+ - Indicates the correlation coefficient for method of standard addition is less than 0.995

M - Indicates duplicate injection results exceeded control limits.

Indicate method used: P for ICP; A for Flame AA and F for Furnace.

REPORT NARRATIVE

The following report contains the results of samples submitted to Century Laboratories, Inc. (CLI) by Fred C. Hart for the National Gypsum project. The samples were received on October 21 1987 and were analyzed for priority pollutant metals as per EPA-CLP SOW #785.

The following facts should be taken into consideration by the end user of these results:

1. The following ICVS and LCS solutions were used for this report.

ICVS	LCS
ICV #1 0487-ICP Metals	ICV #1-ICP Metals
ICV #3-Sb	ICV #3-Sb
ICV #2(1186)-As,Se	ICV #2(1186)-As,Se
ICV #4(0387)-Pb,Tl	ICV #4(0387)-Pb,Tl
ICV #5-Hg	

2. The following samples were reported as less than the CRDL as per SOW #785 furnace flow chart (Section E).

SAMPLE #	ELEMENT	CRDL (ppb)
904-2	Pb	5.0
904-2F	Pb	5.0
907-2	Pb	5.0
908-2F	Pb	5.0
MS/MSD 1-2	Pb	5.0
SW 2-2	Pb	5.0
SW 6-2	Pb	5.0
902-2F	As	10

3. The raw ICP data is presented in this report for Sample #F2530-05, F2530-05 dup, and F2530-05 spike. This QC is associated with the last six samples of this report. The blanks and CCV's associated with the QC samples are not presented in this report, but are available.

ASB 001 1966

QA/QC Review for Inorganics

on Century Laboratories Report #F2514

Holding Times:

All holding times were adhered to as per the CLP.

Initial and Continuing Calibration Verification:

All recoveries were within CLP limits.

Blanks:

Initial and Continuing Calibration and Preparation Blanks were within CLP limits.

ICP Interference Check Sample:

All initial and final recoveries were within CLP limits.

Spike Sample Recoveries:

Silver (50%) had a recovery outside QC limits (75-125%). Positive silver results should be considered estimates.

Duplicates:

All duplicate results were within CLP limits.

Laboratory Control Samples:

All recoveries were within CLP limits:

Standard Addition Results:

None were run.

ICP Serial Dilution:

Serial dilution results were within CLP limits.

Instrument Detection Limits:

All IDLs were at or below the contract-required detection limits as specified in the CLP.

QA/QC Review for Inorganics

on Century Laboratories Report #F2447

Holding Times:

All holding times were adhered to as per the CLP.

Initial and Continuing Calibration Verification:

All recoveries were within CLP limits.

Blanks:

Initial and Continuing Calibration and Preparation Blanks were within CLP limits.

ICP Interference Check Sample:

All initial and final recoveries were within CLP limits.

Spike Sample Recoveries:

Lead (160%), Silver (50%), and Thallium (68%) had recoveries outside QC limits (75-125%) for spike sample #F2447-20. Silver (50%) had a recovery outside QC limits for spike sample #F2530-5. All positive results affected by these samples should be considered estimates.

Duplicates:

All duplicate results were within CLP limits.

Laboratory Control Samples:

All recoveries were within CLP limits:

Standard Addition Results:

All analyses quantitated by the method of standard additions had correlation coefficients greater than 0.995 as required by CLP.

ICP Serial Dilution:

Serial dilution results were within CLP limits.

Instrument Detection Limits:

All IDLs were at or below the contract-required detection limits as specified in the CLP.

Comments:

ICP interelement and background corrections applied? Yes ✓ No ____.

If yes, corrections applied before ✓ or after ____ generation of raw data.

Footnotes:

NR - Not required by contract at this time

Form I:

Value - If the result is a value greater than or equal to the instrument detection limit but less than the contract-required detection limit, report the value in brackets (i.e., [10]). Indicate the analytical method used with P (for ICP), A (for Flame AA) or F (for Furnace AA).

U - Indicates element was analyzed for but not detected. Report with the instrument detection limit value (e.g., 10U).

E - Indicates a value estimated or not reported due to the presence of interference. Explanatory note included on cover page.

S - Indicates value determined by Method of Standard Addition.

N - Indicates spike sample recovery is not within control limits.

* - Indicates duplicate analysis is not within control limits.

\+ - Indicates the correlation coefficient for method of standard addition is less than 0.995

M - Indicates duplicate injection results exceeded control limits.

Indicate method used: P for ICP; A for Flame AA and F for Furnace.

REPORT NARRATIVE

The following report contains the results of samples submitted to Century Laboratories, Inc. (CLI) by Fred C. Hart for the National Gypsum project. The samples were received on October 23, 1987 and were analyzed for priority pollutant metals only as per EPA-CLP SOW #785.

The following facts should be taken into consideration by the end user of these results:

1. The following ICVS and LCS solutions were used for this report.

ICVS	LCS
ICV #1 0487-ICP Metals	ICV #1-ICP Metals
WP 975C1-Sb	WP 975C1-Sb
ICV #2(1186)-As,Se	ICV #2(1186)-As,Se
ICV #4(0387)-Pb,Tl	ICV #4(0387)-Pb,Tl
ICV #5-Hg	
WP 179C8-CN	Mid-Range Std.

2. The ICP raw data contains some time gaps. This is due to the fact that samples that did not pertain to this report but were run on the same analysis were omitted.

3. The mercury holding time was exceeded was by 9 days.

ASB 001 1991

THIRD SAMPLING ROUND
GROUND WATER DATA
ORGANIC ANALYSES

ASB 001 1992

QA/QC Review of Radian Organics
Data for Report #'s S7-10-093, S7-10-102, and S7-10-103

Sample Holding Times: CLP holding times were adhered to for volatile and base/neutral-acid extractable analyses.

GC/MS Tuning and Performance: BFB and DFTPP tuning criteria were met.

Initial and Continuing Calibration: All calibration criteria were met except for two continuing calibration runs. BNA continuing calibration on 10-28-87 had 4 CCC's outside QC limits. This only effected a method blank on that data, the data was unusable. VOA continuous calibration on 10-22-87 had two SPCC compound outside QC limits, Bromoform and 1,1,2,2,-Tetrachloroethane. For samples GS7-2, GS8-2, and G-S9-2 results for those compounds should be considered estimates.

Surrogates: Volatiles - Samples 903-2, 903-2R, 907-2, GS6-2 and GS9-2 had one surrogate recovery outside QC limits but greater than 10%. Volatile data for these samples should be considered estimates.

BNA - Samples 901-2, 905-2, 907-2, and 908-2 had 3 surrogates outside QC limits in the acid fraction. Acid fraction data for these samples should be considered unuseable.

Matrix Spike (MS)/Matrix Spike Duplicate(MSD): Volatile FB-1MS & MSD had 1 of 5 RPD's outside QC limits and 0 of 10 percent recoveries. BNA 905-2 MS & MSD had 3 of 11 RPD's and 0 of 22 percent recoveries outside QC limits, all were acid fraction compounds. BNA GS6-2MS & MSD had 0 of 22 percent recoveries outside QC limits.

Blanks: Volatiles - All method blanks were within CLP limits. The following had an acceptable level compounds in them:
10-28-87, methylene chloride 5 ug/L
10-26-87, methylene chloride 2 ug/L
10-27-87, acetone 18 ug/L

BNA - Method blank was within CLP limits. It did contain Di-n-Octyl Phthalate 9 ug/L and Bis(2-Ethylhexyl)phthalate 2 ug/L.

Compound Identification: Compound identification criteria were met.

System Performance: Overall the internal standards areas were within +100% and -50% of the 12 hr. std. There were no other indications of poor system performance.

ASB 001 1993

QA/QC Review for BNA Re-extraction
on Samples 901-2, 908-2, 907-2

Sample Holding Times: Sample holding times were exceeded. However, these analyses were re-extractions of samples previously analyzed.

GC/MS Tuning and Performance: All tuning and performance criteria were met.

Calibration: All calibration criteria were met.

Blanks: Blank was within CLP limits, although trace, amounts of bis(2-Ethylhexyl)phthalate was found. Seven tentatively identified compounds were found in the blank.

Surrogate Recovery: Samples 901-2 and 908-2 met QC limits. Samples 907-2 had two surrogates outside limits.

Matrix Spike (MS)/Matrix Spike Duplicate(MSD): Not reported.

Compound Identification: All identification criteria were met.

ASB 001 1994

MW-904

QA/QC Review of Radian Organics Data for
Report #'s S7-10-112 and S7-10-113

Sample Holding Times: CLP holding times were adhered to for volatile and base/neutral-acid extractable analyses.

GC/MS Tuning and Performance: BFB and DFTPP tuning criteria were met.

Initial and Continuing Calibration: All tuning criteria were met.

Surrogates: TRP BLK 6 had volatile surrogage recovery outside QC limits but above 10%. The surrogate was only 1% outside QC limits, no action required.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD): No volatile data for this report set. BNA MS/MSD data had 0 of 11 RPD's and 0 of 22 were outside QC limits.

Blanks: All method blanks were within CLP limits. Volatile blank had an acceptable level of acetone 18 ug/L, present. The BNA blank had traces of Di-n-Butyl Phthalate, 5 ug/L and Bis(2-Ethylhexyl)phthalate, 1 ug/L.

Compound Identification: Compound identification criteria were met.

System Performance: Only one base/neutral internal standard area was outside QC range. Overall system performance did not indicate any problems.

ASB 001 1995

RADIAN CORPORATION

CASE NARRATIVE

Laboratory: Radian
Case Number: HART-4

Report Number(s): S7-10-112
S7-10-113

This data package compiles sample and standard analyses for the following water samples received by Radian on 10/21/87:

Laboratory I.D.	Sample I.D.
S710112-01	MW 904-2
S710112-02	MSD-1-2
S710112-03	SW-1-2
S710112-04	SW-2-2
S710112-05	SW-3-2
S710112-06	SW-4-2
S710112-07	SW-5-2
S710112-08	SW-6-2
S710112-09	TRIP BLANK #6
S710112-10	TRIP BLANK #11

Clarifications regarding these analyses are as follows:

1. Sample MW904-2 (Volatile Analysis): Trichlorofluoromethane is reported as a Tentatively Identified Compound on Form IE of the data package. However, this compound is in the standard mixture and thus is not quantitated as a TIC. Because it is not an EPA-CLP target compound, it is not included on Form IA. Also, the program that generates the forms automatically qualifies the TIC compounds with a "J" flag which indicates that it is an estimated value only. In this case, the "J" reporting qualifier does not apply to this compound.

2. Trip Blank #6 (Volatile Analysis): The percent recovery of surrogate D4-1,2-dichloroethane is below the QC limit for this compound. Normally, this sample would have been reanalyzed. However, because it was only 1% below the QC limit and there were no analytes found in this sample, the analyst did not feel that it was necessary to perform a reanalysis.

3. The VOA matrix spike and matrix spike duplicate analyses for this set of samples are batched with the next set of samples in Case Number HART-5. A set of MS/MSD samples were performed every twenty samples.

Laird H. Gale

THIRD SAMPLING ROUND
GROUND WATER DATA
INORGANIC ANALYSES

ASB 001 2058

REPORT NARRATIVE

The following report contains the results of samples submitted to Century Laboratories, Inc. (CLI) by Fred C. Hart for the National Gypsum project. The samples were received on October 21 1987 and were analyzed for priority pollutant metals as per EPA-CLP SOW #785.

The following facts should be taken into consideration by the end user of these results:

1. The following ICVS and LCS solutions were used for this report.

ICVS	LCS
ICV #1 0487-ICP Metals	ICV #1-ICP Metals
ICV #3-Sb	ICV #3-Sb
ICV #2(1186)-As,Se	ICV #2(1186)-As,Se
ICV #4(0387)-Pb,Tl	ICV #4(0387)-Pb,Tl
ICV #5-Hg	

2. The following samples were reported as less than the CRDL as per SOW #785 furnace flow chart (Section E).

SAMPLE #	ELEMENT	CRDL (ppb)
904-2	Pb	5.0
904-2F	Pb	5.0
907-2	Pb	5.0
908-2F	Pb	5.0
MS/MSD 1-2	Pb	5.0
SW 2-2	Pb	5.0
SW 6-2	Pb	5.0
902-2F	As	10

3. The raw ICP data is presented in this report for Sample #F2530-05, F2530-05 dup, and F2530-05 spike. This QC is associated with the last six samples of this report. The blanks and CCV's associated with the QC samples are not presented in this report, but are available.

Comments:

ICP interelement and background corrections applied? Yes ✓ No ____.

If yes, corrections applied before ✓ or after ____ generation of raw data.

Footnotes:

NR - Not required by contract at this time

Form I:

Value - If the result is a value greater than or equal to the instrument detection limit but less than the contract-required detection limit, report the value in brackets (i.e., [10]). Indicate the analytical method used with P (for ICP), A (for Flame AA) or F (for Furnace AA).

U - Indicates element was analyzed for but not detected. Report with the instrument detection limit value (e.g., 10U).

E - Indicates a value estimated or not reported due to the presence of interference. Explanatory note included on cover page.

S - Indicates value determined by Method of Standard Addition.

N - Indicates spike sample recovery is not within control limits.

* - Indicates duplicate analysis is not within control limits.

\+ - Indicates the correlation coefficient for method of standard addition is less than 0.995

M - Indicates duplicate injection results exceeded control limits.

Indicate method used: P for ICP; A for Flame AA and F for Furnace.

ASB 001 2061

QA/QC Review for Inorganics

on Century Laboratories Report #F2447

Holding Times:

All holding times were adhered to as per the CLP.

Initial and Continuing Calibration Verification:

All recoveries were within CLP limits.

Blanks:

Initial and Continuing Calibration and Preparation Blanks were within CLP limits.

ICP Interference Check Sample:

All initial and final recoveries were within CLP limits.

Spike Sample Recoveries:

Lead (160%), Silver (50%), and Thallium (68%) had recoveries outside QC limits (75-125%) for spike sample #F2447-20. Silver (50%) had a recovery outside QC limits for spike sample #F2530-5. All positive results affected by these samples should be considered estimates.

Duplicates:

All duplicate results were within CLP limits.

Laboratory Control Samples:

All recoveries were within CLP limits:

Standard Addition Results:

All analyses quantitated by the method of standard additions had correlation coefficients greater than 0.995 as required by CLP.

ICP Serial Dilution:

Serial dilution results were within CLP limits.

Instrument Detection Limits:

All IDLs were at or below the contract-required detection limits as specified in the CLP.

ATTENTION: STEVE HAMBOS

JOB NUMBER: #87H2605 - #01005-00-85001-25

ANALYSIS: ASBESTOS IN WATER

PROCEDURE:

An aliquot of sample water was filtered through a 47 mm. Metricel GN-6 Membrane (0.45 micron pore size). Due to high interference from suspended solids, the recommended sample volume may be adjusted. An aliquot of deionized water was used as a blank. The filters were dried in a dessicator and analyzed by NIOSH Method P and CAM 239.

INTERPRETATION:

The following are the Detection Limits for various aliquots filtered:

Volume Filtered	Detection Limit	Volume Filtered	Detection Limit
200 ml.	50,000 f/l	25 ml.	400,000 f/l
150 ml.	75,000 f/l	20 ml.	500,000 f/l
100 ml.	100,000 f/l	10 ml.	1,000,000 f/l
50 ml.	200,000 f/l		

RESULTS:

SAMPLE	Ml's. Filtered	Fibers/liter
#901-2	200 ml	<50,000
902-2	200 ml	58,800
903-2	200 ml	142,000
904-2	200 ml	<50,000
