DATE: July 6, 1987
SUBJECT: Trip report for the June 26, 1987 site visit at the Skinner Landfill site

FROM: Gene Wong, RPM
TO: FILE

On June 26, 1987, a site visit of the Skinner Landfill site was conducted by Gene Wong (U.S. EPA), and Mike Bort and Dave Pyles (Weston). The purpose of the visit was to check the site conditions, especially around the buried lagoon/central shoulder (BLCS) area in preparation for the Phase II fieldwork, which focuses on the BLCS area.

We arrived at the site and reported in the Mrs. Elsa Skinner at around 11:30 A. We did not see Ray Skinner at all during this visit. The conditions of the BLCS area had been drastically altered since the last visit which occurred in April, 1987. The whole BLCS area had been uniformly covered with an estimated 25 to 40 feet of fill. Additionally, the fill had been compacted. Attached to this memo, as figure 1, is a map of the site illustrating the extent of fill coverage. Photographs were taken in the afternoon and a photolog is also attached to this memo.
