Subject: Trip report for Skinner Landfill site visit conducted on 11/6-7/87

In the afternoon of 11/6/87, I arrived at the Skinner Landfill site to check the progress of the survey being conducted to topographically describe the area we have marked off for investigation (buried lagoon / central shoulder). The survey had been completed by 2 Weston contractor staff from the Chicago office (between 11/5-6/87). The wooden post and caution tape "fence" was being replaced by a metal post and plastic (orange, 4') mesh fence. Approximately 500' of fence was required.

After the brief inspection, I had a short visit with Mike Burns, union township administrator, to provide him with a site ~~progress~~ update.

On 11/7/87, I revisited the site with the 2 Weston staff from Chicago and 2 add'l Weston staff from the TAT office in Cincinnati. TAT office staff will monitor conditions of our investigation areas during their off-hours every other week as described in the 10/ /87 memo. The TAT members were given formal instructions and introduced to Mrs. Skinner.

At the far northern end of our marked-off area moved our fence ≈ 10-15' further south (gave the Skinner's some area) so the operator's had room to turnaround their vehicles. This should not affect our study area.
