Subject: Fwd: accident report

Times in the following chronology are based upon my recollection, phone call and photo times.

1000 to 1115: Traveled from Innsbrook to Possum Point to visually inspect various items at Ash Pond ABC Dam , Ash Pond E Dam and the Oily Waste Pond Dam.

1115 to 1215 Met Dominion employee Matt Overton at the guard house. Checked in with security. Proceeded to Ash Pond ABC Dam. Walked along the downstream bottom of the dam slope. Located seeps and located wetland boundaries. Recorded photos and notes.

1215 to 1230: Drove to Ash Pond E to look for evidence of a pipe beneath dam in the vicinity of the southeast corner of the dam. Drove to southeast corner. Walked down the slope, walked along the bottom of the slope and along the edge of the downstream pond. Matt Overton also drove to Ash Pond E to observe status of dredging. Matt Overton left the area prior to me completing my exploration.

1230 to 1310: Drove to the Oily Waste Pond Dam. Walked across the crest to the south abutment, walked down the access to the bottom of the slope at the Potomac River. Observed an approximate 8 inch diameter plastic pipe protruding from the slope in the reeds on the bank of the river. Grasped reeds to clear my view of the pipe. Pulled reeds to the right in order to break them off. One of the reeds was between my index finger and middle finger of my right hand. When I pulled the reeds the one between my fingers stayed in place, sliding between my fingers. Something sharp on the reed such as an edge or joint cut my finger (approximately 1300). Bleeding under control continued inspection prior to proceeding the the admin building.

1310 to 1330: Proceeded to the admin building. Cleaned the cut with water. Noted that stitches may be necessary. Called Latoya Sessoms to report the injury. Was assisted by station personnel in bandaging the area. Was escorted to Stafford Hospital where the cut received 5 stitches.
