Below the Schrade well is confirmed to now be in use. This caused me to look back into the record. At this point I believe UEC may have left a few domestic water wells off the "EPA" map which appears to be an enlarged copy of Figure 4.1 of the application titled Water Well Inventory. The list of water wells provided in the application refers to Figure 4.1 for their location. The trouble is not all wells identified as water wells in the list appear in Figure 4.1. However, if one were to go to Figure 1.4, which is a map of all artificial penetrations, and compare the water well list to those locations, one see a few more domestic water wells may exist, marked as abandoned gas wells on the AP map, or not marked at all, but are listed as domestic water wells in the water well inventory list. Some of these may be of relevance to the current approach, if we find they currently exist as water wells.

As with the Schrade well, these are wells I never got to on my ground proofing trip. I plan to contact Art to see if I can get confirmation on the status of these wells much like was done on the Schrade well.

Ray Leissner, Env. Eng.
Ground Water / UIC Section (6WQ-SG)
