Re: Comment on the Report from Brehm Lab (EPA #56606WAZX)

They followed the procedures very similar to the methods published in Federal Register Method #613. I couldn't find any discrepancies in their analysis technique except that they quantitated HxCDDs (Hexachlorodibenzodioxins) against the response of TCDDs (Tetrachlorodibenzodioxins). Although it may not vary much in response they should use HpCDDs (Heptachlorodibenzodioxins) instead of TCDDs and for calculating concentration of HxCDDs since HpCDDs should have closer physical properties to HxCDDs.
