SUBJECT Pond

DATE 2/23/74

MESSAGE Paul, I understand there is some thought being given to cleaning the pond and modifying it to allow pause of the water. If so, I would like to be involved in the discussions. I have asked Chuck Hummel not to make any arrangements for cleaning the pond without discussing with me first as it is very difficult to reprocess this material if not handled properly. Presently we are running the slimes system on a 5 day 3 shift basis to treat the slime and the recovered A. P sludge with some pond residue occasionally treated. I believe that with improved attention from Maintenance and improved efficiency in the slimes department we could handle everything - perhaps six days would be needed.
