RPMs and Section Chiefs,

It is time to review our Contaminated Groundwater Migration Environmental Indicator (EI) determinations for all of our sites. I have provided to all RPMs a copy of the Contaminated Groundwater Migration Environmental worksheets for all assigned sites. Attached is an Excel spreadsheet of the current Contaminated Groundwater Migration EI determinations.

RPMs should review the worksheets and update them as appropriate. If the worksheet is correct, RPMs should just initial and date the bottom of the worksheet, and provide it to their Section Chief for initials/date. If the worksheet is incorrect, the RPM should mark up the worksheet with corrections; initial and date it; and provide it to their Section Chief for initials/date. Once all worksheets from a section have been reviewed and initialed off by the Section Chief, the Section Chief should provide me all reviewed worksheets from their section.

Sites with groundwater *not controlled* or with *insufficient data* status need to have paragraph explanations for this determination. Attached are the most current groundwater *not controlled* and *insufficient data* explanations. Please review the explanations for sites so categorized. If the explanation needs updating, RPMs should update the explanation for Section Chief review. Once Section Chiefs have received and reviewed all updated explanations from their section, please provide me an electronic copy of the updates.

Section Chiefs,
Please provide to me by January 9th reviewed/initialed worksheets and an electronic copy of updated explanations. Please provide me only the electronic update of the edited site(s) and not the whole Word file of all explanations.

As always, I am available to discuss with folks questions about these determinations.

Thanks for your cooperation.
