phone call w/: 2/17/95

Ken Zolnierczyk [redacted]

when spill contamination drinking water surface water supplies

Cleanup levels of high concentration spill 25 ppm

low concentration ≤ 1 lb separate soil + backfill w/clean

w/ water involved its evaluated on a case by case basis

will discuss w/ supervisor to determine cleanup level

John Connell - 10 ppm would be ok if based on Risk Assessment. if not somewhere between 10 - 25 ppm.
John told this to Ken who forwarded it to me.
