CHAIN-OF-CUSTODY DOCUMENTATION

1.0 EXECUTIVE SUMMARY

Delta Environmental Consultants, Inc. (Delta) and Blasland, Bouck, and Lee, Inc. (BBL), and SAIC performed monthly separate-phase hydrocarbon recovery, quarterly well gauging (May, June, and September 2006), and semi-annual (September 2006) groundwater sampling as part of the remedial investigation/feasibility study work at the Willbridge Bulk Fuel Facilities (Willbridge Facility). The Willbridge Facility is comprised of terminals owned by Chevron Products Company (Chevron), Kinder Morgan Liquid Terminals, LLC (KMLT), and ConocoPhillips Company. This report fulfills the requirement of Section 7F of Oregon Department of Environmental Quality (DEQ) Consent Order WMCSR-NW-94-06.

2.0 GROUNDWATER MONITORING AND SAMPLING

Groundwater monitoring and sampling activities, along with separate-phase hydrocarbon (SPH) recovery were performed at the Willbridge Facility from April 2006 through September 2006. The Willbridge Facility is located in northwest Portland, Oregon on Northwest Front Avenue, along the Willamette River (See Figure 1).

Monitoring activities were performed on June 26 and 27, 2006 (Second Quarter 2006) and September 25, 2006 (Third Quarter 2006) and consisted of measuring depth to groundwater and SPH thickness in all wells. Sampling activities performed at the Chevron, KMLT, and ConocoPhillips Terminals on September 25 through 27, 2006 consisted of measuring depth to groundwater and collecting groundwater samples from select wells. Groundwater samples were analyzed for dissolved petroleum hydrocarbon constituents and selected metals. During the Third Quarter 2006 sampling event select wells near the Willamette River were monitored in accordance with the DEQ approved Sampling and Analysis Plan dated September 22, 2006 prepared by Delta. Monitoring and sampling activities are described in the following sections.

Based upon results of the previous quarterly monitoring activities, select wells were monitored for the presence of SPH on a monthly basis. SPH recovery was performed on a monthly basis for wells containing measurable amounts of SPH between April 2006 and September 2006.

2.1 Hydrogeologic Analysis

Depth-to-groundwater measurements were collected from each monitoring well in June 2006 and September 2006 (See Tables 1A through 1C). A map showing groundwater elevation contours and SPH thicknesses measured in wells in September 2006 is presented as Figure 2. Groundwater monitoring procedures are included in Appendix A.

During the second and third quarters of 2006, groundwater elevations across the facility ranged from approximately 9.21 feet to 32.38 feet above mean sea level. Groundwater flow direction is generally northeasterly, toward the Willamette River.

2.2 Willamette River

The Willamette River stage (daily mean, measured at the Morrison Bridge river gauge and converted to the City of Portland (COP) datum) during the second and third quarter of 2006 ranged from a high of 15.49 feet (COP datum) on May 30, 2006 to a low of 4.41 feet (COP datum) on September 17, 2006. The average river stage elevation was approximately 9.31 feet (COP datum) between May 1, 2006 and September 30, 2006. Precipitation and river stage data are presented on Figure 3.

2.3 Groundwater Analytical Results

Groundwater samples were collected from selected Chevron, KMLT, and ConocoPhillips monitoring wells on September 26, 27, and 28, 2006, and analyzed in accordance with consent order WMCSR-NWR-94-06, the revised sampling agreement (May 11, 2001), and the 2006 Groundwater Monitoring Sampling and Analysis Plan Addendum (September 19, 2006). The list of analytes included benzene, toluene, ethylbenzene, total xylenes (BTEX), and methyl tert-butyl ether (MTBE) using EPA Method 8260B, polynuclear aromatic hydrocarbons (PAHs) using EPA Method 8270M-SIM, and total RCRA metals (arsenic, barium, cadmium, chromium, copper, lead, mercury, selenium, silver, and zinc) using EPA Method 6000/7000 Series Methods. Additionally, selected ConocoPhillips wells B-40, P-1, and U-5, Chevron wells B-10 and CR-1, and Kinder Morgan wells MW-33, MW-34, MW-36, and MW-37 were analyzed using lower level reporting limits, consistent with the Environmental Protection Agency's (EPA) 2004 National Recommend Water Quality Criteria (NRWQC) screening levels to complete the groundwater source control evaluation in the areas not addressed by the cutoff walls located at the Chevron and ConocoPhillips facilities. Kinder Morgan Well MW-40 was inaccessible to sample and was not included in this sampling event. Groundwater sampling procedures are presented in Appendix A. Groundwater samples were not collected from wells containing observable sheens or measurable quantities of SPH.

Portland Harbor Joint Source Control Screening Level Comparisons of Select Wells

Analytical results collected from ConocoPhillips wells B-40, P-1, and U-5, Chevron wells B-10 and CR-1, and Kinder Morgan wells MW-33, MW-34, MW-36, and MW-37 were compared to the screening levels presented in Table 3-1 of the Portland Harbor Joint

Source Control guidance document, dated December 2005. Analytical results were compared to the EPA's 2004 NRWQC (organism only) screening level for human health (fish consumption). The DEQ's 2004 AWQC (organism only), the EPA's 2004 NRWQC ecological receptors (chronic), and/or the DEQ's 2004 AWQC ecological receptors (chronic), were not established, the results were compared to the EPA's 2004 NRWQC (organism only) screening levels.

Chevron Well B-10, Kinder Morgan Well MW-37, and ConocoPhillips Wells B-40 and U-4 exceeded the EPA's 2004 NRWQC (organism only) screening level for human health (fish consumption) for one or more PAH compounds. All select wells exceeded the EPA's 2004 NRWQC (organism only) screening level for human health (fish consumption) for arsenic. Additional metals, including cadmium, copper, lead, silver, mercury, and zinc exceeded, or potentially exceeded, screening level values in Chevron well B-40, Kinder Morgan Well MW-33, and ConocoPhillips Wells B-40, P-1, and U-5. BTEX and MTBE concentrations in the select wells did not exceed the Portland Harbor Joint Source Control Screening Levels listed above.

BTEX, PAH, and total metals laboratory analytical results for the third quarter 2006 sampling event are presented in Tables 2 through 4. Portland Harbor Joint Source Control groundwater screening level comparisons of analytes detected in select wells are presented in Table 5. Laboratory analytical reports and chain-of-custody documentation are included in Appendix A.

2.4 Separate Phase Hydrocarbon Occurrence

Based upon the results of the previous quarterly monitoring activities, select wells were monitored for the presence of SPH on a monthly basis. SPH recovery was performed monthly on wells containing measurable amounts of SPH between April and September 2006. The detected SPH thicknesses measured during the June and September 2006 monitoring events are included in Table 1. Observable sheens and SPH thicknesses measured during the September 2006 monitoring event are presented in Figure 2.

Chevron

During quarterly groundwater monitoring in May 2006, SAIC conducted weekly SPH monitoring. Three Chevron Wells (B-20, CR-10, and CR-19) contained measurable thicknesses of SPH, ranging from 0.01 foot in Wells B-20 and CR-10 to 0.13 foot in Well

CR-19. Additionally, a sheen was observed in Wells B-20 and CR-10. SPH thicknesses were consistent with historical measurements.

During quarterly groundwater monitoring in September 2006, five Chevron Wells (CR-7, CR-10, CR-15, CR-19, and CR-25) contained measurable thicknesses of SPH, ranging from 0.02 foot in Well CR-7 to 0.85 foot in Well CR-10. Additionally, trace SPH was observed in Wells B-11, B-19, B-26, B-28, CR-6, CR-22A, CR-24B, and GPW-2 through GPW-4 during the September 2006 monitoring event. SPH thicknesses were consistent with historical measurements.

KMLT

During quarterly groundwater monitoring in June 2006, one KMLT Well (MW-7) contained a measurable thickness SPH thickness of 0.41 foot. Additionally, a sheen was observed in Wells MW-17, MW-19, MW-23, and MW-31. SPH was observed in Well MW-24; however, a thickness could not be measured due to fouling of the oil/water interface probe by highly viscous SPH in the well.

During quarterly groundwater monitoring in September 2006, two KMLT Wells (MW-7 and MW-31) contained measurable thicknesses of SPH, measuring 1.62 foot and 0.08 foot, respectively. SPH was observed in Well MW-24; however, a thickness could not be measured due fouling of the oil/water interface probe by highly viscous SPH. Additionally, a sheen was observed in Wells MW-19, MW-23, and MW-28. The SPH thickness in Well MW-7 is higher this monitoring event than historically observed.

ConocoPhillips

During quarterly groundwater monitoring in June 2006, one ConocoPhillips Well (U-13) contained a measurable thickness of SPH of 0.28 foot. Additionally, a sheen was observed in Wells EX-39B and U-4.

During quarterly groundwater monitoring in September 2006, two ConocoPhillips Wells (U-5 and U-13) contained measurable thicknesses of SPH, measuring 0.06 foot and 0.07 foot, respectively. Sheens were observed in Wells EX-39B and U-4. SPH was observed in Well U-5A; however, a thickness could not be measured due fouling of the oil/water interface probe by highly viscous SPH. SPH has not been observed in Well U-5A since September 2004 (sheen) and measurable SPH has not been observed since September 2002.

3.0 SEPARATE PHASE HYDROCARBON RECOVERY

Monthly manual recovery of SPH was initiated at the Willbridge Facility in February 1997. SPH recovery is performed in each well where measurable SPH is observed during the previous quarterly gauging event. Manual SPH recovery consists of manual bailing, pumping, or the use of a sorbent sock installed in the well.

Approximately 162 gallons of SPH have been removed to date by the above-referenced manual recovery methods. Recovered SPH volumes for this reporting period (April 2006 to September 2006) totaled approximately 5 gallons. The SPH recovery data is presented in Table 1.

In November and December 2001, a "U"-shaped cut-off wall encompassing the stormwater trench backfill was installed on the ConocoPhillips Terminal. The cut-off wall was designed to intercept SPH and groundwater migrating along the backfill of a 60-inch diameter storm sewer trench. The cut-off wall was constructed with 20-foot-long steel sheet-pile with sealed joints between the sheet-piles. A groundwater and SPH recovery system is used to extract groundwater and SPH from a series of wells located behind the cut-off wall.

In addition to the monthly SPH recovery events, SPH recovery has also been conducted near the outfall of the 60-inch diameter storm sewer. Since December of 2001, SPH recovery is performed using permanent recovery wells installed behind the cutoff wall. Approximately 4,210 gallons of SPH have been recovered to date from the backfill material around the storm sewer outfall. During the second and third quarter of 2006, the treatment system continued to recover SPH. During this reporting period, the recovered SPH reached capacity in the batch tank and was transported from the site to Oil-Re-Refining in Portland, Oregon for recycling.

Containment booms currently border the shoreline between the Chevron and ConocoPhillips docks, and from the south edge of the ConocoPhillips dock to the southern property line (beyond the current Doane Avenue storm sewer outfall). Additionally, secondary and tertiary containment booms are located inside of the first boom around the current 60-inch Doane Avenue storm sewer outfall pipe.

A groundwater recovery system was installed in the 1988 trench at the mouth of the Holbrook slough and periodically operated since July 2004. The system included a total fluids, double diaphragm pump with a float control system set to maintain a depressed water level in the recovery sump and trench. Since July 30, 2004, 2,515,105 gallons of water have been recovered and treated at water treatment system at the Chevron terminal. The system was in operation during periods of low river levels. The system was decommission during the third quarter of 2006 and replace by a sheet pile cut-off wall.

The sheet pile cut-off wall was installed during the third quarter of 2006. The design consists of a near linear, 200-foot-length sheet-pile wall along the shoreline in the area between the Chevron and ConocoPhillips docks. Similar to the existing cutoff wall around the 60-inch outfall, extraction wells were installed behind the wall to remove impacted groundwater and recovery SPH. The existing treatment system for the 60-inch cutoff wall will be used to separate any recovered SPH and treat impacted groundwater.

In 2004, during the replacement of a storm drain at the Chevron terminal, a CDF/bentonite wall and recovery sump were installed in the storm drain backfill. The recovery sump (Well CR-8A) and Well CR-8 (downgradient of the wall) have been monitored since installation. A comparison of water elevations indicates that the wall is

effectively blocking the migration of water along the storm drain backfill material. To date no SPH has been measured in the recovery sump.

4.0 ISSUES ENCOUNTERED DURING THE SECOND AND THIRD QUARTER 2006

No notable issues occurred during this last reporting period.

5.0 ACTIVITIES SCHEDULED FOR THE FOURTH QUARTER 2006 AND FIRST QUARTER OF 2007 (OCTOBER 2006 THROUGH MARCH 2007)

The following tasks are planned for the fourth quarter of 2006 and first quarter of 2007:

- Measure depth to water and SPH in all Willbridge Facility wells during the fourth quarter of 2006 (December) and first quarter of 2007 (March) monitoring events.
- Sample selected Willbridge Facility wells during the March (first quarter) 2007 sampling event.
- Perform monthly SPH recovery from wells that have historically contained SPH.
- Operate the 60-inch storm sewer groundwater treatment system.
- Start-up of the Chevron-ConocoPhillips cutoff wall at the mouth of Holbrook Slough (fourth quarter of 2006).

6.0 REMARKS

The services described in this report represent Delta's professional opinions based upon the currently available information and are arrived at in accordance with currently acceptable professional standards. This report is based upon a specific scope of work requested by the client. The Contract between Delta and its client outlines the scope of work, and only those tasks specifically authorized by that contract or outlined in this report were performed. This report is intended only for the use of Delta's Client and anyone else specifically listed on this report. Delta will not and cannot be liable for unauthorized reliance by any other third party. Other than as contained in this paragraph, Delta makes no express or implied warranty as to the contents of this report.

TABLE 1A
GROUNDWATER ELEVATION AND SPH RECOVERY DATA
ChevronTexaco Company - Willbridge Terminal
Portland, Oregon

Well Designation (TOC)	Date Gauged	Depth to Groundwater	Depth to SPH (feet)	SPH Thickness (feet)	Groundwater Elevation	SPH Recovered* (gallons)

NOTES:
Wells B-8 and B-31 were abandoned after first quarter 2000
NP = No measurable product
NA = Not Applicable
NM = Not Measured
NR = None Recovered
* = SPH Recovered for latest quarter monitored
** = Well Contains a Sock for Product Recovery
*** = Product Recovery Part of Chevron Ethanol Study
E = 3/4 inch-diameter well/ SPH thickness estimated with bailer
- = No measurable product thickness
Groundwater elevations for wells with product thicknesses have been corrected using 0.8
GWE = TOC -(DTW - (0.8 x DTP - DTW)) Where 0.8 = The density of the SPH

NOTES:
If SPH Thickness equals 0.0 feet, then non-measurable sheen was observed
NP - No measurable product
NA - Not Applicable
NM - Not Measured
* - SPH recovered for latest quarter monitored
** - Unable to determine due to SPH viscosity
GWE = TOC -(DTW - (0.8 x DTP - DTW)) Where 0.8 = The density of the SPH

COPPOR00007106

Notes:
2/00 and 5/00 data from IT Corporation
8/00, 11/00, 2/01 and 5/01 data from KHM Environmental Management, Inc.
NS/F = Not sampled floating product present
NS/S = Not sampled sheen present
µg/l = Micrograms per Liter
ND = Not detected at or below detection limit
<0.200 = Not detected above the laboratory method reporting limit (MRL) of 0.200 µg/L.
BTEX analysis by USEPA Method 8021B
dup* = duplicate for B-30 submitted as blind duplicate labeled as B-50
dup** = duplicate for B-30 submitted as blind duplicate labled as B-31
dup*** = duplicate for B-30 submitted as blind duplicate labeled as B-99
TB-LB = trip blank
[1] = The reporting limit for this analyte was raised to compensate for the limited sample quantity available for analysis.
[2] = The reporting limit for this analyte was raised to compensate for the limited sample quantity available for analysis.

TABLE 3
GROUNDWATER ANALYTICAL RESULTS - PAH COMPOUNDS
Willbridge Terminals
Portland, Oregon

Well Identification	Date Sampled	Acenaphthene	Acenaphthylene	Anthracene	Benzo (a) anthracene	Benzo (a) pyrene	Benzo (b) fluoranthene	Benzo (g,h,i) perylene	Benzo (k) fluoranthene	Chrysene	Dibenzo (a,h) anthracene	Fluoranthene	Fluorene	Indeno (1,2,3-cd) pyrene	Naphthalene	Phenanthrene	Pyrene
Number of benzene rings		2	2	3	4	5	4	5	4	4	5	3	2	5	2	3	4
		(µg/l)	(µg/l)	(µg/l)	(µg/l)	(µg/l)	(µg/l)	(µg/l)	(µg/l)	(µg/l)	(µg/l)	(µg/l)	(µg/l)	(µg/l)	(µg/l)	(µg/l)	(µg/l)

NOTES:
- = Not sampled, not analyzed, not applicable
µg/l = Micrograms per Liter
ND = Not detected at or above method detection limit
2/00 and 5/00 data from IT Corporation
8/00, 11/00, 2/01 and 5/01 data from KHM Environmental Management, Inc.
IT Corp Data recorded as reported in Second Quarter 2000 Report
Analytes reported in alphabetical order
NS/F = Not sampled floating product present
NS/S = Not sampled sheen present
[1] = Sample rerun outside of hold time due to low surrogate recovery reported in the initial sample as a result of an extraction error.
[2] = Sample ID was misidentified by the laboratory as D-2
[3] = Analytical results are from a re-sample due to container breakage at the laboratory of the sample collected on 3/14/06.
[4] = Analyte was detected in the associated Method Blank.
[5] = Naphthalene was detected in the Method Blank at 0.0165 µg/L. Sample has a detection for naphthalene at 0.0468 µg/L. The result has been qualified and should be considered an estimate. Unable to perform corrective action due to insufficient volume left.
[6] = The reporting limit for this analyte was raised due to matrix interference.
[7] = Analyte was detected in the blank at greater than one-half of the MRL, but samples are ND.
[8] = The reporting limit was raised due to dilution necessary for analysis. Sample contains high levels of reported analyte, non-target analyte, and/or matrix interference.
[9] = Analyte was detected in the associated method blank. Analyte concentration in the sample is greater than 10 times the concentration found in the method blank.
dup* = duplicate for B-30 submitted as blind duplicate labeled as B-50
dup**= duplicate for B-30 submitted as blind duplicate labled as B-31
dup***= duplicate for B-30 submitted as blind duplicate labeled as B-130
PAHs by EPA Method 8270M-SIM

TABLE 4
GROUNDWATER ANALYTICAL RESULTS - TOTAL METALS
Willbridge Terminals
Portland, Oregon

Sample I.D.	Sample Date	Arsenic (mg/l)	Barium (mg/l)	Cadmium (mg/l)	Chromium (mg/l)	Copper (mg/l)	Lead (mg/l)	Mercury (mg/l)	Selenium (mg/l)	Silver (mg/l)	Zinc (mg/l)

NOTES:
ND - Not detected at laboratory reporting limits
NS/F = Not sampled floating product present
NS/S = Not sampled sheen present
2/00 and 5/00 data from IT Corporation
8/00, 11/00, 2/01 and 5/01 data from KHM Environmental Management, Inc.
Sample locations are shown on Figure 2
Analytical Reports are included in Attachment B
dup* = duplicate for B-30 submitted as blind duplicate labeled as B-50
dup**= duplicate for B-30 submitted as blind duplicate labeled as B-31
dup***= duplicate for B-30 submitted as blind duplicate labeled as B-130
[1] = Sample ID was misidentified by the laboratory as D-2
[2] = Sample ID was misidentified by the laboratory as U-2
[3] = The reporting limit for this analyte was raised due to matrix interference.
[4] = The sample container type or preservation does not meet method specifications using EPA Method 1631 modified. The sample was also analyzed for total mercury by EPA Method 7470A. Total mercury was not detected above the laboratory MRL of 0.000200 mg/l.
[5] = Estimated value
[5] = Estimated value
Total Metals Analysis by EPA 6000/7000 Series Methods
Total mercury analysis by EPA 6000/7000 Series Methods or EPA Method 1631 Modified

NOTES:
µg/l = micrograms per Liter
<0.00985 = Analyte not detected above the laboratory method reporting limit (MRL) of 0.00985 µg/L
Screening Level Values (SLVs) taken from Table 3-1 of the Portland Harbor Joint Source Control Strategy (JSCS) guidance document, dated December 2005.
NRWQC = National Recommended Water Quality Criteria
AWQC = Ambient Water Quality Criteria
Bold face font indicates analyte was detected above the applicable screening levels presented in Table 3-1 of the Portland Harbor JSCS guidance document, dated December 2005.
NS = Not sampled
N/A = Not applicable
ND = Not detected
VOCs = Volatile Organic Compounds
PAHs = Polynuclear Aromatic Compounds
[1] = The reporting limit was raised due to dilution necessary for analysis. Sample contains high levels of reported analyte, non-target analyte, and/or matrix interference.
[2] = The reporting limit for this analyte was raised due to matrix interference.
[3] = Analyte was detected in the associated method blank.
[4] = Naphthalene was detected in the Method Blank at 0.0165 µg/L. Sample has a detection for naphthalene at 0.0468 µg/L. The result has been qualified and should be considered an estimate. Unable to perform corrective action due to insufficient volume left.
[5] = Analyte was detected in the associated blank at greater than one-half the MRL, but samples are ND.
[6] = Analyte was detected in the associated method blank. Analyte concentration in the sample is greater than 10 times the concentration found in the method blank.

APPENDIX A

GROUNDWATER MONITORING AND SAMPLING PROCEDURES, CERTIFIED ANALYTICAL LABORATORY REPORTS AND CHAIN-OF-CUSTODY DOCUMENTATION

Groundwater Monitoring and Sampling

Before the sampling event, Delta measured depth to water in each groundwater monitoring well at the facility with a Solinst Electronic Oil/Water Interface Probe. This information was recorded on waterproof field sheets. Groundwater elevations (GWE) were measured to an accuracy of 0.01 feet. Wells were sampled after purging three casing volumes of water from the well (or until dry). Wells with observable amounts of SPH were not sampled. After the well had recharged to approximately 80% of static level, samples were collected using a disposable polyethylene bailer and placed in the appropriate laboratory-provided containers. Samples were labeled, placed into ice filled coolers, logged onto chain-of-custody forms and transported to the laboratory.

RE: CVX Willbridge / Chevron #100-1868

Enclosed are the results of analyses for samples received by the laboratory on 09/26/06 17:00. The following list is a summary of the Work Orders contained in this report, generated on 10/13/06 12:26.

If you have any questions concerning this report, please feel free to contact me.

Work Order	Project	ProjectNumber
PPI1103	CVX Willbridge / Chevron #1	100-1868-OML

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

Report Specific Notes:

D-19	-	Detected hydrocarbons do not have pattern and range consistent with typical petroleum products and may be due to biogenic interference.
DP-1	-	Sample RPD exceeded the laboratory control limit.
Q-02	-	The spike recovery for this QC sample is outside of the laboratory's established control limits due to sample matrix interference.
R-03	-	The reporting limit for this analyte was raised due to matrix interference.
R-05	-	Reporting limits raised due to dilution necessary for analysis. Sample contains high levels of reported analyte, non-target analyte, and/or matrix interference.
S-02	-	The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present.

Laboratory Reporting Conventions:

DET	-	Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
ND	-	Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
NR/NA	-	Not Reported / Not Available
dry	-	Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
wet	-	Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
RPD	-	RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
MRL	-	METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
MDL*	-	METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
Dil	-	Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
Reporting Limits	-	Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
Electronic Signature	-	Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Analytical Case Narrative
TestAmerica - Portland, OR

PPI1206

Polynuclear Aromatic Compounds per EPA 8270M-SIM

Naphthalene was detected in the Method Blank at 0.0165 ug/L. Sample MW-33 has a detection for Naphthalene at 0.0468 ug/L. The result for MW-33 has been qualified and should be considered an estimate. Unable to perform corrective action due to insufficient volume left.

No additional anomalies or discrepancies were associated with this analysis other than those already qualified in the data.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

Report Specific Notes:

A-01	-	Suspected lab contamination
B-18	-	Analyte was detected in the blank at greater than one-half of the MRL, but samples are ND.
BK-2	-	Analyte was detected in the associated Method Blank.
BK-3	-	Analyte was detected in the associated Method Blank. Analyte concentration in the sample is greater than 10x the concentration found in the method blank.
Q-02	-	The matrix spike recovery, and/or RPD, for this QC sample is outside of established control limits due to sample matrix interference.
Q-03	-	The matrix spike recovery, and/or RPD, for this QC sample cannot be accurately calculated due to the high concentration of analyte already present in the source sample.
Q-06	-	RPD is not applicable for analyte concentrations less than 5 times the MRL.
R-03	-	The reporting limit for this analyte was raised due to matrix interference.
X	-	See case narrative.

Laboratory Reporting Conventions:

DET	-	Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
ND	-	Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
NR/NA	-	Not Reported / Not Available
dry	-	Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
wet	-	Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
RPD	-	RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
MRL	-	METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
MDL*	-	METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
Dil	-	Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
Reporting Limits	-	Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
Electronic Signature	-	Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

Report Specific Notes:

A-01	-	Suspected lab contamination
B-17	-	Analyte was detected in the blank at greater than one-half of the MRL but less than 1/10 the concentration in the sample.
B-18	-	Analyte was detected in the blank at greater than one-half of the MRL, but samples are ND.
BK-2	-	Analyte was detected in the associated Method Blank.
BK-3	-	Analyte was detected in the associated Method Blank. Analyte concentration in the sample is greater than 10x the concentration found in the method blank.
DP-1	-	Sample RPD exceeded the laboratory control limit.
Q-01	-	The spike recovery for this QC sample is outside of established control limits. Review of associated batch QC indicates the recovery for this analyte does not represent an out-of-control condition for the batch.
Q-02	-	The matrix spike recovery, and/or RPD, for this QC sample is outside of established control limits due to sample matrix interference.
Q-02a	-	The spike recovery for this QC sample is outside of the laboratory's established control limits due to sample matrix interference.
R-01	-	The reporting limit for this analyte was raised to compensate for the limited sample quantity available for the analysis.
R-03	-	The reporting limit for this analyte was raised due to matrix interference.
R-05	-	Reporting limits raised due to dilution necessary for analysis. Sample contains high levels of reported analyte, non-target analyte, and/or matrix interference.

Laboratory Reporting Conventions:

DET	-	Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
ND	-	Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
NR/NA	-	Not Reported / Not Available
dry	-	Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
wet	-	Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
RPD	-	RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
MRL	-	METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
MDL*	-	METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
Dil	-	Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
Reporting Limits	-	Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
Electronic Signature	-	Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Delta Environmental Consultants - Tigard	Project Name:	**Willbridge / Kindermorgan**	
7150 SW Hampton - Suite 220	Project Number:	PTWB-03A-6	Report Created:
Tigard, OR 97223	Project Manager:	Tim Browning	10/24/06 17:12

Notes and Definitions

Report Specific Notes:

A-01	-	Suspected lab contamination
B-18	-	Analyte was detected in the blank at greater than one-half of the MRL, but samples are ND.
BK-3	-	Analyte was detected in the associated Method Blank. Analyte concentration in the sample is greater than 10x the concentration found in the method blank.
Q-02	-	The matrix spike recovery, and/or RPD, for this QC sample is outside of established control limits due to sample matrix interference.
Q-03	-	The matrix spike recovery, and/or RPD, for this QC sample cannot be accurately calculated due to the high concentration of analyte already present in the source sample.
Q-06	-	RPD is not applicable for analyte concentrations less than 5 times the MRL.
R-03	-	The reporting limit for this analyte was raised due to matrix interference.
R-05	-	Reporting limits raised due to dilution necessary for analysis. Sample contains high levels of reported analyte, non-target analyte, and/or matrix interference.

Laboratory Reporting Conventions:

DET	-	Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
ND	-	Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
NR/NA	-	Not Reported / Not Available
dry	-	Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
wet	-	Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
RPD	-	RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
MRL	-	METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
MDL*	-	METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
Dil	-	Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
Reporting Limits	-	Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
Electronic Signature	-	Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

Report Specific Notes:

BK-3	-	Analyte was detected in the associated Method Blank. Analyte concentration in the sample is greater than 10x the concentration found in the method blank.
Q-02	-	The matrix spike recovery, and/or RPD, for this QC sample is outside of established control limits due to sample matrix interference.
Q-03	-	The matrix spike recovery, and/or RPD, for this QC sample cannot be accurately calculated due to the high concentration of analyte already present in the source sample.
Q-06	-	RPD is not applicable for analyte concentrations less than 5 times the MRL.
R-01	-	The reporting limit for this analyte was raised to compensate for the limited sample quantity available for the analysis.
R-03	-	The reporting limit for this analyte was raised due to matrix interference.
R-05	-	Reporting limits raised due to dilution necessary for analysis. Sample contains high levels of reported analyte, non-target analyte, and/or matrix interference.
S-09	-	Surrogate recovery is outside control limits due to matrix interference.

Laboratory Reporting Conventions:

DET	-	Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
ND	-	Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
NR/NA	-	Not Reported / Not Available
dry	-	Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
wet	-	Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
RPD	-	RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
MRL	-	METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
MDL*	-	METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
Dil	-	Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
Reporting Limits	-	Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
Electronic Signature	-	Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy.* Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

Report Specific Notes:

A-01	-	The detected hydrocarbons appear to be due to heavy gas/light diesel components.
BK-3	-	Analyte was detected in the associated Method Blank. Analyte concentration in the sample is greater than 10x the concentration found in the method blank.
D-15	-	Detected hydrocarbons have non-petroleum peaks or elution pattern that suggests the presence of biogenic interference.
Q-01	-	The matrix spike recovery, and/or RPD, for this QC sample is outside of established control limits. Failure of a matrix spike QC sample does not represent an out-of-control condition for the batch.
Q-06	-	RPD is not applicable for analyte concentrations less than 5 times the MRL.
R-01	-	The reporting limit for this analyte was raised to compensate for the limited sample quantity available for the analysis.
R-03	-	The reporting limit for this analyte was raised due to matrix interference.
R-05	-	Reporting limits raised due to dilution necessary for analysis. Sample contains high levels of reported analyte, non-target analyte, and/or matrix interference.

Laboratory Reporting Conventions:

DET	-	Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
ND	-	Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
NR/NA	-	Not Reported / Not Available
dry	-	Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
wet	-	Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
RPD	-	RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
MRL	-	METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
MDL*	-	METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
Dil	-	Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
Reporting Limits	-	Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
Electronic Signature	-	Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

CERTIFIED ANALYTICAL LABORATORY REPORTS AND
CHAIN-OF-CUSTODY DOCUMENTATION

1.0 EXECUTIVE SUMMARY

Delta Consultants (Delta) and ARCADIS U.S., Inc. (ABBL [formerly known as Blasland, Bouck & Lee, Inc.]) performed monthly separate-phase hydrocarbon recovery, quarterly well gauging (June 2007 and September 2007), and semi-annual (September 2007) groundwater sampling as part of the remedial investigation/feasibility study work at the Willbridge Bulk Fuel Facilities (Willbridge Facility). The Willbridge Facility is comprised of terminals owned by Chevron Products Company (Chevron), Kinder Morgan Liquid Terminals, LLC (KMLT), and ConocoPhillips Company (ConocoPhillips). This report fulfills the requirement of Section 7F of Oregon Department of Environmental Quality (DEQ) Consent Order WMCSR-NW-94-06.

2.0 GROUNDWATER MONITORING AND SAMPLING

Groundwater monitoring and sampling activities, along with separate-phase hydrocarbon (SPH) recovery were performed at the Willbridge Facility from April 2007 through September 2007. The Willbridge Facility is located in northwest Portland, Oregon on Northwest Front Avenue, along the Willamette River (see Figure 1).

Monitoring activities were performed on June 18, 2007 (second quarter 2007) and September 17 through September 20, 2007 (third quarter 2007) and consisted of measuring depth to groundwater and SPH thickness in all wells. Sampling activities performed at the Chevron, KMLT, and ConocoPhillips Terminals on September 17 through September 20, 2007 consisted of measuring depth to groundwater and collecting groundwater samples from select wells. Groundwater samples were analyzed for dissolved petroleum hydrocarbon constituents and selected metals. During the third quarter 2007 sampling event, select wells near the Willamette River were also monitored in accordance with the DEQ approved Sampling and Analysis Plan Addendum dated September 22, 2006 prepared by Delta to complete the groundwater source control evaluation in the areas not addressed by the cutoff walls located at the Chevron and ConocoPhillips facilities. Monitoring and sampling activities are described in the following sections.

Based upon results of the previous quarterly monitoring activities, several wells were monitored for the presence of SPH on a monthly basis. SPH recovery was performed on a monthly basis for wells containing measurable amounts of SPH between April and September of 2007.

2.1 Hydrogeologic Analysis

Depth-to-groundwater measurements were collected from each monitoring well in June and September of 2007 (see Tables 1A through 1C). A site facility map showing groundwater elevation contours and SPH thicknesses measured in wells in September 2007 is presented as Figure 2. Figure 3 shows the groundwater elevation contours and SPH thicknesses measured in wells located north east of Front Avenue (riverfront wells). Groundwater monitoring procedures are included in Appendix A.

During the second quarter 2007 and third quarter 2007, groundwater elevations across the facility ranged from approximately 8.31 feet to 31.97 feet above mean sea level. Groundwater flow direction is generally northeasterly, toward the Willamette River.

2.2 Willamette River

The daily mean Willamette River stage, measured at the Morrison Bridge river gauge and converted to the City of Portland (COP) datum during the second quarter 2007 and third quarter of 2007 ranged from a high of 11.39 feet (COP datum) on April 1, 2007 to a low of 4.26 feet (COP datum) on September 20, 2007. The average river stage elevation was approximately 7.74 feet (COP datum) between April 1, 2007 and September 30, 2007. Precipitation and river stage data are presented on Figure 4.

2.3 Groundwater Analytical Results

Groundwater samples were collected from selected Chevron, KMLT, and ConocoPhillips monitoring wells on September 18, 19, and 20, 2007, and analyzed in accordance with consent order WMCSR-NWR-94-06, the revised sampling agreement (May 11, 2001), and the 2006 Groundwater Monitoring Sampling and Analysis Plan Addendum (September 22, 2006). The list of analytes included benzene, toluene, ethylbenzene, total xylenes (BTEX), and methyl tert-butyl ether (MTBE) using Environmental Protection Agency (EPA) Method 8260B, polynuclear aromatic hydrocarbons (PAHs) using EPA Method 8270M-SIM, and total RCRA metals (arsenic, barium, cadmium, chromium, copper, lead, mercury, selenium, silver, and zinc) using EPA Method 6000/7000 Series Methods. ConocoPhillips wells U-14 through U-21 were additionally analyzed for TPH using Northwest Methods NWTPH-Gx and NWTPH-Dx with silica gel cleanup. Selected ConocoPhillips wells B-40, P-1, and U-5, Chevron wells B-10 and CR-1 and Kinder Morgan wells MW-33, MW-34, MW-36, MW-37, and MW-40 were analyzed using lower level reporting limits, consistent with the EPA's 2004 National Recommended Water Quality Criteria (NRWQC) screening levels. The purpose of using lower level reporting limits is to provide usable comparison data for evaluating groundwater source control in the areas not addressed by the cutoff walls located at the Chevron and ConocoPhillips facilities. Groundwater sampling procedures are presented in Appendix A. Groundwater samples were not collected from wells containing observable sheens or measurable quantities of SPH.

Portland Harbor Joint Source Control Screening Level Comparisons of Select Wells

Groundwater analytical results collected from ConocoPhillips wells B-40, P-1, and U-5, Chevron wells B-10 and CR-1, and Kinder Morgan wells MW-33, MW-34, MW-36, MW-37, and MW-40 were compared to the screening level values (SLVs) presented in Table 3-1 of the *Portland Harbor Joint Source Control Strategy* guidance document, dated December 2005. Analytical results were compared to the EPA's 2004 NRWQC (organism only) SLVs for human health (fish consumption), and SLVs for ecological receptors (chronic). Results were also compared to the DEQ's 2004 AWQC (organism only) and SLVs for Human Health and ecological receptors (chronic).

BTEX, PAH, and total metals laboratory analytical results for the third quarter 2007 sampling event are presented in Tables 2 through 4. Portland Harbor Joint Source Control groundwater screening level comparisons of analytes detected in select wells are presented in Table 5. Laboratory analytical reports and chain-of-custody documentation are included in Appendix A.

Evaluation of the groundwater data collected from the selected wells from the past three sampling events identifies Chevron well B-10, Kinder Morgan well MW-37, and ConocoPhillips wells B-40 and U-5 as monitoring points which exceed PHJSCS PAH screening levels in groundwater, specifically benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. All source control evaluation monitoring wells exceeded one or more metals screening levels. ConocoPhillips well P-1 did not yield sufficient sample for PAH and metals analyses, with the exception of mercury analysis, during the third quarter 2007 sampling event. None of the source control monitoring wells exceeded the BTEX and MTBE screening levels.

The March 2007 sampling event concluded the requested additional sampling of these selected wells in response to the DEQ Revised Source Control Evaluation letter dated June 15, 2006 and subsequent sampling addendum dated September 22, 2006. These wells will continue to be sampled on a semiannual basis to evaluate concentration trends. PAH concentrations are generally decreasing in the selected wells based on a comparison of concentrations from the previous sampling events.

2.4 Separate Phase Hydrocarbon Occurrence

Based upon the results of the previous quarterly monitoring activities, appropriate wells were monitored for the presence of SPH on a monthly basis. SPH recovery was performed monthly on wells containing measurable amounts of SPH between April and September 2007. The detected SPH thicknesses measured during the June and September 2007 monitoring events are included in Table 1A to 1C. Observable sheens and SPH thicknesses measured during the September 2007 monitoring event are presented in Figure 2.

Chevron

During quarterly groundwater monitoring in June 2007, ABBL conducted monthly SPH monitoring. Six Chevron Wells (CR-6, CR-10, CR-15, CR-19, CR-25, and GPW-2) contained measurable thicknesses of SPH, ranging from 0.04 foot in Wells CR-6 and CR-10 to 0.77 foot in Well GPW-2. Additionally, trace SPH was observed in Wells B-24 and CR-7. SPH thicknesses were consistent with historical measurements.

During quarterly groundwater monitoring in September 2007, seven Chevron Wells (CR-10, CR-11, CR-15, CR-19, CR-21A, CR-25, and GPW-2) contained measurable thicknesses of SPH, ranging from 0.05 foot in Well CR-11 to 0.75 foot in Well CR-10. Additionally, trace SPH was observed in Wells B-9, B-20, CR-6, CR-7, EX-1. SPH thicknesses were consistent with historical measurements.

KMLT

During quarterly groundwater monitoring in June 2007, one KMLT Well (MW-7) contained a measurable SPH thickness of 0.22 foot. Additionally, sheen was observed in Wells MW-6, MW-19, MW-23, MW-28, and MW-31. SPH was observed in Well MW-24; however, a thickness could not be measured due to fouling of the oil/water interface probe by highly viscous SPH in the well.

During quarterly groundwater monitoring in September 2007, three KMLT Wells (MW-7, and MW-31) contained measurable thicknesses of SPH, ranging from 0.18 foot in Well MW-31 to 0.26 foot in Well MW-7. SPH was observed in Well MW-24; however, a thickness could not be measured due to fouling of the oil/water interface probe by highly viscous SPH. Additionally, sheen was observed in Wells MW-19, MW-22, MW-23, and MW-35.

ConocoPhillips

During quarterly groundwater monitoring in June 2007, ConocoPhillips Well U-13 contained a thickness of SPH measuring 0.31 foot. SPH was observed in U-5A; however, a thickness could not be measured due to fouling of the oil/water interface probe by highly viscous SPH.

During quarterly groundwater monitoring in September 2007, ConocoPhillips Well U-13 contained a thickness of SPH measuring 0.03 foot. Additionally, sheen was observed in Wells B-4, B-40, and U-4.

3.0 SEPARATE PHASE HYDROCARBON RECOVERY

Monthly manual recovery of SPH was initiated at the Willbridge Facility in February 1997. SPH recovery is performed in each well where measurable SPH is observed during the previous quarterly gauging event. Manual SPH recovery consists of bailing, pumping, or the use of a sorbent sock installed in the well.

Approximately 179 gallons of SPH have been removed to date by the above-referenced manual recovery methods. Recovered SPH volumes for this reporting period (April 2007 to September 2007) totaled approximately 8 gallons. The SPH recovery data is presented in Table 1.

In November and December 2001, a "U"-shaped cut-off wall encompassing the stormwater trench backfill was installed on the ConocoPhillips Terminal. The cut-off wall was designed to intercept SPH and groundwater migrating along the backfill of a 60-inch diameter storm sewer trench. The cut-off wall was constructed with 20-foot-long steel sheet-pile with sealed joints between the sheet-piles. A groundwater and SPH recovery system is used to extract groundwater and SPH from a series of wells located behind the cut-off wall.

In addition to the monthly SPH recovery events, SPH recovery has also been conducted near the outfall of the 60-inch storm sewer outfall. Since December of 2001, SPH recovery is performed using permanent recovery wells installed behind the cutoff wall. Approximately 4,265 gallons of SPH have been recovered to date from the backfill material around the storm sewer outfall. During the second and third quarter of 2007, the treatment system continued to recover SPH. The recovered SPH for this reporting period is presently stored in an on-site batch tank and has not reached capacity for transport to Oil-Re-refining in Portland, Oregon for recycling.

Containment booms currently border the shoreline between the Chevron and ConocoPhillips docks, and from the south edge of the ConocoPhillips dock to the southern property line (beyond the current 60-inch storm sewer outfall). Additionally, secondary and tertiary containment booms are located inside of the first boom around the 60-inch storm sewer outfall.

A groundwater recovery system was installed in the 1988 trench at the mouth of the Holbrook slough and periodically operated since July 2004. The system included a total fluids double diaphragm pump with a float control system set to maintain a depressed water level in the recovery sump and trench. Since July 30, 2004, 2,515,105 gallons of water have been recovered and treated at the water treatment system at the Chevron terminal. The system was in operation during periods of low river levels. The system was decommissioned during the third quarter of 2006 and replaced by a sheet pile cut-off wall (discussed below).

In 2004, during the replacement of a storm drain at the Chevron terminal, a CDF/bentonite wall and recovery sump were installed in the storm drain backfill. The recovery sump (Well CR-8A) and Well CR-8 (downgradient of the wall) have been monitored since installation. A comparison of water elevations indicates that the wall is effectively blocking the migration of water along the storm drain backfill material. To date, no SPH has been measured in the recovery sump.

A sheet pile cut-off wall at the former 27-inch storm sewer outfall was installed during the third quarter of 2006. This wall replaced the Holbrook Slough recovery sump and trench. The design consists of a near linear, 200-foot-length sheet-pile wall along the shoreline in the area between the Chevron and ConocoPhillips docks. Similar to the existing cutoff wall around the 60-inch storm sewer outfall, extraction wells were installed behind the wall to remove impacted groundwater and recovery SPH.

The former 27-inch storm sewer outfall cutoff wall treatment system began operation in January 2007. The existing treatment system for the 60-inch storm sewer cutoff wall is used to separate recovered SPH and treat impacted groundwater from the former 27-inch storm sewer area.

4.0 ISSUES ENCOUNTERED DURING THE SECOND AND THIRD QUARTER OF 2007

During the second and third quarter COP continued to pursue permits with the City of Portland to repair the storm sewer system in Tank Farm 1 and laterals in Doane Avenue. This work will be completed during the fourth quarter 2007. During the second and third quarter KMLT repaired cracks in the concrete flume channeling Saltzman Creek through the facility toward the Willamette River. During the second and third quarter, Chevron continued to evaluate the onsite storm water system which included conducting video survey and line cleanouts. Results from this investigation was submitted in the Draft Storm Water Sampling Plan (ABBL 2007). The Draft Storm Water Sampling Plan also included proposed catch basin sediment sampling locations, aqueous storm water sampling locations, and methodology for reduction in in storm water sampling scope. Catch basin sediment sampling was conducted in October. Aqueous storm water sampling will be conducted during the fourth quarter. During the second and third quarter ABBL repaired select groundwater monitoring well monuments, abandoned poorly installed wells (B-9, B-13, and B-32), and installed new groundwater monitoring wells (B-9A, CR-28A, and CR-33). Well repair and installation activities will be documented in a technical memorandum. In addition, ABBL conducted a small excavation down gradient of the newly installed 27-inch groundwater cutoff wall to remove residual contamination associated with the former Holbrook Trench. This removal was targeted during low River stage to maximize exposed area. This excavation will be documented in a technical memorandum.

5.0 ACTIVITIES SCHEDULED FOR THE FOURTH QUARTER OF 2007 AND FIRST QUARTER OF 2008 (OCTOBER 2007 THROUGH MARCH 2008)

The following tasks are planned for the fourth quarter of 2007 and first quarter of 2008:

- Measure depth to water and SPH in all Willbridge Facility wells during the fourth quarter (December 2007) and first quarter (March 2008) monitoring events.
- Sample selected Willbridge Facility wells during the March (second quarter) 2008 sampling event.
- Perform monthly SPH recovery from wells that have historically contained SPH.
- Continue operation of the 60-inch storm sewer outfall cutoff wall and the former 27-inch storm sewer outfall cutoff wall treatment system.
- Line in place storm sewer laterals at the ConocoPhillips terminal and repair COP manhole #12. (December 2007)
- Installation of monitoring well network to evaluate cutoff walls effectiveness (December 2007)
- Installation of deep monitoring wells for locality of facility evaluation at COP and KLMT Terminals.
- Submittal of Chevron Well Repair Technical Memorandum and the Wedge Excavation Technical Memorandum
- Collection of aqueous storm water samples from the Chevron Terminal and preparation of summary technical memorandums
- Evaluation of the former 1973 sump at the Chevron Terminal

6.0 REMARKS

The services described in this report represent Delta's professional opinions based upon the currently available information and are arrived at in accordance with currently acceptable professional standards. This report is based upon a specific scope of work requested by the client. The Contract between Delta and its client outlines the scope of work, and only those tasks specifically authorized by that contract or outlined in this report were performed. This report is intended only for the use of Delta's Client and anyone else specifically listed on this report. Delta will not and cannot be liable for unauthorized reliance by any other third party. Other than as contained in this paragraph, Delta makes no express or implied warranty as to the contents of this report.

NOTES:
Wells B-8 and B-31 were abandoned after first quarter 2000
NP = No measurable product
NA = Not Applicable
NM = Not Measured
NR = None Recovered
* = SPH Recovered for latest quarter monitored
** = Well Contains a Sock for Product Recovery
*** = Product Recovery Part of Chevron Ethanol Study
E = 3/4 inch-diameter well/ SPH thickness estimated with bailer
- = No measurable product thickness
Groundwater elevations for wells with product thicknesses have been corrected using 0.8
GWE = TOC -(DTW - (0.8 x DTP - DTW)) Where 0.8 = The density of the SPH

	9/17/2007	15.19	NP	-	18.56	NA

NOTES:
If SPH Thickness equals 0.0 feet, then non-measurable sheen was observed
NP - No measurable product
NA - Not Applicable
NM - Not Measured
* - SPH recovered for latest quarter monitored
** - Unable to determine due to SPH viscosity
GWE = TOC -(DTW - (0.8 x DTP - DTW)) Where 0.8 = The density of the SPH

TABLE 1C
GROUNDWATER ELEVATION AND SPH REMOVAL DATA
ConocoPhillips - Willbridge Terminal
Portland, Oregon

Well Designation (TOC)	Date Gauged	Depth to Groundwater	Depth to SPH (feet)	SPH Thickness (feet)	Groundwater Elevation	SPH Recovered* (gallons)

NOTES:
NP = No measurable product
NA = Not Applicable
NM = Not Measured
* = SPH Recovered for latest quarter monitored
** - Unable to determine due to SPH viscosity
- = No Measurable Product Thickness
GWE = TOC -(DTW - (0.8 x DTP - DTW)) Where 0.8 = The density of the SPH

TABLE 2
GROUNDWATER ANALYTICAL RESULTS - TPH, BTEX, AND MTBE COMPOUNDS
Willbridge Terminals
Portland, Oregon

Well/Sample Identification	Date Sampled	TPH-G (µg/L)	TPH-D (µg/L)	TPH-O (µg/L)	Benzene (µg/l)	Toluene (µg/l)	Ethyl-benzene (µg/l)	Xylenes (µg/l)	MTBE (µg/l)

Notes:
2/00 and 5/00 data from IT Corporation
8/00, 11/00, 2/01 and 5/01 data from KHM Environmental Management, Inc.
NS/F = Not sampled floating product present
NS/S = Not sampled sheen present
µg/l = Micrograms per Liter
ND = Not detected at or below detection limit
<0.200 = Not detected above the laboratory method reporting limit (MRL) of 0.200 µg/L.
BTEX analysis by USEPA Method 8021B
dup* = duplicate for B-30 submitted as blind duplicate labeled as B-50
dup**= duplicate for B-30 submitted as blind duplicate labled as B-31
dup*** = duplicate for B-30 submitted as blind duplicate labeled as B-99
TB-LB = trip blank
[1] = The reporting limit for this analyte was raised to compensate for the limited sample quantity available for analysis.
[2] = The reporting limit for this analyte was raised to compensate for the limited sample quantity available for analysis.
[3] = Detected hydrocarbons appear to be due to heavy gas/light diesel range components as well as weathered diesel.
[4] = Detected hydrocarbons in the diesel range do not have a distinct diesel pattern and may be due to heavily weathered diesel or possibly biogenic interference.
[5] = Hydrocarbon pattern most closely resembles weathered diesel.
[6] = The hydrocarbons present are a complex mixture of diesel range and heavy oil range organics.
[7] = Detected hydrocarbons appear to be due to heavy gas/light diesel range components as well as biogenic interference.
[8] = Detected hydrocarbons do not have a pattern and range consistent with typical petroleum products and may be due to biogenic interference.
[9] = Hydrocarbon pattern most closely resembles weathered jet fuel or similar light diesel range product.
[10] = The reporting limit for this analyte was raised due to sample matrix effects.

TABLE 3
GROUNDWATER ANALYTICAL RESULTS - PAH COMPOUNDS
Willbridge Terminals
Portland, Oregon

Well Identification	Date Sampled	2-Methyl-naphthalene	Acenaphthene	Acenaphthylene	Anthracene	Benzo (a) anthracene	Benzo (a) pyrene	Benzo (b) fluoranthene	Benzo (g,h,i) perylene	Benzo (k) fluoranthene	Chrysene	Dibenzo (a,h) anthracene	Fluoranthene	Fluorene	Indeno (1,2,3-cd) pyrene	Naphthalene	Phenanthrene	Pyrene
Number of benzene rings		2	2	2	3	4	5	4	5	4	4	5	3	2	5	2	3	4
		(µg/l)	(µg/l)	(µg/l)	(µg/l)	(µg/l)	(µg/l)	(µg/l)	(µg/l)	(µg/l)	(µg/l)	(µg/l)	(µg/l)	(µg/l)	(µg/l)	(µg/l)	(µg/l)	(µg/l)

NOTES:
- = Not sampled, not analyzed, not applicable
µg/l = Micrograms per Liter
ND = Not detected at or above method detection limit
2/00 and 5/00 data from IT Corporation
8/00, 11/00, 2/01 and 5/01 data from KHM Environmental Management, Inc.
IT Corp Data recorded as reported in Second Quarter 2000 Report
Analytes reported in alphabetical order
NS/F = Not sampled floating product present
NS/S = Not sampled sheen present
[1] = Sample rerun outside of hold time due to low surrogate recovery reported in the initial sample as a result of an extraction error.
[2] = Sample ID was misidentified by the laboratory as D-2
[3] = Analytical results are from a re-sample due to container breakage at the laboratory of the sample collected on 3/14/06.
[4] = Analyte was detected in the associated Method Blank.
[5] = Naphthalene was detected in the Method Blank at 0.0165 µg/L. Sample has a detection for naphthalene at 0.0468 µg/L. The result has been qualified and should be considered an estimate. Unable to perform corrective action due to insufficient volume left.
[6] = The reporting limit for this analyte was raised due to matrix interference or sample matrix effects.
[7] = Analyte was detected in the blank at greater than one-half of the MRL, but samples are ND.
[8] = The reporting limit was raised due to dilution necessary for analysis. Sample contains high levels of reported analyte, non-target analyte, and/or matrix interference.
[9] = Analyte was detected in the associated method blank. Analyte concentration in the sample is greater than 10 times the concentration found in the method blank.
dup* = duplicate for B-30 submitted as blind duplicate labeled as B-50
dup**= duplicate for B-30 submitted as blind duplicate labled as B-31
dup***= duplicate for B-30 submitted as blind duplicate labeled as B-130
PAHs by EPA Method 8270M-SIM

TABLE 4
GROUNDWATER ANALYTICAL RESULTS - TOTAL METALS
Willbridge Terminals
Portland, Oregon

Sample I.D.	Sample Date	Arsenic (mg/l)	Barium (mg/l)	Cadmium (mg/l)	Chromium (mg/l)	Copper (mg/l)	Lead (mg/l)	Manganese (mg/l)	Mercury (mg/l)	Selenium (mg/l)	Silver (mg/l)	Zinc (mg/l)

NOTES:

ND - Not Analyzed
ND - Not detected at laboratory reporting limits
NS/F = Not sampled floating product present
NS/S = Not sampled sheen present
2/00 and 5/00 data from IT Corporation
8/00, 11/00, 2/01 and 5/01 data from KHM Environmental Management, Inc.
Sample locations are shown on Figure 2
Analytical Reports are included in Attachment B
dup* = duplicate for B-30 submitted as blind duplicate labeled as B-50
dup**= duplicate for B-30 submitted as blind duplicate labeled as B-31
dup***= duplicate for B-30 submitted as blind duplicate labeled as B-130
[1] = Sample ID was misidentified by the laboratory as D-2
[2] = Sample ID was misidentified by the laboratory as U-2
[3] = The reporting limit for this analyte was raised due to matrix interference.
[4] = The sample container type or preservation does not meet method specifications using EPA Method 1631 modified. The sample was also analyzed for total mercury by EPA Method 7470A. Total mercury was not detected above the laboratory MRL of 0.000200 mg/l.
[5] = Estimated value
[6] = The laboratory control sample (LCS) and/or LCS Duplicate recovery was above the acceptance limits.
[7] = Analyte was detected in the associated method blank. Analyte concentration in the sample is greater than 10 times the concentration found in the method blank.
Total Metals Analysis by EPA 6000/7000 Series Methods
Total mercury analysis by EPA 6000/7000 Series Methods or EPA Method 1631 Modified

NOTES:
µg/l = micrograms per Liter
<0.00985 = Analyte not detected above the laboratory method reporting limit (MRL) of 0.00985 µg/L
Screening Level Values (SLVs) taken from Table 3-1 of the Portland Harbor Joint Source Control Strategy (JSCS) guidance document, dated December 2005.
NRWQC = National Recommended Water Quality Criteria
AWQC = Ambient Water Quality Criteria
Bold face font indicates analyte was detected above the applicable screening levels presented in Table 3-1 of the Portland Harbor JSCS guidance document, dated December 2005.
NA = Not analyzed
NS = Not sampled
N/A = Not applicable
ND = Not detected
VOCs = Volatile Organic Compounds
PAHs = Polynuclear Aromatic Compounds
[1] = The reporting limit was raised due to dilution necessary for analysis. Sample contains high levels of reported analyte, non-target analyte, and/or matrix interference.
[2] = The reporting limit for this analyte was raised due to matrix interference or sample matrix effects.
[3] = Analyte was detected in the associated method blank.
[4] = Naphthalene was detected in the Method Blank at 0.0165 µg/L. Sample has a detection for naphthalene at 0.0468 µg/L. The result has been qualified and should be considered an estimate. The lab was unable to perform corrective action due to insufficient volume remaining.
[5] = Analyte was detected in the associated blank at greater than one-half the MRL, but samples are ND.
[6] = Analyte was detected in the associated method blank. Analyte concentration in the sample is greater than 10 times the concentration found in the method blank.
[7] = The laboratory control sample (LCS) and/or LCS Duplicate recovery was above the acceptance limits.

APPENDIX A

GROUNDWATER MONITORING AND SAMPLING PROCEDURES, CERTIFIED ANALYTICAL LABORATORY REPORTS AND CHAIN-OF-CUSTODY DOCUMENTATION

Groundwater Monitoring and Sampling

Before the sampling event, Delta measured depth to water in each groundwater monitoring well at the facility with a Solinst Electronic Oil/Water Interface Probe. This information was recorded on waterproof field sheets. Groundwater elevations (GWE) were measured to an accuracy of 0.01 feet. Wells were sampled after purging three casing volumes of water from the well (or until dry). Wells with observable amounts of SPH were not sampled. After the well had recharged to approximately 80% of static level, samples were collected using a disposable polyethylene bailer and placed in the appropriate laboratory-provided containers. Samples were labeled, placed into ice filled coolers, logged onto chain-of-custody forms and transported to the laboratory.
