Subject: 1930 Update OPA – Magellan Hanlontown Diesel Spill
Date: Wednesday, January 25, 2017 7:28:00 PM

Current update from the onsite operations briefing for the Magellan pipeline diesel spill near the Iowa/Minnesota border.

- 24 hour operations are planned with two operational periods per day from 7:00 a.m. to 7:00 p.m. and 7:00 p.m. to 7:00 a.m.
- There are currently over 100 personnel onsite including representatives from Magellan, RP contractors, Local Responders, IDNR, and 2 EPA Region 7 OSCs.
- The ruptured pipe has been exposed. Soil is being stockpiled and free product is being recovered.
- The pipeline has been excavated approximately 200 feet from the rupture and product is being pulled from the pipeline to recover material in the pipeline.
- Any impacted snow is being collected and stockpiled in lined roll off boxes for future disposal.
- Air monitoring is being conducted onsite and along the perimeter of the spill site.
- Magellan has H&S and Public Affairs personnel onsite or en route. A press conference is being planned for tomorrow.
- No waterways appear to have been impacted. Boom has been placed downstream in a creek as a precautionary measure. Surface water samples have been collected from upstream and downstream of the spill location. One private drinking water well is onsite and has also been tested.

Additional updates will be provided tomorrow morning, or if the situation changes and updates are warranted.
