EMORANDUM

TO: Land Division File 16782516 DATE: 3-12-80

FROM: S.L. Beccue

☒ Information only

SUBJECT: Sangamon Co - Spfld / Buerkett #2 (31st)

☐ Response requested

No one else was on site during this inspection. I spoke with Merle Buerkett later at his office. It began to snow during this inspection. The site was in good order except an erosion spot on the south face and the drainage pipe in the SE corner. There was an orange tinged liquid with thick scum draining from this pipe into a stream which borders the south side of the site. This liquid has left a stain on the base of the drainage area. I sampled from three places in this area: upstream, downstream, and at the opening of the drainage pipe.

When I spoke to Mr. Buerkett I reminded him of the clause in his permit #75-1 about PitC. This clause was:

"The use of PitC may not proceed until:
(A) Pit A has recieved final cover
(B) Pit B has been completely covered
(C) A stockpile of cover has amassed sufficient to accomodate the forseen deficit (≈39,000 yd)

He stated that he had remembered these facts, and that he had bought some ground for use as cover [illegible]
