Thanks – good job – I'm sure they will ask – Is the current plan for you guys to head into Mason City at some point and then Susan demob in the morning and you head back to the site? Are they still at 3 vac trucks, 20 lined roll off boxes, and 14 frac tanks? How many excavators, etc.. What is the timeframe for the pending water samples?

Subject: Magellan Release Update

Just a quick update to feed the "Beast"

- Magellan (RP) is currently planning round the clock operations with 12 Hour shifts from 0700 – 1900 / 1900 – 0700,
- The RP estimates over 100 personnel are onsite. This includes Hazmat Response, WCEC Environmental, Baywest and APEX
- There is a Unified Command Consisting of Local Sheriff and Magellan. County EMA is also onsite as well as IDNR personnel out of the Mason City Field Office.
- They have exposed the pipe where the release occurred and are currently stockpiling contaminated soils and recovering any available free product.
- The have also excavated and tapped into the pipeline just north (approx. 200 ft.) to suck any additional product that may be in the pipeline since product in the pipe ran from the north to the south.
- Any snow within the spray pattern area of the pipeline release is being scraped off the ground and stockpiled in lined roll-off boxes for future disposal.
- Any visible free product is being recovered and transported by tanker truck to the Magellan Tank Farm Facility in Mason City.
- Continuous air monitoring is being conducted onsite and at the perimeter of the site.
- Magellan has several H&S folks onsite including personnel out of their corporate hq.
- No water ways are known to be impacted and surface water samples have been collected up and down stream of the release (results pending)
- A private DW well is onsite and has been tested. (results pending). The homeowner is being offered bottled water.
- Although there has been no product observed in the creek, boom has been place in at least 1 location downstream of the site as a precautionary measure and regularly checked and monitored.
- Any drain tiles nearby to the site have been severed and inspected for impact. Currently none are believed to have been impacted.

- The RP has PR folks coming from their corporate offices and the RP is planning on holding a press conference sometime tomorrow.
-
