Is it premature to say there are no downstream drinking water intakes that COULD be impacted? This statement makes it sound as if drinking water impacts are not possible, which seems like a very strong statement to make at this point.

I suggest softening that phrase to say that EPA has not identified any downstream DW intakes that are likely to be impacted.

Mary,

Here is the draft statement from OPA in case we receive any inquiries from the public. Let me know if you have any comments or concerns. David Bryan and Curtis Carey have already reviewed.

Thanks,

Adam Ruiz

Please review for public release when queried:

EPA Region 7 is responding to the Magellan pipeline spill near the Iowa/Minnesota border in Worth County. Magellan Pipeline reported a 12-inch diesel fuel pipeline leak early this morning (Jan. 25). EPA is coordinating with county emergency agencies, Iowa Department of Natural Resources and Magellan Pipeline on the response. We will provide more information as it becomes available.

If queried - EPA has confirmed that there are no downstream drinking water intakes that could be impacted by the spill.

Subject: Draft Statement

Hi Dave,

Here's a draft statement for you to begin working. Didn't have any information beyond what was included in Ken's email. Figured this was the most important info, but feel free to add/make your own.

EPA Region 7 is aware of and responding to the Magellan pipeline spill near the Iowa/Minnesota border, deploying two On-Scene Coordinators to the site. Initial reports suggest that between 1,500 and 2,500 barrel of diesel have been released. EPA has confirmed that there are no downstream drinking water intakes that could be impacted by the spill. EPA is coordinating with the Iowa Department of Natural Resources as well as Magellan.
