Subject: 1200 Update OPA – Magellan Hanlontown Diesel Spill

Current update for the Magellan pipeline diesel spill near the Iowa/Minnesota border. The Region 7 Spill Phone Duty officer received an update from David Morrison, Region 5 OSC. OSC Morrison is on scene as well as IDNR Carl Berg. Approximately 100 people total are on-scene including local law enforcement, emergency managers, and cleanup contractors (WCEC and Haz Mat, Inc are the two primary at this point). Three vac-trucks are currently on scene recovering product. Fourteen frac-tanks and twenty lined roll-off boxes have been ordered and are en-route. They are clearing an area onsite to stage all equipment. Perimeter air monitoring was conducted with no issues (high winds and blowing snow are currently an issue) and monitoring now has switched to personnel monitoring of vac-truck operators. Worth County Sherriff informed OSC Morrison that clearing off the roads in the area of the release is a priority for the county roads department to allow for responders and contractors to access the scene. Contractors have gone down gradient removing snow and determined none of the diesel has made it off of the property where the spill occurred. A plywood block is being placed at a down gradient culvert as a precaution to contain any product that may leave the site. Region 7 OSCs Fisher and Frey are still en-route and will coordinate with OSC Morrison via cell phone. The EPA Region 7 water program has determined that there are no drinking water intake issues in this area of Worth County nor down gradient in Cerro Gordo County.

Additional updates will be provided as the information is received.
