R5 OSC David Morrison just sent these photos and called me with an update from the scene.

He is on scene as well as IDNR Carl Berg - the release occurred at a farmstead and they have both met with the owner who is ok with everything that is going on and will need to occur. He does have a drinking water well but due to permafrost - should not be an issue but they are keeping an eye on that.

Approximately 100 people total on-scene including local law enforcement, emergency managers, and cleanup contractors (WCEC and Haz Mat, Inc are the two primary at this point). 3 vac-trucks currently on-scene sucking up product. 14 frac-tanks and 20 lined roll-off boxes have been ordered and are en-route. They are clearing an area on the farmstead to stage all equipment. Perimeter air monitoring was conducted with no issues (high winds and blowing snow currently an issue) and monitoring now has switched to personnel monitoring of vac-truck operators. Worth County Sherriff informed Dave that clearing of the roads in the area of the release is a priority for the county roads department to allow for responders and contractors to access the scene. Contractors have gone down gradient removing snow and determined none of the diesel has made it off of the farmstead yet and a plywood block is being placed at the farmstead culvert to contain all product on the current farm. OSC Fisher is still en-route and will coordinate with OSC Morrison via cell phone.

The EPA water program has confirmed that there are no drinking water intake issues in this area of Worth County nor down gradient in Cerro Gordo County.

Christopher Marcy has been assigned as the case officer for the USCG OSLTF for both FPNs opened up for this release (R5 and R7).
