**Subject:** RE: Testing results from May's samples

Trip,

My recent inquiry with E&E was that the lab results are anticipated for their review by mid -October or end of October if not sooner. When E&E receives the laboratory results they will need time to review and summarize the results while compiling the lab information in an expanded upland analysis that was performed through GeoEngineers. E&E's report will include the beachfront sediment analysis that was not included in the GeoEngineers scope.

According to E&E the anticipation is to complete the report by mid November. I'm anticipating this expanded report to be an analysis and assessment of the soil and groundwater quality and their potential contaminant source areas.

That's the latest information I have to this date.

**Subject:** Testing results from May's samples

Hello Dan,

(b) (6)
regarding timelines for the property's testing. Have you any thoughts as to when we can expect a report from E & E regarding the testing done in May on the Old Bremerton Gasworks/sesko properties? Any ideas would be appreciated.

Thank you,

Trip McConkey
