SUBJECT **Site Assessment Report**
Former ExxonMobil Jalk Fee Property
10607 Norwalk Boulevard
Santa Fe Springs, California
CRWQCB-LAR Case No. 0203; Site I.D. No. 1848000

Mr. Changkuon:

At the request of ExxonMobil Environmental Services (EMES), on behalf of ExxonMobil Production Company (ExxonMobil), Cardno ERI has prepared this *Site Assessment Report* dated January 10, 2013 for the above-referenced site. The report was required by the California Regional Water Quality Control Board – Los Angeles Region (CRWQCB-LAR) in its letter dated May 11, 2012, which approved Cardno ERI's *Work Plan for Additional Site Assessment Activities* dated April 13, 2012 (Work Plan).

After review of this report, EMES respectfully requests the opportunity to meet with representatives of the CRWQCB-LAR to discuss the findings of the investigation and the next steps for the site.

I, Aaron Thom, do hereby declare, under penalty of perjury under the laws of the State of California, that I am Project Manager for ExxonMobil Environmental Services, that I am authorized to attest to the veracity of the information contained in the report described herein, and that the information contained in the Report for the subject site dated January 10, 2013 is true and correct, and that this declaration was executed at Houston, Texas, on January 10, 2013.

For any questions concerning this request, please contact Mr. Aaron Thom at (281) 654-0326.

Sincerely,

Aaron Thom
Project Manager
ExxonMobil Environmental Services

SUBJECT **Site Assessment Report**
Former ExxonMobil Jalk Fee Property
10607 Norwalk Boulevard
Santa Fe Springs, California
CRWQCB-LAR Case No. 0203; Site I.D. No. 1848000

Mr. Changkuon:

At the request of ExxonMobil Environmental Services (EMES), on behalf of ExxonMobil Production Company (ExxonMobil), Cardno ERI has prepared this report to document the installation of two groundwater monitoring cluster wells, four single-depth soil vapor wells, three multi-depth soil vapor wells and the drilling and sampling of 14 soil borings at the above-referenced site (Plate 1). The purpose of the work was to further assess the vertical and lateral extents of chlorinated hydrocarbons in soil and groundwater, verify the effectiveness of historic efforts in remediating the residual petroleum hydrocarbons, and conduct a human health risk assessment and bioattenuation study for the residual hydrocarbons in soil vapor at the above-referenced site. The work was performed in accordance with Cardno ERI's *Work Plan for Additional Site Assessment Activities* dated April 13, 2012 (Work Plan), which was approved by the California Regional Water Quality Control Board-Los Angeles Region (CRWQCB-LAR) in its letter dated May 11, 2012 (Appendix A). At the request of the property owner, borings B6 and B8 were relocated directly outside of the industrial building's footprint, as the owner did not allow the building floor to be penetrated.

The third cluster monitoring well proposed in Cardno ERI's Work Plan, which was to be located downgradient of the site, could not be installed as part of this investigation as the adjacent property owner did not grant access (Plate 2).

The CRWQCB-LAR has issued an Order directing the property owner to be responsible to install this monitoring well.

SITE DESCRIPTION

Former ExxonMobil Jalk Fee (Jalk Fee) is located at 10607 Norwalk Boulevard, in the city of Santa Fe Springs, California. The site is 8.8 acres in size and has contained multiple industrial businesses since redevelopment into an industrial park in 2003. The surrounding areas consist mainly of industrial facilities. The Continental Heat Treating (CHT) facility, located contiguous to the south of the site, has an active environmental case with the CRWQCB-LAR for the release of HVOCs, including PCE and TCE, associated with the use of a degreaser at the facility (Plate 2) (ARCADIS, 2009).

The site and the surrounding vicinity were part of the Santa Fe Springs oil field which generally had oil production activities from the 1920s to 1990s, before being redeveloped into a commercial/industrial area. The site and several of the surrounding properties contain plugged and abandoned oil wells (Plate 3).

Both the Jalk Fee property and the CHT facility are located within the downgradient portion of the regional dissolved phase VOC area sourced from the Omega Chemical Superfund Site (Omega), an area more than four miles long, which has been attributed to historical industrial activities in the cities of Santa Fe Springs and Whittier. The constituents of concern relating to Omega are HVOCs, including PCE and TCE (CH2MHILL, 2010).

GEOLOGY AND HYDROGEOLOGY

The site lies at an elevation of 130 to 135 feet msl, and the local topography slopes toward the southwest (USGS, 2001). The site is located in the Santa Fe Springs Oil Field on the Santa Fe Springs Plain, which is part of the Montebello Forebay non-pressure area of the Central Basin [California Department of Water Resources (CDWR), 1961]. Surface waters in the site vicinity drain as part of the watershed of the Lower Los Angeles River (CRWQCB-LAR, 1994). The nearest body of surface water is the concrete-lined San Gabriel River, located 1.5 miles west of the site, which flows to the south (USGS, 2001).

Soil beneath the site consists of Pleistocene deposits of the Lakewood Formation, underlain by the San Pedro Formation. Within the Santa Fe Springs Oil Field, the upper 100 feet of sediments consist predominantly of permeable sands, although the upper 15 feet of sediments have a higher silt and clay content, and lower permeability. Assessment activities indicate that the Lakewood Formation deposits beneath the site consists of interbedded layers of sand and gravel with lessor interbedded layers of clay, silt and sandy silt from the surface to

165 to 200 feet bgs. A low permeable (silt and clay) layer has been encountered at depths varying from 165 to 200 feet bgs, underlain by sandy silt and sand to 212 feet bgs, the maximum depth investigated. The low permeable layer is at least 5 feet thick in each of the locations encountered, up to a maximum of 25 feet in thickness, and is interpreted to be a competent aquiclude (Cardno ERI, 2011).

The site is located within the Central Groundwater Basin of the Los Angeles-San Gabriel Hydrologic Unit (CRWQCB-LAR, 1994). First groundwater is found throughout the region under unconfined conditions in the Lakewood Formation. The first regional water-bearing zone in the site vicinity is the Exposition Aquifer, which is underlain by the Gage Aquifer and may be merged with the overlaying Exposition Aquifer, or separated by a thin aquitard. The Exposition and Gage Aquifers are typically 75- to 100-feet-thick in the site vicinity, and are underlain by the San Pedro Formation, which includes a 25- to 75-foot-thick unnamed aquiclude and the underlying Hollydale Aquifer. The site is located less than 0.5 mile south of the Santa Fe Springs anticline, which dips to the west-northwest and influences the regional groundwater flow (CDWR, 1961).

During the second half 2012 groundwater monitoring and sampling event performed on November 16 and 17, 2012, the depth to groundwater in the site wells ranged from 86.59 to 89.09 feet below TOC. The groundwater flow direction was to the southwest with a horizontal gradient of 0.005 (Table 1 and Plate 4). During the past 11 years of monitoring, groundwater depths have fluctuated from 70 to 97 feet bgs, and are currently rising from a historic low in 2010 (Cardno ERI, 2012). In July, 2012, a soil boring was advanced through the aquiclude and an underlying saturated zone was encountered at 200 feet bgs. First groundwater beneath the site is interpreted to be within the merged Exposition and Gage Aquifers, and the second saturated zone is interpreted as the Hollydale Aquifer (CDWR, 1961).

Groundwater monitoring wells have been installed into three zones within the first aquifer: 1) the shallow zone, which is screened across the groundwater table, 2) the intermediate zone, which is screened at the intermediate depth of the aquifer; and 3) the deep zone, which is screened at the base of the aquifer, directly above the encountered aquiclude.

PREVIOUS WORK

The site contained oil production facilities from the 1920s to the 1990s, and the oil field facilities were removed in the 1990s, including the plugging and abandoning of eight oil wells (Plate 3) (ARCADIS, 2009).

In 1997, Alton Geoscience completed site assessment activities to delineate the distribution of previously identified HVOC- and hydrocarbon-containing soil in the vicinity of the southeastern property boundary and eastern central

portion of the site. In June 1998, Alton Geoscience completed remedial excavation activities of HVOC- and hydrocarbon-containing soil in three areas (Excavations I, II and III) along the southern property boundary and eastern central portion of the site. Excavation I removed soil to a depth of approximately 11.5 feet bgs. Excavation II removed soil to depths between 6 and 15 feet bgs. Excavation III removed soil to depths between 6 and 14 feet bgs. A total of 2,600 tons of hydrocarbon and/or chlorinated solvent-containing soil were removed during these activities (Plate 2; Appendix B) (Alton Geoscience, 1998). Based on the results of the soil remediation activities and the fate and transport model, the CRWQCB-LAR issued a closure letter for soil on March 1, 1999.

In November 2000, TRC Alton Geoscience (TRC) completed additional remedial excavation activities in seven areas throughout the Jalk Fee property (Areas SB-49, M-1, M-2, M-3, M-7, M-8 and M-9), to remove hydrocarbon and metal-containing soil as directed by the Santa Fe Springs Fire Department (SFSFD) to facilitate planned redevelopment of the site (Plate 2). A total of 1,775.82 tons of soil was excavated and transported off site for treatment. Confirmation soil samples collected from the post-excavation areas indicated that cleanup goals set by the SFSFD had been achieved (TRC, 2000). The SFSFD and the CRWQCB-LAR issued no further action letters for soil in directives dated December 26, 2000 and March 5, 2001, respectively.

In 2003, the property was paved and redeveloped as an industrial business park.

Based upon the presence of HVOCs in groundwater, the CRWQCB-LAR required continued annual groundwater monitoring from 2003 through 2010, utilizing wells MMW-04 and MMW-05, which are screened in the shallow zone. Well MMW-03 was destroyed in 2001 to facilitate redevelopment of the property. The PCE concentration for well MMW-04 has shown an increasing trend by an order of magnitude, and PCE for well MMW-05 has remained generally stable at one to two orders of magnitude above the MCL (Cardno ERI, 2012).

In March and April 2011, groundwater monitoring wells MW6A/B/C, MW7A/B/C and MW8A/B/C were installed at the site. The wells were triple-nested and screened as follows: 1) across the groundwater interface; 2) at the intermediate depth of the aquifer; and 3) at the base of the aquifer, directly above the encountered aquiclude. The assessment activities indicated that adsorbed phase PCE and TCE were measured at maximum concentrations of 6.6 and 0.019 mg/kg in wells MW6 at 15 feet bgs and MW8 at 155 feet bgs, respectively. Adsorbed phase benzene was measured at a maximum concentration of 0.00082J mg/kg, for well MW6 at 15 feet bgs (Cardno ERI, 2011).

The PCE concentrations measured in all three groundwater zones for groundwater monitoring wells MW7 and MW8 are interpreted to be associated with the regional Omega plume and delineate the upgradient and crossgradient extent to the east of the dissolved phase hydrocarbons associated with the Jalk Fee site. The PCE concentrations measured for shallow groundwater zone well MMW-04 are interpreted to be associated with the regional Omega

plume and delineate the crossgradient extent of dissolved phase hydrocarbons in the shallow zone to the west associated with the Jalk Fee site (Plates 4 through 10 and Table 1).

FIELD ACTIVITIES AND RESULTS

Groundwater monitoring wells MW9A/B/C and MW10A/B/C and multi-depth soil vapor wells SVP1 through SVP3 were installed and soil borings B11 through B19 were drilled using a hollow-stem auger drill rig. Soil borings B6 through B8 and B10 were advanced using a direct-push rig. Soil boring B9 was drilled using a sonic drill rig for the purpose of determining the thickness of the aquiclude and sampling the underlying saturated zone. Single-depth soil vapor wells SVP4 through SVP7 were installed using a hand auger (Plate 2 and Appendix B). Soil vapor samples were collected from the soil vapor wells on September 20 through 25, 2012. The initial groundwater monitoring event for the newly-installed wells was performed on November 16 and 17, 2012.

Pre-Field Activities

Well installation and boring permits were obtained from the Los Angeles County Department of Public Health (Appendix C). An access agreement was obtained from Continental Heat Treating. Underground Service Alert of Southern California and the CRWQCB-LAR were notified at least 48 hours prior to conducting the fieldwork. A geophysical survey was conducted to identify subsurface features in the vicinity of the well and boring locations.

Soil Borings

On July 3 through 5, 2012, soil borings B6 through B8 were advanced to various depths ranging from 60 to 76.5 feet bgs, and soil samples were collected at 5-foot intervals to total depth for field screening and lithologic description (Appendix B).

On July 9 through 13, 2012, soil boring B9 was drilled through the aquiclude to 212 feet bgs. Boring B9 was continuously sampled from 10 to 212 feet bgs to locate the depth and thickness of the low permeable layer (Appendix B).

On August 13, 2012, soil boring B10 was advanced to 110 feet bgs, and soil samples were collected at 5-foot intervals to total depth for field screening and lithologic description (Appendix B).

On August 21 through 24, 2012, soil borings B11 through B13 were drilled to various depths ranging from 90.5 to 122 feet bgs, and soil samples were collected at 5-foot intervals to total depth for field screening and lithologic description (Appendix B).

On September 4 through 6, 2012, soil borings B14 through B17 were advanced to various depths ranging from 45 to 60 feet bgs, and soil samples were collected at 5-foot intervals to total depth for field screening and lithologic description (Appendix B).

On September 27 and 28, 2012, soil borings B18 and B19 were drilled to 85.5 feet bgs, and soil samples were collected at 5-foot intervals to total depth for field screening and lithologic description (Appendix B).

Soil encountered during the advancement of borings B6 through B19 consisted of interbedded layers of sand and gravel with lessor interbedded layers of clay, silt and sandy silt from the surface to 165 to 200 feet bgs. A low permeability (silt and clay) layer was encountered at varying depths from 165 to 200 feet bgs, and was 25 feet thick in boring B9. A second saturated zone was encountered at 200 feet bgs. The low permeable layer was underlain by sandy silt and sand from 200 to 212 feet bgs, the maximum depth investigated. Detailed soil descriptions and field screening results are included in the soil boring logs in Appendix B. The field protocol for sampling and decontamination is described in Appendix D.

Groundwater Grab Sampling

During the advancement of soil boring B9, groundwater samples were collected using a Simulprobe and disposable bailer. Groundwater was sampled at 200 and 214 feet bgs in boring B9. All field activities were conducted under Cardno ERI soil and groundwater sampling protocol (Appendix D).

Groundwater Monitoring Well Installation and Sampling

Groundwater monitoring cluster well MW9A/B/C was drilled to 186.5 feet bgs and cluster well MW10A/B/C was drilled to 178 feet bgs (Plate 2 and Appendix B). The total depth of each cluster well was based on encountering the low permeable layer, and the bottom of well MW10A/B/C was backfilled with bentonite before setting of the well. Soil samples were collected at 5-foot intervals to total depth.

Soil encountered during the drilling of wells MW9A/B/C and MW10A/B/C consisted of interbedded layers of sand and silty sand with lesser interbedded layers of sandy silt, silt, silty clay and clay from the surface to 186.5 feet bgs, the maximum depth investigated. Detailed soil descriptions are included in the logs in Appendix B.

The wells were clustered and constructed using 4-inch diameter, Schedule 40 PVC casings. Wells MW9A, MW9B and MW9C were screened from 80 to 110 feet bgs (shallow zone), 140 to 150 feet bgs (intermediate zone) and 175 to 185 feet bgs (deep zone), respectively. Wells MW10A, MW10B and MW10C were screened from 80 to 110 feet bgs (shallow zone), 140 to 150 feet bgs (intermediate zone), and 165 to 175 feet bgs (deep zone), respectively. Shallow wells MW9A and MW10A were screened across the groundwater interface, approximately 10 feet above to 20 feet below static groundwater, as measured in nearby monitoring well MMW-05 during the 2010 annual groundwater monitoring event at the site (Appendix B). Intermediate wells MW9B and MW10B were installed with 10 feet of screen at depths designed to provide adequate vertical delineation of dissolved phase chlorinated solvents. Deep wells MW9C and MW10C were screened at the base of the aquifer, directly above the encountered aquiclude. The field protocol for well installation and construction is included in Appendix D. All fieldwork was conducted under the supervision of a State of California professional geologist.

Soil Vapor Probe Installation and Sampling

On June 27 and 28, 2012, and July 2, 2012, Cardno ERI installed multi-depth soil vapor wells SVP1 through SVP3. The wells were drilled to various depths ranging from 82 to 90 feet bgs, and penta-completed at 5, 15, 30, 60 and 82 feet bgs (Plate 2 and Appendix B). The depth of the bottom screen was modified from the Work Plan to set the screen interval above the encountered depth to groundwater. Soil samples were collected at 5-foot intervals to total depth.

On September 13, 2012, Cardno ERI installed single-depth soil vapor wells SVP4 through SVP7 using a hand-auger. The wells were advanced to 5.5 feet bgs and completed at 5 feet bgs (Plate 2 and Appendix B). Soil samples were collected at 5 feet bgs.

Soil encountered during the advancement of wells SVP1 through SVP7 consisted of interbedded layers of clayey silt, silt, sandy silt, silty sand and sand from the surface to 90 feet bgs, the maximum depth investigated. Detailed soil descriptions are included in the logs in Appendix B.

On September 20 through 25, 2012, Cardno ERI collected soil vapor samples from soil vapor wells SVP1 through SVP7. Soil vapor well installation and sample collection were performed in accordance with the CRWQCB-LAR's *Advisory – Active Soil Gas Investigation* dated January 28, 2003, the Department of Toxic Substances Control's (DTSC's) *Advisory – Active Soil Gas Investigation* dated March 2010 (Draft) (*Advisory*), and the Department of Toxic Substances Control's (DTSC's) October 2011 *Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air* (Vapor Intrusion Guidance). Helium was used as the tracer gas during purging and sampling, and was used to detect any leaks in the sampling equipment. Detailed soil descriptions and well

construction details are included in the soil boring logs in Appendix B, the field protocol is included in Appendix D, and the field data sheets are included in Appendix E.

Laboratory Analyses and Results

The soil samples were submitted to TestAmerica Laboratories, Inc., a state-certified, analytical laboratory, and were analyzed for TPHg, TPHd and TPHo by EPA Method 8015B (M) and for full-list VOCs by EPA Method 8260B.

During the drilling of soil boring B9, one soil sample and a grab groundwater sample were submitted to an on-site mobile laboratory provided by H&P Mobile Geochemistry, Inc. a state-certified, analytical laboratory, and were analyzed for VOCs by EPA Method 8260B. The purpose of the mobile lab was to screen analytical data and determine when the boring should be terminated.

A second groundwater sample was collected from beneath the aquiclude using a simulprobe and submitted to TestAmerica Laboratories, Inc., where it was analyzed for TPHg, TPHd and TPHo by EPA Method 8015B (M), TPH (C5-C8) aliphatics, TPH (C9-C10) aromatics and TPH (C9-C12) aliphatics by method MAVPH, and for VOCs by EPA Method 8260B.

The groundwater samples from the monitoring wells were submitted to TestAmerica Laboratories, Inc., a state-certified, analytical laboratory, and were analyzed for TPHg, TPHd and TPHo by EPA Method 8015B (M) and for full-list VOCs by EPA Method 8260B.

Soil vapor samples from wells SVP1 through SVP7 were submitted to Calscience Environmental Laboratories, Inc., a state-certified, analytical laboratory. Soil vapor samples were analyzed for TPH carbon chain by GC/MS, for VOCs by EPA Method TO-15, and for oxygen + argon, carbon dioxide, methane and helium using American Society for Testing and Materials (ASTM) Method D-1946.

During the drilling of well MW10, the location was advanced into the low permeable zone and two soil samples were collected from the low permeable soil. The samples were submitted to Calscience Environmental Laboratories, Inc., and analyzed for grain size distribution by ASTM D4464M, moisture content by American Petroleum Institute (API) RP 40/ASTM D2216, dry bulk density, grain density, total porosity, air-filled porosity and water-filled porosity by API Method RP 40.

The analytical results for soil, groundwater and soil vapor from this investigation are as follows:

Soil

- TPHg was measured at a maximum concentration of 451 mg/kg in boring B12 at 85 feet bgs;
- TPHd was measured at a maximum concentration of 887 mg/kg in boring B6 at 10 feet bgs;
- TPHo was measured at a maximum concentration of 1,010 mg/kg in boring B11 at 10 feet bgs;
- Benzene was measured at a maximum concentration of 0.0918 mg/kg in well SVP3 at 35 feet bgs;
- PCE was measured at a maximum concentration of 182 mg/kg in boring B9 at 30 feet bgs; and
- TCE was measured at a maximum concentration of 3.32 mg/kg in boring B11 at 15 feet bgs.

Groundwater Grab Sampling from below the Aquiclude

- TPHg was measured at a concentration of 340 µg/l in boring B9 at 214 feet bgs;
- TPHd was measured at a concentration of 8,010 µg/l in boring B9 at 214 feet bgs;
- TPHo was measured at a concentration of 2,390 µg/l in boring B9 at 214 feet bgs;
- Benzene was measured at a maximum concentration of 0.6 µg/l in boring B9 at 200 feet bgs;
- PCE was measured at a maximum concentration of 0.410J µg/l in boring B9 at 214 feet bgs; and
- TCE was measured at a maximum concentration of 0.471J µg/l in boring B9 at 214 feet bgs.

Groundwater Monitoring of Wells

- TPHg was measured at a maximum concentration of 712 µg/l in well MW6B;
- TPHd was measured at a maximum concentration of 768J µg/l in well MW7B;
- TPHo was measured at a maximum concentration of 778J µg/l in well MW7C;
- Benzene was measured at a maximum concentration of 0.376J µg/l in well MW7B;
- PCE was measured at a maximum concentration of 1,480 µg/l in well MW6B; and
- TCE was measured at a maximum concentration of 255 µg/l in well MW6B.

Soil Vapor

- TPH (C6-C8) aromatics and TPH (C9-C10) aromatics were not measured above the laboratory reporting limits in any of the samples;

- TPH (C5-C8) aliphatics were measured at a maximum concentration of 64,000,000 µg/m^3 in vapor well SVP1 at 60 feet bgs;
- TPH (C9-C12) aliphatics were measured at a maximum concentration of 13,000,000 µg/m^3 in vapor well SVP1 at 60 feet bgs;
- Benzene was only measured in one sample at a concentration of 34 µg/m^3 in vapor well SVP6 at 5 feet bgs, due to the elevated reporting limits of the samples;
- PCE was measured at a maximum concentration of 48,000,000 µg/m3 in vapor well SVP1 at 15 feet bgs;
- TCE was measured at a maximum concentration of 580,000 µg/m3 in vapor well SVP1 at 60 feet bgs;
- Oxygen + argon concentrations ranged from 2.23 percent by volume to 18.70 percent by volume, and generally decreased with depth;
- Carbon dioxide concentrations ranged from 1.68 percent by volume to 14.40 percent by volume, and generally increased with depth in vapor well SVP1, while remaining stable in wells SVP2 and SVP3;
- The tracer compound, helium, was only measured in two of the samples, and did not exceed 5 percent by volume.

Groundwater analytical results are summarized in Tables 1 through 3, soil analytical results are summarized in Table 4, soil vapor analytical results are summarized in Table 5, and soil physical property analytical results are summarized in Table 6. Groundwater concentration maps for PCE and TCE are Plates 5 through 10, soil concentration maps for PCE and TCE are Plates 11 through 16, and soil vapor concentration maps for PCE, TCE and aliphatic hydrocarbons are Plates 17 through 26. Groundwater laboratory reports are included as Appendix F, soil laboratory reports are included as Appendix G, soil vapor laboratory reports are included as Appendix H, and the soil physical property laboratory report is included as Appendix I.

Waste Management

Soil generated during the field activities was temporarily stored on site in bins and DOT-approved, sealed 55-gallon drums and decontamination water generated during the field activities was temporarily stored on site in DOT-approved, sealed 55-gallon drums. Soil cuttings were transported to Soil Safe, Inc.'s approved facility in Adelanto, California, for recycling. The decontamination water was transported to Crosby and Overton's approved facility in Long Beach, California, for disposal. Copies of the signed manifests are included as Appendix J.

RESULTS OF INVESTIGATION

Hydrocarbons and Chlorinated VOCs in Soil

The assessment activities indicated that adsorbed phase PCE and TCE were measured at maximum concentrations of 182 and 3.32 mg/kg in borings B9 at 30 feet bgs and B11 at 15 feet bgs, respectively. Adsorbed phase benzene was not detected in the majority of the samples analyzed, and was measured at a maximum concentration of 0.0918 mg/kg, for well SVP3 at 35 feet bgs. Adsorbed phase TPHg, TPHd and TPHo were measured at maximum concentrations of 424, 887 and 1,010 mg/kg in borings B10 at 85 feet bgs, B6 at 10 feet bgs and B11 at 10 feet bgs, respectively. The maximum concentrations of adsorbed phase chlorinated hydrocarbons were generally detected from 10 to 40 feet bgs, and the maximum concentrations of petroleum hydrocarbons were detected at 10 and 15 feet bgs, and 80 and 85 feet bgs.

Hydrocarbons and Chlorinated VOCs in Groundwater

Results of the second half 2012 groundwater monitoring event indicated that dissolved phase PCE and TCE were measured at maximum concentrations of 1,480 and 255 µg/l in well MW6B (intermediate zone). Dissolved phase TPHg, was measured at a maximum concentration of 712 µg/l in well MW6B. Dissolved phase TPHd and TPHo were measured at maximum concentrations of 768 and 778 µg/l in well MW7B, while benzene was not measured at a concentration in excess of the MCL for any sample.

Aquiclude Borings

Logging during the drilling of boring B9 identified that the low permeable layer was encountered at 170 feet bgs and was 25 feet in thickness. The physical property analysis indicated that the low permeable layer consists primarily of silt, with lesser amounts of fine-grained sand and clay.

The results for the soil samples collected from within the low permeable layer at borings B9 and MW10 did not indicate any concentrations of VOCs above laboratory reporting limits.

The results for the grab groundwater samples collected from the aquifer beneath the aquiclude did not indicate any VOC concentrations in groundwater above their respective MCLs. Concentrations of TPH were detected, however sufficient sample volume could not be obtained to additionally run a silica gel clean-up to remove any potential organics and reanalyze the sample.

Hydrocarbons and Chlorinated VOCs in Soil Vapor

The results of the soil vapor sampling activities indicated maximum TPH and PCE concentrations in vapor well SVP1 at 60 and 15 feet bgs, respectively. The TPH-aliphatic concentrations in vapor wells SVP1, SVP2 and SVP3 generally increased with depth while PCE concentrations remained within one order of magnitude throughout the vadose zone. With the exception of vapor well SVP1, the oxygen and carbon dioxide concentrations generally remained stable with depth, indicating that bioattenuation of hydrocarbons may be limited in this area beneath the site. However, degradation of chlorinated solvents appears to have occurred beneath the site, and is greatest in the vicinity of vapor well SVP3. TCE and cis-1,2-dichloroethene concentrations, which are anaerobic degradation products of PCE, were measured in the majority of the vapor samples, and trans-1,2-dichloroethene and vinyl chloride, which are further daughter compounds, were measured in vapor well SVP1 at 82 feet bgs, well SVP3 at all depths, well SVP4 at 5 feet bgs and well SVP7 at 5 feet bgs.

Health Risk Assessment

To evaluate the potential human health risk from exposure to vapors migrating from beneath the site, the soil vapor results were compared against their respective California Human Health Screening Levels (CHHSLs) for shallow soil gas for a commercial/industrial land use (Cal EPA, 2005). The CHHSLs were developed for soil vapor samples collected at 5 feet bgs. Thus, only the 5-foot bgs soil vapor samples were compared against their respective CHHSLs.

The results indicate that chlorinated VOC concentrations beneath the site exceed their respective CHHSLs in each of the vapor probe locations. The PCE concentrations measured in vapor probes SVP1 through SVP7 exceed the CHHSL by up to four orders of magnitude, and are the greatest in the vicinity of probe SVP1.

With the exception of benzene in vapor well SVP6, concentrations of BTEX were not measured in any sample above their laboratory reporting limit. However, due to elevated TPH and VOC concentrations, the samples were diluted, raising the reporting limits, which yielded non-detect results.

CONCLUSIONS

The results of the assessment activities indicate that adsorbed phase chlorinated VOCs are present at the highest concentrations at the site along the southern boundary of the property in the vicinity of vapor well SVP1 and boring B9 from 10 to 40 feet bgs, and decrease with depth to concentrations near the laboratory reporting limit at the

capillary fringe. Adsorbed phase TPH concentrations in excess of 100 mg/kg are present in two distinct zones, from 5 to 15 feet bgs, and the capillary fringe from 80 to 85 feet bgs.

The maximum dissolved phase PCE and TCE concentrations were measured in well MW6 in the intermediate zone. The PCE and TCE concentrations were generally within the same order of magnitude in all groundwater wells screened within the shallow zone, indicating the dissolved phase chlorinated hydrocarbons in the shallow zone may be significantly associated with the regional Omega plume. The concentrations of dissolved phase PCE and TCE are up to one order of magnitude higher in wells MW6B and MW6C as compared to onsite perimeter wells screened in the intermediate and deep zones. In the intermediate and deep zones, the uniformity of the concentrations in the perimeter wells indicates these concentrations also may be associated with the regional Omega plume.

Groundwater monitoring wells MW9A/B/C through MW10A/B/C will be incorporated into the groundwater monitoring program for the site, and were sampled for the first time during the second half 2012 groundwater monitoring event. A separate report detailing the second half 2012 monitoring and sampling event will be prepared and submitted to the CRWQCB-LAR by February 15, 2013. The new wells will be sampled on a semi-annual basis in conjunction with the adjacent CHT site.

The results of the borings into the low permeable layer did not indicate any VOC concentrations in soil and the grab groundwater samples from beneath the low permeable layer did not indicate any VOC concentrations above MCLs, therefore it appears that the layer is sufficiently competent to prevent penetration of VOCs through the low permeable layer into the underlying aquifer at concentrations above regulatory standards.

Laboratory analytical results of soil vapor samples were compared against CHHSLs to evaluate the potential risk of exposure to vapors migrating from beneath the site. Based on the comparison, concentrations of multiple chlorinated solvents exceeded their respective CHHSLs, and further evaluation is warranted, which may include research to determine if vapor barriers are present in the building foundations, and the subsequent steps per the DTSC and California EPA's step-wise approach to the evaluation of vapor intrusion to indoor air (DTSC/EPA, 2011).

CONTACTS

The responsible party contact is Mr. Aaron Thom, ExxonMobil Environmental Services, 13401 North Freeway, Houston, Texas 77060. The consultant contact is Mr. James Anderson, Cardno ERI, 4572 Telephone Road, Suite 916, Ventura, California 93003. The agency contact is Mr. Luis Changkuon, California Regional Water Quality Control Board-Los Angeles Region, 320 West 4th Street, Suite 200, Los Angeles, California 90013.

LIMITATIONS

For any reports cited that were not generated by Cardno ERI, the data taken from those reports is used "as is" and is assumed to be accurate. Cardno ERI does not guarantee the accuracy of this data and makes no warranties for the referenced work performed nor the inferences or conclusions stated in these reports.

This report was prepared in accordance with generally accepted standards of environmental, geological and engineering practices in California at the time of investigation. No soil engineering or geotechnical references are implied or should be inferred. The evaluation of the geologic conditions at the site for this investigation is made from a limited number of data points. Subsurface conditions may vary away from these data points.

For any questions concerning this report, please contact Mr. James Anderson at 805 644 4157, extension 181805.

Sincerely,

PROFESSIONAL GEOLOGIST
ANDREW B. NELSON

B19	Soil boring
	Aliphatic hydrocarbon concentration in micrograms per cubic meter
	Line of equal aliphatic hydrocarbon concentration
	Samples collected on 07/30/12 and 09/20-25/12

TABLE 1

CUMULATIVE WATER LEVEL MEASUREMENTS AND VOC GROUNDWATER ANALYSES

FORMER EXXONMOBIL JALK FEE PROPERTY

10607 NORWALK BOULEVARD

SANTA FE SPRINGS, CALIFORNIA

CARDNO ERI 1155

EXPLANATION:

Constituents analyzed by EPA Method 8260B.
(a) = values supplied by previous consultant
(b) = date of well abandonment not known
D = duplicate
ELEV = elevation
GW = groundwater
feet-MSL = feet above mean sea level
feet-TOC = feet below top of casing
NAPL = non-aqueous phase liquid (thickness measured in feet)
EPA = Environmental Protection Agency
DCE = c-1,2-Dichloroethene
PCE = Tetrachloroethene or perchloroethylene
TCE = Trichloroethene
J = estimated value between method detection limit and practical quantitation limit
ND = not detected at or above the stated laboratory reporting limit
< = not detected at or above the stated laboratory reporting limit
µg/l = micrograms per liter

TABLE 2

CUMULATIVE HYDROCARBON GROUNDWATER MONITORING RESULTS

FORMER EXXONMOBIL JALK FEE PROPERTY

10607 NORWALK BOULEVARD

SANTA FE SPRINGS, CALIFORNIA

CARDNO ERI 1155

Explanation:
BTEX = Benzene, toluene, ethylbenzene, and total xylenes
DUP = duplicate sample
ELEV = elevation
EPA = Environmental Protection Agency
GW = groundwater
feet-MSL = feet above mean sea level
feet-TOC = feet below top of casing
DIPE = di-isopropyl ether
EDB = 1,2-dibromoethane
EDC = 1,2-dichloroethane
ETBE = ethyl tertiary butyl ether
J = estimated value between method detection limit and practical quantitation limit
TAME = tertiary amyl methyl ether
TBA = tertiary butyl alcohol
TPHg = total petroleum hydrocarbons as gasoline [called Gasoline Range Organics (C4-C12) in laboratory reports]
TPHd = total petroleum hydrocarbons as diesel [called Petroleum Hydrocarbons C10-C28 in laboratory reports]
TPHo = total petroleum hydrocarbons as oil [called Petroleum Hydrocarbons C24-C40 in laboratory reports]
MTBE = methyl tertiary butyl ether
MTBE analyzed by EPA Method 8260B.
NAPL = non-aqueous phase liquid (thickness measured in feet)
ND = not detected at or above stated laboratory reporting limit
< = not detected at or above stated laboratory reporting limit
ug/l = micrograms per liter
(a) = values supplied by previous consultant
(b) = date of well abandonment not known
Environmental Resolutions, Inc. (ERI) became known as Cardno ERI on October 18, 2010
(c) = discrete sample taken at bottom of water colmun before well was purged
(d) = pre-purge sample taken at top of water column before well was purged

Explanation:

* Sample analyzed using on site mobile laboratory

Concentrations reported in ug/L

ug/L = micrograms per liter

J = estimated value between method detection limit and practical quantitation limit.

NA = not analyzed

< = not detected at or above the stated reporting limit

Explanation:

All concentrations reported in µg/m3, except for helium and methane, which are reported in %v

µg/m3 = micrograms per cubic meter

%v = percent by vloume

J = estimated value between method detection limit and practical quantitation limit.

TCE = Trichloroethene

PCE = Tetrachloroethene

VC = Vinyl Chloride

< = not detected at or above the stated method detection limit

Houston, Texas 77032

Certified Mail
Return Receipt Requested
Claim No. 7011 2970 0000 0643 0909

SUBJECT: APPROVAL OF WORKPLAN FOR ADDITIONAL SITE ASSESSMENT, PURSUANT TO CALIFORNIA WATER CODE SECTION 13267 ORDER

SITE/CASE: FORMER JALK FEE PROPERTY, 10607 NORWALK AVENUE, SANTA FE SPRINGS, CALIFORNIA (SCP NO. 0203, SITE ID NO. 1848000)

Dear Mr. Thom:

Los Angeles Regional Water Quality Control Board (Regional Board) staff reviewed the April 13, 2012, *Workplan for Additional Site Assessment Activities* (Workplan), submitted by Cardno ERI on your behalf, for the referenced site. The Workplan presents the scope of work to further delineate volatile organic compounds (VOCs) in soil vapor, soil matrix, and groundwater at the site and vicinity.

The Workplan proposes the following scope of work:

- Install four (4) single-depth soil vapor wells to approximately 5 feet below ground surface (bgs) near several buildings.
- Install three (3) multi-depth soil vapor wells to approximately 5, 15, 30, 60, and 90 feet bgs, respectively.
- Conduct an evaluation for vapor intrusion into indoor air and a bioattenuation study of contaminants in the vadose zone.
- Drill 13 soil borings into the vadose zone to depths ranging from approximately 45 to 70 feet bgs.
- Drill and sample one (1) deep soil boring into the aquiclude underlying the saturated zone (Exposition Aquifer).
- Install three (3) clustered groundwater monitoring wells into the Exposition Aquifer. Each cluster will contain three wells with screens centered at approximately 90, 140, and 180 feet bgs, respectively.

Based upon review of the information submitted, the Regional Board approves the scope of work presented in the Workplan, with the following additions:

1. As indicated during the meeting with you and your consultants on April 10, 2012, the VOCs screening levels for soil below the water table should be their natural background levels or California drinking water Maximum Contaminant Levels. Therefore, it is not appropriate to terminate the deep soil boring based on the proposed soil screening level of 0.7 milligrams per kilogram (mg/kg) for tetrachloroethene (PCE).

2. The evaluation for vapor intrusion into indoor air shall be conducted in accordance with the *Final Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air*, developed by the California Department of Toxic Substances Control, dated October 2011 or its latest version. The vapor intrusion evaluation will be forwarded to the California Office of Environmental Health Hazard Assessment for their review and comments.

3. Following the completion of field work and laboratory analysis, a technical report presenting the results of the investigations shall be uploaded to GeoTracker by **November 15, 2012**. If the extent of contamination in soil matrix, soil vapor, and groundwater is not fully delineated during this phase of investigation, the technical report shall include a scope of work for further subsurface investigations and an implementation schedule.

4. Following the completion of the installation, development, and first sampling, all new groundwater monitoring wells shall be incorporated into the established semi-annual groundwater monitoring program for the site.

5. Please notify the Regional Board at least 5 days prior to the start of field work. Regional Board staff may visit the site and observe field activities.

The due date for submittal of the technical report is an amended schedule specified in the existing California Water Code (CWC) section 13267 Order issued to ExxonMobil on August 24, 2010. Pursuant to section 13268 of the CWC, failure to submit the required technical report by the specified due date may result in civil liability penalties administratively imposed by the Regional Board in an amount of up to one thousand dollars ($1,000) for each day the technical report is not received.

If you have any questions, please contact case manager Mr. Luis Changkuon at (213) 576-6667 (lchangkuon@waterboards.ca.gov).

Sincerely,

for Paula Rasmussen

APPENDIX D

FIELD PROTOCOL

SOP-5
WELL SAMPLING & SURVEYING
Rev 6/05

WELL SAMPLING AND SURVEYING

1) Open well heads. This may require a socket or a special Allen wrench.

2) If the wells are not surveyed by a licensed land surveyor, then survey the wells if this hasn't been done before as follows:

   a) Select a permanent benchmark (e.g. curb at corner of site, property line). Record on "SURVEYGW" form.
   b) Measure and record rectangular coordinates from benchmark to each well.
   c) Set up tripod and transit where it can see all wells and the benchmark = Station "A". If you can't see all wells, two transit locations must be used. At least one well surveyed from Station "A" must be resurveyed from Station "B". Preferably, two or more wells are resurveyed.
   d) Carefully level the tripod using the bubble indicator.
   e) Place stadia rod on benchmark and record height from crosshair to reference, (D_o).
   f) Place stadia rod on each well (at the notch) and record ht. from well to crosshair, (D_w).
   g) Calculate casing elevation as shown on data sheet SURVEYGW.

   To check the accuracy in leveling the transit, set the transit in second spot and repeat steps 2c through 2g. Recalculation of casing elevations should agree within 0.01 ft. or a third placement of the tripod will be required.

3) Set up a decon station. This consists of four (4) buckets. Fill the first with deionized water and one (1) teaspoon (approximately one cap full) of Liquinox soap. Fill the next three (3) buckets with deionized water. To decon a probe or water level indicator, place the element and the tape in the buckets in series, finishing with a good rise. To decon a pump, place the pump, hose and wire leads into the buckets in series, and circulate water through the pump in each bucket. Move the equipment from the dirtiest to cleanest bucket, rinsing thoroughly in each bucket.

4) Decon the interface probe or water level indicator before inserting into each well. Review the historical groundwater concentrations and sample from cleanest well to hottest well, deconing between each well. Lower probe/indicator until it beeps - raise and lower and mark the level on the tape with your thumb. Estimate level to the nearest 0.01 ft. Note the depth to free product if present as indicated by the interface probe and the depth to water on your field notes and log. Note any odor when the probe is withdrawn from the well. Look for the notch or ink mark on the top of the well and measure all levels from that. Notch should be on the highest side of the well pipe. If no side is high, notch should be on the north side. Measure from the casing adjacent to the notch - not from the bottom of the notch. If there is no notch - make one. For sites that have free product, or historically have had free product, use a bailer to remove a sample of the top of the water column and measure the product in the bailer or look for a sheen. Take a picture of any bailers with product after labeling the bailer with the well number.

5) If there is free product, do not purge or sample. The presence of liquid phase hydrocarbons means the concentration in the water will be high anyway and the pump will be difficult to get clean enough to avoid contaminating other wells.

6) <u>Developing</u>: If the well has not been developed (it is new), surge the well by moving bailer up and down vigorously in the well for about 5 minutes. This will wash silt from the sand pack into the well where it can be removed.

7) Pull out as much silt as possible by running the bailer all the way to the bottom and withdrawing. Continue bailing until water is fairly clear or until local regulatory specifications are met. Removal of silt with the bailer will extend the pump life. Contact the Project Manager if water does not clear up by 10 casing volumes.

8) Decon pump by washing in TSP/water the rinsing with tap water and rinsing again with deionized water. Then pump clean water through the pump to push out any dirty water.

9) Purging: Place pump in well about 2 to 5 feet off bottom. Withdraw at least 3 casing volumes from the well, or until temperature, pH and conductivity stabilize (see local regulations). Be careful not to let the pump run dry. If an electric purging pump is used, such as a Grundfos pump, check the water level in the well with the water level indicator and slow pump down when water level is within 2 ft of the pump head. While purging, collect a water sample as often as possible and check for pH, conductivity, and temperature. Stable pH and conductivity would indicate the well has been filled with representative groundwater and purging is complete. If well recharges slowly, remove 1.5 casing volumes. Estimate flow rates by recording the time it takes to fill a 5-gallon bucket (1/2 of a 55-gallon barrel, etc.)

10) Decon pump thoroughly between each well by repeating step 7.

11) Label bottles with a "Sharpie Pen" when they are dry. Label as W-xx-MWy, where xx is water depth below surface in feet and y is well number (refer to SOP-1).

12) After the well has been developed, sample the water using a disposable bailer and surgical gloves to prevent oil from your hands from contaminating the sample. Be sure to leave no headspace or bubbles in any water sample to be tested for volatiles. Wells should be sampled within (24) hours of purging and the well should have recovered to within 80% of its volume before purging. (Slow recharge wells need to be addressed with the Project Manager - and may have to be purged slowly). Gasoline contaminated water requires at least three (3) 40 ml VOA's from each well. Preserve samples by acidifying to pH <2 (usually with two drops of HCl). Water suspected of contamination with oil or diesel requires 2 1-liter samples in amber bottles. Samples contaminated with oil will require 10 drops of H_2SO_4 for preservation. Samples for organic lead require two (2) 1-liter amber bottles.

13) Place like vials in a baggie and label the baggie. Put vials and baggie in an ice chest filled with ice and document samples and analyses required on a chain of custody. Take samples to the laboratory the same day samples are collected if possible, at least within 24 hours.

14) Clean wellhead gaskets (seals), put locking caps on the wells and replace the covers. Cover and label the drums (if any) of purge and decon water.

Analysis	Bottles	Preservative	
8015 mod gasoline/8020(602)		min. of 3 x 40 ml VOA	2 drops HCl to pH <2
8015 mod diesel/8020(602)		2 1-liter & 3 x 40 ml VOA	2 drops HCl to pH <2 (applied to VOA's)
418.1 (TRPH)		2 1-liter amber	10 drops H_2SO_4 to pH <2
Organic Lead		2 1-liter amber	no preservative suggested
HOC - 8010 (601)		min. of 3 x 40 ml VOA	no preservative suggested

Items Needed:		Items Needed for Surveying:
Water Level Indicator	Distilled Water	Topcon AT-F7 Transit
Disposable Bailers	4 Buckets	Tripod
Generator	Bottle Brush	Stadia Rod
Grundfos Pump and Reel	TSP Detergent	
Grundfos Pump Control Box	Stainless Steel Cable or Poly Rope	
Hydac Cond/Temp/pH Meter	Cooler with Ice	
Liter Bottles	Socket set and Allen Wrench (CNI Key)	
VOAs	Plastic sheeting	

SOP-6
Quarterly Well Monitoring
Rev 6/05

QUARTERLY WELL MONITORING

1) Give the site manager advance notification of field activities. Arrange for a sufficient number of drums. Obtain a site plan with the location and ID's of the wells to be monitored and a copy of the table from the last quarterly report with the previous groundwater data.

2) Open well heads. This may require a socket or a special allen wrench.

3) Set up decon station per SOP-5. Measure groundwater depths with water level indicator as per SOP-5 before any other action is taken. If the depth to the bottom of the monitoring well is unknown, reel out the water level indicator until you feel the probe contact the bottom. You may have to raise and lower the probe several times to "feel" contact with the bottom. The probe is not very heavy, and the bottom of the well may have a cushioning layer of silt. Record the depth of the well once you feel confident the probe is at the bottom. Note odors from well.

4) Calculate the linear footage of water in each well, by subtracting the depth to water from the total well depth. To obtain the casing volume in gallons, multiply the linear footage by a constant for the given well casing diameter. Typically, three casing volumes are purged from each well prior to sampling. **Always** Round up - if 3.4 gallons, then purge 4 gallons - if 12.1 gallons, then purge 13 gallons.

Casing diameter	Gallons per linear foot
2"	0.17
4"	0.66
6"	1.50
8"	2.60

5) After measuring all water levels, begin purging the wells in order of the cleanest to the most contaminated based on last quarter's data. Well purging procedures are outlined in SOP-5. While wells containing free floating product may not be sampled, the project manager may want the free product removed manually by bailer. Check with the project manager before bailing LPH. You may find that for shallow wells, it may be quicker to bail manually rather than set up the pump. Place purge and decon water in a 55-gallon drum or treat on site. Do not mix purge water from different wells in one drum. Record all purge data on Groundwater Sampling Field Logs. Record "LPH" and the thickness in feet and inches (to nearest 1/16 of an inch) in the comments section if a measurable level of LPH present. If non-measurable amount present then record "Sheen" in the comments section.

6) When the well has recovered at least 80% of its' original water level, collect samples using a clean, new disposable bailer. Use a new disposable bailer for each well. Make sure the rope or line is tied securely on the bailer, you don't want to go fishing. Sample in order of the cleanest to the most contaminated. If required, collect field (equipment) blanks.

7) Trip blanks are a QA/QC procedure that must be collected at every site. Obtain a trip blank from the laboratory. They will make them up for you. The trip blank to taken unopened to the site and is kept with the other samples in the cooler unopened during the day's sampling. Label the bottle as an arbitrary monitoring well. For example: if there are 5 monitoring wells to be sampled at the site, the trip blank should be labeled as if it were a sample from MW6. The trip blank is never opened and it is used to determine if any contaminants are introduced by the laboratory or during transportation of the samples.

8) Field (equipment) blanks are a QA/QC procedure to be collected at the project manager's discretion (or always for LACDPW sites). To collect a field blank decon a bailer thoroughly; pour distilled water into the bailer; pour the distilled water from the bailer into appropriate sample bottle(s) for the analysis

to be performed, allow for no headspace; label the bottle as an arbitrary monitoring well. For example: if there are 5 monitoring wells to be sampled at the site plus a trip blank, and a field blank is to collected, the field blank should be labeled as if it were a sample from MW7 (the trip blank is MW6). If a disposable bailer is used for sampling, use a new disposable bailer to collect the field blank.

9) Label sample containers when they are dry (refer to SOP-1). Place vials from each well in a separate plastic zip lock bag. Put bag in an ice chest and document samples and analyses required on a chain of custody (see attached examples).

10) Replace the locking caps, and the covers. Cover and label the drums of waste water. Place the drums on site in a location selected by the site manager. Usually, this will be near a dumpster or in the back, away from public view. Labels should face outward.

11) Decon all equipment per SOP-5 before leaving the site.

In general, groundwater sampling will be performed in accordance with LUFT guidelines. Several local agencies require that groundwater sampling occur under slightly different guidelines. Check with the project manager to find out which sites require special groundwater sampling procedures. Typically, the following apply:

Orange County Health Care Agency Requirements

No special requirements. Water sampling will be performed as per the State Water Resources Board's LUFT manual.

LARWQCB Groundwater Requirements

- **o** Purge a minimum of three well volumes if recovery is fast, or one borehole volume if recovery is slow (water does not recover to 80% of original level within two hours).

- **o** The last three readings must be within 10% for conductivity, temperature, and pH to show stabilization. This means that all three consecutive readings must be within these limits - the first with the middle, and the first with the last, and the middle with the last. For instance, pH readings of 6.92, 6.95, and 7.00 would be sufficient.

- **o** Even though there are no guidelines for turbidity, the measurements should be less than 10 NTU, or meet the baseline level established during development, upon completion of purging. Check with project manager if you use the baseline turbidity level.

- **o** Prior to sampling document recovery time by measuring the water level in each well to prove that at least 80% recovery has occurred.

- **o** A trip blank must be collected.

- o In the comments column of the chain of custody, write “Prepare laboratory report in WIP format."

San Diego Department of Health
Services Groundwater Sampling Requirements

- **o** SDDHS does not encourage purging wells until dry.

- **o** Purge one borehole volume of water if recovery is fast, collecting pH/temperature/conductivity measurements while purging, then remove an additional one-half borehole volume of water. If the first and second measurements vary by less than 10%, purging is considered adequate. If not, keep purging water in one-half borehole volume increments until the measurements vary by less than 10%, or three borehole volumes have been removed. Obtain three consecutive pH/temperature/conductivity measurements that are within 10% of each other.

- **o** If recovery is slow (water does not recover to 80% of original level within two hours) purge only one borehole volume of water.

- **o** Prior to sampling document recovery time by measuring the water level in each well to prove that at least 80% recovery has occurred.

Ventura County Environmental Health Division
Groundwater Sampling Requirements

- **o** A trip blank and a duplicate sample must be analyzed for each site.

- **o** Custody seals must be place over the cap of each sample.

Under certain conditions the calculated purge volumes will need to be calculated in borehole volumes instead of well casings volumes. Use the following to calculate borehole volume in gallons.

Well I.D.	Bore Volume
2"	0.90 gal/ft. in water
4"/or nested wells	1.70 gal/ft. in water

The completed groundwater sampling log must contain:
- pH/temp./conductivity and turbidity measurements indicating stabilization
- time and volume of water removed at each pH/temp./conductivity measurements
- total volume of water purged
- name of personnel performing sampling
- date and project number
- problems or unusual conditions arising during purging or sampling, such as the well going dry during purging, water in the well vault, missing well caps or locks, odors, appearance of purge water, etc.
- 80% recovery measurement and time of measurement after purging and before sampling

All chains of custody for the client's groundwater sites must contain the consultant work release number, station identification number and client contact among the other items to be filled out. Check the groundwater sampling field log and chain of custody for completeness, accuracy and neatness. If you have any questions, call!!!

Make sure that the date and time of relinquished and accepted at the lab are the same on the chain of custody. Also, make sure the lab fills in the sample condition information and signs for the samples on the chain of custody

Santa Barbara County Environmental Health Services
Groundwater Monitoring Guidelines

I. Groundwater Monitoring

A. Groundwater levels are to be monitored/measured in **all wells** in a short time span.
B. Measure the groundwater levels (correct for "free product" thickness).
C. Use a clear bailer to check for the presence of "floating product," sheen, and odors.
D. Replace well cover until ready to purge well.

II. Purging
A. Amount: generally 3 to 5 (no more than 10) well volumes; via bailer, pumps, or vacuum truck.
B. Parameters (pH, temperature, conductivity) shall stabilize while purging.

1. Measure the parameters of a small volume (i.e., a 500 ml) of the water as it is removed from the well. Measure the parameters initially and at regular volume intervals (e.g., after every well casing volume). More frequent testing may be needed if the well is known to go dry.
2. Wells must be allowed to recharge prior to sampling (see section G of the Santa Barbara County LUFT Manual).

C. Slow recharging wells are wells that are purged dry before removing 3 well volumes of water, and take more than **two (2)** hours to recharge.
1. Note this on the field records and estimate the number of well volumes removed.
2. Allow the well to recharge a minimum of two (2) feet and then sample.
3. **Sample wells no later than 24 hours after purging.**
4. Note the water level and percentage of recharge in the report.

III. Sample Collection

A. Use either a decontaminated Teflon, stainless steel, or disposable bailer.

B. Sample containers are to be supplied and certified by a laboratory:
1. VOAs of 40 ml volume (at least 3 per well – check with lab and the PM for specific requirements); fill VOAs first to reduce volatization.
2. 4 oz sample containers for Pb (metallic lead) analysis (if needed).

C. Fill containers by pouring along the inside of the vial to reduce volatilization.

D. Form a positive meniscus with the water, to avoid trapping air, before placing the cap on the VOA. **Samples with headspace are not acceptable for analysis.**
1. Check for bubbles by inverting and tapping gently to dislodge bubbles.
2. If bubbles are found, uncap and repeat steps C and D.

E. Label all samples and store immediately in an ice chest at 4 degrees Celsius filled with ice.

F. Be careful to properly decontaminate equipment between each and every well.

Cardno ERI
Soil Boring and Well Installation
Field Protocol

Preliminary Activities

Prior to the onset of field activities at the site, Cardno ERI obtains the appropriate permit(s) from the governing agency(s). Advance notification is made as required by the agency(s) prior to the start of work. Cardno ERI marks the borehole locations and contacts the local one call utility locating service at least 48 hours prior to the start of work to mark buried utilities. Borehole locations may also be checked for buried utilities by a private geophysical surveyor. Prior to drilling, the borehole location is cleared in accordance with the client's procedures. Fieldwork is conducted under the advisement of a registered professional geologist and in accordance with an updated site-specific safety plan prepared for the project, which is available at the job site during field activities.

Drilling and Soil Sampling Procedures

Cardno ERI contracts a licensed driller to advance the boring and collect soil samples. The specific drilling method (e.g., hollow-stem auger, direct push method, or sonic drilling), sampling method [e.g., core barrel or California-modified split spoon sampler (CMSSS)] and sampling depths are documented on the boring log and may be specified in a work plan. Soil samples are typically collected at the capillary fringe and at 5-foot intervals to the total depth of the boring. To determine the depth of the capillary fringe prior to drilling, the static groundwater level is measured with a water level indicator in the closest monitoring well to the boring location, if available.

The borehole is advanced to just above the desired sampling depth. For CMSSSs, the sampler is placed inside the auger and driven to a depth of 18 inches past the bit of the auger. The sampler is driven into the soil with a standard 140-pound hammer repeatedly dropped from a height of 30 inches onto the sampler. The number of blows required to drive the sampler each 6-inch increment is recorded on the boring log. For core samplers (e.g., direct push), the core is driven 18 inches using the rig apparatus.

Soil samples are preserved in the metal or plastic sleeve used with the CMSSS or core sampler, in glass jars or other manner required by the local regulatory agency (e.g., Environmental Protection Agency Method 5035). Sleeves are removed from the sample barrel, and the lowermost sample sleeve is immediately sealed with Teflon™ tape, capped and labeled. Samples are placed in a cooler chilled to 4º Celsius and transported to a state-certified laboratory. The samples are transferred under chain-of-custody (COC) protocol.

Field Screening Procedures

Cardno ERI places the soil from the middle of the sampling interval into a plastic re-sealable bag. The bag is placed away from direct sunlight for approximately 20 minutes, after which the tip of a photo-ionization detector (PID) or similar device is inserted through the plastic bag to measure organic vapor concentrations in the headspace. The PID measurement is recorded on the boring log. At a minimum, the PID or other device is calibrated on a daily basis in accordance with manufacturer's specifications using a hexane or isobutylene standard. The calibration gas and concentration are recorded on a calibration log. Instruments such as the PID are useful for evaluating relative concentrations of volatilized hydrocarbons, but they do not measure the concentration of petroleum hydrocarbons in the soil matrix with the same precision as laboratory analysis. Cardno ERI trained personnel describe the soil in the bag according to the Unified Soil Classification System and record the description on the boring log, which is included in the final report.

Air Monitoring Procedures

Cardno ERI performs a field evaluation for volatile hydrocarbon concentrations in the breathing zone using a calibrated PID or lower explosive level meter.

Groundwater Sampling

A groundwater sample, if desired, is collected from the boring by using Hydropunch™ sampling technology or installing a well in the borehole. In the case of using Hydropunch™ technology, after collecting the capillary fringe soil sample, the boring is advanced to the top of the soil/groundwater interface and a sampling probe is pushed to approximately 2 feet below the top of the static water level. The probe is opened by partially withdrawing it and thereby exposing the screen. A new or decontaminated bailer is used to collect a water sample from the probe. The water sample is then emptied into laboratory-supplied containers constructed of the correct material and with the correct volume and preservative to comply with the proposed laboratory test. The container is slowly filled with the retrieved water sample until no headspace remains and then promptly sealed with a Teflon-lined cap, checked for the presence of bubbles, labeled, entered onto a COC record and placed in chilled storage at 4° Celsius. Laboratory-supplied trip blanks accompany the water samples as a quality assurance/quality control procedure. Equipment blanks may be collected as required. The samples are kept in chilled storage and transported under COC protocol to a client-approved, state-certified laboratory for analysis.

Backfilling of Soil Boring

If a well is not installed, the boring is backfilled from total depth to approximately 5 feet below ground surface (bgs) with either neat cement or bentonite grout using a tremie pipe. The boring is backfilled from 5 feet bgs to approximately 1 foot bgs with hydrated bentonite chips. The borehole is completed from 1 foot bgs to surface grade with material that best matches existing surface conditions and meets local agency requirements. Site-specific backfilling details are shown on the respective boring log.

Well Construction

A well (if constructed) is completed using materials documented on the boring log or specified in a work plan. The well is constructed with slotted casing across the desired groundwater sampling depth(s) and completed with blank casing to within 6 inches of surface grade. No further construction is conducted on temporary wells. For permanent wells, the annular space of the well is backfilled with Monterey sand from the total depth to approximately 2 feet above the top of the screened casing. A hydrated granular bentonite seal is placed on top of the sand filter pack. Grout may be placed on top of the bentonite seal to the desired depth using a tremie pipe. The well may be completed to surface grade with a 1-foot thick concrete pad. A traffic-rated well vault and locking cap for the well casing may be installed to protect against surface-water infiltration and unauthorized entry. Site-specific well construction details including type of well, well depth, casing diameter, slot size, length of screen interval and sand size are documented on the boring log or specified in the work plan.

Well Development and Sampling

If a permanent groundwater monitoring well is installed, the grout is allowed to cure a minimum of 48 hours before development. Cardno ERI personnel or a contracted driller use a submersible pump or surge block to develop the newly installed well. Prior to development, the pump is decontaminated by allowing it to run and re-circulate while immersed in a non-phosphate solution followed by successive immersions in potable water and de-ionized water baths. The well is developed until sufficient well casing volumes are removed so that turbidity is within allowable limits and pH, conductivity and temperature levels stabilize in the purge water. The volume of groundwater extracted is recorded on a log.

Following development, groundwater within the well is allowed to recharge until at least 80% of the drawdown is recovered. A new or decontaminated bailer is slowly lowered past the air/water interface in the well, and a water sample is collected and checked for the presence of non-aqueous phase liquid, sheen or emulsions. The water sample is then emptied into laboratory-supplied containers as discussed above.

Surveying

If required, wells are surveyed by a licensed land surveyor relative to an established benchmark of known elevation above mean sea level to an accuracy of +/- 0.01 foot. The casing is notched or marked on one side to identify a consistent surveying and measuring point.

Decontamination Procedures

Cardno ERI or the contracted driller decontaminates soil and water sampling equipment between each sampling event with a non-phosphate solution, followed by a minimum of two tap water rinses. De-ionized water may be used for the final rinse. Downhole drilling equipment is steam-cleaned prior to drilling the borehole and at completion of the borehole.

Waste Treatment and Soil Disposal

Soil cuttings generated from the drilling or sampling are stored on site in labeled, Department of Transportation-approved, 55-gallon drums or other appropriate storage container. The soil is removed from the site and transported under manifest to a client- and regulatory-approved facility for recycling or disposal. Decontamination fluids and purge water from well development and sampling activities, if conducted, are stored on site in labeled, regulatory-approved storage containers. Fluids are subsequently transported under manifest to a client- and regulatory-approved facility for disposal or treated with a permitted mobile or fixed-base carbon treatment system.

Cardno ERI
Soil Vapor Sampling Well Installation and Sampling
Field Protocol

Preliminary Activities

Prior to the onset of field activities at the site, Cardno ERI obtains the appropriate permit(s) from the governing agency(s). Advance notification is made as required by the agency(s) prior to the start of work. Cardno ERI marks the borehole locations and contacts the local one call utility locating service at least 48 hours prior to the start of work to mark buried utilities. Borehole locations may also be checked for buried utilities by a private geophysical surveyor. Prior to drilling, the borehole location is cleared in accordance with the client's procedures. Fieldwork is conducted under the advisement of a registered professional geologist and in accordance with an updated site-specific safety plan prepared for the project, which is available at the job site during field activities.

Well Construction

The borehole is advanced to the desired depth using either a direct-push rig, hand auger, or air vacuum rig. Lithologic conditions are recorded on a boring log during borehole advancement, and select soil matrix sampling may be conducted based on soil characteristics.

Each soil vapor sampling (SVS) well is constructed using inert screen material attached to $^{1}/_{8}$- to ¼-inch outer diameter inert tubing. A gas-tight vacuum fitting or valve is attached to the top of each length of tubing using a female compression fitting. Each screen is set within a minimum of a 12-inch thick appropriately sized sand pack, with a minimum of 3 inches of sand pack above the top of the screen. A minimum of 4 inches of dry granular bentonite is set above each screen and associated sand pack. In SVS wells with multiple and separate casings and screens, the annular space between the top of the dry granular bentonite above the deep screen and the bottom of the sand pack associated with the shallow screen is sealed with a minimum of 18 inches of hydrated bentonite. The remainder of the annular space of the well is sealed with hydrated bentonite to 1 foot below ground surface. Wellheads are finished with traffic-rated well boxes set in concrete flush with the surrounding grade. No glues, chemical cements, or solvents are used in well construction.

A boring log is completed with the construction details for each well, including the materials of construction, depth of the borehole, screen length, and annular seal thickness.

Soil Vapor Sampling

Samples are collected using a soil vapor purging and sampling manifold consisting of a flow regulator, vacuum gauges, vacuum pump, and laboratory-prepared, gas-tight, opaque containers such as Summa™ canisters. Samples may also be collected using a syringe and analyzed by a mobile laboratory. Prior to use, Summa™ canisters are checked to ensure they are under the laboratory induced vacuum between 31 and 25 inches of mercury (in. Hg). New inert tubing is used to purge and sample each well. Prior to purging and sampling each SVS well, the sampling manifold is connected to the gas-tight vacuum fitting or valve at the wellhead, and the downstream tubing and fittings are vacuum tested at approximately 24 to 28 in. Hg. Purging and sampling are conducted only on SVS wells when the tubing and fittings hold the applied vacuum for 10 minutes per vacuum gauge reading.

When required, Cardno ERI conducts a purge volume versus constituent concentration test on at least one SVS well prior to purging and sampling activities. The purge volume test well is selected based on the location of the anticipated source of chemical constituents at the site and on the location of anticipated maximum soil vapor concentrations based on lithologic conditions. If the SVS well has been in place for more than 1 week, it is assumed that soil vapor in the sand pack has equilibrated with the surrounding soil, and only the screen and tubing volumes are included in the purge volume calculation. If the SVS well has been in place for less than 1 week, the volume of the sand pack around the screen is included in the purge volume calculation. A photo-ionization detector (PID) or on-site mobile laboratory is used to evaluate concentrations of chemical constituents in the vapor stream after 1, 3, and 7 volumes of vapor have been purged from the SVS well.

Purging is conducted at a rate of 100 to 200 milliliters per minute (ml/min). The purge volume exhibiting the highest concentration is the volume of vapor purged from each SVS well prior to sampling.

During sampling, a leak test is performed at each SVS wellhead valve and fitting to check for leaks in the sampling manifold and bentonite seal. An agency approved leak detection compound (such as 1,1-difluoroethane) is applied around the wellhead, or gauze strips soaked in isopropyl alcohol are applied to the down-hole side of the wellhead valve, and a shroud is placed over the system downstream of the sampling container. The soil vapor sample is collected in the sample container while the shroud is in place. Sampling is conducted at approximately the same rate of purging, at 100 to 200 ml/min. Soil vapor samples are submitted under chain-of-custody protocol for the specified laboratory analyses.

At a minimum, weather conditions (temperature, barometric pressure and precipitation), the sampling flow rate, the purge volume, the leak detection chemical, the sample canister identification number, the method of sample collection, and the vacuum of the sampling canister at the start and end of sample collection (if applicable) are recorded on a log for each SVS well purged and sampled.

Decontamination Procedures

If soil samples are collected, Cardno ERI or the contracted driller decontaminates the soil sampling equipment between each sampling interval using a non-phosphate solution, followed by a minimum of two tap water rinses. De-ionized water may be used for the final rinse. Downhole drilling equipment is steam-cleaned or triple-rinsed prior to advancing each borehole.

Waste Treatment and Disposal

Soil cuttings generated from the well installation are stored on site in labeled, Department of Transportation-approved, 55-gallon drums or other appropriate storage container. The soil is removed from the site and transported under manifest to a client- and regulatory-approved facility for recycling or disposal. Decontamination water is stored on site in labeled, regulatory-approved storage containers, and is subsequently transported under manifest to a client- and regulatory-approved facility for disposal or treated with a permitted mobile or fixed-base carbon treatment system.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Job ID: 490-12512-1

Laboratory: TestAmerica Nashville

Narrative

Job Narrative
490-12512-1

Comments
500mL sample volumes were submitted for the DRO/ORO analysis which yielded elevated reporting limits.

Receipt
The samples were received on 11/24/2012 8:10 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 0.1º C, 1.3º C and 3.2º C.

GC/MS VOA
Method(s) 8260B: The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for preparation batch 40097 exceeded control limits for the following analytes: cis-1,3-Dichloropropene.

Method(s) 8260B: The method blank for batch 40097 contained Hexachlorobutadiene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8260B: The method blank for batch 40239 contained Hexachlorobutadiene, Methylene Chloride above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batches 40239, 40427.

Method(s) 8260B: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for batch 40427 exceeded control limits for the following analytes: tert-butylbenzene, sec-butylbenzene, 135-Trimethylbenzene, 124-Trimethylbenzene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for preparation batch 40427 exceeded control limits for the following analytes: sec-butylbenzene, tert-butylbenzene, 135-trimethylbenzene, 124-trimethylbenzene, 4-chlorotoluene, bromobenzene, 2-chlorotoluene, trans-1,3-Dichloropropene.

No other analytical or quality issues were noted.

GC VOA
Method(s) 8015B GRO LL: Insufficient sample volume was available to perform batch matrix spike/matrix spike duplicate (MS/MSD) associated with batch 39012. The laboratory control sample (LCS) was performed in duplicate to provide precision data for this batch.

No other analytical or quality issues were noted.

GC Semi VOA
Method(s) 8015B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 38678.

No other analytical or quality issues were noted.

Organic Prep
No analytical or quality issues were noted.

VOA Prep
No analytical or quality issues were noted.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	RPD of the LCS and LCSD exceeds the control limits
B	Compound was found in the blank and sample.
E	Result exceeded calibration range.
*	LCS or LCSD exceeds the control limits

GC VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDA	Minimum detectable activity
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
California	NELAC	9	1168CA	10-31-13

The following analytes are included in this report, but are not certified under this certification:

Analysis Method	Prep Method	Matrix	Analyte
8015B	3510C	Ground Water	Diesel Range Organics [C10-C28]
8015B	3510C	Ground Water	ORO C24-C40
8015B	3510C	Water	Diesel Range Organics [C10-C28]
8015B	3510C	Water	ORO C24-C40

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
8260B		Ground Water	tert-Butylbenzene
8260B		Water	tert-Butylbenzene

COOLER RECEIPT FORM

490-12512 Chain of Custody

Cooler Received/Opened On 11/24/2012@ 8:10

1. Tracking # 5752 (last 4 digits, FedEx)

Courier: Fedex IR Gun ID 17610176

2. Temperature of rep. sample or temp blank when opened: 3.2 Degrees Celsius

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO (NA)

4. Were custody seals on outside of cooler? (YES)..NO...NA

If yes, how many and where: 1 Front

5. Were the seals intact, signed, and dated correctly? (YES)...NO...NA

6. Were custody papers inside cooler? (YES)...NO...NA

I certify that I opened the cooler and answered questions 1-6 (intial) _____

7. Were custody seals on containers: YES (NO) and Intact YES...NO...(NA)

Were these signed and dated correctly? YES...NO...(NA)

8. Packing mat'l used? (Bubblewrap) Plastic bag Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: (Ice) Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? (YES)...NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? (YES)...NO...NA

12. Did all container labels and tags agree with custody papers? (YES)...NO...NA

13a. Were VOA vials received? (YES)...NO...NA

b. Was there any observable headspace present in any VOA vial? YES...(NO)...NA

14. Was there a Trip Blank in this cooler? (YES)...NO...NA If multiple coolers, sequence # NA

I certify that I unloaded the cooler and answered questions 7-14 (intial) _____

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES..NO..(NA)

b. Did the bottle labels indicate that the correct preservatives were used (YES)...NO...NA

16. Was residual chlorine present? YES...NO...(NA)

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (intial) _____

17. Were custody papers properly filled out (ink, signed, etc)? (YES)...NO...NA

18. Did you sign the custody papers in the appropriate place? (YES)...NO...NA

19. Were correct containers used for the analysis requested? (YES)...NO...NA

20. Was sufficient amount of sample sent in each container? (YES)...NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (intial) _____

I certify that I attached a label with the unique LIMS number to each container (intial) _____

21. Were there Non-Conformance issues at login? YES..(NO) Was a PIPE generated? YES..(NO)...#_____

BIS = Broken in shipment

14. Was there a Trip Blank in this cooler? YES...NO...NA If multiple coolers, sequence # NA

I certify that I unloaded the cooler and answered questions 7-14 (intial) [signature]

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO...NA

b. Did the bottle labels indicate that the correct preservatives were used YES...NO...NA

16. Was residual chlorine present? YES...NO...NA

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (intial) [signature]

17. Were custody papers properly filled out (ink, signed, etc)? YES...NO...NA

18. Did you sign the custody papers in the appropriate place? YES...NO...NA

19. Were correct containers used for the analysis requested? YES...NO...NA

20. Was sufficient amount of sample sent in each container? YES...NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (intial) [signature]

I certify that I attached a label with the unique LIMS number to each container (intial) [signature]

21. Were there Non-Conformance issues at login? YES...NO... Was a PIPE generated? YES...NO...#

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

Job Narrative
490-12513-1

Comments
500mL sample volumes were submitted for the DRO/ORO analysis which yielded elevated reporting limits.

Receipt
The samples were received on 11/24/2012 8:10 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 1.3º C, 1.5º C and 3.2º C.

GC/MS VOA
Method(s) 8260B: The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for preparation batch 40097 exceeded control limits for the following analytes: cis-1,3-Dichloropropene.

Method(s) 8260B: The method blank for batch 40097 contained Hexachlorobutadiene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8260B: The method blank for batch 40239 contained Hexachlorobutadiene, Methylene Chloride above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batches 40239, 40427.

Method(s) 8260B: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for batch 40427 exceeded control limits for the following analytes: tert-butylbenzene, sec-butylbenzene, 135-Trimethylbenzene, 124-Trimethylbenzene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for preparation batch 40427 exceeded control limits for the following analytes: sec-butylbenzene, tert-butylbenzene, 135-trimethylbenzene, 124-trimethylbenzene, 4-chlorotoluene, bromobenzene, 2-chlorotoluene, trans-1,3-Dichloropropene.

Method(s) 8260B: Dilution analysis was performed past hold time for Tetrachloroethene due to insufficient hold time for the following samples: W-90-MW10A (490-12513-8), Dup (490-12513-12).

No other analytical or quality issues were noted.

GC VOA
Method(s) 8015B GRO LL: Insufficient sample volume was available to perform batch matrix spike/matrix spike duplicate (MS/MSD) associated with batch 38770. The laboratory control sample (LCS) was performed in duplicate to provide precision data for this batch.

No other analytical or quality issues were noted.

GC Semi VOA
Method(s) 8015B: The following samples was analyzed outside of analytical holding time due to received out of holding time: Dup (490-12513-12), W-88-MW6B (490-12513-3), W-89-MW10B (490-12513-9), W-89-MW10C (490-12513-10), W-89-MW6C (490-12513-4), W-89-MW7B (490-12513-6), W-90-MW10A (490-12513-8), W-90-MW6A (490-12513-2), W-90-MW7A (490-12513-5), W-90-MW7C (490-12513-7), W-91-MMW-05 (490-12513-1).

Method(s) 8015B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 38948.

No other analytical or quality issues were noted.

Organic Prep

Job ID: 490-12513-1 (Continued)

Laboratory: TestAmerica Nashville (Continued)

No analytical or quality issues were noted.

VOA Prep

No analytical or quality issues were noted.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	RPD of the LCS and LCSD exceeds the control limits
B	Compound was found in the blank and sample.
E	Result exceeded calibration range.
H	Sample was prepped or analyzed beyond the specified holding time
*	LCS or LCSD exceeds the control limits

GC VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDA	Minimum detectable activity
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: Cardno ERI
Project/Site: Former Jalk Fee

TestAmerica Job ID: 490-12513-1
SDG: 08115513

Laboratory: TestAmerica Nashville

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
California	NELAC	9	1168CA	10-31-13

The following analytes are included in this report, but are not certified under this certification:

Analysis Method	Prep Method	Matrix	Analyte
8015B	3510C	Ground Water	Diesel Range Organics [C10-C28]
8015B	3510C	Ground Water	ORO C24-C40
8015B	3510C	Water	Diesel Range Organics [C10-C28]
8015B	3510C	Water	ORO C24-C40

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
8260B		Ground Water	tert-Butylbenzene
8260B		Water	tert-Butylbenzene

COOLER RECEIPT FORM

490-12513 Chain of Custody

Cooler Received/Opened On 11/24/2012 @ 0810

1. Tracking # 5770 (last 4 digits, FedEx)

Courier: Fed-ex IR Gun: 12080142

2. Temperature of rep. sample or temp blank when opened: 1.5 *Degrees Celsius*

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO...NA

4. Were custody seals on outside of cooler? YES...NO...NA

If yes, how many and where: Front

5. Were the seals intact, signed, and dated correctly? YES...NO...NA

6. Were custody papers inside cooler? YES...NO...NA

I certify that I opened the cooler and answered questions 1-6 (intial) _____

7. Were custody seals on containers: YES NO and Intact YES...NO...NA

Were these signed and dated correctly? YES...NO...NA

8. Packing mat'l used? Bubblewrap Plastic bag Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: Ice Ice-pack Ice (direct contact) Dry Ice Other None

10. Did all containers arrive in good condition (unbroken)? YES...NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? YES...NO...NA

12. Did all container labels and tags agree with custody papers? YES...NO...NA

13a. Were VOA vials received? YES...NO...NA

b. Was there any observable headspace present in any VOA vial? YES...NO...NA

14. Was there a Trip Blank in this cooler? YES...NO...NA If multiple coolers, sequence #_____

I certify that I unloaded the cooler and answered questions 7-14 (intial) _____

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO...NA

b. Did the bottle labels indicate that the correct preservatives were used YES...NO...NA

16. Was residual chlorine present? YES...NO...NA

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (intial) _____

17. Were custody papers properly filled out (ink, signed, etc)? YES...NO...NA

18. Did you sign the custody papers in the appropriate place? YES...NO...NA

19. Were correct containers used for the analysis requested? YES...NO...NA

20. Was sufficient amount of sample sent in each container? YES...NO...NA

500 ml's TPH D...

I certify that I entered this project into LIMS and answered questions 17-20 (intial) _____

I certify that I attached a label with the unique LIMS number to each container (intial) _____

21. Were there Non-Conformance issues at login? YES...NO Was a PIPE generated? YES...NO...# 23948 23949

BIS = Broken in shipment

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	1.5 / 3.2 / 1.3
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	False	Refer to Job Narrative for details.
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	False	Insufficient volume received for requested analysis.
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments
No additional comments.

Receipt
The sample was received on 7/19/2012 8:30 AM; the sample arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.2º C.

GC/MS VOA
Method(s) 8260B: The matrix spike / matrix spike duplicate (MS/MSD) precision for batch 7552 was outside control limits. The associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision met acceptance criteria.

Method(s) 8260B: The following sample(s) were collected in properly preserved vials, however, the pH was outside the required criteria when verified by the laboratory: W-214-B9 (490-2374-1).

No other analytical or quality issues were noted.

GC VOA
No analytical or quality issues were noted.

GC Semi VOA
Method(s) 8015B: Surrogate recovery for the following sample was outside control limits: W-214-B9 (490-2374-1). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method(s) 8015B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 7381.

Method(s) 8015B: The following sample(s) was diluted due to the nature of the sample matrix: W-214-B9 (490-2374-1). Elevated reporting limits (RLs) are provided.

Method(s) 8015B: The method blank for preparation batch 7381 contained a J flagged hit for C10-C24 and a hit for C24-C40 above the reporting limit (RL). The associated sample(s) contained detects for this analyte at concentrations greater than 10X the value found in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

No other analytical or quality issues were noted.

Organic Prep
Method(s) 3510C: Two 500mL bottles were combined, but were extracted for the wrong method. One 500mL bottle left to run the 8015 DRO.

No other analytical or quality issues were noted.

VOA Prep
No analytical or quality issues were noted.

Definitions/Glossary

Client: Cardno ERI
Project/Site: Jalk Fee

TestAmerica Job ID: 490-2374-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
X	Surrogate is outside control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

COOLER RECEIPT FORM

490-2374 Chain of

Cooler Received/Opened On 7/19/2012 @ 8:30

1. Tracking # 6797 (last 4 digits, FedEx)

Courier: FEDEX IR Gun ID 17960357

2. Temperature of rep. sample or temp blank when opened: 2.2 *Degrees Celsius*

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES...NO...(NA)

4. Were custody seals on outside of cooler? (YES)...NO...NA

If yes, how many and where: 1 front

5. Were the seals intact, signed, and dated correctly? (YES)...NO...NA

6. Were custody papers inside cooler? (YES)...NO...NA

I certify that I opened the cooler and answered questions 1-6 (intial) _____

7. Were custody seals on containers: YES (NO) and Intact YES...NO...(NA)

Were these signed and dated correctly? YES...NO...(NA)

8. Packing mat'l used? (Bubblewrap) (Plastic bag) Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: (Ice) Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? (YES)...NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? (YES)...NO...NA

12. Did all container labels and tags agree with custody papers? (YES)...NO...NA

13a. Were VOA vials received? (YES)...NO...NA

b. Was there any observable headspace present in any VOA vial? (YES)...NO...NA 2 VOA

14. Was there a Trip Blank in this cooler? YES...(NO)...NA If multiple coolers, sequence # _____

I certify that I unloaded the cooler and answered questions 7-14 (intial) _____

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO...(NA)

b. Did the bottle labels indicate that the correct preservatives were used (YES)...NO...NA

16. Was residual chlorine present? YES...NO...(NA)

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (intial) _____

17. Were custody papers properly filled out (ink, signed, etc)? (YES)...NO...NA

18. Did you sign the custody papers in the appropriate place? (YES)...NO...NA

19. Were correct containers used for the analysis requested? (YES)...NO...NA

20. Was sufficient amount of sample sent in each container? (YES)...NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (intial) _____

I certify that I attached a label with the unique LIMS number to each container (intial) _____

21. Were there Non-Conformance issues at login? YES...(NO) Was a PIPE generated? YES...(NO)...# _____

BIS = Broken in shipment

PROJECT RECEIPT CHECKLIST

Job #: _____

Loc: 490
2374

Section 1-Receipt

Cooer Received/Opened On Date/Time: TS 7/17/12 1700

Delivered by ☐ Client ☒ TA-Courier (mail) ☐ DHL ☐ Fed Ex ☐ UPS ☐ Other _____

Tracking Number(s): _____

1. Are Custody Seals on Cooler:	INTACT…BROKEN…(NONE)
2. Are custody seals Intact/Signed/Dated correctly?	YES…NO…(N/A)
3. Are COC papers inside the cooler?	(YES)…NO…N/A
4. Is Sampler's Name on COC?	(YES)…NO…N/A
5. Are all signatures on COC?	(YES)…NO…N/A
6. Does COC or sample appearance indicate "product" or otherwise hazardous matrix? If yes, hold for EH&S	YES…(NO)…N/A
7. Number of coolers: 1	
8. Cooler temperature(s) in °C: 3.8	
9. IR Thermometer ID No.: 59 Correction Factor (CF): _____ °C	
10. Did you receive samples with Signature/Date/Time/Temperature on COC?	(YES)…NO…N/A
11. If samples outside of temperature was ice present?	YES…NO…(N/A)
12. Are any Short Holds or Rushes indicated on COC?	SHORT HOLD RUSH
13. Turn-Around-Time? SAME DAY 24-HOUR 48-HOUR 72-HOUR	(STANDARD)

I certify that I received the cooler(s) and answered questions 1-13: TS (Initials) 7/17/12 (Date) _____ (NCM # (if written))

Section 2 - Cooler Breakdown

14. Are Custody Seals on Sample Containers:	INTACT…BROKEN…NONE
15. Are Custody seals Intact/Signed/Dated correctly?	YES…NO…N/A
16. Number of containers in cooler: _____	
17. Do # of containers in cooler and # of containers on COC agree?	YES…NO…N/A
18. Did all containers arrive in good condition?	YES…NO…N/A
19. Do container labels agree with COC?	YES…NO…N/A
20. Were VOA vials received?	YES…NO…N/A
21. Is there headspace present in any VOA Vial?	YES…NO…N/A
22. Were Encores or Terracores received?	YES…NO…N/A
23. Were Trip Blanks received in this cooler?	YES…NO…N/A

I certify that I unloaded the cooler and answered questions 14-23: _____ (Initials) _____ (Date) _____ (NCM # (if written))

Section 3 - Labeling

I certify that I labeled the container(s) from this cooler(s): _____ (Initials) _____ (Date) _____ (NCM # (if written))

Creator: Huckaba, Jimmy

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	False	Headspace in 2 of the 11 VOAs.
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

Mobile Geochemistry Inc.

19 July 2012

Mr. James Anderson
Cardno ERI - Ventura
4572 Telephone Road Suite 916
Ventura, CA 93001

H&P Project: ERI071212-SB1
Client Project: Former Exxon Mobil Jalk Fee Property

Dear Mr. James Anderson:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 12-Jul-12 which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody

Unless otherwise noted, all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

Sincerely,

Janis Villarreal

Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the Environmental Laboratory Accreditation Program (CA) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste for the following methods:

Certificate# 2741, 2743, 2579, 2754 & 2740 approved for EPA 8260 and LUFT GC/MS
Certificate# 2742, 2745, & 2741 approved for LUFT
Certificate# 2745 & 2742 approved for EPA 418.1

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the National Environmental Accreditation Conference Standards for the category Environmental Analysis Air and Emissions for the following analytes and methods:

1,2,4-Trichlorobenzene by EPA TO-15 & TO-14A
Hexachlorobutadiene by EPA TO-15 & TO-14A
1,2,4-Trimethylbenzene by EPA TO -14A
1,2-Dichlorobenzene by EPA TO-15 & TO-14A
1,3,5-Trimethylbenzene by EPA TO -14A
1,4-Dichlorobenzene by EPA TO-15 & TO-14A
Benzene by EPA TO-15 & TO-14A
Chlorobenzene by EPA TO-15 & TO-14A
Ethyl benzene by EPA TO-15 & TO-14A
Styrene by EPA TO-15 & TO-14A
Toluene by EPA TO-15 & TO-14A
Total Xylenes by EPA TO-15 & TO-14A
1,1,1-Trichloroethane by EPA TO-15 & TO-14A
1,1,2,2-Tetrachloroethane by EPA TO-15 & TO-14A
1,1,2-Trichloroethane by EPA TO-15 & TO-14A
1,1-Dichloroethane by EPA TO-15 & TO-14A
1,1-Dichloroethene by EPA TO-15 & TO-14A
1,2-Dichloroethane by EPA TO-15 & TO-14A
1,2-Dichloropropane by EPA TO-15 & TO-14A
Benzyl Chloride by EPA TO-15 & TO-14A
Bromoform by EPA TO-15
Bromomethane by EPA TO-15 & TO-14A
Carbon tetrachloride by EPA TO-15 & TO-14A
Chloroethane by EPA TO-15
Chloroform by EPA TO-15 & TO-14A
Chloromethane by EPA TO-15 & TO-14A
cis-1,2-Dichloroethene by EPA TO-15
cis-1,2-Dichloropropene by EPA TO-15 & TO-14A
Methylene chloride by EPA TO -15 & TO-14A
Tetrachloroethane by EPA TO-15 & TO-14A
trans-1,2-Dichloroethene by EPA TO-15
trans-1,2-Dichloropropene by EPA TO-15 & TO-14A
Trichloroethene by EPA TO-15 & TO-14A
Vinyl chloride by EPA TO -15 & TO-14A
2-Butanone by EPA TO-15
4-Methyl-2-Pentanone by EPA TO-15
Hexane by EPA TO-15
Methyl tert-butyl ether by EPA TO-15
Vinyl acetate by EPA TO-15

Dibromochloromethane by EPA TO-15
Dichlorodifluoromethane by EPA TO-15 & TO-14A
Trichlorofluoromethane by EPA TO-15 & TO-14A
Naphthalene by EPA TO-15 & TO-14A
m&p Xylenes by EPA TO-15
o-Xylene by EPA TO-15
1,3-Butadiene by EPA TO-15
1,1,2-Trichlorotrifluoroethane by EPA TO-15 & TO-14A
Carbon disulfide by EPA TO-15
1,4-Dioxane by EPA TO-15
Cyclohexane by EPA TO-15
tert-Butyl Alcohol by EPA TO-15
1,3-Dichlorobenzene by EPA TO-15 & TO-14A
Heptane by EPA TO-15
Bromodichloromethane by EPA TO-15 & TO-14A

This certification applies to samples analyzed in summa canisters.

Comments
Due to insufficient sample volume, the MADEP EPH could not be performed.

Receipt
The sample was received on 7/19/2012 4:03 PM; the sample arrived in good condition, properly preserved and, where required, on ice.

GC VOA
Method(s) MAVPH: pH is 7 for this sample.

No other analytical or quality issues were noted.

VOA Prep
No analytical or quality issues were noted.

TestAmerica Job ID: 490-5068-1

Qualifiers

GC VOA

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Client: Cardno ERI
Project/Site: Jalk Fee

COOLER RECEIPT FORM

490-2374 Chain of

Cooler Received/Opened On 7/19/2012 @ 8:30

1. Tracking # 6797 (last 4 digits, FedEx)

Courier: FEDEX IR Gun ID 17960357

2. Temperature of rep. sample or temp blank when opened: 2.2 *Degrees Celsius*

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES...NO...(NA)

4. Were custody seals on outside of cooler? (YES)...NO...NA

If yes, how many and where: 1 front

5. Were the seals intact, signed, and dated correctly? (YES)...NO...NA

6. Were custody papers inside cooler? (YES)...NO...NA

I certify that I opened the cooler and answered questions 1-6 (intial) _____

7. Were custody seals on containers: YES (NO) and Intact YES...NO...(NA)

Were these signed and dated correctly? YES...NO...(NA)

8. Packing mat'l used? (Bubblewrap) (Plastic bag) Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: (Ice) Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? (YES)...NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? (YES)...NO...NA

12. Did all container labels and tags agree with custody papers? (YES)...NO...NA

13a. Were VOA vials received? (YES)...NO...NA

b. Was there any observable headspace present in any VOA vial? (YES)...NO...NA 2 VOA

14. Was there a Trip Blank in this cooler? YES...(NO)...NA If multiple coolers, sequence #_____

I certify that I unloaded the cooler and answered questions 7-14 (intial) _____

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO...(NA)

b. Did the bottle labels indicate that the correct preservatives were used (YES)...NO...NA

16. Was residual chlorine present? YES...NO...(NA)

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (intial) _____

17. Were custody papers properly filled out (ink, signed, etc)? (YES)...NO...NA

18. Did you sign the custody papers in the appropriate place? (YES)...NO...NA

19. Were correct containers used for the analysis requested? (YES)...NO...NA

20. Was sufficient amount of sample sent in each container? (YES)...NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (intial) _____

I certify that I attached a label with the unique LIMS number to each container (intial) _____

21. Were there Non-Conformance issues at login? YES...(NO) Was a PIPE generated? YES...(NO)...#_____

BIS = Broken in shipment

PROJECT RECEIPT CHECKLIST

Job #: _____

Loc: 490
2374

Section 1-Receipt

Cooer Received/Opened On Date/Time: TS 7/17/12 1700

Delivered by ☐ Client ☒ TA-Courier (mail) ☐ DHL ☐ Fed Ex ☐ UPS ☐ Other _____

Tracking Number(s): _____

1. Are Custody Seals on Cooler:	INTACT…BROKEN…(NONE)
2. Are custody seals Intact/Signed/Dated correctly?	YES…NO…(N/A)
3. Are COC papers inside the cooler?	(YES)…NO…N/A
4. Is Sampler's Name on COC?	(YES)…NO…N/A
5. Are all signatures on COC?	(YES)…NO…N/A
6. Does COC or sample appearance indicate "product" or otherwise hazardous matrix? If yes, hold for EH&S	YES…(NO)…N/A
7. Number of coolers: 1	
8. Cooler temperature(s) in °C: 3.8	
9. IR Thermometer ID No.: 59 Correction Factor (CF): _____ °C	
10. Did you receive samples with Signature/Date/Time/Temperature on COC?	(YES)…NO…N/A
11. If samples outside of temperature was ice present?	YES…NO…(N/A)
12. Are any Short Holds or Rushes indicated on COC?	SHORT HOLD RUSH
13. Turn-Around-Time? SAME DAY 24-HOUR 48-HOUR 72-HOUR	(STANDARD)

I certify that I received the cooler(s) and answered questions 1-13: TS (Initials) 7/17/12 (Date) _____ (NCM # (if written))

Section 2 - Cooler Breakdown

14. Are Custody Seals on Sample Containers:	INTACT…BROKEN…NONE
15. Are Custody seals Intact/Signed/Dated correctly?	YES…NO…N/A
16. Number of containers in cooler: _____	
17. Do # of containers in cooler and # of containers on COC agree?	YES…NO…N/A
18. Did all containers arrive in good condition?	YES…NO…N/A
19. Do container labels agree with COC?	YES…NO…N/A
20. Were VOA vials received?	YES…NO…N/A
21. Is there headspace present in any VOA Vial?	YES…NO…N/A
22. Were Encores or Terracores received?	YES…NO…N/A
23. Were Trip Blanks received in this cooler?	YES…NO…N/A

I certify that I unloaded the cooler and answered questions 14-23: _____ (Initials) _____ (Date) _____ (NCM # (if written))

Section 3 - Labeling

I certify that I labeled the container(s) from this cooler(s): _____ (Initials) _____ (Date) _____ (NCM # (if written))

Klingensmith, Leah

From: James D. Anderson [james.anderson@cardno.com]

Subject: RE: Files from 490-2374-1 Jalk Fee

Leah,

I realize it is out of holding time, but can you please analyze sample W-214-B9 for:

1) For TPHg, TPHd & TPHo with a silica gel cleanup
2) For a carbon chain speciation (e.g. C4-C44)

Also do you have more details on the B qualifier for this sample? To which blank does this refer?

Thank you

James Anderson

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background		
The cooler's custody seal, if present, is intact.		
The cooler or samples do not appear to have been compromised or tampered with.		
Samples were received on ice.		
Cooler Temperature is acceptable.		
Cooler Temperature is recorded.		
COC is present.		
COC is filled out in ink and legible.		
COC is filled out with all pertinent information.		
Is the Field Sampler's name present on COC?		
There are no discrepancies between the sample IDs on the containers and the COC.		
Samples are received within Holding Time.		
Sample containers have legible labels.		
Containers are not broken or leaking.		
Sample collection date/times are provided.		
Appropriate sample containers are used.		
Sample bottles are completely filled.		
Sample Preservation Verified.		
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs		
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.		
Multiphasic samples are not present.		
Samples do not require splitting or compositing.		
Residual Chlorine Checked.

Narrative

CASE NARRATIVE

Client: Cardno ERI

Project: Jalk Fee

Report Number: 490-2057-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Nashville attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 07/13/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples S-10-B6 (490-2057-1), S-20-B6 (490-2057-2), S-30-B6 (490-2057-3), S-40-B6 (490-2057-4), S-50-B6 (490-2057-5), S-60-B6 (490-2057-6), S-70-B6 (490-2057-7) and S-75-B6 (490-2057-8) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were prepared on 07/14/2012 and analyzed on 07/16/2012, 07/17/2012 and 07/18/2012.

Chloroform was detected in method blank MB 490-5959/6 and MB 490-5959/7 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Methylene Chloride was detected in method blank MB 490-5959/6 and MB 490-5959/7 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Chloroform was detected in method blank MB 490-6188/6 and MB 490-6188/7 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Methylene Chloride was detected in method blank MB 490-6188/6 and MB 490-6188/7 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Methylene Chloride was detected in method blank MB 490-6504/6 at a level that was above the method

Job ID: 490-2057-1 (Continued)

Laboratory: TestAmerica Nashville (Continued)

detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged. Refer to the QC report for details.

Internal standard responses were outside of acceptance limits for the following sample(s): (490-2057-1 MS), (490-2057-1 MSD). The sample(s) shows evidence of matrix interference.

Internal standard responses were outside of acceptance limits for the following sample(s): (490-2081-18 MS), (490-2081-18 MSD). The sample(s) shows evidence of matrix interference.

4-Bromofluorobenzene (Surr) failed the surrogate recovery criteria low for S-10-B6 (490-2057-1). Toluene-d8 (Surr) failed the surrogate recovery criteria high. Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

4-Bromofluorobenzene (Surr) and Toluene-d8 (Surr) failed the surrogate recovery criteria high for S-10-B6MS (490-2057-1MS). 1,2-Dichloroethane-d4 (Surr), 4-Bromofluorobenzene (Surr), Dibromofluoromethane (Surr) and Toluene-d8 (Surr) failed the surrogate recovery criteria low for 490-2081-A-18-C MS. 4-Bromofluorobenzene (Surr) and Toluene-d8 (Surr) failed the surrogate recovery criteria high for S-10-B6MSD (490-2057-1MSD). 1,2-Dichloroethane-d4 (Surr), 4-Bromofluorobenzene (Surr), Dibromofluoromethane (Surr) and Toluene-d8 (Surr) failed the surrogate recovery criteria low for 490-2081-A-18-D MSD. Refer to the QC report for details.

Bromodichloromethane and sec-Butylbenzene failed the recovery criteria low for the MS of sample S-10-B6MS (490-2057-1) in batch 490-5959. Several analytes failed the recovery criteria high.

For the MSD of sample S-10-B6MSD (490-2057-1) in batch 490-5959, 1,2-Dichloroethane, Ethyl tert-butyl ether and sec-Butylbenzene failed the recovery criteria low. Several analytes failed the recovery criteria high. Also, 1,2,3-Trichlorobenzene, 1,2-Dichloroethane, 4-Chlorotoluene and Ethyl tert-butyl ether exceeded the rpd limit.

cis-1,2-Dichloroethene failed the recovery criteria low for the MS of sample S-30-B6MS (490-2057-3) and the MSD of sample S-30-B6MSD (490-2057-3) in batch 490-6188.

The matrix spike / matrix spike duplicate (MS/MSD) percent recoveries and %RPD for batch 6188 were outside control limits. This is attributed to: abundance of target analytes at concentrations significantly higher than the spike concentration.

The matrix spike / matrix spike duplicate (MS/MSD) percent recoveries and %RPD for batch 5959 were outside control limits. This is attributed to: matrix interferences.

Several analytes failed the recovery criteria low for the MS of sample 490-2081-18 in batch 490-6504. Several analytes failed the recovery criteria high.

For the MSD of sample 490-2081-18 in batch 490-6504, Several analytes failed the recovery criteria low. Several analytes failed the recovery criteria high. Also, Several analytes exceeded the rpd limit.

Internal standard responses for some analytes were outside of acceptance limits for MS/MSD in analytical batch 6504. No MS/MSD available for these analytes in this batch. The sample(s) shows evidence of matrix interference.

The presence of the '4' qualifier in the data indicates analytes where the concentration in the unspiked sample exceeded four times the spiking amount.

Refer to the QC report for details.

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

GASOLINE RANGE ORGANICS (GRO)

Samples S-10-B6 (490-2057-1), S-20-B6 (490-2057-2), S-30-B6 (490-2057-3), S-40-B6 (490-2057-4), S-50-B6 (490-2057-5), S-60-B6 (490-2057-6), S-70-B6 (490-2057-7) and S-75-B6 (490-2057-8) were analyzed for gasoline range organics (GRO) in accordance with EPA

Job ID: 490-2057-1 (Continued)

Laboratory: TestAmerica Nashville (Continued)

SW-846 Method 8015B - GRO. The samples were prepared on 07/14/2012 and analyzed on 07/16/2012.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 6081.

No other difficulties were encountered during the GRO analyses.

All quality control parameters were within the acceptance limits.

DIESEL RANGE ORGANICS (DRO)

Samples S-10-B6 (490-2057-1), S-20-B6 (490-2057-2), S-30-B6 (490-2057-3), S-40-B6 (490-2057-4), S-50-B6 (490-2057-5), S-60-B6 (490-2057-6), S-70-B6 (490-2057-7) and S-75-B6 (490-2057-8) were analyzed for diesel range organics (DRO) in accordance with EPA SW-846 Method 8015B - DRO. The samples were prepared on 07/16/2012 and analyzed on 07/17/2012 and 07/19/2012.

Diesel Range Organics [C10-C28] was detected in method blank MB 490-5953/25-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged. Refer to the QC report for details.

o-Terphenyl (Surr) failed the surrogate recovery criteria high for S-10-B6 (490-2057-1). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Sample S-10-B6 (490-2057-1)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Due to the high concentration of diesel range organics, the matrix spike / matrix spike duplicate (MS/MSD) for batch 5953 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

No other difficulties were encountered during the DRO analyses.

All other quality control parameters were within the acceptance limits.

ADDITIONAL CASE NARRATIVE

This report was revised to change the GRO range from C6-C10 to C4-C12.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F	MS or MSD exceeds the control limits
E	Result exceeded calibration range.
4	MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.
F	RPD of the MS and MSD exceeds the control limits

GC VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
X	Surrogate is outside control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

TestAmerica Job ID: 490-2057-1
SDG: 08115503

Laboratory: TestAmerica Nashville

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
California	NELAC	9	1168CA	10-31-12

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
8260B		Solid	1,2-Dibromoethane (EDB)
8260B		Solid	Diisopropyl ether
8260B		Solid	Ethanol
8260B		Solid	Ethyl tert-butyl ether
8260B		Solid	p-Isopropyltoluene
8260B	5035	Solid	1,2-Dibromoethane (EDB)
8260B	5035	Solid	Diisopropyl ether
8260B	5035	Solid	Ethanol
8260B	5035	Solid	Ethyl tert-butyl ether
8260B	5035	Solid	p-Isopropyltoluene

COOLER RECEIPT FORM

490-2057 Chain of

Cooler Received/Opened On 7/13/2012 @ 8:30

1. Tracking # 6282 (last 4 digits, FedEx)

Courier: FEDEX IR Gun ID 12080142

2. Temperature of rep. sample or temp blank when opened: 2.3 *Degrees Celsius*

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES...NO...NA

4. Were custody seals on outside of cooler? YES...NO...NA

If yes, how many and where: 1 front

5. Were the seals intact, signed, and dated correctly? YES...NO...NA

6. Were custody papers inside cooler? YES...NO...NA

I certify that I opened the cooler and answered questions 1-6 (intial) KG

7. Were custody seals on containers: YES NO and Intact YES...NO...NA

Were these signed and dated correctly? YES...NO...NA

8. Packing mat'l used? Bubblewrap Plastic bag Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: Ice Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? YES...NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? YES...NO...NA

12. Did all container labels and tags agree with custody papers? YES...NO...NA

13a. Were VOA vials received? YES...NO...NA

b. Was there any observable headspace present in any VOA vial? YES...NO...NA soil

14. Was there a Trip Blank in this cooler? YES...NO...NA If multiple coolers, sequence #_____

I certify that I unloaded the cooler and answered questions 7-14 (intial) _____

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO...NA

b. Did the bottle labels indicate that the correct preservatives were used YES...NO...NA

16. Was residual chlorine present? YES...NO...NA

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (intial) _____

17. Were custody papers properly filled out (ink, signed, etc)? YES...NO...NA

18. Did you sign the custody papers in the appropriate place? YES...NO...NA

19. Were correct containers used for the analysis requested? YES...NO...NA

20. Was sufficient amount of sample sent in each container? YES...NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (intial) _____

I certify that I attached a label with the unique LIMS number to each container (intial) _____

21. Were there Non-Conformance issues at login? YES...NO Was a PIPE generated? YES...NO...#_____

BIS = Broken in shipment

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Laboratory: TestAmerica Nashville

Narrative

Job Narrative
490-2068-1

Comments
No additional comments.

Receipt
The samples were received on 7/13/2012 8:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.3º C and 2.3º C.

GC/MS VOA
Method(s) 8260B: Internal standard responses were outside of acceptance limits for the following samples: 490-2060-5 MS, 490-2060-5 MSD. The samples show evidence of matrix interference.

Method(s) 8260B: The laboratory control sample (LCS) and / or the laboratory control sample duplicate (LCSD) for batch 6469 exceeded control limits for the following analyte: 124-Trichlorobenzene. The recovery was high biased and the analyte was non-detect in the samples.

No other analytical or quality issues were noted.

GC VOA
No analytical or quality issues were noted.

GC Semi VOA
No analytical or quality issues were noted.

Organic Prep
No analytical or quality issues were noted.

VOA Prep
No analytical or quality issues were noted.

Definitions/Glossary

Client: Cardno ERI
Project/Site: Jalk Fee

TestAmerica Job ID: 490-2068-1
SDG: 08115503

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD exceeds the control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.

GC VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Project/Site: Jalk Fee

TestAmerica Job ID: 490-2068-1
SDG: 08115503

Laboratory: TestAmerica Nashville

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
California	NELAC	9	1168CA	10-31-12

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
8260B		Solid	1,2-Dibromoethane (EDB)
8260B		Solid	Diisopropyl ether
8260B		Solid	Ethanol
8260B		Solid	Ethyl tert-butyl ether
8260B		Solid	p-Isopropyltoluene
8260B	5035	Solid	1,2-Dibromoethane (EDB)
8260B	5035	Solid	Diisopropyl ether
8260B	5035	Solid	Ethanol
8260B	5035	Solid	Ethyl tert-butyl ether
8260B	5035	Solid	p-Isopropyltoluene

COOLER RECEIPT FORM

490-2068 Chain of

Cooler Received/Opened On 7/13/2012 @ 8:30

1. Tracking # 6282 (last 4 digits, FedEx)

Courier: FEDEX IR Gun ID 12080142

2. Temperature of rep. sample or temp blank when opened: 2.3 *Degrees Celsius*

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES...NO...NA

4. Were custody seals on outside of cooler? YES...NO...NA

If yes, how many and where: 1 front

5. Were the seals intact, signed, and dated correctly? YES...NO...NA

6. Were custody papers inside cooler? YES...NO...NA

I certify that I opened the cooler and answered questions 1-6 (intial) KG

7. Were custody seals on containers: YES NO and Intact YES...NO...NA

Were these signed and dated correctly? YES...NO...NA

8. Packing mat'l used? Bubblewrap Plastic bag Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: Ice Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? YES...NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? YES...NO...NA

12. Did all container labels and tags agree with custody papers? YES...NO...NA

13a. Were VOA vials received? YES...NO...NA

b. Was there any observable headspace present in any VOA vial? YES...NO...NA Soil

14. Was there a Trip Blank in this cooler? YES...NO...NA If multiple coolers, sequence #_____

I certify that I unloaded the cooler and answered questions 7-14 (intial) _____

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO...NA

b. Did the bottle labels indicate that the correct preservatives were used YES...NO...NA

16. Was residual chlorine present? YES...NO...NA

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (intial) _____

17. Were custody papers properly filled out (ink, signed, etc)? YES...NO...NA

18. Did you sign the custody papers in the appropriate place? YES...NO...NA

19. Were correct containers used for the analysis requested? YES...NO...NA

20. Was sufficient amount of sample sent in each container? YES...NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (intial) _____

I certify that I attached a label with the unique LIMS number to each container (intial) _____

21. Were there Non-Conformance issues at login? YES...NO Was a PIPE generated? YES...NO...#_____

COOLER RECEIPT FORM

Loc: 490
2068

Cooler Received/Opened On 7/13/2012 @ 8:30

1. Tracking # 6293 (last 4 digits, FedEx)

Courier: FEDEX IR Gun ID 17960357

2. Temperature of rep. sample or temp blank when opened: 1.3 *Degrees Celsius*

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES...NO...NA

4. Were custody seals on outside of cooler? YES...NO...NA

If yes, how many and where: 1 front

5. Were the seals intact, signed, and dated correctly? YES...NO...NA

6. Were custody papers inside cooler? YES...NO...NA

I certify that I opened the cooler and answered questions 1-6 (intial) SB 7/13/12

7. Were custody seals on containers: YES NO and Intact YES...NO...NA

Were these signed and dated correctly? YES...NO...NA

8. Packing mat'l used? Bubblewrap Plastic bag Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: Ice Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? YES...NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? YES...NO...NA

12. Did all container labels and tags agree with custody papers? YES...NO...NA

13a. Were VOA vials received? YES...NO...NA

b. Was there any observable headspace present in any VOA vial? YES...NO...NA Soil

14. Was there a Trip Blank in this cooler? YES...NO...NA If multiple coolers, sequence #_____

I certify that I unloaded the cooler and answered questions 7-14 (intial) _____

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO...NA

b. Did the bottle labels indicate that the correct preservatives were used YES...NO...NA

16. Was residual chlorine present? YES...NO...NA

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (intial) _____

17. Were custody papers properly filled out (ink, signed, etc)? YES...NO...NA

18. Did you sign the custody papers in the appropriate place? YES...NO...NA

19. Were correct containers used for the analysis requested? YES...NO...NA

20. Was sufficient amount of sample sent in each container? YES...NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (intial) _____

I certify that I attached a label with the unique LIMS number to each container (intial) _____

21. Were there Non-Conformance issues at login? YES...NO Was a PIPE generated? YES...NO...#_____

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.3, 1.3
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Job Narrative
490-2073-1

Comments
No additional comments.

Receipt
The samples were received on 7/13/2012 8:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.3º C and 2.3º C.

Exception:

Both soidium bisulfate vials submitted for 8260B analysis for sample S-85-B9(490-2073-3) were received empty. Low level preparations were prepared from the jar submitted.

GC/MS VOA
Method(s) 8260B: The method blank for batch 5960 contained Chloroform and tert-Butylbenzene above the method detection limit. The concentrations of these analytes were less than the reporting limit (RL) in the affected sample, S-75-B9 (490-2073-1); therefore, re-extraction and/or re-analysis of this sample was not performed.

Method(s) 8260B: The method blank for batch 5960 contained sec-Butylbenzene, n-Butylbenzene, Naphthalene, and Isproylbenzene above the reporting limit (RL). A high bias may be indicated. The affected samples, S-80-B9 (490-2073-2) and S-85-B9 (490-2073-3), were re-analyzed.

Method(s) 8260B: The reference method requires a continuing calibration verification (CCV) to be analyzed every 12 hours. The following samples associated with batch 5960 were analyzed outside this method-defined frequency: (490-2073-1 MS), (490-2073-1 MSD), S-90-B9 (490-2073-4). Samples were0 re-analyzed.

Method(s) 8260B: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for batch 6432 exceeded control limits for the following analytes: 135-Trimethylbenzene and Ethylbenzene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No other analytical or quality issues were noted.

GC VOA
Method(s) 8015B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 6081.

Method(s) 8015B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 6708.

No other analytical or quality issues were noted.

GC Semi VOA
Method(s) 8015B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analysis batch 8610.

No other analytical or quality issues were noted.

Organic Prep
No analytical or quality issues were noted.

VOA Prep
No analytical or quality issues were noted.

Definitions/Glossary

Client: Cardno ERI
Project/Site: Jalk Fee

TestAmerica Job ID: 490-2073-1
SDG: 490-2073

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
4	MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.
E	Result exceeded calibration range.
*	LCS or LCSD exceeds the control limits

GC Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Nashville

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
California	NELAC	9	1168CA	10-31-12

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
8260B		Solid	1,2-Dibromoethane (EDB)
8260B		Solid	Diisopropyl ether
8260B		Solid	Ethanol
8260B		Solid	Ethyl tert-butyl ether
8260B		Solid	p-Isopropyltoluene
8260B	5035	Solid	1,2-Dibromoethane (EDB)
8260B	5035	Solid	Diisopropyl ether
8260B	5035	Solid	Ethanol
8260B	5035	Solid	Ethyl tert-butyl ether
8260B	5035	Solid	p-Isopropyltoluene

COOLER RECEIPT FORM

490-2073 Chain of

Cooler Received/Opened On 7/13/2012 @ 8:30

1. Tracking # 6282 (last 4 digits, FedEx)

Courier: FEDEX IR Gun ID 12080142

2. Temperature of rep. sample or temp blank when opened: 2.3 *Degrees Celsius*

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES...NO...NA

4. Were custody seals on outside of cooler? YES...NO...NA

If yes, how many and where: 1 front

5. Were the seals intact, signed, and dated correctly? YES...NO...NA

6. Were custody papers inside cooler? YES...NO...NA

I certify that I opened the cooler and answered questions 1-6 (intial) VG

7. Were custody seals on containers: YES NO and Intact YES...NO...NA

Were these signed and dated correctly? YES...NO...NA

8. Packing mat'l used? Bubblewrap Plastic bag Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: Ice Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? YES...NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? YES...NO...NA

12. Did all container labels and tags agree with custody papers? YES...NO...NA

13a. Were VOA vials received? YES...NO...NA

b. Was there any observable headspace present in any VOA vial? YES...NO...NA Soil

14. Was there a Trip Blank in this cooler? YES...NO...NA If multiple coolers, sequence #_____

I certify that I unloaded the cooler and answered questions 7-14 (intial)

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO...NA

b. Did the bottle labels indicate that the correct preservatives were used YES...NO...NA

16. Was residual chlorine present? YES...NO...NA

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (intial)

17. Were custody papers properly filled out (ink, signed, etc)? YES...NO...NA

18. Did you sign the custody papers in the appropriate place? YES...NO...NA

19. Were correct containers used for the analysis requested? YES...NO...NA

20. Was sufficient amount of sample sent in each container? YES...NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (intial)

I certify that I attached a label with the unique LIMS number to each container (intial)

21. Were there Non-Conformance issues at login? YES...NO Was a PIPE generated? YES...NO...#_____

BIS = Broken in shipment

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.3, 1.3
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Due to QC failure, the MS/MSD recoveries for VOC batch 12G1191 were not reportable.

Qualifiers

GCMS Volatiles

Qualifier	Qualifier Description
U	Analyte included in the analysis, but not detected
R2	The RPD exceeded the acceptance limit.
M8	The MS and/or MSD were below the acceptance limits. See Blank Spike (LCS).
L	Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected, data not impacted.
B	Analyte was detected in the associated Method Blank.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
E	Concentration exceeds the calibration range and therefore result is semi-quantitative.

GC Volatiles

Qualifier	Qualifier Description
U	Analyte included in the analysis, but not detected

GC Semivolatiles

Qualifier	Qualifier Description
U	Analyte included in the analysis, but not detected
Q3	The chromatographic pattern is not consistent with diesel fuel.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

COOLER R

NWG0335

Cooler Received/Opened On 7/7/2012 @ 8:20

1. Tracking # 5893 (last 4 digits, FedEx)

Courier: FEDEX IR Gun ID 12080142

2. Temperature of rep. sample or temp blank when opened: 4.0 *Degrees Celsius*

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES...NO...NA

4. Were custody seals on outside of cooler? YES...NO...NA

If yes, how many and where: Front

5. Were the seals intact, signed, and dated correctly? YES...NO...NA

6. Were custody papers inside cooler? YES...NO...NA

I certify that I opened the cooler and answered questions 1-6 (intial) KG

7. Were custody seals on containers: YES NO and Intact YES...NO...NA

Were these signed and dated correctly? YES...NO...NA

8. Packing mat'l used? Bubblewrap Plastic bag Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: Ice Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? YES...NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? YES...NO...NA

12. Did all container labels and tags agree with custody papers? YES...NO...NA

13a. Were VOA vials received? YES...NO...NA

b. Was there any observable headspace present in any VOA vial? YES...NO...NA Soil

14. Was there a Trip Blank in this cooler? YES...NO...NA If multiple coolers, sequence #

I certify that I unloaded the cooler and answered questions 7-14 (intial)

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO...NA

b. Did the bottle labels indicate that the correct preservatives were used YES...NO...NA

16. Was residual chlorine present? YES...NO...NA

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (intial)

17. Were custody papers properly filled out (ink, signed, etc)? YES...NO...NA

18. Did you sign the custody papers in the appropriate place? YES...NO...NA

19. Were correct containers used for the analysis requested? YES...NO...NA

20. Was sufficient amount of sample sent in each container? YES...NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (intial)

I certify that I attached a label with the unique LIMS number to each container (Intial)

21. Were there Non-Conformance issues at login? YES...NO Was a PIPE generated? YES...NO...# 63299

BIS = Broken in shipment

Client: Cardno ERI Ventura
Project/Site: 08115503

TestAmerica Job ID: NWG0351

Qualifiers

GCMS Volatiles

Qualifier	Qualifier Description
U	Analyte included in the analysis, but not detected
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
L1	Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above acceptance limits.
B	Analyte was detected in the associated Method Blank.
L	Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected, data not impacted.
ZX	Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.

GC Volatiles

Qualifier	Qualifier Description
U	Analyte included in the analysis, but not detected
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semivolatiles

Qualifier	Qualifier Description
U	Analyte included in the analysis, but not detected
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
Q3	The chromatographic pattern is not consistent with diesel fuel.
Q2	The chromatographic pattern is consistent with diesel fuel.
QP7	The hydrocarbon pattern most closely resembles a motor oil product.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments
No additional comments.

Receipt
The sample was received on 7/21/2012 8:30 AM; the sample arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.3º C.

GC/MS VOA
Method(s) 8260B: The laboratory control sample (LCS) and/or the laboratory control sample duplicate (LCSD) for batch 8116 exceeded control limits for the following analyte: Carbon Disulfide. Recovery was outside of historical limits, but within method guidelines. Samples were not repeated.

Method(s) 8260B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 8310 were outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria.

Method(s) 8260B: The laboratory control sample (LCS) and/or laboratory control sample duplicate (LCSD) for batch 8310 exceeded control limits for the following analytes: Methyl acetate, Carbon disulfide, 1,1-Dichloroethene, 1,1,2-Trichloro-1,2,2-trifluoroethane, Ethanol, and Acrolein. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No other analytical or quality issues were noted.

GC VOA
Method(s) 8015B: The continuing calibration verification (CCV) associated with batch 7884 recovered above the upper control limit for C4-C12. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8015B: Insufficient sample volume was available to perform a matrix spike / matrix spike duplicate (MS/MSD) associated with batch 7884.

No other analytical or quality issues were noted.

GC Semi VOA
Method(s) 8015B: The method blank for analysis batch 8196 contained C24-C40 above the reporting limit (RL). None of the samples associated with this method blank contained the target compound; therefore, re-extraction and/or re-analysis of the samples was not performed.

No other analytical or quality issues were noted.

Organic Prep
No analytical or quality issues were noted.

VOA Prep
No analytical or quality issues were noted.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
E	Result exceeded calibration range.
F	MS or MSD exceeds the control limits
*	LCS or LCSD exceeds the control limits
F	RPD of the MS and MSD exceeds the control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: Cardno ERI
Project/Site: Jalk Fee

TestAmerica Job ID: 490-2613-1
SDG: 490-2613

Laboratory: TestAmerica Nashville

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
California	NELAC	9	1168CA	10-31-12

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
8260B		Solid	1,2-Dibromoethane (EDB)
8260B		Solid	Diisopropyl ether
8260B		Solid	Ethanol
8260B		Solid	Ethyl tert-butyl ether
8260B		Solid	p-Isopropyltoluene
8260B	5035	Solid	1,2-Dibromoethane (EDB)
8260B	5035	Solid	Diisopropyl ether
8260B	5035	Solid	Ethanol
8260B	5035	Solid	Ethyl tert-butyl ether
8260B	5035	Solid	p-Isopropyltoluene

COOLER RECEIPT FORM

490-2613 Chain of

Cooler Received/Opened On 7/21/2012 @ 0830

1. Tracking # 8135 (last 4 digits, FedEx)

Courier: FedEx IR Gun ID 97460373

2. Temperature of rep. sample or temp blank when opened: 3.3 *Degrees Celsius*

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO...NA

4. Were custody seals on outside of cooler? YES...NO...NA

If yes, how many and where: 1 (front)

5. Were the seals intact, signed, and dated correctly? YES...NO...NA

6. Were custody papers inside cooler? YES...NO...NA

I certify that I opened the cooler and answered questions 1-6 (intial) _____

7. Were custody seals on containers: YES (NO) and Intact YES...NO...NA

Were these signed and dated correctly? YES...NO...NA

8. Packing mat'l used? Bubblewrap Plastic bag Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: (Ice) Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? YES...NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? YES...NO...NA

12. Did all container labels and tags agree with custody papers? YES...NO...NA

13a. Were VOA vials received? 7.21.12 YES...NO...NA

b. Was there any observable headspace present in any VOA vial? YES...NO...(NA) 5ml

14. Was there a Trip Blank in this cooler? YES...(NO)...NA If multiple coolers, sequence #_____

I certify that I unloaded the cooler and answered questions 7-14 (intial) _____

Sample time of 10:20 recorded on labels.

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES..NO..NA

b. Did the bottle labels indicate that the correct preservatives were used YES...NO...NA

16. Was residual chlorine present? YES...NO...NA

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (intial) _____

17. Were custody papers properly filled out (ink, signed, etc)? YES...NO...NA

18. Did you sign the custody papers in the appropriate place? YES...NO...NA

19. Were correct containers used for the analysis requested? YES...NO...NA

20. Was sufficient amount of sample sent in each container? YES...NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (intial) _____

I certify that I attached a label with the unique LIMS number to each container (intial) _____

21. Were there Non-Conformance issues at login? YES...(NO) Was a PIPE generated? YES...(NO)...#_____

BIS = Broken in shipment

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	3.3C
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	False	The COC records the sample time as 00:00 but the labels record 10:20.
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Job Narrative
490-3072-1

REVISED REPORT:
Report revised on 12/27/12 to correct the sample IDs to match the chain. This final report replaces the final report generated on 9/18/12.

Receipt
The samples were received on 7/31/2012 8:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 0.3º C and 3.5º C.

Except:

Each sample set of VOAs were packaged together in bubblewrap. For S-80-MW10, one methanol and one sodium had no information recorded on the labels.

GC/MS VOA
Method(s) 8260B: The following sample(s) was diluted due to the nature of the sample matrix: NW-1 (490-2997-1). Elevated reporting limits (RLs) are provided.

Method(s) 8260B: Internal standard responses were outside of acceptance limits for the following sample(s): S-178-MW-10 (490-3072-35). The sample(s) shows evidence of matrix interference.

Method(s) 8260B: The matrix spike / matrix spike duplicate (MS/MSD) percent recoveries and %RPD for batches 9562, 9269 & 9827 were outside control limits. This is attributed to: matrix interferences.

No other analytical or quality issues were noted.

GC VOA
No analytical or quality issues were noted.

GC Semi VOA
No analytical or quality issues were noted.

Organic Prep
No analytical or quality issues were noted.

VOA Prep
No analytical or quality issues were noted.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
E	Result exceeded calibration range.
F	MS or MSD exceeds the control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.
F	RPD of the MS and MSD exceeds the control limits

GC VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDA	Minimum detectable activity
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: Cardno ERI
Project/Site: Jalk Fee

TestAmerica Job ID: 490-3072-1
SDG: 08115503

Laboratory: TestAmerica Nashville

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
California	NELAP	9	1168CA	10-31-13

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
8260B		Solid	Diisopropyl ether
8260B		Solid	Ethanol
8260B		Solid	p-Isopropyltoluene
8260B	5035	Solid	Diisopropyl ether
8260B	5035	Solid	Ethanol
8260B	5035	Solid	p-Isopropyltoluene

COOLER RECEIPT FORM

490-3072 Chain of

Cooler Received/Opened On 7/31/2012 @ 0830

1. Tracking # 8469 (last 4 digits, FedEx)

Courier: FedEx IR Gun ID 97460373

2. Temperature of rep. sample or temp blank when opened: 3.5 *Degrees Celsius*

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO...NA

4. Were custody seals on outside of cooler? YES...NO...NA

If yes, how many and where: 1 (front)

5. Were the seals intact, signed, and dated correctly? YES...NO...NA

6. Were custody papers inside cooler? YES...NO...NA

I certify that I opened the cooler and answered questions 1-6 (intial) _____

7. Were custody seals on containers: YES NO and Intact YES...NO...NA

Were these signed and dated correctly? YES...NO...NA

8. Packing mat'l used? Bubblewrap Plastic bag Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: Ice Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? YES...NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? YES...NO...NA

12. Did all container labels and tags agree with custody papers? YES...NO...NA

13a. Were VOA vials received? YES...NO...NA

b. Was there any observable headspace present in any VOA vial? YES...NO...NA Sol

14. Was there a Trip Blank in this cooler? YES...NO...NA If multiple coolers, sequence #_____

I certify that I unloaded the cooler and answered questions 7-14 (intial) _____

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES..NO..NA

b. Did the bottle labels indicate that the correct preservatives were used YES...NO...NA

16. Was residual chlorine present? YES...NO...NA

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (intial) _____

17. Were custody papers properly filled out (ink, signed, etc)? YES...NO...NA

18. Did you sign the custody papers in the appropriate place? YES...NO...NA

19. Were correct containers used for the analysis requested? YES...NO...NA

20. Was sufficient amount of sample sent in each container? YES...NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (intial) _____

I certify that I attached a label with the unique LIMS number to each container (Intial) _____

21. Were there Non-Conformance issues at login? YES...NO Was a PIPE generated? YES...NO...#_____

COOLER RECEIPT FORM

Cooler Received/Opened On 7/31/2012@ 8:30

1. Tracking # 8458 (last 4 digits, FedEx)

Courier: Fedex IR Gun ID 17610176

2. Temperature of rep. sample or temp blank when opened: 0.3 *Degrees Celsius*

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO NA

4. Were custody seals on outside of cooler? YES...NO...NA

If yes, how many and where: 1 Front

5. Were the seals intact, signed, and dated correctly? YES...NO...NA

6. Were custody papers inside cooler? YES...NO...NA

I certify that I opened the cooler and answered questions 1-6 (intial) JH

7. Were custody seals on containers: YES NO and Intact YES...NO...NA

Were these signed and dated correctly? YES...NO...NA

8. Packing mat'l used? Bubblewrap Plastic bag Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: Ice Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? YES...NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? YES...NO...NA

12. Did all container labels and tags agree with custody papers? YES...NO...NA

13a. Were VOA vials received? YES...NO...NA

b. Was there any observable headspace present in any VOA vial? YES...NO...NA

14. Was there a Trip Blank in this cooler? YES...NO...NA If multiple coolers, sequence # 5 of 7

I certify that I unloaded the cooler and answered questions 7-14 (intial)

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO...NA

b. Did the bottle labels indicate that the correct preservatives were used YES...NO...NA

16. Was residual chlorine present? YES...NO...NA

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (intial)

17. Were custody papers properly filled out (ink, signed, etc)? YES...NO...NA

18. Did you sign the custody papers in the appropriate place? YES...NO...NA

19. Were correct containers used for the analysis requested? YES...NO...NA

20. Was sufficient amount of sample sent in each container? YES...NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (intial)

I certify that I attached a label with the unique LIMS number to each container (intial)

21. Were there Non-Conformance issues at login? YES...NO Was a PIPE generated? YES...NO...#

For each set of VOAs they were packed together in bubblewrap. For 5-80-mm3 methanol and 1 sodium had no info. recorded on the labels.

BIS = Broken in shipment

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	False	2 VOA had no info on label.
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

The matrix spike / matrix spike duplicate were not reported for batch 12G0526 due to QC failure.

Qualifiers

GCMS Volatiles

Qualifier	Qualifier Description
U	Analyte included in the analysis, but not detected
R2	The RPD exceeded the acceptance limit.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Volatiles

Qualifier	Qualifier Description
U	Analyte included in the analysis, but not detected
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semivolatiles

Qualifier	Qualifier Description
U	Analyte included in the analysis, but not detected
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
Q3	The chromatographic pattern is not consistent with diesel fuel.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

1,3-Dichloropropane	ND	U	0.00236	0.00118	mg/kg		06/28/12 09:40	07/09/12 13:46	1.00
1,4-Dichlorobenzene	ND	U	0.00236	0.00130	mg/kg		06/28/12 09:40	07/09/12 13:46	1.00
2,2-Dichloropropane	ND	U	0.00236	0.00142	mg/kg		06/28/12 09:40	07/09/12 13:46	1.00
2-Butanone	ND	U	0.0591	0.0296	mg/kg		06/28/12 09:40	07/09/12 13:46	1.00
2-Chlorotoluene	ND	U	0.00236	0.00118	mg/kg		06/28/12 09:40	07/09/12 13:46	1.00
2-Hexanone	ND	U	0.0591	0.0296	mg/kg		06/28/12 09:40	07/09/12 13:46	1.00
4-Chlorotoluene	ND	U	0.00236	0.00130	mg/kg		06/28/12 09:40	07/09/12 13:46	1.00
4-Methyl-2-pentanone	ND	U	0.0591	0.0296	mg/kg		06/28/12 09:40	07/09/12 13:46	1.00
Acetone	ND	U	0.0591	0.0296	mg/kg		06/28/12 09:40	07/09/12 13:46	1.00
Bromobenzene	ND	U	0.00236	0.00142	mg/kg		06/28/12 09:40	07/09/12 13:46	1.00
Bromochloromethane	ND	U	0.00236	0.00142	mg/kg		06/28/12 09:40	07/09/12 13:46	1.00
Bromodichloromethane	ND	U	0.00236	0.00118	mg/kg		06/28/12 09:40	07/09/12 13:46	1.00
Bromoform	ND	U	0.00236	0.00118	mg/kg		06/28/12 09:40	07/09/12 13:46	1.00
Bromomethane	ND	U	0.00236	0.00142	mg/kg		06/28/12 09:40	07/09/12 13:46	1.00

Client: Cardno ERI Ventura
Project/Site: 08115503

TestAmerica Job ID: NWG0083

Client Sample ID: S-45-SVP2
Date Collected: 06/28/12 09:40
Date Received: 07/03/12 08:30

Lab Sample ID: NWG0083-06
Matrix: Soil

Method: SW846 8260B - Volatile Organic Compounds by EPA Method 8260B - RE1 (Continued)

Analyte	Result	Qualifier	RL	MDL	Unit	D	Prepared	Analyzed	Dil Fac
Carbon disulfide	ND	U	0.00591	0.00426	mg/kg		06/28/12 09:40	07/09/12 13:46	1.00
