Sounds great glad you are doing well- I am also (b) (6)
(b) (6)

Side question- Would you know a ball park cost for excavating and backfilling six inches of top soil on a cubic yard basis? The site (ball park fields) is in SeaTac and soil removal will likely be in the order of 1,500 cubic yards total, all at one site.

Thanks- Jim

Hello, James and Pam.

I will arrange to have a copy of the final report sent to each of you. It will be placed into some sort of electron drop box for you to download. Once I know who is sending it, I will give you a warning notice so that you expect it.

I'm doing great. (b) (6)
I also have two really big projects lined up as soon as the agency allows up in the field for non-emergencies. Small town with residential lawns contaminated with lead in NE Washington and a six-month dismantling of a smelter that is releasing PCBs, asbestos, and cPAHs in Spokane. It's like an OSC's dream-come-true.

Hi Jeff and Pam,
Any updates on the EPA report or the Ecology groundwater samples?
Hope you are both doing well-
Thanks-Jim

Guys,

I'm not sure if I already forwarded the groundwater data to you or not. I saw the entry, not crossed off, on a "to do" list in my log book. If you've already received this, go ahead and delete.

FYI: The final report, detailing EPA's 2018 and 2019 work, including all data, volumes removed, and isolated areas of residual contamination, is due for delivery approximately February 1, 2020.
