Yes, that'll work. I won't be getting to the SOW for my contractors until next week, so I won't need those details for at least a week.

Hi Jeff,

As an update, I've met internally with technical staff and will be meeting with the Health inspector tomorrow. The Code inspector who was most familiar with this site (b) (6) and the surface water inspector (b) (6). We should be able to respond by early next week with any recommendations on the sampling approach. Will that work for you in terms of developing the SAP/QAPP? We will likely recommend some additional surface/near surface soil sampling in the Bus/RV and Workshop area. There were some hits in this area in the 2006 sampling round and in addition to probable spills of vehicle fluids these areas were used for storage of asphalt and lead acid batteries, I've been told.

Thanks-Jim
