Subject: RE: sampling

Nothing beyond than last week's meeting. We shared preliminary data, which show we have two or three 24-hr composite samples above the 9ppb acute health threshold. Final QA still being done, we will tell Ohio when our QA is complete. We promised to share data and findings, so look forward to seeing your results.

ATSDR is doing a health consultation/analysis and will tell everyone when complete. I expect they will recommend the quantity and type of additional sampling. They may have a risk-based recommendation, e.g. "agencies should take immediate action to reduce…", or "agencies should continue to monitor", we'll see. There is no deadline but I think they need two weeks or more for final data and ATSDR recommendation.

We are considering additional monitoring, including Solar Occultation Flux, a remote method to quantify (e.g. lb/hr) VOC/benzene emissions. Still discussing that.

Call if you want,
