Dear Mr. Booth and Mr. Vasser:

The Tetra Tech, Inc. Superfund Technical Assessment and Response Team (Tetra Tech START) submits this emergency response (ER) letter report summarizing activities to address a lithium-ion battery fire at the Lakes Parkway Lithium Battery Fire site (the site) in Lawrenceville, Gwinnett County, Georgia from December 11, 2021 through March 8, 2022. This report includes six enclosures and two attachments. Enclosure 1 contains figures illustrating the site location, site layout, multimedia sampling locations, and air monitoring locations. Enclosure 2 includes multimedia sampling data summary tables. Enclosure 3 contains daily air monitoring data summary tables. Enclosure 4 contains the photographic log. Enclosure 5 contains the logbook notes. Enclosure 6 includes the Tetra Tech data validation reports. Attachment 1 contains National Response Center (NRC) Report #1324174. Attachment 2 contains the laboratory analytical data packages.

SITE BACKGROUND

On December 7, 2021, the Gwinnett County Fire Department (GCFD) responded to a fire inside the Recytech USA (Recytech) warehouse at 1665 Lakes Parkway, Suite 116, Lawrenceville, Gwinnett County, Georgia. The geographic coordinates of the site are 33.965963 degrees north and 84.055812 degrees west (see Figure 1 in Enclosure 1). The GCFD removed several pallets of smoldering and burning lithium-ion batteries (batteries) to the outside loading dock area at the rear of the building. GCFD spaced the pallets apart to prevent additional arcing between the batteries. Marion Environmental, Inc. (MEI) arrived on site to conduct cleanup activities but were turned away by the responsible party (RP), who assured GCFD they could remediate the problem themselves.

The site, which is in an industrial park, stores and ships electronic waste overseas. It is bordered to the north by residences and to the east, south, and west by commercial businesses (see Figure 2 in Enclosure 1).

On December 9, 2021, GCFD responded to another battery fire at the site. The GCFD notified the NRC (see Attachment 1) and the Georgia Environmental Protection Division (GAEPD). GAEPD notified EPA of the battery fires, which prompted EPA to mobilize On-Scene Coordinator (OSC) Jason Booth to the site.

On December 10, 2021, EPA arrived on site and met with GAEPD, GCFD, and the RP. MEI returned to the site but was unable to secure a contract with the RP. EPA presented a Notice of Federal Interest, a Notice of Federal Assumption, and an access agreement to the RP. After the RP signed the access agreement, EPA mobilized the Emergency Rapid Response Services contractor, Environmental

Restoration, LLC (ER), to conduct emergency response cleanup activities. ER arrived on site later that afternoon and covered the batteries in the loading dock area with sand and plastic sheeting to prevent further reactivity and suppress smoke. Later that evening, EPA mobilized Tetra Tech START to collect soil and surface water samples from a retention pond impacted by runoff from firefighting activities during multiple responses.

EMERGENCY RESPONSE AND REMOVAL ACTIVITIES

On the morning of December 11, 2021, Tetra Tech START arrived on site and discussed emergency response activities with EPA. EPA and Tetra Tech START conducted a brief site walk and observed the batteries in the loading dock area covered with sand and plastic sheeting. Next to the staged batteries, EPA and Tetra Tech START observed a storm drain where runoff from firefighting activities emptied and deposited into the retention pond located southeast of the Rytech entrance on the eastern side of the site. EPA and Tetra Tech START inspected the retention pond and observed some standing water and minor quantities of fire suppressant pellets. EPA tasked Tetra Tech START to collect soil and surface water samples from the retention pond, including a background sample. Tetra Tech START collected six soil samples and three surface water samples, including quality control samples, from the following locations (see Figure 3 in Enclosure 1):

- Soil sample LLB-SS-L01-121121 and surface water sample LLB-SW-L01-121121, including duplicate samples LLB-SS-L01-121121-DUP and LLB-SW-L01-121121-DUP were collected from an area northeast of the southwestern outfall.
- Soil sample LLB-SS-L02-121121, including a matrix spike and a matrix spike duplicate (MS/MSD) sample, was collected approximately 25 feet west of soil samples LLB-SS-L01-121121 and LLB-SS-L01-121121-DUP.
- Surface water sample LLB-SW-L02-121121, including a matrix spike and a matrix spike duplicate sample, was collected at the southwestern outfall.
- Soil sample LLB-SS-L03-121121 was collected approximately 10 feet north of the southwestern outfall.
- Soil sample LLB-SS-L04-121121 was a background sample collected uphill from the southwestern outfall near the northwestern corner of the 1655 Lakes Parkway loading dock parking area.
- Soil sample LLB-SS-L05-121121 was collected near the southeastern outfall servicing 1655 Lakes Parkway. Tetra Tech START collected the sample from just above the water line after a flash thunderstorm filled the outfall area with water.

On December 13, 2021, ER began placing the individual batteries into plastic bags and stacking the bagged batteries between layers of fire suppressant pellets within 55-gallon steel drums. The drums were sealed and secured inside a conex storage container. EPA requested Tetra Tech START return to the site to collect a 5-point composite sample (LLB-SS-L06-121321) from the sand covering the batteries for disposal purposes (see Figure 3 in Enclosure 1).

On December 14, 2021, ER continued packing the batteries into 55-gallon drums in the same manner as the previous day until the batteries self-ignited in the drums on two separate occasions. After the GCFD extinguished the fires, EPA suspended battery packing operations and decided to pack batteries individually in Department of Transportation (DOT) Packing Group 1 rated pails (DOT pails) to prevent self-ignition and allow for safe transport.

On December 14, 2021, EPA mobilized Tetra Tech START to conduct perimeter air monitoring around the battery packing operation. Tetra Tech START arrived on site and deployed Viper, a remote telemetry system with Honeywell AreaRAE Pros (AreaRAE Pro), at four locations to determine if the smoke contained combustion byproducts that could threaten nearby residents and employees. Each AreaRAE Pro contained sensors to detect carbon monoxide (CO), hydrogen sulfide (H_2S), oxygen (O_2), lower explosive limit (LEL), and gamma radiation, as well as a photoionization detector (PID) with a 10.6 electron volt (eV) bulb to detect volatile organic compounds (VOCs).

Based on proximity to battery packing operations, Tetra Tech START identified and placed an AreaRAE Pro at each of the following locations (see Figure 4 of Enclosure 1):

- Location 1 – Approximately 55 feet north of the loading dock area at the northern fence line of the facility near a residential area
- Location 2 – Northwestern side of operations at the loading dock stairwell of 1675 Lakes Parkway, Suite 101
- Location 3 – Western side of operations at the loading dock stairwell of 1675 Lakes Parkway, Suite 105
- Location 4 – Southwestern side of operations at the loading dock stairwell of 1665 Lakes Parkway, Suite 112

From December 15 through 19, 2021, ER conducted battery packing operations using the DOT pails. ER placed one battery into a plastic bag, placed the bagged battery into a pail, and surrounded it with fire suppressant pellets. ER inventoried, weighed, and labeled each DOT pail with the following information: DOT Class 9 Lithium Battery labels, Dangerous Goods Lithium Battery labels with UN3480 identifier, a Lithium-Ion label, a Damaged/Defective Lithium-Ion Battery label, and an inventory identification label. ER secured the DOT pails inside a conex storage container each day. In addition, ER contracted a group to erect a tent over the batteries covered in sand in the loading dock area to minimize their exposure to the weather.

On December 19, 2021, some of the DOT pails staged in the conex storage container self-ignited and GCFD mobilized to the site to extinguish the fire. EPA and ER suspended battery packing operations.

On December 20, 2021, EPA and ER met with representatives from several battery recycling facilities. Based on those meetings, EPA decided to submerge the batteries in a 0.5 percent sodium chloride brine solution (brine solution) to de-energize them prior to disposal. ER prepared a test brine solution in a 55-gallon steel drum and placed batteries in the solution. EPA requested Tetra Tech START move the AreaRAE Pro from Location 4 to monitor gases potentially released from the test drum during the de-energizing process. Tetra Tech START moved the AreaRAE Pro to the southwestern portion of the battery staging area on the western side of the stationary tractor trailer (Location 5) (see Figure 4 in Enclosure 1).

From December 21 through 23, 2021, ER submerged all batteries at the site into two roll-off containers filled with the brine solution. EPA and Tetra Tech START observed bubbles coming from the batteries in the solution as they were submerged. EPA requested Tetra Tech START move the AreaRAE Pros from Locations 2 and 3 to near the roll-offs to monitor for gases potentially released during the de-energizing process. Tetra Tech START placed one AreaRAE Pro south of the battery staging area near the center of the stationary tractor trailer (Location 6) and the other AreaRAE Pro southwest of the battery staging area at the loading dock stairwell of 1665 Lakes Parkway, Suites 114 and 116 (Location 7) (see Figure 4 in Enclosure 1). EPA installed a nitric oxide (NO) sensor in the AreaRAE Pro at Location 6 and a sulfur dioxide (SO_2) and chlorine (Cl_2) sensor in the AreaRAE Pro at Location 7. Also, ER tested

the voltage of select batteries submerged for longer than 12 hours and found that some still carried a charge. EPA and ER decided the batteries would need more time to de-energize in the brine solution. On December 22, 2021, EPA tasked Tetra Tech START to collect a grab wastewater sample (LP-LB-WW-01) of the brine solution for disposal purposes.

On December 23, 2021, EPA tasked Tetra Tech START to monitor for hydrogen chloride (HCl) and hydrogen fluoride (HF) gases using Honeywell SPM Flexes (SPM Flex) fitted with Honeywell SPM Flex mineral acid chemcassette tapes (mineral acid tapes). Tetra Tech START conducted HCl and HF air monitoring on the eastern side of the roll off containers (Location 8) (see Figure 4 in Enclosure 1). EPA, Tetra Tech START, and ER demobilized from the site.

From December 24, 2021 through February 21, 2022, the batteries remained submerged in the two roll-offs. Tetra Tech START continued air monitoring activities at Locations 1, 6, 7, and 8; conducted visual inspections of the roll-offs; and briefed EPA on site changes, as necessary. During this time, EPA applied for and received an Emergency Special Permit from DOT for battery disposal, and ER procured contracts for the disposal of all site wastes, including the batteries. On January 11, 2022, EPA tasked Tetra Tech START to collect a composite wastewater sample (LPLBF-WW-L01-011122) of the brine solution from the two roll-off containers for disposal purposes.

On February 18, 2022, Tetra Tech START moved both SPM Flexes from Location 8 to Location 6 to continue HCl and HF monitoring during battery disposal activities. Location 8 was in front of the roll-off access doors and would have impeded ER from draining and accessing the roll-off container.

From February 22 through March 4, 2022, EPA and ER mobilized to the site to package and dispose of the de-energized batteries. ER pumped the brine solution into 330-gallon intermediate bulk container (IBC) totes to access the batteries for disposal activities. ER randomly selected batteries and tested the voltages of the batteries. The voltages ranged from 0.0 to 0.1 volts across accessible electrodes. ER packaged the batteries pursuant to DOT Special Permits SP-16532 for small batteries and SP-21329 medium and large batteries. ER placed each small battery into individual plastic bags and placed them between layers of fire suppressant pellets in plastic-lined 55-gallon drums. ER placed the medium to large batteries between layers of fire suppressant pellets in fire suppressant-lined 55-gallon drums. A total of 13,414 pounds of batteries were packaged for shipment and disposal. On February 25, 2022, EPA tasked Tetra Tech START to collect a composite waste sample (LPLBF-SL-L01-022522) from the sludge in the northern roll off container for disposal purposes.

On March 4, 2022, Clean Harbors, Inc. (Clean Harbors) arrived on site and removed approximately 6,300 gallons of brine solution from the totes and roll-off containers for transport and disposal as non-hazardous waste. Tetra Tech START completed air monitoring, packed up the air monitoring equipment, and returned it to EPA. On March 8 and March 16, 2022, the batteries were transported to Retriev Technologies, Inc. (RTI) in Lancaster, Ohio for disposal.

MULTIMEDIA SAMPLING AND RESULTS

From December 11, 2021 through February 25, 2022, Tetra Tech START collected soil and surface water samples from a retention pond impacted by runoff from firefighting activities, a waste sample from the sand used to cover the batteries, wastewater samples from the brine solution used to de-energize the batteries, and a waste sludge sample from a roll-off container, including quality control duplicate and MS/MSD samples. Tetra Tech conducted a Stage 3 validation of the soil and surface water sampling analytical results and a Stage 2A validation of the waste sampling analytical results. The Tetra Tech data validation reports are contained in Enclosure 6, and the laboratory analytical data packages are contained in Attachment 2.

Tetra Tech START compared the soil and waste sand sampling results to the EPA Removal Management Levels (RMLs) for Chemicals for 10^{-4} Risk Level for Carcinogens or a Hazard Quotient of 3 for Non-Carcinogens Management Levels, dated May 2022, and the waste sand and sludge results to regulatory levels listed in Title 40 Code of Federal Regulation (CFR) Part 261.24, Identification and Listing of Hazardous Waste, Toxicity Characteristic, Table 1, Maximum Concentration of Contaminants for the Toxicity Characteristic (40 CFR 261.24, Table 1). Comparison criteria for the analytical results

associated with the surface water and wastewater samples was not available. The analytical results are summarized as follows:

- Analytical results for the soil samples detected the presence of TCL VOCs, TCL SVOCs, and total metals, but the results did not exceed the EPA RMLs for industrial soil (see Table 1 in Enclosure 2).
- Analytical results for the surface water samples detected the presence of TCL VOCs and total metals (see Table 2 in Enclosure 2).
- Analytical results for the waste sand samples detected the presence of total and TCLP metals, but the results did not exceed the EPA RMLs for industrial soil or the regulatory levels listed in 40 CFR 261.24, Table 1 (see Table 3 in Enclosure 2).
- Analytical results for the wastewater samples detected the presence of TCL VOCs, TCL SVOCs, and total metals, as well as values for pH, chloride, fluoride, ignitability, percent fixed solids, percent total solids, total suspended solids, and total solids (see Table 4 in Enclosure 2).
- Analytical results of the waste sludge samples detected the presence of TCLP SVOCs and TCLP metals, but the results did not exceed regulatory levels listed in 40 CFR 261.24, Table 1 (see Table 5 in Enclosure 2).

AIR MONITORING RESULTS

From December 14, 2021 through March 4, 2022, Tetra Tech START conducted 24-hour stationary air monitoring at eight locations around the site (see Figure 4 in Enclosure 2) and provided EPA a daily summary table of the air monitoring data. Tetra Tech START compared the air monitoring data to the following criteria:

- Temporary Emergency Exposure Limits (TEELs) representing VOC concentrations for benzene associated with no effects (TEEL-0) over a 15-minute time-weighted average (TWA). TEELs estimate the concentrations at which most people will begin to experience health effects if they are exposed to a hazardous airborne chemical for a given duration.
- EPA Acute Exposure Guideline Levels (AEGL), Level 1 (AEGL-1), 1-hour action levels for Cl_2, HCl, and HF and 8-hour action levels for H_2S and SO_2 refers to the airborne concentration of a substance above which the general population, including susceptible individuals, could experience notable discomfort, irritation, or certain asymptomatic non-sensory effects; however, Level 1 effects are not disabling and are transient and reversible upon cessation of exposure.
- AEGL, Level 2 (AEGL-2), 8-hour action level for CO refers to the airborne concentration of a substance above which the general population, including susceptible individuals, could experience irreversible or other serious, long-lasting adverse health effects or an impaired ability to escape.
- Protective Action Criteria, Level 1 (PAC-1), 1-hour action levels for NO refers to mild, transient health effects associated with uncontrolled releases of hazardous chemicals.

Summaries of the daily air monitoring data indicated the following (see Enclosure 3):

- VOC concentrations were below the TEEL-0, 15-minute TWA period average for benzene (1,000 parts per billion) during monitoring activities.

- The following analytes were below their respective AEGL-1 and AEGL-2 period average concentrations during monitoring activities: CO (27 ppm), H_2S (0.33 ppm), SO_2 (0.2 ppm), HCl (1.8 ppm), and HF (1 ppm).
- Concentrations of NO at Location 6 were below the PAC-1 period average action level [0.5 parts per million (ppm)], except on December 25 through 31, 2021 (0.7 ppm to 1.3 ppm); January 1, 2022 (1.7 ppm); February 10 through February 12 (0.5 ppm to 0.7 ppm); February 16 (0.6 ppm); February 18 (1.3 ppm); February 23 (0.8 ppm); February 24 (0.9 ppm); February 26 (0.5 ppm); February 28 (1.1 ppm); and March 1 through 3 (0.9 ppm to 1.0 ppm).

Tetra Tech START compared stationary ambient air quality readings for O_2 and LEL to benchmarks specified in the U.S. Department of Labor (DOL), Occupational Safety and Health Administration (OSHA), 29 CFR 1910.146, Permit-required Confined Spaces.

SUMMARY OF RESPONSE ACTIVITIES

From December 10, 2021 through March 18, 2022, EPA and ER conducted emergency response, removal, and disposal activities associated with the lithium-ion battery fire at the Recytech facility in Lawrenceville, Georgia. ER packed the batteries between layers of fire suppressant pellets in 55-gallon drums and DOT pails, but the batteries self-ignited. ER de-energized the batteries in a brine solution from December 21, 2021 through February 22, 2022 and packaged the batteries pursuant to DOT Special Permits SP-16532 for small batteries and SP-21329 medium and large batteries. ER disposed of 6,300 gallons of brine solution as non-hazardous waste via Clean Harbors and 13,414 pounds of batteries via RTI.

From December 11, 2021 through March 4, 2022, Tetra Tech START collected soil and surface water samples from a retention pond impacted by runoff from firefighting activities, collected waste samples (sand, wastewater, and sludge) generated during emergency response and removal activities, and conducted 24-hour air monitoring during emergency response and removal activities. Analytical results indicated the detection of various analytes, but none exceeded the EPA RMLs for industrial soil or regulatory levels listed in 40 CFR 261.24, Table 1. Summaries of air monitoring data indicated an exceedance of the PAC-1 period average action level for NO on 18 occasions, but no analytes exceeded their respective TEEL-0, 15-minute TWA, AEGL-1, and AEGL-2, period average concentrations.

On March 4, 2022, Tetra Tech START demobilized from the site. On March 18, 2022, EPA and ER completed all site activities and demobilized from the site.

U.S. ENVIRONMENTAL PROTECTION AGENCY

TOLIN:	82-035	**Location:**	1665 Lakes Parkway, Lawrenceville, Gwinnett County, Georgia
Orientation:	East	**Date:**	December 11, 2021
Photographer:	Paul Prys, Tetra Tech, Inc. Superfund Technical Assessment and Response Team (Tetra Tech START)	**Witness:**	Jason Booth, U.S. Environmental Protection Agency (EPA)

Subject: On December 10, 2021, U.S Environmental Protection Agency (EPA) mobilized to Rytech USA (the site) in response to lithium-ion battery fires at the site. EPA mobilized the Emergency Rapid Response Services contractor, Environmental Restoration, LLC (ER), to the site to conduct emergency response activities. ER arrived on site later that afternoon and covered the batteries in the loading dock area with sand and plastic sheeting to prevent further reactivity and suppress smoke.

Orientation:	North	**Date:**	December 11, 2021
Photographer:	Paul Prys, Tetra Tech START	**Witness:**	Jason Booth, EPA

Subject: Runoff from firefighting activities flowed into a storm drain located next to the staged batteries and emptied into the retention pond located southeast of the Rytech USA entrance on the eastern side of the site. ER covered the storm drain with plastic sheeting to prevent runoff from the battery storage area from emptying into the retention pond.

Orientation:	North	**Date:**	December 11, 2021
Photographer:	Paul Prys, Tetra Tech START	**Witness:**	Jason Booth, EPA

Subject: On December 11, 2021, Tetra Tech START mobilized to the site to collect soil and surface water samples from the retention pond impacted by runoff during firefighting activities. EPA and Tetra Tech START inspected the retention pond and observed some standing water and minor quantities of fire suppressant pellets. Tetra Tech START collected soil and surface water samples from the retention pond, including a background sample and quality control samples.

Tetra Tech START deployed Viper, a remote telemetry system with Honeywell AreaRAE Pros (AreaRAE Pro), at four locations to determine if the smoke contained combustion byproducts that could threaten nearby residents and employees. Each AreaRAE Pro contained sensors to detect carbon monoxide (CO), hydrogen sulfide (H_2S), oxygen (O_2), lower explosive limit (LEL), and gamma radiation, as well as a photoionization detector (PID) with a 10.6 electron volt (eV) bulb to detect volatile organic compounds (VOCs).

Weather: High of 73°F, 100% chance of rain, winds from west at 10-15mph

0900 START PHYS onsite and met with EPA OSC Jason Booth and ER. The fire occurred in the loading dock area of 1665 Lakes Parkway, Suite 116, Lawrenceville, GA. The lithium batteries were staged in the loading dock area and covered with sand and plastic sheeting. GPS coordinates: 33.965963, -84.055812 (PP)

OSC Booth tasked START PHYS with collecting water and soil samples from the outfall area located northwest of 1665 Lakes Parkway and north of 1655 Lakes Parkway. A stream drain located in the loading dock of the site empties into the area. Name of business at this location is Recytech USA. Runoff generated during fire fighting activities conducted on DEC 7 and DEC 9 emptied into this area. Samples will be analyzed for target compound list VOCs, TCL SVOCs, and TAL metals and Hg.

ALL-WEATHER TOUGH!

BRAND HISTORY

The *Rite in the Rain* story began a century ago in the forests of the Great Pacific Northwest. Entrepreneur Jerry Darling recognized the logging industry's need for a durable material that could be written on and survive in poor weather conditions. Jerry developed a special coating that created a unique moisture shield on the hand-dipped sheets of paper that he and his wife, Mary, processed at their home. From these humble beginnings our first all-weather paper was born. Over the many years we've perfected and patented our environmentally responsible coating process. Still located in Tacoma, our continued mission is to provide innovative products for professionals and enthusiasts who brave the outdoors.

The *Rite in the Rain* story began a century ago in the forests of the Great Pacific Northwest. Entrepreneur Jerry Darling recognized the logging industry's need for a durable material that could be written on and survive in poor weather conditions. Jerry developed a special coating that created a unique moisture shield on the hand-dipped sheets of paper that he and his wife, Mary, processed at their home. From these humble beginnings our first all-weather paper was born. Over the many years we've perfected and patented our environmentally responsible coating process. Still located in Tacoma, our continued mission is to provide innovative products for professionals and enthusiasts who brave the outdoors.
