For Patrick?

There is no NESHAP violation from what I saw just on the 24th. I need 30 days worth of observations to make that determination.

Good, we'll add the NESHAP violation.

And I had time blocked off for another meeting, so hopefully that attorney (Jackie Clark) wasn't roaming 18.

No worries. I joined around 11:00 am I think. I figured since both you and Brian had the time blocked off then the meeting must have been occurring then.

It'd be NESHAP L for the charging violation. They have a limit of 12 seconds per charge based on a 30-day rolling log average. I've been planning on reviewing once I get their other records, but the possibility of there being a violation from that is low. For the day I was there the log average was 23 seconds, and that is using three runs which each had emissions emerging for close to one minute. For 30 days you need 150 observations.

It was at 10:30, it was crazy last second (hence BD's scrambled message below), and we told Ohio EPA that we're sending an NOV. No specific action plan yet, more sampling from Ohio. Lmk if you want to talk about it by phone.

Also - Marie, did you look at the NESHAPs (L and CCCCC) for possible charging violations? If there's a SIP charging violation, there may also be a NESHAP violation too.

Thanks.

If you could get a room, that'd be great.

Call to touch base with ATSDR and US EPA on AK Steel air emissions.

Apologies for the short notice. Please forward as needed.
