Notes:
E - Estimated.
G - Estimate is greater than value shown.
I - the MRL/MDL has been elevated due to a chromatographic interference.
J - The associated numerical value is an estimated quantity.
M - Mean.
N - Presumptive evidence of presence of material; identification of the compound is not definitive.
P - GC/HPLC criteria exceeded RPD>40% (>25% CLP pesticides).
R - The data are unusable (compound may or may not be present). Resampling and reanalysis are necessary for verification. (Overrides all qualifiers and their codes.)
T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.
U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

Notes:

J - The associated numerical value is an estimated quantity.

N - Presumptive evidence of presence of material; identification of the compound is not definitive.

R - The data are unusable (compound may or may not be present). Resampling and reanalysis are necessary for verification. (Overrides all qualifiers and their codes.)

T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.

U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

Notes:

G - Estimate is greater than value shown.

I - the MRL/MDL has been elevated due to a chromatographic interference.

J - The associated numerical value is an estimated quantity.

N - Presumptive evidence of presence of material; identification of the compound is not definitive.

R - The data are unusable (compound may or may not be present). Resampling and reanalysis are necessary for verification. (Overrides all qualifiers and their codes.)

T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.

U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

Table C2-20. PAH Values Used in Total PAH Calculations for Subsurface Sediment Samples

	CAS No	91-57-6	83-32-9	208-96-8	120-12-7	86-73-7	91-20-3	85-01-8	LPAH	53-70-3	56-55-3	50-32-8	205-99-2	207-08-9	BKBFLANTH	191-24-2	218-01-9	206-44-0	193-39-5	129-00-0	HPAH	130498-29-2
	Chemical Name	2-Methylnaphthalene	Acenaphthene	Acenaphthylene	Anthracene	Fluorene	Naphthalene	Phenanthrene	Low Molecular Weight PAH	Dibenzo(a,h)anthracene	Benzo(a)anthracene	Benzo(a)pyrene	Benzo(b)fluoranthene	Benzo(k)fluoranthene	Benzo(b+k)fluoranthene	Benzo(g,h,i)perylene	Chrysene	Fluoranthene	Indeno(1,2,3-cd)pyrene	Pyrene	High Molecular Weight PAH	Total PAHs
	Unit	µg/kg	µg/kg	µg/kg	µg/kg	µg/kg	µg/kg	µg/kg	µg/kg	µg/kg	µg/kg	µg/kg	µg/kg	µg/kg	µg/kg	µg/kg	µg/kg	µg/kg	µg/kg	µg/kg	µg/kg	µg/kg

Notes:
B - Analyte detected in method blank.
G - Estimate is greater than value shown.
H - Holding time exceeded.
J - The associated numerical value is an estimated quantity.
N - Presumptive evidence of presence of material; identification of the compound is not definitive.
T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.
U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

BZTO104(e)028850

Notes:

J - The associated numerical value is an estimated quantity.

T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.

U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

Notes:

J - The associated numerical value is an estimated quantity.

T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.

U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

Notes:
T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.

U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

Notes:

J - The associated numerical value is an estimated quantity.

N - Presumptive evidence of presence of material; identification of the compound is not definitive.

T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.

U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

BZTO104(e)028881

Table C2-34. PAH Values Used in Total PAH Calculations for Transition Zone Water Samples.

	CAS No	91-57-6	83-32-9	208-96-8	120-12-7	86-73-7	91-20-3	85-01-8	LPAH	53-70-3	56-55-3	50-32-8

Notes:

J - The associated numerical value is an estimated quantity.

T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.

U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

BZTO104(e)028889

Notes:

J - The associated numerical value is an estimated quantity.

T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.

U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

Notes:

J - The associated numerical value is an estimated quantity.

T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.

U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

Notes:

J - The associated numerical value is an estimated quantity.

R - The data are unusable (compound may or may not be present). Resampling and reanalysis are necessary for verification. (Overrides all qualifiers and their codes.)

T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.

U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

BZTO104(e)028897

Table C2-39. 2,4' and 4,4' DDx Values Used in Total DDx Calculations for Surface Water Samples.

	CAS No	72-54-8	72-55-9	50-29-3	PP_DDT3ISO	53-19-0	3424-82-6	789-02-6	E966176	E17075011	E17075029	E17075037

Notes:

J - The associated numerical value is an estimated quantity.

N - Presumptive evidence of presence of material; identification of the compound is not definitive.

T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.

U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

Notes:

J - The associated numerical value is an estimated quantity.

T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2

Ú - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

Notes:

J - The associated numerical value is an estimated quantity.

T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.

U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

Notes:

C - suffix in sample ID indicates an XAD column sample.

F - suffix in sample ID indicates an XAD filter sample.

J - The associated numerical value is an estimated quantity.

N - Presumptive evidence of presence of material; identification of the compound is not definitive.

T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.

U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

BZTO104(e)028907

Table C2-45a. PCB Congener Values Used in Total PCB Congener Calculations for Surface Water XAD Samples (Table 1 of 2).

Notes:
C - suffix in sample ID indicates an XAD column sample.
F - suffix in sample ID indicates an XAD filter sample.
J - The associated numerical value is an estimated quantity.
U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

BZTO104(e)028913

Notes:
C - suffix in sample ID indicates an XAD column sample.
F - suffix in sample ID indicates an XAD filter sample.
J - The associated numerical value is an estimated quantity.
U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

BZTO104(e)028915

Table C2-46. Dioxin and Furan Values Used in Total Dioxin/Furan Calculations for Surface Water XAD Samples.

Notes:

C - suffix in sample ID indicates an XAD column sample.

F - suffix in sample ID indicates an XAD filter sample.

J - The associated numerical value is an estimated quantity.

T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results
(e.g., for parameters reported by multiple methods) for the Round 2 data.

U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

BZTO104(e)028916

Table C2-47. Dioxin, Furan, and PCB Congener Values Used in 2,3,7,8-TCDD TEQ Value Calculations for Surface Water XAD Samples.

Notes:
C - suffix in sample ID indicates an XAD column sample.
F - suffix in sample ID indicates an XAD filter sample.
J - The associated numerical value is an estimated quantity.
T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.

U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

BZTO104(e)028918

Table C2-48. 2,4' and 4,4' DDx Values Used in Total DDx Calculations for Surface Water XAD Samples.

Notes:

C - suffix in sample ID indicates an XAD column sample.

F - suffix in sample ID indicates an XAD filter sample.

J - The associated numerical value is an estimated quantity.

T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.

U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

BZTO104(e)028919

Notes:

C - suffix in sample ID indicates an XAD column sample.

F - suffix in sample ID indicates an XAD filter sample.

J - The associated numerical value is an estimated quantity.

R - The data are unusable (compound may or may not be present). Resampling and reanalysis are necessary for verification. (Overrides all qualifications and their codes.)

T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.

U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

Notes:

C - suffix in sample ID indicates an XAD column sample.

F - suffix in sample ID indicates an XAD filter sample.

J - The associated numerical value is an estimated quantity.

T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.

U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

Notes:

J - The associated numerical value is an estimated quantity.

N - Presumptive evidence of presence of material; identification of the compound is not definitive.

T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.

U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

BZTO104(e)028930

Table C2-53a. PCB Congener Values Used in Total PCB Congener Calculations for Tissue Samples (Table 1 of 2).

	CAS No	2051-60-7	2051-61-8	2051-62-9	13029-08-8	16605-91-7	25569-80-6	33284-50-3	34883-43-7	34883-39-1	33146-45-1	2050-67-1	PCB012_013	34883-41-5	2050-68-2	38444-78-9	37680-66-3	37680-65-2	PCB018_030	38444-73-4	PCB020_028

Notes:
J - The associated numerical value is an estimated quantity.
K - Peak detected but did not meet QC criteria.
N - Presumptive evidence of presence of material; identification of the compound is not definitive.
T - The
U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

BZTO104(e)028948

Notes:
J - The associated numerical value is an estimated quantity.
K - Peak detected but did not meet QC criteria.
N - Presumptive evidence of presence of material; identification of the compound is not definitive.
T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.

U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

BZTO104(e)028957

Notes:
J - The associated numerical value is an estimated quantity.
K - Peak detected but did not meet QC criteria.
N - Presumptive evidence of presence of material; identification of the compound is not definitive.
T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.

U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

BZTO104(e)028960

Notes:

J - The associated numerical value is an estimated quantity.

K - Peak detected but did not meet QC criteria.

N - Presumptive evidence of presence of material; identification of the compound is not definitive.

T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.

U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

BZTO104(e)028969

Notes:

J - The associated numerical value is an estimated quantity.

N - Presumptive evidence of presence of material; identification of the compound is not definitive.

T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.

U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

Notes:

J - The associated numerical value is an estimated quantity.

N - Presumptive evidence of presence of material; identification of the compound is not definitive.

T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.

U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

Notes:
J - The associated numerical value is an estimated quantity.
N - Presumptive evidence of presence of material; identification of the compound is not definitive.
T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.
U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

Table C2-59. PAH Values Used in Total PAH Calculations for Tissue Samples.

	CAS No	91-57-6	83-32-9	208-96-8	120-12-7	86-73-7	91-20-3	85-01-8	LPAH	53-70-3	56-55-3	50-32-8

Notes:

J - The associated numerical value is an estimated quantity.

T - The associated numerical value was mathematically derived (e.g., from summing multiple analyte results such as Aroclors, or calculating the average of multiple results for a single analyte). Also indicates all results that are selected for reporting in preference to other available results (e.g., for parameters reported by multiple methods) for the Round 2 data.

U - The material was analyzed for, but was not detected. The associated numerical value is the sample quantitation limit.

Table C3-9. Column Header Definitions for Tables C3-1 through C3-8.

Column name	Description
h_criteria	Horizontal Search Criteria (ft) - Only sample pairs less than this horizontal distance apart are shown
v_criteria	Vertical Search Criteria (ft) - Only sample pairs less than this vertical distance apart are shown
Analyte	Analyte name result of result pair
sys_loc_code1	sys_loc_code of the first sample in a pair
sys_sample_code1	sys_sample_code of the first sample in a pair
sys_loc_code2	sys_loc_code of the second sample in a pair
sys_sample_code2	sys_sample_code of the second sample in a pair
X_loc1	X location of first sample in pair
Y_loc1	Y location of first sample in pair
X_loc2	X location of second sample in pair
Y_loc2	Y location of second sample in pair
SampleDate_loc1	Sample Date of first sample in pair
RiverZone_loc1	RiverZone of first sample in pair
RiverMile_loc1	River Mile of first sample in pair
UpperDepth_loc1	Upper sample Depth of first sample in pair
LowerDepth_loc1	Lower sample Depth of first sampe in pair
VALUE_loc1	Result Value of first sample in pair
lab_qualifiers_loc1	lab_qualifiers of first sample in pair
detect_flag_loc1	detect flag of first sample in pair
Units_loc1	Result Units of first sample in pair
SampleDate_loc2	Sample Date of second sample in pair
RiverZone_loc2	RiverZone of second sample in pair
RiverMile_loc2	River Mile of second sample in pair
UpperDepth_loc2	Upper sample Depth of second sample in pair
LowerDepth_loc2	Lower sample Depth of second sampe in pair
VALUE_loc2	Result Value of second sample in pair
lab_qualifiers_loc2	lab_qualifiers of second sample in pair
detect_flag_loc2	detect flag of second sample in pair
Units_loc2	Result Units of second sample in pair
qc_level
