Rich,
Please don't respond to this until you back from A/L. I just want to get it on the radar...

Dan has suggested to the EPA LST-1166 team that perhaps we (ERU) should conduct an EE/CA to confirm the information provided by Coast Guard regarding the cost and limitations on ability to scrap the LST. There appears to be some gaps and uncertainty about whether it is feasible to have it scrapped. The scrapping alternative needs to be completely exhausted before an ocean disposal permit can be considered. An EE/CA might also uncover other alternatives that haven't been considered yet. Let's discuss this when you're back in the office.
Thanks.
