MAY 30 1986 9:51 P.M.

About 9 20 I paddled up slip 2 and saw water gushing out from behind a 12 X 12 approx steel plate. It was milky and made a large milky area the west the length of a moored barge but did not extend outside the barges. It seemed to be a different source than that observed last Thurs. that source appeared to have been used since the area outside those discharge areas was not I observed the discharge from about 9:20 to 9:40. It seemed steady.
