June 11 1986 9:40 PM

I observed 2 drains at Pioneer Cement that were discharging muddy water into the Duwamish the westerly one was very dark & muddy, the easterly one (square plate) was milky. The equipment was running. I videotaped the above but it was fairly dark. I observed the above for about 15 minutes. There were two barges that observed viewing the above from anywhere but between the barges and the shore.

June 12 1986 6:00 AM
Viewed Pioneer plant from opposite shoreline and taped general operation & location of drains. Noted wet area as evidence of June 11 discharge.

June 16 1986

Paddled Duwamish & observed Pioneer at about 7:00 pm & 8:00 pm with no discharge.

June 26, 1986

6:45 Am high tide. Observed from So Shore. Plate drain hard to see, surface drain outfall was wet but not in use,

June 19, 1984 7:12 AM

Taped discharge from plate drain

"Glacier" hard hat, employee asked if he could help me. I said no. I was on opposite shore but tide was low so drains were visible over the barges.

GERD:

Lee Moyer called - 246-9385

says he witnessed another violation at 7:12 AM today (6/19) and taped same
