DATA QUALIFIERS AND DEFINITIONS

C	Calibration Verification recovery was above the method control limit for this analyte. Analyte not detected, data not impacted.
HFT	The holding time for this test is immediate. It was analyzed in the laboratory as soon as possible after receipt.
L	Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected, data not impacted.
M1	The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
M2	The MS and/or MSD were below the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
M7	The MS and/or MSD were above the acceptance limits. See Blank Spike (LCS).
MHA	Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).
MNR1	There was no MS/MSD analyzed with this batch due to insufficient sample volume. See Blank Spike/Blank Spike Duplicate.
P-HS	Sample container contained headspace.
R	The RPD exceeded the method control limit due to sample matrix effects. The individual analyte QA/QC recoveries, however, were within acceptance limits.
R-2	The RPD exceeded the acceptance limit.
R-3	The RPD exceeded the acceptance limit due to sample matrix effects.
Z	Due to sample matrix effects, the surrogate recovery was below the acceptance limits.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
RPD	Relative Percent Difference

ADDITIONAL COMMENTS

For 8260 analyses:

Due to the high water solubility of alcohols and ketones, the calibration criteria for these compounds is <30% RSD. The average % RSD of all compounds in the calibration is 15%, in accordance with EPA methods.

For Volatile Fuel Hydrocarbons

Volatile Fuel Hydrocarbons (C4-C12) are quantitated against a gasoline standard. Quantitation begins immediately before TBA-d9.

For Extractable Fuel Hydrocarbons (EFH, DRO, ORO) :

Unless otherwise noted, Extractable Fuel Hydrocarbons (EFH, DRO, ORO) are quantitated against a Diesel Fuel Standard.

Whittier, California 90606

Dear Mr. Gabriel:

GEOLOGICA, Inc. (GEOLOGICA) is pleased to present this report describing subsurface investigation activities conducted at the above-referenced property located in Whittier, California. The scope of work was developed by GEOLOGICA and NPEC, Inc. (NPEC) in conjunction with the transfer of site operations to Ryder System, Inc. and at the request of the property owner (identified as CLPF Whittier Industrial, LP).

We have enjoyed working with you on this project and appreciate the opportunity to be of service. Should you have any questions, please do not hesitate to contact us at (949) 548-9348 or (415) 597-7883.

Very truly yours,

GEOLOGICA, Inc.

WHITTIER, CALIFORNIA, 90606

1.0 INTRODUCTION

GEOLOGICA, Inc. ("GEOLOGICA") is pleased to submit this report to NPEC, Inc. (NPEC) describing subsurface investigation activities conducted at the Eastman Kodak Company ("Kodak") Western Zone Warehouse facility located at 12100 Rivera Road, Whittier, California (the "site," "subject property," or "property,") as shown in **Figure 1**. Subsurface investigation activities were conducted at the locations of two former underground storage tanks (USTs): one Former Fuel Oil UST located near the northeast corner of the building; and, a second Former Photochemicals UST located near the southeast corner of the building (**Figure 2**). The project was conducted in conjunction with the transfer of Kodak site operations to Ryder System, Inc. (Ryder), and at the request of the property owner (identified as CLPF Whittier Industrial, LP).

1.1 Site Description

The subject property includes a single-story, approximately 218,000-square-foot building and a 7,000-square-foot parking area located in a principally commercial and industrial area of Whittier, California. The site building, generally known as the *Office and Distribution Center*, also referred to as the Warehouse Building, was constructed as, and is still used as, a regional distribution center for Kodak finished products for the western United States. The facility handles approximately 60–70% consumer goods and the remainder professional and medical products, including: one-time use cameras, film, photochemicals, limited photographic equipment, anesthetics, and dental x-ray film. The facility incorporates an "automated" warehouse to handle stored, shipped and received goods. The facility employs approximately 50 individuals twelve hours/day, five days/week.

1.2 General Site History

Prior to site development for its current use the subject property appears to have been used for agricultural purposes from at least 1928 through the site's first reported development by Kodak in 1959, when the Office and Distribution Center was constructed. Kodak appears to have leased at least a portion of the property to the City of Whittier in 1964. Site buildings and configurations have changed over time. A small Technical Building was built in 1959, along

with the original Warehouse Building, which now comprises the northeastern portion of the current Office and Distribution Center. The Distribution/Office Building was expanded several times, reportedly most recently in 1985. Another small Marketing Building was constructed in 1975. A small Flammable Storage Building was added in 1985. The northern portion of the building was used for hazardous materials storage; the southern portion was reportedly leased to a plastics recycling company. The Technical Building, Marketing Building, and Flammable Storage Building were demolished in approximately 1999. Kodak sold the subject property to Pacific Gulf Properties Inc. (Pacific Gulf) in 1998 and leased back the facility. The property was subsequently sold by Pacific Gulf. The current property owner is identified as CLPF Whittier Industrial, LP. Kodak leased the facility from CPLF until 2007, when the lease was assigned to Ryder.

1.3 Former Photochemicals UST Investigation (IT Corporation, 1984)

In July 1984, Kodak detected an overfill of a 1,000-gallon UST which received photochemicals discharged from leaking or damaged containers into a disposal sink. Subsequent excavation around the upper part of the tank revealed a leak in the pipeline that conveyed materials from the sink into the tank and impacted soils in the tank backfill. The tank and "obviously contaminated" soils were removed for off-site disposal. A limited soil and groundwater investigation was conducted which included advancement of one soil boring and installation of one groundwater well. Soil and groundwater samples were collected and analyzed for priority pollutant metals, Volatile Organic Compounds (VOCs), Base-Neutral-Acid extractable organic compounds; no constituents were reported above relevant criteria. UST closure information was reportedly submitted to the Los Angeles Regional Water Quality Control Board (LARWQCB). The LARWQCB reported no related documents were found in response to GEOLOGICA's information requests and database searches.

1.4 Site Underground Storage Tank UST History Summary

Based on review of internal documents and discussions with site personnel, two historic / former USTs have been identified:

- Photochemical Overflow UST - A former photochemicals "overflow" UST was located exterior to the then existing south wall of the building (near southeast corner of existing building). This area was subsequently covered up by an addition to the building in the mid-1980s. The UST was closed by removal in 1984 following a tank overfill. Refer to **Section 1.3** above for additional information regarding this UST.

- Fuel Oil UST - A former UST (size unknown) was located adjacent to the Maintenance and Will-Call Areas near the northeast corner of the building. The UST was reportedly used to store diesel fuel oil as backup fuel for the facility's boilers. The UST was removed at an unknown time, probably in the mid-1980's. No records were identified suggesting or confirming that soil or groundwater characterization was performed in conjunction with the tank removal. No formal closure documentation was identified.

2.0 PURPOSE AND SUMMARY OF WORK PERFORMED

The purpose of the work was to assess subsurface conditions in areas associated with the Former Fuel Oil UST and the Former Photochemicals UST, as shown in **Figure 2**. The initial scope of work, described in GEOLOGICA's April 2008 Work Plan ("Work Plan"), was developed by GEOLOGICA and NPEC in conjunction with the transfer of site operations to Ryder and at the request of the property owner (CLPF Whittier Industrial, LP). Deviations from the Work Plan due to the field conditions encountered are described in the applicable sections below.

2.1 Preliminary Activities

To assess the presence of subsurface utilities prior to the commencement of excavation and subsurface sampling activities, GEOLOGICA coordinated with site personnel for site access, mark-out of sampling locations, and review of available as-built plans. GEOLOGICA engaged a commercial firm to locate and "clear" related on-site subsurface utilities, and notified Underground Services Alert of Southern California prior to the commencement of investigation activities. The approximate locations of the former photochemicals UST and the associated existing monitoring well were identified by facility personnel. The location of the former fuel oil UST was identified by drawings provided by facility personnel.

2.2 Former Fuel Oil UST Area Soil and Groundwater Sampling

As described in the Work Plan, two direct-push soil borings (B-4 and B-5) were drilled on July 1, 2008 in the approximate location of the former fuel oil UST (**Figure 3**) using a truck-mounted, direct-push drilling rig. Soil samples were collected for borehole logging purposes and analytical testing in single use, two-foot long, one-inch diameter, acetate tubes. Cleaned and dedicated downhole tooling was used to drill each of the soil borings. No on-site decontamination of sampling equipment was required. Soil samples were collected at five-foot intervals to a maximum depth of 35 feet in Soil Boring B-4 and Soil Boring B-5.

A total of six soil samples were submitted for laboratory analysis from the two soil borings from the 5-foot, 10-foot, and 15-foot bgs intervals. These soil samples were analyzed for: Total Petroleum Hydrocarbons as Volatile Fuel Hydrocarbons (TPH-VFH); Total Petroleum Hydrocarbons as Extractable Fuel Hydrocarbons (TPH-EFH); Volatile Organic Compounds (VOCs); and, pH. Two additional soil samples collected from Soil Boring B-4, at the 20-foot and 25-foot intervals, were analyzed for TPH-VFH and VOCs.

Two "grab" groundwater samples were collected: one from Soil Boring B-4 and one from Soil Boring B-5. Groundwater samples were collected through pre-cleaned one inch diameter GeoProbe-style steel casing equipped with a two-foot long retractable screen section (clean screen section for each groundwater sample). "Grab" groundwater samples were collected by hand-raising and lowering a dedicated length of plastic tubing fitted with a dedicated stainless steel check valve. The groundwater samples were analyzed for the same suite of constituents as the soil samples.

Soil and groundwater samples were placed in laboratory-supplied sample jars, and transported to TestAmerica, Inc., in Irvine, California, under appropriate chain-of-custody protocols in a cooler filled with wet ice. VOC samples were collected using Terracore samplers and in-field preservation, in general compliance with LARWQCB requirements.

2.3 Former Photochemicals UST Area Soil and Groundwater Sampling

As described in the Work Plan, two direct-push soil borings (B-9 and B-10) were drilled in locations near the former photochemicals UST (**Figure 4**). Soil samples were collected at five-foot intervals to a maximum depth of 35 feet bgs for lithologic logging purposes, except for two soil samples analyzed for mercury, for screening purposes only to assist in establishing site and background concentrations.

The Work Plan provided for one "grab" groundwater sample to be collected from each of the two borings. Due to the collapse of gravel fill underlying the concrete floor, Soil Boring B-9 could not be advanced deeper than approximately 25 feet bgs, and a groundwater sample could not be collected. One grab groundwater sample was collected from Soil Boring B-10 through pre-cleaned one inch diameter GeoProbe-style steel casing equipped with a two-foot long retractable screen section (clean screen section for each groundwater sample). Grab groundwater samples were collected by hand-raising and lowering a dedicated length of plastic tubing fitted with a dedicated stainless steel check valve. Groundwater samples for metals' testing were filtered by the analytical testing laboratory. The groundwater sample was placed in laboratory-supplied sample jars, and transported to TestAmerica, Inc., in Irvine, California, under appropriate chain-of-custody protocols in a cooler filled with wet ice. The grab groundwater sample was tested for: TPH-VFH; TPH-EFH; VOCs; cadmium; chromium; silver; nitrate; nitrite; sulfate; and, pH.

3.0 SOIL AND GROUNDWATER CRITERIA AND FINDINGS

Soil sample analytical testing results are summarized in **Table 1**. Groundwater sample analytical testing results are summarized in **Table 2**. Soil data were compared to potentially applicable: (1) United States Environmental Protection Agency (USEPA) Region 9 Preliminary Remediation Goals (PRGs); (2) California Human Health Screening Levels (CHHSLs); and, (3) Maximum Soil Screening Levels for TPH and BTEX above Drinking Water Aquifers, as listed in the LARWQCB's 1996 *Interim Site Assessment & Cleanup Guidebook*. Groundwater data were evaluated against USEPA and California Maximum Contaminant Levels (MCLs).

3.1 Soil and Groundwater Conditions

Soils encountered at both former UST sites generally consisted of fine sands with varying amounts of silt and clay. Several borings contained stratigraphic sections comprising clayey-silts. Groundwater was generally encountered at approximately 30 feet bgs. Refer to the **Soil Boring Logs** provided in **Appendix A**.

3.2 Former Fuel Oil UST Soil Samples Analytical Testing Findings

Key findings from the former fuel oil UST site soil analytical testing are tabulated in **Table 1** and summarized below.

- **TPH-VFH.** TPH-VFH was detected in only one of eight soil samples analyzed, B-4/15' at a concentration of 92 micrograms per kilogram (µg/kg). There are no USEPA PRGs or California CHHSLs for TPH-VFH. The 92 µg/kg detected in this sample is well below the LARWQCB criteria of 500,000 µg/kg for soils. TPH-VFH was not detected in the two successively deeper samples from this boring: B-4/20' and B-4/25'.
- **TPH-EFH.** TPH-EFH was not detected in the soil samples analyzed.
- **VOCs.** VOCs were not detected in the soil samples analyzed.

3.3 Former Fuel Oil UST Groundwater Samples Analytical Testing Findings

Key findings from the Former Fuel Oil UST groundwater analytical testing are tabulated in **Table 2**, and summarized below.

- **TPH-VFH.** TPH-VFH was detected in one of the two groundwater samples, B-4-GW, at a concentration of 380 micrograms per liter (µg/L). There are no USEPA or California MCLs for TPH-VFH.
- **TPH-EFH.** TPH-EFH was not detected in either of the groundwater samples analyzed. There are no USEPA or LARWQCB criteria for TPH-VFH.
- **VOCs.** Chloroform and trichlorofluoromethane were detected at concentrations below potentially applicable US EPA and California MCLs. The following VOCs were detected in the two groundwater samples at concentrations above potentially applicable US EPA and/or California MCLs:
  - 1,1-Dichloroethylene at concentrations of 64 µg/L and 110 µg/L in B-4-GW and B-5-GW, respectively.
  - Tetrachloroethylene (PCE) at concentrations of 28 µg/L and 77 µg/L in B-4-GW and B-5-GW, respectively.
  - Trichloroethylene (TCE) at concentrations of 340 µg/L and 580 µg/L in B-4-GW and B-5-GW, respectively.
  - 1,2-cis-Dichloroethylene at concentrations of 29 µg/L and 42 µg/L in B-4-GW and B-5-GW, respectively.

3.4 Former Photochemicals UST Soil Samples Analytical Testing Findings

Two soil samples were tested for mercury from Soil Boring B-9. These samples were analyzed beyond the analytical testing holding time; however, these samples were analyzed for screening purposes only, to assist with evaluating site and background concentrations. Analytical data are tabulated in **Table 1**, and summarized below.

- Mercury was detected in soil sample B-9/5'-7', from the five- to seven-foot bgs interval, had a concentration of 96 µg/kg. This concentration exceeds the US EPA Risk-based Soil Screening Level (SSL) of 33 µg/kg.
- Mercury was detected in soil sample B-9/10', from the 10-foot bgs interval, had a concentration of 34 µg/kg. This concentration exceeds the US EPA Risk-based Soil SSL of 33 µg/kg.

3.5 Former Photochemicals UST Groundwater Samples Analytical Testing Findings

Key findings from the photochemicals UST groundwater analytical testing are tabulated in **Table 2**, and summarized below.

- **Constituents Not Detected.** None of the following constituents were detected in the groundwater sample analyzed: *TPH-VFH, TPH-EFH, VOCs, or metals*.
- **Photochemical-Related Compounds.** *Nitrate* was detected at a concentration of 46,000 µg/L, above the 10,000 µg/L USEPA and California MCLs. *Nitrite* was detected at a concentration of 190 µg/L, below the USEPA and California MCLs of 1,000 µg/L applicable criteria. *Sulfate* was detected at a concentration of 82,000 µg/L, below the USEPA and California 250,000 µg/L Secondary MCL (for taste or aesthetics).

4.0 KEY FINDINGS AND CONCLUSIONS

Key findings and conclusions from the above-described activities are summarized below.

4.1 Former Fuel Oil UST

- **Soil.** Soil samples were collected from two soil borings at the Former Fuel Oil UST site. Soil samples were analyzed for total petroleum hydrocarbons, VOCs, and pH. Residual petroleum hydrocarbons were detected in soil samples from the area of the former fuel oil UST, but no evidence of a significant release of fuel oil was identified. TPH-VFH was detected in a single soil sample at a concentration of 92 µg/kg. There are no applicable USEPA PRG or California CHHSL criteria for TPH-VFH. The 92 µg/kg detected is below the LARWQCB criteria of 500 µg/kg.
- **Groundwater.** Groundwater samples were collected from temporary wells installed in the soil borings. Groundwater samples were analyzed for total petroleum hydrocarbons, VOCs, and pH. Evidence of VOCs in groundwater was detected in the area of the Former Fuel Oil UST. The compounds 1,1-DCE, TCE, PCE, and 1,2-cis-DCE were all detected at concentrations ranging up to two magnitudes above potentially applicable criteria. The observed impact to groundwater is considered most likely unrelated to the Former Fuel Oil UST, which was reportedly used to store diesel fuel for backup purposes only. Residual petroleum hydrocarbons were detected in one groundwater sample from the area of the Former Fuel Oil UST, but no evidence of a significant release of fuel oil was identified. TPH-VFH was detected in the groundwater sample, at a concentration of 380 µg/L. There are no USEPA or California MCLs for TPH-VFH.

4.2 Former Photochemicals UST

- **Soil.** Two soil borings were advanced at the Former Photochemicals UST site, for lithological purposes. Two soil samples were tested for mercury for screening purposes only, to assist with evaluating site and background concentrations. Mercury was detected in one soil sample at a concentration of 96 µg/kg and the second soil sample at a concentration of 34 µg/kg. These concentrations exceed the US EPA Risk-based SSL of 33 µg/kg.
- **Groundwater.** One groundwater sample was collected and analyzed for total petroleum hydrocarbons, VOCs, cadmium, chromium, silver, photochemical-related compounds, and pH. No total petroleum hydrocarbons, VOCs or metals were detected in the groundwater sample collected at this UST site. Residual concentrations of the photochemical-related compounds nitrate, nitrite, and sulfate were detected in the groundwater sample. Only nitrate was detected, at a concentration (46,000 µg/L), that exceeds potentially applicable USEPA and California MCLs (10,000 µg/L).

Warehouse
Sampled: 07/01/08
Received: 07/01/08
Issued: 07/15/08 15:36

NELAP #01108CA California ELAP#1197 CSDLAC #10256

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain of Custody, 1 page, is included and is an integral part of this report.
This entire report was reviewed and approved for release.

SAMPLE CROSS REFERENCE

ADDITIONAL INFORMATION: Report reissued with data for Sample 4 and 5 that were requested at a later point.

DATA QUALIFIERS AND DEFINITIONS

C	Calibration Verification recovery was above the method control limit for this analyte. Analyte not detected, data not impacted.
HFT	The holding time for this test is immediate. It was analyzed in the laboratory as soon as possible after receipt.
L	Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected, data not impacted.
M1	The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
M6	Matrix Spike recovery was outside the method control limits.
M7	The MS and/or MSD were above the acceptance limits. See Blank Spike (LCS).
MNR1	There was no MS/MSD analyzed with this batch due to insufficient sample volume. See Blank Spike/Blank Spike Duplicate.
R	The RPD exceeded the method control limit due to sample matrix effects. The individual analyte QA/QC recoveries, however, were within acceptance limits.
R-2	The RPD exceeded the acceptance limit.
R-7	LFB/LFBD RPD exceeded the acceptance limit. Recovery met acceptance criteria.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
RPD	Relative Percent Difference

ADDITIONAL COMMENTS

For 8260 analyses:

Due to the high water solubility of alcohols and ketones, the calibration criteria for these compounds is <30% RSD. The average % RSD of all compounds in the calibration is 15%, in accordance with EPA methods.

For Volatile Fuel Hydrocarbons

Volatile Fuel Hydrocarbons (C4-C12) are quantitated against a gasoline standard. Quantitation begins immediately before TBA-d9.

For Extractable Fuel Hydrocarbons (EFH, DRO, ORO) :

Unless otherwise noted, Extractable Fuel Hydrocarbons (EFH, DRO, ORO) are quantitated against a Diesel Fuel Standard.

LABORATORY REPORT

Prepared For: Geologica
303 La Jolla Drive
Newport Beach, CA 92663
Attention: Charles Wechsler

Project: Eastman Kodak Company
NPEC03: EKC WHITTIER WAREHOUSE
Sampled: 07/01/08-07/03/08
Received: 07/03/08
Revised: 07/22/08 12:33

NELAP #01108CA California ELAP#1197 CSDLAC #10256

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain(s) of Custody, 6 pages, are included and are an integral part of this report.
This entire report was reviewed and approved for release.

DATA QUALIFIERS AND DEFINITIONS

C	Calibration Verification recovery was above the method control limit for this analyte. Analyte not detected, data not impacted.
HFT	The holding time for this test is immediate. It was analyzed in the laboratory as soon as possible after receipt.
L	Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected, data not impacted.
M1	The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
M2	The MS and/or MSD were below the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
M7	The MS and/or MSD were above the acceptance limits. See Blank Spike (LCS).
MHA	Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).
MNR1	There was no MS/MSD analyzed with this batch due to insufficient sample volume. See Blank Spike/Blank Spike Duplicate.
P-HS	Sample container contained headspace.
R	The RPD exceeded the method control limit due to sample matrix effects. The individual analyte QA/QC recoveries, however, were within acceptance limits.
R-2	The RPD exceeded the acceptance limit.
R-3	The RPD exceeded the acceptance limit due to sample matrix effects.
Z	Due to sample matrix effects, the surrogate recovery was below the acceptance limits.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
RPD	Relative Percent Difference

ADDITIONAL COMMENTS

For 8260 analyses:

Due to the high water solubility of alcohols and ketones, the calibration criteria for these compounds is <30% RSD. The average % RSD of all compounds in the calibration is 15%, in accordance with EPA methods.

For Volatile Fuel Hydrocarbons

Volatile Fuel Hydrocarbons (C4-C12) are quantitated against a gasoline standard. Quantitation begins immediately before TBA-d9.

For Extractable Fuel Hydrocarbons (EFH, DRO, ORO) :

Unless otherwise noted, Extractable Fuel Hydrocarbons (EFH, DRO, ORO) are quantitated against a Diesel Fuel Standard.

Sampled: 07/02/08
Received: 08/06/08
Issued: 08/07/08 12:27

NELAP #01108CA California ELAP#1197 CSDLAC #10256

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain(s) of Custody, 7 pages, are included and are an integral part of this report.
This entire report was reviewed and approved for release.

Rochester, New York 14616-2579

Attention: Mr. Joseph Gabriel

RE: **Closure Report**
Exterior Clarifier and Associated Interior Drain
Eastman Kodak Company
Western Zone Warehouse
12100 Rivera Road
Whittier, California 90606

Dear Mr. Gabriel:

GEOLOGICA, Inc. ("GEOLOGICA") is pleased to present this report describing closure activities for the Exterior Clarifier and associated Interior Drain at the Eastman Kodak Company ("Kodak") Western Zone Warehouse in Whittier, California. The purpose of the scope of work developed by GEOLOGICA and NPEC, Inc. was to decommission the Exterior Clarifier and associated Interior Drain, formerly used for the permitted discharge of certain photochemicals, in conjunction with the transfer of site operations to Ryder System, Inc. and at the request of the property owner (identified as CLPF Whittier Industrial, LP).

We have enjoyed working with you on this project and appreciate the opportunity to be of service. Should you have any questions, please do not hesitate to contact us at (949) 548-9348 or (415) 597-7883.

Very truly yours,

GEOLOGICA, Inc.

CLOSURE REPORT
EXTERIOR CLARIFIER AND ASSOCIATED INTERIOR DRAIN
EASTMAN KODAK COMPANY WESTERN ZONE WAREHOUSE
12100 RIVERA ROAD
WHITTIER, CALIFORNIA 90606

1.0 INTRODUCTION

GEOLOGICA, Inc. ("GEOLOGICA") is pleased to submit this report summarizing closure activities for the Exterior Clarifier and associated Interior Drain at the Eastman Kodak Company ("Kodak") Western Zone Warehouse located at 12100 Rivera Road, Whittier, California ("site," "subject property," or "property"), as shown in **Figure 1**. The purpose of the scope of work developed by GEOLOGICA and NPEC, Inc. was to decommission the Exterior Clarifier and associated Interior Drain, formerly used for the permitted discharge of certain photochemicals, in conjunction with the transfer of site operations to Ryder System, Inc. and at the request of the property owner (identified as CLPF Whittier Industrial, LP). Decommissioning activities included: 1) preliminary subsurface soil and groundwater sampling; 2) physical removal of the Exterior Clarifier and associated Interior Drain; 3) excavation "exit" soil sampling; and, 4) excavation backfilling and surface refinishing.

1.1 SITE DESCRIPTION

The subject property includes a single-story, approximately 218,000-square-foot building and a 7,000-square-foot parking area located in a principally commercial and industrial area of Whittier, California (**Figure 2**). The site building, generally known as the *Office and Distribution Center*, also referred to as the Warehouse Building, was constructed as, and is still used as, a regional distribution center for Kodak finished products for the western United States. The facility handles approximately 60–70% consumer goods and the remainder professional and medical products, including: one-time use cameras, film, photochemicals, limited photographic equipment, anesthetics, and dental x-ray film. The facility incorporates an "automated" warehouse to handle stored, shipped and received goods. The facility employs approximately 50 individuals twelve hours/day, five days/week.

1.2 GENERAL SITE HISTORY

Prior to site development for its current use, the subject property appears to have been used for agricultural purposes from at least 1928 through the site's first reported development by Kodak in 1959, when the Office and Distribution Center was constructed. Kodak appears to have leased at least a portion of the property to the City of Whittier in 1964. Site buildings and configurations have changed over time. A small Technical Building was built in 1959, along with the original Warehouse Building, which now comprises the northeastern portion of the

current Office and Distribution Center. The Distribution/Office Building was expanded several times, reportedly most recently in 1985. Another small Marketing Building was constructed in 1975. A small Flammable Storage Building was added in 1985. The northern portion of the building was used for hazardous materials storage; the southern portion was reportedly leased to a plastics recycling company. The Technical Building, Marketing Building, and Flammable Storage Building were demolished in approximately 1999. Kodak sold the subject property to Pacific Gulf Properties Inc. (Pacific Gulf) in 1998 and leased back the facility from Pacific Gulf. The property was subsequently sold by Pacific Gulf. The current property owner is CLPF Whittier Industrial, LP. Kodak leased the facility from CPLF until 2007, when the lease was assigned to Ryder.

1.3 EXTERIOR CLARIFIER

The Exterior Clarifier that is the subject of this report was located near the exterior southwest corner of the building (**Figure 2**). The Exterior Clarifier was of concrete construction with a fiberglass and resin lining. This unit was permitted by the Los Angeles County Sanitation District (LACSD) to discharge certain materials to the sanitary sewer, including out-of-specification and other photochemicals.

Permitted materials were manually discharged via a sink into the interior floor drain (Interior Drain) located in the hazardous waste storage area in the southwest building interior. The liquids were routed under the concrete "landing" directly outside the building, adjacent to the Interior Drain. The line discharged into an aboveground PVC weir structure (installed subsequent to the initial clarifier installation), and then into the first chamber of the subsurface clarifier. Liquids were automatically monitored and pH adjusted via lines connected to the Exterior Clarifier. Liquids were directed through the three downstream chambers, then exited into the sanitary sewer near the west end.

This clarifier was decommissioned and subsequently removed during July and August 2008, as described below in **Section 2.0** and shown in **Appendix A**.

2.0 PURPOSE AND WORK PERFORMED

The scope of work was developed by GEOLOGICA and NPEC in conjunction with the transfer of site operations to Ryder and at the request of the property owner and property owner's environmental consultant. Deviations from the Work Plan due to the field conditions encountered are described in the applicable sections below.

2.1 GOVERNMENT AGENCY COMMUNICATIONS AND PERMITTING

GEOLOGICA submitted letters to the Los Angeles County Sewer District (LACSD) Industrial Waste Section and the Los Angeles County Department of Public Works (LACDPW) Environmental Programs. These agencies reported by telephone, but would not provide written confirmation that:

(1) No specific permits are required for removal of the clarifier;

(2) There are no minimum or specific, soil or groundwater sampling requirements for clarifier closures;

(3) The LACSD Industrial Waste Section will "close out" the permit after receiving a brief letter describing the closure and photograph of the capped sewer line; and,

(4) There is no requirement for submittal of closure documentation to the County of Los Angeles Department of Public Works (LACDPW) Environmental Programs Division.

The LACSD Industrial Waste Section and LACPDW confirmed via telephone (1), (2), and (3) above. These agencies stated no written confirmation would be provided. Agency-related correspondence is reproduced in **Appendix B**.

Consequently, a decision was made to decommission the clarifier following generalized procedures for closure of an underground storage tank (UST).

2.2 PRELIMINARY SITE ACTIVITIES

The following measures were taken to assess the presence of subsurface utilities prior to the commencement of excavation and subsurface sampling activities: GEOLOGICA coordinated with site personnel for site access; mark-out of excavation/sampling locations; and, review of available as-built plans; Underground Services Alert of Southern California was notified; and a commercial firm was engaged to locate and "clear" the clarifier location, as possible, using line tracing and geophysical equipment.

2.3 PRE-CLOSURE SOIL AND GROUNDWATER SAMPLING

As described in the Work Plan, a total of three direct-push soil borings were drilled in locations adjacent to the former Exterior Clarifier on June 30, 2008 (refer to attached **Figure 2** and **Figure 3**). Soil Borings were drilled with a direct-push, truck-mounted drilling rig. Soil samples were collected for borehole logging purposes and analytical testing in single use, two-foot long, one-inch diameter, acetate tubes. Boring logs are included in **Appendix C**. Cleaned and dedicated downhole tooling was used to drill each of the soil borings. No on-site decontamination of sampling equipment was required. Soil samples were collected at five-foot intervals to a maximum depth of 35 feet bgs in Soil Boring B-1 and 30 feet in Soil Boring B-3. Soil Boring B-2 was drilled to a depth of five feet bgs using a hand auger to evaluate potential subsurface obstructions tentatively identified during the subsurface utility survey. Soil samples were collected for lithological logging only. Soil Boring B-2 was then advanced to 42 feet below ground surface (bgs) for collection of a groundwater sample only. Soil samples from Borings B-1 and B-3 were generally analyzed for: Total Petroleum Hydrocarbons as Volatile Fuel Hydrocarbons (TPH-VFH); Total Petroleum Hydrocarbons as Extractable Fuel Hydrocarbons (TPH-EFH); Volatile Organic Compounds (VOCs); cadmium; chromium; mercury; silver; cyanide; nitrate; nitrite; sulfate; ammonia; and, pH.

Two "grab" groundwater samples were collected: one from Boring B-1 and one from Soil Boring B-2. A grab groundwater sample could not be collected from Soil Boring B-3 due to the underlying, tight, silty-clay and clayey silt soils (insufficient water-production). Groundwater samples were collected through pre-cleaned one inch diameter GeoProbe-style steel casing

equipped with a two-foot long retractable screen section (clean screen section for each groundwater sample). "Grab" groundwater samples were collected by hand-raising and lowering a dedicated length of plastic tubing fitted with a dedicated stainless steel check valve.

Analytical results for the soil and groundwater testing are discussed in **Section 3.0** of this report.

2.4 PRE-EXCAVATION CLOSURE ACTIVITIES

Residual liquids from the associated weir were removed and containerized prior to the physical removal of the structure; no residual solids were encountered. Based on GEOLOGICA communications with the property owner's environmental consultant, the approximately 1,100 gallons of residual liquids from the weir structure and from the four-stage clarifier were subsequently discharged through the existing permitted sanitary sewer connection. The clarifier was subsequently pressure-washed / triple-rinsed with a water and "Simple Green" detergent mix, and the wash water discharged to the existing sewer connection.

2.5 INITIAL EXCAVATION ACTIVITIES

Exterior Clarifier excavation activities were conducted from August 4 to 7, 2008. The overlying concrete ground-surface was perforated using a hoe-ram and removed to expose the top of the clarifier. (Refer to **Appendix A** for project images, Plates 1 - 30). The clarifier was subsequently excavated and removed from the subsurface. The clarifier was inspected after removal, and appeared to be in good condition. The clarifier was a fiberglass vessel consisting of four interconnected chambers, and encased in approximately six-inches of concrete. No significant holes or other breaches were identified. The clarifier vessel and the concrete over-cladding were removed off-site for disposal as construction and debris waste. At the time, the excavation measured approximately 9 feet wide by 15 feet long and six feet deep.

Two previously unidentified pipes were exposed after removal of the clarifier. A two-inch pipe was observed exiting from the adjacent concrete "landing," outside the former hazardous waste storage area immediately inside the building. This two-inch pipe was observed to continue around the north side of the clarifier, but abruptly ended. This pipe was later determined to connect to a two-inch pipe located in the Interior Drain Area, which was connected to a roof vent. This pipe is considered most likely a former vent line.

A four-inch pipe stub, also originating from the "landing" was observed attached to a surface cleanout, but was not connected to the clarifier. This four-inch stub was later determined to be the historical discharge line into the clarifier, which was replaced when the weir structure was added to the system. The clarifier excavation was extended an additional three feet to the west and one foot to the east to uncover the clarifier's sewer connection and evaluate the two previously unknown pipes identified during the clarifier removal described above.

2.6 SUBSEQUENT EXCAVATION ACTIVITIES

A total of six soil post-excavation, confirmatory samples ("exit samples") were collected: two from the bottom of the excavation and one from each of the four sidewalls (**Figure 3)**. The soil samples were generally analyzed for: TPH-VFH; TPH-EFH; VOCs; cadmium; chromium; mercury; silver; cyanide; nitrate; nitrite; sulfate; ammonia; and, pH.

Based on the results of the analytical testing of the exit soil samples, described in **Section 3.0**, the excavation was extended approximately one foot to the south, to remove low-level TPH-impacted soils to the furthest extent possible (adjacent to the walk-up ramp).

After the sewer line was capped, the excavation was backfilled and compacted. The surface was finished with four-inch thick, rebar-reinforced concrete. A compaction report is provided in **Appendix D**.

2.7 INTERIOR DRAIN EXCAVATION AND EXIT SOIL SAMPLING

On August 26, 2008, the building Interior Drain area tile and concrete floor surface were removed using a concrete saw, jackhammer, and hand tools, and stockpiled for off-site transportation and disposal (**Appendix A**, Photographs 1 - 12). Exposed soil was removed by hand tools to a depth of approximately two feet deep. Four pipes were observed in the excavated area. The first pipe was capped and appeared to be the "original" drainpipe that discharged to the clarifier prior to the installation of the weir structure. Two of the pipes were determined to be vent lines leading to the subject property roof. The fourth pipe was determined to be the pipe that drained to the weir structure while the clarifier was active. The pipes were each cut and capped.

Two soil "exit" samples were collected using a hand auger from depths of approximately 36 inches and 52 inches (one boring, two sample intervals) beneath the exposed drain pipes (**Figure 3)**. Deeper samples could not be collected due to the apparent presence of a concrete slab or other significant obstruction at approximately 54 inches below the floor surface. The soil samples were tested for: TPH-VFH; TPH-EFH; VOCs; cadmium; chromium; mercury; silver; cyanide; nitrate; nitrite; sulfate; ammonia; and, pH.

The Interior Drain area was subsequently backfilled with clean fill and hand compacted. The floor was then refinished with approximately four-inch thick rebar-reinforced concrete.

3.0 SOIL AND GROUNDWATER CRITERIA AND ANALYTICAL TESTING FINDINGS

Soil sample analytical data were compared to potentially applicable: (1) USEPA Region 9 Preliminary Remediation Goals (PRGs); (2) Maximum Soil Screening Levels for TPH and BTEX above Drinking Water Aquifers, as listed in the LARWQCB's 1996 Interim Site Assessment & Cleanup Guidebook (1996 Guidebook); and, (3) California Human Health Screening Levels (CHHSLs).

3.1 SOIL AND GROUNDWATER CONDITIONS

Soils encountered generally consisted of tight fine sands with varying amounts of silt and clay. Several borings contained stratigraphic sections comprising clayey-silts. Groundwater was encountered at approximately 30 feet bgs. Refer to the **Soil Boring Logs** provided in **Appendix C**.

3.2 PRE-CLOSURE INVESTIGATION - SOIL ANALYTICAL TESTING FINDINGS

Key findings from the pre-closure soil sample analytical testing are tabulated in **Table 1** and are summarized below (Soil Borings B-1 and B-3).

- **TPH-VFH.** TPH-VFH was not detected in any of the four soil samples analyzed.

- **TPH-EFH.** TPH-EFH was detected at a concentration of 10,000 micrograms per kilogram (μg/kg) in one soil sample (B-3/5') at a depth of five feet bgs. TPH-EFH was not detected in the deeper sample tested from B-3 from 10 feet bgs. The concentration of TPH-EFH detected is well below potentially applicable criteria (**Table 1**).
- **VOCs.** VOCs were not detected in any of the four soil samples analyzed.
- **Metals.** Cadmium was detected at low concentrations (550 μg/kg to 1,400 μg/kg), below applicable criteria, in three of the four soil samples. Chromium was detected in each of the soil samples tested, at concentrations ranging from 23,000 to 35,000 μg/kg, below applicable criteria. Mercury was detected in each of five soil samples tested, at concentrations ranging from 38 μg/kg to 100 μg/kg. These concentrations are below EPA residential and industrial PRGs, but above PRGs for the protection of groundwater (33 μg/kg). These concentrations are consistent with expected background concentrations of mercury in soils as listed in the Kearney Report. Silver was not detected in the soil samples tested.
- **Cyanide.** Cyanide was not detected in any of the four soil samples tested.
- **Photochemical-Related Compounds.** Nitrate was detected at concentrations ranging from 5,200 μg/kg to 60,000 μg/kg; these concentrations are well below applicable criteria. Nitrite was not detected above the Method Detection Limit. Sulfate was detected at concentrations ranging from 40,000 μg/kg to 690,000 μg/kg. There are no listed criteria for sulfate. Ammonia was not detected above the Method Detection Limit.

3.3 PRE-CLOSURE INVESTIGATION - GROUNDWATER ANALYTICAL TESTING FINDINGS

Key findings from the pre-closure groundwater sample analytical testing are tabulated in **Table 2** and are summarized below.

- **TPH-VFH.** TPH-VFH was not detected in either of the two groundwater samples analyzed.
- **TPH-EFH.** TPH-EFH was not detected in either of the two groundwater samples analyzed.
- **VOCs.** Trichloroethylene (TCE) was detected in one of the two groundwater samples, B-2-GW at a concentration of 5.2 micrograms per liter (μg/L), marginally above the EPA and California Maximum Contaminant Levels of 5 μg/L. No other VOCs were detected in the two groundwater samples analyzed.
- **Metals.** None of the four metals were identified above their respective Method Reporting Limits in either of the two samples analyzed.
- **Cyanide.** Cyanide was detected in one of the two samples, B-1-GW, at a concentration of 34 μg/L, below applicable criteria.
- **Photochemical-Related Compounds.** Nitrate was detected at concentrations of 260,000 μg/L and 220,000 μg/L, in samples B-1-GW and B-2-GW, respectively. These values exceed the US EPA and California MCLs of 10,000 μg/L. Nitrite was detected in one sample (B-2-GW) at a concentration of 4,000 μg/L, above the US EPA and California MCLs of 1,000. Sulfate was detected at concentrations of 940,000 μg/L and 610,000 μg/L, in samples B-1-GW and B-2- GW, respectively, above the US EPA and California 250,000 μg/L secondary MCL (taste or aesthetics). Ammonia was detected at concentrations of 1,300 and 1,000 μg/L, in samples B-1-GW and B-2-GW, respectively. There are no listed MCLs for ammonia.

3.4 POST-EXCAVATION SOIL EXIT SAMPLING ANALYTICAL TESTING FINDINGS - EXTERIOR CLARIFIER AND INTERIOR DRAIN AREAS

Key findings from the post-excavation soil sample analytical testing are tabulated in **Table 3** and included:

- **TPH-VFH.** TPH-VFH was not detected in any of the eight soil samples analyzed.
- **TPH-EFH.** TPH-EFH was detected in two of eight soil samples concentrations of 26,000 μg/kg (Interior Drain at 52" bgs, sample ID-52") and 63,000 μg/kg (south wall of excavation, sample SW-1). These concentrations are below potentially applicable criteria.
- **VOCs.** Only one compound, styrene, was detected. Styrene was detected in one of the eight soil samples, from the west wall (WW-1), at a concentration of 5.0 μg/kg, below potentially applicable criteria. VOCs were not detected in any of the remaining soil samples analyzed.
- **Metals**. Cadmium was detected in two of the eight samples at concentration of 500 μg/kg and 520 μg/kg, below potentially applicable criteria. Chromium was detected in each of the soil samples tested, at concentrations ranging from 18,000 μg/kg to 26,000 μg/kg, below potentially applicable criteria. Silver was not detected in the eight samples tested. Mercury was detected in eight samples tested, at concentrations ranging from 35 μg/kg to 520 μg/kg. These concentrations are below EPA residential and industrial soil PRGs, but, are above PRGs for the protection of groundwater (33 μg/kg). These concentrations are considered consistent with background soil concentrations in California.
- **Cyanide.** Cyanide was detected in one of the eight the soil samples (Interior Drain sample ID-52"), at a concentration of 1,300 μg/kg, below potentially applicable criteria.
- **Photochemicals-Related Compounds.** Nitrate was detected in seven of the eight samples at concentrations ranging from 6,600 to 51,000 μg/kg, well below potentially applicable criteria. Nitrite was detected in one sample (Interior Drain sample ID-52") at a concentration of 2,300 μg/kg, below potentially applicable criteria. Sulfate was detected in each sample at concentrations ranging from 40,000 μg/kg to 2,900,000 μg/kg. There are no listed criteria for sulfate. Ammonia was detected in the two Interior Drain samples at 1,210 μg/kg (sample ID-38") and 872 μg/kg (sample ID-52"), below potentially applicable criteria.

4.0 KEY FINDINGS AND CONCLUSIONS

Based on the activities and results described above, GEOLOGICA has the following key findings and conclusions.

4.1 DECOMMISSIONING

The Exterior Clarifier was decommissioned during field activities conducted during July and August 2008. Principal activities included: removing residual materials; pressure-washing/rinsing internal clarifier and weir chambers; disconnecting and capping inlet/outlet pipes; physically removing the clarifier; and, backfilling the excavation with compacted granular material and applying reinforced –concrete ground surface. The related building Interior Drain area was decommissioned by: removing pH adjustment lines; removing the tile and concrete

flooring; excavating the sub-floor soil; disconnecting and capping inlet/outlet pipes; backfilling the excavated area with compacted granular material; and, finishing the floor with reinforced-concrete.

4.2 CHARACTERIZATION

Soil samples were collected from multiple borings and excavation wall/floor locations at the Exterior Clarifier site and from a related building Interior Drain. Two grab groundwater samples were also collected from two of the soil borings. Soil and groundwater samples were analyzed for total petroleum hydro carbons, VOCs, metals, and photochemical-related compounds.

4.3 SOILS

TPH-VFH was not detected in any of the soil samples analyzed. TPH-EFH was detected in three soil samples at concentrations (10,000 µg/kg – 63,000 µg/kg) below potentially applicable criteria. Only one VOC, styrene was detected in one of the soil samples analyzed, at a concentration of 5.0 µg/kg, below potentially applicable criteria.

Cadmium and chromium were detected in several soil samples at concentrations below potentially applicable criteria. These metals were not detected in groundwater. Mercury was detected in each of the soil samples tested, at concentrations ranging from 35 µg/kg to 520 µg/kg. These concentrations are below EPA residential and industrial soil PRGs, but are above PRGs for the protection of groundwater (33 µg/kg). These concentrations are considered consistent with background soil concentrations in California. Mercury was not detected in the groundwater samples collected and analyzed from this area. Silver was not detected in the soil samples tested. Cyanide was detected in one soil sample (1,300 µg/kg).

Nitrate was detected in the majority of the soil samples tested at concentrations well below potentially applicable criteria. Nitrite was detected in one soil sample at a concentration (2,300 µg/kg) below potentially applicable criteria. Sulfate was detected in soil samples at concentrations ranging from 40,000 µg/kg to 2,900,000 µg/kg. There are no listed criteria for sulfate. Ammonia was detected in two soil samples well below potentially applicable criteria.

4.4 GROUNDWATER

Neither TPH-VFH nor TPH-EFH was detected in either of the two groundwater samples analyzed. One VOC (TCE) was detected in one groundwater sample at a concentration of 5.2 µg/L, marginally above the 5.0 µg/L US EPA and California MCL. None of the target metals were detected in the groundwater samples tested. Cyanide was detected in one of the groundwater samples at a concentration of 34 µg/L, below applicable criteria.

Nitrate, nitrite, and sulfate were each detected above US EPA and California MCLs in one or both groundwater samples tested. Ammonia was detected in the two groundwater samples tested at concentrations ranging from 1,000 to 1,300 µg/L. There are no listed criteria for ammonia.

(7) VFH = Volatile Fuel Hydrocarbons.

(8) - = Not Analyzed.

(9) 500 / 100 = First value is for soils between 20 and 150 feet above drinking water aquifers / Second value is for soils less than 20 feet above drinking water aquifers.

(10) EFH = Extractable Fuel Hydrocarbons.

(11) ND = Not Detected.

(12) Shaded Cell Indicates Criteria Exceedence.

(13) For certain low-toxicity chemicals, the SLs exceed possible concentrations at the target risks. Many years ago, these SLs were rounded to the highest possible concentration, or 1.0E+06 ppm. This type of truncation has been discontinued so that Table users can adjust the SLs to a different target risk whenever necessary. For example, when screening chemicals at a target HQ of 0.1, noncarcinogenic SLs may simply be divided by 10. Such scaling is not possible when SLs are rounded. Users who are interested in truncation can also consult the Soil Screening Guidance for a discussion of "Csat," the saturation concentration, which reflects physical limits on soil concentrations. (http://www.epa.gov/reg3hwmd/risk/human/rb-concentration_table/faq.htm#23).

(2) *Use of California Human Health Screening Levels (CHHSLs) in Evaluation of Contaminated Properties,* California Environmental Protection Agency, January 2005.

(3) LARWQCB = Los Angeles Regional Water Quality Control Board.

(4) bgs = below ground surface.

(5) µg/kg = micrograms per kilogram.

(6) *Table 4-1: Maximum Soil Screening Levels for TPH and BTEX above Drinking Water Aquifers, Interim Site Assessment & Cleanup Guidebook*, California Regional Water Quality Control Board, Los Angeles and Ventura Counties, Region 4, May 1996.

(7) 500 / 100 = First value is for soils between 20 and 150 feet above drinking water aquifers / Second value is for soils less than 20 feet above drinking water aquifers.

(8) VFH = Volatile Fuel Hydrocarbons.

(9) EFH = Extractable Fuel Hydrocarbons.

(10) For certain low-toxicity chemicals, the SLs exceed possible concentrations at the target risks. Many years ago, these SLs were rounded to the highest possible concentration, or 1.0E+06 ppm. This type of truncation has been discontinued so that Table users can adjust the SLs to a different target risk whenever necessary. For example, when screening chemicals at a target HQ of 0.1, noncarcinogenic SLs may simply be divided by 10. Such scaling is not possible when SLs are rounded. Users who are interested in truncation can also consult the Soil Screening Guidance for a discussion of "Csat," the saturation concentration, which reflects physical limits on soil concentrations. (http://www.epa.gov/reg3hwmd/risk/human/rb-concentration_table/faq.htm#23).

Innovative Strategies for Managing Environmental Liability

April 11, 2008

County of Los Angeles Department of Public Works
Environmental Programs Division
400 South Fremont Avenue
Annex Building, Third Floor
Alhambra, California 91803

Attention: Mr. Fred Rubin

Subject: **Permitting and Technical Requirements for Clarifier Closure**
Eastman Kodak Company Western Division Warehouse
12100 Rivera Road
Whittier, California 90606

Dear Mr. Rubin:

GEOLOGICA, INC. (GEOLOGICA) is transmitting this letter to request written confirmation regarding permitting and technical requirements for clarifier closures at the above-referenced facility. Please note that this clarifier is permitted by the Sanitation Districts of Los Angeles County Industrial Waste Section (Permit # 001658). Specifically, GEOLOGICA requests that the County of Los Angeles Department of Public Works (LACDPW) Environmental Programs Division confirm:

- No specific permits are required for removal of a clarifier;
- There are no minimum or specific, soil or groundwater sampling requirements for clarifier closures; and,
- There is no requirement for submittal of closure documentation to the County of Los Angeles Department of Public Works (LACDPW) Environmental Programs Division.

Thank you in advance for your assistance with this matter. I will telephone you during the week of April 14, 2008 to follow up. Should you have any questions, please do not hesitate to contact us at (949) 548-9348.

Very truly yours,
GEOLOGICA, INC.

Charles E. Wechsler
Project Manager

Innovative Strategies for Managing Environmental Liability

April 11, 2008

Sanitation Districts of Los Angeles County
Industrial Waste Section
1955 Workman Mill Road
Whittier, California 90601
Phone: (562) 908-4288 ext 2900

Attention: Suzanne Wienke

Subject: **Permitting and Technical Requirements for Clarifier Closure**
Permit # 001658 - Eastman Kodak Company Western Division Warehouse
12100 Rivera Road
Whittier, California 90606

Dear Ms. Wienke:

GEOLOGICA, INC. (GEOLOGICA) is transmitting this letter to request written confirmation regarding the planned closure of the clarifier located at the above-referenced facility. This clarifier is permitted by the Sanitation Districts of Los Angeles County Industrial Waste Division (Permit # 001658). Specifically, GEOLOGICA requests that the Industrial Waste Section confirm:

- No specific permits are required for removal of the clarifier;
- There are no minimum or specific, soil or groundwater sampling requirements for clarifier closures;
- The Industrial Waste Section will "close out" the permit after performing a post-removal inspection and receiving a copy of closure documentation.

Thank you in advance for your assistance with this matter. I will telephone you during the week of April 14, 2008 to follow up. Should you have any questions, please do not hesitate to contact us at (949) 548-9348.

Very truly yours,
GEOLOGICA, INC.

LABORATORY REPORT

Prepared For: Geologica
303 La Jolla Drive
Newport Beach, CA 92663
Attention: Charles Wechsler

Project: Eastman Kodak Company
Whittier Warehouse / NPEC03

Sampled: 06/30/08
Received: 06/30/08
Issued: 07/22/08 17:03

NELAP #01108CA California ELAP#1197 CSDLAC #10256

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain(s) of Custody, 2 pages, are included and are an integral part of this report.
This entire report was reviewed and approved for release.

SAMPLE CROSS REFERENCE

SUBCONTRACTED: Refer to the last page for specific subcontract laboratory information included in this report.

ADDITIONAL INFORMATION: Report reissued with Mercury data.

DATA QUALIFIERS AND DEFINITIONS

B	Analyte was detected in the associated Method Blank.
HFT	The holding time for this test is immediate. It was analyzed in the laboratory as soon as possible after receipt.
L	Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected, data not impacted.
M1	The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
M2	The MS and/or MSD were below the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
M-3	Results exceeded the linear range in the MS/MSD and therefore are not available for reporting. The batch was accepted based on acceptable recovery in the Blank Spike (LCS).
MHA	Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).
MNR1	There was no MS/MSD analyzed with this batch due to insufficient sample volume. See Blank Spike/Blank Spike Duplicate.
P	The sample, as received, was not preserved in accordance to the referenced analytical method.
pH	pH = 9
RL1	Reporting limit raised due to sample matrix effects.
RL4	Reporting limit raised due to insufficient sample volume.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
RPD	Relative Percent Difference

ADDITIONAL COMMENTS

For 8260 analyses:

Due to the high water solubility of alcohols and ketones, the calibration criteria for these compounds is <30% RSD. The average % RSD of all compounds in the calibration is 15%, in accordance with EPA methods.

For Volatile Fuel Hydrocarbons

Volatile Fuel Hydrocarbons (C4-C12) are quantitated against a gasoline standard. Quantitation begins immediately before TBA-d9.

For Extractable Fuel Hydrocarbons (EFH, DRO, ORO) :

Unless otherwise noted, Extractable Fuel Hydrocarbons (EFH, DRO, ORO) are quantitated against a Diesel Fuel Standard.

DATA QUALIFIERS AND DEFINITIONS

HFT	The holding time for this test is immediate. It was analyzed in the laboratory as soon as possible after receipt.
L	Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected, data not impacted.
M2	The MS and/or MSD were below the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
MNR1	There was no MS/MSD analyzed with this batch due to insufficient sample volume. See Blank Spike/Blank Spike Duplicate.
P	The sample, as received, was not preserved in accordance to the referenced analytical method.
pH	pH = 9
RL1	Reporting limit raised due to sample matrix effects.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
RPD	Relative Percent Difference

ADDITIONAL COMMENTS

For 8260 analyses:

Due to the high water solubility of alcohols and ketones, the calibration criteria for these compounds is <30% RSD. The average % RSD of all compounds in the calibration is 15%, in accordance with EPA methods.

For Volatile Fuel Hydrocarbons

Volatile Fuel Hydrocarbons (C4-C12) are quantitated against a gasoline standard. Quantitation begins immediately before TBA-d9.

For Extractable Fuel Hydrocarbons (EFH, DRO, ORO) :

Unless otherwise noted, Extractable Fuel Hydrocarbons (EFH, DRO, ORO) are quantitated against a Diesel Fuel Standard.

DATA QUALIFIERS AND DEFINITIONS

B	Analyte was detected in the associated Method Blank.
B-1	Analyte was detected in the associated method blank. Analyte concentration in the sample is greater than 10x the concentration found in the method blank.
MHA	Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).
RL1	Reporting limit raised due to sample matrix effects.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
RPD	Relative Percent Difference

NELAP #01108CA California ELAP#1197 CSDLAC #10256

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain(s) of Custody, 4 pages, are included and are an integral part of this report.
This entire report was reviewed and approved for release.

SAMPLE CROSS REFERENCE

SUBCONTRACTED: Refer to the last page for specific subcontract laboratory information included in this report.

ADDITIONAL INFORMATION: Report is reissued to include additional analyses for Sample 3 (Cd, Cr, Hg, NO3, SO4, and pH) that were requested at a later point.

DATA QUALIFIERS AND DEFINITIONS

HFT	The holding time for this test is immediate. It was analyzed in the laboratory as soon as possible after receipt.
L	Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected, data not impacted.
M1	The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
MHA	Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).
MNR1	There was no MS/MSD analyzed with this batch due to insufficient sample volume. See Blank Spike/Blank Spike Duplicate.
R	The RPD exceeded the method control limit due to sample matrix effects. The individual analyte QA/QC recoveries, however, were within acceptance limits.
R-7	LFB/LFBD RPD exceeded the acceptance limit. Recovery met acceptance criteria.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
RPD	Relative Percent Difference

ADDITIONAL COMMENTS

For 8260 analyses:

Due to the high water solubility of alcohols and ketones, the calibration criteria for these compounds is <30% RSD. The average % RSD of all compounds in the calibration is 15%, in accordance with EPA methods.

For Volatile Fuel Hydrocarbons

Volatile Fuel Hydrocarbons (C4-C12) are quantitated against a gasoline standard. Quantitation begins immediately before TBA-d9.

For Extractable Fuel Hydrocarbons (EFH, DRO, ORO) :

Unless otherwise noted, Extractable Fuel Hydrocarbons (EFH, DRO, ORO) are quantitated against a Diesel Fuel Standard.

DATA QUALIFIERS AND DEFINITIONS

I	Internal Standard recovery was outside of method limits. Matrix interference was confirmed.
MHA	Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).
MNR1	There was no MS/MSD analyzed with this batch due to insufficient sample volume. See Blank Spike/Blank Spike Duplicate.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
RPD	Relative Percent Difference

ADDITIONAL COMMENTS

For 8260 analyses:

Due to the high water solubility of alcohols and ketones, the calibration criteria for these compounds is <30% RSD. The average % RSD of all compounds in the calibration is 15%, in accordance with EPA methods.

For Volatile Fuel Hydrocarbons

Volatile Fuel Hydrocarbons (C4-C12) are quantitated against a gasoline standard. Quantitation begins immediately before TBA-d9.

For Extractable Fuel Hydrocarbons (EFH, DRO, ORO) :

Unless otherwise noted, Extractable Fuel Hydrocarbons (EFH, DRO, ORO) are quantitated against a Diesel Fuel Standard.

Received: 08/26/08

DATA QUALIFIERS AND DEFINITIONS

8N	Spike sample recovery is outside control limits.
8Q	Elevated reporting limit. The reporting limit is elevated due to high analyte levels.
C	Calibration Verification recovery was above the method control limit for this analyte. Analyte not detected, data not impacted.
L	Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected, data not impacted.
M2	The MS and/or MSD were below the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
M-3	Results exceeded the linear range in the MS/MSD and therefore are not available for reporting. The batch was accepted based on acceptable recovery in the Blank Spike (LCS).
MNR1	There was no MS/MSD analyzed with this batch due to insufficient sample volume. See Blank Spike/Blank Spike Duplicate.
R-3	The RPD exceeded the acceptance limit due to sample matrix effects.
R-7	LFB/LFBD RPD exceeded the acceptance limit. Recovery met acceptance criteria.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
RPD	Relative Percent Difference

ADDITIONAL COMMENTS

For 8260 analyses:

Due to the high water solubility of alcohols and ketones, the calibration criteria for these compounds is <30% RSD. The average % RSD of all compounds in the calibration is 15%, in accordance with EPA methods.

For Volatile Fuel Hydrocarbons (C4-C12):

Volatile Fuel Hydrocarbons (C4-C12) are quantitated against a gasoline standard. Quantitation begins immediately before TBA-d9.

For Extractable Fuel Hydrocarbons (EFH, DRO, ORO) :

Unless otherwise noted, Extractable Fuel Hydrocarbons (EFH, DRO, ORO) are quantitated against a Diesel Fuel Standard.

KODAK MEMO

October 2, 2009

TO: David J. Shevlin, FPEG HSE, 5/56/KP/24543
FROM: Kathleen A. Vogele, Legal Dept., 11/7/KO/00208, (Ext. 15705)
SUBJECT: Whittier Facility – Property Transaction Information

Dave, in response to your e-mail dated October 1, 2009, I have addressed each item listed (and enclosed copies of documents when available) as follows:

1. Identify the parcel/parcels and year(s) of acquisition, plus respective street addresses and tax parcel ID's.

   - Copies of two (2) Grant Deeds dated March 4, 1958 (recorded March 12, 1958) describing property conveyed to Eastman Kodak Company (approximately 23.7 acres)
   - Copy of Grant Deed dated September 26, 1963 (recorded September 30, 1963) describing property conveyed to Eastman Kodak Company (small strip of land)

2. Identify the parcel/parcels and year(s) of sales, plus respective street addresses and tax parcel ID's.

   - Copy of Grant Deed dated May 21, 1998, describing property conveyed to Pacific Gulf Properties Inc.

3. Provide maps/graphics related to items 1 and 2 above.

   - Copy of map attached to the Grant Deed dated May 21, 1998

4. Identify the parcel/parcels (by street address/tax ID) and periods that we have occupied the site as a tenant.

   - A portion of the property known as 12100 Rivera Rd., Whittier, CA for the period from May 21, 1998 through December 28, 2007

5. Identify the lessor(s) for the periods that Kodak was tenant noted in item 4 above.

   - Pacific Gulf Properties, Inc. ("PGP") – May 21, 1998 – sometime prior to April 5, 2004*
   - Calwest Industrial Holdings, LLC ("CIH"), successor to PGP – April 5, 2004 – sometime prior to February 29, 2008*
   - ING Clarion LP, successor to CIH – sometime prior to February 29, 2008*

   *do not have exact dates of the succession

6. Provide copy of Leases, rental agreements or other docs that establish Kodak's relationship to Lessor.

   - Copy of Lease dated May 21, 1998, by and between Pacific Gulf Properties Inc. and Eastman Kodak Company
   - Copy of First Amendment to Lease dated April 5, 2004, by and between Calwest Industrial Holdings, LLC, successor-in-interest to Pacific Gulf Properties, Inc. and Eastman Kodak Company
   - Copy of Assignment of Lease with Consent of Landlord dated February 29, 2008, between Eastman Kodak Company (the "Assignor"), Ryder Integrated Logistics, Inc. (the "Assignee") and ING Clarion, LP (the "Landlord") whereby the above referenced Lease and First Amendment to Lease were assigned to Assignee effective on December 28, 2007

Should you have any questions, please feel free to contact me. Thank you.

Kathy Vogele

GRANT DEED

FOR A VALUABLE CONSIDERATION, receipt of which is hereby acknowledged,

MANUEL R. CRAVEIRO and MARIE C. CRAVEIRO

hereby GRANT to EASTMAN KODAK COMPANY, a New Jersey corporation,

the following described real property in the State of California, County of Los Angeles, more particularly described as:

All that portion of the Rancho Santa Gertrudes finally confirmed to Tomas Sanchez Colima by patent recorded in Book 2 Page 345 of Patents, in the County of Los Angeles, State of California, described as follows:

Beginning at a point 20 feet south of the northwest corner of the tract of land conveyed to Joseph A. Cole, by deed recorded in Book 297 Page 171 of Deeds; thence along the west line of said Jos. A. Cole Tract, south 11° 30' east 20.20 chains to the north line of the right of way of the Whittier branch of the Southern Pacific Railroad; thence along the north line of, and conforming to the curve of said right of way, the general course being South 68° 20' west 17.20 chains; thence north 4° west 23.56 chains, more or less, to a point which is 20 feet south of the north line of the Colima Tract (so-called); thence parallel with and 20 feet south of the north line of the said Colima Tract, north 79° east 13.86 chains to the point of beginning.

EXCEPT the easterly 319.80 feet measured along the northerly line thereof.

FURTHER EXCEPTING all of the above described property, except that portion thereof bounded and described as follows: Beginning at the northeast corner thereof, thence westerly along the northerly boundry thereof 160 feet; thence southerly parallel to the easterly boundary thereof 225 feet; thence easterly to the easterly boundary thereof parallel to the northerly boundary thereof; thence northerly along said easterly boundary to the point of beginning.

FURTHER EXCEPTING one-half of all oil, gas, and other hydrocarbon substances lying in or under said land, or which may be removed or recovered therefrom, subject to general and special county taxes for the current year, and to an easement over the portion of said land lying within the boundaries of Byron Road as shown on the map of Tract No. 2329, recorded in Book 26, Page 2 of Maps, records of said county.

DATED: March 4th, 1958.

LEASE

THIS LEASE (the "*Lease*") is entered into as of May 21, 1998, ("*Effective Date*"), by and between PACIFIC GULF PROPERTIES INC., a Maryland corporation (the "*Landlord*"), and EASTMAN KODAK COMPANY, a New Jersey corporation (the "*Tenant*").

RECITALS

A. Landlord owns that certain real property located at 12100 Rivera Road, Whittier, California (the "**Property**"), consisting of 323,000 total square feet. Located on the Property are four buildings, one of which contains approximately 99,000 square feet of office space to be demolished ("**Office**") plus 214,000 square feet of warehouse space including approximately 18,000 square feet of office space which will remain ("Warehouse").

B. Tenant desires to lease from Landlord the Warehouse portion which is more particularly described in the attached Exhibit A and Landlord desires to lease the Warehouse to Tenant pursuant to the terms of this Lease.

C. Both parties acknowledge that Landlord intends to: (a) detach the Warehouse from the Office so that the Warehouse is left a separate and free-standing building and (b) demolish the Office and other buildings on the Property. Landlord may elect to construct new improvements on the Property outside of the Premises for lease to third parties. All improvements now or hereafter constructed on the Property are referred to herein as "Improvements."

LANDLORD AND TENANT AGREE as follows:

1. LEASE OF PREMISES.

Landlord leases the Warehouse to Tenant, and Tenant leases the Warehouse from Landlord, subject to the terms, conditions and covenants set forth in this Lease. The "Premises" shall consist of the Warehouse; all improvements and permanent fixtures incorporated into the Warehouse; and all exclusive parking rights granted by Landlord to Tenant herein and described in the attached Exhibit A (the "***Exclusive Parking Area***"). For all purposes of this Lease, regardless of any contrary actual measurements or anything else to the contrary, Landlord and Tenant hereby agree that the Warehouse consists of 214,000 rentable square feet.

Tenant also shall be entitled under this Lease to certain non-exclusive rights of ingress and egress, the right to use the driveways, walkways and common areas; and all other rights, privileges, easements and appurtenances relating to the Warehouse, including but not limited to those listed in the attached Exhibit B.

2. PERMITTED USE.

Tenant may use the Warehouse for any use permitted by law that does not require more than 100 parking spaces. Tenant shall not commit or permit any waste in or on the Premises, or any nuisance, or any other act or thing which unreasonably disturbs the quiet enjoyment of other tenants, adjoining landowners or their tenants or causes damage to neighboring premises or properties.

3. TERM.

3.1 Initial Term. The term of this Lease (the "*Term*") shall be seven (7) years, beginning on May 21, 1998 ("*Commencement Date*") and ending on May 21, 2005 ("*Termination Date*").

3.2 Option to Extend Term. Anytime after the commencement of the 74th month of the Term, Landlord shall give Tenant one written notice of the option to extend the Term for an additional five (5) year period (the "*Renewal Term*"), provided that Tenant may not extend the Term if Tenant is then in default. Tenant shall have 60 days from the date of receipt of notice to decide whether to extend the Term. If Tenant extends the Term in accordance with this Section 3.2, then all of the terms, conditions and covenants of the Lease shall remain in full force and effect, except that Monthly Rent for the Renewal Term shall be adjusted in accordance with Section 4.2, and such election shall be irrevocable.

4. ADJUSTED RENT.

4.1 Monthly Rent. Tenant shall pay monthly rent to Landlord ("*Monthly Rent*") without prior notice, demand, offset or deduction, in the amount of $85,600 ($0.40 per rentable square foot as set out in Section 1.) Monthly Rent shall be payable in advance on the first day of each calendar month, beginning on the Commencement Date and continuing each month during the Term. Monthly Rent for any partial month shall be prorated based on the actual number of days of the calendar month involved. Monthly Rent shall be payable to Landlord at the address stated in Section 22.1, or as Landlord may otherwise specify in writing to Tenant. 12/31/00

4.2 Rent Adjustment. Monthly Rent shall increase on the first day of the 31st month of the Term to $92,448 per month and on the first day of the 61st month of the Term to $99,844 per month. If Tenant elects to extend the Term under Section 3.2, Monthly Rent on the first month of the renewal term shall be the Prevailing Market Rental Rate on that date (determined as provided in attached Exhibit C).

4.3 Additional Rent. Each and every sum payable to Landlord pursuant to this Lease (other than Monthly Rent), each and every sum Tenant pays to any third party pursuant to this Lease, and each and every sum which Landlord pays to any third party to cure a default of Tenant shall be additional rent (***"Additional Rent"***). Landlord shall be entitled to the same rights and remedies with respect to the recovery of Additional Rent as with respect to Monthly Rent. Monthly Rent and Additional Rent are collectively referred to as ***"Rent."***

4.4 Late Charges. If Tenant fails to pay Monthly Rent or Additional Rent within 10 days after receiving written notice of non-receipt from Landlord, Tenant shall pay an additional late charge of six percent (6%) of the sums overdue. Tenant agrees that this late charge represents a fair and reasonable estimate of the costs that Landlord will incur by reason of the late payment by Tenant. After Tenant has received 3 notices of non-receipt from Landlord in a twelve (12) month period, if Tenant fails to pay Monthly Rent or Additional Rent within 10 days after the due date, then without notice, the late charge shall automatically accrue from the due date.

5. EXPENSES AND REAL ESTATE TAXES.

5.1 Net Lease. This Lease is intended to be a net lease, and the Rent is to be paid by Tenant net of all costs and expenses relating to Landlord's ownership and operation of the Premises (except as otherwise provided in this Lease), without assertion of any counterclaim, setoff, deduction or defense and without abatement, suspension, deferment or reduction. The provisions of this Section 5 for the payment by Tenant of Taxes and Expenses are intended to pass on to Tenant all such costs and expenses. For purposes of this Lease, the following terms shall have the following meanings:

(a) *"Real Estate Taxes"* means all taxes, assessments and charges levied upon or with respect to the Property or Landlord's interest in the Property, regardless of whether Tenant disputes the amount of such taxes based on Tenant's retention of an estate for years or any other claim by Tenant pursuant to Revenue and Tax Code Section 62 or otherwise. Real Estate Taxes shall include, without limitation, all general real property taxes and general and special assessments; charges, fees, or assessments for transit, housing, police, fire, or other governmental services or benefits; service payments in lieu of taxes; and any tax, fee, or excise on the act of entering into this Lease, or on the use or occupancy of the Property or any part of the Property, or on the Rent payable under this Lease or in connection with the business of renting space, that are levied against Landlord by the United States of America, the State of California or any political subdivision, public corporation, district, or any other political or public entity, and shall also include any other tax, fee or other excise, however described, that may be levied as a substitute for, or as an addition to, in whole or in part, any other Real Estate Taxes, whether or not now customary or in the contemplation of the parties on the Effective Date. Real Estate Taxes shall not include franchise, transfer, inheritance, or capital stock taxes or income taxes measured by the

net income of Landlord from all sources unless, due to a change in the method of taxation, any such tax is levied against Landlord as a substitute for, or as an addition to, in whole or in part, any other tax that would otherwise constitute a Real Estate Tax.

Tenant shall, at Tenant's sole cost and expense, use all commercially reasonable efforts to cause the Premises to be separately assessed. If the Premises are not separately assessed from the rest of the Property or a separate assessment is not available, then Tenant's share of Real Estate Taxes shall be as follows:

(i) For the period from the Commencement Date until the completion of the Landlord's Work, the Premises Real Estate Taxes. The ***"Premises Real Estate Taxes"*** are the Real Estate Taxes on the Premises land plus the Real Estate Taxes on the Warehouse. The Real Estate Taxes on the Premises land shall equal the percentage of the total tax on the Property that the square footage of the Premises bears to the total square footage of the Property at the time of the assessment.

(ii) For the period prior to the commencement of the Landlord's Work and from the completion of the Landlord's Work until the Termination Date, the Premises Real Estate Taxes shall also include the Tenant's percentage share of the Common Area Real Estate Taxes. The ***"Common Area Real Estate Taxes"*** are the Real Estate Taxes on the portion of the land comprising the Property which is common to all tenants at the Property. Tenant's percentage share of the Common Area Real Estate Taxes shall equal the percentage that the square footage of the Warehouse bears to the square footage of all buildings on the Property at the time of the assessment.

(b) ***"Personal Property Taxes"*** means all taxes levied on all trade fixtures, furniture, furnishings, equipment, and articles of movable personal property installed in the Premises by Tenant and which can be removed without structural damage to the Premises (collectively, "***Tenant's Personal Property***").

(c) "Expenses" means:

(i) the total costs and expenses arising in connection with the operation, maintenance and repair of the Premises, including, without limitation, all costs of: (a) maintenance and repair of systems (including air conditioning, electricity, steam, water, heating, ventilating, mechanical, telephone and telecommunications systems and all other utilities and systems), (b) all labor, supplies, tools, equipment and materials costs related to the operation, maintenance and repair of the Premises, (c) security and fire protection, (d) any other expenses of any kind whatsoever incurred in connection with the operation, maintenance and repair of the Premises; and

(ii) the Tenant's pro rata share of Landlord's actual and reasonable costs and expenses arising in connection with the operation, maintenance and repair of the common areas, including, without limitation: (a) landscaping on or about the Property, (b) maintenance of sidewalks, parkways and utility distribution lines, (c) the

cost of premiums for the insurance policies maintained by Landlord concerning the common areas, and (d) a management fee not to exceed one and one-half percent of the Monthly Rent, and excluding the cost of maintaining the parking lot and all other items included in Section 10.2. Landlord shall provide Tenant a reasonably detailed statement showing the calculation of the costs of maintaining the common area and Tenant's share. Tenant may, at its expense, conduct an audit of the common area costs charged by Landlord. If an discrepancy is discovered, the overcharge or undercharge shall be promptly refunded or paid, as applicable. If the audit discloses an overcharge to Tenant greater than 5% of Tenant's share, Landlord shall pay the cost of the audit in addition to the refund.

5.2 Payment of Taxes. Tenant shall pay as Additional Rent to the relevant authority or entity or to Landlord as provided below, before delinquency, all Premises Real Estate Taxes and Personal Property Taxes assessed during the Term, plus, for portions of the Term occurring prior to commencement and after completion of the Landlord's Work, Tenant's percentage share of the Common Area Real Estate Taxes (Premises Real Estate Taxes, Common Area Real Estate Taxes and Personal Property Taxes shall be collectively referred to as *"Taxes"*). If Tenant's portion of the Taxes is separately assessed, Tenant shall pay the appropriate amount directly to the taxing authority. Tenant shall deliver to Landlord upon written request from Landlord documentary evidence that Tenant has paid all Taxes. If Tenant's portion of the Taxes is not separately assessed, Tenant shall pay the appropriate amount to Landlord by the later of 15 days before delinquency or 15 days from receipt of the property tax bill and an itemized statement from Landlord showing the calculation of Tenant's share. Any Real Estate Taxes relating to a fiscal period of any taxing authority, only a part of which is included in the Term, shall be prorated between Landlord and Tenant so that Landlord shall pay the portion attributable to any period subsequent to the Termination Date, and Tenant shall pay the portion attributable to any period during the Term. Tenant shall pay all Personal Property Taxes, without proration, that relate to a fiscal year in which the Term shall commence or terminate.

5.3 Payment of Expenses; Utilities. Tenant shall pay as Additional Rent to the entitled parties all Expenses accruing during the Term, and except as provided in Exhibit D, shall be solely responsible for and make all arrangements for the provision of utilities and services to the Premises during the Term, including without limitation, electricity, water, gas, heat, sewer service, waste pick-up, telephone and other electronic communication services, and other utilities.

6. COMPLIANCE WITH LAWS.

6.1 Except as provided in Section 6.2, Tenant shall at its sole expense promptly comply with all applicable statutes, ordinances, rules, regulations and orders, whether presently existing or which may come into effect after the Commencement Date, including without limitation, all governmentally mandated replacement, installation or retrofitting concerning fire detection, prevention and extinguishing systems,

earthquake stabilization and Americans with Disabilities Act requirements, during the Term or any part of the Term relating in any manner to the Premises. Tenant may contest in good faith any such laws, withhold compliance during any proceeding including appeals, or change its operational routines to comply with the laws.

6.2 Notwithstanding Section 6.1, if the Premises are not in compliance with any applicable statutes, ordinances, rules, regulations and orders, including without limitation, all governmentally mandated replacement, installation or retrofitting concerning fire detection, prevention and extinguishing systems, earthquake stabilization and Americans with Disabilities Act requirements as a result of Landlord's Work (as defined below), Landlord shall be responsible for and perform the required modifications at no cost to Tenant.

7. CONDITION OF PREMISES.

Tenant acknowledges that Tenant has occupied the Property since 1958, and except for the modifications to the Property resulting from Landlord's Work, Tenant is familiar with all aspects of the Property and is satisfied that the Premises and Property are in an acceptable condition and meet Tenant's needs. Except for the modifications to the Premises resulting from Landlord's Work, Tenant specifically agrees to take the Premises in their existing condition. Tenant acknowledges that Tenant has had the opportunity to examine all aspects of the Premises and Property as they currently exist and that in entering into this Lease, Tenant does not rely on, and Landlord does not make any express or implied representations or warranties as to any aspects of the Premises or Property including, without limitation:

(a) All matters relating to title, together with all municipal and other legal requirements such as taxes, assessments, zoning, use permit requirements and building codes;

(b) The physical condition of the Premises or any improvements, including the interior, the exterior, the structure, paving, utilities, the gross and net square footage of the buildings and of the land, the soils and the presence or absence of hazardous materials on, under or in the vicinity of the Premises and all other physical and functional aspects of the Premises;

(c) All easements and access rights;

(d) The suitability of the Premises for the intended use; and

(d) The economic feasibility of the business Tenant intends to conduct on the Premises.

Tenant specifically agrees that the Premises are leased "as is" subject to completion of the Landlord's Work. Tenant further acknowledges that in entering into this Lease, Tenant is relying solely on its own examination and inspection of the Premises and Property

and not upon any warranties or representations, express or implied, of Landlord or other information from Landlord.

8. DETACHMENT AND DEMOLITION.

The detachment of the Warehouse from the Office and the demolition of all the improvements on the Property except for the Premises (the "***Landlord's Work***") is described in the Work Letter attached as Exhibit D.

9. DISRUPTIONS TO TENANT'S OPERATIONS.

Landlord recognizes the critical importance to Tenant's business that there is no interruption at all to Tenant's operations on the Premises except as otherwise provided in Exhibit D.

10. MAINTENANCE, REPAIRS, AND ALTERATIONS.

10.1 Tenant's Obligations.

(a) Tenant shall at its sole expense keep in good order, condition and repair the Premises including, without limitation, fire detection systems (including sprinkler system, maintenance and repair), all equipment and facilities servicing the Premises, plumbing, heating, air conditioning, ventilating, electrical, lighting facilities, boilers, fired or unfired pressure vessels, fire sprinkler and/or standpipe and hose or other automatic fire extinguishing systems, including fire alarm and/or smoke detection systems and equipment and internal fire hydrants, fixtures, interior walls, ceilings, floors, windows, doors, roof membrane, plate glass, located in or on the Premises.

(b) Tenant shall make appropriate arrangements and pay for trash removal, janitorial services and, to the extent deemed necessary by Tenant, security services to the Premises.

(c) If Tenant fails to perform Tenant's obligations under this Section; Landlord may at its option (but shall not be required to) enter upon the Premises after thirty (30) days' prior written notice to Tenant (except in the case of an emergency, in which case no notice shall be required), perform such obligations on Tenant's behalf and put the Premises in good order, condition and repair, and the cost of this performance shall become due and payable as Additional Rent to Landlord within ten (10) days of written demand from Landlord for payment.

10.2 Landlord's Obligations. Landlord shall at its sole expense keep in good order, condition and repair the structure, exterior walls, roof structure, driveways, and parking lot of the Premises. Landlord shall be responsible for cosmetic maintenance of the Premises, including exterior walls and any patching, painting or finishing of exterior walls. Tenant waives the provisions of Civil Code Sections 1941 *et seq.* and 1942 *et seq.* with respect to Landlord's obligations for tenantability of the Premises and

Tenant's right to vacate the Premises; Tenant also waives any and all benefits of any other statutes or laws which would otherwise afford Tenant the right to terminate this Lease because of Landlord's failure to keep the Premises in good order, condition and repair.

10.3 Alterations. Tenant shall not make any structural alterations to the Premises without Landlord's prior written consent, which shall not be unreasonably withheld or delayed; provided, however, that Tenant at its expense shall have the right to make without Landlord's consent non-structural alterations to the Premises costing less than one hundred thousand dollars ($100,000.00) in any calendar year. Any alterations for which Tenant requests Landlord's consent shall be deemed approved unless Landlord delivers a written notice of disapproval to Tenant within thirty (30) days after receipt of Tenant's request, stating the reason(s) for the disapproval in reasonable detail. In making any alterations, Tenant shall comply with the following:

(a) Tenant shall submit reasonably detailed final plans and specifications and working drawings of the proposed alterations and the name of its contractor at least twenty (20) days before the date it intends to commence the alterations.

(b) The alterations shall not be commenced until ten (10) days after Landlord has received notice from Tenant stating the date the installation of the alterations is to commence so that the Landlord can post and record an appropriate notice of non-responsibility.

(c) The alterations shall be approved by all appropriate government agencies and all applicable permits and authorization shall be obtained before commencement of the alterations.

(d) All alterations shall be completed with due diligence in compliance with all applicable laws.

(e) Tenant's contractors shall carry builders risk insurance in an amount then customarily carried by prudent contractors, Workers' Compensation insurance for its employees in statutory limits, and such other insurance as Landlord reasonably requires, naming Landlord as an additional insured. Tenant shall supply Landlord with a certificate of insurance evidencing the above insurance together with a 30-day notice of cancellation clause.

10.4 Removal of Alterations, Trade Fixtures. On the expiration or early termination of the Term, Landlord may require Tenant to remove from the Premises any trade fixtures paid for by Tenant, including racks, conveyors, battery chargers and other warehouse equipment, but not including refrigeration equipment or HVAC. Tenant, at its sole cost and expense, shall repair in a good and workman-like manner any damage caused by the removal. The foregoing notwithstanding, if Tenant shall request in writing prior to commencing alterations, Landlord shall decide within fifteen (15) days of the request and receipt of a reasonably detailed description of the alterations whether Landlord will require their removal at the end of the Term. All alterations made to the Premises by or on behalf of Tenant, including but not limited to any trade fixtures installed in the Premises, and not previously removed by Tenant, shall immediately become the property of Landlord and remain upon the Premises and be surrendered with the Premises by Tenant.

10.5 Mechanic Liens. Tenant shall pay when due all claims for labor or materials furnished to or for Tenant at or for use on the Premises. Tenant shall keep the Premises free and clear of all mechanics' liens resulting from construction done by or for Tenant. Within thirty (30) days of notice of filing of a mechanics lien, Tenant shall bond around the lien or pay the lien in full. Notwithstanding anything in this Section 10.5 to the contrary, Tenant shall have no responsibility for any claims or liens arising out of Landlord's Work or any warranty or corrective work performed by or on behalf of Landlord.

11. INSURANCE AND INDEMNITY.

11.1 Insurance Required of Tenant. Tenant shall at its sole expense maintain at all times during the Term the insurance coverage set forth in this Section 11. Tenant shall furnish to Landlord a certificate of insurance evidencing such insurance together with a 30-day notice of cancellation clause. Except for self-insurance, all insurance policies shall be issued by companies reasonably acceptable to Landlord and contain commercially reasonable deductibles. Tenant shall name Landlord and, if requested, any lender as additional insureds on its policies; provided, however, that all insurance policies carried by Landlord shall be deemed to be excess insurance and all of Tenant's insurance policies shall state that they are deemed primary and non-contributing with any insurance carried by Landlord. All insurance may be provided under Tenant's blanket policies or self insurance programs from time to time in effect.

(a) Property Insurance. Tenant shall insure or self-insure the Premises under a policy of standard fire and extended coverage insurance, with vandalism and malicious mischief endorsements, but not earthquake or flood coverage, in an amount not less than the full replacement value, or the actual cash value if Landlord elects to not repair or replace the loss or damage to the Premises.

(b) Personal Property Insurance. Tenant shall insure or self-insure its Personal Property on the Premises under a policy of standard fire and extended coverage insurance, with vandalism and malicious mischief endorsements, in an amount not less than the full replacement value.

(c) Liability Insurance. Tenant shall maintain commercial general liability insurance in an amount of $2,000,000 each occurrence combined single limit for injury to persons and damage to property naming Landlord as an additional insured as to the lease of Premises.

(d) Workers' Compensation Insurance. Tenant shall maintain Workers' Compensation insurance required to be carried by Tenant under Workers' Compensation or other applicable state and federal laws now existing or as modified, supplemented or amended.

11.2 Waiver of Subrogation. Landlord and Tenant hereby waive on behalf of themselves and their respective insurers, any claims that either may have against the other and the partners, members, shareholders, officers, directors and authorized representatives of the other for loss or damage resulting from perils covered by the standard form of fire and extended coverage insurance, including vandalism and malicious mischief coverage. It is understood that this waiver is intended to extend to all such loss or damage whether or not the same is caused by the fault or neglect of either Landlord or Tenant and whether or not insurance is in force. If required by policy conditions, each party shall secure from its property insurer a waiver of subrogation endorsement to its policy, and deliver a copy of such endorsement to the other party to this lease if requested.

11.3 Indemnification.

(a) Indemnification by Tenant. Tenant shall indemnify, defend (with counsel reasonably satisfactory to Landlord) and hold harmless Landlord from and against all claims, losses, damages, liability, causes of action, and costs (including, without limitation, attorneys' fees and costs) but only to the extent arising from: (i) Tenant's use of the Premises; (ii) the conduct of Tenant's business in or about the Premises; (iii) any activity, work or things done, permitted or suffered by Tenant in or about the Property; (iv) any act, omission, negligence or willful misconduct of Tenant or any of Tenant's agents, employees, representatives, contractors or invitees during the Term on or about the Property; (v) any event, loss, accident, injury or damage occurring on or about the Premises; (vi) any breach by Tenant under this Lease (vii) any claim or assertion involving the reassessment of the Premises during the Term of the Lease and any re-allocation to any other portion of the Property of taxes that would have been allocated to the Warehouse but for Tenants assertion that the Warehouse should not be reassessed based upon application of Revenue and Tax Code Section 62 or otherwise.

(b) Indemnification by Landlord. Landlord shall indemnify, defend (with counsel reasonably satisfactory to Tenant) and hold harmless Tenant from and against

any and all claims, losses, damages, liability, causes of action, and costs (including, without limitation, attorneys' fees and costs) but only to the extent arising from: (i) Landlord's Work; (ii) any activity, work or things done, permitted or suffered by Landlord in or about the Property; (iii) the negligence or willful misconduct on the part of Landlord or any of Landlord's agents, employees, representatives, contractors or invitees; or (iv) any breach by Landlord under this Lease.

12. DAMAGE OR DESTRUCTION.

12.1 Damage or Destruction. If, during the Term, the Premises are totally or partially destroyed, except by a cause attributable to an act or omission of Landlord, Tenant shall restore the Premises to substantially the same condition as they were in immediately before the casualty, provided, however, that Tenant shall only be obligated to restore the Premises to the extent of any deductible which shall be paid by Tenant plus insurance proceeds from the insurance coverage required under Section 11.1(a) (or the proceeds which would have been available to Tenant if it had procured the insurance required by Section 11.1(a) rather than self-insuring), and this Lease shall continue in full force and effect; provided, however, that if it would take longer than twelve (12) months from the date of the casualty to restore the Premises, or if sufficient insurance proceeds are not available, Tenant shall have the right, exercisable in its sole discretion by delivery of written notice to Landlord within thirty (30) days after the determination of the time period required to restore the Premises, to terminate this Lease, pay any required insurance deductibles, and assign its insurance proceeds to Landlord (or the proceeds which would have been available to Tenant if it had procured the insurance required by Section 11.1(a) rather than self-insuring.) Except as set forth above, in case of damage or destruction, there shall be no abatement or reduction of rent.

12.2 Damage Near End of Term. If total or partial damage of the Premises occurs during the last twenty-four (24) months of the Term, and if the cost of repairs exceeds one hundred fifty thousand dollars ($150,000.00), Tenant shall have the right, exercisable in its sole discretion, to terminate this Lease by giving notice to Landlord not more than thirty (30) days after the destruction. Notwithstanding Tenant's right to terminate the Lease under this Section, Tenant shall not be relieved of its obligation to have maintained the insurance required under this Lease and upon termination under this Section shall pay any required deductibles and assign all insurance proceeds to Landlord (or the proceeds which would have been available to Tenant if it had procured the insurance required by Section 11.1(a) rather than self-insuring.)

12.3 Waiver. Landlord and Tenant waive the provisions of any statutes or laws which relate to the termination of leases or abatement of rent when leased property is damaged or destroyed and agree that such event shall be governed by the terms of this Lease.

13. CONDEMNATION.

13.1 Taking and Termination. If any portion or all of the Premises is taken under the power of eminent domain, or sold under the threat of the exercise of said power, this Lease shall terminate as to the part taken as of the date the condemning authority takes title or possession, whichever occurs first. If more than ten percent (10%) of the rentable square feet of the Warehouse, ten (10) or more automobile parking spaces of which Tenant is entitled to exclusive use under this Lease (the ***"Premises Automobile Parking Spaces"***) are taken, or two (2) or more trailer parking spaces of which Tenant is entitled to exclusive use under this Lease (the ***"Premises Trailer Parking Spaces"***) are taken, Tenant may terminate this Lease by providing in writing, within ten (10) days after Landlord has given Tenant written notice of such taking, Tenant's notice of its election to terminate this Lease. Such termination by Tenant shall be effective as of the date the condemning authority takes title or possession of the condemned portion of the Premises. If Tenant does not terminate this Lease in accordance with the foregoing, this Lease shall remain in full force and effect as to the portion of the Premises remaining, except that the Monthly Rent shall be reduced in the same proportion as the rentable square feet of the Warehouse taken bears to the total rentable square feet of the Warehouse. There shall be an equitable adjustment in rent for any portion of the Premises taken which is not a part of the Warehouse.

13.2 Parking Restoration. If, within ten (10) days after Landlord has received notice of Tenant's intention to terminate this Lease because of the pending taking of ten (10) or more Premises Automobile Parking Spaces or because of the pending taking of two (2) or more Premises Trailer Parking Spaces, Landlord notifies Tenant that Landlord at its cost can reasonably add on to or reconfigure the remaining parking area so that the Premises will continue to be parked at a ratio of not less than 3.3 automobile parking spaces per 10,000 rentable square feet in the Premises with no more than forty percent (40%) of the total parking spaces designated as compact spaces or 0.7 trailer parking spaces per 10,000 rentable square feet, and if Landlord commences the restoration within thirty (30) days after Landlord notifies Tenant and diligently pursues the same to completion, this Lease shall continue in full force and effect. Provided, however, that if the proposed taking is so extensive that any attempt to add on to or reconfigure the parking area to conform with the above 3.3 to 10,000 automobile parking ratio or the 0.7 to 10,000 trailer parking ratio could not reasonably be completed within ninety (90) days after notice of Tenant's intention to terminate this Lease, the Lease shall terminate effective as of the date the condemning authority takes title to or possession of the condemned portion of the Premises.

13.3 Premises Restoration. If the Lease is not canceled as provided for above, then Tenant shall promptly repair and restore the Premises (including Tenant's trade fixtures, Personal Property, equipment and alterations) to substantially the condition that existed immediately before the taking (except only for the part taken), so as to render the Premises a complete, integrated functional architectural unit.

13.4 Awards and Damages. Landlord reserves all rights to damages in its capacity as owner. Tenant reserves all rights to damages in its capacity as tenant, occupant and business owner. Tenant may participate in any negotiations or other proceedings concerning the condemnation. If there is a partial taking of the Premises and Tenant does not elect to terminate the Lease, the first proceeds to Landlord relating to the Premises shall be applied to the restoration of the Premises pursuant to Section 13.3.

13.5 Waiver. Landlord and Tenant waive the provisions of any statutes or laws which relate to the termination of Leases or abatement of rent when leased property is taken by condemnation or the power of eminent domain.

14. DEFAULT AND REMEDIES.

14.1 Tenant's Default. The occurrence of any of the following shall be a default on the part of Tenant:

(a) Tenant's failure to pay Monthly Rent, Additional Rent, or any other amounts due under this Lease, as and when due where such failure continues for ten (10) days after Tenant receives written notice from Landlord of Tenant's failure to pay such amount;

(b) Tenant's failure to perform or observe any other Tenant obligation after a period of thirty (30) days after Tenant receives written notice from Landlord setting forth, in reasonable detail, the nature and extent of the failure and identifying the applicable Lease provision; provided that if the nature of the default is such that more than thirty (30) days are reasonably required for its cure, then Tenant shall not be in default under this Lease so long as Tenant commences the cure within such thirty (30) day period and thereafter diligently and continuously prosecutes the cure to completion.

(c) The vacation or abandonment of the Premises for a period in excess of thirty (30) continuous days without the written consent of Landlord; provided, however, Tenant shall not be in default if Tenant vacates the Premises but performs all of its obligations under the Lease.

(d) Tenant's failure to vacate or stay any of the following within ninety (90) days after they occur:

(i) A petition in bankruptcy is filed by or against Tenant;

(ii) Tenant is adjudicated as bankrupt or insolvent;

(iii) A receiver, trustee, or liquidator is appointed for all or a substantial part of Tenant's Property; or

(iv) Tenant makes an assignment for the benefit of creditors.

14.2 Landlord's Remedies. Landlord shall have the following rights and remedies if Tenant commits a default:

(a) Termination of Lease. The right to terminate this Lease, in which event Tenant shall immediately surrender possession of the Premises in accordance with Section 20, and pay to Landlord all Rent and other charges due to the date of termination.

(b) The rights and remedies described in California Civil Code Section 1951.2, including without limitation, the right to recover the worth at the time of award of the amount by which the Rent and other charges payable for the balance of the Term after the time of award exceed the amount of such rental loss for the same period that Tenant proves could be reasonably avoided, as computed pursuant to subdivision (b) of said Section 1951.2, and the right to recover any amount necessary to compensate Landlord for the detriment proximately caused by Tenant's failure to perform its obligations under this Lease or which in the ordinary course of things would be likely to result therefrom which, includes without limitation, unpaid taxes and assessments, any direct costs or expenses incurred by Landlord in recovering possession of the Premises, maintaining or preserving the Premises after such default, preparing the Premises for reletting to a new tenant, leasing commissions, and any other costs reasonably necessary or appropriate to relet the Premises, and such amounts in addition to or in lieu of the foregoing as may be permitted from time to time by applicable California law.

(c) The rights and remedies described in California Civil Code Section 1951.4 that allow Landlord to continue this Lease and to enforce all of its rights and remedies, including the right to recover Rent and other charges payable under the Lease as they become due, for as long as Landlord does not terminate Tenant's right to possession. Acts of maintenance or preservation, efforts to relet the Premises or the appointment of a receiver upon Landlord's initiative to protect its interest under this Lease shall not constitute a termination of Tenant's right to possession.

(d) Other Remedies. Any other remedy available to Landlord under the laws or judicial decisions of California.

14.3 No Release. The expiration or termination of this Lease and/or the termination of Tenant's right to possession shall not relieve either party from liability under any indemnity provisions of this Lease as to matters occurring or accruing prior to the expiration or termination or by reason of Tenant's occupancy of the Premises.

14.4 Landlord's Default. Landlord shall not be in default unless Landlord fails to perform obligations required of Landlord within a reasonable time, but in no event later than thirty (30) days after written notice by Tenant to Landlord and to the holder of any first mortgage or deed of trust (*"Mortgage Holder"*) covering the Premises whose name and address have been furnished to Tenant in writing expressly for the purpose of giving such notice, specifying how Landlord has failed to perform such obligation;

provided, however, that if the nature of Landlord's obligation requires more than thirty (30) days for performance, then Landlord shall not be in default if Landlord or the Mortgage Holder commences performance within such thirty (30) day period and thereafter diligently and continuously pursues the same to completion.

15. NO LIEN ON TENANT'S PERSONAL PROPERTY

Landlord shall under no circumstances be granted a lien or security interest in Tenant's Personal Property stored or located at the Premises to secure payment of Rent or any other obligation of Tenant under the Lease.

16. ASSIGNMENT.

16.1 Consent Required. Except as provided in Section 16.2, Tenant shall not assign any part of its interest in or rights to the Premises (***"Assignment"***), without Landlord's prior written consent; which Landlord shall not unreasonably withhold or delay. Tenant may sublease without restriction but will at all times remain liable under the Lease.

(a) If Tenant desires to enter into an Assignment, it shall give written notice (***"Notice of Proposed Transfer"***) to Landlord of its intention to do so, which notice shall contain (a) the name and address of the proposed assignee, (b) the nature of the proposed Transferee's business to be carried on in the Premises, (c) the terms and provisions of the proposed Assignment, and (d) such financial and other information as Landlord may request in its reasonable discretion concerning the proposed assignee.

(b) At any time within thirty (30) days after Landlord's receipt of the Notice of Proposed Transfer, Landlord may by written notice to Tenant approve or disapprove the proposed Assignment. If Landlord fails to give Tenant written notice within thirty (30) days after receipt of the Notice of Proposed Transfer, the proposed Assignment shall be deemed approved. If Landlord approves the proposed Assignment, Tenant may, within ninety (90) days after receipt of the written approval, enter into such Assignment with the proposed Transferee and upon substantially the terms and conditions set forth in the Notice of Proposed Transfer.

16.2 Transfers without consent. Notwithstanding Section 16.1, Tenant may assign part or all of the Premises without Landlord's consent to: (i) any corporation, partnership or other person or entity that on the Effective Date controls or is controlled by, or is under common control with, Tenant; and (ii) any entity resulting from the merger or consolidation with Tenant; or (iii) any entity that acquires substantially all of the assets of Tenant's operating division of which this Warehouse is part, as long as the purchasing entity assumes Tenant's obligations.

16.3 Conditions. Any assignments by Tenant (whether or not requiring Landlord's consent) are also subject to the following terms and conditions:

(a) Landlord shall not unreasonably withhold its consent to a release of Tenant from Tenant's obligations under this Lease in the event of an Assignee who is financially able to pay the rent and other sums due Landlord, and to perform and satisfy all other obligations to be performed by Tenant under this Lease;

(b) If Tenant shall remain liable after Assignment, Landlord may not reasonably withhold consent based on the financial condition of the proposed assignee.

(c) Each Assignment shall be subject to the provisions of this Lease; and

(d) No Assignment shall be effective without the express written assumption in a form reasonably acceptable to Landlord by such assignee of all the applicable obligations of the Tenant under this Lease.

For purposes of this Section, an Assignee is "financially able to pay the rent" where the Assignee has a net worth in excess of $500 million.

17. SUBORDINATION AND ATTORNMENT.

17.1 Subordination. Subject to Tenant's receipt of a reasonably satisfactory non-disturbance agreement from each lender, Tenant shall agree to subordinate this Lease to later recorded mortgages, ground leases, deeds of trust, or other hypothecation or security device (collectively, "*Security Device*"). Tenant agrees that the lenders holding any such Security Device shall have no duty, liability or obligation to perform any of the obligations of Landlord under this Lease accruing prior to the date such lender acquires title to the Premises, but that in the event of Landlord's default with respect to any such obligation, Tenant will give any lender, whose name and address have been furnished to Tenant in writing for such purpose, notice of Landlord's default, and allow such lender thirty (30) days following receipt of such notice, for the cure of said default before invoking any remedies Tenant may have.

17.2 Attornment. If a lender or any other party acquires ownership of the Premises by reason of a foreclosure of a Security Device, Tenant agrees to attorn to the lender provided that Tenant receives from the lender a reasonably satisfactory non-disturbance agreement which states that Tenant's possession and this Lease will not be disturbed so long as Tenant is not in default. The new owner shall not: (i) be liable for any act or omission of any prior landlord or with respect to events occurring prior to acquisition of ownership; or (ii) be subject to any offsets or defenses which Tenant might have against any prior landlord.

17.3 Agreements. The agreements contained in this Section 17 shall be effective without the execution of any further documents; provided, however, that upon written request from Landlord or a lender in connection with a sale, financing or

refinancing of the Premises, Tenant and Landlord shall execute such further writings as may be reasonably required to separately document any such subordination or non-subordination, attornment and/or non-disturbance agreement, so long as there is no material impairment of Tenant's rights or expansion of Tenant's obligations under this Lease. Tenant agrees to execute such agreement within ten (10) business days of written request from Landlord.

18. ESTOPPEL CERTIFICATES.

Either party (*"answering party"*) shall from time to time, within ten (10) business days after receiving a written request by the other party (*"asking party"*), execute and deliver to the asking party estoppel certificates, which may be relied upon by the asking party and any third party buyer or lender of or for the Premises and which shall certify: (i) the accuracy of the Lease document; (ii) the beginning and ending dates of the Lease Term; (iii) that the Lease is unmodified and in full effect or in full effect as modified, stating the date and nature of the modification; (iv) the amount of Monthly Rent, the dates to which any rent has been paid in advance, and the amount of any security deposit or prepaid rent; (v) whether to the answering party's knowledge: (a) the asking party is in default or (b) the answering party has any claims or demands against the asking party and, if so, specifying the default, claim, or demand; and (vi) confirmation of such other reasonable information as is requested by the asking party. Neither party shall agree to appoint the other party as its attorney-in-fact for purposes of granting any such agreement or certificate.

19. HAZARDOUS WASTE.

19.1 Tenant shall not during the Term spill, release or discharge, or permit a spill, release or discharge, in, on or about the air, land, surface, water or ground water of the Premises of any Hazardous Substance, as defined below. The nature of Tenant's normal business operations involves the use of chemicals, some of which are Hazardous Substances. Tenant's use of such chemicals shall comply with all laws, rules and regulations regarding their use.

19.2 The term *"Hazardous Substance"* as used in this Lease shall mean any product, substance, chemical, material or waste whose presence, nature, quantity and/or intensity of existence, use, manufacture, disposal, transportation, spill, release or effect, either by itself or in combination with other materials on the Premises, is either: (i) regulated or monitored by any governmental authority as potentially injurious to the public health, safety or welfare, the environment or the Premises; or (ii) a basis for liability of Landlord to any governmental agency or third party under any applicable environmental statute or common law theory. Hazardous Substance shall include, but not be limited to, hydrocarbons, petroleum, gasoline, crude oil and their products, by-products or fractions.

19.3 If Tenant knows, or has reasonable cause to believe, that a Hazardous Substance has been released in, on, under or about the Premises, other than as previously consented to by Landlord, Tenant shall promptly give written notice of such fact to Landlord. Tenant shall also promptly give Landlord a copy of any statement, report, notice, registration, application, permit, business plan, license, claim, action or proceeding given to, or received from, any governmental authority or private party, or persons entering or occupying the Premises, concerning the spill, release, or discharge of, any Hazardous Substance or contamination in, on, or about the Premises.

19.4 Tenant shall, to the extent remediation for which Tenant is responsible under this Section 19 may be required by any regulatory authority, promptly perform, at Tenant's sole cost and expense, all remedial actions reasonably necessary to remove any such Hazardous Substance existing in, on or about the Premises; but only to the extent caused by Tenant, Tenant's agents, employees, contractors and invitees. Such work shall be performed by Tenant in accordance with the provisions of Section 10.1(b) of the Purchase and Sale Agreement dated as of April 6, 1998, between Tenant and Landlord.

19.5 Tenant shall deliver promptly to Landlord (i) copies of all documents received by Tenant from the United States Environmental Protection Agency or from any state, regional, county or municipal environmental health or safety agency concerning the Premises or Tenant's operations in, on or about the Premises and (ii) copies of all documents submitted by Tenant to the United States Environmental Protection Agency or any state, regional, county or municipal environmental health or safety agency regarding the Premises or Tenant's operations in, on or about the Premises, and (iii) all test results, reports, correspondence etc. in connection with any remediation performed pursuant to Section 19.4.

19.6 Tenant shall indemnify, protect, defend and hold Landlord its successors and assigns and any lender or encumbrancer of the Property harmless from and against any and all loss of rents and/or damages, liabilities, judgments, costs, claims, liens, expenses, penalties, permits and attorneys' and consultant's fees (i) arising out of the spill, release or discharge of or exposure to any Hazardous Substance at the Premises during the Term; or (ii) arising out of exposure to any Hazardous Substance at the Property during the Tenant's prior ownership of the Property by or for Tenant, Tenant's agents, employees, contractors and invitees or others under Tenant's control. Tenant's obligations under this Section 19.6 shall include without limitation, the effects of any contamination or injury to person, property or the environment created or suffered by Tenant, and the cost of investigation (including consultant's and attorneys' fees and testing), removal, remediation, restoration and/or abatement. Tenant's obligations shall survive the expiration or earlier termination of this Lease, and no termination, cancellation or release agreement entered into by Landlord and Tenant shall release Tenant from its obligations with respect to Hazardous Substances, unless specifically so agreed by Landlord in writing at the time of such agreement. The foregoing notwithstanding, Tenant shall not be obligated to indemnify Landlord for any

remediation costs, unless Landlord, prior to incurring any remediation costs, first offered Tenant the opportunity to conduct the remediation.

20. SURRENDER OF PREMISES AND HOLDING OVER.

20.1 Surrender of Premises.

(a) On or before expiration of the Term, Tenant shall surrender to Landlord the Premises and all alterations "broom" clean, free of debris, and in good condition (except for ordinary wear and tear and except for damage caused by fire, storm or other casualty). Tenant shall remove within the above stated time all its Personal Property and trade fixtures and perform all restoration made necessary by the removal of any alterations, or its Personal Property.

(b) Landlord can elect to retain or dispose of in any manner any alterations, including but not limited to trade fixtures, or Tenant's Personal Property that Tenant does not remove from the Premises on expiration or termination of the Term after first giving at least ten (10) days' notice to Tenant. Title to any such alterations or Tenant's Personal Property that Landlord elects to retain or dispose of on expiration of the ten (10) day period shall vest in Landlord. Tenant waives all claims against Landlord for any damages to Tenant resulting from Landlord's retention or disposition of any such alterations or Tenant's Personal Property after the expiration or earlier termination of the Lease Term. Tenant shall be liable to Landlord for Landlord's cost for storing, removing and disposing of Tenant's Personal Property that Tenant was required to remove.

20.2 Hold Over.

(a) Any holding over after the expiration of the Term with the consent of Landlord shall be construed to automatically extend the Term of this Lease on a month to month basis at one hundred and eight percent (108%) of the Monthly Rent, terminable on thirty (30) days' advance notice by either party.

(b) If Tenant shall retain possession of any part or all of the Premises without Landlord's consent following the expiration or sooner termination of this Lease for any reason, then Tenant shall pay by the first day of each month one hundred thirty percent (130%) of the Monthly Rent due on the last full month immediately preceding the holdover period. Tenant shall also indemnify, defend and hold Landlord harmless from any losses, claims, causes of action, damages, liabilities, costs (including, without limitation, attorneys' fees and costs) arising from delay by Tenant in surrendering the Premises, including, without limitation, any claims made by any succeeding tenant arising from such delay.

(c) Holding Over shall be on the same terms and conditions as this Lease except: (i) any extension of the Term or options granted in the Lease are terminated;

and (ii) consent to an assignment or a sublease may be withheld and delayed at Landlord's discretion.

21. LANDLORD'S ACCESS.

(a) Landlord and Landlord's agents, servants, and employees may enter the Premises at reasonable times, and at any time in an emergency, without charge, liability, or abatement of rent, to: examine the Premises; make repairs, alterations, improvements, and additions advisable to preserve the integrity, safety, and good order of part or all of the Premises; comply with applicable laws; perform the Landlord's Work; show the Premises to prospective lenders or purchasers and, during the one hundred eighty (180) days immediately before this Lease ends, to prospective tenants; post notices of non-responsibility; and post "for sale" signs and; during one hundred eighty (180) days immediately before the Lease ends, post "For Lease" signs. Landlord's entry shall not be deemed a forcible or unlawful entry or detainer of the Premises or an eviction.

(b) Notwithstanding Section 21(a) and except as otherwise provided in Exhibit D, entry is conditioned upon Landlord: (i) giving at least twenty-four (24) hours' advance written notice, except in an emergency; (ii) promptly finishing any work for which it entered; and (iii) causing the least practical interference to Tenant's business.

22. MISCELLANEOUS PROVISIONS.

22.1 Notices. All notices, consents, requests, demands or other communications to or upon the respective parties shall be in writing and shall be effective for all purposes upon receipt on any work day before 5:00 PM local time and on the next work day if received after 5:00 PM or on other than a business day, including without limitation, in the case of (i) personal delivery, (ii) delivery by messenger, express or air courier or similar courier, (iii) delivery by United States first class certified or registered mail, postage prepaid; and (iv) transmittal by electronically confirmed telecopier or facsimile, addressed as follows:

LANDLORD:

Pacific Gulf Properties Inc.
4220 Von Karman, 2nd Floor
Newport Beach, CA 92660-2002
Attention: Robert Dewey

TENANT:

Eastman Kodak Company
12100 Rivera Road
Whittier, California 90606
Attention: Mario Irizzary

With a copy to:

Eastman Kodak Company
US&C Real Estate and Property Services
343 State Street
Rochester, New York 14650-1265
Attention: Lease Management Office

In this section **"work days"** means days other than Saturdays, Sundays, and federal and state legal holidays. Either party may change its address by written notice to the other in the manner set forth above. Receipt of communications by United States first class or registered mail shall be sufficiently evidenced by return receipt. Receipt of communication by facsimile shall be sufficiently evidenced by a machine generated confirmation of transmission without notation of error. In the case of illegible or otherwise unreadable facsimile transmissions, the receiving party shall promptly notify the transmitting party of any transmission problem and the transmitting party shall promptly resend any affected pages. If Tenant is notified of the identity and address of Landlord's mortgagee, Tenant shall give to such mortgagee notice of any default by Landlord under the terms of this Lease in writing sent by mail.

22.2 Signage. Landlord shall allow Tenant to use its own signage on the Warehouse and to maintain a monument sign on the Property but off of the Premises, provided such signage meets all governmental requirements. Tenant shall be responsible for obtaining all governmental approvals required for its signage. In the event the Property is limited to a single monument sign, Tenant shall share the monument sign with other tenants at the Property.

22.3 Waiver. The failure of either party to exercise any of its rights is not a waiver of those rights. A party waives only those rights specified in writing and signed by the party waiving its rights. No acceptance of full or partial rent during the continuance of any breach, and no acceptance of the keys to or possession of the Premises prior to the expiration of the Term by any employee or agent of Landlord shall constitute a waiver of any such breach or of such term, covenant or condition or operate as surrender of this Lease. No waiver of any breach shall affect or alter this Lease, but each and every term, covenant and condition of this Lease shall continue in full force and effect with respect to any other then existing or subsequent breach.

22.4 Amendments. Neither this Lease nor any of its provisions may be changed, waived, discharged or terminated orally, and no breach shall be waived, altered or modified, except by written instrument signed by the party against which the enforcement of the change, waiver, discharge or termination is sought.

22.5 Construction. Any titles or captions or sections contained in this Lease are for convenience only and shall not be deemed part of the context of this Lease. All pronouns and their variations shall be deemed to refer to the masculine, feminine, neuter, singular or plural as the identification of the person, persons, firm, or firms may require.

22.6 Successors and Assigns; Survivability. The terms, covenants and conditions in this Lease shall bind and inure to the benefit of Landlord and Tenant and, except as otherwise provided, their respective personal representatives and successors and assigns. The provisions pertaining to the parties' respective indemnification obligations under this Lease shall survive the expiration or termination of this Lease.

22.7 Severability. If any provision of this Lease shall prove to be invalid, void, illegal or unenforceable, that provision shall in no way affect, impair or invalidate any other provisions of this Lease, and such other provisions and this Lease shall remain in full force and effect.

22.8 Applicable Law. This Lease shall be construed and enforced in accordance with the laws of the State of California.

22.9 Entire Agreement. This instrument and its exhibits, which are incorporated into this Lease, contain the entire agreement between the parties. All prior negotiations and agreements are merged in this Lease, and there are no representations or warranties between the parties except as expressly set forth in this Lease.

22.10 Attorneys' Fees. In the event of any action or proceeding (including arbitration) brought by either party against the other to enforce or interpret this Lease, the prevailing party shall be entitled to recover all costs and expenses including its attorneys' fees in such action or proceeding in such amount as the court or other arbiter may adjudge reasonable. The prevailing party shall be determined by the trier of fact based upon an assessment of which party's major arguments made or positions taken in the proceedings could fairly be said to have prevailed over the other party's major arguments or positions on major disputed issues.

22.11 Authority. The officers executing this Lease on behalf of the Tenant represent and warrant that they are authorized to execute and deliver this Lease on behalf of Tenant. The individuals executing this Lease on behalf of Landlord represent and warrant to Tenant that they are fully authorized and legally capable of executing this Lease on behalf of Landlord and that this Lease is binding upon all parties holding an interest in the Premises.

22.12 Consents. Wherever in this Lease one party's consent is required to an act of the other party, such consent shall not be unreasonably withheld or delayed. Landlord's consent given in any instance shall not relieve Tenant of any obligation to

secure Landlord's consent in any other or future instances under the terms of this Lease.

22.13 Quiet Possession. Tenant shall have quiet possession of the Premises for the entire Term, subject to all of the provisions of this Lease.

22.14 Cumulative Remedies. No remedy or election under this Lease shall be deemed exclusive but shall, whenever possible, be cumulative with all other remedies at law or at equity.

22.15 No Third Party Beneficiaries. The execution and delivery of this Lease shall not be deemed to confer any rights upon, nor obligate any of the parties to this Agreement to any person or entity other than Landlord or Tenant. There shall not be any third party beneficiaries to this Lease, including, without limitation, any brokers or finders claiming to be owed commissions or other compensation with regard to the transaction contemplated by this Lease.

22.16 Termination; Merger. Unless specifically stated otherwise in writing by Landlord, the voluntary or other surrender of this Lease by Tenant, mutual termination or cancellation, or a termination by Landlord for default by Tenant, shall automatically terminate a sublease or lesser estate in the Premises; provided, however, that Landlord shall, in the event of any such surrender, termination or cancellation, have the option to continue any one or all of any existing subtenancies. Landlord's failure within ten (10) business days following any such event to make a written election to the contrary by written notice to the holder of any such lesser interest, shall constitute Landlord's election to have the event constitute the termination of such interest.

IN WITNESS WHEREOF, the parties have executed this Lease as of the date first written above.

secure Landlord's consent in any other or future instances under the terms of this Lease.

22.13 Quiet Possession. Tenant shall have quiet possession of the Premises for the entire Term, subject to all of the provisions of this Lease.

22.14 Cumulative Remedies. No remedy or election under this Lease shall be deemed exclusive but shall, whenever possible, be cumulative with all other remedies at law or at equity.

22.15 No Third Party Beneficiaries. The execution and delivery of this Lease shall not be deemed to confer any rights upon, nor obligate any of the parties to this Agreement to any person or entity other than Landlord or Tenant. There shall not be any third party beneficiaries to this Lease, including, without limitation, any brokers or finders claiming to be owed commissions or other compensation with regard to the transaction contemplated by this Lease.

22.16 Termination; Merger. Unless specifically stated otherwise in writing by Landlord, the voluntary or other surrender of this Lease by Tenant, mutual termination or cancellation, or a termination by Landlord for default by Tenant, shall automatically terminate a sublease or lesser estate in the Premises; provided, however, that Landlord shall, in the event of any such surrender, termination or cancellation, have the option to continue any one or all of any existing subtenancies. Landlord's failure within ten (10) business days following any such event to make a written election to the contrary by written notice to the holder of any such lesser interest, shall constitute Landlord's election to have the event constitute the termination of such interest.

IN WITNESS WHEREOF, the parties have executed this Lease as of the date first written above.

A - 5/5/04

FIRST AMENDMENT TO LEASE

THIS FIRST AMENDMENT TO LEASE, dated this 5th day of April, 2004 (this "Amendment"), is entered into by and between CALWEST INDUSTRIAL HOLDINGS, LLC, a Delaware limited liability company ("Landlord"), successor-in-interest to Pacific Gulf Properties, Inc., a Maryland corporation, and EASTMAN KODAK COMPANY, a New Jersey corporation ("Tenant").

RECITALS:

A. Landlord's predecessor and Tenant entered into that certain Lease dated May 21, 1998 (the "Lease") for those certain premises commonly known as 12100 Rivera Road, Whittier, California, containing approximately 214,000 square feet of warehouse space including approximately 18,000 square feet of office space(the "Premises").

B. Landlord and Tenant desire to extend the Term of Lease and to amend certain other provisions of the Lease as more fully set forth below.

AGREEMENT:

1. Capitalized Terms. All capitalized terms used herein shall have the same meaning ascribed to them in the Lease, unless otherwise defined in this Amendment.

2. Extension of Term. Paragraph 3.1 of the Lease is amended to provide that the Term of Lease is hereby extended for a period of an additional five (5) years, so that the Termination Date is deemed to be May 20, 2010, on all of the same terms and conditions of the Lease, except as modified by this Amendment.

3. Rent. Paragraphs 4.1 and 4.2 are modified to provide that as of March 1, 2004 (the "Effective Date") and continuing through the Termination Date, as extended hereby, the Monthly Rent shall be payable in the following amounts:

Period	Square Feet	Monthly Rent per square foot	Monthly Rent
3/1/2004 – 4/30/2005	214,000	$0.39	$83,460.00
5/1/2005 – 4/30/2006	214,000	$0.40	$85,964.00
5/1/2006 – 4/30/2007	214,000	$0.41	$88,543.00
5/1/2007 – 4/30/2008	214,000	$0.43	$91,199.00
5/1/2008 – 4/30/2009	214,000	$0.44	$93,945.00
5/1/2009 – 5/20/2010	214,000	$0.45	$96,753.00

The parties acknowledge that for the time period from the Effective Date through April 30, 2004, Tenant has previously paid Monthly Rent in the aggregate amount of ONE

HUNDRED NINETY NINE THOUSAND SIX HUNDRED EIGHTY EIGHT DOLLARS ($199,688.00). Accordingly, Tenant is entitled to a credit in the amount of **THIRTY TWO THOUSAND SEVEN HUNDRED SIXTY EIGHT DOLLARS ($32,768.00)** (which represents the difference between the Monthly Rent due for such time period pursuant to the terms of the Lease [$199,688.00] and the Monthly Rent for such time period due hereunder [$166,920.00]). Such credit shall be applied against the Monthly Rent due for May, 2004. Accordingly, Tenant shall pay, as the installment of Monthly Rent due for such month the amount of **FIFTY THOUSAND SIX HUNDRED NINETY TWO DOLLARS ($50,692.00)**.

4. Option to Extend Term. Section 3.2 of the Lease is hereby deleted in its entirety and the following substituted therefor:

> "Tenant shall, provided the Lease is in full force and effect and Tenant is not in default under any of the other terms and conditions of the Lease at the time of notification or commencement, have the option to renew this Lease for a term of five (5) years, for the portion of the Premises being leased by Tenant as of the date the renewal term is to commence, on the same terms and conditions set forth in the Lease, except that the Monthly Rent shall be adjusted to the greater of the Prevailing Market Rental Rate on that date or the then current Monthly Rent. If Tenant elects to exercise said option, then Tenant shall provide Landlord with written notice no later than August 19, 2009. If Tenant fails to provide such notice, Tenant shall have no further or additional right to extend or renew the term of the Lease."

5. Termination Option. Tenant shall, provided the Lease is in full force and effect and Tenant is not in default under any of the other terms and conditions of the Lease at the time of notification or termination, have the option to terminate this Lease, effective May 20, 2008. If Tenant elects to exercise said option, then Tenant shall provide Landlord with written notice no later than November 20, 2007 (the "Termination Exercise Date"), together with a termination payment (the "Termination Payment") equal to: (i) **NINETY-FIVE THOUSAND THREE HUNDRED THIRTY-TWO AND 34/100 DOLLARS ($95,332.34)**, which represents the unamortized portion of the reduced rent for the period from the Effective Date to the original Termination Date of the Lease; plus (ii) **SIXTY-SIX THOUSAND NINETY-SIX AND 70/100 DOLLARS ($66,096.70)**, which represents forty percent (40%) of the leasing commissions actually paid by Landlord in connection with this Lease; plus (iii) forty percent (40%) of the portion of the Allowance (detailed in Paragraph 6[c] below) **actually used** by Tenant prior to the Termination Exercise Date; plus (iv) the unamortized portion of any Additional Allowance under Paragraph 6 below **actually used** by Tenant prior to the Termination Exercise Date. Tenant shall be entitled to offset against the Termination Payment due to Landlord hereunder, sixty percent (60%) of the portion of the Allowance **not used** by Tenant prior to the Termination Exercise Date (such sixty percent [60%] of such unused Allowance is hereinafter called the "Credit") and if the Credit exceeds the Termination Payment, the balance of such unused Credit will be used to offset installments of Monthly Rent becoming due after the Termination Exercise Date until such Credit has been fully expended. If Tenant fails to provide such notice or to pay such Termination Payment on or before the Termination Exercise Date (either by the use of the Credit or otherwise), Tenant shall have no further or additional right to terminate the Lease.

6. Alterations.

a. Landlord shall, as promptly as reasonably possible after the Effective Date (but in no event later than May 1, 2004), provide an additional sixty-four (64) parking spaces at the Premises, including three handicapped accessible spaces, for the exclusive use of Tenant, its employees, customers and invitees.

b. Tenant may make such alterations, additions, improvements and repairs at the Premises ("Tenant's New Work") as it may elect to do, provided that Tenant's New Work complies with Section 10.3 of the Lease and the following additional requirements: (i) plans for Tenant's New Work must be approved by Landlord, such approval not to be unreasonably withheld, conditioned or delayed; (ii) Landlord shall not charge any supervisory and/or overhead fee in connection with Tenant's New Work; (iii) Landlord shall not have any approval rights in relation to Tenant's selection of contractors or subcontractors; and (iv) provided that Landlord notifies Tenant at least ninety (90) days prior to the end of the Term, Tenant shall remove all of Tenant's New Work so designated by Landlord for removal.

c. Provided the Lease is in full force and effect and Tenant is not in default thereunder (beyond any applicable notice and cure periods), Landlord hereby agrees to reimburse Tenant for the cost of Tenant's New Work, including without limitation all hard and soft construction costs, an amount not to exceed **Five Hundred Thirty-Five Thousand Dollars ($535,000)** (the "Allowance"). Landlord shall pay Tenant the Allowance within thirty (30) days of the receipt by Landlord of all of the following as to any portion of Tenant's New Work: (i) invoices indicating the amount paid by Tenant for Tenant's New Work; (ii) an architect's certificate of final completion; (iii) copies of all necessary governmental permits; (iv) the sworn statement of the general contractor; and (v) final lien waivers from all contractors, subcontractors and materialmen. In the event the cost of Tenant's New Work exceeds the Allowance, such excess cost shall be borne solely by Tenant. If Tenant chooses not to spend all or any portion of the Allowance toward the cost of Tenant's New Work, then, upon notice given by Tenant to Landlord of such election, any unused portion of the Allowance may, at Tenant's sole option and in Tenant's sole discretion, be credited against any future installments of Monthly Rent and/or the Termination Payment as described in Paragraph 5 above.

d. Provided the Lease is in full force and effect and Tenant is not in default thereunder (beyond any applicable notice and cure periods) and upon written request therefor by Tenant (provided the Allowance has already been fully disbursed), Landlord hereby agrees to reimburse Tenant for the cost of Tenant's New Work an additional amount not to exceed **Six Hundred Forty-Two Thousand Dollars ($642,000)** (the "Additional Allowance"). Any portion of the Additional Allowance requested by Tenant shall be disbursed in the same manner as in subparagraph c. above, except that Tenant may not use any portion of the Additional Allowance for the payment of installments of Monthly Rent, any additional rent due under the Lease or the Termination Payment or for any purpose other than for payment of the costs of Tenant's New Work. Any disbursed portion of the Additional Allowance shall result in an increase in the Monthly Rent in an amount equal to the amount which would be necessary to repay the entire disbursed amount over the remainder of the Term with an interest rate of Ten

Percent (10.0%) per annum, as though such disbursement were actually a loan payable in equal monthly installments.

7. Hazardous Materials. In addition to the provisions of Paragraph 19 of the Lease, Tenant shall provide Landlord with copies of any Material Safety Data Sheets (as required by the Occupational Safety and Health Act) relating to any Hazardous Materials to be used, kept, or stored at or on the Premises. Tenant shall not store hazardous wastes on the premises for more than 90 days; "hazardous waste" has the meaning given it by the Resource Conservation and Recovery Act of 1976, as amended. Tenant shall not install any underground or above ground storage tanks on the Premises. In performing any alterations of the Premises permitted by the Lease, Tenant shall not install any Hazardous Material in the Premises without the specific consent of Landlord.

8. Broker's Commissions. Each of the parties represents and warrants to the other that it has not dealt with any broker or finder in connection with the Lease other than CB Richard Ellis (whose commission Landlord will pay subject to the final negotiated terms and in accordance with a separate commission agreement), and each of the parties hereby indemnifies and holds harmless the other party from any claim for commission asserted by any other broker or finder with whom said indemnifying party is alleged to have dealt.

9. Landlord Services. Throughout the Term, Landlord shall be responsible for coordinating and supervising all landscape maintenance and repair or replacement of same at the Premises, including but not limited to all plantings, planting sprinkler systems and ground mounted landscape lighting. In addition, Landlord shall also coordinate and supervise all cleaning, sweeping service and repairs and replacements as necessary to all parking areas and roadways at the Premises. The costs of landscape maintenance, repair and replacement shall be included in the definition of Expenses (as defined in Paragraph 5.1[c] of the Lease) and Tenant shall pay its percentage share of same. Pursuant to the provisions of Paragraph 5.1(c)(ii)(d), Landlord shall pay all costs of maintaining, repairing and replacing the parking areas and roadways at the Premises.

10. Condition of Premises. As of the Effective Date, Landlord certifies to Tenant that all systems and improvements contained in the Premises are in good working order and in compliance with all current and applicable requirements.

11. Incorporation. Except as otherwise amended herein, all other terms and conditions of the Lease shall remain in full force and effect and Landlord and Tenant each hereby ratifies and confirms its obligations thereunder. Each party acknowledges that as of the date of this Amendment, the other (i) is not in default under the terms of the Lease; (ii) has no defense, set off or counterclaim to the enforcement by the other of the terms of the Lease; and (iii) is not aware of any action or inaction by the other that would constitute an event of default under the Lease.

(Signatures on following page)

(Remainder of page left intentionally blank)

12. Limitation of Landlord Liability. Redress for any claim against Landlord under the Lease as amended hereby shall be limited to and enforceable only against and to the extent of Landlord's interest in the Building. Notwithstanding the foregoing, if Tenant is prohibited from fully recovering any judgment obtained against Landlord by reason of the foregoing limitation, Tenant shall thereafter have the right to offset the amount of such unrecovered judgment from installments of rent thereafter becoming due. The obligations of Landlord under the Lease are not intended to and shall not be personally binding on, nor shall any resort by had to the private properties of, any of its or its investment manager's trustees, directors, officers, partners, beneficiaries, members, stockholders, employees, or agents, and in no case shall either party be liable to the other party hereunder for any lost profits, damage to business, or any form of special, indirect or consequential damages.

IN WITNESS WHEREOF, the parties have executed this Amendment as of the day and year first written above.

ASSIGNMENT OF LEASE WITH CONSENT OF LANDLORD

THIS AGREEMENT made as of the 29th day of February, 2008.

BETWEEN:

EASTMAN KODAK COMPANY, as successor-in-interest to KODAK POLYCHROME GRAPHICS, LLC (the "Assignor")

- and -

RYDER INTEGRATED LOGISTICS, INC. (the "Assignee")

- and -

ING CLARION, LP (the "Landlord")

WHEREAS:

A. Pursuant to that certain Lease dated May 21, 1998, between Pacific Gulf Properties, Inc. as landlord and Assignor as tenant, as amended by that certain First Amendment to Lease dated April 5, 2004 attached hereto as Exhibit "A" (collectively, the "Lease"), PGP leased to the Assignor certain premises described in the Lease as approximately 214,000 square feet of space located at 12100 Rivera Road, Whittier, California (the "Premises") for a sixty (60) month term terminating on February 29, 2004; and

B. EASTMAN KODAK COMPANY, a New Jersey corporation is the successor-in-interest to Kodak Polychrome Graphics, LLC and the present Tenant under the Lease; and

C. Calwest Industrial Holdings, LLC is the successor in interest to PGP, and ING Clarion LP is the successor in interest to Calwest Industrial Holdings, LLC and the present landlord under the Lease; and

D. Landlord and Assignor previously extended the term of the Lease through May 20, 2010; and

E. The Lease contains a covenant on the part of the tenant not to assign the Lease without the Landlord's consent;

F. The Assignor has agreed to assign the Lease to the Assignee (the "Assignment");

G. The Assignor has requested Landlord to give its consent to assign the Lease to the Assignee, subject to and upon the terms and conditions set forth herein set; and

H. The Landlord has agreed to grant its consent to the Assignment, subject to the terms and conditions herein.

NOW THEREFORE, in consideration of the mutual covenants and agreements between the parties to this Agreement and the sum of One Dollar ($1.00) that has been paid by each of the parties to each of the other, the receipt and sufficiency of which is acknowledged, the parties covenant and agree as follows:

1. **RECITALS** – The parties hereby acknowledge, confirm and agree that the foregoing recitals are true in substance and fact and all rights and remedies to which it may be entitled at law, in equity or as tenant under the Lease.

2. **ASSIGNMENT** – As of and only upon the closing of the transactions contemplated in the Asset Purchase Agreement, dated December 28, 2007, between Assignor and Assignee (the date of which shall be referred to herein as the "Effective Date"), the Assignor assigns, transfers and sets over to the Assignee the Assignor's undivided right, title and interest in and to the Lease. To the best of Assignor's knowledge, Landlord has performed all of its obligations arising pursuant to the Lease up to and including the Effective Date. Notwithstanding anything contained herein to the contrary, in the event that the Closing does not occur, the Asset Purchase Agreement is terminated for any reason or the Landlord does not consent to the assignment contemplated hereby, this Agreement shall be null and void.

3. **ASSUMPTION** – Assignee hereby assumes all of Assignor's obligations as tenant under the Lease with regard to the Premises, from and after the Effective Date but not prior thereto, except for obligations with regard to the Excluded Assets (as defined in the Asset Purchase Agreement).

4. **INDEMNIFICATION** - Assignor shall defend, indemnify and hold Assignee harmless from and against any and all loss, cost, damage, expense (including reasonable attorneys' fees), liability, claim or cause of action incurred by Assignee as a result of claims brought against Assignee, as Assignor's successor-in-interest to the Lease, arising prior to the Effective Date hereof from, in connection with, or in any way relating to the Lease. Assignee hereby agrees to defend, indemnify and hold Assignor harmless from and against any and all loss, cost, damage, expense (including reasonable attorneys' fees), liability, claim or cause of action incurred by Assignor as a result of claims brought against Assignor by reason of Assignee's failure to perform the obligations set forth in the Lease and assumed hereunder by Assignee from and after the Effective Date, except for all loss, cost, damage, expense (including reasonable attorneys' fees), liability, claim or cause of action incurred by Assignee as a result of Assignor's removal of any Excluded Asset after the Effective Date. Assignor shall indemnify, defend and hold Assignee harmless for such loss, cost, damage expense (including reasonable attorneys' fees), liability, claim or cause of action incurred by Assignee which is caused by Assignor's removal of any Excluded Asset after the Effective Date.

5. **LEASE** - The Lease attached hereto as **EXHIBIT "A"** constitutes the entire agreement between Landlord and Assignor with respect to the Premises, is a good, valid and subsisting Lease and there are no modifications or supplemental or other agreements between Landlord and Kodak with respect to the Premises other than as set forth in the Lease.

6. **LANDLORD'S CONSENT** – The Landlord consents to this assignment of the Lease from the Assignor to the Assignee as of and from the Effective Date, provided that

Assignor shall continue to remain liable for the performance of tenant's obligations under the Lease. Nothing contained herein shall constitute any waiver of the necessity for consent to any further transfer or assignment of the Lease which must be obtained in accordance with the terms of the Lease.

7. **LANDLORD'S ACKNOWLEDGMENT** – The Landlord acknowledges the following, and understands and agrees that this certificate may be relied upon by the Assignee under the Lease:

(a) The Lease is in full force and effect;

(b) The Lease has not been previously assigned except that Assignor has succeeded to the interests of the original tenant under such Lease;

(c) Rent and all other amounts due under the Lease have been paid up to and including the Effective Date;

(d) No security deposit or rental deposit has been paid or is required under the Lease;

(e) To the best of Landlord's knowledge, Tenant is not in material default and no notice of default has been served under the Lease;

(f) The Landlord is not in default under the Lease;

(g) To the best of Landlord's knowledge, there is no defence, counterclaim, set off, dispute or claim under or in respect of the Lease which remains outstanding by or against the Assignor; and

(h) Landlord acknowledges that this Acknowledgement acts as an affirmation and ratification of the Lease and that Assignee will rely on the information contained herein in connection with the transactions contemplated between Assignor and Assignee.

8. **COUNTERPARTS** – This Agreement may be executed by facsimile and in several counterparts, each of which so executed shall be deemed to be an original and all of which taken together shall be deemed to constitute one and the same instrument, and it shall not be necessary in making proof of this Agreement to produce or account for more than one such counterpart.

9. **ENTIRE AGREEMENT** – This Agreement constitutes the entire Agreement between the parties with respect to all of the matters herein. Its execution has not been induced by, nor do any of the parties rely upon or regard as material, any representations or writings not incorporated herein and made a part hereof. The parties may not amended or modify this Agreement in any respect except by written instrument signed by the parties hereto. Any exhibits referred to in this Agreement are incorporated herein by reference and form part of the Agreement.

SECTION 4 – FIRE & EXPLOSION DATA

Flash Point: NONE F. C.

Method Used: N/A

Flammable Limits in Air % by Volume: LEL Lower 7.5 UEL Upper 15.0

Auto-Ignition Temperature:

Extinguisher Media: THIS MATERIAL IS NOT COMBUSTIBLE. USE EXTINGUISHING MEDIA ~~APPROPRIATE FOR SURROUNDING FIRE.~~

Special Fire Fighting Procedures: FIREFIGHTERS SHOULD WEAR SELF-CONTAINED BREATHING APPARATUS AND FULL PROTECTIVE CLOTHING. USE WATER SPRAY TO COOL NEARBY CONTAINERS AND STRUCTURES EXPOSED TO FIRE.

Unusual Fire and Explosion Hazards: EXTINGUISH ALL NEARBY SOURCES OF IGNITION SINCE VAPORS DECOMPOSE TO HAZARDOUS PRODUCTS AT HIGH TEMPERATURES.

SECTION 5 – PHYSICAL HAZARDS (REACTIVITY DATA)

Stability: Unstable ☐ Stable ☒ Conditions to Avoid: OPEN FLAMES, WELDING ARCS OR OTHER HIGH TEMPERATURE SOURCES

Incompatability (Materials to Avoid): ALKALIS, OXIDIZING MATERIALS, WATER, MOIST AIR.

DO NOT STORE THIS PRODUCT IN ALUMINUM CONTAINERS. DO NOT CONTACT WITH ACTIVE METALS SUCH AS ZINC OR ITS ALLOYS.

Hazardous Decomposition Products: MAY LIBERATE CARBON MONOXIDE, CARBON DIOXIDE, CHLORINE OR PHOSGENE

Hazardous Polymerization: May Occur ☐ Will Not Occur XX ☐ Conditions to Avoid

SECTION 6 – HEALTH HAZARDS

Signs and Symptoms of Exposure: INHALATION: Minimal effects expected at exposures below 1,000 ppm. Dizziness and drowsiness expected as a result of exposures above 1,000 ppm. EYE CONTACT: Liquid and vapors can irritate the eyes. SKIN CONTACT: Brief contact may dry the skin, causing dermatitis.

Medical Conditions Generally Aggravated by Exposure: THIS MATERIAL IS NOT CONSIDERED TO BE A CARCINOGEN BY THE NATIONAL TOXICOLOGY PROGRAM, THE INTERNATIONAL AGENCY FOR RESEARCH ON CANCER, OR THE OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION.

Emergency and First Aid Procedures

ROUTES OF ENTRY

1. Inhalation: REMOVE TO FRESH AIR. IF NOT BREATHING, GIVE ARTIFICIAL RESPIRATION. GET IMMEDIATE MEDICAL ATTENTION.
2. Eyes: IMMEDIATELY FLUSH EYES WITH LOTS OF RUNNING WATER. GET MEDICAL ATTENTION.
3. Skin: WASH SKIN WITH LOTS OF SOAP AND WATER, IF IRRITATION PERSISTS, GET MEDICAL ATTENTION.
4. Ingestion: DO NOT INDUCE VOMITING. GET IMMEDIATE MEDICAL ATTENTION.

SECTION 7 - SPECIAL PRECAUTIONS AND SPILL/LEAK PROCEDURES

Precautions to be Taken in Handling and Storage: STORE IN COOL, DRY, WELL-VENTILATED PLACE AWAY FOR INCOMPATIBLE MATERIALS. VENT CONTAINER FREQUENTLY TO RELIEVE PRESSURE.

Other Precautions: DO NOT CUT, GRIND, WELD OR DRILL ON OR NEAR THIS CONTAINER.

Steps to be Taken in Case Material is Released or Spilled: WEAR SAFETY EQUIPMENT INCLUDING SELF CONTAINED BREATHING APPARATUS. FOR SMALL SPILLS, WIPE OR MOP UP AND DISPOSE OF IN DOT APPROVED CONTAINERS. FOR LARGE SPILLS, CONTAIN BY DIKING WITH SOIL. PLACE RESIDUE IN DOT APPROVED CONTAINERS. KEEP OUT OF SEWERS.

Waste Disposal Methods (Consult federal, state, and local regulations): DISPOSE OF CONTAMINATED MATERIAL AND MATERIALS USED IN CLEANUP IN A MANNER APPROVED BY REGULATORY AGENCIES FOR THIS TYPE OF MATERIAL.

SECTION 8 – SPECIAL PROTECTION INFORMATION/CONTROL MEASURES

Respiratory Protection (Specify Type): IF USE CONDITIONS GENERATE VAPORS OR MISTS, WEAR A NIOSH APPROVED RESPIRATOR.

Ventilation: Local Exhaust XXX; Mechanical (General) XXX; Special; Other

Protective Gloves: RUBBER GLOVES

Eye Protection: YES UNLESS A FULL FACEPIECE RESPIRATOR IS WORN

Other Protective Clothing or Equipment: LONG SLEEVED SHIRT, TROUSERS AND PROTECTIVE SHOES

Work/Hygienic Practices: AN EYEWASH AND SAFETY SHOWER SHOULD BE NEARBY AND READY FOR USE

FORMS EXPLOSIVE PEROXIDES
HEAT SENSITIVE - CAN DECOMPOSE IF HEATED
CONTACT WITH ACID LIBERATES TOXIC GAS
CAUSES SKIN AND EYE IRRITATION
HARMFUL IF INHALED, ABSORBED THROUGH SKIN, OR SWALLOWED
HIGH VAPOR CONCENTRATIONS MAY CAUSE DROWSINESS AND IRRITATION OF THE EYES OR RESPIRATORY TRACT
NOTICE! DELIBERATE CONCENTRATION AND INHALATION OF VAPORS MAY BE HARMFUL OR FATAL
CAN CAUSE CNS EFFECTS
CAN CAUSE CARDIOVASCULAR EFFECTS
CAN CAUSE LIVER DAMAGE
CAN CAUSE KIDNEY DAMAGE
POSSIBLE CANCER HAZARD - MAY CAUSE CANCER BASED ON ANIMAL DATA

HMIS III Hazard Ratings: Health - 2*, Flammability - 3, Reactivity (Stability) - 1

NFPA Hazard Ratings: Health - 4, Flammability - 3, Instability - 1

NOTE: HMIS III and NFPA 704 (2007) hazard indexes involve data review and interpretation that may vary among companies. They are intended only for rapid, general identification of the magnitude of the potential hazards. To adequately address safe handling, ALL information in this MSDS must be considered.

3. Composition/information on ingredients

Weight %	Components - (CAS-No.)
45 - 50	1,4-Dioxane (123-91-1)
25 - 30	Dichloromethane (75-09-2)
25 - 30	Acetone (67-64-1)
1 - 5	Cellulose nitrate (9004-70-0)
1 - 4	Methanol (67-56-1)

4. First aid measures

Inhalation: If inhaled, remove to fresh air. Get medical attention.

Eyes: In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention.

Skin: In case of contact, immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Get medical attention if symptoms occur. Wash contaminated clothing before re-use. Destroy or thoroughly clean contaminated shoes.

Ingestion: Do NOT induce vomiting. Give victim a glass of water. Never give anything by mouth to an unconscious person. Get medical attention immediately.

Notes to physician:

Treatment: Overexposure may sensitize the myocardium to epinephrine and/or increase myocardial irritability. Unless the benefits of epinephrine administration outweigh the potential serious side effects, the use of epinephrine may be contraindicated. If administration of epinephrine is necessary, electrocardiographic monitoring during and after administration is recommended.

5. Fire-fighting measures

Extinguishing Media: Water spray, Carbon dioxide (CO2), Dry chemical, Foam. Use water spray to cool unopened containers.

Special Fire-Fighting Procedures: Wear self-contained breathing apparatus and protective clothing. Fire or excessive heat may produce hazardous decomposition products. Fight fire from a protected location. USE WATER WITH CAUTION. Water may be ineffective.

Hazardous Combustion Products: Carbon oxides, nitrogen oxides (NOx), (see also Hazardous Decomposition Products sections.)

Unusual Fire and Explosion Hazards: Flammable Material contains a flammable solvent that may accumulate in the container headspace. Vapours may form explosive mixtures with air. Vapours are heavier than air and may spread along floors. Prevent buildup of vapours or gases to explosive concentrations. Elevated temperature can cause decomposition. May form peroxides of unknown stability.

6. Accidental release measures

Remove all sources of ignition. Absorb spill with vermiculite or other inert material, then place in a container for chemical waste. Clean surface thoroughly to remove residual contamination.

For Large Spills: Use water spray to disperse vapours and dilute spill to a nonflammable mixture. Prevent runoff from entering drains, sewers, or streams.

7. Handling and storage

Personal precautions: Do not breathe mist or vapour at concentrations greater than the exposure limits. Keep container tightly closed. Use only with adequate ventilation. Avoid contact with eyes, skin, and clothing. Wash thoroughly after handling.

Cleaning Precautions: If accidentally mixed with a strong oxidizer or acid, do not breathe gas.

Prevention of Fire and Explosion: Keep away from heat, light, sparks, and flame. Use only with adequate ventilation. Exercise caution if heating, especially in a closed container. Keep from contact with oxidizing materials. Comply with all national, state, and local codes pertaining to the storage, handling, dispensing, and disposal of flammable liquids. If peroxide formation is suspected, do not open or move container. Minimize exposure to air. After opening, purge container with nitrogen before reclosing. Periodically test for peroxide formation on long-term storage. Do not distill or allow to evaporate to near dryness.

Storage: Keep containers tightly closed in a cool, well-ventilated place. Store in cool place. Do not freeze. Protect against light. Protect from contamination. Keep away from incompatible substances (see Incompatibility section.)

8. Exposure controls/personal protection

Occupational exposure controls

Chemical Name	Regulatory List	Value Type	Value
1,4-Dioxane	ACGIH	time weighted average	20 ppm
		Skin - potential significant contribution to overall exposure by the cutaneous route	
	OSHA	time weighted average	100 ppm 360 mg/m3
		prevent or reduce skin absorption	
Dichloromethane	EK HPG	Time Weighted Average (TWA):	50 ppm
		Short Term Exposure Limit (STEL):	200 ppm
	ACGIH	time weighted average	50 ppm
	OSHA	time weighted average	25 ppm
		Action Level	12.5 ppm
		Short term exposure limit	125 ppm
			15 min
		time weighted average	25 ppm
			8 hr
		Short term exposure limit	125 ppm
		Remarks: See 29 CFR 1910.1052	
Acetone	ACGIH	time weighted average	500 ppm
		Short term exposure limit	750 ppm
	OSHA	time weighted average	1,000 ppm 2,400 mg/m3

Methanol	ACGIH	time weighted average	200 ppm
		Short term exposure limit	250 ppm
		Skin - potential significant contribution to overall exposure by the cutaneous route	
	OSHA	time weighted average	200 ppm 260 mg/m3
		prevent or reduce skin absorption	

Ventilation: Use process enclosures, local exhaust ventilation, or other engineering controls to maintain airborne levels below recommended exposure limits. Controls should be sufficient so that applicable occupational exposure limits are not exceeded.

Respiratory protection: If engineering controls do not maintain airborne concentrations below recommended exposure limits, an approved respirator must be worn. A respirator should be worn if hazardous decomposition products are likely to be or have been released. Respirator type: full-face positive-pressure air-supplied. If respirators are used, a program should be instituted to assure compliance with applicable federal, state, commonwealth, provincial, or local laws and regulations.

Eye protection: Wear safety glasses with side shields (or goggles).

Hand protection: Wear impervious gloves and protective clothing appropriate for the risk of exposure.

9. Physical and chemical properties

Physical form: liquid

Colour: colourless

Odour: pungent

Specific gravity: 1.035

Vapour pressure (at 20.0 °C (68.0 °F)) : 365 mbar (273.8 mm Hg)

Vapour density: no data available

Volatile fraction by weight: 97 %

Boiling point/boiling range: no data available

Water solubility: insoluble

pH: not applicable

Flash point: -6 °C (21.2 °F) (Setaflash closed cup)

10. Stability and reactivity

Stability: Stable; however, forms peroxides that may explode on concentration. Safe handling temperatures are dependent on specific conditions of use and are typically substantially below the onset temperature. Consult your technical safety experts. Materials containing similar structural groups can decompose if heated.

Exotherm onset temperature: 163 °C

Incompatibility: Strong oxidizing agents, Reducing agents, Halogenated compounds, Strong acids, Strong bases, Metals, Aluminium.

Hazardous decomposition products: Phosgene, hydrogen chloride, nitrogen oxides (NOx), dichloromethane

Hazardous Polymerization: Hazardous polymerisation does not occur.

11. Toxicological information

Effects of Exposure

General advice:

Contains: 1,4-Dioxane. Possible cancer hazard. May cause cancer based on animal data. Can cause liver damage. Can cause kidney damage.

Contains: Dichloromethane. Possible cancer hazard. May cause cancer based on animal data. Can cause CNS effects. May cause liver damage based on animal data. May cause an increase in carboxyhemoglobin levels. Individuals with cardiovascular disease may be more susceptible to possible adverse effects from elevated carboxyhemoglobin levels.

Contains: Acetone. Extensive human experience and animal data indicate that acetone is of low toxicity. However, ingestion of very large amounts or inhalation of extremely high vapour concentrations can cause irritation, nausea, vomiting, confusion, drowsiness, convulsions, and coma with possible liver and kidney injury.

Contains: Methanol. Prolonged and repeated exposure to high vapour concentrations, skin absorption or ingestion of methyl alcohol may result in visual disturbances, metabolic acidosis, headache, giddiness, nausea, insomnia, gastric disturbance, dizziness, and slow breathing. There have been several cases reported of blindness, coma and death due to the ingestion of methyl alcohol.

Inhalation: Harmful if inhaled. Deliberate concentration and inhalation of vapours may be harmful or fatal. High vapour concentrations may cause drowsiness and irritation.

Eyes: Causes eye irritation. High vapour concentrations may cause irritation.

Skin: Causes skin irritation. Harmful if absorbed through skin.

Ingestion: Harmful if swallowed. May cause irritation of the gastrointestinal tract. May cause abdominal pain with vomiting, nausea, diarrhea, or dizziness.

Data for 1,4-Dioxane (CAS 123-91-1):

Acute Toxicity Data:
Oral LD50 (mouse): 3,200 - 6,400 mg/kg

- Oral LD50 (rat): 4,200 mg/kg

- Inhalation LC50 (rat): 46000 MG/M3 /
- Inhalation LC50 (mouse): 37000 mg/m3 /
- Dermal LD50 (rabbit): 7600 UL/KG
- Skin irritation: none
- Eye irritation: moderate

Data for Dichloromethane (CAS 75-09-2):

Acute Toxicity Data:
Oral LD50 (rat): 800 - 1,600 mg/kg

- Inhalation LC50 (rat): < 57 mg/l / 6 hr
- Skin irritation: severe
- Skin Sensitization: negative
- Eye irritation: mild

Definitions for the following section(s): LOEL =lowest-observed-effect level, LOAEL = lowest-observed-adverse-effect, NOAEL = no observed-adverse-effect level, NOEL =no-observed-effect level.

Repeated dose toxicity:

- Inhalation (24 months, rat): NOEL; 500 ppm

Data for Acetone (CAS 67-64-1):

Acute Toxicity Data:
Oral LD50 (rat): 5,800 mg/kg

- Inhalation LC50 (rat): > 16000 ppm / 4 hr
- Inhalation LC50 (mouse): 44 GM/M3 / 4 hr
- Inhalation LC50 (rat): 50,100 mg/l / 8 hr
- Inhalation LC50 (rat): 76 mg/l / 4 hr
- Dermal LD50 (guinea pig): >9400 UL/KG
- Skin irritation: Mild skin irritation
- Eye irritation: severe

Data for Methanol (CAS 67-56-1):

Acute Toxicity Data:

- Inhalation LC50 (rat): > 22500 ppm / 8 hr
- Inhalation LC50 (rat): 83.2 mg/l / 4 hr
- Dermal LD50 (guinea pig): 10 - 20 ml/kg
- Skin irritation: Skin irritation
- Skin Sensitization: slight
- Eye irritation: slight to moderate

12. Ecological information

The following properties are ESTIMATED from the components of the preparations.

Potential Toxicity:

Toxicity to fish (LC50):	> 100 mg/l
Toxicity to daphnia (EC50):	> 100 mg/l
Toxicity to algae (IC50):	> 100 mg/l
Toxicity to other organisms (EC50):	> 100 mg/l
Persistence and degradability:	Readily biodegradable.
Chemical Oxygen Demand (COD):	ca. 1561 g/l
Biochemical Oxygen Demand (BOD):	ca. 400 g/l

13. Disposal considerations

Discharge, treatment, or disposal may be subject to federal, state, commonwealth, provincial, or local laws. Since emptied containers retain product residue, follow label warnings even after container is emptied. Residual vapours may explode on ignition; do not cut, drill, grind, or weld on or near this container.

14. Transport information

The information given below is provided to assist in documentation. It may supplement the information on the package. The package in your possession may carry a different version of the label depending on the date of manufacture. Depending on inner packaging quantities and packaging instructions, it may be subject to specific regulatory exceptions. Please consult the product packaging for further details.

IATA:	UN-Number:	UN1133
	Proper shipping name:	ADHESIVES (Dichloromethane, 1,4-dioxane)
	Class:	3
	Packaging group:	II
IMDG:	UN-Number:	UN1133
	Proper shipping name:	ADHESIVES (Dichloromethane, 1,4-dioxane)
	Class:	3
	Packaging group:	II
US DOT:	UN-Number:	UN1133
	Proper shipping name:	ADHESIVES
	Class:	3
	Packaging group:	II
	Reportable Quantity:	Dichloromethane, 1,4-dioxane
	Reportable Quantity:	455 lb
	Reportable Quantity:	45 lb

For more transportation information, go to: www.kodak.com/go/ship.

15. Regulatory information

Notification status

Regulatory List	Notification status
TSCA	All listed
DSL	All listed
NDSL	None listed
EINECS	Not all listed
ELINCS	None listed
NLP	None listed
AICS	All listed
IECS	All listed
ENCS	All listed
ECI	All listed
NZIoC	All listed
PICCS	All listed
TSCA 12(b)	Listed

"Not all listed" indicates one or more component is either not on the public Inventory or is subject to exemption requirements. If additional information is needed contact Kodak.

Other regulations

American Conference of Governmental Industrial Hygienists (ACGIH):	A3 - Confirmed Animal Carcinogen with Unknown Relevance to Humans: 1,4-Dioxane, Dichloromethane
International Agency for Research on Cancer (IARC):	Group 2B - Possibly Carcinogenic to Humans: 1,4-Dioxane, Dichloromethane
U.S. National Toxicology Program (NTP):	Reasonably Anticipated To Be A Human Carcinogen: 1,4-Dioxane, Dichloromethane
U.S. Occupational Safety and Health Administration (OSHA):	OSHA Carcinogen or Potential Carcinogen: 1,4-Dioxane, Dichloromethane
California Prop. 65	WARNING! This product contains a chemical known in the State of California to cause cancer.
U.S. - CERCLA/SARA (40 CFR § 302.4 Designation of hazardous substances):	1,4-Dioxane, Methanol, Acetone, Dichloromethane

U.S. - California - 8 CCR Section 339 - Director's List of Hazardous Substances:	1,4-Dioxane, Methanol, Acetone, Dichloromethane
U.S. - California - 8 CCR Section 5200-5220 - Specifically Regulated Carcinogens:	Dichloromethane
U.S. - California - 8 CCR Section 5203 Carcinogens:	Dichloromethane
U.S. - California - 8 CCR Section 5209 Carcinogens:	No components found on the California Section 5209 Carcinogens List.
U.S. - Massachusetts - General Law Chapter 111F (MGL c 111F) - Hazardous Substances Disclosure by Employers (a.k.a. Right to Know Law):	1,4-Dioxane, Methanol, Acetone, Dichloromethane, Cellulose nitrate
U.S. - Minnesota Employee Right-to-Know (5206.0400, Subpart 5. List of Hazardous Substances):	1,4-Dioxane, Methanol, Acetone, Dichloromethane
U.S. - New Jersey - Worker and Community Right to Know Act (N.J.S.A. 34:5A-1):	1,4-Dioxane, Methanol, Acetone, Dichloromethane, Cellulose nitrate
U.S. - Pennsylvania - Part XIII. Worker and Community Right-to-Know Act (Chapters 301-323):	1,4-Dioxane, Methanol, Acetone, Dichloromethane, Cellulose nitrate
U.S. - Rhode Island - Title 28 Labor and Labor Relations (Chapters 28-21 Hazardous Substance Right-to-Know Act):	1,4-Dioxane, Methanol, Acetone, Dichloromethane, Cellulose nitrate

16. Other information

The data below reflects current legislative requirements whereas the product in your possession may carry a different version of the label depending on the date of manufacture.

US/Canadian Label Statements:

KODAK Fast Drying Film Cement
CONTAINS: 1,4-Dioxane (123-91-1), Dichloromethane (75-09-2), Acetone (67-64-1), Methanol (67-56-1), Cellulose nitrate (9004-70-0).
DANGER! FLAMMABLE LIQUID AND VAPOR. FORMS EXPLOSIVE PEROXIDES. HEAT SENSITIVE - CAN DECOMPOSE IF HEATED. CONTACT WITH ACID LIBERATES TOXIC GAS. CAUSES SKIN AND EYE IRRITATION. HARMFUL IF INHALED, ABSORBED THROUGH SKIN, OR SWALLOWED. HIGH VAPOR CONCENTRATIONS MAY CAUSE DROWSINESS AND IRRITATION OF THE EYES OR RESPIRATORY TRACT. NOTICE! DELIBERATE CONCENTRATION AND INHALATION OF VAPORS MAY BE HARMFUL OR FATAL. CAN CAUSE CNS EFFECTS. CAN CAUSE CARDIOVASCULAR EFFECTS. CAN CAUSE LIVER DAMAGE. CAN CAUSE KIDNEY DAMAGE. POSSIBLE CANCER HAZARD - MAY CAUSE CANCER BASED ON ANIMAL DATA.
Keep away from heat, light, sparks, and flame. Store away from heat and light. Keep container tightly closed. Store in cool place. Do not allow to evaporate to near dryness. Do not freeze. Avoid heat or contamination. Residual vapours may explode on ignition; do not cut, drill, grind, or weld on or near this container. Do not breathe vapours or spray mist. Avoid contact with eyes, skin, and clothing. Use only

with adequate ventilation. Wash thoroughly after handling. **FIRST AID:** If inhaled, remove to fresh air. Get medical attention. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention. In case of contact, immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Get medical attention if symptoms occur. Wash contaminated clothing before re-use. Destroy or thoroughly clean contaminated shoes. Do NOT induce vomiting. Give victim a glass of water. Never give anything by mouth to an unconscious person. Get medical attention immediately. **Note to Physicians:** Overexposure may sensitize the myocardium to epinephrine and/or increase myocardial irritability. Unless the benefits of epinephrine administration outweigh the potential serious side effects, the use of epinephrine may be contraindicated. If administration of epinephrine is necessary, electrocardiographic monitoring during and after administration is recommended. Keep out of reach of children. Do not handle or use until safety precautions in Material Safety Data Sheet (MSDS) have been read and understood. Since emptied containers retain product residue, follow label warnings even after container is emptied. **IN CASE OF FIRE:** Water spray, Carbon dioxide (CO2), Dry chemical, Foam. Use water spray to cool unopened containers. **IN CASE OF SPILL:** Remove all sources of ignition. Absorb spill with vermiculite or other inert material, then place in a container for chemical waste. Clean surface thoroughly to remove residual contamination. For Large Spills: Use water spray to disperse vapours and dilute spill to a nonflammable mixture. Prevent runoff from entering drains, sewers, or streams.

The information contained herein is furnished without warranty of any kind. Users should consider these data only as a supplement to other information gathered by them and must make independent determinations of suitability and completeness of information from all sources to assure proper use and disposal of these materials and the safety and health of employees and customers and the protection of the environment. The information relating to the working solution is for guidance purposes only, and is based on correct mixing and use of the product according to instructions.

Material Safety Data Sheet

Genetron® 11

1. CHEMICAL PRODUCT AND COMPANY IDENTIFICATION

PRODUCT NAME: Genetron® 11
OTHER/GENERIC NAMES: CFC-11
PRODUCT USE: Refrigerant and blowing agent for insulating foam. See Section 15 for Regulatory Information
MANUFACTURER: Honeywell
101 Columbia Road
Box 1053
Morristown, New Jersey 07962-1053

FOR MORE INFORMATION CALL:
(Monday-Friday, 8:00am-5:00pm)
1-800-522-8001

IN CASE OF EMERGENCY CALL:
(24 Hours/Day, 7 Days/Week)
Chemtrec 1-800-424-9300 or 703-527-3887

2. COMPOSITION/INFORMATION ON INGREDIENTS

INGREDIENT NAME	CAS NUMBER	WEIGHT %
Trichlorofluoromethane	75-69-4	100

Trace impurities and additional material names not listed above may also appear in Section 15 toward the end of the MSDS. These materials may be listed for local "Right-To-Know" compliance and for other reasons.

3. HAZARDS IDENTIFICATION

EMERGENCY OVERVIEW: Colorless, volatile liquid with ethereal and faint sweetish odor. Non-flammable material. Overexposure may cause dizziness and loss of concentration. At higher levels, CNS depression and cardiac arrhythmia may result from exposure. Vapors displace air and can cause asphyxiation in confined spaces. At high temperatures (>250°C), decomposition products may include Hydrochloric Acid (HCl), Hydrofluoric Acid (HF) and carbonyl halides.

POTENTIAL HEALTH HAZARDS

SKIN: Prolonged and/or repeated contact with this solvent can cause irritation of the skin (defatting of skin).

EYES: Irritant. Liquid contact will irritate and may cause conjunctivitis.

INHALATION: Genetron 11 has a relatively low order of acute toxicity. When oxygen levels in air are reduced to 12-14% by displacement, symptoms of asphyxiation, loss of coordination, increased pulse rate and deeper respiration will occur. In repeated exposure tests with animals, changes were noted in liver functions and lipid production at levels above 100ppm. At higher levels, cardiac arrhythmia may occur.

INGESTION: Discomfort due to volatility would be expected. Some of the inhalation effects could be expected.

DELAYED EFFECTS: None identified.

MATERIAL SAFETY DATA SHEET

Genetron® 11

Ingredients found on one of the OSHA designated carcinogen lists are listed below.

INGREDIENT NAME	NTP STATUS	IARC STATUS	OSHA LIST
No ingredients listed in this section			

4. FIRST AID MEASURES

SKIN: Promptly flush skin with water until all chemical is removed. Remove clothing contaminated with liquid and wash before reuse.

EYES: Immediately flush eyes with large amounts of water for at least 15 minutes, lifting eyelids occasionally to facilitate irrigation. Get medical attention.

INHALATION: Immediately remove patient to fresh air. If breathing has stopped, give artificial respiration. Use oxygen as required, provided a qualified operator is available. DO NOT give epinephrine (adrenaline). Get medical attention immediately.

INGESTION: DO NOT induce vomiting unless instructed to do so by a physician. DO NOT give stimulants. Get medical attention immediately.

ADVICE TO PHYSICIAN: Because of possible disturbances of cardiac rhythm, catecholamine drugs such as epinephrine, should be used with special caution and only in situations of emergency life support. Treatment of overexposure should be directed at the control of symptoms and the clinical conditions.

5. FIRE FIGHTING MEASURES

FLAMMABLE PROPERTIES

FLASH POINT: None
FLASH POINT METHOD: ASTM D-1310-67 and ASTM D-56-82
AUTOIGNITION TEMPERATURE: Unknown
UPPER FLAME LIMIT (volume % in air): None
LOWER FLAME LIMIT (volume % in air): None

FLAME PROPAGATION RATE (solids): Not applicable
OSHA FLAMMABILITY CLASS: Not applicable

EXTINGUISHING MEDIA:
Use any standard agent - choose the one most appropriate for type of surrounding fire (material itself in not flammable)

UNUSUAL FIRE AND EXPLOSION HAZARDS:
Contact with certain finely divided metals may cause exothermic reaction and/or explosive combinations under specific conditions (e.g. very high temperatures and/or appropriate pressures and in the presence of oxygen). Decomposition products include hydrochloric acid, hydrofluoric acid, and carbonyl halides.

SPECIAL FIRE FIGHTING PRECAUTIONS/INSTRUCTIONS:
Firefighters should wear self-contained, NIOSH-approved breathing apparatus for protection against suffocation and possible toxic decomposition products. Proper eye and skin protection should be provided. Use water spray to keep fire-exposed containers cool and to knock down vapors which may result from product decomposition.

6. ACCIDENTAL RELEASE MEASURES

IN CASE OF SPILL OR OTHER RELEASE: (Always wear recommended personal protective equipment.)
Immediately evacuate the area and provide maximum ventilation. Try to eliminate all ignition sources. Unprotected personnel should move upwind from spill. Only personnel equipped with proper respiratory and eye/skin protection should be permitted in the area. Dike area to contain the spill. Take precautions as necessary to prevent contamination of ground and surface waters. For large spills, pump material into appropriate containers. For small spills, recover or absorb spilled material using an absorbant designed for chemical spills such as Hazsorb® pillows. Place used absorbants into closed DOT approved containers for disposal. After all visible traces have been removed, thoroughly wet vacuum the area. DO NOT flush into sewer. If the area of the spill is porous, removal of contaminated earth/surface may be required.

Spills and releases may have to be reported to Federal and/or local authorities. See Section 15 regarding reporting requirements.

7. HANDLING AND STORAGE

NORMAL HANDLING: (Always wear recommended personal protective equipment.)
Genetron 11 boils at 74.5°F, hence contents may be under pressure. Exercise caution when opening container. If containers have been stored in direct sunlight or heated above the boiling point of the solvent, the container should be cooled to below the boiling point before opening.

Recommended Opening Prcedure
To open container, follow these procedures to avoid loss and contamination of the product.
1. Tear off protective cap over large bung opening.
2. Carefully remove the 3/4 inch plug from the center of the large bung. DO NOT puncture the inner seal.
3. Insert convenient length 3/4 inch nipple fitted with a closed valve. As nipple is inserted, the inner seal is broken and container is ready to unload through valve.

STORAGE RECOMMENDATIONS:
Keep container closed when not in use. DO NOT store in open, unlabeled or mislabeled containers. Store in a cool, well-ventilated area of low fire risk. Protect container and its fittings from physical damage. Storage in subsurface locations should be avoided. Close valve tightly and replace bung after use and when empty. If container temperature exceeds boiling point, cool the container before opening.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

ENGINEERING CONTROLS:
Use local exhaust at filling zones and where leakage is probable. Use mechanical (general) ventilation for storage areas. All ventilation should be designed in accordance with OSHA standard (29 CFR 1910.94).

PERSONAL PROTECTIVE EQUIPMENT

SKIN PROTECTION:
Use protective, impervious gloves such as PVA or neoprene. Also, use full protective clothing if there is prolonged or repeated contact of liquid with skin. Any non-impervious clothing should be promptly removed when contaminated and washed before reuse.

EYE PROTECTION:
For normal conditions, wear safety glasses. Where there is reasonable probability of liquid contact, wear splash-proof goggles.

RESPIRATORY PROTECTION:
None required for normal work situations where adequate ventilation is provided. Use NIOSH approved self-contained, positive pressure respirators for emergencies and in situations where air may be displaced by vapors.

ADDITIONAL RECOMMENDATIONS:
High dose-level warning signs are recommended for areas of principle exposure. Provide eyewash stations and quick drench shower facilities at convenient locations. For tank cleaning operations, see OSHA regulations, 29 CFR 1910.132 and 29 CFR 1910.133.

EXPOSURE GUIDELINES

INGREDIENT NAME	ACGIH TLV	OSHA PEL	OTHER LIMIT
Trichlorofluoromethane	1000 ppm Ceiling	1000 ppm TWA - 8	None

* = Limit established by Honeywell.
** = Workplace Environmental Exposure Level (AIHA).
*** = Biological Exposure Index (ACGIH).

OTHER EXPOSURE LIMITS FOR POTENTIAL DECOMPOSITION PRODUCTS:
Hydrogen Fluoride: ACGIH TLV: 3 ppm ceiling

9. PHYSICAL AND CHEMICAL PROPERTIES

APPEARANCE: Colorless liquid
PHYSICAL STATE: Liquid
MOLECULAR WEIGHT: 137.35
CHEMICAL FORMULA: CCl_3F
ODOR: Faint ethereal and sweetish odor
SPECIFIC GRAVITY (water = 1.0): 1.47 @ 70°F (21.1°C)
SOLUBILITY IN WATER (weight %): 0.21% @ 70°F (21.1°C)
pH: Neutral
BOILING POINT: 23.6°F (74.5°C)
MELTING POINT: -167.8°F (-111°C)
VAPOR PRESSURE: 12.8 psia at 68°F
VAPOR DENSITY (air = 1.0): 4.8
EVAPORATION RATE: >1 **COMPARED TO:** Ether = 1
% VOLATILES: 100
FLASH POINT: None
(Flash point method and additional flammability data are found in Section 5.)

10. STABILITY AND REACTIVITY

NORMALLY STABLE? (CONDITIONS TO AVOID):
Product is normally stable.

Avoid sources of ignition such as sparks, hot spots, welding flames and lighted cigarettes. At all concentration ranges, exposure of the product to high energy sources may yield toxic and/or corrosive decomposition products.

INCOMPATIBILITIES:

Strong acids and alkalis, reactive metals e.g., powdered or freshly abraded aluminum (may cause strong exothermic reaction), sodium, potassium, calcium, magnesium, zinc, molten aluminum, barium and lithium shavings. Strong oxidizing agents.

HAZARDOUS DECOMPOSITION PRODUCTS:

Hydrochloric and hydrofluoric acids; and carbonyl halides, such as phosgene.

HAZARDOUS POLYMERIZATION:

Will not occur.

11. TOXICOLOGICAL INFORMATION

IMMEDIATE (ACUTE) EFFECTS:

Acute Inahlation:

4 hr LC_{50}.(rat)....26,000 ppm

Cardiac Sensitization Threshold (dog).....5,000 ppm

Anesthetic Concentration 35,000 ppm (10 min.)

DELAYED (SUBCHRONIC AND CHRONIC) EFFECTS:

Subchronic NOEL - 10,000 ppm

OTHER DATA:

Not a teratogen

12. ECOLOGICAL INFORMATION

Biodegradability - Minimal

Octanol Water Partition Coefficient: Not Determined

13. DISPOSAL CONSIDERATIONS

RCRA

Is the unused product a RCRA hazardous waste if discarded? Yes

If yes, the RCRA ID number is: U121

OTHER DISPOSAL CONSIDERATIONS:

Disposal of waste material may be subject to federal regulations. Users should review their operations, then consult with appropriate regulatory agencies before discharging or disposing of waste material. Genetron 11 is subject to U.S. Environmental Protection Agency Clean Air Act Regulations, Section 608 in 40 CFR Part 82 regarding refrigerant recycling.

The information offered here is for the product as shipped. Use and/or alterations to the product such as mixing with other materials may significantly change the characteristics of the material and alter the RCRA classification and the proper disposal method.

14. TRANSPORT INFORMATION

US DOT HAZARD CLASS: For individual packages that contain LESS THAN the Reportable Quantity (5000 lbs.),- Not Regulated.
For individual packages that contain MORE THAN the Reportable Quantity (5000 lbs.), - RQ, Environmentally Hazardous Substances, Liquid, n.o.s. (Trichlorofluoromethane) 9, PG III, UN3082

US DOT ID NUMBER: For individual packages that contain LESS THAN the Reportable Quantity (5000 lbs.),- Not Applicable.
For individual packages that contain MORE THAN the Reportable Quantity (5000 lbs.), - RQ, Environmentally Hazardous Substances, Liquid, n.o.s. (Trichlorofluoromethane) 9, PG III, UN3082

For additional information on shipping regulations affecting this material, contact the information number found in Section 1.

15. REGULATORY INFORMATION

TOXIC SUBSTANCES CONTROL ACT (TSCA)

TSCA INVENTORY STATUS: Listed on the TSCA Inventory

OTHER TSCA ISSUES: None

SARA TITLE III/CERCLA

"Reportable Quantities" (RQs) and/or "Threshold Planning Quantities" (TPQs) exist for the following ingredients.

INGREDIENT NAME	SARA/CERCLA RQ (lb)	SARA EHS TPQ (lb)
Trichlorofluoromethane	5000	None

Spills or releases resulting in the loss of any ingredient at or above its RQ requires immediate notification to the National Response Center [(800) 424-8802] and to your Local Emergency Planning Committee.

SECTION 311 HAZARD CLASS: IMMEDIATE
DELAYED

SARA 313 TOXIC CHEMICALS:
The following ingredients are SARA 313 "Toxic Chemicals". CAS numbers and weight percents are found in Section 2.

INGREDIENT NAME	COMMENT
Trichlorofluoromethane	None

STATE RIGHT-TO-KNOW

In addition to the ingredients found in Section 2, the following are listed for state right-to-know purposes.

INGREDIENT NAME	WEIGHT %	COMMENT
No ingredients listed in this section		

ADDITIONAL REGULATORY INFORMATION:

Genetron 11 is subject to U.S. Environmental Protection Agency Clean Air Act Regulations Sections 610, 611 at 40 CFR Part 82. Section 611 requires the following label text on all shipments of this product:

WARNING:
DO NOT VENT TO THE ATMOSPHERE. TO COMPLY WITH PROVISIONS OF THE U.S. CLEAN AIR ACT, ANY RESIDUAL MUST BE RECOVERED.
CONTAINS TRICHLOROFLUOROMETHANE (CFC-11), A SUBSTANCE WHICH HARMS PUBLIC HEALTH AND ENVIRONMENT BY DESTROYING OZONE IN THE UPPER ATMOSHPERE.

WHMIS CLASSIFICATION (CANADA):

This product has been evaluated in accordance with the hazard criteria of the CPR and the MSDS contains all the information required by the CPR.

FOREIGN INVENTORY STATUS:

EINECS Number:2008925

16. OTHER INFORMATION

CURRENT ISSUE DATE: January, 2004
PREVIOUS ISSUE DATE: February, 2003

CHANGES TO MSDS FROM PREVIOUS ISSUE DATE ARE DUE TO THE FOLLOWING:

Section 3: Revised decomposition products
Section 5: Revised decomposition products

OTHER INFORMATION: HMIS Classification: Health - 1, Flammability - 0, Reactivity – 0
NFPA Classification: Health - 2, Flammability - 0, Reactivity - 0

Hazardous Material Business Plans and Chemical Inventory Forms

(Responsive to Questions #7, #8)

LOS ANGELES COUNTY FIRE DEPARTMENT
HEALTH HAZARDOUS MATERIALS DIVISION
5825 Rickenbacker Road, Commerce, CA 90040

BUSINESS PLAN ANNUAL RENEWAL CERTIFICATION

Hazardous Materials Inventory Statement (HMIS)

I certify that the attached HMIS reflects the handling of hazardous materials for the reporting year in accordance with the following conditions:

- ☐ **Delete:** Write "delete" on the HMIS next to any previously disclosed hazardous materials that are no longer used.
- ☒ **Revise:** Write the correct amounts, locations, or container type on the HMIS to reflect the accuracy of any previously reported hazardous materials.
- ☐ **EPCRA Compliance:** Fill in the EPCRA field with your signature on the HMIS for any hazardous material type and quantity identified on 40 CFR Part 355, Appendix A—The List of Extremely Hazardous Substances and Their Threshold Planning Quantities.
- ☒ **Add:** Complete one **Hazardous Materials Inventory—Chemical Description Form** to add each hazardous materials that you have not previously disclosed. Submit one form per chemical.
- ☐ **No Change:** The HMIS is accurate and complete.

Consolidated Contingency Plan (CCP)

I review the CCP every three years and certify that the CCP on file with your agency is accurate and current in accordance with the following conditions:

- ☐ **Modification:** Significant changes in facility personnel or operations required a revision of the CCP. Complete and submit changes of your CCP with this form.
- ☐ **Lost:** Complete and submit any parts of your CCP that were lost or damaged.
- ☒ **No Change:** There have not been any significant changes in the facility's personnel and operations that require a revision to the current CCP.

Cal-ARP Program

I reviewed the threshold quantities in Section 2770.5 of Title 19 of the California Code of Regulations and certify that any regulated substance on the attached HMIS accords with the following registration requirement:

- ☒ **Add:** Complete the **Cal-ARP Program Regulated Substance Registration** form only if the regulated substance is at or above the threshold quantity (TQ). Submit one form per chemical.
- ☐ **No Change:** The previously submitted registration for regulated substance(s) is accurate.

ANNUAL CERTIFICATION

I certify that the information submitted herein is complete and accurate. Also, no hazardous materials subject to the inventory requirements of Chapter 6.95 of the Health and Safety Code are being handled that are not listed on the most recently submitted annual inventory form.

Component Breakdown & CAS #'s

BLEACHES
Acetic Acid – 14% (000064-19-7)
Ferric Ammonium Propylenediaminetetraacetic acid – 12% (021265-50-9)
Ammonium Bromide – 6% (012124-97-9)
Ammonium Nitrate – 4% (007757-79-1)
Ammonium Acetate – 2% (000631-61-8)
8,937/5,898 (908g/599g)

BLEACH/REPLENISHERS
Ferric Ammonium Propylenediaminetetraacetic acid – 10% (021265-50-9)
Acetic Acid – 5% (000064-19-7)
Ammonium Bromide – 5% (012124-97-9)
Ammonium Nitrate – 4% (007757-79-1)
Ammonium Acetate – 2% (000631-61-8)
24,508/16,175 (2,672g/1,764g)

BLEACH/FIXES
Ammonium Thiosulfate – 20% (007732-18-5)
Acetic Acid – 2% (000064-19-7)
Ammonium Bisulfate – 2% (010192-30-0)
Ammonium Sulfite – 2% (010196-04-0)
Ammonium Acetate – 1% (00631-61-8)
83,720/55,255 (8,440g/5,570g)

STABILIZERS
Ammonium Thiocyanate – 22% (001762-95-4)
Acetic Acid – 10% (000064-19-7)
Sodium Acetate – 5% (000127-09-3)
228/155 (delete-added to fix)

STABILIZER/REPLENISHERS (lbs)
Formaldehyde – 15% (000050-00-0)(RS)(EHS)
Methanol – 4% (000067-56-1)
1,683/1,111 (198g/131g)

STOP BATH
Acetic Acid – 76% (000064-19-7)
Sodium Acetate – 3% (000127-09-3)
3,061/2,020 (334g/220g)

REVERSAL BATH/REPLENISHERS
Sodium Acetate – 10% (000127-09-3)
Acetic Acid – 5% (000064-19-7)
2,267/1,496 (238g/157g)

ACTIVATORS
Potassium Hydroxide – 10% (1310-58-3)
Potassium Sulfite – 5% (10117-38-1)
Sodium Sulfite – 5% (7757-83-7)
738/487 (delete-added to dev)

TONERS
Sodium Carbonate – 10% (000497-19-8)
Sodium Hydroxide – 1% (001310-73-2)
185/122 (delete-added to dev)

SODIUM HYDROXIDE
Sodium Hydroxide – 51% (001310-73-2)
2,088/1,378 (164g/108g)

SULFURIC ACID
Sulfuric Acid – 50% (007664-93-9)
2220/1465 (190g/125g)

ACETIC ACID
Acetic Acid – 70% (64-19-7)
13,560/8,950 (1,355g/894g)

FIXERS
Ammonium Thiosulfate – 28% (007783-18-8)

he generator listed above is shipping to you a waste determined to be restricted under 40 CFR Part 268 and/or 6 NYCRR art 376. The generator provides notice that the waste is restricted and the EPA waste number(s) and the appropriate eatment standards are as follows (check all that applies):

] The information regarding the waste stream and applicable treatment standard is attached in Appendix A.

] The waste stream contains a spent solvent identified as: ___F001, ___F002, ___F003, ___F004, ___F005

] The waste stream includes D001 [other than 1) high-TOC ignitables, or 2) other ignitables that will combusted or recovered], D002, and/or D012-D043 characteristic waste codes, (except D012-D017 WW). The waste stream will not be managed in CWA systems. Attach Appendix B (UTS).

] The waste stream includes multi-sourced leachate (F039). Attach Appendix B (F039).

] The waste stream contains a California List waste identified as:

___Hazardous wastes containing free liquids and nickel at concentrations above 134 mg/l (WW or NWW)
___Hazardous wastes containing free liquid and thallium at concentrations above 130 mg/l (WW or NWW)
___Hazardous wastes containing free liquids and PCBs at concentrations above or equal to 50 ppm
___Hazardous wastes containing Hazardous Organic Compounds (HOC) at concentrations above or equal to 1000 ppm
___Hazardous wastes containing free liquids and free cyanides at concentrations above or equal to 1000 mg/l

] The waste stream is defined as hazardous debris[1].

☒ The waste stream is identified below:

EPA Hazardous Waste Code	Waste Description and/or Subcategory	Treatability Group (WW/NWW)[2]	Treatment Standard
D008	Lead	NWW	NA

☐ OTHER: (include all pertinent information)

****

[1] Hazardous Debris: Debris (solid materials exceeding 60 mm particle size that is a manufactured object, plant/animal matter, or natural geological material, excluding batteries, process solids, treatment residues and intact containers) that contains a listed hazardous waste or exhibit a hazardous waste characteristic.

[2] Wastewater: (for F001-5 wastes) a solvent water mixture, containing less than 1% by weight F001-5 solvent constituents
(for non-F001-5 wastes) wastes containing less than 1% by weight TOC and less than 1% TSS

[3] Nonwastewater: wastes that do not meet the definition of wastewater

The following NY State regulated wastes are land restricted in the State of New York and are subject to 6NYCRR Part 376. Refer to 6NYCRR 376.4(f) for New York land disposal requirements. Check all that apply:

___ B001 ___ B002 ___ B003 XX B004
XX B005 ___ B006 ___ B007

****

___ CERTIFICATION- Waste Meets Treatment Standards:

I am the generator of the waste as identified above that is restricted under 6NYCRR Part 376. I have determined that this waste meets all applicable treatment standards set forth in 6NYCRR Part 376 and, therefore, it can be land disposed without further treatment.

I certify under penalty of law that I personally have examined and am familiar with the waste through analysis and testing or through knowledge of the waste to support this certification, that the waste complies with the treatment standards specified in Part 376, section 376.4 and all applicable prohibitions set forth in subdivision 376.3(b) of Part 376 or RCRA section 3004(d). I believe that the information I submitted is true, accurate and complete. I am aware that there are significant penalties for submitting a false certification including the possibility of a fine or imprisonment.

generator signature *date*

XX NOTIFICATION - Waste Does Not Meet Treatment Standards:

I am the generator of a waste restricted under 6NYCRR Part 376 as identified above. I notify that the waste identified above does not comply with the treatment standards specified in 6NYCRR Part 376.4(f). This waste must be treated to the applicable treatment standard set forth in 6NYCRR 376.4(f) prior to land disposal.

Dear Sir/Madam,

It has been discovered that on New York Hazardous Waste Manifest #NYB5233428, an erroneous entry was made. Line B indicates 5 drums of waste acetic acid. In actuality, there were only 3 drums. The other 2 drums are waste sulfuric acid. A corrected/revised manifest is attached. Our apologies for any problems this may have caused. If there are any questions, please feel free to contact me at 562-945-9868.

16. **GENERATOR'S CERTIFICATION:** I hereby declare that the contents of this consignment are fully and accurately described above by proper shipping name and are classified, packed, marked, and labeled, and are in all respects in proper condition for transport by highway according to applicable international and national government regulations.

If I am a large quantity generator, I certify that I have a program in place to reduce the volume and toxicity of waste generated to the degree I have determined to be economically practicable and that I have selected the practicable method of treatment, storage, or disposal currently available to me which minimizes the present and future threat to human health and the environment; OR, if I am a small quantity generator, I have made a good faith effort to minimize my waste generation and select the best waste management method that is available to me and that I can afford.

Certificate of Treatment/Recycling

ISSUED TO

EASTMAN KODAK

FOR

MANIFEST NUMBER 20683698 DATE RECEIVED 10/04/01

The aqueous waste received on the above manifest will be treated to standards mandated by the FEDERAL CLEAN WATER ACT and to effluent requirements established by the Sanitation Districts of Los Angeles County. Waste treatment and recycling is performed under permits granted to DeMENNO/KERDOON, a California Corporation, by the California Department of Toxic Control (DTSC), in coordination with the Environmental Protection Agency, in accordance with the provisions of the Resource Conservation and Recovery Act (RCRA) of 1976, together with applicable federal and state regulations including but not limited to waste discharge requirements established by the Sanitation Districts of Los Angeles County.

When the above described waste material is accepted by DeMENNO/KERDOON and treated/recycled and the aqueous phase discharged for further treatment by the Sanitation Districts, the certificate holder's responsibility for the waste material is eliminated under both RCRA and Proposition 65. Upon request, DeMENNO/KERDOON will issue this certificate that all waste material has been handled in accordance with applicable permits and the certificate holder's liability has been terminated.

Certificate of Treatment/Recycling

ISSUED TO

EASTMAN KODAK

FOR

MANIFEST NUMBER 21560920 DATE RECEIVED 05/29/02

The aqueous waste received on the above manifest will be treated to standards mandated by the FEDERAL CLEAN WATER ACT and to effluent requirements established by the Sanitation Districts of Los Angeles County. Waste treatment and recycling is performed under permits granted to DeMENNO/KERDOON, a California Corporation, by the California Department of Toxic Control (DTSC), in coordination with the Environmental Protection Agency, in accordance with the provisions of the Resource Conservation and Recovery Act (RCRA) of 1976, together with applicable federal and state regulations including but not limited to waste discharge requirements established by the Sanitation Districts of Los Angeles County.

When the above described waste material is accepted by DeMENNO/KERDOON and treated/recycled and the aqueous phase discharged for further treatment by the Sanitation Districts, the certificate holder's responsibility for the waste material is eliminated under both RCRA and Proposition 65. Upon request, DeMENNO/KERDOON will issue this certificate that all waste material has been handled in accordance with applicable permits and the certificate holder's liability has been terminated.

Certificate of Treatment/Recycling

ISSUED TO

EASTMAN KODAK

FOR

MANIFEST NUMBER 23735984 DATE RECEIVED 10/6/2004

The aqueous waste received on the above manifest will be treated to standards mandated by the FEDERAL CLEAN WATER ACT and to effluent requirements established by the Sanitation Districts of Los Angeles County. Waste treatment and recycling is performed under permits granted to DeMENNO/KERDOON, a California Corporation, by the California Department of Toxic Control (DTSC), in coordination with the Environmental Protection Agency, in accordance with the provisions of the Resource Conservation and Recovery Act (RCRA) of 1976, together with applicable federal and state regulations including but not limited to waste discharge requirements established by the Sanitation Districts of Los Angeles County.

When the above described waste material is accepted by DeMENNO/KERDOON and treated/recycled and the aqueous phase discharged for further treatment by the Sanitation Districts, the certificate holder's responsibility for the waste material is eliminated under both RCRA and Proposition 65. Upon request, DeMENNO/KERDOON will issue this certificate that all waste material has been handled in accordance with applicable permits and the certificate holder's liability has been terminated.

16. GENERATOR'S CERTIFICATION: I hereby declare that the contents of this consignment are fully and accurately described above by proper shipping name and are classified, packed, marked and labeled, and are in all respects in proper condition for transport by highway according to applicable international and national government regulations and state laws and regulations.
If I am a large quantity generator, I certify that I have a program in place to reduce the volume and toxicity of waste generated to the degree I have determined to be economically practicable and that I have selected the practicable method of treatment, storage, or disposal currently available to me which minimizes the present and future threat to human health and the environment; OR if I am a small generator, I have made a good faith effort to minimize my waste and select the best waste management method that is available to me and that I can afford.

DESIGNATED FACILITY TO GENERATOR

Certificate of Treatment/Recycling

ISSUED TO

EASTMAN KODAK

FOR

MANIFEST NUMBER 000187758CEX DATE RECEIVED 11/14/2006

The aqueous waste received on the above manifest will be treated to standards mandated by the FEDERAL CLEAN WATER ACT and to effluent requirements established by the Sanitation Districts of Los Angeles County. Waste treatment and recycling is performed under permits granted to DeMENNO/KERDOON, a California Corporation, by the California Department of Toxic Control (DTSC), in coordination with the Environmental Protection Agency, in accordance with the provisions of the Resource Conservation and Recovery Act (RCRA) of 1976, together with applicable federal and state regulations including but not limited to waste discharge requirements established by the Sanitation Districts of Los Angeles County.

When the above described waste material is accepted by DeMENNO/KERDOON and treated/recycled and the aqueous phase discharged for further treatment by the Sanitation Districts, the certificate holder's responsibility for the waste material is eliminated under both RCRA and Proposition 65. Upon request, DeMENNO/KERDOON will issue this certificate that all waste material has been handled in accordance with applicable permits and the certificate holder's liability has been terminated.

Certificate of Treatment/Recycling

ISSUED TO

EASTMAN KODAK

FOR

MANIFEST NUMBER 000569917SKS **DATE RECEIVED** 11/6/2007

The aqueous waste received on the above manifest will be treated to standards mandated by the FEDERAL CLEAN WATER ACT and to effluent requirements established by the Sanitation Districts of Los Angeles County. Waste treatment and recycling is performed under permits granted to DeMENNO/KERDOON, a California Corporation, by the California Department of Toxic Control (DTSC), in coordination with the Environmental Protection Agency, in accordance with the provisions of the Resource Conservation and Recovery Act (RCRA) of 1976, together with applicable federal and state regulations including but not limited to waste discharge requirements established by the Sanitation Districts of Los Angeles County.

When the above described waste material is accepted by DeMENNO/KERDOON and treated/recycled and the aqueous phase discharged for further treatment by the Sanitation Districts, the certificate holder's responsibility for the waste material is eliminated under both RCRA and Proposition 65. Upon request, DeMENNO/KERDOON will issue this certificate that all waste material has been handled in accordance with applicable permits and the certificate holder's liability has been terminated.

EPA Form 8700-22A (Rev. 3-05) Previous editions are obsolete.

GENERATOR'S INITIAL COPY

Instructions—Continuation Sheet
U.S. EPA Form 8700-22A

Read all instructions before completing this form. This form has been designed for use on a 12-pitch (elite) typewriter; a firm point pen may also be used—press down hard.

This form must be used as a continuation sheet to U.S. EPA Form 8700-22 if:

- More than two transporters are to be used to transport the waste; or
- More space is required for the U.S. DOT descriptions and related information in Item 9 of U.S. EPA Form 8700-22.

Federal regulations require generators and transporters of hazardous waste and owners or operators of hazardous waste treatment, storage, or disposal facilities to use the uniform hazardous waste manifest (EPA Form 8700-22) and, if necessary, this continuation sheet (EPA Form 8700-22A) for both interstate and intrastate transportation.

I. Instructions for Generators

Item 21. Generator's ID Number

Enter the generator's U.S. EPA twelve digit identification number or, the State generator identification number if the generator site does not have an EPA identification number.

Item 22. Page ___

Enter the page number of this Continuation Sheet.

Item 23. Manifest Tracking Number

Enter the Manifest Tracking number from Item 4 of the Manifest form to which this continuation sheet is attached.

Item 24. Generator's Name—

Enter the generator's name as it appears in Item 5 on the first page of the Manifest.

Item 25. Transporter—Company Name

If additional transporters are used to transport the waste described on this Manifest, enter the company name of each additional transporter in the order in which they will transport the waste. Enter after the word "Transporter" the order of the transporter. For example, Transporter 3 Company Name. Also enter the U.S. EPA twelve digit identification number of the transporter described in Item 25.

Item 26. Transporter—Company Name

If additional transporters are used to transport the waste described on this Manifest, enter the company name of each additional transporter in the order in which they will transport the waste. Enter after the word "Transporter" the order of the transporter. For example, Transporter 4 Company Name. Each Continuation Sheet can record the names of two additional transporters. Also enter the U.S. EPA twelve digit identification number of the transporter named in Item 26.

Item 27. U.S. D.O.T. Description Including Proper Shipping Name, Hazardous Class, and ID Number (UN/NA)

For each row enter a sequential number under Item 27b that corresponds to the order of waste codes from one continuation sheet to the next, to reflect the total number of wastes being shipped. Refer to instructions for Item 9 of the manifest for the information to be entered.

Item 28. Containers (No. And Type)

Refer to the instructions for Item 10 of the manifest for information to be entered.

Item 29. Total Quantity

Refer to the instructions for Item 11 of the manifest form.

Item 30. Units of Measure (Weight/Volume)

Refer to the instructions for Item 12 of the manifest form.

Item 31. Waste Codes

Refer to the instructions for Item 13 of the manifest form.

Item 32. Special Handling Instructions and Additional Information

Refer to the instructions for Item 14 of the manifest form.

RECEIVED, subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of contents of packages unknown), marked, consigned, and destined as indicated above which said carrier (the word carrier being understood throughout this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery at said destination, if on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the bill of lading terms and conditions in the governing classification on the date of shipment.

Shipper hereby certifies that he is familiar with all the lading terms and conditions in the governing classification and the said terms and conditions are hereby agreed to by the shipper and accepted for himself and his assigns.

RECEIVED, subject to the classifications and tariffs in effect on the date of the issue of the Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of contents of packages unknown), marked, consigned and destined as indicated above which said carrier (the word carrier being understood throughout this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery at said destination, if on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property over all or any portion of said route to destination and as to each party at any time interested in all or any of said property, that every service to be performed hereunder shall be subject to all the bill of lading terms and conditions in the governing classification on the said terms and conditions are hereby agreed to by the shipper and accepted for himself and his assigns.

Shipper certifies that he is familiar with all the bill of lading terms and conditions in the governing classification and the said terms and conditions are hereby agreed to by the shipper and accepted for himself and his assigns.

Environmental Practices Information

(Responsive to Question #9)

PROCEDURE FOR

CHEMICAL DISPOSAL AREA

(WHITTTIER FACILITY)

9/11/01
SW

Introduction

The purpose of these guidelines are to provide direction or personnel who are asked to handle and dispose of chemical waste, decontaminate personal protective equipment and rebox leaked on product within the Whittier Product Logistics organization. Nothing in these guidelines are meant to supercede any existing safety, environmental, regulatory or operating procedure.

Requirements

- Obtain appropriate medical clearance. This will be arranged by the regional nurse and done on a bi-annual basis.

- Successfully complete the following annual training:
    1. Chemical Hazard Communication program
    2. Respirator program & fit test
    3. Spill procedure
    4. Resource Conservation & Recovery Act
    5. KP Fire Department spill/leak response refresher training

General Rules & Safety Guidelines

- Keep all non-essential personnel away from the chemical disposal area.

- Store all chemicals to be disposed of inside the disposal area.

- Any volatiles that can not be handled and disposed of promptly must be stored in the primary flammable storage shed.

- Beards and facial hair that interferes with the respirator facepiece seal are prohibited.

- Be in good health.

- Always know what you are dealing with before proceeding. If you are unsure of anything or have any questions, contact the HSE coordinator immediately.

- Use good judgement.

- Follow procedures.

- Plan well and plan ahead. Your safety is top priority.

- Use the proper personal protective equipment. Refer to the facility PPE matrix.
- No food or open beverage containers are allowed in the disposal area.

Authorized Chemical Disposal Area personnel

Scott Williams
Philip Nieto

Available Personal Protective Equipment and other necessary materials

- North 800 positive pressure SCBA
  >low pressure (2216 PSI)
  >30 minute air capacity
  >NIOSH/MSHA approved
  >suitable for high hazard and IDLH scenarios
- North 7600 full face cartridge respirator
  >cartridge interchangeable
  >NIOSH/MSHA approved
  >suitable for low and moderate hazard scenarios
- North 7700 half face cartridge respirator
  >cartridge interchangeable
  >NIOSH/MSHA approved
  >suitable for low and moderate hazard scenarios
- Assorted cartridges
- Neoprene/nylon jacket & coveralls
- Neoprene boots
- Neoprene gloves
- Disposable nitrile gloves
- Goggles
- Chemical resistant aprons
- Absorbant material
- Totes for containment
- Spill control pads
- Spark resistant shovels
- Squeggees
- Brooms
- Dustpans
- Mop/bucket/wringer
- Salvage drums
- DOT 21c fibre drums
- Plastic liner bags
- RSFC scroll
- Emergency response guidebook

Procedure

Scenarios

The following procedure covers various disposal scenarios. These may include:

- Chromium containing products (see catalog number list)
- Flammables/low flash points (see catalog number list)
- Oil/grease

- Batteries
- PCB containing light ballasts
- Various hazardous & non-hazardous photochemicals
- Absorbed materials
- Non-Kodak or unknown products
- Contaminated packaging

In all cases, appropriate personal protective equipment **must** be worn. Refer to the PPE matrix or if unsure, contact the HSE coordinator for guidance.

PPE Guidelines

An exposure assessment of the chemical disposal area is difficult to accomplish due to the fact it is intermittant, unpredictable and changes daily. The following guidelines have been established to provide personnel safety and are based on Kodak's RSF&C ratings, Material Safety Data Sheets and corporate HSE guidance.

- Always wear gloves, apron or coat & coveralls, boots and goggles or face shield. Respiratory rating may require the need for further protection.
- Chemicals with a R2 rating require the use of a cartridge respirator. If a half face cartridge respirator is utilized, goggles must also be worn.
- Chemicals with a R3 rating require the use of SCBA.
- Any unknowns require the most stringent level of protection be worn.

Handling scenarios

Remember, no free liquids can be intentionally mixed with an absorbant material to render them non-hazardous or easier and safer to handle. Check with the HSE coordinator for all appropriate marking and labeling requirements each time a new waste drum is started. Also, if unsure about anything, contact the HSE coordinator immediately. The HSE coordinator will also prepare all shipping documentation for any waste that must be moved off site for disposal and ensure that accumulation guidelines have not been exceeded.

Chromium containing products:

- Overpack product in a small double bagged 21C fibre drum with sufficient amounts of absorbant material. When drum is full, tape each bag closed separately. Tape lid in place. Keep weight of drum to 100 pounds maximum. Place any contaminated packaging materials in a large double bagged 21C fibre drum. Notify the HSE coordinator for proper marking and labeling requirements.

Flammables/low flash point products:

- Follow the same steps as indicated for Chromium containing products.

Oil/grease:

- Place absorbed material in a small double bagged 21C fibre drum. When drum is full, tape each bag closed separately. Tape lid in place. Keep weight of drum to 100 pounds maximum. If paper towels were used to wipe up or absorb the oil/grease,

place these in a large double bagged 21C fibre drum. Notify the HSE coordinator for proper marking and labeling requirements.

Batteries:

- Place **alkaline** batteries in a large double bagged 21C fibre drum. When full, tape bags and lid closed. Place **lithium** batteries in a small double bagged 21C fibre drum. When full, tape bags and lid closed. Place **Nickel-Cad** batteries in a small double bagged metal drum. When full, tape bags closed and secure lid in place. Notify the HSE coordinator for proper marking and labeling requirements.

PCB containing light ballasts:

- Place ballasts in a small double bagged metal drum. When full, tape bags closed and secure lid in place. Notify the HSE coordinator for proper marking and labeling requirements.

Absorbed materials:

- Place absorbed materials in a small double bagged 21C fibre drum. When full, tape bags and lid closed. Notify the HSE coordinator for proper marking and labeling requirements.

Non-Kodak & unknown materials:

- Contact the HSE coordinator immediately for proper disposal guidelines.

Liquid photochemicals (other than flammable/low flash point materials):

- These may be disposed of via the facility clarifier. Pour material slowly into the clarifier. Ensure that appropriate PH levels are maintained by activating the acid/base pumps (between 6 & 12). Also ensure our flow restrictions are not exceeded (see permit). Triple rinse all drums, bottles and cubitainers. These may be disposed of into the general refuge if no visible contamination is evident. Powdered chemicals may be disposed of via the clarifier if mixed with copious amounts of water. Remember to complete the 'disposal form'.

Contaminated packaging:

- Place packaging in a large double bagged 21C fibre drum. When full, tape bags closed and secure lid. Notify the HSE coordinator for proper marking and labeling requirements.

Remember to decontaminate all PPE used during any of the above scenarios with water and properly store for future use. If the PPE can not be decontaminated, dispose of properly. Also, keep good records for all disposed of materials. This is vital so the HSE coordinator can ensure all appropriate marking, labeling, SWIMS ticket preparation and shipping documentation is correct and accurate.

Reboxing:

- Any product with contaminated packaging and is not leaking may be reboxed. Rebox supplies are available or can be ordered. When reboxing, be sure to complete the 'rebox form'. Dispose of contaminated packaging properly.

Ryder Integrated Logistics

SPILL/LEAK PROCEDURE

(Whittier Facility)

Reviewed: 02/10/09

INTRODUCTION

The purpose of these guidelines/procedures is to provide direction for personnel who, in the course of their normal duties, may be asked to respond to and handle incidental spills or leaks of Kodak finished goods within the Ryder Integrated Logistics organization. Nothing in these guidelines/procedures is meant to supersede any existing safety, environmental or operating procedure. In addition, the need to respond will be minimized through all associate training with regards to the hazards and proper handling of chemicals in the workplace. This training will include our 'Chemical Hazard Communication Program', loading and unloading procedures, 'General Safety Principles' and the 'Employee Orientation' checklist.

REQUIREMENTS

Spill team members must:

- Obtain appropriate medical clearance to perform the spill/leak function. Whittier's HSE Manager will make the necessary arrangements. Clearance will be conducted every 5 years.

- Complete training on the proper use and care of a full face cartridge respirators. Training will be conducted by the Heath, Safety & Environmental Manager (HSEM). This training will be documented. Spill team members who have not completed this training may still perform support functions. Training will be conducted annually.

- Complete qualitative "Fit testing" which will be conducted by the HSEM and documented. Retesting will be done annually.

- Complete the Resource, Conservation and Recovery Act (RCRA) training within six months of assignment, if applicable. Training will be conducted by the HSEM and documented. Training will be conducted annually (is **optional only** at the discretion of the HSEM).

- Complete the Chemical Hazard Communication Program pursuant to 29CFR1910.1200 and documented. Training will be conducted by the HSEM annually or on-line as a STAR safety topic.

- Complete the Spill/Leak Response training and documented. Training will be conducted by the HSEM on an annual basis.

GENERAL RULES AND SAFETY GUIDELINES

- Never work alone. Utilize the "Buddy System" always.

- Keep all non-essential personnel away from the effected area.

- Secure the area by using floor signs, pallets, barricade tape, etc.

- Spill team members with beards or facial hair that interferes with the respirator face piece seal may be prohibited from using the full face respirator.

- Spill team members must be in good health.

- Always know what you're dealing with before proceeding.

- Always use good judgment.

- Always follow procedures.

- Plan well and plan ahead. Your safety is top priority.

- Always use proper personal protective equipment (PPE).

- If unsure about anything, contact the HSEM for guidance before proceeding.

SPILL TEAM MEMBERS

Scott Williams	- Health, Safety & Environmental Manager (909-983-7915) cell # (951-733-9179)
Mike Esqueda	- KPG shipping
Ed Cisneros	- Shipping
Albert Gonzales	-Shipping
Larry Crabtree	-Order filling
Art Villegas	-Shipping
Philip Nieto	-Order filling
Jeff Lamar	- KPG shipping
Gary Cruz	- KPG order filling
Chris Sims	- shipping office
Maneck Bhot	- Receiving

1/5/00
SW

REQUIRED PERSONAL PROTECTIVE EQUIPMENT (PPE)

10- North 7600 Full Face Respirator:
- cartridge interchangeable
- NOISH/MSHA approved
- suitable for moderate and high hazard situations

cartridges for respirators:
(change schedule is 60 minutes of use)

100 - North N7500-3: organic vapors and acid gasses
8 - North N7500-2: acid gasses
56 - North N7500-4: ammonia and methyl amine
12 - North N7500-5: formaldehyde

In addition, each spill team member has:

- Tychem hooded coverall (acid/base resistant)
- neoprene/nylon jacket (acid/base resistant)
- neoprene/nylon coveralls (acid/base resistant)
- neoprene overboot (acid/base resistant)
- neoprene gloves (acid/base resistant)
- latex gloves (disposable)
- goggles
- apron (chemical resistant)

spill carts contain:
- totes
- broom
- dustpan
- shovel
- absorb-it
- spill control pads
- emergency response guidebook (ERG)

additional equipment
- 6 headlamps

1/5/00
SW

LEVELS OF EMERGENCY RESPONSE (ROLE IDENTIFICATION)

First Responder (awareness):

First responders witness or discover a hazardous substance release. These individuals have been trained to initiate an emergency response sequence by notifying the spill team. This notification is accomplished by announcing a "Code 10" over the public address system; giving the location of the spill.

First Responder (operations) (spill team)

First responders at the operations level respond to a release of hazardous substances. Their response protects nearby people, property and the environment from the effects of the release. They are trained to respond in a defensive manner which includes establishing a safe perimeter, containment, clean-up and decontamination.

Health, Safety & Environmental Manager (HSEM)

The HSEM is trained in the hazards of specific hazardous substances. He also provides technical advice or assistance and ensures all applicable regulations are adhered to. He will also act as the focal point for all resultant documentation and waste disposal. Additionally, he is fully trained in the RCRA regulations and handles all off site disposal of all waste streams.

1/5/00
SW

PROCEDURE

Upon notification, some or all spill team members will respond to the incident scene and initiate the following spill procedure. **If you respond, bring your PPE with you so you can assess the scenario safely**:

- Secure the area. This may be accomplished by using pallets to block aisles, floor signs, barricade tape, etc. Ensure a safe distance is maintained. ERG's may be helpful.

- Identify the material involved. This may be done by catalog number, shipping papers, labels, product description, etc. If unable to positively identify the material involved, stop any further action. Immediately notify the HSEM for instructions.

- Once the information is obtained, retrieve a copy of the Material Safety Data Sheet (MSDS).

- Through the use of the MSDS, determine the appropriate level of personal protective equipment to be used based on the following criteria. **Always** utilize the MSDS to retrieve the R,S,F & C values since this is the most current information and provides other hazards that should be considered:

Low Hazard (caution): substances, chemicals or materials with ratings of R-1, S-2, F-1 and less than 5 gallons. If more than 5 gallons, contact the HSEC or Specialist for direction.

Minimum Level of Protection:
goggles, coveralls or apron, gloves.

Moderate Hazard (warning): substances, chemicals or materials with ratings of R2, S2, S3 or F2 and less than 5 gallons.

Minimum Level of Protection:
full face cartridge respirator, coveralls or apron, boots and gloves.

High Hazard (Danger): Substances, chemicals or materials with ratings of R3, S3, F2 or greater and any unknown materials in any quantities.

Minimum Level of Protection:
full face cartridge respirator, coveralls or apron, boots and gloves.

Additional Notes:
-Any material with a "C" rating of 1 or higher requires special handling. Contact the HSEM for guidance.

- For incidents involving spills in trailers, refer to the section on "Trailer Spills".

- For situations involving Blood borne Pathogens, refer to the appropriate section.

- Other considerations, such as, location of spill, amount, conditions (heat, cold, etc.) all may be a factor in determining the appropriate level of protection required.

- For situations involving poisons, refer to the appropriate section.

- Good accurate "size-up" information is critical to the success of the operation. Do not underestimate the time, effort or number of personnel necessary.

- For incidents involving any non-Kodak materials, contact the HSEM for directions.

- Remember, even though a chemical may be non-hazardous under DOT, this does not mean it's non-hazardous from a spill standpoint.

- Marshall supplies in the immediate area. This will include absorbent, totes and PPE for a minimum of 2 personnel.

- Don appropriate PPE and clean-up chemical spill as follows.

ABSORPTION METHOD

-Place absorbent in a ring around spill to prevent spreading.

-Place absorbent on top of spilled chemical.

-Ensure liquid is fully absorbed and shovel (spark resistant) into tote.

-Use broom to sweep up residual absorbent and place into tote.

-Damp mop area (if necessary).

-Take all contaminated equipment and PPE to the disposal area for proper decontamination and final disposal by the HSEM.

-Ensure product is properly identified.

-Always take care when removing contaminated equipment not to affect any part of your body. If you should become contaminated, follow the procedure on "Chemical Spills On You".

Additional considerations:

-Powdered chemicals should be swept up and placed in a tote. Take the tote to the disposal area.

-Under no circumstances attempt to neutralize chemical spills.

-Always use spark resistant equipment only.

-Take frequent breaks to cool down and drink plenty of fluids. Your body will become dehydrated, so fluid intake is critical.

1/5/00
SW

TRAILER SPILLS

Trailers present a potentially more dangerous situation when a leak or spill occurs. Operations inside trailers and other limited access areas offer adequate to poor circulation. Consequently, one must be concerned about oxygen content, toxicity concentrations and possible build-up of an explosive concentration (LEL). In addition, limited room, limited lighting and trip/slip hazards, all combine to make your job more demanding and cause for additional precautions.

As a minimum, the following steps should be taken when handling spills or leaks inside trailer:

-Follow all steps in the general spill procedure.

-Set up fans at end of trailer to aid in air circulation and oxygen replenishment within trailer.

-PPE will include coveralls or apron, boots and double gloves. Also utilize the heavy duty flashlights or headlamps obtainable from the HSEM.

Additionally, if leakage occurs outside the trailer:

-immediately contain the spill from spreading by using either absorbent or cobra coils (from disposal area).

-use brooms to aid in scrubbing spill into absorbent.

-ensure all liquid is fully absorbed and shoveled into totes.

-sweep up residual absorbent and place in totes.

-repeat above steps as necessary to get up all chemical.

POISONS

Special provisions must be taken when dealing with poison spills. If the product involved has a poison label, immediately:

-Evacuate personnel from the area.

-Full face cartridge respirators and appropriate PPE must be donned at least until product can be identified.

- Notify HSEM and obtain a copy of the MSDS if product is known.

-Do not take any further action until the HSEM provides further guidance.

-If necessary, the HSEM will contact the "Poison Control Center" at 800-222-1222 for additional assistance or Kodak's Industrial Hygiene contact (John Heyer, 585-588-6567).

-While waiting for instructions, open doors or use exhaust fans to purge the poisonous vapors from the atmosphere. Good ventilation is a must.

-In general, if adequate ventilation can be achieved, the standard spill procedure should be followed to complete the clean-up process. Again, the HSEM will make the final determination and provide any necessary special instructions.

BLOOD BORNE PATHOGENS

Biohazards can create an extremely dangerous situation with regards to bodily infection. Because of the sensitive nature surrounding this type of scenario, do not attempt to handle these spills yourself. All such spills will be handled be the HSEM or a CPR team member. The appropriate procedure for this type of clean-up is as follows:

-Put on disposable gloves to prevent contact with blood and any other body fluids.

-Carefully read label on 8oz. plastic bottle containing dry bleach (from Biohazard Clean-up Kit). Fill bottle to rim with water. Shake to dissolve granules.

-Place open paper towel over liquid human fluid. Pour bleach solution onto towels, saving some solution for step #7.

-Open red regulated medical bag (from clean-up kit) and fold top edge over about 3 inches.

-After 15-20 minutes, remove towels and place into center of waste bag.

-If sharp materials (glass, etc.) are present, use plastic scoop to clean up (from clean-up kit)

-Pour remaining bleach solution onto area and wipe clean. Discard towels, bleach and all other used and/or contaminated kit items into red bag. Double bag is there is a chance of leakage or breakage.

-Remove gloves carefully and place in red bag. Tie knot in bag.
To remove gloves:
-Pinch glove near cuff. Pull glove over palm so that tips of fingers are still covered and glove is inside out.
-Use inside out glove to pinch other glove below cuff. Pull glove off over palm.
-Dispose of gloves into the red bag.

-Wash hands thoroughly with soap and water. If no soap is available, use hand wipe to temporarily clean hands.

-Discard red bag into a small double bagged 21C fiber drum located in the shipping office.

-Refer to attachment 1 for detail of required PPE for this scenario.

-For additional information regarding this general topic, refer to attachment 2.

OTHER UNUSUAL SPILL SCENARIOS

Occasionally, spills may occur which involve non-Kodak products or items which fall outside the normal parameters which the spill team is accustomed to. Examples might include but not limited to:

-lead containing items (see attachment 3 for clean-up procedure)
-outside vendor products which we have purchased
-solvents

In these cases or any others not mentioned, do not attempt to handle yourself. Contact the HSEM. He will handle these types of scenarios himselves or may give you specific instructions on the proper handling and disposal.

DECONTAMINATION

Decontamination consists of physically removing contaminates or changing their chemical nature to harmless substances. How extensive decontamination must be depends on a number of factors. The most important being the type of contaminates involved. The more harmful the contaminate, the more extensive and thorough the decontamination process must be. Less harmful contaminates may require less decontamination.

Planning is crucial for the decontamination process; both during and after the remediation of the spill. The objective is to ensure contamination is kept to as much a minimum as possible. The following steps should be adhered to:

- If during the remediation process additional equipment and/or supplies are needed, utilize support personnel (those not directly involved in the clean-up process) to get them. If you attempt to do this yourself, the potential for unnecessary contamination increases dramatically. Remember, the objective is to keep contamination to a minimum.

-Upon completion of the clean-up, utilize the "buddy system" to help remove all contaminated protective clothing and equipment. Be careful not to spread the contamination.

-Place all contaminated equipment and PPE in a tote and have support personnel take totes to the chemical disposal area for proper decontamination.

-Wash hands, face and any other potentially exposed body parts with plenty of soap and warm water.

-See attachment 4 for explanation of decontamination concepts.

ADDITIONAL PROCEDURES

Refer to attachment 5 for detail on what to do if a chemical spills on you.

PRODUCT LOGISTICS

CHEMICAL HAZARD

COMMUNICATION

PROGRAM

Reviewed: 3/9/2005

1/17/01
SW

Right To Know

This Hazard Communication Program in accordance with 29 CFR 1910.1200 is designed to ensure that information concerning the characteristics of the hazardous chemicals found in the workplace is communicated to all individuals that have the potential to come in contact with them. The program addresses the following items:

- Hazard determination/inventory
- Material safety data sheets
- Labels and other forms of warning
- Employee information and training

Hazardous Chemical Inventory

What is a hazardous chemical: Any chemical that has either a physical or health hazard associated with its use.

Physical Hazards: The physical properties of a chemical. These include combustibility, oxidizers (can explode if come in contact with other hazards), compressed gasses, pyrophorics (ignites spontaneously in air at 130 degrees F or below), explosives, flammability, unstable-reactive (decomposes, condenses or becomes self reactive under conditions of shock, pressure or temperature), water-reactive (reacts with water resulting in a gas that causes flammability of health hazards) or organic peroxides.

Health Hazards: Chemicals that produce a reaction within the body. These chemicals can cause you to become ill, either right away (acute) or at a later date (chronic). The term 'health hazard' includes chemicals that are:

- Carcinogens (cancer causers)
- Hepatotoxins (toxic to the liver)
- Toxic or highly toxic (poisons)
- Nephrotoxins (toxic to the kidneys)
- Reproductive toxins
- Neurotoxins (toxic to the nervous system)
- Irritants (cause reversible inflammatory effect on living tissue)
- Agents that act on the hematopoietic system (bone marrow and lymph nodes)
- Corrosives (cause visible destructive or irreversible alterations in tissue)
- Agents that damage the lung, eyes or mucous membranes

- Sensitizers (cause a substantial proportion of exposed people to develop an allergic reaction in normal tissue after repeated exposure)

Who places chemicals on the Hazardous Chemical Inventory?

The chemicals are evaluated by the company's health and environment labs and transportation services. Additionally, employees should ensure that all chemicals used are on the inventory. Chemicals placed on the inventory list should include all chemicals with hazard warnings (Danger, Warning, Caution). See attachment A for the list of chemicals used by the Whittier facility.

Employee Responsibilities for the Hazardous Chemical Inventory.

Even though it is the employer's responsibility to maintain the hazardous chemical inventory, employees are the ones who work with or near the chemicals and should be aware of the risks involved. Therefore, it is to the workers advantage to help keep the inventory current. Some tips to accomplish this may include:

- When you notice a new chemical in the work area, check to see if it is on the inventory. If it is not or you can't find the MSDS, let your supervisor or HSE Manager know.
- Be on the look out for chemicals that have been forgotten or are no longer in use. Areas that may contain such chemicals are cabinets, shelves or closets.

<u>Material Safety Data Sheets</u>

What is a Material Safety Data Sheet?

A Material Safety Data Sheet is defined as written or printed material concerning a hazardous chemical that is prepared in accordance with 29CFR1910.1200.

Each chemical produced or used must be evaluated for its potential hazards by the manufacturer or distributor. The hazard information based on scientific evidence is then placed on a Material Safety Data Sheet (MSDS). The chemical manufacturer or distributor is required to send an MSDS with:

- The initial shipment of the chemical.
- The first shipment after an MSDS is updated.

How to read and understand an MSDS.

Each MSDS may look a bit different but they must all provide the same information. Basically, the MSDS must inform you how to safely use, handle and store the chemical. All information must be written in English.

Before using any chemical product, read the MSDS to find out what safety precautions are needed. Reading an MSDS also saves valuable time in the event of an accident. If you cannot find an MSDS for a certain chemical, inform your supervisor or HSE coordinator. Kodak is required to provide information and training on that chemical before you can continue to work with it.

Contents of a MSDS

A. Supplier/Manufacturer Information (also referred to as Product Identification, Chemical Identification, Material Identification)

This includes:

- Name of the chemical
- Any trade names
- Name, address and telephone number of the manufacturer

Other information that may be in this section is:

- Emergency telephone number
- DOT hazard class
- DOT shipping name

B. Hazardous Ingredients/Identity Information

This section lists what's in the chemical that can cause harm, as well as, how much of the chemical you can safely be exposed to. This amount is referred to as either:

- PEL - permissible exposure limit
- TLV – threshold limit value

These amounts, which are listed based on a typical 8 hour work shift, are usually reported as parts per million or PPM. As a rule of thumb, the lower the number the more hazardous the chemical is.

C. Physical Data (also called Physical/Chemical Characteristics)

The chemicals physical characteristics are listed in this section. This includes:

- Boiling point
- Appearance
- Odor
- Percent volatile (how much of the chemical evaporates at room temperature)
- PH (how acidic or caustic a substance is on a scale of 1 to 14) [note: 1 is very acidic, 14 is very caustic].

D. Fire and Explosion Data

This section tells you the flash point (temperature at which a chemical will ignite) and provides information on how to safely extinguish a fire, including the type of fire extinguishing media to use. [note: a flammable chemical ignites below 100 degrees F and a combustible chemical ignites at 100 degrees F].

E. Health Hazard Data (also called Toxicology and Health Information)

This section identifies the generally recognized health hazards of the chemical. Symptoms of overexposure are also listed. This could include such comments as 'headache' or 'burn'.

Other information listed in this section includes:

- TLV (threshold limit value)
- Whether the substance is a carcinogen
- Any medical conditions that may be aggravated by exposure
- Primary routes of entry
- First aid and emergency procedures

F. Reactivity Data

This section tells whether you need to be concerned about what could happen if the chemical is mixed with air, water or other chemicals. It also explains what conditions and chemicals to keep away from. [note: incompatibility refers to materials such as water or other chemicals that cause the chemical to burn, explode or release dangerous gases. Stability indicates whether the substance is stable or unstable while in use, storage or through misuse].

G. Precautions for Safe Handling and Use (also called Environmental Impact, Spill or Leak Procedures)

In this section you'll find you'll find instructions for the correct way to handle, store and dispose of the chemical. There is also information on what to do if the chemical spills, leaks or is released into the air.

H. Special Protection Information (also called Exposure Control Methods)

This section lists other precautions you may need to follow when handling the chemical, such as the proper protective equipment required while handling or during clean-up of a spill.

I. Special Precautions

Other generally applicable precautions for the safe handling and use of the chemical. This section may include the type of signs to use in case of a spill and how to properly handle contaminated equipment.

Where are Material Safety Data Sheets located?

MSDS's must be accessible to all employees. Whittier maintains all MSDS at the desk of the HSE coordinator in a computer base.

Hazard Warning Labels

How do labels communicate hazard warnings?

A hazard warning is defined as 'any words, pictures, symbols or combination thereof appearing on a label or other appropriate form of warning that conveys the hazard(s) of the chemical(s) in the container(s)'. Labels come in different formats and may convey the message through the use of colors and numbers.

Who is responsible for labeling?

- Manufacturer or distributor
- Employer

What information should be on the label?

The label should always tell you:

- The identity of the chemical
- The name and address of the company that made the chemical
- The chemicals physical hazards
- The chemicals health hazards

The label may also include the following:

- Important instructions for storage and handling
- Protective clothing and equipment you should use when working with the chemical
- Suggested safety procedures

Whatever labeling system is used, it must:

- Clearly identify the chemical name and hazards in words, pictures or symbols
- Be worded in English, although information in other languages may be added

[note: a hazard warning label is used to alert you to the fact that a potential hazard exists. It should not be used as the sole or most complete source of hazard information.]

What are the employers responsibilities?

Relabeling:

There are some situations where Whittier will relabel chemicals after the shipment arrives at the workplace. The most common reasons for relabeling are:

- To repack product into less than case quantities
- To replace soiled, unreadable or missing labels

Information and Training

What type of training is required?

The Hazard Communication Standard requires Kodak to provide information and training for its employees regarding the hazards of the chemicals found in the workplace. This training must be provided:

- At the beginning of each new employee assignment
- Whenever a new hazardous chemical is first used
- On an annual basis

What is required of the employer?

- Requirements of the standard
- Places where hazardous chemicals are present in the work area
- The location and availability of the written program, the chemical inventory list and the MSDS's
- How to use an MSDS
- The type of labeling systems used
- Specific hazardous chemicals in the work area

What is chemical specific training?

Since Kodak may use many different chemicals, with varying types and degrees of hazards, chemical specific training must be done according to the employee's needs. For our purposes, training is by hazard groups (ie. corrosives or flammables). In addition, chemical specific training will also include the following:

- How to detect the presence or release of a hazardous chemical and what to do if occurs
- The physical and health hazards involved
- Measures to use to protect yourself against these hazards, such as:
    - The use of safe work practices
    - Emergency procedures
    - Proper personal protective equipment

Informing contractors:

It is the responsibility of the facility manager, supervisors and HSE manager to provide contractors working in the facility with the following information:

1. Whittier Safety Pamphlet
2. Contractor HSE Checklist
3. HSE Work Permit Agreement

4. In addition, the HSE manager will, if necessary, utilize the HSE inspection form to ensure compliance with any Kodak and regulatory requirements

Other functions:

Any chemicals purchased from an outside vendor will be done in accordance with the facilities 'Purchase Order' procedure and reviewed by the HSE manager
Other required additional training will be covered separately under the following programs:

- Spill
- SCBA/Respirator
- RCRA
- Chemical Disposal/Waste Management
- HM126F
- PPE

Remember, if you have any questions or concerns, see your Supervisor or HSE coordinator.

CHEMICAL INVENTORY LIST

Oxidizers:

Sodium Persulfate

Flammables:

3,5-Dinitrobenzoic Acid
1,4-Dioxane
Methylene Chloride
Acetone
Chloronated Solvents (1,1,1-Trichloroethane)

Corrosives:

(This list is not all inclusive. See individual MSDS's for complete listing)

Sulfuric Acid
Formaldehyde
Ammonia
Acetic Acid
Acetic Acid, Glacial
Boric Acid
Phosphoric Acid
Potassium Carbonate
Potassium Hydroxide
Sodium Hydroxide
Sodium Metabisulfate
Sodium Sulfide
Ammonium Bromide
Aluminum Sulfate
Glutaraldehyde

Toxics:

(This list is not all inclusive. See MSDS's for complete listing)

Hydroquinone
(4-(N-Ethyl-N-2-Hydroxyethyl)-2-Methylphenylenediamine Sulfate

This Page Left Intentionally Blank

Job Summary:

Coordinates the Western Zone Logistics Health, Safety and Environmental (HSE) compliance with local, state and federal regulations as well as corporate standards. Ensures adherence with HSE and security procedures to guarantee the well-being and individual safety of the WZ employees, customers, contractors, and visitors. Assures HSE and security elements are incorporated in all aspects of the operation, protecting corporate assets.

Essential Duties and Responsibilities

1) Ensures all site tenants/employees are furnished with a hazard free workplace based on corporate, OSHA and CALOSHA requirements. This is done through maintaining expertise and understanding of all applicable regulations and standards. And, in turn, designing, preparing and implementing policies, programs and procedures, and conducting mandatory training to maintain organizational and facility compliance. (50%)

2) Provide technical expertise regarding government transportation regulations (i. e. DOT, IMO, ICAO) for hazardous materials. Often directly handling unusual transportation issues requiring a detailed and "no error" approach in documentation. (15%)

3) Develops and regularly performs various employee and facility inspections to ensure regulatory and corporate standard compliance as demonstrated by the successful results of numerous corporate and agency audits. (10%)

4) Ensures the safe and responsible use, transportation, storage, and disposal of both EK and non-EK regulated materials. For the facility's industrial waste requirements this involves on-site disposal (permitted chemical neutralization), off-site shipment preparation (containerization, marking, labeling, documentation), reboxing of contaminated product and monitoring/reporting. (10%)

5) Responsible for facility regulatory reporting, monitoring and permit application with associated fee and tax payments. (5%)

6) Represents site with government and corporate on-site visits, monitoring requirements and audits. (4%)

7) Chairs and/or participates in various in-house and cross-site teams including the WZ safety committee, spill remediation team; reporting findings, identifying concerns and making recommendations to management for consideration, with subsequent responsibility for implementing action items.(4%)

8) Provides operational and regulatory support to carriers, customers and other EK facilities; conducting on-site visits and audits, training, and assistance in program and procedure development. (2%)

Functional/Technical Knowledge:

The individual must have extensive knowledge in corporate HSE requirements, HAZMAT regulations, OSHA standards, government regulations (DOT, EPA, etc.), and emergency procedures and requirements, i.e. fire safety. They must possess a very specific knowledge of the issues unique to California. A thorough knowledge of local product handling methods, systems and capabilities is required. A high degree of operational knowledge in the processes of Product Logistics, Customer Order Services (COS), Worldwide Transportation Services (WTS), corporate HSE and Purchasing is necessary. The individual must be versed in the use of various computer systems and PC applications.

1600 LEXINGTON AVE
ROCHESTER, NY 14652-0122

This certifies that the registrant is registered with the U.S. Department of Transportation as required by 49 CFR Part 107, Subpart G.

This certificate is issued under the authority of 49 U.S.C. 5108. It is unlawful to alter or falsify this document.

Reg. No: 061407 550 045P Issued: 06/14/2007 Expires: 06/30/2008

Record Keeping Requirements for the Registration Program

The following must be maintained at the principal place of business for a period of three years from the date of issuance of this Certificate of Registration:

(1) A copy of the registration statement filed with PHMSA; and
(2) This Certificate of Registration

Each person subject to the registration requirement must furnish that person's Certificate of Registration (or a copy) and all other records and information pertaining to the information contained in the registration statement to an authorized representative or special agent of the U. S. Department of Transportation upon request.

Each motor carrier (private or for-hire) and each vessel operator subject to the registration requirement must keep a copy of the current Certificate of Registration or another document bearing the registration number identified as the "U.S. DOT Hazmat Reg. No." in each truck and truck tractor or vessel (trailers and semi-trailers not included) used to transport hazardous materials subject to the registration requirement. The Certificate of Registration or document bearing the registration number must be made available, upon request, to enforcement personnel.

For information, contact the Hazardous Materials Registration Manager, PHH-62, Pipeline and Hazardous Materials Safety Administration, U.S. Department of Transportation, 1200 New Jersey Avenue, SE, Washington, DC 20590, telephone (202) 366-4109.

APPROVAL CA2001110036
(First Revision)
ISSUED BY THE COMPETENT AUTHORITY OF THE UNITED STATES
Expiration Date: 02-28-2008

1. **APPROVAL HOLDER:** Eastman Kodak Company
1600 Lexington Avenue
Rochester, NY 14652

2. **REGULATORY AUTHORITY:** Chapter 7.2 of the International Maritime Dangerous Goods code and Part 1; Chapter 1, Paragraph 1.1.2 of the International Civil Aviation Organization's Technical Instructions for the Safe Transportation of Dangerous Goods by Air (ICAO TI).

3. **SYNOPSIS:** This approval authorizes the transportation of photographic processing materials consisting of a Class 8 material in liquid form with a small quantity of tertiarybutylamine borane (Division 4.1) that has a poison subsidiary hazard in the same outside package.

4. **BASIS:** This approval is issued in response to Eastman Kodak Company's application dated November 4, 2002.

5. **PERIOD OF VALIDITY AND CONDITIONS OF APPROVAL:** This approval does not provide relief from any requirements of the Hazardous Materials Regulations, the IMDG Code or ICAO TI except as stated herein. This approval is valid until terminated by the Associate Administrator for Hazardous Materials Safety.

a. Approved Materials: Only the following material(s) may be transported under the terms of this approval.

Proper shipping name, Hazard class or division, and Identification number and Packing Group:

Proper Shipping Name/Hazardous Materials Description	Hazard Class/ Division	Identification number	Packing Group
Corrosive liquid, basic, organic, n.o.s.	8	UN3267	III
Corrosive liquid, basic, inorganic, n.o.s.	8	UN3266	II
Flammable solid, toxic, inorganic, n.o.s. (tertiarybutylamine borane)	4.1	UN3179	II
Sodium hydroxide solution	8	UN1824	II

b. Packaging: UN4G boxes with inner packagings consisting of plastic bottle(s) containing not more than 64 ounces of Class 8 liquids and plastic bottle(s) containing not more than 1 ounce of tertiarybutylamine borane (Division 4.1). Other non-hazardous chemicals may be packed in plastic bottles or bags in the same outside packaging. Sufficient partitioning and cushioning materials must be provided to protect the inside packaging from damage.

6. **SPECIAL PROVISIONS:**

a. A copy of this approval must accompany the shipment made under the terms of this approval.

b. This approval in no way affects the need to obtain any required authorizations from other agencies of the United States Government or from the competent authorities of the countries of transit and destination.

7. **GENERAL PROVISIONS:**

a. Failure by any person to comply with the terms and conditions of this approval and the Hazardous Materials Regulations, 49 CFR Parts 171-180, may result in the modification, suspension or termination of that person's authority to use this approval. Failure to comply may also subject that person to penalties prescribed by 49 U.S.C. §§ 5123 and 5124. This approval may be modified, suspended or terminated in its entirety if that action is justified in light of changes in circumstances or additional information not available when this approval was issued. Unless immediate modification, suspension or termination is necessary to avoid a risk of significant harm to persons or property, before action is taken, that person will be

notified and provided with an opportunity to show why the proposed action should not be taken.

b. Each "Hazmat employee", as defined in § 171.8, who performs a function subject to this approval must be provided training on the requirements and conditions of this approval in addition to the training required by §§ 172.700 through 172.704.

8. **Application for Renewal**:

a. Each application for renewal of an approval must:

(1) Be submitted to: Associate Administrator for Hazardous Materials Safety, Research and Special Programs Administration to the attention of the Office of Approvals, DHM-32;

(2) Identify by number the approval for which renewal is requested;

(3) State the name, street and mailing addresses, and telephone number of the applicant; if the applicant is not an individual, state the name, street and mailing addresses, and telephone number of an individual designated as an agent of the applicant for all purposes related to the application;

(4) Include a certification by the applicant that the original or revised approval, remains accurate and complete;

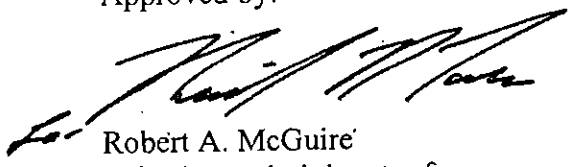
(5) Include a statement describing all relevant shipping and incident experience in connection with the approval since its issuance or most recent renewal; and

b. If at least 60 days before an existing approval expires the holder files an application for renewal that is complete and conforms to the requirements of this section, the approval will not expire until final administrative action on the application for renewal has been taken.

Issued in Washington, D.C.

Dated: **February 7, 2003**

Approved by:



Robert A. McGuire
Associate Administrator for
Hazardous Materials Safety

Address all inquiries to: Associate Administrator for Hazardous Materials Safety, Research and Special Programs Administration, Department of Transportation, Washington, D.C. 20590. Attention: DHM-32.

DOT-SP 8770
(TENTH REVISION)

EXPIRATION DATE: February 28, 2011

(FOR RENEWAL, SEE 49 CFR § 107.109)

1. GRANTEE: Eastman Kodak Company
Rochester, NY

2. PURPOSE AND LIMITATION:

a. This special permit authorizes the transportation in commerce of certain photographic processing materials consisting of a Class 8 (corrosive) material in liquid form and a minute quantity of a Class 4, Division 4.1 (flammable solid) material that has a poison subsidiary hazard in the same outside package. This special permit provides no relief from the Hazardous Materials Regulation (HMR) other than as specifically stated herein.

b. The safety analyses performed in development of this special permit only considered the hazards and risks associated with transportation in commerce.

c. Party status will not be granted to this special permit.

3. REGULATORY SYSTEM AFFECTED: 49 CFR Parts 106, 107 and 171-180.

4. REGULATIONS FROM WHICH EXEMPTED: 49 CFR §§ 174.81(d), and 177.848(d) in that materials may not be stored or transported in the same package, except as specified herein.

5. BASIS: This special permit is based on the Eastman Kodak Company's application dated March 1, 2007, submitted in accordance with § 107.109.

6. HAZARDOUS MATERIALS (49 CFR § 172.101):

Hazardous Materials Description			
Proper Shipping Name	**Hazard Class/ Division**	**Identi-fication Number**	**Packing Group**
Corrosive liquid, basic, organic, n.o.s.	8	UN3267	III
Corrosive liquid, basic, inorganic, n.o.s.	8	UN3266	II
Flammable solid, toxic, inorganic, n.o.s. *	4.1	UN3179	II
Sodium hydroxide solution	8	UN1824	II

* This material requires a 6.1 (POISON) subsidiary hazard label.

7. SAFETY CONTROL MEASURES: PACKAGING - Prescribed packaging is UN4G boxes with inner packagings consisting of plastic bottle(s) containing not more than 64 ounces of Class 8 liquids and plastic bottle(s) containing not more than 1 ounce of tertiarybutylamine borane (Division 4.1). Other non-hazardous chemicals may be packed in plastic bottles or bags in the same outside packaging. Sufficient partitioning and cushioning materials must be provided to protect the inside packagings from damage.

8. SPECIAL PROVISIONS:

a. A person who is not a holder of this special permit who receives a package covered by this special permit may reoffer it for transportation provided no modifications or changes are made to the package and it is reoffered for transportation in conformance with this special permit and the HMR.

b. A current copy of this special permit must be maintained at each facility where the package is offered or reoffered for transportation.

c. Packagings permanently marked 'DOT-E 8770', prior to October 1, 2007 may continue to be used under this special

permit for the remaining service life of the packaging or until the special permit is no longer valid. Packagings marked on or after October 1, 2007 must be marked 'DOT-SP 8770'.

d. Shipping papers displaying 'DOT-E 8770' may continue to be used until October 1, 2007, provided the special permit remains valid.

9. MODES OF TRANSPORTATION AUTHORIZED: Motor vehicle, rail freight, cargo vessel, cargo aircraft only.

10. MODAL REQUIREMENTS: No modal-specific requirements are required by this special permit.

11. COMPLIANCE: Failure by a person to comply with any of the following may result in suspension or revocation of this special permit and penalties prescribed by the Federal hazardous materials transportation law, 49 U.S.C. 5101 et seq:

- All terms and conditions prescribed in this special permit and the Hazardous Materials Regulations, 49 CFR Parts 171-180.
- Persons operating under the terms of this special permit must comply with the security plan requirement in Subpart I of Part 172 of the HMR, when applicable.
- Registration required by § 107.601 et seq., when applicable.

Each "Hazmat employee", as defined in § 171.8 who performs a function subject to this special permit must receive training on the requirements and conditions of this special permit in addition to the training required by §§ 172.700 through 172.704.

No person may use or apply this special permit, including display of its number, when the special permit has expired or is otherwise no longer in effect.

Under Title VII of the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU)- 'The Hazardous Materials Safety and Security Reauthorization Act of 2005' (Pub. L. 109-59), 119 Stat. 1144 (August 10, 2005), amended the Federal hazardous materials transportation law by changing the term

'exemption' to 'special permit' and authorizes a special permit to be granted up to two years for new special permits and up to four years for renewals.

12. REPORTING REQUIREMENTS: Shipments or operations conducted under this special permit are subject to the Hazardous Materials Incident Reporting requirements specified in 49 CFR §§ 171.15 - Immediate notice of certain hazardous materials incidents, and 171.16 - Detailed hazardous materials incident reports. In addition, the grantee(s) of this special permit must notify the Associate Administrator for Hazardous Materials Safety, in writing, of any incident involving a package, shipment or operation conducted under terms of this special permit.

Issued in Washington, D.C.:

Diane LaValle

for Bob Richard
Deputy Associate Administrator
for Hazardous Materials Safety

Address all inquiries to: Associate Administrator for Hazardous Materials Safety, Pipeline and Hazardous Materials Safety Administration, Department of Transportation, Washington, D.C. 20590. Attention: PHH-31.

Copies of this special permit may be obtained by accessing the Hazardous Materials Safety Homepage at http://hazmat.dot.gov/sp_app/special_permits/spec_perm_index.htm Photo reproductions and legible reductions of this special permit are permitted. Any alteration of this special permit is prohibited.

EASTMAN KODAK COMPANY
HAZARDOUS MATERIALS TRANSPORTATION SECURITY PLAN FOR DISTRIBUTION CENTER – WESTERN ZONE

PREFACE

The U.S. Department of Transportation (U.S. DOT) regulations mandate companies to develop and adhere to a dangerous goods transportation security plan (herein referred to as the "plan") if they are subject to the security plan requirements of 49 CFR, part 172, subpart I, section 172.800. The requirements involve offering or transporting in commerce the following types or quantities of hazardous materials:

- A highway route-controlled quantity of a Class 7 radioactive material.
- More than 25 kg (55 pounds) of a division 1.1, 1.2, or 1.3 explosive material.
- More than one liter per package of a material poisonous by inhalation that meets the criteria for Hazard Zone A.
- A select agent or toxin regulated by the Centers for Disease Control and Prevention under 42 CFR part 73.
- Hazardous materials contained in bulk packaging with a capacity of 13,248 L (3,500 gallons) or more for liquids or gases or more than 13.24 cubic meters (468 cubic feet) for solids.
- A quantity of hazardous material that requires placarding under 49 CFR, subpart F.

The plan includes an assessment of possible transportation security risks and appropriate measures to reduce or eliminate the risks. Procedures dealing with personnel security, unauthorized access and en route security when hazardous materials are transported in commerce are also incorporated into the plan.

Table of Contents

Transportation Security Risk Assessment 3

Main Warehouse 6

Mitigation of Personnel Security Risks 10

Transportation Security Risk Assessment

Risk assessment begins with an inventory of those materials that are considered to pose a significant security threat while in commerce. This includes but not limited to, chemicals with the following risk severity properties:

1. Explosive (detonable material creating a very rapid release of energy with destructive force).

2. Toxic (causing fatalities in humans and animals through oral, dermal, inhalation, or other routes of administration).

3. Biological agents, (Pathogens that cause disease and or death in humans and animals). Note - Kodak does not possess any materials considered biological agents.

4. Oxidizers (cause or enhance the combustion of other materials).

5. Radioactive materials (emitting ionizing radiation) that are route controlled.

Any other materials of a type or quantity that require placarding per 49 CFR, part 172, subpart F such as; gases, (Class 2), flammable liquids (Class 3), flammable solids (Class 4.1), spontaneously combustible (Class 4.2), dangerous when wet (Class 4.3), organic peroxides (Class 5.2), and corrosive liquids or solids (Class 8), are also included in the assessment.

This plan addresses the mandatory elements using a risk assessment model published by the American Chemistry Council[1] as a guideline. Kodak's Human Resource procedure for complying with the personnel security component required in section 172.802(a)(1) is also referenced.

Attached are several listings documenting the various chemicals classified as hazardous for transportation that are affected by the plan. This compilation resulted from the information provided by Kodak's Distribution Center – Western Zone hazardous materials transportation analyst.

Only hazardous materials that meet the requirements of the plan as defined in section 172.800(b) are referred to and described in the plan.

[1] "Transportation Security Guidelines for the U.S. Chemical Industry" – American Chemistry Council, 2001, 1-25

Kodak Distribution Center – Western Zone (KDC –WZ)

Chemical Listing

Kodak Distribution Center – Western Zone is a warehouse located in Whittier, CA. The warehouse is approximately 215,000 square feet and is used to store Kodak finished goods photochemical products received from various Kodak manufacturing and warehouse locations.

KDC - WZ Location	Material	Risk Severity (High Medium Low)	Shipped outside of KDC - WZ yes/no?	Packaging
Warehouse	Various hazardous materials	Hazard classes 3, 4.1, 4.2, 5.1, 6.1, 8 (Medium)	Yes	Various bulk and non-bulk containers
Warehouse	Various waste hazardous materials	Hazard classes 3, 4.1, 4.2, 5.1, 6.1, 8 (Medium)	Yes	Various bulk and non-bulk containers
Warehouse	Various hazardous materials	Hazard classes 3, 4.1, 4.2, 5.1, 6.1, 8 (Low)	Yes, as a residue	Various bulk and non-bulk containers

High Risk Shipments

1. There are no high-risk shipments made from the KDC-WZ facility. High-risk materials are categorized as materials with explosive, inhalation hazard, toxins used in biological weapons or radioactive fissile material properties.

Medium Risk Shipments

1. Bulk and non-bulk containers of various hazardous materials of classes 3, 4.1, 4.2, 5.1, 6.1 and class 8 are shipped via commercial carrier to consignee addresses located primarily in the western states of the United States and Hawaii.

2. Non-bulk containers of hazardous liquid and solid waste of classes 3, 4.1, 4.2, 5.1, 6.1, and class 8 are shipped to other domestic disposal facilities.

Low Risk Shipments

1. Empty non-bulk and bulk packagings containing a residue of various hazardous materials of classes 3, 4.1, 4.2, 5.1, 6.1, and class 8 are shipped back to the original supplier or to a disposal facility.

The following section describes the risk assessment performed for KDC – WZ, including the materials that are affected by the security plan requirements. To reduce the risk for misuse of the hazardous materials, unauthorized access and en route security measures are also identified in the plan.

Main Warehouse – Chemical Hazard(s)

The main warehouse ships photochemical finished goods of hazard classes 3, 4.1, 4.2, 5.1, 6.1 and class 8 in bulk and non-bulk containers that may require placards depending upon the quantity offered to a commercial carrier. Shipment activity is daily, Monday through Friday.

KDC – WZ operates an 8 hour per day, five day a week operation, excluding weekends. There are 47 employees of which 46 are trained and certified hazmat transportation employees. There are no contract personnel employed at KDC – WZ.

Threat Assessment. Shipments offered to a commercial carrier that require placards will need unauthorized access procedures and en route security measures during transport.

Chemical Access Procedure

Procedures must be in place that document how the security of hazardous materials are maintained that are stored incident to movement in transportation. Storage incident to movement of a hazardous material means from the time the material is offered for transportation until it reaches its destination.[2]

1. Document the procedure for shipping containers of hazardous materials that require placards to be offered to commercial carriers as follows:

   a. Maintain a list of employees who are authorized to access and handle the product that requires placards to be offered to the commercial carrier (attachment A).

   b. Identify the carrier name and contact person. If possible, obtain the name of the driver who will be picking up and delivering the material (attachments B & C).

   c. Upon arrival, have the commercial carrier's driver contact authorized Kodak personnel and identify him or herself. An authorized employee verifies the driver's credentials including commercial driver's license with picture.

   d. Authorized employees load, segregate and secure the non-bulk and bulk containers requiring placarding inside the carrier's trailer from the designated building shipping docks.

   e. An authorized employee provides signed shipping papers including date and time, to the driver, offers appropriate placards as required and seals the trailer.

[2] U. S. Department of Transportation. Federal Register. Vol. 68. No. 57. Washington D.C. March 25, 2003. p 14516

Unauthorized Access Procedure

All Eastman Kodak and subsidiary locations (including any unimproved or apparently unused land), whether leased or owned must display appropriate notice(s) identifying the premises as Eastman Kodak and that access to and activities on the premises are to be restricted to company business. The placement and wording of the notice(s) should be appropriate and consistent with any applicable lease provisions and with local legal requirements regarding trespass and liability statues.[3]

1. Document the procedure for challenging unauthorized personnel who are in the restricted area (attachments D, E, F, G & H).

    a. Any persons who are not authorized to be in the area must be asked to identify themselves and to state their purpose. If a legitimate business reason is not given, the person is asked to leave the area immediately.

    b. If the individual(s) refuse to leave the area or are acting suspiciously, contact Whittier management immediately and provide the persons' names and descriptions.

[3] Kodak Internal Control Standards – Section 11:Protection of Physical and Intellectual Assets

En Route Security

Successfully reducing transportation security risks is a coordinated effort that requires the cooperation of the shipping areas, commercial carrier, and consignees of the hazardous materials. Effective communication between the participants in a timely manner is critical to identifying potential threats as well as developing alternative strategies for closing gaps and vulnerabilities.

1. Document the procedure for addressing the security of hazardous materials affected by the plan that are offered to a commercial carrier for transportation.

    a. The carrier must provide an acceptable method for insuring the safety and security of the hazardous materials after being offered and accepted by the carrier for transport.

    b. The carrier must provide a means for immediately communicating any abnormal situation that occurs with the shipment during transportation that could result in the misuse of the material.

    c. The consignee (receiver of the goods) must provide a method for communicating to the shipment originator as soon as reasonable; if any unusual tampering was detected or if the shipment was not received in the quantity and condition expected.

Note - A list of preferred commercial carriers can be found at the Kodak internal web site http://www.kodak.com/US/en/corp/vendorTransportation/. Select (Domestic Shipment), and Contact Names, Phone Numbers and E-mail addresses or (International Shipment) and Contact Name Information for assistance.

Preferred carriers will have a security plan that ensures the safety of Kodak shipments from pickup until delivery.

Mitigation of Personnel Security Risks

The plan must describe the procedures for addressing personal security to reduce the risk of employees hired to perform hazmat transportation functions from misrepresenting their personal and work history. This section describes the procedure for confirming information provided by job applicants hired for positions involving access or handling of the hazardous materials covered by the plan. The procedure is used for job applicants hired by all Kodak domestic locations within the United States.

This procedure confirms the accuracy of the information submitted on a job application. This validation process will be performed after an offer for employment (i.e., full time, part-time, seasonal, co-operative, etc.) has been extended to a prospective applicant by the Human Resource department of Eastman Kodak Company.

Refer to the Background Check Policy[4] in the Kodak internal web site at location http://policies.kodak.com/policy.cfm?PolicyID=321 for the procedures detailing the background check process for new hire employees (attachment I).

WZ ACCESS CONTROL DEVICE PROCEDURE

The purpose of this procedure is to ensure measures for access control devices are in place. These measures include approval for, coordination and maintenance of and an audit process. Access control devices for the Whittier facility include keys, identification badges and electronic access control readers.

Keys:

All keys **must** have management approval before issuance. Doug Bell will be the primary contact for these purposes. A review will be done to determine need. If the need is appropriate, authorization will be granted and a key will be issued. Keys are controlled by type and numbered. If issued, the individuals name, key type and key number will be maintained on the 'key inventory log' (appendix A). It will be the individual's responsibility to ensure control of the keys in their possession is maintained. Duplication of any key is forbidden without the express permission of management. If a key is lost or stolen, it **must** be reported immediately. In these instances, a determination will be made by management whether there exists a need to replace involved locks to ensure continuity of facility security. Additionally, once employment has been ended (for any reason), it is the responsibility of management to ensure all issued keys are retrieved.

Identification Badges:

All employees and non-employees will be issued identification badges for facility access. There shall be only two types of identification badges used for access; permanent or visitor/contractor/temporary. Larry Wells (Hollywood facility) is solely responsible for producing identification badges. Additionally, Eastman Kodak visitors from other company facilities may be granted access to our facility by having management request them added to our 'reader system' and then removed at the end of their visit.

Permanent badges are produced upon request from either Doug Bell or Dennis Westling. They will display the holder's image, name and company. It is the responsibility of the holder to wear their badge at all times while on company property, as well as, maintain control of their badge (do not allow another individual to have and/or use your badge). If a badge is lost or stolen, it **must** be reported immediately to supervision so a new badge may be requested. In the interim, a visitor/temporary badge may be issued to the employee. It will also be supervision's responsibility to ensure an employee's badge is retrieved once employment is ended and their name deleted from the 'electronic reader' system.

Visitor/contractor/temporary badges are produced upon request from Doug Bell or Dennis Westling. There will be a pool of these types of badges under their control. They

will display the badge type and number designation. It is the responsibility of the holder to wear their badge at all times while on company property and return the badge to Doug or Denny when business is complete. If the badge is lost or stolen, it **must** be immediately reported to Doug Bell or Dennis Westling so that particular badge number can be deleted from the 'electronic reader' system.

Elecronic Access Control Readers:
Larry Wells (Hollywood facility) is responsible for the facilities electronic reader system. This includes maintaining a current list of authorized users, reports of access data and repairs. Any 'reader' issues will be conveyed from supervision.

Close Circuit TV:
Close circuit cameras are in place and monitoring the east and west entrances and parking lots. A monitor is in place in the shipping office to view all personnel activity in and out of the warehouse. This activity is recorded and maintain on a dedicated hard drive.

Audit Process:
Keys will be audited on an annual basis. This will be performed during the 'performance appraisal' process by supervision. Possession of all applicable keys (based on 'key inventory log') will be confirmed via visual inspection.

Identification badges will be periodically audited by management during facility walk arounds.

WESTERN ZONE

SECURITY INCIDENT REPORTING PROCEDURE

To ensure that proper documenting and reporting is adhered to, please use the following guidelines when a security incident occurs:

What is a security incident:
A security incident is anything that involves fraud, theft, embezzlement, suspicious items, bomb threats or any unlawful or unethical practice or condition involving company property and assets. These may also include personal property while on company premises.

Reporting process:
The reporting process is similar to that of any other incident which may occur on site. It is management's responsibility to ensure all pertinent information is gathered from all parties involved and the corporate report filed. Detail is important. A police report (or other emergency agency reports) may be a necessary part of this process. Once the initial information has been gathered, a 'Worldwide Corporate Security Incident' form must be completed.

Completing the 'Worldwide Corporate Security Incident' form:
Follow these steps;

- Access Kodak's Intranet page.
- Click on 'Security' under the 'Services & Support' section.
- Click on 'Worldwide Corporate Security'.
- Click on 'submit a report' located at the bottom of their web page.
- Fill in all information and click on the 'submit' button. Use your name and phone number for these fields. If the incident involved an employee's personal property, indicate their name in the 'describe' field.

The information is automatically submitted to the appropriate individuals. You may be directly contacted later for further follow up and/or additional information.

Footnote: You can set up an icon on your desktop that will take you directly to the 'Worldwide Corporate Security' web page.

WZ Fire Prevention Plan

Purpose:
The purpose of this plan is to define the fire prevention steps taken at the WZ, Whittier facility.

Scope:
This plan applies to all product logistics employees, contract and any other permanent or temporary tenants residing in the Whittier facility.

Responsibilities:
Management shall review the Fire Prevention Plan with each new or transferred employee upon initial assignment to the Whittier Product Logistics Organization by way of the 'orientation checklist', as well as, inform any other tenants residing within the facility.

Definitions:
CFR – Code of Federal Regulations
HSEC – Health, Safety & Environmental Coordinator

List of the facilities major fire hazards, potential ignition sources, control processes and fire protection equipment systems (29CFR1910.38(b)(2)(i)):

1. Combustible and flammable liquids, solids and gasses are the major workplace fire hazards present in the Whittier facility.
2. Potential ignition sources include open flame, hot surfaces and electrical discharge and are located in the general warehouse, shop area, battery charging area and during welding and grinding tasks.
3. Inventory Control and the HSEC ensure all Kodak products that are flammable are stored in the primary flammable storage cabinet. All other non-Kodak flammable products (i.e. cleaning materials) are stored in secondary flammable storage cabinets or segregated per maintenance shop procedures and verified by the HSEC and safety inspections.
4. The facility is equipped with sprinkler systems, portable fire extinguishers and fire hoses.

Names or titles of personnel responsible for the maintenance of equipment and systems installed to prevent or control ignition of fires (29CFR1910.38(b)(2)(ii)):

1. SSD Systems is responsible for the testing of the facility fire sprinkler system.
2. Advanced Fire Protection is responsible for the maintenance and repair of the facility fire sprinkler system.
3. Academy Fire Extinguisher Service and maintenance shop personnel are responsible for the maintenance of the facilities portable fire extinguishers and fire hoses.
4. Facility management and the HSEC are responsible for ensuring proper procedures are followed regarding ignition sources.

Names or job titles or personnel responsible for the control of fuel source hazards (29CFR1910.38(b)(2)(iii)):

1. Management and the HSEC are responsible for controlling fuel sources found in the Whittier facility.

Housekeeping (29CFR1910.38(b)(3)):

1. Accumulation of flammable and/or combustible waste materials is managed and controlled through bi-monthly safety inspections, periodic management and HSEC spot checks and the facilities general housekeeping procedure.

Training (29CFR1910.38(b)(4)(i)&(ii)):

1. The facility has a team annually trained in fire safety and the use and limitations of fire extinguishers.
2. Periodic testing of the facilities evacuation alarm system is conducted.
3. Periodic practice evacuation drills are conducted and documented.

4. Employees are informed of facility practices by way of an annual review of the 'orientation checklist' process.
5. Tenants are informed either verbally or by written communication.

Maintenance (29CFR1910.38(b)(5)):

1. Monthly inspections are conducted by maintenance shop personnel to ensure fire suppression equipment is maintained properly.
2. Annual inspection and servicing of the fire suppression equipment is conducted by Academy Fire Extinguisher Service.
3. SSD Systems conducts monthly inspections and testing of the sprinkler system.
4. Any identified repairs of the sprinkler system will be performed by Academy Fire Protection.
5. Fire suppression equipment is spot checked as part of the bi-monthly safety inspection process.
6. The HSEC conducts weekly inspections of the sprinkler system control valves to ensure they are open and secure from tampering.

Re: PCB's.

Please adhere to the following revised procedure:

Under no circumstances are light ballasts from our flourescent light fixtures to be discarded in the general refuge. All spent light ballasts are to be given to the Chemical Disposal Area for proper disposal. The HSE Coordinator will ensure they are placed in 17H metal drums and labeled properly per all applicable regulations. Packed drums will be shipped via PSC, per established waste profiles, for ultimate disposal.

If you have any questions regarding this procedure, contact the HSE Coordinator at extension 2410.

RE: Lead Base Paints.

It is not uncommon to notice paint chips which have fallen from the pipes, vents and ceiling of the warehouse. The question has been asked if this poses any health concerns. Samples were sent to our Environment Technical Services for analysis. The results indicate that the paint contains various heavy metals; primarily lead. Lead is considered to be a carcinogen under California's Proposition 65. It generally enters the human body via ingestion or inhalation.

From a work environment standpoint, the levels of lead are well within permissible OSHA exposure limits and present no health hazards to you. If however, you should come in direct contact with any paint chips, wash the contacted area thoroughly with soap and water. If you notice any large amounts of fallen paint chips, contact the HSE coordinator for proper clean-up and disposal.

If you have any questions or would like to see the analysis results, contact your HSE coordinator.

Environmental Analytical Services
Metals Work Center
Report

Title: Determination of Ba,Cd,Cr,Pb and Zn in Paint.

Customer: T.Oberlin

TMS Number: 3SXP501 IH WC Job # 116

Hael Project: 3060

Date received: 1/25/94

Sample ID: Paint Chips from LA

Analyte(s): Barium (Ba), Cadmium (Cd), Chromium (Cr), Lead (Pb), Zinc (Zn).

Technique: Inductively Coupled Plasma Atomic Emission Spectroscopy.

Method used: Method 3051, nitric only.

Results: The results are expressed as weight percent of the average of the duplicate analysis.

Sample ID	Ba%	Cd%	Cr%	Pb%	Zn%
Paint Chip	0.025	0.0002	0.08	0.51	0.22

Control results are expressed in ug/g:

Control result (Lot 218)	260	92	150	160	110

Attached is a sheet listing advisory range for the control.

< = less than detection limit

This report will be kept on file in the MWC, B-34 for two years.

Sample Preparation: Mary Jane Dikeman Date: 1/26/94

January 27, 1994

KMX - Ty Oberlin

I have results of the lead test on the paint samples. They do contain .51% lead. There was also analysis for Barium which was .025, for Cadmium .0002, for Chromium .08, and for Zinc .22 all in percentages.

What they need to do to clean up the lead is basically you need to:

- Wet the material first
- Minimize dust
- Wear safety glasses
- Wash hands and face after doing so

No respiratory protection is required because there would be low, their exposure would be assumed to be below the OSHA action level.

You do need to have some concerns about waste disposal. You need to contact Sue Fero in Rochester and she can help you with the disposal of that waste. If not, maybe Scott Williams is aware of how to handle lead contaminated waste.

Any more questions please contact me at Knet 258-8025.

This Page Left Intentionally Blank

To: All Employees – Whittier Facility

Subject: California Assembly Bill 3713 (annual reminder)

The California Assembly Bill 3713 requires us to inform all employees of the presence of asbestos containing materials (ACM) in any of our facilities.

The purpose of this letter is to notify employees working in the Kodak Whittier warehouse located at 12100 Rivera Road that an asbestos survey report has been conducted and confirms the presence of asbestos containing materials (ACM) in this building.

Airborne asbestos levels in buildings are much lower than those in industrial workplaces where serious health effects such as lung cancer and asbestosis have been observed. However, it is important for employees to follow proper work practices to minimize the potential for disturbing ACM. Avoid touching asbestos materials on walls, ceilings, pipes or boilers. Do not drill holes or hang objects from ceilings made of ACM. If you find ACM that has been damaged, report it to your supervisor. Do not disturb damaged asbestos materials or asbestos debris. Only persons authorized and properly trained should perform any work which may disturb asbestos materials. This type of work will be performed by outside contractors only.

Asbestos containing materials pose no threat to your health unless asbestos fibers become airborne due to material aging, deterioration or as the result of some damage. Where ACM have been identified in the building survey, they are generally in good condition or of a type not likely to release fibers unless disturbed. Also, these areas are typically not accessible to most employees.

Any employee may review the asbestos survey report. All asbestos-related data will be available during normal business hours from the Health, Safety and Environmental Coordinator.

Bulk samples of suspect materials were analyzed by polarized light microscopy. Asbestos containing materials have been identified in the following locations:

Location	Type ACM
Throughout complex	9" x 9" vinyl asbestos tile
"	Built up roof
"	Tape wrap valve insulation
"	Some (cementitious) plaster insulation at pipe transitions
Chilled water system	Some sections of pipe insulations
Hot water heat system	Some sections of pipe insulations
City water line system	Cementitious plaster insulation at pipe transitions (i.e. elbows)
#2 Chiller	Pipe insulation
Boiler exhaust stack	Stack insulation

If you have any question, contact the Health, Safety and Environmental Coordinator at ext. 2410.

1/4/00

FACILITY ASBESTOS INSPECTION

Asbestos is a known carcinogen and caution **must** be exercised if the asbestos containing material (ACM) is disturbed or damaged. During the inspection process, do not touch or disturb any ACM. If any damage is found, immediately contact the HSE coordinator at extension 2410. In addition, secure the area so that Whittier personnel are restricted from contact with the ACM. The HSE coordinator will notify the building owners and request they arrange for repair or removal of the ACM. Until appropriate action is taken, the area will remain restricted.

Location of ACM:

Locations	Description	Type
S9 penthouse	Mud, steam return line elbow	Chrysotile
S13 penthouse	Tape insulation, chill water line	Chrysotile
Chiller 2 room	Block insulation, chill water line	Chrysotile
Chiller 2 room	Block insulation, hot water line	Amosite
Warehouse	Block insulation, hot water line	Amosite
Warehouse	Mud, city water line	Chrysotile
Warehouse	Mud, city water line elbows	Chrysotile
Boiler Control Room	Light grey green floor tiles (9 x 9)	Chrysotile

Frequency of inspection:

Quarterly

Inspection form:

Attachment A

Attachment A

ACM Inspection Form

1. Inspect all areas listed.

2. Do not touch any of the material in the listed areas.

3. Check for disturbance, deterioration, crack, torn or loose ACM.

4. If any damaged asbestos is discovered during the inspection, immediately secure the area, note the location and type of damage below and give the inspection form to the HSE coordinator.

5. Sign and date the form.

6. Location and damage:

REPORTED BY: Richard Rote & David Vitt

REVIEWED BY: J. Grant Elder

ACTION REQUIRED?
X NO

Survey Summary

At the request of Mr. David Fite, Corporate Real Estate, KO, the Whittier Regional Marketing and Distribution Center, located at 12100 Rivera Rd., Whittier, California, was surveyed for the presence of suspected asbestos-containing materials. The Whittier complex consists of 4 different buildings, the Marketing and Training building, the Technical building, Office/warehouse building, and the Flamables Storage building. The entire complex was inspected for suspected asbestos-containing materials.

Samples were taken of pipe and boiler insulations, wall plasters, wallboard, ceiling tiles, floor tiles, linoleum, and other suspect materials. The survey was conducted by Mr. Richard Rote, CIH, Industrial Hygiene, HAEL, and by Mr. David Vitt, CSP, Safety, KAD. Mr. Richard Rote is an EPA accredited Building Inspector, Georgia Institute of Technology certificate number 304. Sample analysis was performed by Environmental Analytical Services, Chemical Quality Services, KP. Environmental Analytical Services is an AIHA approved laboratory. The analytical method was Polarized Light Microscopy.

Asbestos (acc.# 123635) was found in some pipe insulations, floor tiles, mastics, and roof felt. These materials are located throughout the complex, except for the Flamables Storage building which was determined to be asbestos free. None of the other materials sampled were found to contain asbestos.

Recommendations

1. Employees such as mechanics and custodians should receive training in the locations, recognition, maintenance, and health effects of asbestos. They should be instructed not to disturb asbestos materials, and trained in how to respond to an emergency release of asbestos material.

2. Eastman Kodak policy states that asbestos materials will be maintained in good condition. Damaged or deteriorated asbestos insulation should be repaired or replaced in a timely manner.

3. Samples were not taken of pipe gaskets, pump packings, oven door gaskets, or other similar materials. It should be assumed that these materials contain asbestos, unless bulk sample analysis establishes otherwise.

Homogeneous Area or System Sampled

1. PIPE AND BOILER INSULATIONS

Location
The following types of insulations are present throughout the Complex, including the roof; premolded calcium silicate or 'magnesia', cementitious plaster or 'mud', fibrous glass, and foam. Sample numbers and locations are listed in Table 1.

Results
All samples of premolded calcium silicate insulations were found to contain asbestos. Premolded block insulation was found on a number of pipes in Chiller Room #2 and on an abandoned boiler exhaust stack in the Office/warehouse building. Premolded block insulation, containing asbestos, was found at the hangers on the Hot Water and Chilled Water lines in the Office/warehouse building. It should be assumed that all pieces of premolded block insulation found on the Hot Water and Chilled Water lines in the warehouse contain asbestos. Premolded block insulation was not found on any of the pipes located in pipe racks in the warehouse.

All of the cementitious muds tested were asbestos free, except in two cases. All the mud samples taken from the City Water Line were found to contain asbestos. It should be assumed that all mud type insulations found on the City Water Line contain asbestos. The other asbestos-containing mud sample was taken from the S9 Penthouse. Only one of two elbow mud samples from the S9 Penthouse contained asbestos. None of the other penthouse mud samples were found to contain asbestos. All of the cementitious mud insulations in the S9 penthouse are suspect and should be assumed to contain asbestos. Additional sampling and analysis should be performed before plant personnel or contract laborers begin work which could disturb mud insulations in the S9 penthouse.

In a few locations a sticky white or black tape insulation was found wrapped around joints or valves in chill water lines. This asbestos-containing tape is approximately 2 inches wide and 1/4 inch thick. The surface of the tape is tacky.

Assessment
Most of the pipe insulations were in good condition. Visual observation indicated that localized damage or deterioration was evident in only a few scattered areas. Damaged insulation should be repaired or replaced in a timely manner by accredited asbestos workers.

2. WALLS

A. Plaster

Location
Plaster is used throughout the building in the construction of walls. The walls are constructed of a grey/brown plaster with a white finish coat over top. Sample numbers, locations and results are listed in Table 2.

Results
None of the plaster samples were found to contain asbestos.

Homogeneous Area or System Sampled

2. WALLS continued

B. Wallboard

Location
Gypsum wallboard and joint compound was used for interior wall construction, and is present throughout the building. Sample numbers, locations, and results are listed in Table 2.

Results
None of the wallboard or joint compound samples were found to contain asbestos.

3. CEILINGS

A. Suspended Tile

Location
A variety of patterns and sizes (12 x 12, and 2 x 4 foot) of suspended ceiling tile have been used as false ceilings. One or more samples were taken of each different style. Sample numbers, locations, and results are listed in Table 3.

Results
None of the ceiling tile samples were found to contain asbestos.

B. Textured Ceiling Plaster

Location
A textured acoustical ceiling plaster was found in three areas of the Office/warehouse building. Textured plaster was found in the Lobby, the front row of offices, and in the cafeteria.

Results
All samples of the textured plaster were found to contain asbestos.

Assessment
The asbestos-containing textured plaster is in excellent condition and does not represent a hazard to the occupants of the building. However, this material should not be disturbed or damaged as during cleaning or repair activities. Mechanics should be informed of its presence and warned not to disturb the plaster.

Homogeneous Area or System Sampled

4. FLOOR TILE AND LINOLEUM

Location
A variety of floor tile styles are used throughout the complex. The following two sizes were found, 9x9 inch and 12x12 inch. Sample numbers, locations, and results are listed in Table 4.

Results
All 9x9 inch floor tile samples and their mastics contained asbestos. None of the 12x12 inch floor tiles contained asbestos. The mastic used with the brown colored 12x12 inch floor tile used in the Marketing building, and the mastic used with the yellow 12x12 inch floor tile used in the kitchen storage room were found to contain asbestos. None of the other 12x12 inch floor tiles or associated mastics were found to contain asbestos.

5. MISCELLANEOUS

A. Roofing

Location
Multi-ply asphalt or coal tar pitch built-up roofing systems used in the complex should be assumed to contain asbestos. Destructive testing was not performed to determine the presence of asbestos. One sample was taken from a piece of roofing left from a roof coring operation. This one sample tested positive for the presence of asbestos. Roofing materials should be assumed to contain asbestos, or sampled and analyzed prior to removal or demolition. The insulation under the roofing was tested and found not to contain asbestos.

B. Gaskets and Packings

Location
It should be assumed that asbestos containing gaskets and packings can be found throughout the complex on older pipe and mechanical systems.

Assessment
Gaskets and packings are typically nonfriable materials and do not represent a health hazard in normal use and maintenance.

September 29, 1994

With regards to item #35 identified in the HSE Corporate audit, "Groundwater Protection Program", the following statement by Sue Faro applies:

In accordance with the Corporate HSE Performance Standard ES4 (Groundwater Protection Program), the only source indentified at the Whittier facility which may have the potential to impact groundwater is the clarifier system. This system is located on the west side of the building and consists of a series of three underground tanks utilized to capture liquid photochemistry from leaking containers. An automatic PH system is in place and the facility is in possesion of a sewer permit for the affluent. In addition, this system has been registered with the California DTSC under the Permit By Rule regulations. A written procedure is in place which details the cleaning and inspection of the clarifier system (refer to PM#201).

This Page Left Intentionally Blank

WHITTIERS WASTE MINIMIZATION PLAN

The Whittier facility is continually searching for innovative methods to reduce the amount of waste generated at our facility. The following points represent the culmination of this effort:

- Reboxing of leaking or damaged chemicals. This process favorably reduces the amount of waste which might otherwise be disposed of on or off site. It also saves considerable product which can be sold and improve our sales/loss figure.

- Reduction of waste disposed of off-site. Our on-site clarifier (PH adjusting system) dramatically reduces the amount of waste which otherwise would be disposed of off-site. It has also resulted in considerable dollar savings with regards to waste removal and more important, has kept our waste out of landfills and the environment.

- Employee awareness. We continually educate our employees on the safe handling of our chemicals. This is accomplished via the "Chemical Hazard Communication Program", our Safety Committee and our on-site spill team which is often able to save product through quick action which might otherwise result in the generation of waste. All this has resulted in the better handling of our chemcials and reduced in-house damage.

- Manufacturing involvement. A constant channel of communication with manufacturing on the types of product defects we see which have resulted in damaged or leaking chemicals has aided greatly in reducing the amount of waste we generate and helped address the source of most of that waste.

- Off-site waste. Any waste which we can not rebox or dispose of on-site will be transported to B218 in Rochester, NY where it will be burned. This aids in keeping our chemicals out of landfills and potentially causing a negative impact on the environment.

- Whittiers' "DIRT" team. Our "Damage In Region Team" is constantly trying to find ways to reduce the amount of in-house product damage. Their progress is measured by our ACS charges and has resulted in reduced in-house damage.

- Recycling. We will recycle as much as possible. Our primary opportunity lies with the waste oil and solvents our Building Services generate. These will be moved off-site and recycled as an alternative fuel.

- Performance Measures. A tracking comparison will be maintained of our reboxing operation, off-site waste generation, on-site disposal and recycled waste. This will be a yearly comparison. Any trends which can be identified by this tracking will be addressed and our processes modified accordingly.

- Other operating groups. We will continually work with other groups within the Whittier facility to ensure any waste the might generate is handled and disposed of in a manner which is both environmentally sound and in compliance with all applicable regulations.

- HSE communication. On-going communications with the Health, Safety & Environmental group in Rochester will address and investigate any opportunities which could result in waste reduction through changes in processes or procedures.

- Outside purchased products. We will continually strive to purchase only products which are as environmentally friendly as possible. This will hopefully reduce any negative environmental impact they might have at time of disposal. This will be accomplished thru the review of the products Material Safety Data Sheet prior to purchase of the material by the HSEC.

WHITTIER'S WASTE MINIMIZATION PLAN

	2000	2001	2002	2003	2004	2005	2006	2007
CLARIFIER: (GALLONS)	159,016 (1,852)	79,496 (4 ,612)	240,212 (3,167)	48,557 (2,225)	123,555 (1,144)	109,839 (2,976)	183,742 (1,729)	80,327 (522)

PROCEDURE FOR

CHEMICAL DISPOSAL AREA

(WHITTTIER FACILITY)

Introduction

The purpose of these guidelines are to provide direction or personnel who are asked to handle and dispose of chemical waste, decontaminate personal protective equipment and rebox leaked on product within the Whittier Product Logistics organization. Nothing in these guidelines are meant to supercede any existing safety, environmental, regulatory or operating procedure.

Requirements

- Obtain appropriate medical clearance. This will be arranged by the regional nurse and done on a bi-annual basis.

- Successfully complete the following annual training:
  1. Chemical Hazard Communication program
  2. Respirator program & fit test.
  3. Spill procedure
  4. Resource Conservation & Recovery Act
  5. KP Fire Department spill/leak response refresher training

General Rules & Safety Guidelines

- Keep all non-essential personnel away from the chemical disposal area.

- Store all chemicals to be disposed of inside the disposal area.

- Any volatiles that can not be handled and disposed of promptly must be stored in the primary flammable storage shed.

- Beards and facial hair that interferes with the respirator facepiece seal are prohibited.

- Be in good health.

- Always know what you are dealing with before proceeding. If you are unsure of anything or have any questions, contact the HSE coordinator immediately.

- Use good judgement.

- Follow procedures.

- Plan well and plan ahead. Your safety is top priority.

- Use the proper personal protective equipment. Refer to the facility PPE matrix.
- No food or open beverage containers are allowed in the disposal area.

Authorized Chemical Disposal Area personnel

[redacted]

Available Personal Protective Equipment and other necessary materials

- North 800 positive pressure SCBA
  >low pressure (2216 PSI)
  >30 minute air capacity
  >NIOSH/MSHA approved
  >suitable for high hazard and IDLH scenarios
- North 7600 full face cartridge respirator
  >cartridge interchangeable
  >NIOSH/MSHA approved
  >suitable for low and moderate hazard scenarios
- North 7700 half face cartridge respirator
  >cartridge interchangeable
  >NIOSH/MSHA approved
  >suitable for low and moderate hazard scenarios
- Assorted cartridges
- Neoprene/nylon jacket & coveralls
- Neoprene boots
- Neoprene gloves
- Disposable nitrile gloves
- Goggles
- Chemical resistant aprons
- Absorbant material
- Totes for containment
- Spill control pads
- Spark resistant shovels
- Squeggees
- Brooms
- Dustpans
- Mop/bucket/wringer
- Salvage drums
- DOT 21c fibre drums
- Plastic liner bags
- RSFC scroll
- Emergency response guidebook

Procedure

Scenarios

The following procedure covers various disposal scenarios. These may include:

- Chromium containing products (see catalog number list)
- Flammables/low flash points (see catalog number list)
- Oil/grease
- Batteries
- PCB containing light ballasts
- Various hazardous & non-hazardous photochemicals
- Absorbed materials
- Non-Kodak or unknown products
- Contaminated packaging

In all cases, appropriate personal protective equipment **must** be worn. Refer to the PPE matrix or if unsure, contact the HSE coordinator for guidance.

PPE Guidelines

An exposure assessment of the chemical disposal area is difficult to accomplish due to the fact it is intermittant, unpredictable and changes daily. The following guidelines have been established to provide personnel safety and are based on Kodak's RSF&C ratings, Material Safety Data Sheets and corporate HSE guidance.

- Always wear gloves, apron or coat & coveralls, boots and goggles or face shield. Respiratory rating may require the need for further protection.
- Chemicals with a R2 rating require the use of a cartridge respirator. If a half face cartridge respirator is utilized, goggles must also be worn.
- Chemicals with a R3 rating require the use of SCBA.
- Any unknowns require the most stringent level of protection be worn.

Handling scenarios

Remember, no free liquids can be intentionally mixed with an absorbant material to render them non-hazardous or easier and safer to handle. Check with the HSE coordinator for all appropriate marking and labeling requirements each time a new waste drum is started. Also, if unsure about anything, contact the HSE coordinator immediately. The HSE coordinator will also prepare all shipping documentation for any waste that must be moved off site for disposal and ensure that accumulation guidelines have not been exceeded.

Chromium containing products:

- Overpack product in a small double bagged 21C fibre drum with sufficient amounts of absorbant material. When drum is full, tape each bag closed separately. Tape lid in place. Keep weight of drum to 100 pounds maximum. Place any contaminated packaging materials in a large double bagged 21C fibre drum. Notify the HSE coordinator for proper marking and labeling requirements.

Flammables/low flash point products:

- Follow the same steps as indicated for Chromium containing products.

Oil/grease:

- Place absorbed material in a small double bagged 21C fibre drum. When drum is full, tape each bag closed separately. Tape lid in place. Keep weight of drum to 100 pounds maximum. If paper towels were used to wipe up or absorb the oil/grease, place these in a large double bagged 21C fibre drum. Notify the HSE coordinator for proper marking and labeling requirements.

Batteries:

- Place **alkaline** batteries in a large double bagged 21C fibre drum. When full, tape bags and lid closed. Place **lithium** batteries in a small double bagged 21C fibre drum. When full, tape bags and lid closed. Place **Nickel-Cad** batteries in a small double bagged metal drum. When full, tape bags closed and secure lid in place. Notify the HSE coordinator for proper marking and labeling requirements.

PCB containing light ballasts:

- Place ballasts in a small double bagged metal drum. When full, tape bags closed and secure lid in place. Notify the HSE coordinator for proper marking and labeling requirements.

Absorbed materials:

- Place absorbed materials in a small double bagged 21C fibre drum. When full, tape bags and lid closed. Notify the HSE coordinator for proper marking and labeling requirements.

Non-Kodak & unknown materials:

- Contact the HSE coordinator immediately for proper disposal guidelines.

Liquid photochemicals (other than flammable/low flash point materials):

- These may be disposed of via the facility clarifier. Pour material slowly into the clarifier. Ensure that appropriate PH levels are maintained by activating the acid/base pumps (between 6 & 12). Also ensure our flow restrictions are not exceeded (see permit). Triple rinse all drums, bottles and cubitainers. These may be disposed of into the general refuse if no visible contamination is evident. Powdered chemicals may be disposed of via the clarifier if mixed with copious amounts of water. Remember to complete the 'disposal form'.

Contaminated packaging:

- Place packaging in a large double bagged 21C fibre drum. When full, tape bags closed and secure lid. Notify the HSE coordinator for proper marking and labeling requirements.

Remember to decontaminate all PPE used during any of the above scenarios with water and properly store for future use. If the PPE can not be decontaminated, dispose of properly. Also, keep good records for all disposed of materials. This is vital so the HSE

coordinator can ensure all appropriate marking, labeling, SWIMS ticket preparation and shipping documentation is correct and accurate.

Reboxing:

- Any product with contaminated packaging and is not leaking may be reboxed. Rebox supplies are available or can be ordered. When reboxing, be sure to complete the 'rebox form'. Dispose of contaminated packaging properly.

LOS ANGELES COUNTY FIRE DEPARTMENT
HEALTH HAZARDOUS MATERIALS DIVISION
5825 Rickenbacker Road, Commerce, CA 90040

HAZARDOUS MATERIALS STATE REPORTING PACKET

Enclosed is your latest Hazardous Materials Inventory Statement. Please carefully review it for accuracy. The requirements for submitting a Consolidated Contingency Plan have changed **(see Page 1)**. If you require assistance in processing these forms, please contact the Data Operations Unit at (323) 890-4000, Monday through Friday, 9:00 A.M. to 4:00 P.M., or the web site: ***http://www.lacofd.org/HealthHazMat/HHMDForms.asp***

The Department recommends use of CERTIFIED MAIL to ensure delivery of these forms before the December 31st deadline to avoid late fees. Sign and date the Annual Certification section below and keep a copy of the entire package for your records.

RE-CERTIFICATION PROCEDURE

Please check the appropriate box(es).

☐ **Delete:** Write "delete" next to any discontinued hazardous materials on the attached Inventory Statement.

☐ **Add:** If you are handling materials not previously disclosed ***Make copies of the Chemical Description Form and complete all information required*** (one form per chemical).

☒ **Revise/Update:** Cross out any errors on the Inventory Statement and ***Clearly Print*** the correct information.

☐ **No Change:** There has been no change in the quantity of any hazardous material as reported.

☐ **Consolidated Contingeney Plan:** The web link above connects to the UP Forms: Click the Consolidated Contingency Plan.

☒ **No Change:** Mark this Box if the Consolidated Contingency Plan on file is correct and complete.

☐ **Regulated Substanee Registration:** If you are handling a Regulated Substance not previously disclosed, you must also complete the Registration Substance Registration form. Complete only if substance is at or above the Threshold Quantity (TQ). Refer to the list of regulated substances and the respective TQ.

THE SUBMITTAL OF THE HAZARDOUS MATERIALS STATE REPORTING FORMS CONTAINS ALL OF THE REQUIRED STATE AND FEDERAL INVENTORY INFORMATION AND SATISFIES THE REQUIREMENTS OF BOTH STATE AND FEDERAL REGULATIONS.

ANNUAL CERTIFICATION

I certify under penalty of law that I have personally examined the information submitted herein is complete, accurate and up to date. Also, no hazardous materials subject to the inventory requirements of Chapter 6.95 of the Health and Safety Code are being handled that are not listed on the most recently submitted annual inventory form.

UNITED STATES OF AMERICA
DEPARTMENT OF TRANSPORTATION
PIPELINE AND HAZARDOUS MATERIALS SAFETY ADMINISTRATION

HAZARDOUS MATERIALS CERTIFICATE OF REGISTRATION FOR REGISTRATION YEAR(S) 2007-2008

Registrant: EASTMAN KODAK COMPANY
Attn: JOHN F. CHRISTMAN
1600 LEXINGTON AVE
ROCHESTER, NY 14652-0122

This certifies that the registrant is registered with the U.S. Department of Transportation as required by 49 CFR Part 107, Subpart G.

This certificate is issued under the authority of 49 U.S.C. 5108. It is unlawful to alter or falsify this document.

Reg. No: 061407 550 045P Issued: 06/15/2007 Expires: 06/30/2008

Record Keeping Requirements for the Registration Program

The following must be maintained at the principal place of business for a period of three years from the date of issuance of this Certificate of Registration:

(1) A copy of the registration statement filed with PHMSA; and
(2) This Certificate of Registration

Each person subject to the registration requirement must furnish that person's Certificate of Registration (or a copy) and all other records and information pertaining to the information contained in the registration statement to an authorized representative or special agent of the U. S. Department of Transportation upon request.

Each motor carrier (private or for-hire) and each vessel operator subject to the registration requirement must keep a copy of the current Certificate of Registration or another document bearing the registration number identified as the "U.S. DOT Hazmat Reg. No." in each truck and truck tractor or vessel (trailers and semi-trailers not included) used to transport hazardous materials subject to the registration requirement. The Certificate of Registration or document bearing the registration number must be made available, upon request, to enforcement personnel.

For information, contact the Hazardous Materials Registration Manager, PHH-62, Pipeline and Hazardous Materials Safety Administration, U.S. Department of Transportation, 1200 New Jersey Avenue, SE, Washington, DC 20590, telephone (202) 366-4109.

JAMES F. STAHL
Chief Engineer and General Manager

TO: INDUSTRIAL DISCHARGERS OF WASTEWATER

SUBJECT: FILING OF THE "LONG FORM" WASTEWATER TREATMENT SURCHARGE STATEMENT FOR FISCAL YEAR 2004-2005

This booklet contains the "Long Form" Surcharge Statement and filing instructions for the 2004-2005 fiscal year. The "Long Form" must be used by those companies discharging over six (6) million gallons per year of wastewater to the sewer or discharging wastewater with strength values for surcharge parameters which significantly exceed the average values outlined in this booklet. The "Long Form" may be used by companies discharging less than six (6) million gallons per year if appropriate measurements of wastewater quality are performed.

For your filing convenience, Tables 1, 2A, 2B and 3 from this booklet are available on the Internet as spread sheets at **www.lacsd.org/iw/surcharge.htm**. They may be completed, printed, and submitted with your Surcharge Statement in lieu of the corresponding tables in this booklet.

Prior to filing the Surcharge Statement, please verify the information on the identification label which is located on the first page of the statement. This will ensure proper identification for the account. If the method of wastewater flow determination is metered or adjusted metered water supply, copies of water bills must be included as well as calculations to substantiate the wastewater flow volume.

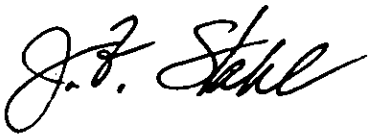
If the amount of wastewater discharged to the sewer is less than six (6) million gallons per year and the strength values do not exceed the average values outlined in this booklet, the "Short Form" Surcharge Statement may be used. If a "Short Form" surcharge booklet is required, please complete the "Request for Information and Forms" postcard attached to the back of this surcharge booklet and return it to the Districts. The requested material will be sent promptly.

The last day to file the 2004-2005 Surcharge Statement without incurring penalty and interest penalty charges is AUGUST 15, 2005 (U.S. Postmarked no later than this date). Please do not file your Surcharge Statement prior to June 30, 2005, the end of the fiscal year charge period. Surcharge Statements filed after August 15, 2005 will incur a one percent penalty for each day the charge is delinquent. This penalty shall not exceed ten percent. An interest penalty is also charged on the total of all unpaid charges including penalty charges.

A Sanitation Districts' sewer connection fee program was implemented on December 15, 1981. A connection fee is required of all new users of the sewerage system, as well as existing users who increase their wastewater discharge by more than 25 percent. The facility's baseline capacity for connection fee purposes is determined from Districts' industrial permit and surcharge records and may have been previously forwarded. Please contact the Sanitation Districts' Industrial Waste Section if it is believed a connection fee is due as a result of the 2004-2005 filing.

Thank you for your cooperation. If you have any questions concerning the surcharge or connection fee programs please call the Districts' Industrial Waste Section at (562) 699-7411, extension 2600.

Very truly yours,



James F. Stahl

SANITATION DISTRICTS SURCHARGE REQUIREMENTS FOR DISCHARGERS OF INDUSTRIAL WASTEWATER

DISCHARGE, IN MILLION GALLONS PER YEAR (MGY)	SURCHARGE REQUIREMENTS
6.00 MGY or Less[1]	– Usually file a SHORT FORM Surcharge Statement – May file a LONG FORM Surcharge Statement, if four (4) analyses of wastewater effluent are performed for the Surcharge parameters of Chemical Oxygen Demand (COD) and Suspended Solids (SS). [2,3]
6.01 MGY	– Must file a LONG FORM Surcharge Statement – Must analyze wastewater effluent for Surcharge parameters of Chemical Oxygen Demand (COD) and Suspended Solids (SS) ONCE EVERY 3 MONTHS for each outlet. [2,3]
15.01 MGY	– Must file a LONG FORM Surcharge Statement – Must analyze wastewater effluent for Surcharge parameters of Chemical Oxygen Demand (COD) and Suspended Solids (SS) ONCE EVERY 2 MONTHS for each outlet. [2,3]
40.01 MGY	– Must file a LONG FORM Surcharge Statement – Must analyze wastewater effluent for Surcharge parameters of Chemical Oxygen Demand (COD) and Suspended Solids (SS) TWICE PER MONTH for each outlet. [2,3]
100.01 MGY	– Must file a LONG FORM Surcharge Statement – Must analyze wastewater effluent for Surcharge parameters of Chemical Oxygen Demand (COD) and Suspended Solids (SS) ONCE PER WEEK for each outlet. [2,3]
Over 250 MGY	– Must file a LONG FORM Surcharge Statement – Must analyze wastewater effluent for Surcharge parameters of Chemical Oxygen Demand (COD) and Suspended Solids (SS) TWICE PER WEEK for each outlet. [2,3]

[1] If your flow volume is 6.00 MGY or less with COD and SS average concentrations in excess of 1,250 mg/l and 335 mg/l respectively, contact the Industrial Waste Surcharge Group at (562) 699-7411, extension 2600 for filing requirements.

[2] THE NUMBER OF TESTS LISTED ABOVE ARE ONLY MINIMUM REQUIREMENTS. IF MORE TESTS ARE PERFORMED, ALL MUST BE USED IN THE CALCULATION OF THE SURCHARGE. ALL WASTEWATER SAMPLES USED FOR SURCHARGE CALCULATION MUST BE OBTAINED DURING THE 2004-2005 FISCAL YEAR AND MUST BE 24-HOUR COMPOSITES - GRAB SAMPLES ARE NOT ACCEPTABLE.

[3] The testing frequency shown above may be different from the Self-Monitoring Report frequency established in your permit. Please contact the Industrial Waste Permit Group at (562) 699-7411, extension 2900 if you have any questions regarding the Self-Monitoring Program.

If you need a SHORT FORM Surcharge booklet, please return the postcard attached to the inside back cover to the Districts and the requested forms and information will be mailed to you promptly.

INSTRUCTIONS FOR FILING A LONG FORM WASTEWATER TREATMENT SURCHARGE STATEMENT for the Fiscal Year July 1, 2004 to June 30, 2005

PURPOSE OF WASTEWATER TREATMENT SURCHARGE

State and Federal programs require that industrial companies discharging to publicly owned sewerage systems should pay their fair share of wastewater treatment costs. The Sanitation Districts adopted a Wastewater Ordinance effective April 1, 1972, and as last amended effective July 1, 1998, to implement such a program. The Ordinance provides a method whereby industrial companies within the Districts can calculate, based upon their own measurements, what the annual wastewater surcharge payments to the Districts must be. A copy of this Ordinance will be mailed to you upon request.

INDUSTRIAL COMPANIES REQUIRED TO FILE

In general, all industrial companies having a wastewater discharge to the sewerage system of over one (1) million gallons during the fiscal year must file a Sanitation Districts' Wastewater Treatment Surcharge Statement. Industrial wastewater is that wastewater from any producing, manufacturing, processing, institutional, commercial, agricultural, or other operation where the wastewater discharged includes quantities of wastes of nonhuman origin. Companies having discharged under one (1) million gallons of wastewater (including sanitary wastewater) to the sewer with concentrations of 1,250 mg/l COD and 335 mg/l SS or less during fiscal year 2004-2005 are considered to have discharged an insignificant quantity of wastewater and should file an Exemption Statement. (See back of "Short Form" Surcharge Statement.) All companies discharging under six (6) million gallons per year of wastewater may file either the "Short Form" or "Long Form" Surcharge Statement; all companies with greater flow discharges or higher concentrations of COD and SS than those stated above must file the "Long Form." Each company, which occupies one parcel of land, or multiple contiguous parcels of land, must file only one Surcharge Statement or one Exemption Statement. The facility's total wastewater flow volume, not the wastewater flow volume from each of multiple discharge outlets, should be used as the criteria for determining the applicability of either an Exemption Statement (for under one (1) million gallons per year) or a "Short Form" Surcharge Statement (for six (6) million gallons or less per year). Filing a separate Surcharge Statement for each of several multiple discharge outlets from contiguous property is not permitted.

GEOGRAPHICAL AREA WHERE SURCHARGE STATEMENT IS REQUIRED

The Wastewater Treatment Surcharge Statement is required to be filed by any industrial company or business discharging industrial wastewater directly or indirectly to the sewerage system of the Sanitation Districts. The sewerage system service area of the Districts generally coincides with the territorial limits shown on the small scale map in Figure 1 on the inside front cover of this booklet. If there is any question whether your company is within the geographical area shown on the map, please write or call the Districts for clarification.

ESTIMATED QUARTERLY PAYMENTS FOR FISCAL YEAR 2005-2006

All companies filing a "Long Form" Surcharge Statement are required to make estimated quarterly surcharge payments during the 2005-2006 fiscal year. The schedule for these estimated payments is shown below:

* September 30, 2005 (U.S. Postmarked no later than this date)**
December 31, 2005 (U.S. Postmarked no later than January 3, 2006)**
March 31, 2006 (U.S. Postmarked no later than this date)**
*** August 15, 2006 (U.S. Postmarked no later than this date)**

* Please note, this payment is in addition to the 2004-2005 fiscal year surcharge payment due August 15, 2005. (U.S. Postmarked no later than this date).

** Postmarked by the U.S. Postal Service no later than this date. Independently stamped postal meter dates will also be accepted for this date provided the postal meter date does not conflict with a U.S. Postal Service postmark.

*** This payment should accompany the annual Surcharge Statement.

The procedure to be used in estimating the first three quarterly payments is to divide your company's "Gross Wastewater Treatment Surcharge Payable" (Line 25a on the Long Form Surcharge Statement) for fiscal year 2004-2005 by four and round to the nearest whole dollar. This figure is the amount the Districts will expect to receive on each of the first three quarterly payment dates during the 2005-2006 fiscal year. **Please note, each quarterly payment obligation is separate and distinct and is evaluated as such for penalty and/or interest penalty charges. Any underpayment of an estimated quarterly payment obligation may be subject to such charges.** The last payment and the filing of the annual Surcharge Statement will be due on August 15, 2006. This last payment should reflect the "Gross Wastewater Treatment Surcharge Payable" less the above mentioned three quarterly payments. Please see the example below:

Example Calculation

2004-2005 Gross Surcharge Payable = $60,585.97

The first three quarterly payments (for each quarter) = $60,585.97 ÷ 4 = $15,146.49 (Round to the nearest dollar) = $15,146.00

Date Payable	EXAMPLE Amount
September 30, 2005	$ 15,146.00
December 31, 2005	$ 15,146.00
March 31, 2006	$ 15,146.00
Total of three quarterly payments	$ 45,438.00
For the August 15, 2006 Payment	
Actual 2005-2006 Gross Surcharge Payable (per Surcharge Statement for 2005-2006)	$ 70,445.95
Less three quarterly payments	-$ 45,438.00
August 15, 2006 payment - Quarter 4	$ 25,007.95

Pre-printed quarterly payment coupons showing company name, address, and account number will be sent to all "Long Form" companies in July, 2005. If your company does not receive these coupons, please contact the Sanitation Districts immediately. Payments received after the quarterly due dates indicated above are subject to a one percent penalty for each day the charge is delinquent (not to exceed ten percent). An interest penalty charge for Quarterly Payments 1-3 will accrue at three percent over the prime interest rate in effect July 1, 2005, compounded monthly, until the balance is paid. Actual wastewater discharges will be considered in the calculation of such charges which will be assessed at the end of the fiscal year.

EXEMPTION STATEMENT

The back page of the "Short Form" Surcharge Statement is an Exemption Statement Form. You may claim an exemption from filing a Surcharge Statement by use of this form which may be obtained by completing the "Request for Information and Forms" postcard attached to the back cover of this booklet, and returning it to the Districts. The Exemption Statement will be mailed to you promptly. The exemption claim will be subject to Districts' verification. If your company is not responsible for any industrial wastewater discharge or your company discharged less than one (1) million gallons of wastewater (including sanitary wastewater) with concentrations of 1,250 mg/l COD and 335 mg/l SS or less during fiscal year 2004-2005, then you must complete and sign the Exemption Statement and return it to the Districts. If you claim an exemption, there is no need to read further in these instructions or to complete either the "Short Form" or "Long Form" Surcharge Statements. Industrial dischargers of less than one (1) million gallons per year of wastewater are assessed through a service charge placed on the property tax bill.

Please note, copies of your water bills, calculations for any claimed evaporative losses, the number of employees, and the number of discharge days during the 2004-2005 fiscal year are to be submitted along with your Exemption Statement.

SECURED PROPERTY TAX BILLS

Please submit a copy of the secured property tax bill for each contiguous parcel of land occupied by your facility. This information will be used to determine if additional wastewater treatment charges have been paid through the service charge program. Without these documents, an evaluation of duplicate payment cannot be completed.

EXPLANATION FOR "LONG FORM" SURCHARGE STATEMENT

The "Long Form" Surcharge Statement must be used by all companies discharging over six (6) million gallons of industrial wastewater to the sewerage system during fiscal year 2004-2005. All businesses discharging over six (6) million gallons during the fiscal year must supply data on flow measurements and 24-hour composite sampling and analyses of their wastewater which were used to determine the total yearly flow volume, chemical oxygen demand (COD), suspended solids (SS), and peak flow.

If desired, companies discharging under six (6) million gallons per year with average concentrations of 1,250 mg/l COD and 335 mg/l SS or less may use the "Long Form" Surcharge Statement but must perform at least four annual determinations of chemical oxygen demand (COD), and suspended solids (SS) during fiscal year 2004-2005. These values must be used in the calculation of the yearly discharge quantities. All companies discharging under six (6) million gallons per year with average concentrations greater than 1,250 mg/l COD and 335 mg/l SS must use the "Long Form" Surcharge Statement.

Measurement of Quantities Used in the Surcharge Formula

The quantities to be measured when using the "Long Form" are total yearly flow volume, chemical oxygen demand (COD), suspended solids (SS), and peak flow rate. All companies using the "Long Form" Surcharge Statement must complete at least the minimum number of sample analyses for COD and SS, as shown in Table A, for the annual discharge outlet flow volume projected by the company. The minimum required frequency for the determination of surcharge parameters for each discharge outlet is based upon the yearly cumulative flow volume of wastewater discharged to the public sewer from that outlet.

If only one discharge outlet is being reported on the surcharge form, then the flow volume on Line 13a of the Surcharge Statement is used as the yearly cumulative flow volume in Table A. If more than one discharge outlet is being reported, the flow from each discharge outlet is used to determine the frequency of tests for that outlet. Each discharge outlet with a wastewater flow volume greater than one (1) million gallons per year reported on a "Long Form" Surcharge Statement must, however, have at least four determinations of the surcharge parameters performed and these values must be used in the calculation of the yearly discharge of quantities for that outlet. Those companies reporting multiple discharge outlets on the "Long Form" Surcharge Statement, where at least one of the outlets is discharging a wastewater flow volume of less than one (1) million gallons per year, may choose not to determine chemical oxygen demand and suspended solids by chemical analyses for such an outlet. In lieu of performing these analyses, for outlets discharging under one (1) million gallons per year, the Districts will permit the "average" concentrations of these parameters found in industrial wastewater to be used. For the 2004-2005 fiscal year the average concentration of chemical oxygen demand is 1,250 milligrams per liter and for suspended solids is 335 milligrams per liter, as previously mentioned.

Those companies which have nonuniform flow rates or wastewater discharge quantities that are substantially variable over a year's time must make more frequent measurements than indicated in Table A. For example, if the projected yearly cumulative flow volume from one discharge outlet is seven million gallons, but a major portion of the wastewater discharge will occur during a three month period, the company should perform more frequent analyses than required by Table A (one per three months) during this three month period. The frequency of wastewater analyses should be sufficient to fully define the total wastewater discharge quantities. If more than the minimum number of parameter tests are performed, submit copies of analyses and report all results on Table 3.

TABLE A

REQUIRED FREQUENCY OF TESTS FOR SURCHARGE PARAMETERS OF CHEMICAL OXYGEN DEMAND AND SUSPENDED SOLIDS

Yearly Cumulative Flow Volume From Each Discharge Outlet 2/	Required Testing Frequency 1/
Million Gallons	
15.00 and less	1 per 3 months
15.01 to 40.00	1 per 2 months
40.01 to 100.00	2 per month
100.01 to 250.00	1 per week
Over 250	2 per week

NOTES:

1/ Companies having peak flows of 100 gallons per minute or more, or total flows of 50,000 gallons per discharge day or more, must have a continuous, automatic flow measurement system which indicates, totalizes, and records the total industrial wastewater flow volume discharged.

2/ Average industrial wastewater concentrations will be used to calculate the yearly discharge quantities should no determinations of the surcharge parameters be performed by companies for discharge outlets with wastewater flow volumes greater than one (1) million gallons during the fiscal year. Please note, the company will be required to pay the costs of any Districts' monitoring needed to supplement the annual sampling requirement.

Total Flow Volume Measurement

There are three methods allowed for determining the volume of wastewater discharged to the sewer: direct measurement, metered water supply and adjusted metered water supply. Those companies with flow rates reaching a maximum of over 100 gallons per minute or 50,000 gallons per day must have a continuous, automatic flow measurement system incorporating flow indication, totalization and recording of the total wastewater flow volume (direct measurement system). Those companies not required to have a continuous, automatic wastewater flow measurement system must use metered water supply or adjusted metered water supply measurements to determine the total yearly flow volume and peak flow rates.

Direct Measurement

Direct measurement reports the volume of industrial wastewater determined by a permanent full-time flow meter, measuring the wastewater flow leaving the plant. Only those companies with permanent full-time flow metering installations which have been approved by the Districts or are capable of approval by the Districts can determine their annual flow volume through direct measurement. Copies of totalizer readings must be submitted with the Surcharge Statement. Short term flow measurements extrapolated to an entire year or to substantial time intervals have been found to result in surcharge errors and are not allowed to be used alone for determination of the total yearly flow volume.

The Sanitation Districts' Wastewater Ordinance and permit regulations require large wastewater dischargers (100 gallons per minute or 50,000 gallons per day) to install and maintain a full-time flow metering device which is to be used to determine the annual surcharge amount. Flow meter charts must be dated regularly, preferably daily but not less than weekly, with the time and totalizer readings indicated on the chart. These records shall be maintained for possible inspection by the Districts for a period of not less than four (4) years. Should your company's flow meter be inoperative during a portion of the fiscal year, your discharge for that portion of the year may be based on metered water supply or adjusted metered water supply measurements. Copies of all calculations **must** be submitted and will be subject to review and approval by the Districts.

Metered Water Supply

Metered water supply reports the amount of wastewater discharge when the flow volume is a measurement of the total water entering the company plant with only a deduction for the amount of sanitary wastewater contributed by employees as calculated on the attached Table 2B. This value can be taken from water bills or any flow measuring device approved by the Districts which measures the intake of water from either water companies (purveyors) and/or company water wells. Companies who choose the metered water supply method must report the total annual water intake minus the sanitary flow as the amount of wastewater discharged to the sewer. Please note, the deduction for sanitary flow may only be taken if your chemical analysis sampling point is located upstream of the sanitary connection. See Sanitary Flow Charge heading for additional information. **Water bills or well pumping records must be attached to substantiate the flow volume reported.** Table 2A has been furnished for summarizing water bill records for the fiscal year. Use of metered water supply data for surcharge determination is permitted only for those companies having maximum discharges under 50,000 gallons per day and 100 gallons per minute.

Districts' experience has shown that influent (fresh) water meter readings may, on occasion, be erroneous. Influent water meters of 1-inch and larger are recommended to be calibrated for surcharge purposes at least every four years. If a surcharge dispute should arise, Districts' effluent flow measurements may be used to determine surcharge flows if proof of a recent influent water meter calibration is not available.

Adjusted Metered Water Supply

Adjusted metered water supply reports the amount of wastewater discharged when water consumed in plant operations is deducted from the total volume of metered water entering the company plant, in addition to the deduction of the sanitary flow. Please note, the deduction for sanitary flow may only be taken if your chemical analysis sampling point is located upstream of the sanitary connection. See Sanitary Flow Charge heading for additional information. This results in a calculated rather than a measured flow volume of wastewater leaving the plant. When using the adjusted metered water supply method, take the total water intake of the company, as measured by water bills and/or by records of water pumped from company wells, and deduct from this amount the quantities of water used within the plant which do not enter the wastewater discharged to the sewer. The water quantities allowed for deduction may originate from plant processes such as evaporative cooling systems, steam boilers, landscape watering, etc., or from water incorporated into the product that does not enter the wastewater flow. Full details and calculations showing the disposition of the supplied water used

within the plant and the amount of water contained in the annual plant product output must be furnished to substantiate the wastewater flow figures submitted. If sufficient documentation is not received, the Districts may disallow any unsubstantiated losses. A summary of these deductions from the total water supply quantity should be given in Table 2B. **Water bills or well pumping records and Table 2A MUST be attached to substantiate the water intake quantities.** Use of adjusted metered water supply for surcharge determination is permitted only for those companies having maximum discharges under 50,000 gallons per day and 100 gallons per minute. Additionally, Natural Gas bills must be submitted to substantiate any claimed boiler losses or other heat related losses.

Peak Flow Measurements

A peak flow rate is considered to be the average rate at which wastewater is discharged to the public sewer during the highest 30-minute flow period occurring within the fiscal year. The yearly peak flow rate is then determined by averaging the ten highest (or any lesser number) peak flows discharged between 8:00 a.m. and 10:00 p.m. Peak flow rates discharged during the hours of 10:00 p.m. to 8:00 a.m. (the low flow period in the sewerage system) typically do not require a special allotment of sewerage capacity and therefore are not subject to a peak flow charge. All companies having permanent full-time flow metering equipment must determine peak flow rates from those recorded by the metering equipment. All companies not having full-time flow metering equipment must either assume a peak flow rate equal to twice the average flow rate during the company's main discharge hours, or must submit engineering calculations establishing a peak flow rate. If the peak flow rate is known to exceed twice the average flow rate, then this higher peak flow rate must be reported. The engineering calculations must account for all sources of peak flow discharges within the plant, as well as the month-to-month fluctuations in the water intake quantities. In the absence of direct measurements or engineering calculations, a peak flow rate value equal to twice the average flow rate must be used.

Chemical Oxygen Demand (COD) and Suspended Solids (SS)

Chemical oxygen demand (COD), a measure of the organic material contained in wastewater, and suspended solids (SS), a measure of the solid matter suspended in wastewater, must be determined by laboratory analyses. These laboratory analyses must be performed by a California State Certified laboratory or by a laboratory approved by the Sanitation Districts and conducted in accordance with the appropriate procedure contained in the current edition of *Standard Methods for the Examination of Water and Wastewater*, as published by the American Public Health Association. Any company desiring to have a laboratory approved for making such tests should contact David B. Whipple, Industrial Waste Section, County Sanitation Districts of Los Angeles County, 1955 Workman Mill Rd., P.O. Box 4998, Whittier, CA 90607-4998, telephone (562) 699-7411, ext. 2909. To obtain a list of commercial and Districts' approved laboratories, complete and return the "Request for Information and Forms" postcard attached to the back cover of this booklet. The requested list will be mailed to you promptly.

The total amount of COD and SS discharged in the wastewater during the fiscal year must be reported when using the "Long Form" Surcharge Statement. The concentrations of these constituents in the wastewater must be determined by laboratory analyses on 24-hour composite wastewater samples. The samples must be taken to adequately represent the average daily discharge of COD and SS to the sewerage system from an individual company's industrial wastewater. The sampling points for such samples must be located downstream of all sources of industrial wastewater and of any gravity separation interceptor or other pretreatment equipment and should be located upstream of any sanitary wastewater connection. Each 24-hour composite wastewater sample must have individual samples taken at least once per hour during all 24 hours or any lesser number of hours that wastewater is flowing to the sewer. The individual hourly samples should be composited proportionally to the flow existing at the time of sampling, to form one sample for the 24 hour sampling period. The final volume of the composited 24-hour wastewater sample should contain volumes of the hourly samples proportional to the fraction of the total daily flow occurring during the 24-hour sampling period, i.e., if 10 percent of the total daily flow occurred during one hourly sampling period, then the total 24-hour composite sample should have 10 percent of its volume from the sample collected during this hourly sampling period.

The required frequency of obtaining 24-hour composite samples and performing analyses for COD and SS is listed in Table A. The times of sampling during the fiscal year should coincide with conditions in the company plant that would reasonably be expected to produce normal and not minimum amounts of wastewater flows and constituents.

Companies who are required to have permanent full-time flow metering systems or who have chosen to file using direct measurement and who have them properly installed and working, must complete a "flow-weighted" Table 3 to determine the total weight discharged of COD and SS for fiscal year 2004-2005. Companies must first totalize the flow volume for the required COD and SS sampling periods. The totalized flow volume for each sampling period is then used with that period's average COD and SS values to determine the total weight discharged in thousands (1000's) of pounds of COD and SS for that period. For example, if according to Table A you must sample at the required frequency of once per week, then you must totalize the flow volume for each week during the fiscal year. If no samples are available for any of the prescribed sampling periods, then the annual average concentration for COD and SS is to be used with the totalized flow volume for the sampling period. Table 3 is furnished to assist you in making these calculations and must be enclosed with copies of ALL your laboratory analyses sheets when your completed Surcharge Statement is returned to the Districts.

Companies who are not required to have permanent full-time flow metering systems and have chosen not to file direct measurement must, as described previously, use either the metered water supply or adjusted metered water supply method to determine the annual volume of wastewater discharged to the sewer. These companies must average the COD and SS values for the fiscal year and use these annual averages with the total annual flow volume to determine the total annual weight discharged in thousands of pounds of COD and SS.

The weight discharged of chemical oxygen demand (COD) and suspended solids (SS) is calculated using the following formula:

[Flow Volume Discharged in Millions of Gallons (to two decimal places)] X [Chemical Oxygen Demand or Suspended Solids Concentration in Milligrams per Liter (mg/l)] X [$\frac{8.34}{1,000}$] = [Thousands of Pounds of Chemical Oxygen Demand or Suspended Solids (to two decimal places)]

Two examples of these calculations as they are to be used in Table 3 are shown in the example calculations for the "Long Form" Surcharge Statement on pages 31 and 32. Please note that discharge outlet #2042 used a total yearly flow volume as determined by adjusted metered water supply, and discharge outlet #2043 used separate internal flow volumes as determined by direct flow measurements to calculate the weight discharges of COD and SS.

Sanitary Flow Charge

This is a dollar amount added to the wastewater treatment charge to reimburse the Sanitation Districts for treatment of sanitary (domestic) wastewater from any employee which is discharged to the sewer but NOT included in the total wastewater flow volume on Line 13a of the "Long Form." If all employee wastewater has been included in the wastewater flow volume on Line 13a, no charge should be calculated.

LINE BY LINE INSTRUCTIONS FOR COMPLETING THE "LONG FORM"

The Line by Line instructions of the "Long Form" Surcharge Statement is presented here for your assistance. It is recommended that you review the explanation given for any portions of the Surcharge Statement that you may not understand.

Lines 1 to 6: Company Identification Label

These items refer to the address of the company's wastewater discharge, the company name and mailing address, the property tax identification number, the Districts' account number, and the Sanitation District within which the company is located.

```
****** ADDRESS * OF * WASTEWATER * DISCHARGE ******
TO:    COMPANY NAME
       MAILING ADDRESS
 * DISTRICT * ACCOUNT NO. **** PROPERTY TAX I.D. ****
```

Lines 7 to 9: Company Name, Federal Tax Identification Number, Company Mailing Address, Address of Wastewater Discharge

Complete these lines including your company name, federal tax identification number, mailing address and address of wastewater discharge. Any corrections to your Districts' account identification records will be made from these entries, so please complete the information clearly and accurately. The federal tax identification number is the number assigned to a business entity by the Internal Revenue Service.

Line 10: Property Tax Identification Number

The property tax identification number is the same as that used by the County Tax Assessor and should be identical to that shown on the annual secured property tax bill.

Line 11: Federal Standard Industrial Classification (SIC) No(s).

The SIC number (or numbers) must be entered. Please enter the primary SIC number first. This number is found on the Districts' Industrial Wastewater Discharge Permit form, or may be obtained from the Federal Standard Industrial Classification Manual, 1987, found in the offices of your local city sewering agency or the County of Los Angeles Department of County Engineer. You may also call the Sanitation Districts' Industrial Waste Surcharge Group at (562) 699-7411, extension 2600.

Line 12: Discharge Outlets to Sewer

On Line 12, please list the Districts' Industrial Wastewater Discharge Permit Number(s) for those discharge outlets which discharge any industrial wastewater. If more than four discharge outlets to the public sewer are being reported on one Surcharge Statement, then indicate the number being reported in the blank box and use Table 1 to calculate the total yearly wastewater quantities discharged. If Table 1 is used, enter only the total quantities of flow volume, chemical oxygen demand and suspended solids on Lines 13a-15a of the Surcharge Statement. Only the highest value listed for the peak flow rate in Table 1 should be entered on the Surcharge Statement on Line 40a.

All industrial companies discharging to the Districts' sewerage system are required to have an Industrial Waste Discharge Permit. If your company does not have a permit, please contact the Industrial Waste Permit Group at (562) 699-7411, extension 2901.

Line 13: Flow Volume in Millions of Gallons

On Line 13, list the total yearly flow volume of industrial wastewater determined for each discharge outlet being reported. If your chemical analysis sampling point is located upstream of the sanitary connection, this figure should not include any discharge contributed by your employees. See Table 2B for the calculation of the sanitary flow deduction. This number should be reported in millions of gallons rounded off to two decimal places. For example, if you are reporting two discharge outlets with flows of 7,340,000 gallons and 12,660,000 gallons, the correct numbers to enter would be 7.34 and 12.66. The total amount entered on Line 13a would equal 20.00 million gallons. If more than four outlets are being reported, use Table 1 and enter only the total yearly flow volume on Line 13a.

Lines 14 and 15: Chemical Oxygen Demand (COD) and Suspended Solids (SS)

Chemical oxygen demand (COD) and suspended solids (SS) concentrations must be determined by laboratory analyses as described previously in these "Long Form" instructions. A value for COD and SS must be entered for each discharge outlet reported on Line 13 (or in Table 1 if more than four discharge outlets are listed). The COD and SS values must be reported in thousands of pounds rounded off to two decimal places and are most easily calculated by following the instructions given on page 9. Example calculations are shown on pages 31 and 32. The total quantities of COD and SS on Lines 14 and 15 or in Table 1 should each be summed and entered respectively on Line 14a (Total COD) and 15a (Total SS). **Please submit copies of all laboratory analyses for ALL 24-hour composite samples taken during the fiscal year which were analyzed for either COD or SS concentrations.**

Line 16: Peak Flow Rate

A peak flow rate in gallons per minute should be reported using whole numbers only on Line 16 for each discharge outlet given on Line 13. If more than four discharge outlets are being reported, then Table 1 should be completed by entering a peak flow rate beside each discharge outlet listed. A definition of how a peak flow rate is determined has been previously given in these "Long Form" instructions. In the absence of peak flow rate measurements or a calculation of the peak flow rate, a value of peak flow rate equal to twice the average flow rate during the company's discharge hours should be used. If a peak to average flow ratio (P/A) of two (P/A = 2.00) is assumed, the peak flow rate value reported for each discharge outlet on

Line 16 or in Table 1 should be equal to twice that particular discharge outlet's average flow rate. Line 16a should equal either Line 39a or Line 43a from the peak flow rate calculation table on the reverse side of the "Long Form."

Line 17: Method of Flow Volume Determination

Check only one of the three boxes provided.

Direct Measurement

Check this box only if the volume of industrial wastewater is determined by a permanent, full-time, Districts' approved flow meter measuring the wastewater flow leaving the plant. Flow charts and totalizer readings are to be retained by your company for four years for verification of the total yearly flow volume. This method must be used when maximum discharges are over 50,000 gallons per day or 100 gallons per minute. **Copies of the totalizer readings used to determine the total yearly flow volume must be submitted.**

Metered Water Supply

This box should be checked when the flow volume is a measurement of the total water entering the company plant with only a deduction for the amount of sanitary wastewater contributed by your employees. This value can be determined using water bills or any accurate Districts' approved full-time flow metering device which measures the intake of water from water companies (purveyors) and/or company water wells. Table 2A must be completed for each fresh water meter supplying the facility. If your chemical analysis sampling point is located upstream of the sanitary connection and a sanitary flow deduction is being taken, complete Table 2B. This method may be used only when maximum discharges are under 50,000 gallons per day and 100 gallons per minute.

Adjusted Metered Water Supply

This box should be checked when water consumed in plant operations in addition to the sanitary flow is deducted from the total volume of water entering the company plant. This results in a calculated rather than a measured flow volume of wastewater leaving the plant. Table 2A must be completed for each fresh water meter supplying the facility. Table 2B must also be completed when this box is checked. Please note, a sanitary flow deduction may be taken only if your chemical analysis sampling point is located upstream of the sanitary connection. This method may be used only when maximum discharges are under 50,000 gallons per day and 100 gallons per minute.

Line 18: Source of Water Supply

Check the source of the plant water supply. If water is received from both a company water well and a water company (purveyor), check both boxes. Enter the name of the water company (purveyor) on the line provided.

Line 19: Method of Peak Flow Rate Determination

Only one of the three boxes provided should be checked. Direct measurement is made by using a permanent full-time flow metering device approved by the Districts. If a peak flow rate equal to twice the average flow rate is used, check the box labeled "Assumed (P/A) = 2.00". If the peak flow rate is calculated, then supporting engineering calculations describing how the figures used on Line 16a were obtained must be submitted. If the peak flow rate is known to exceed twice the average flow rate, then this higher peak flow rate must be reported.

Line 20: Flow Volume Charge

Multiply the total flow volume given on Line 13a by $478.00 and enter this calculated value on Line 20a.

Line 21: Chemical Oxygen Demand (COD) Charge

Multiply the total chemical oxygen demand (COD) given on Line 14a by $84.50 and enter this calculated value on Line 21a.

Line 22: Suspended Solids (SS) Charge

Multiply the total suspended solids (SS) given on Line 15a by $238.90 and enter this calculated value on Line 22a.

Line 23: Peak Flow Rate Charge

This peak flow rate charge is obtained from Line 46a of the calculation table for the peak flow rate charge on the reverse side of the "Long Form." Please follow the instructions for Lines 33 through 46 to correctly calculate the peak flow rate charge.

Line 24: Sanitary Flow Charge

This is the dollar amount to be added to the wastewater treatment charge to reimburse the Sanitation Districts for treatment of sanitary (domestic) wastewater from any employees which is discharged to the sewer but NOT included in the total on Line 13a of the "Long Form." Use Lines 47 and 48 on the reverse side of the "Long Form" to calculate the sanitary flow charge. The number of employees entered on Line 47a must match that shown on Table 2B. Please note, this charge is to be paid only if your chemical analysis sampling point is located upstream of the sanitary connection. Transfer the figure shown on Line 48a to Line 24a.

Line 25: Gross Wastewater Treatment Surcharge Payable

To determine the amount for Line 25a, add together Lines 20a, 21a, 22a, 23a and 24a. This amount represents the gross wastewater treatment surcharge.

Line 26: Quarterly Payment Credit

Enter on Line 26a the total amount paid toward the gross wastewater treatment surcharge for the first three quarters of the fiscal year.

Line 27: Net Wastewater Treatment Surcharge Payable - Quarter 4

To determine the amount for Line 27a, subtract the amount shown on Line 26a from that shown on Line 25a. This amount represents the surcharge payment due the Sanitation Districts for the treatment of wastewater from your company's plant during fiscal year 2004-2005. If a refund is due, enclose the amount shown on Line 27a in brackets, as [ ].

Any overpayment shall be forwarded to your company upon Districts' verification. Refunds due will not be automatically credited to subsequent quarterly balances due.

Any payment due should be submitted after the close of the fiscal year on June 30, 2005 and prior to August 15, 2005 (U.S. Postmarked no later than this date). Quarter 4 payments received after August 15, 2005 are subject to a one percent penalty for each day the charge is delinquent (not to exceed ten percent) and will accrue an interest penalty charge at three percent over the prime interest rate in effect July 1, 2005, compounded monthly, until the balance is paid.

Line 28: Signature

The signature of a company administrative officer is required.

Line 29: Date

The date the Surcharge Statement is completed and signed.

Line 30: Name and Position

Print the name of the company administrative officer signing the Surcharge Statement.

Line 31: Prepared By

Print the name of the person responsible for the preparation of the document if other than that shown on Lines 28 and 30.

Line 32: Telephone Number

The telephone number of the administrative officer who signs the Surcharge Statement.

Lines 33 to 38: CALCULATION TABLE FOR PEAK FLOW RATE CHARGE

Line 33: Total Yearly Flow Volume - In Gallons

Multiply the total yearly flow volume given on Line 13a by 1,000,000 and write this number on Line 33a. This is the total yearly flow volume of wastewater discharged in gallons.

Line 34: Number of Discharge Days Per Year

This number should indicate the actual number of days during the fiscal year that the company is in normal operation, discharging normal amounts of wastewater to the sewer, and employing a normal or average number of people. If the company is in operation five days each week and discharging normal amounts of wastewater, Line 34a should equal approximately 250 (allowing for holidays). This number should match the discharge days per year figure used to calculate the sanitary flow on Table 2B.

Line 35: Average Number of Discharge Hours Per Discharge Day

Discharge hours are those hours that the company is in operation and discharging significant amounts of wastewater. Significant wastewater discharge hours are those periods where the effluent flows are at least 50 percent of the annual average hourly rate. If the company is in production and discharging significant amounts of wastewater an average of 8 hours per discharge day, enter 8.00 on Line 35a.

Line 36: Minutes Per Year

To obtain this number, multiply Line 34a by Line 35a by 60.

Line 37: Average Flow Rate "A" - In Gallons Per Minute

This is the average flow rate, in gallons per minute, of the total yearly flow volume reported on Line 33a. This figure should be reported as a whole number. This is also the "A" value used in the peak to average flow ratio "(P/A)". To calculate the average flow rate "A", divide Line 33a by 36a.

Line 38: Discharge Outlets to Sewer

On Line 38a, write the number of discharge outlets reported on Line 12 or in Table 1. Use Line 39 to list peak flow rate "P" only if "1" is entered on Line 38a. If two or more discharge outlets are reported, proceed to Line 40 instructions below.

Lines 39 to 46: CALCULATION TABLE FOR PEAK FLOW RATE CHARGE - SINGLE DISCHARGE OUTLET ONLY

Line 39: Peak Flow Rate "P" for Single Outlet - In Gallons Per Minute

The peak flow rate to the sewer for a single discharge outlet should be determined by one of the methods listed on Line 19 and the value entered on Line 16a and Line 39a. Proceed to Line 44. If more than one discharge outlet is reported, proceed to "Calculation Table for Peak Flow Rate Charge - Multiple Discharge Outlets Only" on this page. If a peak to average flow ratio of two (P/A = 2.00) is assumed, multiply Line 37a by two and enter this value on Line 39a.

Lines 40 to 43: Applies to Multiple Discharge Outlets Only - See Instructions for Lines 40 to 46

Line 44: Peak to Average Flow Ratio (P/A)

The peak to average flow ratio (P/A) is calculated by dividing the "P" value from Line 39a by "A", the average flow rate from Line 37a. Round this number to two decimal places. If the peak to average flow ratio of two (P/A = 2.00) is assumed for unmeasured flows, enter the number 2.00 on Line 44a.

Line 45: Factor "M"

Factor "M" must be calculated to determine the peak flow rate charge on Line 46a. Factor "M" may be obtained from Figure 2 on page 28 according to the P/A value on Line 44a or from the mathematical formula "M" = 2.50 log (P/A). Factor "M" should be rounded to two decimal places and reported on Line 45a.

Line 46: Peak Flow Rate Charge

To calculate the peak flow rate charge payable to the Sanitation Districts, multiply Line 45a by $63.50 and then by Line 39a.

Transfer the dollar amount determined for Line 46a to Line 23a on the front side of the "Long Form." Lines 23a and 46a should be the same number.

Single outlet dischargers proceed to Line 47 instructions on page 14.

Lines 40 to 46: CALCULATION TABLE FOR PEAK FLOW RATE CHARGE - MULTIPLE DISCHARGE OUTLETS ONLY

Line 40: Highest Peak Flow Rate "P" Among Multiple Outlets - In Gallons Per Minute

Pick the highest peak flow rate from the peak flow rates reported on Line 16 (or in Table 1 if more than four

discharge outlets are listed). Enter this value on Line 40a.

Line 41: Total Yearly Flow Volume of the Outlet with the Highest Peak Flow Rate - In Gallons

Use the yearly flow volume reported on Line 13 (or in Table 1 if more than four discharge outlets are listed) for the discharge outlet with the highest peak flow rate. Multiply this number by 1,000,000 and enter the result on Line 41a. This equals the yearly flow volume, in gallons, of the outlet with the highest peak flow rate.

Line 42: Average Flow Rate of the Outlet with the Highest Peak Flow Rate - In Gallons Per Minute

To obtain the average flow rate of the outlet with the highest peak flow rate, divide Line 41a, the yearly flow volume, by Line 36a, the discharge minutes per year.

Line 43: Peak Flow Rate "P" for Multiple Outlets

The peak flow rate for multiple outlets is the "P" value in the peak to average flow ratio (P/A). This figure is equal to the highest peak flow rate of any individual discharge outlet plus the average flow rate of all the remaining discharge outlets. To obtain this value, add the average flow rate from all discharge outlets (Line 37a) to the highest peak flow rate of any individual outlet (Line 40a) and subtract from this total the average flow rate of the outlet with the highest peak flow rate (Line 42a). This yields the value for the peak flow rate "P" for multiple outlets (Line 43a). Enter this value on Line 16a.

Line 44: Peak to Average Flow Ratio (P/A)

The peak to average flow ratio (P/A) is calculated by dividing the "P" value from Line 43a by "A", the average flow rate from Line 37a. Round this number to two decimal places.

If a peak to average flow ratio of two (P/A = 2.00) is assumed for unmeasured flows, enter the number 2.00 on Line 44a. Multiply Line 42a (the average flow rate of the outlet with the highest peak flow rate) by two, enter this value on Line 40a, and proceed with the calculations stated above.

Line 45: Factor "M"

Factor "M" must be calculated to determine the peak flow rate charge on Line 46a. Factor "M" may be obtained from Figure 2 on page 28 according to the P/A value on Line 44a or from the mathematical formula "M" = 2.50 log (P/A). Factor "M" should be rounded to two decimal places and reported on Line 45a.

Line 46: Peak Flow Rate Charge

To calculate the peak flow rate charge payable to the Sanitation Districts, multiply Line 45a by $63.50 and then by Line 43a.

Transfer the dollar amount determined for Line 46a to Line 23a on the front side of the "Long Form." Lines 23a and 46a should be the same number.

Lines 47 and 48: <u>CALCULATION TABLE FOR SANITARY FLOW CHARGE</u>

This charge should not be calculated if all sanitary (domestic) wastewater flow volumes are included in the total yearly flow volume shown on Line 13a.

Line 47: Average Number of Employees Per Discharge Day <u>Not</u> Contributing to the Reported Flow Volume on Line 13a

On Line 47a, please list the number of employees per discharge day who do not contribute sanitary wastewater to the yearly flow volume reported on Line 13a. This number should match the employee figure used to calculate the sanitary flow on Table 2B. If employees in the plant discharge sanitary wastewater to the sewer that is included in the yearly flow volume reported on Line 13a, then these employees should not be included in the number entered on Line 47a. If all employees contribute to the yearly flow volume reported on Line 13a, then enter zero (0) on Lines 47a and 48a.

Line 48: Sanitary Flow Charge

To obtain this amount, multiply Line 47a by Line 34a by $0.021 and enter the total on Line 48a. Transfer the dollar amount determined for Line 48a to Line 24a on the front side of the "Long Form." Lines 24a and 48a should be the same number.

If you should require assistance in completing the Surcharge Statement or have any unanswered questions, please call the Industrial Waste Surcharge Group at (562) 699-7411, ext. 2600.

	Annual Average					Annual Total				

NOTES:

1/ Frequency of surcharge parameter measurements should follow the requirements in Table A, according to the total yearly flow volume of the discharge outlet. If more than 24 tests are required or performed during the fiscal year, please attach additional sheets.

2/ Mg/l corresponds to milligrams per liter - also equivalent to PPM or parts per million. All sample results must be reported in whole numbers.

3/ Companies determining wastewater flows by an effluent flow meter must have a value for flow volume in this column for every required sampling time period. These flow volumes should be used to calculate the quantities of COD and SS discharged.

4/ Companies using metered or adjusted metered water supplies should calculate the annual average for COD and SS and use these values and the total annual flow volume to calculate the total annual wastewater quantities of COD and SS discharged.

5/ Submit copies of laboratory analyses for ALL 24-hour composite samples which were analyzed for either COD or SS concentrations.

6/ The flow-weighted COD and SS in thousands of pounds is determined by:

[Flow Volume Discharged in Millions of Gallons (to two decimal places).] X [Chemical Oxygen Demand or Suspended Solids Concentration in Milligrams per Liter (mg/l)] X [8.34 / 1,000] = [Thousands of Pounds of Chemical Oxygen Demand or Suspended Solids (to two decimal places)]

BASIS OF SURCHARGE

The wastewater treatment surcharge for industrial companies is based upon the total amounts of wastewater flow, chemical oxygen demand, suspended solids, and peak flows discharged to the sewerage system during the fiscal year. The following formula applies for the current fiscal year:

Used in "Long Form" Surcharge Statement

Surcharge = \$478.00(V) + \$84.50(COD) + \$238.90(SS) + \$63.50(M)(P)

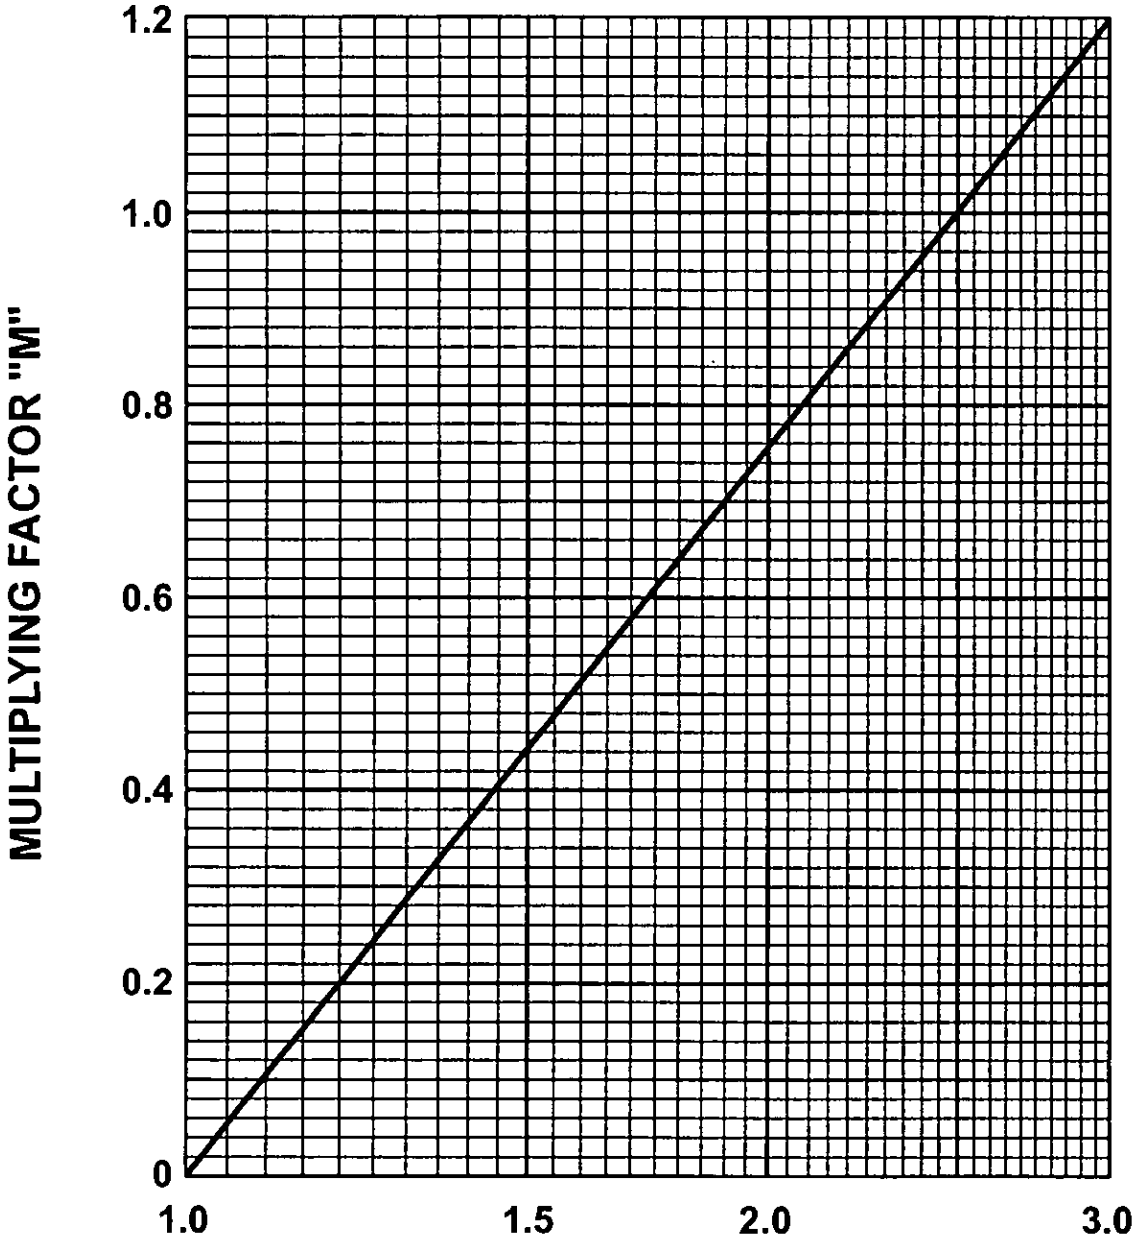
The charge rates used for total flow volume, chemical oxygen demand, suspended solids, and peak flow rate of \$478.00, \$84.50, \$238.90 and \$63.50, respectively, were calculated based upon the Districts' costs for treatment of these materials. These unit charge rates will change from year to year as the Districts' costs for wastewater treatment and disposal vary. The charge rates are calculated as set forth in Section 410 of the Wastewater Ordinance.

The following definitions apply for items in the above formula:

Surcharge	=	Net annual wastewater treatment surcharge in dollars.
V	=	Total annual flow volume in millions of gallons.
COD	=	Total annual wastewater discharge of chemical oxygen demand, in thousands of pounds.
SS	=	Total annual wastewater discharge of suspended solids, in thousands of pounds.
P	=	Peak wastewater discharge rate over a thirty (30) minute period occurring between the hours of 8:00 a.m. and 10:00 p.m. and determined by averaging a maximum of 10 substantiated peak flow rate measurements from the accrual year, in gallons per minute. Values of "P" which are equal to or less than ten (10) gallons per minute shall be considered equal to zero.
A	=	Average wastewater discharge flow rate, determined by dividing the total annual flow volume, "V", by the total annual average discharge hours per discharge day converted to gallons per minute. (See M.) The discharge hours are taken to mean the working hours when substantially "normal" flow discharges are made to the sewer system. These hours do not include those times when the plant is substantially shut-down and very little flow is discharged to the sewer.
M	=	A multiplying factor accounting for increased Districts' costs due to high ratios of industrial discharger peak to average flow rates (P/A). Factor "M" is equal to 2.50 log (P/A). Figure 2 on page 28 may be used to graphically determine "M" for P/A values which are equal to or less than 3.

FIGURE 2

VALUES OF MULTIPLYING FACTOR "M"



NOTE: Mathematical formula for "M" is: M=2.50 log (P/A)

important information

Definitions

CONNECTION FEE is a payment required of all new users of the sewerage system, as well as existing users who expand their wastewater discharge by more than 25%, and is based upon the quantity and the quality of their wastewater discharge. This connection fee applies to residential, commercial, and industrial dischargers. The connection fee is to be paid prior to the time the facility is actually connected to the sewer or, in the case of expanding facilities, at the time of increase of the wastewater discharge.

CONTIGUOUS PROPERTY is property which is owned or hired by the industrial wastewater discharger, is contiguous to the source of industrial wastewater discharge, and is made up of land parcels with common boundaries or parcels separated only by publicly owned or operated rights-of-way. Publicly owned rights-of-way include those owned or operated by railroad, pipeline, water, power, electrical, gas, telephone, or other public utility companies. Only those parcels having a common boundary, if the public right-of-way is removed, shall be considered contiguous.

DOMESTIC WASTEWATER is the water-carried waste produced from non-commercial or non-industrial activities and which results from normal human living processes. This is synonymous to the term Sanitary Flow.

INDUSTRIAL DISCHARGER shall mean any facility discharging any measurable quantity of industrial wastewater to any of the Districts' sewerage systems or any other system tributary thereto.

INDUSTRIAL WASTE PERMIT is an agreement which allows companies to discharge industrial waste into the sewer system under certain restrictions, and which is obtained through the County Sanitation Districts of Los Angeles County's Industrial Waste Permit Program.

INDUSTRIAL WASTEWATER is all liquid-carried wastes and wastewater of the community excluding domestic wastewater and uncontaminated water, and shall include all wastewater from any producing, manufacturing, processing, institutional, commercial, agricultural, or other operation where the wastewater discharged includes quantities of wastes of non-human origin. All liquid wastes hauled by truck, rail or other means for disposal to the sewer shall be considered industrial wastewater.

SIC is an abbreviation of Standard Industrial Classification. An SIC number has been established by the Federal Government to define the type of product a company creates. This identification number may be obtained through the use of the Federal Standard Industrial Classification Manual or by telephoning the Districts' Industrial Waste Section at (562) 699-7411, extension 2600.

WASTEWATER is the liquid-carried wastes of the community derived from human or industrial sources including domestic wastewater and industrial wastewater. Rainwater, groundwater, or drainage of uncontaminated water is not wastewater and is not permitted to be discharged to the sewer.

APPLICABLE TO LONG FORM ONLY

CHEMICAL OXYGEN DEMAND (COD) is the measure of chemically decomposable material in domestic or industrial wastewater.

SUSPENDED SOLIDS (SS) is insoluble solid matter suspended in wastewater that is separable by laboratory filtration.

PEAK FLOW RATE is the average rate at which wastewater is discharged to a public sewer during the highest 30-minute flow period occurring within the fiscal year.

Conversion Factors and Formulas

1 cubic foot (CF)	=	7.48 gallons
1 hundred cubic feet (CCF)	=	748 gallons
1 acre foot	=	325,900 gallons
1 gallon of water	=	8.34 pounds of weight

APPLICABLE TO LONG FORM ONLY

[Flow Volume Discharged in Millions of Gallons] X [Chemical Oxygen Demand or Suspended Solids Concentration in Milligrams per Liter (mg/l)] X [$\frac{8.34}{1,000}$] = [Thousands of Pounds of Chemical Oxygen Demand or Suspended Solids]

SCHEDULE A – MANIFEST FEE CALCULATION SHEET (2005 Manifests)

(See back of this form for sample manifest form.)

EPA ID Number: CAD054854377 **Name of organization:** EASTMAN KODAK CO-REGL M&D CENTER

From **January 1, 2005 through December 31, 2005,** the Department of Toxic Substances Control recorded the number of California Manifests shown at the right using the EPA ID printed above.

Non-recycled: 1

Recycled: 0

(NOTE: There is no fee for solely recycled manifests.)

Manifest Fee Calculation:

a. Enter the total number of **non-recycled** manifests from above... 1

b. How many of the **non-recycled** manifests listed on Line a. are non-recycled air compliance solvent manifests..... 0 X $3.50 = $ _____

c. Subtract the number of manifests on Line b. from Line a. ..... 1 X $7.50 = $ 7.50

d. No fee due for **recycled** manifests.....$ 0.00

e. Total of Line b. + Line c. .....= $ 7.50

Note: The manifest count on Lines b. and c. should equal the count on Line a.

INSTRUCTIONS FOR COMPLETING SCHEDULE A

1.
   - For lines a. – e. above, enter the numbers requested for each line.
   - For line b. multiply the number of manifests by $3.50 and record the dollar amount.
   - For line c. multiply the number of manifests by $7.50 and record the dollar amount.
   - For line e. add dollar amounts of lines b. and c. This total is the manifest fees due for the EPA ID number shown at the top of the page.

2. For this assessment there are three types of manifests: non-recycled, recycled and air compliance solvents manifests. Manifests used *solely* for recycled waste will have a handling code reported as **"01"** or **"R01"** in item **K** on the manifest form (see circled area on manifest sample on the back of this form). All wastes listed on a manifest must have handling codes of "01" or "R01" to be counted as a solely recycled manifest. You need to pay manifest fees only for non-recycled manifests. There is no fee for recycled manifests.

3. If you believe the manifest totals shown in the box above are incorrect, you may use the manifest totals from your own files to calculate the fee. However, please be aware that any difference between the amount you report and the amount printed above is subject to audit by DTSC.

4. On January 1, 1999 many businesses were required to switch from petroleum-based solvents to air compliance solvents (also called water-based cleaners). The fee for manifests used solely for hazardous waste derived from air compliance solvents was reduced from $7.50 to $3.50. Most air compliance solvent waste is now recyclable. Manifests used to ship air compliance solvents that were recycled should not be charged $3.50. The Manifest Fee Calculation above includes air compliance solvent manifests as part of the non-recycled manifest count. Businesses that do not recycle their air compliance solvent waste who desire to use the reduced $3.50 fee must use their internal records to identify manifests used solely for air compliance solvent wastes.

2006

SCHEDULE B – FEES SUMMARY SHEET

(See back of this form for complete instructions.)

All completed forms and appropriate fees must be submitted **not later than 30 days** from the date of receipt.

A. EPA ID NUMBER VERIFICATION FEE (July 1, 2005 through June 30, 2006)

1. Name of your organization: EASTMAN KODAK CO.
2. Enter the total number of California employees in your entire organization: 45
   (Please read instructions for Line 2 on the back of this form.)

Number of Employees	1 – 49	50 – 74	75 – 99	100 – 249	250 – 499	500 or more
EPA ID Fee Rate	NO FEE	$150	$175	$200	$225	$250

(Total EPA ID Number Verification Fees not to exceed $5000)

3. Enter the EPA ID Number Verification Fee rate from the table above: $ 0
4. Enter the total number of **permanent** EPA ID numbers held by your organization: 1
   *(NOTE: Attach a VQ form and Schedule A for **each** permanent EPA ID number you are reporting. Numbers that begin with "CAC" should not be included in your total on Line 4. See instructions.)*
5. Multiply Line 3 by Line 4: =$ 0
6. **TOTAL** EPA ID Number Verification Fee due (Enter the dollar amount from Line 5 above **OR** $5000, whichever amount is less.): $ 0

B. MANIFEST FEE (January 1, 2005 through December 31, 2005)

1. Enter the dollar amount from Line e on your Schedule A – Manifest Fee Calculation Sheet.
   *(If you are reporting more than one ID number, enter the **TOTAL** of the dollar amounts from Line e on **all** of your Schedule A – Manifest Fee Calculation Sheets.)* $ 7.50

C. GRAND TOTAL OF EPA ID NUMBER VERIFICATION FEES AND MANIFEST FEES

1. **Add** Line **A6** and Line **B1**, enter the total dollar amount.
   It is not uncommon to not owe fees. You are still required to complete and submit all forms.
   If fee is due, please make your check payable to "DTSC" for the total amount on this line: =$ 7.50

*** **Please write one of your EPA ID numbers on your check.**

To pay your fees via **credit card**, complete the enclosed "EPA ID and Manifest Fee Credit Card Payment Form".

I hereby certify under penalty of perjury that the information on the Verification Questionnaire(s), Schedule A(s) and Schedule B is true and correct.

Request for Agency Oversight of a Brownfield Site

The purpose of this application is to provide the Department of Toxic Substances Control and the Regional Water Quality Control Board sufficient information to determine which agency will be the appropriate lead agency to provide oversight for the assessment and/or remediation of this Brownfield site. The detailed site information requested in this application will also help the appropriate lead agency to expedite the development of a cost recovery agreement for the site, so that the site applicant can begin site work in a timely and efficient manner. Please use additional pages, as necessary, to complete your responses.

SECTION 1
APPLICANT/PRIMARY CONTACT INFORMATION

The person/organization requesting oversight must possess all necessary rights and access to the site so that they can carry out any and all activities that the oversight agency may require in making its regulatory decisions.

Applicant Name: NPEC, Inc.

Applicant Point of Contact Name: David Shevlin

E-mail Address: david.shevlin@kodak.com

Phone: (585)477-1217

Address, City, County & Zip Code: 3400 Dewey Road, Suite 5-341, Rochester, NY 14626

Applicant's relationship to site: Current Owner ☐ or Operator ☐
Local Agency ☐ Prospective Purchaser ☐ Developer ☐
Other (please describe): Former Site Owner / Operator

Consulting Firm Name: Geologica, Inc.

Consultant Point of Contact Contact Name: Charles Wechsler

E-mail Address: cwechsler@geologica.net

Phone: (949)548-9348

Address, City, County & Zip Code: 303 La Jolla Drive, Newport Beach CA 92663

Agency's Primary Point of Contact for this Site: Applicant Contact ☐ or Consultant Contact ☒

Request for Agency Oversight of a Brownfield Site

SECTION 2
SITE INFORMATION

If applicable, the applicant may supplement the responses to this section with information from a Phase 1 Environmental Assessment or other site investigation reports available for the site.

1. Is this site listed on Envirostor? Yes ☐ No ☒ and/or Geotracker? Yes ☐ No ☒

2. Name of Site: Eastman Kodak Company Western Zone Warehouse

3. Address City County ZIP: 12100 Rivera Road, Whittier, CA 90606

4. APN(s): 8168-028-003

5. Provide a Site Location Map and a Site Diagram showing significant features

Refer to Figure 1 – Site Location Map and Figure 2 – Site Layout Map with Proposed Monitoring Well Locations in the attached Groundwater Investigation Work Plan.

6. Describe the site property (include approximate size & description of features):
The subject property is located at 12100 Rivera Road in the City of Whittier, Los Angeles County, California 90606 and includes a single-story, approximately 218,000-square-foot building with about 7,000 square feet of parking space located in a principally commercial and industrial area of Whittier, California.

The facility, generally referred to as the Warehouse Building, was constructed, and is still used as, a regional distribution center for Kodak Products. The facility handles approximately 60-70% consumer goods and the remainder professional and medical products, including: one-time use cameras, film, photochemicals, photographic equipment, and dental x-ray film. The facility employs approximately 50 individuals from 0600-1800 hours, five days/week. Refer to additional information provided in the attached Groundwater Investigation Work Plan.

7. Describe the surrounding land use (including proximity to residential housing, schools, churches, etc):

No residential properties, churches, or schools were observed within approximately 0.25-mile of the site. Adjacent and nearby properties include:

North: Unsigned and possibly vacant building (12080-12090 Rivera Road) and Rivera Road;

South: DDS Distribution Services (8550 A, Chetle Avenue) and Nielsen Bainbridge (8550 B, Chetle Avenue);

East: 12140 Rivera Road - Sprinkler Fitters UA Local, 8145 Byron Road - Taylor Engines, 8155 Byron Road - Welded Fixtures, Inc., 8167 Byron Road - Compu Aire, 8189 Byron Road - Russ Basset Company and,

Request for Agency Oversight of a Brownfield Site

West: 8333 Chetle Avenue - Better Way Grinding, 8403 Chetle Avenue - Goldstar Grinding & Wire, 8409 Chetle Avenue - Teamco Electrical Equipment, 8421 Chetle Avenue - West Industrial, 8433 Chetle Avenue - Moranth Fabrication, 8503 Chetle Avenue - S & R Crane Service, Inc.

8. Current Owner
Name: CLPF Whittier Industrial, LP

Address, City, County & Zip Code: c/o Stacey Magee
Sr. Vice President / Asset Director
ING Clarion Partners
2650 Cedar Springs Road, Suite 850
Dallas, TX 75201-1491

Phone (949)477-4766 (Robert Chute, Project Manager)
E-mail Address: RChute@trammellcrow.com

9. Background: Current & Previous Business Operations
Name: Eastman Kodak Company Western Zone Warehouse

Type: Industrial/Commercial Warehouse

Years of Operation: The site has been operated as a regional warehouse for Kodak since approximately 1959.

10. If known, list all previous businesses operating on this property:
1. Not Applicable
2.
3.
4.
5.

11. What hazardous substances, pollutants, or contaminants have been associated with the site?
Solvents containing PCE and TCE were stored and used historically at the site. Photofinishing compounds were historically, and are currently, stored at the site. These chemicals include: fixers, developers, rinses, and others. Constituents of these chemicals include: silver, nitrates, and sulfates. Historically, photofinishing chemicals may have included chromium. Refer to additional information in Groundwater Investigation Work Plan, attached.

12. Describe any information on the known or suspected discharge of hazardous substances, pollutants, or contaminants at the Site.
Three subsurface investigations were conducted at the site in 2008:
- Closure Report, Maintenance Area Clarifier
- Report, Subsurface Investigation – Former Fuel Oil UST and Former Photochemicals UST
- Closure Report, Exterior Clarifier and Associated Interior Drain

These reports will be provided to the assigned agency once the site has entered the program.

13. What environmental media is/was/may be contaminated (check all that apply)?
Soil ☒ Air ☐ Groundwater ☒ Surface water ☐

14. Has sampling or other investigation been conducted? Yes ☒ No ☐
Specify: The following is summarized from the attached supplemental documentation.

Former Photochemicals UST

In July 1984, Kodak detected an overfill of a 1,000-gallon UST which received photochemicals discharged from leaking or damaged containers into a disposal sink. Subsequent excavation around the upper part of the tank revealed a leak in the pipeline that conveyed materials from the sink into the tank and impacted soils in the tank backfill. The tank and "obviously contaminated" soils were removed for off-site disposal. Soil sample analytical results were reported to be below relevant criteria. UST closure information was reportedly submitted to the Los Angeles Regional Water Quality Control Board (LARWQCB); however, related records have not been identified.

Investigation Activities (GEOLOGICA 2008). A preliminary soil and groundwater investigation was conducted at the Former Photochemicals UST site in July 2008, which included advancement of two direct-push soil borings and installation of one temporary groundwater well. Soil and groundwater samples were collected for laboratory analysis.

Soil Quality. Soil samples were collected primarily for lithologic-logging purposes; however, one soil sample from each boring was analyzed for mercury as part of a site-wide background concentration assessment. The resulting concentrations (34 – 96 µg/kg) marginally exceed one potentially applicable criterion (risk-based soil screening level of 33 µg/kg).

Groundwater Quality. The groundwater sample was analyzed for suites of petroleum hydrocarbons, volatile organic compounds (VOCs), metals, and photochemical-specific constituents. Nitrate (46,000 µg/L) was the only constituent that exceeded potential applicable criteria (USEPA and California Maximum Contaminant level [MCL] of 10,000 µg/L).

Former Fuel Oil UST

A former Fuel Oil UST of unknown size was located adjacent to the Maintenance Area near the northeast corner of the building. The UST was reportedly used to store diesel fuel oil as backup fuel for the facility's boilers, and was reportedly removed in the mid-1980's. No evidence of soil or groundwater characterization or formal closure documentation was identified.

Investigation Activities (GEOLOGICA 2008). Two direct-push soil borings were drilled in locations near the Former Fuel Oil UST (July 2008). Soil samples were collected at five-foot intervals to a maximum depth of 35 feet below ground surface (bgs). A temporary well was installed in each of the borings. Soil and groundwater samples were collected from both borings / wells and analyzed for suites of the following parameters: Total Petroleum Hydrocarbons (TPH), VOCs, and pH.

Soil Quality. TPH as Volatile Fuel Hydrocarbons (TPH-VFH) was detected in only one of eight soil samples tested at a concentration of 92 µg/kg, below potentially applicable criteria. TPH-VFH was not detected in the two successively deeper samples from the corresponding boring. No VOCs were detected.

Groundwater Quality. TPH-VFH was the only hydrocarbon detected, in one of the two groundwater samples, at a concentration of 380 µg/L. There are no USEPA or California MCLs for TPH-VFH. Chloroform and trichlorofluoromethane were detected at concentrations below potentially applicable USEPA and California MCLs. The following VOCs were detected in the two groundwater samples at concentrations above potentially applicable MCLs: 1,1-Dichloroethylene

at 64 µg/L and 110 µg/L; Tetrachloroethylene (PCE) at 28 µg/L and 77 µg/L; Trichloroethylene (TCE) at 340 µg/L and 580 µg/L; and, 1,2-cis-Dichloroethylene at 29 µg/L and 42 µg/L.

Former Exterior Clarifier and Associated Interior Drain

The Former Exterior Clarifier was located near the exterior southwest corner of the building and was permitted by the Los Angeles County Sanitation District (LACSD) to discharge certain materials to the sanitary sewer, including out-of-specification and other photochemicals, via a sink into an interior floor drain (Associated Interior Drain) in the southwest building interior.

Investigation Activities (GEOLOGICA 2008). Soil samples were collected from multiple borings drilled before the Former Exterior Clarifier was decommissioned, and then from excavation wall/floor locations during excavation activities. Temporary wells were installed in two of the borings and one groundwater sample was subsequently collected from each well. Soil and groundwater samples were analyzed for suites of petroleum hydrocarbons, VOCs, metals, photochemical-specific constituents, and pH. Soil samples were also collected from the Associated Interior Drain site and analyzed for the same suite of constituents.

Soil Quality. TPH as Extractable Fuel Hydrocarbon (TPH-EFH) was detected at concentrations (10,000 µg/kg – 63,000 µg/kg) below potentially applicable criteria. Only one VOC, styrene, was detected in one soil sample, at a concentration of 5.0 µg/kg, below potentially applicable criteria. Cadmium and chromium were detected in several soil samples at concentrations below potentially applicable criteria. Mercury was detected at concentrations ranging from 35 µg/kg to 520 µg/kg, below EPA residential and industrial soil Preliminary Remediation Goal (PRG) values and consistent with background soil concentrations in California. Cyanide was detected in one soil sample (1,300 µg/kg), below potentially applicable criteria.

Nitrate was detected in the majority of the soil samples at concentrations below potentially applicable criteria. Nitrite was detected in one soil sample at a concentration of 2,300 µg/kg, below potentially applicable criteria. Sulfate was detected in soil samples at concentrations ranging from 40,000 µg/kg to 2,900,000 µg/kg. There are no listed criteria for sulfate. Ammonia was detected in two soil samples at concentrations below potentially applicable criteria.

Groundwater Quality. Neither TPH-VFH nor TPH-EFH was detected in either of the two groundwater samples analyzed. Trichloroethylene (TCE) was the only VOC detected in one groundwater sample at a concentration of 5.2 µg/L, marginally above the 5.0 µg/L USEPA and California MCL. None of the target metals (cadmium, chromium, mercury, and silver) were detected in the groundwater samples tested. Cyanide was detected in one of the groundwater samples at a concentration of 34 µg/L, below potentially applicable criteria.

Nitrate, nitrite, and sulfate were each detected above USEPA and or California MCLs in one or both groundwater samples tested. Ammonia was detected in the two groundwater samples tested at concentrations ranging from 1,000 to 1,300 µg/L. There are no listed criteria for ammonia.

Decommissioning Activities. The Former Exterior Clarifier was decommissioned during field activities conducted during July and August 2008. Principal activities included: removing residual materials; pressure-washing/rinsing internal clarifier and weir chambers; disconnecting and capping inlet/outlet pipes; physically removing the clarifier and adjacent soil; and, backfilling the excavation with compacted granular material and applying reinforced-concrete ground surface. The Associated Interior Drain area was decommissioned by: removing pH adjustment lines; removing the tile and concrete flooring; excavating the sub-floor soil; disconnecting and capping inlet/outlet pipes; backfilling the excavated area with compacted granular material; and, finishing the floor with reinforced-concrete.

Former Maintenance Area Clarifier

A decommissioned and closed-in-place, subsurface clarifier (Maintenance Area Clarifier) is located in the Maintenance Area near the northeast corner of the building, adjacent to the Former

Fuel Oil UST site described above. This clarifier was installed at an unknown time prior to about 1985, reportedly as a clarifier and oil-water separator for Maintenance Area floor wash water discharge. Facility personnel discontinued use of this Maintenance Area Clarifier in approximately 1986.

Investigation Activities (2008). Three direct-push soil borings were drilled in July 2008 at locations adjacent to the clarifier. Soil samples were collected for laboratory analysis from each boring to a maximum depth of 20 feet bgs. No groundwater characterization was performed as part of this investigation. Soil samples were generally analyzed for: TPH-VFH, TPH-EFH, VOCs, and pH.

Soil Quality. Neither TPH-VFH nor TPH-EFH was detected in the soil samples. VOCs detected in three of the soil samples included: tetrachloroethylene (PCE) at a concentration of 2.1 µg/kg in two samples; toluene at a concentration of 2.4 µg/kg; and, 1,1,1-trichloroethane (1,1,1-TCA) at concentrations of 2.7 µg/kg and 3.9 µg/kg. Tetrachloroethylene (PCE) at 2.1 µg/kg was the only VOC exceeding a potentially applicable criteria value (Risk-Based SSL of 0.052 µg/kg).

Two soil samples were analyzed for total mercury for screening purposes only to assist with evaluating area-wide concentrations. Concentrations of 40 µg/kg and 36 µg/kg, both below EPA residential and industrial soil PRGs and consistent with background soil concentrations in California, though above the Risk-Based SSL of 33 µg/kg) were detected.

Decommissioning Activities. After the above-described sampling and analysis activities, the clarifier was closed in place in August 2008. Closure activities included: Removal of residual liquids and solids; triple-rinsing clarifier; disconnecting plumbing; slurry-filling the clarifier; and, refinishing the floor with rebar-reinforced concrete.

15. If Yes, what hazardous substances, pollutants, or contaminants have been detected and what were their maximum concentrations exceeding screening levels, e.g., Preliminary Remediation Goals or California Human Health Screening Levels?

Refer to #14 Above.

16. Is there currently a potential of exposure of the community or workers to hazardous substances, pollutants, or contaminants at the site?
Yes ☐ No ☒ If Yes, explain

17. Provide a description of known or possible water quality impacts at the property. Also, provide information about the type(s) of water supply for the property and, if known, any information on municipal, domestic, agricultural or industrial water supply wells that are either on the property or within a 1-mile radius of the project area:
Potable water is supplied to the site by the City of Whittier. No public drinking water supply wells were identified within one mile in the EDR database search dated September 2007.

18. Are any Federal, State or Local regulatory agencies currently involved with the site?
Yes ☐No☒

19. If Yes, state the involvement, and give contact names and telephone numbers

Request for Agency Oversight of a Brownfield Site

Agency Involvement Contact Name Phone

Agency	Involvement	Contact Name	Phone Number
			( ) -
			( ) -
			( ) -

20. What is the future proposed use of the site? No changes to site use are planned at this time.

21. If the Site is not cleaned-up to unrestricted standards, will the property owner accept land use restrictions? TBD

22. What oversight service is being requested of the Lead Agency (check all that apply)?
Initial Investigation/Preliminary Endangerment Assessment ☐
Remedial Investigation/Feasibility Study ☐
Removal Action/Remedial Action ☐
Case Closure ☐
Document Review X
Other (describe the proposed project):
Kodak requests agency approval of the attached Groundwater Investigation Work Plan. Copies of related reports will be provided to the assigned agency once the site has entered the program.

23. Provide a general description of the nature of the project, including a general timeline for development, redevelopment or transfer of the site, and the expectations of the Agreement: Not Applicable.

24. Provide information about the potential benefits of the project, if available:

Anticipated number of jobs created/retained: Not Applicable.
Anticipated number of proposed residential units: Not Applicable.
Anticipated square footage of planned commercial space: Not Applicable.
Anticipated square footage of planned open space: Not Applicable.
Anticipated acres made ready for re-use by proposed Site cleanup: Not Applicable.

25. Provide information on the environmental documents produced for the Site to date. Note that copies may be requested by the designated Lead Agency.

☐ Preliminary Endangerment Assessment, dated
☒ Phase 1 Environmental Assessment, dated October 2007
☐ Phase 2 Environmental Assessment, dated
☐ Health Risk Assessment, dated
☒ Other, describe and provide date – Refer to 12, above.
☒ Other, describe and provide date – Refer to 12, above.
☒ Other, describe and provide date – Refer to 12, above.
☐ Other, describe and provide date

26. Provide any other pertinent Site information not covered in this Application:

Not Applicable.

SECTION 3
COMMUNITY PROFILE INFORMATION

1. What are the demographics of the community (e.g., socioeconomic level, ethnic composition, specific language considerations, etc.)?
Refer to attached information obtained from the Whittier Chamber of Commerce.

2. Local Interest
Has there been any media coverage?
No.

3. Past Public Involvement
Has there been any past public interest in the site as reflected by community meetings, ad hoc committees, workshops, fact sheets, newsletters, etc.?
No.

4. Key Issues and Concerns
Have any specific concerns/issues been raised by the community regarding past operations or present activities at the site?
No.

5. Are there any concerns/issues anticipated regarding site activities?
No.

6. Are there any general environmental concerns/issues in the community relative to neighboring sites?
The site is located in a heavy industrial and commercial area of Whittier.

7. Describe the visibility of activities and any known interest the site:
Not Applicable.

Whittier Demographics

Founded in 1887 as a Quaker Colony, Whittier is a city rich with traditions and history. A strong sense of this heritage, which stresses the protection of landmark structures and sites, is shared by the people who call Whittier "home." Whittier's unique combination of community identity, spirit and cooperation have helped to make it one of the most attractive and desirable residential and business locations in Southern California. It is this sense of history, as well as a clear vision for the future, that has made Whittier an up-scale and dynamic residential community.

Throughout the years, the City of Whittier has strived to provide a healthy and safe community and a well-maintained infrastructure enhanced by planned patterns of growth and development. Through a balance of economic, social, political, cultural and recreational opportunities, the City Council has encouraged an atmosphere conducive to community spirit and active participation in the affairs and progress of the community. Such efforts have been made to ensure a visually pleasing community in which the City's identity and character are preserved and enhanced.

Whittier is a beautiful, friendly community, nestled within the east Los Angeles basin, with the majestic hills to the north and freeway access to both LA and Orange county communities. Home to two colleges, Whittier College to the west and Rio Hondo College to the north, Whittier is a philanthropic community.

Whittier has a history of attracting shoppers from the neighboring Los Angeles and Orange County communities. The "Shop Whittier" program, promoted by the **Chamber of Commerce**, is designed to promote and publicize the importance of shopping locally and keeping sales tax dollars within the city. With an average household income of $61,000+/- and 1.9 million population within 10 miles, Whittier offers excellent potential for expanding businesses to find just the right location in one of the city's key retail hubs; The Marketplace in west Whittier, Uptown in northwest Whittier, The Quad in central Whittier, Whittwood Town Center in East Whittier and the many Boulevard retail locations spanning from east to west Whittier. Businesses and industries in the area include 2500 professional services, retail stores, hotels and motels, automobile dealerships and over specialty shops and boutiques.

Whittier is readily accessible to virtually all Los Angeles and Orange County communities. Located just 12 miles southeast of Los Angeles and occupying 12.4 square miles, incorporated Whittier is populated by 87,000 people and 188,000 for the Whittier Area. The city of Whittier, incorporated in 1898, has a City Manager / Council type of government.

top

Economic Condition

Whittier offers an outstanding quality of life to new business owners, managers, and professionals who choose to settle locally. There is a wide spectrum of housing opportunities ranging from spacious estates in Friendly Hills to moderately priced Victorian homes, California bungalows, condominiums, townhouses and apartments.

top

Housing Characteristics

Whittier offers an outstanding quality of life to new business owners, managers, and professionals who choose to settle locally. There is a wide spectrum of housing opportunities ranging from spacious estates in Friendly Hills to moderately priced Victorian homes, California bungalows, condominiums, townhouses and apartments.

The Whittier Association of Apartment Owners is a committee of the Chamber that is designed to enhance and educate apartment owners and managers in Whittier. The Association meets quarterly to discuss issues which are pertinent and critical to the success of running and operating an apartment complex.

top

Educational Opportunities

Whittier is proud of its many educational opportunities, from the quality private and parochial schools to its award winning public schools which include 34 elementary, 8 middle, and 5 high schools. Whittier is also home to Rio Hondo Community College and Whittier College, a nationally ranked private four-year institution offering liberal arts, law and MBA programs.

top

Community Demographics

Location: Whittier is located 12 miles southeast of Los Angeles.
Area: 12.4 square miles.
Elevation: 200-1000 feet.
Population: County: 8,863,164; Incorporated City: 82,805
Government: The City of Whittier has a City Manager / Council type of government. It was incorporated in 1898.

Market Profile Report

Area 1: Zip Codes 90601 – 90606

The Market Profile Report contains a comprehensive list of demographic information based on 1990 Census data updated to reflect 1999 estimates and 2004 projections. Population and household count data on this report is retrieved at the census block level.

top

Population and Households

Population and household information allows you to quantify the market size and measure future market growth. Population is defined as all living persons. Households include all occupied housing units, regardless of the relationship of the residents.

2004 Population	187,847
1999 Population	181,122
1990 Population	172,555
Pop. Per square mile	5,709
2004 Households	60,621
1999 Households	58,402
1990 Households	55,494
% Annual HH Growth (1990-1999)	0.6

top

Household by Income

Household income is a good indicator of the spending power of your market. Household income includes the income of all persons 15 years old and over. Median income divides the income distribution into two equal parts, one-half falling above the median and half below.

% Under $15,000	9.4
% $15,000 - $24,999	10.5
% $25,000 - $34,999	12.7
% $35,000 - $49,999	19.5
% $50,000 - $74,999	24.2
% $75,000 - $99,999	12.0
% $100,000 - $149,999	7.8
% Above $150,000	4.0

Median: $48,349 **Average:** $63,141

top

Population by Race

The race variables represent the self-classification by people according to the race with which they most closely identify. Ancestry can be viewed as the nationality, lineage or country of birth of a person. Persons of Hispanic ancestry may be of any race.
(Data is from 1999)

% White	61.1
% Black	1.1
% Asian	5.2
% Other	32.6
% Hispanic Ancestry	60.8

top

Population by Age

Population by age variables provide valuable information as to the relative maturity of youth of a particular market. Median age divides the age distribution into two equal parts, one-half falling below the median and one-half above.
(Data is from 1999)

% Under Age 5	8.8
% Age 5 - 14	16.7
% Age 15 - 17	4.1
% Age 18 - 20	4.5
% Age 21 - 25	5.2
% Age 25 - 35	15.4
% Age 35 – 44	15.4
% Age 45 – 54	10.9
% Age 55 – 64	7.7
% Age 65 - 74	6.4
% Age 75 - 84	3.7
% Age 85 +	1.2

Median Age: 32.1 **Average Age:** 33.8

1.0 Introduction and Purpose

GEOLOGICA Inc. (GEOLOGICA) is pleased to submit this *Groundwater Investigation Work Plan* (Work Plan) for the Eastman Kodak Company (Kodak) Western Division Warehouse located at 12100 Rivera Road in Whittier, California (Site or Subject Site or Subject Property), as shown in **Figure 1**. The site is owned by *CLPF Whittier Industrial LP* (CLPF). The purpose of this Work Plan is to: (1) evaluate potential groundwater impact to the site near the locations of two former underground storage tanks (USTs), two former clarifiers and a former flammables storage building; and, (2) evaluate site-wide groundwater flow direction.

2.0 Site Description

The site includes a single-story, approximately 218,000-square-foot building with about 7,000 square feet of parking space located in a principally commercial and industrial area of Whittier, California (**Figure 2**). The site was constructed, and is still used as, a regional distribution center for Kodak products. *Ryder System, Inc.* (Ryder) operates the facility for Kodak. The facility employs approximately 50 individuals from 0600 – 1800 hours, five days/week.

3.0 General Site History

Prior to site development for its current use, the subject property appears to have been used for agricultural purposes from at least 1928 through the Site's first reported development by Kodak in 1959, when the current building, known as the *Office and Distribution Center* was constructed. Site buildings and configurations have changed over time. A small *Technical Building* was built in 1959, along with the original *Warehouse Building*, which now comprises the northeastern portion of the current *Office and Distribution Center*. The *Office and Distribution Center* was expanded several times, reportedly most recently in 1985. Another small Marketing Building was constructed in 1975. A small *Flammable Storage Building* was added in 1985. The northern portion of the building was used for hazardous materials storage; the southern portion was reportedly leased to a plastics recycling company. The *Technical Building*, *Marketing Building*, and *Flammable Storage Building* were demolished in approximately 1999.

Kodak sold the subject property to *Pacific Gulf Properties Inc.* (Pacific Gulf) in 1998 and leased back the facility from Pacific Gulf. The property was subsequently sold by Pacific Gulf. The current property owner is CLPF. Kodak leased the facility from CLPF until 2007, when the lease was assigned to Ryder.

3.1 Former USTs Investigations and Removals

Two former UST sites were investigated during July and August 2008. Background information and key investigation activities and findings are summarized below. The UST locations are shown in **Figure 2**.

3.1.1 Former Photochemicals UST

In July 1984, Kodak detected an overfill of a 1,000-gallon UST which received photochemicals discharged from leaking or damaged containers into a disposal sink. Subsequent excavation around the upper part of the tank revealed a leak in the pipeline that conveyed materials from the sink into the tank and impacted soils in the tank backfill. The tank and "obviously contaminated" soils were removed for off-site disposal. Soil sample analytical results were reported to be below relevant criteria. UST closure information was reportedly submitted to the Los Angeles Regional Water Quality Control Board (LARWQCB); however, related records have not been identified.

Investigation Activities (GEOLOGICA 2008). A preliminary soil and groundwater investigation was conducted at the Former Photochemicals UST site in July 2008, which included advancement of two direct-push soil borings and installation of one temporary groundwater well. Soil and groundwater samples were collected for laboratory analysis.

Soil Quality. Soil samples were collected primarily for lithologic-logging purposes; however, one soil sample from each boring was analyzed for mercury as part of a site-wide background concentration assessment. The resulting concentrations (34 – 96 µg/kg) marginally exceed one potentially applicable criterion (risk-based soil screening level of 33 µg/kg).

Groundwater Quality. The groundwater sample was analyzed for suites of petroleum hydrocarbons, volatile organic compounds (VOCs), metals, and photochemical-specific constituents. Nitrate (46,000 µg/L) was the only constituent that exceeded potential applicable criteria (USEPA and California Maximum Contaminant level [MCL] of 10,000 µg/L).

3.1.2 Former Fuel Oil UST

A former Fuel Oil UST of unknown size was located adjacent to the Maintenance Area near the northeast corner of the building (**Figure 2**). The UST was reportedly used to store diesel fuel oil as backup fuel for the facility's boilers, and was reportedly removed in the mid-1980's. No evidence of soil or groundwater characterization or formal closure documentation was identified.

Investigation Activities (GEOLOGICA 2008). Two direct-push soil borings were drilled in locations near the Former Fuel Oil UST (July 2008). Soil samples were collected at five-foot intervals to a maximum depth of 35 feet below ground surface (bgs). A temporary well was installed in each of the borings. Soil and groundwater samples were collected from both borings / wells and analyzed for suites of the following parameters: Total Petroleum Hydrocarbons (TPH), VOCs, and pH.

Soil Quality. TPH as Volatile Fuel Hydrocarbons (TPH-VFH) was detected in only one of eight soil samples tested at a concentration of 92 µg/kg, below potentially applicable criteria. TPH-VFH was not detected in the two successively deeper samples from the corresponding boring. No VOCs were detected.

Groundwater Quality. TPH-VFH was the only hydrocarbon detected, in one of the two groundwater samples, at a concentration of 380 µg/L. There are no USEPA or California MCLs for TPH-VFH. Chloroform and trichlorofluoromethane were detected at concentrations below potentially applicable USEPA and California MCLs. The following VOCs were detected in the two groundwater samples at concentrations above potentially applicable MCLs: 1,1-Dichloroethylene at 64 µg/L and 110 µg/L; Tetrachloroethylene (PCE) at 28 µg/L and 77 µg/L; Trichloroethylene (TCE) at 340 µg/L and 580 µg/L; and, 1,2-cis-Dichloroethylene at 29 µg/L and 42 µg/L.

3.2 *Clarifier Areas Investigations and Closures*

Two subsurface clarifiers were investigated and closed during July and August 2008. Background information plus key activities and findings are summarized below.

3.2.1 Former Exterior Clarifier and Associated Interior Drain

The Former Exterior Clarifier was located near the exterior southwest corner of the building and was permitted by the Los Angeles County Sanitation District (LACSD) to discharge certain materials to the sanitary sewer, including out-of-specification and other photochemicals, via a sink into an interior floor drain (Associated Interior Drain) in the southwest building interior.

Investigation Activities (GEOLOGICA 2008). Soil samples were collected from multiple borings drilled before the Former Exterior Clarifier was decommissioned, and then from excavation wall/floor locations during excavation activities. Temporary wells were installed in two of the borings and one groundwater sample was subsequently collected from each well. Soil and groundwater samples were analyzed for suites of petroleum hydrocarbons, VOCs, metals, photochemical-specific constituents, and pH. Soil samples were also collected from the Associated Interior Drain site and analyzed for the same suite of constituents.

Soil Quality. TPH as Extractable Fuel Hydrocarbon (TPH-EFH) was detected at concentrations (10,000 µg/kg – 63,000 µg/kg) below potentially applicable criteria. Only one VOC, styrene, was detected in one soil sample, at a concentration of 5.0 µg/kg, below potentially applicable criteria. Cadmium and chromium were detected in several soil samples at concentrations below potentially applicable criteria. Mercury was detected at concentrations ranging from 35 µg/kg to 520 µg/kg, below EPA residential and industrial soil Preliminary Remediation Goal (PRG) values and consistent with background soil concentrations in California. Cyanide was detected in one soil sample (1,300 µg/kg), below potentially applicable criteria.

Nitrate was detected in the majority of the soil samples at concentrations below potentially applicable criteria. Nitrite was detected in one soil sample at a concentration of 2,300 µg/kg, below potentially applicable criteria. Sulfate was detected in soil samples at concentrations ranging from 40,000 µg/kg to 2,900,000 µg/kg. There are no listed criteria for sulfate. Ammonia was detected in two soil samples at concentrations below potentially applicable criteria.

Groundwater Quality. Neither TPH-VFH nor TPH-EFH was detected in either of the two groundwater samples analyzed. Trichloroethylene (TCE) was the only VOC detected in one groundwater sample at a concentration of 5.2 µg/L, marginally above the 5.0 µg/L USEPA and California MCL. None of the target metals (cadmium, chromium, mercury, and silver) were detected in the groundwater samples tested. Cyanide was detected in one of the groundwater samples at a concentration of 34 µg/L, below potentially applicable criteria.

Nitrate, nitrite, and sulfate were each detected above USEPA and or California MCLs in one or both groundwater samples tested. Ammonia was detected in the two groundwater samples tested at concentrations ranging from 1,000 to 1,300 µg/L. There are no listed criteria for ammonia.

Decommissioning Activities. The Former Exterior Clarifier was decommissioned during field activities conducted during July and August 2008. Principal activities included: removing residual materials; pressure-washing/rinsing internal clarifier and weir chambers; disconnecting and capping inlet/outlet pipes; physically removing the clarifier and adjacent soil; and, backfilling the excavation with compacted granular material and applying reinforced-concrete ground surface. The Associated Interior Drain area was decommissioned by: removing pH adjustment lines; removing the tile and concrete flooring; excavating the sub-floor soil; disconnecting and capping inlet/outlet pipes; backfilling the excavated area with compacted granular material; and, finishing the floor with reinforced-concrete.

3.2.2 Former Maintenance Area Clarifier

A decommissioned and closed-in-place, subsurface clarifier (Maintenance Area Clarifier) is located in the Maintenance Area near the northeast corner of the building, adjacent to the Former Fuel Oil UST site described above. This clarifier was installed at an unknown time prior to about 1985, reportedly as a clarifier and oil-water separator for Maintenance Area floor wash water discharge. Facility personnel discontinued use of this Maintenance Area Clarifier in approximately 1986.

Investigation Activities (2008). Three direct-push soil borings were drilled in July 2008 at locations adjacent to the clarifier. Soil samples were collected for laboratory analysis from each boring to a maximum depth of 20 feet bgs. No groundwater characterization was performed as part of this investigation. Soil samples were generally analyzed for: TPH-VFH, TPH-EFH, VOCs, and pH.

Soil Quality. Neither TPH-VFH nor TPH-EFH was detected in the soil samples. VOCs detected in three of the soil samples included: tetrachloroethylene (PCE) at a concentration of 2.1 µg/kg in two samples; toluene at a concentration of 2.4 µg/kg; and, 1,1,1-trichloroethane (1,1,1-TCA) at concentrations of 2.7 µg/kg and 3.9 µg/kg. Tetrachloroethylene (PCE) at 2.1 µg/kg was the only VOC exceeding a potentially applicable criteria value (Risk-Based SSL of 0.052 µg/kg).

Two soil samples were analyzed for total mercury for screening purposes only to assist with evaluating area-wide concentrations. Concentrations of 40 µg/kg and 36 µg/kg, both below EPA residential and industrial soil PRGs and consistent with background soil

concentrations in California, though above the Risk-Based SSL of 33 µg/kg) were detected.

Decommissioning Activities. After the above-described sampling and analysis activities, the clarifier was closed in place in August 2008. Closure activities included: Removal of residual liquids and solids; triple-rinsing clarifier; disconnecting plumbing; slurry-filling the clarifier; and, refinishing the floor with rebar-reinforced concrete.

4.0 Investigation Scope of Work

The Investigation Scope of Work is divided into six tasks, described below. Soil and groundwater sampling activities will be performed in general agreement with the LARWQCB's *Interim Site Assessment and Cleanup Guidebook: May 1996 California Regional Water Quality Control Board Los Angeles And Ventura Counties Region 4*.

4.1 *Task 1 – Preliminary Field Activities*

Prior to the initiation of field activities, GEOLOGICA will: (1) coordinate with appropriate site personnel for site access and mark sampling locations prior to the commencement of excavation activities; (2) review available as-built blueprints; and, (3) contact Underground Services Alert of California to help establish the approximate location of subsurface utilities in the proposed monitoring well locations.

4.2 *Task 2 – New Monitoring Wells Installation, Development, Sampling, and Surveying*

Five monitoring well installation permits will be obtained from the Los Angeles County Department of Public Health. Wells will be constructed with two-inch diameter, Schedule 40, PVC screen (0.010-inch slot-size) and riser and completed with flush-mount well boxes. The wells will be constructed such that the screened-interval corresponds to the apparent water table surface, with anticipated maximum 10-foot screen length. The wells will be installed at the locations shown in **Figure 2**.

During well construction, soil samples will be collected at five-foot intervals using a standard split spoon or direct-push sampler for lithologic description purposes only, and will be screened using a field Organic Vapor Analyzer (OVA) or Photo Ionization Detector (PID). If elevated OVA or PID readings are encountered, soil samples may selectively be collected using United States Environmental Protection Agency (USEPA) Method 5035 field preservation protocols for VOC analysis by USEPA Method 8260B.

Monitoring wells will be developed by purging a minimum of 10 casing volumes of groundwater. Groundwater samples will be collected immediately after well development and analyzed for the following constituents: TPH-VFH, TPH-EFH, VOCs (by USEPA Method 8260B), total cyanide, cadmium, chromium, mercury, and silver, ammonia, nitrate, nitrite, sulfate, and pH.

Groundwater samples will be submitted under applicable chain-of-custody protocols to TestAmerica, Inc.'s Irvine, California Laboratory, a California Department of Health Services-certified analytical testing laboratory.

Monitoring well elevations and locations will be surveyed to within 0.01-foot vertically and 0.1-foot vertically by a California-licensed surveyor. A minimum of one round of monitoring well water levels will be collected after the installation, development, sampling, and surveying of the monitoring wells.

Residual soil cuttings, sampling equipment cleaning water, development and purge water, and sampling expendables will be containerized in 55-gallon drums and held on-site pending receipt of laboratory analytical testing results. These materials will then be disposed of in an appropriate manner.

4.3 *Task 3 – Existing Monitoring Well Destruction*

An historic monitoring well is located near the Former Photochemicals UST location. No construction records or other information regarding the existing well installation, well materials, or geologic log are available; the well is considered unsuitable for further investigation work. GEOLOGICA will submit a monitoring well destruction permit application requesting a variance otherwise to abandon the existing monitoring well (**Figure 2**) by removing the upper five feet of casing and tremie-grouting the well from the bottom. If the variance is not granted, then, the monitoring well may be closed by overdrilling and then tremie-grounting. The surface will be refinished with rebar-reinforced concrete.

4.4 *Task 4 - Reporting*

A summary report will be prepared for submission to the Los Angeles Regional Water Quality Control Board and will include appropriate documentation, such as: discussion of field activities; site plan and sampling location map(s); groundwater contour map, summary analytical data; raw analytical and QA/QC data; and, data interpretation/discussion of findings.

5.0 Schedule

Field activities will be scheduled as soon as possible after review and response to any LARWQCB comments regarding this Work Plan. A summary technical report will be issued within approximately 60 days after the completion of the field activities.

Re: Transfer of AQMD Mobile Source Emission Reduction Credits (MSERCs)

The South Coast Air Quality Management District (AQMD) has received your Transaction Registration Form on May 17, 1996, regarding a purchase of MSERCs. By means of this letter, the AQMD acknowledges and confirms your purchase of the following amounts of MSERCs:

1,322	pounds of VOC	10,522	pounds of CO
902	pounds of NOx	NONE	pounds of PM

which were PURCHASED FROM: Commuter Services Group ,

having account ID number 105685 .

USE of MSERCs

Your ownership of the above MSERCs is effective as of the date of this letter. The original issuance date of the above MSERCs is **April 25, 1996**. Therefore, the above amount(s) of MSERCs may be consumed -- within the following limits:

1. No more than one-third may be consumed prior to April 25, 1997.
2. No more than two-third may be consumed prior to April 25, 1998.

All unused portions of the above amounts of MSERCs will expire on **April 24, 2001.**

Re: Transfer of AQMD Mobile Source Emission Reduction Credits (MSERCs)

The South Coast Air Quality Management District (AQMD) has received your Transaction Registration Form on April 23, 1996, regarding a purchase of MSERCs. By means of this letter, the AQMD acknowledges and confirms your purchase of the following amounts of MSERCs:

661	pounds of VOC	5,261	pounds of CO
451	pounds of NOx	NONE	pounds of PM

which were PURCHASED FROM: Commuter Services Group ,

having account ID number 105685 .

USE of MSERCs

Your ownership of the above MSERCs is effective as of the date of this letter. The original issuance date of the above MSERCs is **March 29, 1996**. Therefore, the above amount(s) of MSERCs may be consumed -- within the following limits:

1. No more than one-third may be consumed prior to March 29, 1997.
2. No more than two-third may be consumed prior to March 29, 1998.

All unused portions of the above amounts of MSERCs will expire on **March 28, 2001.**

KODAK MEMO

January 19, 1995

TO: Mario Irizarry, Property Mgr Whittier

FROM: Linda Bickerstaff, Supervisor,FPM

SUBJECT: CFC Refrigerants

The following is an inventory of all the equipment at this facility containing CFC and HCFC:

Equipment Type	Qty	Refrigerant	Age
Chiller (centrifugal)	2	R-11	1959 and 1969
DX Refrigeration *	58	R-12	1974 to 1992
DX Air Dryer	3	R-12	1972 to 1985
DX A/C units	30	R-22	1972 to 1992
DX Freezer (0 deg)	1	R-502	1985
Fire extinguisher	57	Halon	1980 to 1990

* Includes, Food preparation and storage equipment, drink dispensers, vending machines, room A/C unit (1), and refrigerant recovery recycle unit (1).

R- 123 have none.

Due to age, the two chillers we have cannot be retro-fitted. Both chillers were rebuilt in 1993. Life expectancy is another 5 to 6 years. We have a quarterly preventative maintenance contract with Carrier, who checks for leaks and maintains them in working order. Both chillers are pre-vent units which prevents them from leaking. The discharge is recycled back into the unit. We have no CFC venting.

We have activity been participating in the CFC program for 2 years.

Mario, for your info only, not Rochester, we have enough stock of R-11 to refill both chillers once.

July 28, 1993 KODAK MEMO

TO: Frederick Kraiger, Energy Coordinator
Corporate Real Estate Office, Bldg 10, Basement

FROM: Larry Wells, Supv Bldg Svcs, W.R. Whittier

SUBJECT: Equipment Containing CFC and HCFC.

The Following is an inventory of all equipment at this facility determined to contain CFC and HCFC.

Equipment type	Qty	Refrigerant	Age
Chiller (centrifugal)	2	R-11	1959 and 1969
DX Refrigeration*	58	R-12	1974 to 1992
DX Air Dryer	3	R-12	1972 to 1985
DX A/C units**	31	R-22	1972 to 1992
DX Freezer(0 deg)	1	R-502	1985
Fire extinguisher	57	Halon	1980 to 1990

* Includes, Food preparation and storage equipment, drink dispensers, vending machines, room A/C unit (1), and refrigerant recovery recycle unit (1).

** Includes one ice cream showcase in cafeteria.

Annual refrigerant purchases equate to:

Refrigerant	Average (5 year)	Annual (expected)
R-11	400 #	400 #
R-12	100 #	5 #
R-22	600 #	600 #
R-502	30 #	5 #

If you have questions or require additional information, I may be contacted at Knet 431-1580.

lgw

Linda -
Have Larry Wells confirm if this is still the case
PM - 7/27/95

AlliedSignal CHEMICALS

MATERIAL SAFETY DATA SHEET
GENETRON® 11

1. CHEMICAL PRODUCT AND COMPANY IDENTIFICATION

PRODUCT NAME: GENETRON® 11

OTHER/GENERIC NAMES: Trichlorofluoromethane

PRODUCT USE: Refrigerant and insulating gas

MANUFACTURER:
AlliedSignal, Inc.
Fluorocarbons
101 Columbia Road
P.O. Box 1053
Morristown, NJ 07962

FOR MORE INFORMATION CALL:
(Monday-Friday, 9:00am-4:30pm Eastern Standard Time
Product Safety Department (201) 455-4157

IN CASE OF EMERGENCY CALL:
(24 Hours/Day, 7 Days/Week)
(201) 455-2000

2. COMPOSITION/INFORMATION ON INGREDIENTS

INGREDIENT NAME	CAS #	WEIGHT %
Trichlorofluoromethane	75-69-4	100

Trace impurities and additional material names not listed above may also appear in the Regulatory Information section (#15) towards the end of the MSDS. These materials may be listed for local "Right to Know" compliance and for other reasons.

3. HAZARDS IDENTIFICATION

EMERGENCY OVERVIEW: Colorless, volatile liquid with ethereal and faint sweetish odor. Non-flammable material. Overexposure may cause dizziness and loss of concentration. At higher levels, CNS depression and cardiac arrhythmia may result from exposure. Vapors displace air and can cause asphyxiation in confined spaces. At higher temperatures, (> 250°C), decomposition products may include Hydrochloric Acid (HCl), Hydrofluoric Acid (HF), and carbonyl halides such as phosgene.

POTENTIAL HEALTH HAZARDS:

SKIN: Irritation would result from defatting action on tissue.

EYES: Liquid contact can cause irritation which may be severe. Mist may irritate.

INHALATION: Genetron® 11 has a relatively low order of acute toxicity. When oxygen levels in air are reduced to 12-14% by displacement, symptoms of asphyxiation, loss of coordination, increased pulse rate and deeper respiration will occur. In repeated exposure tests with animals, changes were noted in liver functions and lipid production at levels above 100 ppm. At higher levels, cardiac arrhythmia may occur.

INGESTION: Although not a likely route of exposure, discomfort in the gastrointestinal tract would
