NPEC Inc. 3800 Dewey Avenue, #317 • Rochester, NY 14616-2579

November 6, 2009

Ms. Linda Ketellapper, SFD-7-5
U.S. Environmental Protection Agency, Region IX
Superfund Division
75 Hawthorne Street
San Francisco, CA 94105

Subject: Response to 104(e) Request for Information - Omega Superfund Site Real Property at 12100 Rivera Road, Whittier, CA, dated September 14, 2009

Dear Ms. Ketellapper:

The referenced 104(e) Request for Information ("Request") addressed to Antonio M. Perez, Chairman and Chief Executive Officer, Eastman Kodak Company ("Kodak"), was referred to me for reply. The letter was received by my office on September 24, 2009 and I am responding for Kodak through NPEC Inc. ("NPEC"), its wholly owned subsidiary which has the responsibility for managing Kodak's remedial environmental liabilities. NPEC requested an extension of time in which to reply to the request and in an e-mail from Steve Berninger of your office, an extension of 15 additional days was granted with November 9 set as the new due-date.

The information provided relates to a facility formerly owned and operated by Kodak and located at 12100 Rivera Road, Whittier, CA. A diligent search of existing Kodak records and files, current facility operator records and files and public records was made. Interviews with current and former employees and consultants who have knowledge of the facility were conducted. As a result, the enclosed hard-copy and e-format documents are submitted to the Agency in response to the Request.

As described in the enclosed documents, the land was purchased, developed and initially operated by Kodak as a regional logistics and training facility for Kodak products. The property size, function and ownership have changed over time. The facility currently occupies a smaller parcel; training operations have ceased, some structures have been demolished, and the facility is now owned by a non-Kodak affiliated real estate company (ING Clarion LP). The facility continues to function as a logistics center for Kodak products, now operated by Ryder Integrated Logistics Inc.

During the entire period as a Kodak-related logistics facility (1958 to current), dry finished products have been and continue to represent the vast majority (approximately

90%) of the materials handled on-site. Liquid products represent the remaining product-mix (approximately 10%) and are present in drum-quantity (55 gallon) and smaller containers. These liquid materials are primarily photoprocessing chemicals (photographic developers, fixes and bleaches) that do not contain the chlorinated organic compounds identified in the Operable Unit 2 (OU-2) groundwater that the Agency is investigating.

Bulk-volume liquids were previously managed on-site in two underground storage tanks (UST): waste photoprocessing chemicals (from broken containers of unused chemical products) were collected in a 1,000 gallon tank, and fuel oil was stored in the second tank (volume undetermined). Both tanks were decommissioned and removed in the mid-1980s. Subsurface impacts were noted during the photochemical tank removal, and impacted soil was removed then disposed of at a permitted off-site facility.

Small-scale photoprocessing operations were previously conducted on-site, for demonstration and training purposes. Spent photoprocessing chemicals were collected from the machines for subsequent off-site recovery, sent off-site for disposal at regulated treatment facilities, or discharged as permitted to the facility sanitary sewer.

In addition to products related to the distribution and former training operations described above, some chemicals containing chlorinated organic components have been used on-site in small volumes for cleaning and maintenance purposes. These materials have typically been present in drum-quantity and smaller containers. Wastes generated from distribution operations (i.e. residue from broken product containers) and from cleaning/maintenance operations have been managed according to regulatory requirements, and following prescriptive Kodak practices. No documented or otherwise known releases of any facility materials have occurred on-site that would have potentially impacted soil or groundwater, other than the apparent release at the former photochemical tank noted above. There are no known or suspected compromises of on-site sewers.

Kodak conducted voluntary screening-level subsurface investigations at the facility in 2008. This work was performed as part of Kodak-due diligence. Soil and groundwater sampling were performed at several areas of interest, including at the two UST sites noted above. This investigation was summarized in three reports, which are included as part of the attachment to this letter. Sub-mg/L concentrations of some chlorinated organics were detected in some groundwater samples collected from three temporary wells. These investigations are not conclusive regarding the source of the detected chlorinated organics. Releases of chlorinated organics from one or more upgradient release sites are known to exist and may have impacted the facility subsurface conditions.

Kodak subsequently developed a draft work plan to conduct follow-on characterization at the areas of interest. This work plan was submitted to the California Department of Toxic Substances Control (DTSC) in June 2009, as part of a “Request for Agency Oversight of a Brownfield Site”. Kodak and DTSC are currently collaborating on the

Request. Following implementation of the final work plan, Kodak will submit the related report to the Agency to supplement information provided in the attachments to this letter.

Kodak believes that the information attached to this letter, provided in response to the Agency's Request, plus results of the DTSC-approved investigation, when completed will demonstrate the facility has been operated in a responsible manner, that facility-related release(s) have not significantly impacted on-site subsurface conditions, that the facility has not impacted OU-2 groundwater quality, and Kodak has no financial responsibility for OU-2.

Future correspondence regarding this matter should be directed to me. Please feel free to contact me if you have any questions or concerns regarding this response.

Sincerely,

Terrence Lee

W857
enc

Note: USEPA questions/requested information presented in bold italics, followed by Kodak responses in non-italicized font.

1. State the full legal name, address, telephone number, position(s) held by, and tenure of, the individual(s) answering any of these questions on behalf of Eastman Kodak Company concerning the facility located at 12100 Rivera Rd., Whittier, CA (the "Facility"). It should be noted that this Request is not limited solely to 12100 Rivera Rd. Rather, this Request shall include any and all parcels and street addresses in the area of 12100 Rivera Rd. where your operations occurred. EPA research indicates that Eastman Kodak Company operated at a location or locations currently bordered by Rivera Road to the north, Chetle Avenue to the west, and Byron Road to the east in Whittier, CA, an area which includes the property with the current street address of 12100 Rivera Rd., Whittier, CA.

1. David J. Shevlin has overall responsibility for response to this 104(e) Request. Specific contributing individuals are identified here as well as at the end of each of the respective questions for which they provided information. Other information sources are also identified following responses to the questions.

David J. Shevlin, Environmental Project Manager (1986 - present)
NPEC Inc. (subsidiary of Eastman Kodak Company)
3800 Dewey Avenue, #317, Rochester, NY 14616-4543
(585) 477-1217

Kathleen A. Vogele, Paralegal (1995 - present)
Eastman Kodak Company
343 State Street, Rochester, NY 14650-0208
(585) 781-5705

Scott Williams, HSE Manager (1973 - present)
Ryder Integrated Logistics Inc.
12100 Rivera Road, Whittier, Ca. 90606
(562) 789-2410

The Facility property is currently identified with Assessor Information Number 8168-028-003 and the address 12100 Rivera Road, Whittier, California 90606. Until late 1997 – early 1998, the Facility property comprised two parcels with Assessor Information Numbers 8168-018-014 and 8168-018-015 and used the address 12100 Rivera Road, Whittier, California 90606.

The information presented immediately above was obtained from the County of Los Angeles Assessor's Office and from the document titled "Phase I Environmental Site Assessment, Eastman Kodak Company Regional Marketing and Distribution Center, Whittier, Conestoga-Rovers & Associates, November 1997" (CRA 1997). Copies of applicable Assessor documents and selected

information from the CRA 1997 report are provided in **Attachment A – Assessor Information Numbers**. The complete Phase I Environmental Assessment report is provided in **Attachment B – Technical Environmental Documents**.

2. State whether you are currently operating at the Facility or have ever operated there in the past. If so, identify the dates you operated at the Facility. If you were not the owner of the Facility at any time during your period of operations there, provide a copy of the lease(s), rental agreement(s) or any other document(s) that establish(es) your relationship to the Facility.

2. Eastman Kodak Company ("Kodak") does not currently operate the Facility. Kodak operated the Facility from its initial operations in approximately 1958 until March 1, 2008. On that date, Kodak outsourced Facility operations to Ryder Integrated Logistics Inc. ("Ryder"), and Ryder began operating the Facility under contract to Kodak.

A majority portion of the Facility property (23.7 acres) was purchased by Kodak in March 1958. A smaller additional portion to the Facility property was purchased by Kodak in 1963. In 1998, the property was sold to Pacific Gulf Properties, Inc. (PGP). In 2004, Calwest Industrial Holdings, LLC (CIH) succeeded PGP as the owner. In 2008, ING Clarion LP (ING) succeeded CIH. Kodak leased the Facility from PGP, followed by a lease from CIH from 1998 to 2008. In 2008, Kodak "assigned" the lease to Ryder and Ryder became the Facility tenant of ING.

Supporting documentation, including copies of leases and other documents establishing Kodak's relationship to the Facility are provided in **Attachment C – Ownership and Lease Information**. The information presented in this section was provided by Kathleen A. Vogele of Kodak and includes:

- Copies of two (2) Grant Deeds dated March 4, 1958 (recorded March 12, 1958) describing property conveyed to Kodak (approximately 23.7 acres).
- Copy of Grant Deed dated September 26, 1963 (recorded September 30, 1963) describing property conveyed to Kodak (small strip of land).
- Copy of Grant Deed dated May 21, 1998, describing property conveyed to Pacific Gulf Properties Inc.
- Copy of map attached to the Grant Deed dated May 21, 1998.
- Copy of Lease dated May 21, 1998, by and between Pacific Gulf Properties Inc. and Kodak.
- Copy of First Amendment to Lease dated April 5, 2004, by and between Calwest Industrial Holdings, LLC, successor-in-interest to Pacific Gulf Properties, Inc. and Kodak.
- Copy of Assignment of Lease with Consent of Landlord dated

February 29, 2008, between Kodak (the "Assignor"), Ryder Integrated Logistics, Inc. (the "Assignee") and ING Clarion, LP (the "Landlord") whereby the above referenced Lease and First Amendment to Lease were assigned to Assignee effective on December 28, 2007.

3. State whether any other entities affiliated with Eastman Kodak Company have ever operated at the Facility, and identify each such entity. For each such entity, set forth the periods of operation at the Facility, the nature of its operations, and provide copies of all documentation evidencing each such entity's operations at the Facility.

3. As indicated in the response to Question Number 2 above, Ryder began operating the Facility on March 1, 2008 through the present. No material changes to the transportation and distribution functions of the Facility are noted. No other entities affiliated with Kodak were identified as having operated at the Facility.

The information presented in this section was obtained from Mr. Scott Williams of Ryder and from the "Phase I Environmental Site Assessment, Eastman Kodak Company Regional Marketing and Distribution Center, Whittier, Conestoga-Rovers & Associates, November 1997. A copy of this document is provided in **Attachment B – Technical Environmental Documents**.

4. Identify and explain all of your business operations at the Facility, including such information as the number of employees, the size of the Facility, dates of operation, product(s) manufactured and a description of the daily activities. Include a historical perspective of all changes in operations over time. As part of your answer, identify the specific street address and/or Assessor's Parcel Number (APN) of each location where you conducted operations, and include a historical perspective of all changes to street addresses over the course of your operations at or near the Facility.

4. The Facility property is currently identified with Assessor Information Number 8168-028-003 and the address 12100 Rivera Road, Whittier, California 90606. Until late 1997 – early 1998, the Facility property comprised two parcels with Assessor Information Numbers 8168-018-014 and 8168-018-015 and used the address 12100 Rivera Road, Whittier, California 90606. No other Assessor Information Numbers or addresses were identified for the Facility property.

The Facility comprises a single-story, approximately 218,000-square-foot building and about 7,000 square feet of parking area located in a principally commercial and industrial area of Whittier, California. The Facility land area is smaller, and the number of structures are fewer than previously existed. Several previously-existing structures were demolished in approximately 1998 and the related land was sold.

The current Facility structure, referred to as the Warehouse Building, was constructed in 1958 and is used as a regional distribution center for finished Kodak products for the western United States including: one-time use cameras, photographic film, dental x-ray film, photochemicals, and photographic equipment. The facility currently employs approximately 65 individuals (Ryder staff) from 0600 – 1800 hours, five days a week. Operations at the Warehouse Building are comprised principally of receiving goods, warehousing the goods, and then shipping the goods on to their next destination. No manufacturing operations are currently, or have been historically conducted at the Facility

Notable changes to Facility operations included:

- Addition to Warehouse Building – Room 5 (1985);
- Demolition of the Marketing and Training Building, Technical Building, and Flammables Storage Building (approximately 1998);
- The installation of an industrial wastewater clarifier in approximately 1985 and its removal in 2008;
- The installation in the mid-1980s and abandonment in 2008 of a Maintenance Area Clarifier; and,
- The installation (date unknown) and removal (1984) of one waste photochemicals tank and the installation (date unknown) and removal (mid 1980s) of one petroleum UST.

This information was obtained from Mr. Scott Williams of Ryder and from the Phase I Environmental Site Assessment reports reproduced in **Attachment B**. Locations of all features noted above are identified on **Figure 1A** and **Figure 1B in Attachment D – Facility Layout Maps**

5. Provide a scaled map of the Facility, which includes the locations of significant buildings and features. Indicate the locations of any maintenance shops, hazardous material or waste storage area(s), machine shops, degreasers, liquid waste tanks, clarifiers, chemical storage tanks and fuel tanks. Provide a physical description of the Facility and identify the following:

a. Surface structures (e.g., buildings, tanks, containment and/or storage areas, etc.);

b. Subsurface structures (e.g., underground tanks, sumps, pits, clarifiers, etc.);

c. Groundwater and dry wells, including drilling logs, date(s) of construction or completion, details of construction, uses of the wells, date(s) the wells) was/were abandoned, depth to groundwater, depth of wells and depth to and of screened interval(s);

d. Past and present stormwater drainage system and sanitary sewer system, including septic tank(s) and subsurface disposal field(s);

e. Any and all additions, demolitions or changes of any kind to physical structures on, under or about the Facility or to the property itself (e.g., excavation work), and state the date(s) on which such changes occurred; and

f. Indicate the location of all waste storage or waste accumulation areas, waste disposal areas, dumps, leach fields, burn pits and any other disposal locations.

5. Refer to **Figure 1A** and **Figure 1B,** provided as **Attachment D – Facility Layout Maps**. Applicable features are identified in these figures. Additional information is presented in the Phase I Environmental Assessment reports included in **Attachment B**.

The Facility comprises a single-story, approximately 218,000-square-foot building and about 7,000 square feet of parking area located in a principally commercial and industrial area of Whittier, California. The exterior of the site building is surrounded by paved asphalt. Thirty loading docks are located on the east side of the building. Employee parking is located at the northeast corner of the property and on the western side of the building. As noted in the response to Item 4 above, three previously-existing structures were demolished in approximately 1998 (Marketing and Training Building, Technical Building, and Flammables Storage Building).

There is no evidence or knowledge that any of the following features, currently or historically exist or existed on the property: septic tanks, leachfield(s), subsurface disposal fields, dumps, or burn pits.

The information presented in this section was obtained from Mr. Scott Williams of Ryder, Facility records and files, and the Phase I Environmental Site Assessment reports reproduced in **Attachment B**.

6. A 1991 figure of the facility contained an area labeled "chem dump." Identify what operations occurred there and the associated materials or wastes.

6. Current staff members were not familiar with the term “chem dump” as it applied to the Facility. Kodak requested and received from the United States Environmental Protection Agency (USEPA), a copy of the referenced 1991 figure (**Attachment E – 1991 Figure showing “chem dump”**). Subsequently, we have identified the feature as the former Interior Drain that connected to the Exterior Clarifier that were removed in 2008. The Interior Drain and Exterior Clarifier were used for the permitted disposal of photofinishing chemicals. Details regarding drain/clarifier system are presented in several attached documents. The information presented in this section was obtained from the

USEPA, Facility records and files, and the Phase I Environmental Site Assessments (**Attachment B)**.

7. If any substances containing Trichloroethylene (TCE), Tetrachloroethylene (PCE), Chromium, 1,1,1-Trichloroethane (TCA), 1,2-Dichloroethene, 1,1-Dichloroethene, 1,1-Dichloroethane, 1,4-Dioxane, Vinyl Chloride, Chloroform, or Perchlorate were utilized in any of Eastman Kodak Company's operations at the Facility, provide a complete description of those operations (current or discontinued). For those substances containing the aforementioned materials, provide the following:

a. The trade or brand name, chemical composition, and quantity used for each chemical or hazardous substance, and the relevant Material Safety Data Sheet for each product, and its period of use;

b. The location(s) where each chemical or hazardous substance is or was used, stored and disposed of. In addition, identify the kinds of wastes (e.g., scrap metal, construction debris, motor oil, solvents, waste water), quantities and methods of disposal for each chemical or hazardous substance;

c. A description of the waste streams from any process in which any such hazardous substance is, or was used, manufactured, generated or produced; and

d. Copies of any permits for storage, treatment, or disposal of any waste stream from any process in which any hazardous substance is, or was used, manufactured, generated, or produced.

7. Except as noted in the following paragraphs regarding 1,1,1-trichloroethane (1,1,1-TCA) and 1,4-dioxane, no records, such as Material Safety Data Sheets (MSDS), chemical inventories, use permits, hazardous materials business plans, waste disposal records, or other documents were identified confirming the historic or current use/storage of any of the Agency-identified compounds. Similarly, except as noted, no information regarding specific use areas, brand names, quantities, or disposal histories was identified. Kodak can not discount the possibility that some of these compounds were present as components in products historically managed at the Facility.

1,1,1-TCA has been used in very low volumes (<2 gal/year) at the Facility as a degreasing agent (parts cleaning) for approximately 15 years. The current product trade name is “Klor-O-Solv”. A related MSDS is included in **Attachment F – Material Safety Data Sheets**. When present, 1,1,1-TCA has been stored in a single 55-gallon drum within a dedicated cabinet (Hazardous Material Storage Cabinet) located in the southeast portion of the general warehouse area (**Attachment D - Figure 1B**). Typical usage involved dispensing small volumes from the drum for use in the Maintenance Area where parts cleaning was conducted. Unused or excess 1,1,1-TCA was then returned to the drum. Waste

material such as contaminated rags or other media were containerized and sent off-site for disposal at permitted treatment facilities. Information regarding the 1,1,1-TCA is presented in a Chemical Inventory List included in **Attachment G – Hazardous Material Business Plan and Chemical Inventory Forms**.

1,4-dioxane is typically present on-site, as a component in a film adhesive product. This film adhesive product is part of the Facility distribution inventory. While on-site and prior to distribution, it remains in sealed containers (1-gallon and smaller), within the same cabinet identified above, located in the southeast portion of the general warehouse area. The film adhesive is not used in any on-site process. Chemical information regarding the film adhesive is presented in a Hazardous Materials Inventory form included in **Attachment G – Hazardous Material Business Plan and Chemical Inventory Forms**. An MSDS for the film adhesive product is included in **Attachment F – Material Safety Data Sheets**.

7a. Except for 1,1,1-TCA and the film adhesive product described above, no trade or brand name, chemical composition, quantity used for each chemical or hazardous substance, MSDS, or period of product use information was identified.

7b. Except for 1,1,1-TCA and the film adhesive product stored the southeast portion of the general warehouse (Hazardous Materials Storage Cabinet), there is no known storage of substances containing the Agency-identified compounds. Storage areas for other hazardous materials or wastes include the Maintenance Area, Hazardous Waste Storage Room, and former Flammables Storage Building (demolished in approximately 1998). The locations of all these areas are shown in **Figure 1A** and **Figure 1B** presented in **Attachment D**.

7c. Wastes were generated from broken or damaged containers, or off-specification compounds, or out-of-date materials. Manifests for wastes generated from 1997 – 2009 are reproduced in **Attachment H – Facility Waste Manifests and Waste Characterizations/Profiles**.

7d. Permit information for the exterior clarifier is presented in the Phase I Environmental Site Assessment reports reproduced in **Attachment B**. No copies of other permits for storage, treatment, or disposal of any waste stream from any process in which any hazardous substance is, or was used, manufactured, generated, or produced were identified for the Facility.

Information for Question Number 7 was determined from a review of Facility records and files, plus the references cited above.

8. Provide copies of all hazardous material business plans and chemical inventory forms (originals and updates) submitted to city, county and/or state agencies and all manifests governing hazardous substances generated by your operations at the Facility.

8. Available documentation is reproduced in **Attachment G – Hazardous Material Business Plans and Chemical Inventory Forms**. Information was obtained from Facility records and files and the Phase I Environmental Site Assessment reports presented in **Attachment B**. Manifests for wastes generated from 1997 – 2009 are reproduced in **Attachment H**.

9. Provide copies of any and all documents evidencing your environmental practices at the Facility, including, but not limited to, documents setting forth your waste management practices and procedures. As part of your response, include any and all letters of enforcement from any regulatory agency concerning operations or events at the Facility and inspection notes, citizen complaints, and formal notices of violation.

9. Kodak has no letters of enforcement or similar documents from any regulatory agency concerning operations or events at the Facility, citizen complaints, or formal notices of violations, and to the best of our knowledge no enforcement action was ever initiated with respect to Facility operations. One Inspection Report was identified (Los Angeles County Fire Department). Available documentation is reproduced in **Attachment I – Environmental Practices Information**. Information was obtained from Facility records and files and the Phase I Environmental Site Assessment reports presented in **Attachment B**.

10. Provide copies of all technical or analytical environmental information, including, but not limited to, any known releases of hazardous substances to any media (soil, water or air) and any data and documents related to soil, water (ground and surface), geology, hydrogeology, soil sampling, soil gas sampling or groundwater sampling on or at the Facility.

10. The following documents are reproduced in **Attachment B – Technical Environmental Documents**:

- Phase I Environmental Site Assessment, Western Zone Regional Warehouse, 12100 Rivera Road, Whittier, California, Geologica, Inc. October 27, 2007.
    - Phase I Environmental Site Assessment, Western Zone Regional Warehouse, 12100 Rivera Road, Whittier, California, Geologica, Inc. January, 2003.*
    - Phase I Environmental Site Assessment, 12100 Rivera Road, Whittier, California, Dames & Moore, March 20, 1998. Prepared for Pacific Gulf Properties, Inc.*
    - Phase I Environmental Site Assessment, Eastman Kodak Company Regional Marketing and Distribution Center, Whittier, Conestoga-Rovers & Associates, November 1997.*

  - Assessment of Tank Leakage, Eastman Kodak Company, Whittier, California, IT Corporation, October 30, 1984.*

* Included in Appendix C of the Geologica, Inc. October 27, 2007 report.

- Work Plan for Clarifier Closures, Monitoring Well Abandonment, and Limited Subsurface Investigation, Eastman Kodak Company, Western Division Warehouse, 12100 Rivera Road, Whittier, California 90606. Geologica, Inc., April 2008.
- Closure Report [for the] Maintenance Area Clarifier, Eastman Kodak Company, Western Division Warehouse, 12100 Rivera Road, Whittier, California 90606. Geologica, Inc., November 2008.
- Subsurface Investigation Report – Former Fuel Oil UST and Former Photochemicals UST, Eastman Kodak Company, Western Division Warehouse, 12100 Rivera Road, Whittier, California 90606. Geologica, Inc., November 2008.
- Closure Report [for the] Exterior Clarifier and Associated Interior Drain, Eastman Kodak Company, Western Division Warehouse, 12100 Rivera Road, Whittier, California 90606. Geologica, Inc., November 2008.

11. Provide copies of all information and documentation related to approval of any remediation or cleanup activities conducted during your ownership or operations at the Facility.

11. Based on the findings of the investigations listed in Question Number 10 above, Kodak submitted an Application for Agency Oversight in August 2009, for the purpose of conducting additional site investigation. The California Department of Toxic Substance Control (DTSC) was assigned the case. The Kodak submittal included a Work Plan for the additional site investigation.

This information was obtained from Mr. David J. Shevlin. Associated documentation is reproduced in **Attachment J – Remediation and Cleanup Related Documents**.

12. At the time Eastman Kodak Company first took possession of the Facility, state whether you were aware of any contamination of the Facility and describe your efforts at the time to determine if the Facility had been contaminated or otherwise environmentally impaired. Provide all documentation evidencing your efforts to determine whether the Facility was contaminated or environmentally impaired at the time you first took possession of it (e.g., Phase I or other due diligence report). Describe the environmental condition of the Facility at the time you first took possession of it. Specifically, describe any contamination and/or hazardous substances, or any evidence suggesting the possible presence of

contamination and/or hazardous substances that may have been present at the Facility at the time you first took possession of it.

12. The facility was developed in 1958 by Kodak from land previously used for agricultural purposes. There are no records indicating that Kodak was aware of any contamination or other environmental impairment of the Facility at the time of its initial acquisition of the Facility property. There are no records indicating what methods, if any, were used to identify potential contamination or environmental impairment. No Phase I or other due diligence reports were identified for Kodak's initial acquisition of the land.

This information is based on the previously identified Phase I Environmental Site Assessments reproduced in **Attachment B** and Kodak records and files.

13. State whether the facility located at 12100 Rivera Rd., Whittier, CA was ever sold during Eastman Kodak Company's ownership or operation at the Facility. If so:

a. Describe the environmental condition of each parcel of real property identified as 12100 Rivera Road, Whittier, CA. As part of your response, describe any contamination and/or hazardous substances, or any evidence suggesting the possible presence of contamination and/or hazardous substances that may have been present at each identified parcel at the time of its sale; and

b. Provide copies of any and all documents related to the environmental condition of the property at the time of sale, including technical reports, appendices and lab reports.

13. The property was sold to PGP in 1998. The ownership and sales history of the property is summarized in the response to Question Number 2, above. A description of the overall Facility environmental condition is presented in the Phase I Environmental Site Assessments identified in the response to Question Number 13a below.

13a. Two Phase I Environmental Site Assessments by CRA (1997) and Dames & Moore (1998), respectively, were prepared in conjunction with the sale of the Facility by Kodak to PGP. These two Phase I Environmental Site Assessments (**Attachment B**) address, in the conclusions, the consultant's view of the potential for contamination at the Facility at the time of the 1997-1998 sale. Key portions of the conclusions of these documents are reproduced below.

CRA (1997):

Based on the Phase I Environmental Site Assessment including the Property inspection, information provided by facility representatives and regulatory agencies, documents reviewed, and the environmental database searches, the

following recognized environmental conditions, as defined in ASTM Standard E1527-97, were identified at the Site.

i) **Historic Operations/Fuel Oil UST**: One fuel oil UST previously was owned and operated on-site for storage of backup heating oil for the Facility boiler. The UST was located adjacent to the north wall of the Maintenance Area/Will Call Area and was closed by removal in 1985. No closure assessment or soil/groundwater sampling and analysis reportedly were conducted at the time the UST was removed.

ii) **Historical Operations/Waste Photofinishing Chemical UST**: One UST was operated on-site for storage of waste photographic chemicals. The photographic chemical UST was located exterior to the original south wall of the distribution building. Building construction has since occurred in this area, which is currently occupied by "Room 5". The UST was closed by removal in 1984 following detection of an overfill of the tank.

The soil and groundwater beneath the UST were previously investigated by IT Corporation (1984). The investigation included the advancement of one soil boring and the installation of one groundwater monitoring well. Soil and groundwater samples were collected and analyzed by two different laboratories for priority pollutant metals, volatile organic compounds and base/neutral/extractable organic compounds. Analysis of the water and soil samples indicated the presence of low levels of organic and inorganic chemicals.

Groundwater Sampling: Two laboratories were utilized for sample analysis. One laboratory found all concentrations of priority pollutant metals below detection limits. A second laboratory identified mercury at 0.0003 mg/L and Nickel at 0.013 mg/L. Cyanide was reported at concentrations of 0.072 mg/L and non-detect. One laboratory did not identify priority pollutant organic compounds above the laboratory's detection limits. The second laboratory identified 1,1,1-trichloroethane at 0.2ug/L. This laboratory also detected chloroform at 0.1 ug/L

Soil Sampling: Methylene chloride was detected at concentrations up to 0.060 mg/Kg. No priority pollutant metals were detected at a concentration greater than twice their threshold limit concentration.

Reportedly, all UST closure documentation was submitted to the Regional Water Quality Control Board and Los Angeles County. No documentation verifying approval of the UST closure by the regulatory agencies was identified.

iii) **Adjacent Properties**: A number of adjacent commercial properties presently are listed on the RCRIS-SG list as small quantity generators of hazardous waste and include a variety of commercial business operations.

The impact of activities conducted on these properties, if any, to the soils and/or groundwater beneath the Site presently is unknown.

iv) **Radon Gas**: The Site area is classified by USEPA as a Level 2 radon zone potentially having moderately high radon levels. No testing to determine if elevated levels of radon gas are present at the Site has been conducted to date.

v) **Asbestos-Containing Materials (ACM)**: Asbestos containing materials are present in some pipe insulation, floor tile, mastic and roof felt in the building. No compliance or good management practice issues were identified for the Site.

Dames & Moore (1998):

Based on the scope of services performed for this ESA, evidence was found to suggest that on-site operation may have created a recognized environmental condition. This conclusion was reached, in part, on the following:

- No documentation exists for the diesel fuel underground storage tank reportedly removed in 1984.
- Kodak operates a clarifier through which photochemicals are passed before discharge to the sanitary sewer. This clarifier is located exterior of the building (southwest corner).
- A second clarifier is located within the Maintenance Area of the Facility building (northeast corner).

13b. Full copies of the two-above-referenced reports are provided in **Attachment B**.

14. Information obtained by EPA suggests that Eastman Kodak Company may have utilized Freon 11 (trichlorofluoromethane) or Freon 113 (trichlorotrifluoroethane) at the Facility. If so:

a. Identify the quantity used and the relevant Material Safety Data Sheet for each product containing Freon 11 or 113, and its period of use;

b. Describe all processes in which Freon 11 or 113 is or was used (including any current or discontinued processes). For each process or use, specifically identify if Freon 11 and Freon 113 was used;

c. Identify the location(s) where Freon 11 or 113 is or was used and stored. In addition, identify the kinds of wastes that contained Freon 11 or 113 and the quantities and methods of disposal for each kind of waste; and

d. Provide documentation evidencing the use of Freon 11 or 113 (e.g., manifests, material inventories, etc.).

14. Kodak has not used Freon 113 at the Facility. Kodak has used Freon 11 at the Facility.

14a. The facility initially used Freon 11 in its two original chillers dating back to 1958. The primary chiller contained 2000 lbs of Freon 11. The secondary/backup chiller contained 650 lbs of Freon 11. The primary chiller was replaced in approximately 1998 with a unit that contains 840 lbs of Freon 22. The backup chiller, with its 650 lbs of Freon 11, remains in place. An MSDS for Freon 11 is provided in **Attachment F – Material Safety Data Sheets**.

14b. No other Facility processes used Freon 11. The use of Freon 11 was restricted to the chiller units only.

14c. The Freon 11 was used in the equipment in the chiller room. Freon was not typically stored on-site, except in closed drums during brief maintenance operations. No wastes were generated by the chillers or related operations. No significant losses of Freon 11 were identified, only minute atmospheric losses.

14d. Freon-related documentation (equipment information) is presented in **Attachment K**.

Information for Question Number 14 was provided by Mr. Scott Williams of Ryder Logistics and obtained from Facility records and files.

Innovative Strategies for Managing Environmental Liability

October 27, 2007

NPEC, Inc.
3400 Ridge Road West, Suite 5-341
Rochester, New York 14626

Attention: Joseph Gabriel

Subject: **Final Report:**
Phase I Environmental Site Assessment
Kodak Regional Distribution Center
12100 Rivera Road
Whittier, California 90606

Dear Mr. Gabriel:

GEOLOGICA INC. is pleased to present this Phase I Environmental Site Assessment (Phase I ESA) report for the above-referenced property. The purpose of this Phase I ESA was to evaluate the site for indications of recognized environmental conditions that have the potential to impact soil and groundwater beneath the subject property.

We have enjoyed working with you on this project and appreciate the opportunity to be of service. Should you have any questions, please do not hesitate to contact us at (949) 548-9348 or (415) 597-7883.

Very truly yours,
GEOLOGICA, INC.

Phase I Environmental Site Assessment

Western Zone Warehouse –
Kodak Regional Distribution Center

12100 Rivera Road
Whittier, California 90606

1 EXECUTIVE SUMMARY

Purpose. The purpose of the Phase I ESA was to review past and present land use practices and activities at and near the subject property for evidence of Recognized Environmental Conditions (RECs) that could result in impacts to soil, surface water, and/or groundwater at, beneath, or originating from, the subject property. Work was conducted in general conformance with GEOLOGICA'S March 2007 proposal to NPEC and the scope and limitations of the American Society of Testing Materials (ASTM) Standard Practice for Environmental Site Assessment: Phase I Environmental Site Assessment Process (Standard Designation E1527-05). This assessment was accomplished through, and limited to, the following tasks:

- Interviews of knowledgeable personnel;
- Site walk-through and windshield survey of subject property vicinity;
- Review of records reasonably available at local and regional public agencies through agency visits, telephone contacts, and environmental database search;
- Investigation of site history through interviews and review of readily available historic documentation such as: aerial photos, topographic maps, Sanborn Fire Insurance Maps, historic city directories, agency files, chains-of-title, and previous site investigation documents; and,
- Review of readily available relevant documentation available through standard resources regarding environmental, physiographic, hydrologic, geologic, and hydrogeologic conditions.

Site Location. The subject property is located at 12100 Rivera Road in the City of Whittier, Los Angeles County, California 90606 and includes a single-story, approximately 218,000-square-foot building and about 7,000 square feet of parking space located in a principally commercial and industrial area of Whittier, California.

Site Description and Current Operations. The Office and Distribution Center, also referred to as the Warehouse Building, was constructed, and is still used as, a regional distribution center for finished products for the western U.S. The facility handles approximately 60–70% consumer goods and the remainder professional and medical products, including: one-time use cameras, film, photochemicals, limited photographic equipment, anesthetics, and dental x-ray film. The facility incorporates an "automated" warehouse to handle stored, shipped and received goods. The facility employs approximately 50 individuals from 0600 – 1800 hours, five days/week.

Physical Setting. The City of Whittier is located in the eastern portion of the Los Angeles Coastal Plain in the West Coast Basin subarea. Surface materials in the general site area have been mapped as "urban land" (e.g. fill), alluvial gravels, sands and silts. Groundwater has been recorded at a depth of about 30 feet at the subject property.

No significant surface water bodies are present within one mile of the site, though the site has been mapped within a 500-year floodplain. The San Gabriel River is located approximately two miles west of the subject property.

Public water wells within approximately three miles of the subject property are known to be impacted by Volatile Organic Chemicals (VOCs).

Hazardous Materials Management. Principal chemicals used for facility operations include cleaning, painting and maintenance supplies normally used and stored in consumer-sized amounts. Hazardous chemicals stored at the facility include primarily photofinishing chemicals.

Hazardous Wastes. The site is identified as a small quantity generator of hazardous waste, EPA ID CAD054854377. Hazardous waste is generated principally due to damaged containers of photofinishing products handled or received at the facility. Certain of these products are discharged to the active clarifier. Others are repackaged for appropriate off-site transportation and disposal.

Approximately 20-30 gallons of oil generated from fork-truck hydraulic maintenance is removed for off-site disposal four times/year. There is a Safety Kleen parts cleaner located in the maintenance area.

Underground Storage Tanks and Other Subsurface Structures. Two "clarifiers" were identified. One is located in the maintenance area at the northeast corner of the Warehouse Building. This clarifier is reportedly of sealed concrete construction and was installed for use as an oil-water separator. This unit was no longer used as of about 1986. Facility personnel stated that the unit was "self-closed" in about 2006; it is currently welded shut.

The second clarifier is located at the southwest corner of the building. This unit is permitted by Los Angeles County for use to discharge certain materials to the sanitary sewer (corrosives, photochemicals and cooling tower blow-down). Site personnel report that the clarifier is of concrete construction with a fiberglass and resin lining.

A 1,000-gallon underground waste photofinishing chemical storage tank was reportedly located near the existing southeast corner of the Warehouse Building and was reportedly removed along with approximately 30 cubic yards of soil in about 1984, in response to an observed overflow. Site personnel stated that this tank was situated approximately 60% aboveground and 40% below grade. A monitoring well located in the southeastern portion of the building was installed in conjunction with the tank removal in 1984.

An underground tank (size unknown) was reportedly located adjacent to the Maintenance Shop/Will-Call Area (near east side of property). Independent confirmation has not been identified for this tank's use, location and closure status. The tank was reportedly used for backup fuel oil storage for the facility's boiler; reportedly no sampling or testing of soil or groundwater was conducted in conjunction with the tank closure.

Facility personnel report that floor drains are present only in the chiller / cooling tower / air compressor areas, and these discharge directly to the sanitary sewer. No other floor drains were observed or reported; construction drawings were not identified.

Site History. The subject property appears to have been used for agricultural purposes from at least 1928 through the site's first reported development by the Eastman Kodak Company in 1959, when the Office and Distribution Center was constructed. Kodak appears to have leased at least a portion of the property to the City of Whittier in 1964. The property was sold to Pacific Gulf Properties in about 1998 and leased back to Kodak.

Site buildings and configurations have changed over time. A small Technical Building was built in 1959, along with the original Distribution/Warehouse Building, which now comprises the northeastern portion of the current Office and Distribution Center. The Distribution/Office Building was expanded several times, reportedly most recently in 1985. Another small Marketing Building was constructed in 1975. A

small Flammable Storage Building was added in 1985. The northern portion of the building was used for hazardous materials storage; the southern portion was reportedly leased to a plastics recycling company. The Technical Building, Marketing Building, and Flammable Storage Building were removed in approximately 1999. Historic operations included operation of a paint spray booth in 1976 and 1982; it is not known where these operations took place.

Previous Environmental Investigations. Three Phase I Environmental Site Assessments and two UST removals have been performed at the subject property.

2003 Phase I Environmental Site Assessment. GEOLOGICA completed a Phase I Environmental Site Assessment for the subject property for NPEC in January 2003. Information from the 2003 Phase I has been incorporated into this 2007 Phase I Environmental Site Assessment.

1998 Phase I Environmental Site Assessment. Dames & Moore completed a Phase I Environmental Site Assessment for the subject property in March 1998. The ESA was conducted for Pacific Gulf Properties, Inc. (current property owner) prior to their subsequent purchase of the property. Dames & Moore concluded:

- Former on-site operations may have created a recognized environmental condition.
- No documentation exists for a diesel underground storage tank reportedly removed in 1984.
- A clarifier is used for discharge of photochemicals to the sanitary sewer.
- A second clarifier is located in the machine shop.

Dames & Moore recommended a review of on-site plans to identify the location of the removed diesel UST and a limited soil investigation in: (1) the vicinity of the removed UST, (2) adjacent to the two clarifiers to evaluate the soils for VOCs and (3) within the former hazardous materials storage area to evaluate soils for VOCs. It is not known if these recommendations were carried out; but, no documentation or evidence of a Phase II has been identified.

1997 Phase I Environmental Site Assessment. Conestoga-Rovers & Associates completed a Phase I Environmental Site Assessment for the subject property in November 7, 1997 and identified the following RECs:

- No closure assessment or soil/groundwater sampling and analysis reportedly were conducted at the time the fuel oil UST was removed.
- A former photographic chemical UST located exterior to the south wall of the distribution building was closed by removal in 1984 following a tank overfill. One soil boring and one groundwater well were drilled and installed. Soil and groundwater samples analyzed for priority pollutant metals, volatile organic chemicals (VOCs) and base-neutral-acid extractable organic compounds were reported present below applicable criteria.
- A number of adjacent properties are listed as RCRIS small quantity generators; the impact of activities conducted on these properties, if any, to subject property soil and groundwater, is unknown.
- The site was identified as located in a Level 2 radon zone; no site-specific radon testing was conducted.
- Asbestos-containing materials were identified in some pipe insulation, floor tile, mastic and roof felt; but, these materials were observed in generally good condition.

Data Gaps - No significant data gaps, as defined by ASTM 1527-05, were identified for the subject property.

Recognized Environmental Conditions - The following Recognized Environmental Conditions have been identified for the subject site:

- The potential presence and condition of unknown subsurface drains, conduits, or other constructed pathways, particularly floor drains, to the subsurface environmental media, based on facility's age and

history of redevelopment.

- Inconsistent and limited information regarding construction, installation, use and closure of facility USTs.
- Limited information regarding construction, installation, use and closure of maintenance area clarifier or oil-water separator.
- There is a clarifier, permitted by Los Angeles County, used to discharge waste photofinishing compounds to the sanitary sewer.
- Presence of inactive monitoring well.
- The presence of numerous nearby off-site hazardous waste generators, leaking UST sites and other sites with a low to medium potential to impact subsurface environmental media.

Other Environmental Items. The following environmental-related items are noted:

- Historic, unspecified use of paints, flammables, solvents and other compounds is reported; and,
- Asbestos-containing materials have been identified in pipe insulation, floor tile, mastic and roof felt.
- Lead-Based Paint has been identified at the site.
- Facility personnel report that on-site PCBs are limited to some fluorescent light ballasts.

2 INTRODUCTION

This report presents the results of a Phase I Environmental Site Assessment (Phase I ESA) prepared at the request of NPEC, Inc. for the "property" or "subject property" or "site" located at 12100 Rivera Road in the City of Whittier, Los Angeles County, California 90606. The site includes a single-story, approximately 218,000-square-foot building and about 7,000 square feet of parking area located in a principally commercial and industrial area of Whittier, California.

2.1 PURPOSE

The Phase I ESA evaluates past and present land use practices and activities at and near the subject property for evidence of Recognized Environmental Conditions (RECs) that could result in impacts to soil, surface water, and/or groundwater at, beneath, or originating from, the subject property. The result of this Phase I ESA is a listing of identified Recognized Environmental Conditions, defined by ASTM as "*... the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property.*"

2.2 GUIDANCE PROTOCOL

Work was conducted in general conformance with the scope and limitations of the American Society for Testing Materials (ASTM) *Standard Practice for Environmental Site Assessment: Phase I Environmental Site Assessment Process (Standard Designation E1527-05)*.

2.3 SCOPE OF SERVICES

This assessment was accomplished through, and limited to, the following tasks:

- Interviews with knowledgeable personnel;
- Site walk-through and windshield survey of subject property vicinity;
- Review of records reasonably available at local and regional public agencies through agency visits, telephone contacts, and environmental database search;
- Investigation of site history through interviews and review of readily available historic documentation such as: a) Aerial photos; b) Topographic maps; c) Sanborn Fire Insurance Maps; d) Historic city directories; e) Agency files; and f) Previous site investigation documents; and,
- Review of readily available relevant documentation available through standard resources regarding environmental, physiographic, hydrologic, geologic, and hydrogeologic conditions.

3 SITE LOCATION AND SURROUNDING AREA

This section describes certain information based on office research and as obtained by GEOLOGICA Senior Investigator Charles E. Wechsler during a site observation visit on September 5, 2007. The site location is described below and shown in **Figure 1 – Site Location Map**. The **Project Area Assessor Map** is shown in **Figure 1A**. A **Site Layout Map** is provided as **Figure 2**. Selected photographs of the property and vicinity are reproduced in **Appendix A**. Historical and environmental database information provided by EDR are reproduced in **Appendix B**. Supplement project information is provided in **Appendix C**.

3.1 SITE LOCATION AND DESCRIPTION

The subject property is located at 12100 Rivera Road in the City of Whittier, Los Angeles County, California and includes a single-story, approximately 218,000-square-foot building and about 7,000 square feet of parking area located in a principally commercial and industrial area of Whittier, California.

The Office and Distribution Center, also referred to as the Warehouse Building, was constructed, and is still used as, a regional distribution center for finished products for the western U.S. The facility handles approximately 60–70% consumer goods and the remainder professional and medical products, including: one-time use cameras, film, photochemicals, limited photographic equipment, anesthetics, and dental x-ray film. The facility incorporates an "automated" warehouse to handle stored, shipped and received goods. The facility employs approximately 50 individuals from 0600 – 1800 hours, five days/week.

3.2 SURROUNDING PROPERTIES

Adjacent and nearby properties observed during the September 5, 2007 site observation visit are identified on **Figure 1A** and summarized below.

North: Unsigned and possibly vacant building (12080-12090 Rivera Road) and Rivera Road;

South: DDS Distribution Services (8550 A, Chetle Avenue) and Nielsen Bainbridge (8550 B, Chetle Avenue);

East: 12140 Rivera Road - Sprinkler Fitters UA Local, 8145 Byron Road - Taylor Engines, 8155 Byron Road - Welded Fixtures, Inc., 8167 Byron Road - Compu Aire, 8189 Byron Road - Russ Basset CompanySprinkler Fitters V.A. Local 709 (12140 Rivera Road); and,

West: 8333 Chetle Avenue - Better Way Grinding, 8403 Chetle Avenue - Goldstar Grinding & Wire, 8409 Chetle Avenue - Teamco Electrical Equipment, 8421 Chetle Avenue - West Industrial, 8433 Chetle Avenue - Moranth Fabrication, 8503 Chetle Avenue - S & R Crane Service, Inc.

3.3 PHYSICAL SETTING

This sub-area is located in the central structural block of the Los Angeles Basin. This alluvial plain is bounded by the Santa Ana Mountains and the San Joaquin Hills to the east and southeast. The Whittier fault zone is the north-northeast border with the Newport-Inglewood fault zone to the west and southwest and the Santa Monica Mountains to the northwest. Northwest trending, doubly plunging synclinal features are the dominant structures in the block.

3.3.1 SITE AND AREA TOPOGRAPHY

Site elevation is about150 feet above Mean Sea Level. Regional topography dips slightly to the southwest. The subject property itself is relatively flat.

3.3.2 SITE SOILS AND GROUNDWATER

Surface materials in the general site area have been mapped as "urban land" (e.g. fill), alluvial gravels, sands and silts. Groundwater has been recorded at a depth of about 30 feet at the subject site.

3.3.3 GROUNDWATER BASIN

The subject property is located in the eastern portion of the Los Angeles Coastal Plain in the West Coast Basin sub-area.

3.3.4 SURFACE WATER

No significant surface water bodies are present within one mile of the site, though the site has been mapped within a 500-year floodplain. The San Gabriel River is located approximately two miles west of the subject property.

3.3.5 OIL WELLS

No oil wells were identified either from the EDR physical characteristics map or on California Department of Conservation Division of Oil & Gas Maps for the subject site.

3.3.6 METHANE

No evidence or information was identified to indicate methane as a material environmental issue at the subject property.

3.3.7 RADON GAS

Radon is a radioactive gas that occurs naturally in the environment and cannot be seen, smelled or tasted. The human health effect associated with exposure to elevated levels of radon is an increased risk of developing lung cancer. EPA conducted a radon survey and presented the results for various counties in 1993.

EPA's map of Radon Zones assigns each of the 3,141 counties in the United States to one of three zones. The zone designations were determined by assessing five factors that are known to be important indicators of radon potential: indoor radon measurements, geology, aerial radioactivity surveys, soil parameters and foundation types.

Based on the results of the surveys of the EPA, the subject property falls within the designation of ***Zone 2***. Zone 2 counties have a predicted average indoor radon screening level greater than or equal to two (2) picocuries per liter (pCi/l) and less than or equal to four (4) pCi/l. The subject site appears to fall within a radon screening level below the recommended EPA Action Level of four (4) pCi/l.

4 SITE OBSERVATIONS

This section describes the current site uses and occupants based on GEOLOGICA'S September 5, 2007, site observation visit and interviews with personnel knowledgeable about the subject property. Site investigators Mr. Charles Wechsler and Mr. Eric Till were accompanied by site personnel Lois Castranova and Scott Williams.

4.1 CURRENT USES AND OCCUPANTS

The Office and Distribution Center, also referred to as the Warehouse Building, was constructed, and is still used as, a regional distribution center for finished products for the western U.S. The facility handles approximately 60–70% consumer goods and the remainder professional and medical products, including: one-time use cameras, film, photochemicals, limited photographic equipment, anesthetics, and dental x-ray film. The facility incorporates an "automated" warehouse to handle stored, shipped and received goods. The facility employs approximately 50 individuals from 0600 – 1800 hours, five days a week.

Principal chemicals used for facility operations include cleaning, painting and maintenance supplies normally used and stored in consumer-sized amounts. Hazardous chemicals stored at the facility include photofinishing chemicals.

4.2 EXTERIOR AREAS

The exterior of the site building is surrounded by paved asphalt. A six-foot tall cement wall surrounds the property, separating it from the adjacent buildings. The southwest portion of the lot is used for employee parking. Thirty loading docks are located in the western portion of the warehouse building. The western portion of the subject property is mostly used for loading/off-loading traffic.

4.3 HAZARDOUS MATERIALS – USE AND STORAGE

Drums and various-sized containers of hazardous photofinishing chemicals are stored in a Hazardous Chemicals Storage Area of the building. Portable secondary containment is available as needed for specific drums or containers. Sulfuric acid and caustic soda are stored in the Hazardous Chemicals Storage Area for use in pH balancing in the clarifier. Flammable materials are stored in several flammable materials storage cabinets. Potentially hazardous photofinishing-related chemicals are stored throughout the warehouse area in containers ranging in size up to 55-gallon drums.

4.3.1 ABOVEGROUND STORAGE TANKS (ASTS) AND UNDERGROUND STORAGE TANKS (USTS)

There are no current petroleum or other chemical aboveground storage tanks (ASTs) or underground storage tanks (USTs).

4.4 OTHER SUBSURFACE STRUCTURES

This section describes other subsurface structures at the subject site.

4.4.1 CLARIFIERS

Two "clarifiers" have been identified. One is located in the maintenance area and was reportedly "self-closed" by the company in 2006, but, has not been used since about 1986. The unit was not filled in and is currently welded shut. The unit does not appear to have been formally closed and documented under applicable procedures. The use history of this unit has not been documented; it was reportedly installed as an oil-water separator.

The second clarifier is located at the northwest corner of the site building. This unit is permitted by Los Angeles County for use to discharge certain materials to the sanitary sewer (corrosives and photochemicals). Chromium, low pH (<2), high pH (>12), solvents and flammables are not discharged. The materials are discharged into a floor drain located in the hazardous waste storage area and connected to the exterior clarifier. Site personnel report that the clarifier is of concrete construction with a fiberglass and resin lining.

4.4.2 FLOOR DRAINS

Facility personnel report that floor drains are present only in the chiller / cooling tower / air compressor areas, and these discharge directly to the sanitary sewer. No other floor drains were observed or reported; construction drawings were not identified for independent confirmation of subsurface plumbing features.

4.4.3 MONITORING WELL

A monitoring well located in the southeastern portion of the building. Kodak personnel and documentation reviewed indicate it is a monitoring well installed in conjunction with a 1,000-gallon underground tank removal in 1984 (refer to Section 6). Analytical results for priority pollutant metals, semi-volatile organic and volatile organic compounds were reported as either non-detectable or below California total threshold limit concentrations.

4.5 HAZARDOUS WASTES

The site is identified as a small quantity generator of hazardous waste, EPA ID CAD054854377. Hazardous waste is generated principally due to damaged containers of photofinishing products handled or received at the facility. Certain of these products are discharged to an active clarifier. Others are repackaged for appropriate off-site transportation and disposal.

Approximately 20-30 gallons of oil generated from fork-truck hydraulic maintenance is removed for off-site disposal four times/year. There is a Safety Kleen parts cleaner located in the maintenance area. Safety Kleen disposes of the parts washer waste when needed.

4.6 UTILITIES AND INFRASTRUCTURE

Site utility services and infrastructure are listed below.

- Natural gas is provided by The Gas Company;
- Electric service and potable water are provided by the City of Whittier Department of Water and Power;
- Sanitary sewer services are provided by the City of Whittier; and,

- Solid waste services provided by a third party contractor.

4.7 OTHER ENVIRONMENTAL ISSUES

Other than the items previously described, and an in-ground scale in the warehouse, no other evidence of underground storage tanks (USTs), vent pipes, fill pipes, hydraulic lifts, drums, chemical containers, drains, clarifiers, drywells, discharge areas, discolored soils, pools of liquid, odors, wells, or septic tanks was observed. No evidence of distressed vegetation, or disturbed soil was observed onsite.

4.7.1 TRANSFORMERS AND ELECTRICAL EQUIPMENT

A visual review was conducted for the presence of electrical equipment that could contain polychlorinated biphenyls (PCBs), an environmentally regulated material used in dielectric fluid in some electrical equipment. Use of PCBs was discontinued in the United States in 1978. Because the facility was constructed in approximately 1955, it is considered possible that PCB-containing equipment is present or has been used on site.

No pole-mounted transformers were observed on site. Electrical panels were observed throughout the site, as were several fluorescent lights. No labels with respect to PCB-content were observed. Fluorescent light ballasts manufactured before 1979 may contain small quantities of PCBs. Because the facility was constructed before 1979, it is considered possible that the light ballasts contain PCBs.

Facility personnel report that on-site PCBs are limited to some fluorescent light ballasts. As needed, these are replaced with non-PCB ballasts, and then disposed of in accordance with applicable regulations.

No other potential or suspect PCB-containing units were observed on the property.

4.7.2 ASBESTOS CONTAINING MATERIALS (ACM)

Based on the 1959 construction date of the building, it is considered likely that asbestos-containing materials (ACM) were used in the construction of the building. No friable or damaged suspect ACM was observed in the areas accessible and viewed by GEOLOGICA. No previous asbestos inspection or survey reports were identified or provided.

4.7.3 LEAD-BASED PAINT (LBP)

Based on the 1959 construction date of the building, it is considered likely that lead-based paints have been used in the construction of the building. Observed paint appeared to be in good condition. No significant areas of damaged or chipped paint was observed in the areas accessible and viewed by GEOLOGICA. Paint containing 0.51% lead was identified at the facility according to limited documentation dated 1994.

4.7.4 MOLD AND/OR WATER DAMAGE

No significant water damage or staining was observed.

4.7.5 HIGH POWER TOWER-MOUNTED TRANSMISSION LINES

No high power tower-mounted transmission lines were observed in on or adjacent to the property.

5 SITE HISTORY

Information about the property's history and development are summarized below. Copies of available historical documentation provided by Environmental Data Resources (EDR) are reproduced in **Appendix B**.

5.1 SITE HISTORY SUMMARY

The subject property appears to have been used for agricultural purposes from at least 1928 through the site's first reported development by the Eastman Kodak Company in 1959, when the Office and Distribution Center was constructed. Kodak appears to have leased at least a portion of the property to the City of Whittier in 1964. The property was sold to Pacific Gulf Properties in about 1998 and leased back to Kodak. Site buildings and configurations have changed over time. A small Technical Building was built in 1959, along with the original Distribution/Warehouse Building, which now comprises the northeastern portion of the current Office and Distribution Center. The Distribution/Office Building was expanded several times, reportedly most recently in 1985. Another small Marketing Building was constructed in 1975. A small Flammable Storage Building was added in 1985. The northern portion of the building was used for hazardous materials storage; the southern portion was reportedly leased to a plastics recycling company. The Technical Building, Marketing Building, and Flammable Storage Building were removed in approximately 1999.

5.2 SANBORN MAPS

The site location is not identified on historic Sanborn maps provided by EDR .

5.3 HISTORICAL DIRECTORIES

The subject property address was researched in historical city directories dated 1920 to 2006 and summarized by EDR (**Appendix B**).

5.4 AERIAL PHOTOGRAPHS

The site location is identified on historic aerial photographs provided by EDR and reproduced in **Appendix B**. Key observations are summarized below.

5.4.1 1928 (SCALE: 1"=500')

The subject property does not appear developed. The general area is rural and grassy in nature. Several buildings are observed to the northeast. The site and general area appears to be used for agricultural purposes.

5.4.2 1938 (SCALE: 1"=555')

The subject property does not appear developed. The general area is rural and grassy in nature. Several buildings are observed to the northeast. Limited residential and agricultural development is observed to the northeast.

5.4.3 1949 (SCALE: 1"=500')

The subject property does not appear developed. The general area is rural and grassy in nature. Areas of increased development to the northwest and southwest of the site are observed.

5.4.4 1953 (SCALE: 1"=555')

The subject property does not appear developed. The general area has increased significantly with residential properties. Commercial properties are observed to the west of the site. Areas to the south and east of the site remain undeveloped.

5.4.5 1968 (SCALE: 1"=480')

The subject property building is visible. The general area is developed with residential and commercial properties.

5.4.6 1977 (SCALE: 1"=666')

The subject property building is visible, an addition to the property is observed. The adjacent properties are developed, and the surrounding area appears highly developed with residential and commercial properties.

5.4.7 1989 (SCALE 1'=666)

The subject property building is visible. The adjacent properties are highly developed, and the surrounding area appears highly developed, primarily with residential and commercial properties.

5.4.8 2002 (SCALE 1'=666)

The subject property building is visible. The adjacent properties are highly developed, and the surrounding area appears highly developed, primarily with residential and commercial properties.

5.5 TOPOGRAPHIC MAPS

The site location is identified on historic topographic maps provided by EDR and reproduced in **Appendix B**. Key observations are summarized below.

5.5.1 1901 (1:250,000) AND 1902 (1:62,500)

No site-specific details are illustrated on these maps. The subject property and general surrounding area appear minimally developed.

5.5.2 1925 (1:24,000)

No site-specific details are illustrated on this map. The subject property and general surrounding area appear slightly more developed from the 1901 and 1902 topographic maps.

5.5.3 1947 (1:50,000)

No building-level details are illustrated at the subject site. The site and surrounding areas appears relatively densely developed, but, very few individual buildings are detailed. Red shading on the topographic map indicates areas of development.

5.5.4 1953, 1965, AND 1981 (1:24,000)

No building-level details are illustrated at the subject site. The site and surrounding areas appears relatively densely developed, but very few individual buildings are detailed. Red shading on the topographic map indicates areas of development.

5.5.5 HISTORICAL UNDERGROUND STORAGE TANKS

An underground tank (size unknown) was reportedly located adjacent to the Maintenance Shop/Will-Call Area (near east side of property). Independent confirmation has not been identified for this tank's use, location and closure status. The tank was reportedly used for backup fuel oil storage for the facility's boiler; reportedly no sampling or testing of soil or groundwater was conducted in conjunction with the tank closure. No formal closure documentation was identified.

A 1,000-gallon underground waste photofinishing chemical storage tank was reportedly located near the existing southeast corner of the Warehouse Building and was reportedly removed along with approximately 30 cubic yards of soil in about 1984, in response to an observed overflow. Site personnel stated that this tank was situated approximately 60% aboveground and 40% below grade. A monitoring well located in the southeastern portion of the building was installed in conjunction with the tank removal in 1984.

GEOLOGICA's 2003 Phase I Environmental Site Assessment report identified a 1,000-gallon underground "trap" tank removed during construction in approximately 1984-5 from Cold Storage Room 10 (west side of building). On-site personnel interviewed for this 2007 Phase I ESA stated that they did not believe that this third tank existed, and that this finding resulted from a miscommunication in 2003.

6 PREVIOUS ENVIRONMENTAL INVESTIGATIONS

The following are summarized environmental investigations performed at the subject property:

6.1.1 PHASE ONE ENVIRONMENTAL SITE ASSESSMENT (GEOLOGICA, 2003)

GEOLOGICA completed a Phase I Environmental Site Assessment for the subject property for NPEC in January 2003. Information from the 2003 Phase I has been incorporated into this 2007 Phase I Environmental Site Assessment.

6.1.2 PHASE ONE ENVIRONMENTAL SITE ASSESSMENT (DAMES & MOORE, 1998)

Dames & Moore completed a Phase I Environmental Site Assessment for the subject property in March, 1998. The ESA was conducted for Pacific Gulf Properties, Inc. (current property owner) prior to their subsequent purchase of the property. Dames & Moore concluded:

- Former on-site operations may have created a recognized environmental condition.
- No documentation exists for a diesel underground storage tank removed in 1984. .
- A clarifier is used for discharge of photochemicals to the sanitary sewer.
- A second clarifier is located in the machine shop.
- At least one clarifier is permitted, but, it was not obvious which one.
- "Kodak did not routinely follow Los Angeles County Sanitation District regulations regarding discharge".

Dames & Moore recommended a review of on-site plans to identify the location of the removed diesel UST and a limited soil investigation in: (1) the vicinity of the removed UST, (2) adjacent to the two clarifiers to evaluate the soils for VOCs and (3) within the former hazardous materials storage area to evaluate soils for VOCs. It is not known if subsequent subsurface investigation activities were conducted; but, it is believed that they were not.

Sewer-related information identified by Dames & Moore is reproduced below:

> Permit #1658 was first granted in 1974 for discharge to the sanitary sewer from four onsite cooling towers. An application for this permit number was filed in 1981 to renew the permit.
>
> An application for Permit #3554 was filed by Kodak in 1975 for photochemicals used to demonstrate equipment to potential customers at the marketing building. The Sanitation District issued a Waiver of Industrial Waste Discharge Permit Requirements to Kodak because less than 50 gallons/week of photochemicals were used in house.
>
> In 1979, plans on record at the Sanitation District indicate that a new storage room and maintenance area with a new clarifier were added to the subject property.
>
> In 1983, Kodak applied for Permit #1658 R-1 for discharge from onsite cooling towers and product leakers (photochemicals). This permit was rejected by the Sanitation District in 1984. A revised permit to increase the amount of product discharge from 250 gallons/week to 500 gallons/week was

filed by Kodak in 1985, along with a later permit application for 500 gallons/week of photochemical discharge from leaking containers. The Sanitation District rejected this permit in 1985.

In 1986, Kodak applied for Permit #1658 R-2 for discharge from onsite cooling tower bleed-off and vehicle and maintenance flow wash. A 1986 letter from Kodak to the Sanitation District indicates that plans to build a new hazardous waste storage and collection system along the south wall of the warehouse were canceled because of objections from the Sanitation District. A new clarifier that had been built along the south wall was sealed off at the sample box in early 1986. The new industrial waste sewer line installed along the south wall is not in use by Kodak.

In 1990, an inspection report by the Sanitation District reports that I.W. #1658 is still active. The unpermitted clarifier along the south wall was sealed in April 1986. The abandoned sewer connection was permanently sealed.

In 1992, two Notices of Violation (N.O.V.) Were issued to Kodak for failure to submit a self-monitoring report.

In 1994, a N.O.V. was issued to Kodak for failure to submit a self-monitoring report. Plans for a three-stage clarifier were submitted to the Sanitation District. A Spill Containment Report from the Sanitation District reported that four 55-gallon drums of sulfuric acid are stored next to floor drains.

In 1996, a N.O.V. was issued to Kodak for failure to submit a five-year permit renewal application. Permit #1658 R-3 was voided by the Sanitation District because Kodak was declared exempt from filing for an Industrial Waste Discharge Permit due to low flow. A memo from the Sanitation District to Kodak in regard to Permits #1659 and #3554 recommends that Permit #1658 be reactivated in Kodak was required to file a surcharge report due to the amount of flow from the property. The memo also recommended that Kodak install a meter on the irrigation line to the property.

6.1.3 PHASE ONE ENVIRONMENTAL SITE ASSESSMENT (CONESTOGA AND ROVERS & ASSOCIATES, 1997)

Conestoga and Rovers & Associates completed a Phase I Environmental Site Assessment for the subject property in November 7, 1997 and identified the following RECs:

- No closure assessment or soil/groundwater sampling and analysis reportedly were conducted at the time the fuel oil UST was removed.
- A former photographic chemical UST was located exterior to the south wall of the Distribution Building which was subsequently covered up by the construction of "Room 5". The UST was closed by removal in 1984 following a tank overfill. A limited soil and groundwater investigation was conducted which included advancement of one soil boring and installation of one groundwater well. Soil and groundwater samples collected and analyzed for priority pollutant metals, volatile organic chemicals (VOCs) and base-neutral-acid extractable organic compounds were reported present below criteria. UST closure information was reportedly submitted to the LARWQCB, but was not available at the time the CRA Phase I ESA was completed.
- A number of adjacent properties listed as RCRIS small quantity generators; the impact of activities conducted on these properties, if any, to subject property soil and groundwater, is unknown.
- The site was identified as located in a Level 2 radon zone; no site-specific radon testing was conducted.

6.1.4 ASSESSMENT OF TANK LEAKAGE (IT CORPORATION, 1984)

IT Corporation completed an Assessment of Tank Leakage for the facility in October 1984. The following is summarized from their report.

Assessment Activities

In July 1984, Eastman Kodak Company detected an overfill of a 1,000-gallon UST which received photographic chemicals discharged from leaking or damaged containers into a disposal sink. Subsequent excavation around the upper part of the tank revealed a leak in the pipeline that carried materials into the tank and impacted soils in the tank backfill. The tank and "obviously contaminated" soils were removed for off-site disposal.

The following (>2%) chemicals comprising the UST waste photochemicals were identified: Benzyl Alcohol (29.4%), Triethanolamine (18.2%), Potassium (7.7%), Acetate (6.3%), Sulfite (5.5%), Thiosulfate (5.3%), Carbonate (3.8%), Diethylene Glycol (2.0%) and Triethylene Glycol (2.0%).

One borehole was drilled using a 12-inch outside diameter hollow stem augur; 12 soil samples were collected using a California ring sampler. Boring log data shows the top 10 feet to comprise sands, underlain by clayey silts to a depth of 18 feet. Sands with small amounts of silt or clay were observed to the bottom of the borehole, completed at 41 feet below ground surface (bgs). The borehole was completed as a 4-inch PVC monitoring well to a depth of 60 feet (40 feet of casing and 20 feet of 20-slot screen). The well was developed prior to sampling. Depth to water was measured between 26.5 and 26.8 feet bgs.

Soil and Groundwater Testing

Seven split soil samples and one water sample (with duplicate) were collected and analyzed for Priority Pollutant Metals, VOCs and Base-Neutral-Acid Extractable Compounds by two different laboratories.

Groundwater Analyses

Groundwater samples were analyzed by both Brown and Caldwell and Montgomery Laboratories. Brown and Caldwell did not detect any Priority Pollutant Metals above laboratory detection limits. Montgomery Laboratories detected mercury at 0.0003 mg/l, below the EPA and California Standards of 0.002 mg/l. Nickel was detected at 0.013mg/l; there is no primary standard for nickel. Cyanide was detected at 0.072 mg/l.

No VOCs were detected by Brown and Caldwell; this lab also did not detect any Priority Pollutant Metals above laboratory detection limits. Montgomery Laboratories identified 1,1,1-trichloroethane and chloroform at 0.2 mg/l and 0.1 mg/l respectively.

Non-quantifiable indications of 1,1-dichloroethane, 1,1-dichloroethene and tetrachloroethene were also detected.

Soil Analyses

Soil samples were analyzed by both Brown and Caldwell and Montgomery Laboratories. All Priority Pollutant Metals were detected below applicable California total threshold limit concentration and soluble limit threshold concentrations.

Montgomery Laboratories detected methylene chloride in five samples at decreasing concentrations with increasing depth, ranging from 0.060 mg/kg to 0.015 mg/kg, respectively. Methylene chloride was not detected in samples tested below 20 feet. Methylene chloride was not identified as a component of the UST waste material by Eastman Kodak and is a common laboratory contaminant. Decane and nonanal were also detected at concentrations of 0.003 and 0.004 mg/l.

7 GOVERNMENT AGENCY RECORDS

GEOLOGICA generally submitted agency record review requests file information within three days of project authorization. Copies of information requests and agency responses are included in **Appendix C** and described below.

7.1 CITY OF WHITTIER BUILDING & SAFETY DEPARTMENT

A review was conducted of building permits and other information maintained by the City of Whittier Department of Building & Safety. The subject property was developed in 1958 – 1959. Readily-available records are reproduced in **Appendix C**. The following key records were noted:

Year	Permit #	Description
1958	1741	For construction of 138,800 square-foot warehouse and office building
1960	-	Certificate of occupancy for above
1961	M11643	Refrigeration system installation permit
1966	36075	Addition of two volatile materials storage rooms to warehouse
1968	49609	Addition of 47,000 square feet to warehouse and office building
1972	65200	Addition of 37,870 square feet of space (location unknown)
1983	10281	Construction of a cold storage room
1984	11704	New maintenance and storage building
1984	13080	East side of property parking lot
1984	14833	New addition to warehouse
1984	15436	Installation of an interceptor tank outside a building to remove a section of block wall and install a floor drain to the tank (tank location not identified).
1985	15733	New addition to warehouse
1985	15577	Installation of wood frame vault
1986	–	Permit application for installation of hazardous waste storage tank and containment structure along the south wall of warehouse building; subsequently cancelled.

Other, later building department documents identified mostly various electrical and mechanical permits related to site improvements or maintenance. No environmentally-significant permits or documents were identified.

7.2 COUNTY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS

This agency provides Industrial Waste approvals and permits in the County for all waste substances, liquid or solid, except domestic sewage, from any manufacturing, processing, institutional, commercial, or agricultural operation. Note that an industrial waste approval may also require the installation of storm water treatment devices.

The Underground Storage Tank (UST) Program of the County of Los Angeles Department of Public Works, Environmental Programs Division (DPW EPD) permits and inspects underground storage tanks within the unincorporated areas of Los Angeles County and 77 cities. The Unit regulates all unauthorized releases from underground storage tanks.

Los Angeles County Code (LACC), Title 11, Division 4, established the underground storage tank program in Los Angeles County in 1983. The Los Angeles County Underground Storage Tank Program's goal is to protect the public, the environment (air, soil and groundwater) and UST owners/operators by ensuring that UST facilities are permitted, designed/installed/modified, operating and eventually closed in compliance with local/state/federal requirements.

In response to GEOLOGICA'S request, this agency reported no records for the subject property address.

7.3 LOS ANGELES COUNTY SANITATION DISTRICTS (LACSD)

Each of the LACSD's industrial users is required to obtain an Industrial Wastewater Discharge Permit. Permit applications are reviewed by engineering staff to determine if the pretreatment equipment proposed is adequate to meet appropriate discharge limits and to determine compliance with the LACSD's spill containment, flow monitoring, rainwater diversion, and combustible gas monitoring policies.

The LACSD maintains an active monitoring program to ensure continued compliance by its industrial users. Sampling for compliance purposes is conducted by both the industrial waste monitoring crew and industrial waste inspectors. The monitoring crew is devoted solely to sampling and obtains both grab and composite samples, while the inspectors collect grab samples in conjunction with on-site inspections of industrial equipment and wastewater sources. In addition to LACSD's monitoring, 1,703 facilities are currently required to perform self-monitoring of their industrial wastewater and report the results to the LACSD.

The LACSD also maintain an extensive field inspection program, which includes visiting industrial facilities to investigate their compliance status, identifying industrial sources responsible for treatment plant upsets or incidents, and disseminating information on the pretreatment program to industrial users.

*Selected documents from this agency are reproduced in **Appendix C**, and are generally consistent with the sewer information previously described. historical Minor violations were identified in 1994. The facility has received several "certificates of recognition" in the past 5 years. No evidence of a subsurface release was identified in the documentation reviewed.*

7.4 COUNTY OF LOS ANGELES FIRE DEPARTMENT, HEALTH AND HAZARDOUS MATERIALS DIVISION (HMMD)

HHMD became a Certified Unified Program Agency (CUPA) to administer the following programs within Los Angeles County: the Hazardous Waste Generator Program, the Hazardous Materials Release Response Plans and Inventory Program, the California Accidental Release Prevention Program (Cal-ARP), the Aboveground Storage Tank Program and the Underground Storage Tank Program. HHMD is a division of the Department's Prevention Services Bureau.

Information about specific sites involving hazardous materials business plans and inventories, waste generator permits, Cal ARP, spills, and site remediation must be requested in writing from the County of Los Angeles Public Health Investigation (PHI) Custodian of Records.

Copies of the Los Angeles CUPA Consolidated Permit/License to Operate for the fiscal year 2007 and with an expiration date of 5/20/2008 were provided by the facility. The site is permitted/licensed to operate under the following programs: California Accidental Release Program; Hazardous Materials Disclosure Program; Hazardous Waste Generator Program; and, Tier Program.

7.5 COUNTY OF LOS ANGELES PUBLIC HEALTH INVESTIGATION

In response to GEOLOGICA'S request, this agency reported no records for the subject property address.

7.6 LOS ANGELES REGIONAL WATER QUALITY CONTROL BOARD

In response to GEOLOGICA'S request, this agency reported no records or files for the subject property address.

7.7 SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT

The AQMD is the air pollution control agency for all of Orange County and the urban portions of Los Angeles, Riverside and San Bernardino counties. AQMD is responsible for controlling emissions primarily from stationary sources of air pollution. These can include anything from large power plants and refineries to the corner gas station. There are about 28,000 such businesses operating under AQMD permits.

AQMD develops and adopts an Air Quality Management Plan, which serves as the blueprint to bring this area into compliance with federal and state clean air standards. Rules are adopted to reduce emissions from various sources, including specific types of equipment, industrial processes, paints and solvents, even consumer products. Permits are issued to many businesses and industries to ensure compliance with air quality rules. AQMD staff conducts periodic inspections to ensure compliance with these requirements.

No active permits were identified in documentation provided by this agency. Historical permitted items included: two (2) permits to operate fuel oil supplied boilers registered with Los Angeles Air Pollution District, dated August 16, 1972; inactive permits for paint spray booths dated 11/05/1976 and 12/16/1982. It is not known if the paint spray operations were conducted in the current subject property building.

7.8 DEPARTMENT OF TOXIC SUBSTANCES CONTROL

In response to GEOLOGICA'S request, this agency's Glendale office reported no records for the subject property address.

7.9 EDR REPORT

The EDR Radius Map with GeoCheck Report dated September 10, 2007 (**Appendix B**) contains a summary of a search of federal, state, and local governmental environmental information sources listing known or potential hazardous waste sites or landfills, and sites currently under investigation for environmental violations that might include the property or properties in the vicinity and USTs, according to prescribed search distances referenced in ASTM Designation E 1527-00.

7.9.1 EDR GOVERNMENT AGENCY DATABASES SUMMARY – SUBJECT PROPERTY

The property was not listed in any of the databases researched by EDR.

7.9.2 EDR GOVERNMENT AGENCY DATABASES SUMMARY – SURROUNDING PROPERTIES

Numerous nearby and up-gradient properties were listed on the environmental database search provided by EDR. No direct evidence of impact to the subject property soils or groundwater was identified. Based on the number of up-gradient listings and the open status of several of these listings, the risk to subject property subsurface environmental media is considered low to medium.

8 CONCLUSIONS

We have performed a Phase I Environmental Site Assessment for the property located at 12100 Rivera Road in the City of Whittier, California 90606. This assessment has revealed no evidence of adverse environmental conditions associated with the subject site property, except for the following:

Data Gaps - No significant data gaps, as defined by ASTM 1527-05, were identified for the subject property.

Recognized Environmental Conditions - The following Recognized Environmental Conditions have been identified for the subject site:

- The potential presence and condition of unknown subsurface drains, conduits, or other constructed pathways, particularly floor drains, to the subsurface environmental media, based on facility's age and history of redevelopment.
- Inconsistent and limited information regarding construction, installation, use and closure of facility USTs.
- Limited information regarding construction, installation, use and closure of maintenance area clarifier or oil-water separator.
- There is a clarifier, permitted by Los Angeles County, used to discharge waste photofinishing compounds to the sanitary sewer.
- Presence of inactive monitoring well.
- The presence of numerous nearby off-site hazardous waste generators, leaking UST sites and other sites with a low to medium potential to impact subsurface environmental media.

Other Environmental Items. The following environmental-related items are noted:

- Historic, unspecified use of paints, flammables, solvents and other compounds is reported.
- Asbestos-containing materials have been identified in pipe insulation, floor tile, mastic and roof felt.
- Lead-Based Paint has been identified at the site.
- Facility personnel report that on-site PCBs are limited to some fluorescent light ballasts.

9 LIMITATIONS

The information and opinions rendered in these reports are exclusively for use and reliance by NPEC. No one may distribute or publish this report without the consent of GEOLOGICA except as required by law or court order. The information and opinions expressed in this report are given in response to a limited assignment by NPEC and should be considered and implemented only in light of that assignment. The services provided by GEOLOGICA in completing this project have been provided in a manner consistent with normal standards of the profession. No other warranty, expressed or implied, is made.

However, NPEC and other parties who may rely on the findings and conclusions of the report should recognize that this report is not a comprehensive site characterization and should not be construed as such. The findings and conclusions in this report are predicated on a site reconnaissance, a review of specified regulatory records, and a review of the historical usage of the property as presented in this report.

The information obtained is only relevant for the dates of the records reviewed or as of the date of the latest site visit. Thus, the information contained herein is only valid as of the date of the report, and will require an update to reflect recent records review/site visits. Therefore, the report should only be deemed conclusive with respect to the information obtained. No guarantee of the results of the study is made within the intent of this report or any subsequent report, correspondence or consultation, either expressed or implied. The services performed were conducted in accordance with the local standard of care in the geographic region at the time the services were rendered.

The collection of air, soil, groundwater, surface water, drinking water, asbestos survey, or lead-based paint, or performance of analytical laboratory testing for hydrocarbons, lead, radon, or other compounds, was not included as a part of our scope of services, nor is the sampling and testing of these materials within the normal scope of a Phase I ESA. This work did not constitute a comprehensive regulatory compliance, endangered species, wetlands, indoor air quality, or high voltage power line audits.

This report has been prepared under the professional supervision of the individual(s) whose signature(s) appear herein. Resumes for those individuals are included in **Attachment 1**. The information contained in this report has received appropriate technical review and approval. The conclusions represent professional judgments and are founded upon the findings of the investigations identified in the report and the interpretation of such data based on our experience and expertise according to the existing standards of care for work of this kind.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ✓ Library of Congress
- ✓ University Publications of America
- ✓ EDR Private Collection

Total Maps: 0

Limited Permission To Make Copies

Geologica (the client) is permitted to make up to THREE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EDR City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening report designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.

EXECUTIVE SUMMARY

A search of the environmental records was conducted by Environmental Data Resources, Inc. (EDR). GEOLOGICA used the EDR FieldCheck System to review and/or revise the results of this search, based on independent data verification by GEOLOGICA. The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

An online review and analysis by GEOLOGICA of the NPL list,
as provided by EDR, and dated 07/18/2007 has revealed that there are 2 NPL sites
within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
WASTE DISPOSAL, INC.	***12731 E LOS NIETOS RD***	***1/2 - 1 SSW***	***0***	***6***
OMEGA CHEMICAL SITE PRP ORGANI	***12504 E WHITTIER BLVD***	***1/2 - 1 ENE***	***L51***	***125***

CERCLIS-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

An online review and analysis by GEOLOGICA of the CERC-NFRAP list,
as provided by EDR, and dated 06/21/2007 has revealed that there is 1 CERC-NFRAP site
within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
RIPPY FRED R INC	***12471 WASHINGTON BLVD***	***1/4 - 1/2 ENE***	***H38***	***101***

EXECUTIVE SUMMARY

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

An online review and analysis by GEOLOGICA of the CORRACTS list,
as provided by EDR, and dated 06/26/2007 has revealed that there are 4 CORRACTS sites
within approximately 1 mile of the target property.

RCRAInfo: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System(RCRIS). The database includes selective information on sites which generate, transport, store , treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

An online review and analysis by GEOLOGICA of the RCRA-SQG list,
as provided by EDR, and dated 06/13/2006 has revealed that there are 21 RCRA-SQG sites
within approximately 0.25 miles of the target property.

STATE AND LOCAL RECORDS

HIST CAL-SITES: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

An online review and analysis by GEOLOGICA of the HIST Cal-Sites list, as provided by EDR, and dated 08/08/2005 has revealed that there are 4 HIST Cal-Sites sites within approximately 1 mile of the target property.

CORTESE: This database identifies public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release and all solid waste disposal facilities from which there is known migration. The source is the California Environmental Protection Agency/Office of Emergency Information.

An online review and analysis by GEOLOGICA of the Cortese list, as provided by EDR, and dated 04/01/2001 has revealed that there are 11 Cortese sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

NOTIFY 65: Notify 65 records contain facility notifications about any release that could impact drinking water and thereby expose the public to a potential health risk. The data come from the State Water Resources Control Board's Proposition 65 database.

An online review and analysis by GEOLOGICA of the Notify 65 list,
as provided by EDR, and dated 10/21/1993 has revealed that there is 1 Notify 65 site
within approximately 1 mile of the target property.

UNION OIL OF CALIFORNIA	9645 SANTA FE SPRINGS	1/2 - 1 SSW	68	232

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

An online review and analysis by GEOLOGICA of the RESPONSE list,
as provided by EDR, and dated 08/28/2007 has revealed that there are 3 RESPONSE sites
within approximately 1 mile of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

An online review and analysis by GEOLOGICA of the ENVIROSTOR list,
as provided by EDR, and dated 08/28/2007 has revealed that there are 18 ENVIROSTOR sites
within approximately 1 mile of the target property.

SANTA FE SPRINGS, CA 90670

Site Description: The site was placed on the National Priorities List in 1987. Following the site listing, EPA sent general notice letters to 28 potentially responsible parties (PRPs). However, no party came forward with a good faith offer to conduct the remedial investigation (RI), so, EPA began the RI. In 1988, EPA undertook a removal action, erecting a fence around one corner of the site to improve site security and prevent accidental exposure to surface contamination. EPA completed the RI in November 1990, and initiated a feasibility study (FS). In January 1992, EPA began three quarters of ground water monitoring, culminating in the January 1993 Groundwater Sampling Report. EPA decided to divide the site into two operable units so that more information could be collected for ground water without delaying the decision for the remaining contaminated media. In August 1993, EPA completed the FS for contaminated soils and subsurface gases.The contamination present on-site at WDI exists in the soil and ground water matrices, and in the form of subsurface gases. Present in on-site soils are large amounts of oil well drilling muds and sludges and waste producrs, metals, low concentractions of volatile organic compounds and semivolatile organiccompounds, low concentrations of pesticides and PCBs, and lead. Methane is the most prevalent subsurface gas, with the highest concentrations in the reservoir area. Volatile organic compounds (vinyl

WASTE DISPOSAL, INC. (Continued) **1000397104**

chloride and benzene) also were detected in the subsurface gas both within and outside the reservoir area. This ROD does not address ground water.The Waste Disposal, Incorporated (WDI) site consists of approximately 43 acres located in an industrial area on the east side of Santa Fe Springs in Los Angeles County, California. The site boundaries include Santa Fe Springs Road on the northwest, a warehouse and a private high school on the northeast, Los Nietos Road on the southwest, and Greenleaf Avenue on the southeast. A residential area lies to the east of the site.The U. S. Environmental Protection Agency (EPA) is the lead agency for the site. The California Department of Toxic Substances Control (DTSC) is a support agency.Funding for site remediation is expected to be provided through settlements with potentially responsible parties. The 43-acre site consists of 22 parcels of landthat are owned by 17 individual landowners. A buried 42- million gallon reservoir (600 feet in diameter and 25 feet deep), located in the center of the site, was used for the disposal of a variety of liquid and solid wastes. In addition, wastes weredisposed of outside of the reservoir (in Area 2) and have been delineated in many of the parcels located around the perimeter of the reservoir. Twenty structures are located on- site and have been used for past and current small business activities.The WDI site encompasses a total of 22 individual land parcels, 19 of which currently contain structures. Zoning for the site is M-2 Heavy Manufacturing with an Industrial land use designation. Existing structures accommodate a wide variety of light industrial enterprises, including recreational vehicle storage, a tool and die shop, printing and plating shops, and vehicle maintenance facilities.Adjacent land uses include residential areas and additional businesses that undertake light industrialand commercial activities. A private high school with associated athletic playing fields is located directly north of the WDI site.The City of Santa Fe Springs currently owns and operates three municipal water supply wells, two of which are located within 1.5 miles of the WDI site. According to State and City sources one well is located 0.9 mile upgradient from the site and produces water from aquifer zones ranging between 200 and 900 feet bgs. Another well is located 1.3 miles west of the WDI site and is screened in a deep aquifer zone, but is currently not active. The other active municipal water supply well is located four miles south and downgradient of the site and produces water from deeper aquifer zones below300 feet bgs. Historical information, summarized in the Final Groundwater Characterization Report, has indicated that several private wells were constructed within one mile of the WDI site and were historically used to produce water from deeper water-bearing zones for irrigation and industrial purposes.The most significant feature of the WDI site is the buried 42-million gallon concrete-lined reservoir (600 feet in diameter and 25 feet deep), located within Area 2 in the center of the site. Thereservoir was constructed prior to 1924 and was initially used for crude petroleum storage. The areas outside of the reservoir began to be used for the unregulated disposal of a variety of liquid and solid wastes and the possible storage and mixing of drilling muds by the late 1920s. Sometime between 1937 and 1941, the owner/ operators removed the reservoir cover anticipating a change of use. After removal of the reservoir cover, the reservoir was used from the early to mid- 1940s until the mid-1960s for the disposal of a variety of liquid and solid wastes.The disposal site operated under a permit from Los Angeles County from 1949 until 1964, and may have operated for roughly two to three years afterwards while the site was graded. Permitted wastes included rotary drilling muds, clean earth, rock, sand, gravel, paving fragments, concrete, brick, plaster, steel mill slag, dry mud cake from oil field sumps, and acetylene sludge. Investigations have shown that disposed materials also included, but were not limited to, the following unpermitted wastes: organic wastes, oil refinery wastes, solvents, petroleum-related chemicals, and other chemical wastes. Wastes were disposed within the reservoir and in areas adjacent to and outside of the

WASTE DISPOSAL, INC. (Continued) **1000397104**

reservoir.While disposal activities continued during the 1950s, the reservoir and some of the areas of the site outside the reservoir were gradually developed for commercial and industrial use. By 1963, the reservoir was covered with fill and by 1964, most, although not all, disposal activities appeared to have ceased. Grading over the remainder of the buried wastes continued until approximately 1966. A number of structures were constructed for small business enterprises.The site was placed on the National Priorities List (NPL) on July 22, 1987. Following the site's NPL listing, EPA issued General Notice Letters to 28 Potentially Responsible Parties (PRPs). The list included current and former property owners, generators, and transporters identified during the PRP search. At that time, no party came forward with a good faith offer to conduct the Remedial Investigation (RI), and EPA commenced the RI in 1988 as a "Fund-lead" project. In 1988, EPA also undertook a removal action, erecting a fence around the southern corner of the site at Los Nietos Road and Greenleaf Avenue to improve site security and prevent accidental exposure to contamination.In 1994, EPA issued Unilateral Administrative Order (UAO) #94-17 to eight PRPs to compel commencement of Remedial Design (RD) activities for the site. EPA issued Amended UAO #97-09 in 1997 to add thirteen additional parties to the PRP working group, and ordered additional investigative activities at the site as well as continued remedial design activities. This PRP group, known as the Waste Disposal, Inc. Group (WDIG), has performed numerous sites investigative and design activities at the site since 1994.Since the issuance of the original 1993 ROD, theCity of Santa Fe Springs has continued to express a strong interest in redeveloping the site for industrial uses. In 2000, EPA provided a grant to the City of Santa Fe Springs under the Superfund Redevelopment Initiative (SRI) to develop a master plan for the future redevelopment and reuse of the site. The City is preparing the development plan and is exploring numerous industrial land uses.Recognizing the City's interest in redevelopment of the site, EPA evaluated remedial alternatives as presented in the Supplemental Feasibility Study that address redevelopment according to separate and distinct strategies. These strategies emphasize protection of human health and the environment through implementation of containment systems. The alternatives differ, however, with respect to the timing and sequencing of redevelopment. The challenges of directly integrating the implementation of the containment remedy with redevelopment are considered significant. Implementation of the remedy would need to be delayed to allow the City to finalize its redevelopment plans, enter into development agreements, and work with existing landowners whose businesses may potentially be relocated. OU 1:In December 1993, EPA signed a Record of Decision (ROD) for OU1. EPA designated a second operable unit (OU2) for groundwater and decided to reserve selection of a groundwater remedy pending completion of groundwater investigations. The 1993 ROD selected a remedy for OU1 that included excavation, reconsolidation, and containment of waste using a RCRA-equivalent capping system over the reservoir, with associated soil gas control and monitoring.EPA issued an Amended ROD in June 2002 as a result of additional information that became available since the issuance of the original ROD for the site in 1993. This additional information relates to the expanded areal extent of waste and contaminated soils at the site, as well as additional soil, groundwater, and soil gas characterization data that were obtained since issuance of the original ROD.The 1993 ROD for OU1 anticipated that OU2 for groundwater would be separately addressed at a later date. However, groundwater investigations conducted between 1998 and 2000 ultimately led EPA to determine that the WDI site has not caused exceedances of groundwater standards as defined by California maximum contaminant levels (MCLs). EPA accordingly has concluded that only continued groundwater monitoring and the use of ICs will be necessaryto ensure that site-related hazardous substances do not contribute to exceedances of MCLs. The June 2002 Amended ROD incorporates OU2 by addressing all known contaminated media at the

WASTE DISPOSAL, INC. (Continued) **1000397104**

site. The site conceptual model and remediation strategy addressthe site as a landfill by utilizing remedy components including containment (i.e. capping), liquids and gas monitoring and control, engineering controls, access and institutional controls, groundwater monitoring, and long- term operations and maintenance (O&M). The remedy will include institutional controls that will prevent exposure to contaminated groundwater and prohibit the construction of any new on-site wells without approval by EPA. Institutional controls will also address coordination with state and local regulatory agencies to restrict the potential permitting and construction of any new wells in contaminated shallow water- bearing zones in the vicinity of the WDI site. The revised remedy presented in the Amended ROD (Alternative 2) will be generally compatible with the City's desire to redevelop the site in the future. Within EPA's authority, and to the maximum extent practicable, the design and implementation for the remedy will be accomplished so as not to preclude appropriate redevelopment of the site.OU2:The 1993 ROD for OU1 anticipated that OU2 for groundwater would be separately addressed at a later date. However, groundwater investigations conducted between 1998 and 2000 ultimately led EPA to determine that the WDI site has not caused exceedances of groundwater standards as defined by California maximum contaminant levels (MCLs). EPA accordingly has concluded that only continued groundwater monitoring and the use of ICs will be necessary to ensure that site-related hazardous substances do not contribute to exceedances of MCLs. The June 2002 Amended ROD incorporates OU2 by addressing all known contaminated media at the site.

FINDS:
Other Pertinent Environmental Activity Identified at Site

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Summary Details:

Conditions at proposal June 10, 1986): Waste Disposal, Inc., is located on a 40-acre tract of land in Santa Fe Springs, Los Angeles County, California. On the land is a concrete-lined pond/sump capacity of 1 million barrels), oil sumps, and a solid waste landfill. The company operated the facility during 1928-65. It was licensed by the California Regional Water Quality Control Board to accept acetylene sludge, brewery residues, and fluids from cesspool operations, and by the Los Angeles County Engineer to accept rotary drilling muds, construction debris, and oil field sump sludges. Unidentified substances may have been dumped at the facility at night. According to State files, citi ens complained frequently about conditions at the facility throughout its operation. In 1984 and 1985, testing by the City of Santa Fe Springs detected numerous ha ardous substances, including ben o a)pyrene, phenol, ben ene, and toluene, in soil at the facility at depths of 22 feet. Ground water is at about 50 feet beneath the facility. The 15,000 residents of Santa Fe Springs obtain drinking water from wells within 3 miles of the site. Status July 22, 1987): EPA is conducting a search for individuals or companies potentially responsible for wastes associated with the site.

California - Hazardous Waste Tracking System - Datamart

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RACT/BACT/LAER Clearinghouse (RBLC) data base contains case-specific information on the 'Best Available' air pollution technologies that have been required to reduce the emission of air pollutants from stationary sources (e.g., power plants, steel mills, chemical plants, etc.). This information has been provided by State and local permitting agencies. The Clearinghouse also contains a regulation data base that summarizes EPA emission limits required in New Source Performance Standards (NSPS), National Emission Standards for Hazardous Air Pollutants (NESHAP), and Maximum Achievable Control Technology (MACT) standards.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Comments: The Department received a CERCLA PA report dated April 16, 1993 from U.S. EPA. The site consists of approximately 40,000 sq. ft. and fenced. There are two buildings, one at the front of the property and one at the rear. Most of the site is unpaved and has sparse vegetation. The site was used by NELCO. NELCO fabricates and assembles lead products such as x-ray protection construction materials, roof flash- ing for the construction industry, industrial air cleaning equipments and corrosioncontrol equipments. Incidental dispersal of lead dust and shavings to surface soil and asphalt on site occurred through routine operations. In anticipation of selling the property, NELCO conducted an initial investigation during 1990. Sample results indicated the presence of lead at elevated levels in surface soil. NELCO conducted cleanup by its own without any regulatory agency involvement. Surface soil and asphalt were scrapped from the site, placed in drums and removed to a waste disposal facility. Post cleanup confirmation sampling shows lead in soil at levels up to 315 mg/kg with back- ground levels up to 233 mg/kg. NELCO's remediation report indicates that initial lead contamination in shallow soil up to a level of 1,870 mg/kg. Due to the evidence of lead contamination still at the site, staff recommends a PEA.

California - Hazardous Waste Tracking System - Datamart

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Summary Details:

Conditions at Proposal September 29, 1998): The Omega Chemical Corporation Omega) site is a former ha ardous waste treatment and storage facility that operated from 1976 to 1991 on a 40,000-square foot property in Whittier, Los Angeles County,California. Omega conducted solvent recovery using an on-site fractionation and distillation process and operated as a storage and transfer facility for various ha ardous waste classifications. Ha ardous wastes stored on site contained mainly chlorinated and aromatic solvents. In June 1995, before removal activities, the Omega site consisted of thousands of drums of ha ardous waste, two roll-off bins of hardened resin material, hundreds of empty but contaminated drums, numerous cylinders with capacities ranging from 15 to 20,000 pounds, and various other smaller containers of waste and/or ha ardous waste. Inside the on-site warehouse there were hundreds more 55-gallon drums that Omega claimed to be product and assorted smaller containers of ha ardous material. Since 1991, the California Department of Toxic Substances Control DTSC) and EPA s Ha ardous Waste Management Division have been actively trying to get the owner/operator to remove the wastes and clean up the site.In March 1995, the site owner/operator plead guilty to two felony counts of illegal storage and disposal of ha ardous wastes. On May 9, 1995, EPA issued CERCLA Administrative Order No. 95-15 to the owner of Omega and to generators of ha ardous waste that had shipped major quantities of material to Omega. During 1995, EPA s Superfund Emergency Response Office oversaw Phase I removal activities, during which contractors to a responsible party group removed all ha ardous materials and wastes from the site. Phase II site activities began in November 1995 and included collection and analyses of subsurface soil and ground water at the site. Analytical results indicated that subsurface soil samples were mainly contaminated with tetrachloroethene PCE), with lesser amounts of trichloroethene, dichloroethene and other chlorinated hydrocarbons, Freons and metals. PCE contamination was detected in soil at concentrations ranging from 1.9 milligrams per kilogram mg/kg) to 510 mg/kg. Ground water samples collected at the site contained PCE up to 86,000 micrograms per liter as well as significant concentrations of other chlorinated hydrocarbons and Freons. Phase II activities documented the presence of PCE in shallow ground water ina plume that extends almost 1 mile downgradient of the site. Although the ground water samples were collected in the shallow regional aquifer of the Lakewood Formation and most of the municipal drinking water wells draw water from the San Pedro Formation, California Department of Water Resources hydrogeologic cross-sections of the Lakewood and Upper San Pedro Formations indicate that aquifers are interconnected within 2 miles of the site. Eight water purveyors draw ground water from 35 wells within 4 miles of the site to supply drinking water to approximately 284,270 people. The nearest well to the site is 1.3 miles to the west. This and nearly two-thirds of the wells within 4 miles draw water from the Lakewood and Upper San Pedro formation aquifers. The San Gabriel River is the nearest surface water body at approximately 2.5 miles from the site. The site is located in a mixed industrial and residential community, with residences located across Whittier Boulevard tothe northeast. Status January 1999): EPA is considering various alternatives for the site. The description of the site release) is based on information available at the time the site was scored. The description may change as additional information is gathered on the sources and extent of contamination. See 56 FR 5600, February 11, 1991, or subsequent FR notices.

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Comments: On June 3, 1999, ten underground storage tanks were removed from OU2. Slight corrosion on each tank was observed. These tanks had previously contained straight line hydrocarbon chemicals or were used for blending.Completion of Remedial Investigation/Feasibility study for Angeles Chemical Company, North Operable Unit. RI/FS addresses subsurface soil on the Northern portion of the site. The RI defined the extent of subsurface gas contamination. FS analyzedDTSC issued an Imminent and Substantial Endangerment Order to Angeles Chemical Company to investigate and remediate site contamination. ACC has been divided into 3 Operabel Units (OU): OU1 - the Vadose Zone in the Northern portion of the site, incluNOE Completion for OU2 RAW. Chosen removal action will employ installation of an in-situ vapor extraction system (VES) utilizing a catalytic oxidation unit; balancing and monitoring of the VES with data analysis; disposal of treated material; verifiFacility identified via drive-by. Paved site, drums stored on asphalt. Appears to be bulk transfer. No visible problems.Clean Loan Response Action Agreement signed.CEQA completion for OU1 RAW Negative Declaration approval. Removal

Other Pertinent Environmental Activity Identified at Site

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

HEAT TREATMENT OF METAL PARTS USING VACUUM FURNACES AT THE SITE. SOIL AND GROUNDWATER ARE CONTAMINATED WITH VOCs.SOIL AT A DEPTH OF 25-27 FEET FOUND 4700 PPM TPH AND 92,000 PPB TETRACHLOROETHENE. TOTAL VOC CONCENTRATIONS IN GW RANGED FROM 27 PPB TO 7458 PPB. TETRA IS THE PRIMARY VOC GW CONTAMINANT. OTHER VOCs DETECTED IN GW INCLUDE 1,1, DICHLOROETHENE, 1,1,1, TRICHLOROETHANE, AND TRICHLOROETHENE. GW FOUND AT A DEPTH OF 32 FEET BELOW THE GRADE. THE COMPANIES ADJECENT TO THE PROPERTY ARE CAL-WESTERN PAINTS AND WESTERN SCREW PRODUCTS. STAFF RECOMMENDED A PEA AND MAILED THE NOTIFICATION TO RP.

RCRAInfo Corrective Action Summary:

Event:	Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.
Event Date:	01/09/2004
Event:	Igration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected.
Event Date:	08/11/2000
Event:	Current Human Exposures under Control, More information is needed to make a determination.
Event Date:	08/11/2000
Event:	Igration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected.
Event Date:	05/19/1998
Event:	Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.
Event Date:	05/19/1998
Event:	CA Prioritization, Facility or area was assigned a medium corrective action priority.
Event Date:	06/16/1994
Event:	Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1) it appears to be technically infeasible or inappropriate (NF) or 2) there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

California - Hazardous Waste Tracking System - Datamart

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

California - Hazardous Waste Tracking System - Datamart

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions,

SO CA CHEM CO INC (Continued) **1000409074**

and settlements.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo Corrective Action Summary:

Event:	RFI Workplan Approved
Event Date:	10/07/2004
Event:	Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.
Event Date:	03/29/2002
Event:	Igration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected.
Event Date:	03/29/2002
Event:	Igration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected.
Event Date:	05/04/2000
Event:	Current Human Exposures under Control, Current human exposures are NOT under control.
Event Date:	05/04/2000
Event:	Igration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected.
Event Date:	05/06/1999
Event:	Current Human Exposures under Control, Current human exposures are NOT under control.

Event Date:	08/02/1995
Event:	CMS Approved
Event Date:	06/30/1995
Event:	CMS Workplan Approved
Event Date:	03/31/1992
Event:	Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1) it appears to be technically infeasible or inappropriate (NF) or 2) there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Other Pertinent Environmental Activity Identified at Site

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

EPA Waste Codes Addendum

Code	Description
D001	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
D002	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
D007	CHROMIUM
D008	LEAD
D019	CARBON TETRACHLORIDE

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/20/2007
Date Data Arrived at EDR: 05/03/2007
Date Made Active in Reports: 07/05/2007
Number of Days to Update: 63

Source: EPA
Telephone: N/A
Last EDR Contact: 08/31/2007
Next Scheduled EDR Contact: 10/29/2007
Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/20/2007
Date Data Arrived at EDR: 05/03/2007
Date Made Active in Reports: 06/25/2007
Number of Days to Update: 53

Source: EPA
Telephone: N/A
Last EDR Contact: 08/29/2007
Next Scheduled EDR Contact: 10/29/2007
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994
Number of Days to Update: 56

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 04/23/2007
Date Data Arrived at EDR: 06/20/2007

Last EDR Contact: 09/19/2007
Next Scheduled EDR Contact: 12/17/2007
Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

RCRA: Resource Conservation and Recovery Act Information

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US BROWNFIELDS: A Listing of Brownfields Sites
Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UMTRA: Uranium Mill Tailings Sites
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

DEED: Deed Restriction Listing
Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

ENVIROSTOR: EnviroStor Database
The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 12/31/2005
Date Data Arrived at EDR: 06/15/2007
Date Made Active in Reports: 08/20/2007

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: PennWell Corporation
Telephone: (800) 823-6277
This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

EKC WHITTIER WAREHOUSE
12100 RIVERA ROAD
WHITTIER, CA 90606

TARGET PROPERTY COORDINATES

Latitude (North):	33.96520 - 33° 57' 54.7''
Longitude (West):	118.0529 - 118° 3' 10.4''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	402723.1
UTM Y (Meters):	3758602.5
Elevation:	154 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	33118-H1 WHITTIER, CA
Most Recent Revision:	1981

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

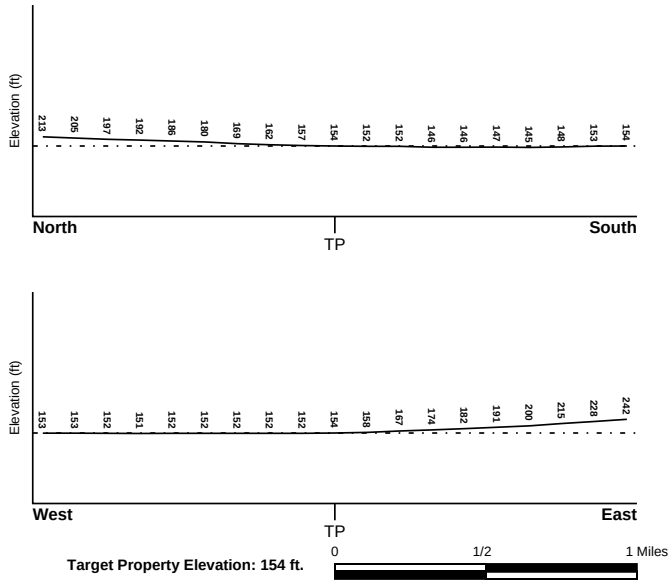
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 154 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
LOS ANGELES, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 0601690003B

0601690002B
0601580001B

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
WHITTIER	Not Available

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile WSW
Site Name:	WEST BENT BOLT
Site EPA ID Number:	CAD004295572
Groundwater Flow Direction:	NOT AVAILABLE.
Inferred Depth to Water:	approximately 100 feet in the Gaspur aquifer.
Hydraulic Connection:	Thick layers of clay are present between the ground surface and a depth of 70 feet. The Gaspur and underlying aquifers are interconnected in the site vicinity.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT **GEOLOGIC AGE IDENTIFICATION**

Era:	Cenozoic	Category:	Stratifed Sequence
System:	Quaternary		
Series:	Quaternary		
Code:	Q *(decoded above as Era, System & Series)*		

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	URBAN LAND
Soil Surface Texture:	variable
Hydrologic Group:	Not reported
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 10 inches
Depth to Bedrock Max:	> 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types: loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types: fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types: stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW[R] Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EDR Environmental LienSearch™ Report

The EDR Environmental LienSearch Report includes results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers follows established procedures to:

- search for parcel information, legal description, and ownership based on client supplied address information;
- research indexes and title repositories;
- obtain a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument (title, parties involved, and description); and
- provide a copy of the deed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

GRANT DEED

FOR VALUABLE CONSIDERATION, receipt of which is hereby acknowledged, CALWEST INDUSTRIAL HOLDINGS, LLC, a Delaware limited liability company ("Grantor"), hereby grants to CLPF – WHITTIER INDUSTRIAL, L.P., a Delaware limited partnership ("Grantee"), the real property located in the County of Los Angeles, State of California, described on Exhibit A attached hereto and made a part hereof (the "Property"), subject to the exceptions to title described on Exhibit B attached hereto and made a part hereof.

Executed as of this 5th day of April, 2005.

Grantor: CALWEST INDUSTRIAL HOLDINGS, LLC,
a Delaware limited liability company

Exhibit A

Real Property Legal Description

[See Attached]

5

Asset No. 23

All that certain real property situated in the County of Los Angeles, State of California, described as follows:

Parcels 1, 2 and 3 of Parcel Map No. 25375, in the City of Whittier, County of Los Angeles, State of California, as per map filed in Book 291 Pages 27 to 29 inclusive of Parcel Maps, in the office of the County Recorder of said County.

Except one-half of all oil, gas and other hydrocarbon substances lying in or under said land or which may be removed or recovered therefrom, by deed recorded in Book 17602 Page 182 Official Records.

APN: 8618-028-002, 003 and 004

6

Exhibit B

Exceptions to Title

(1) Interests of tenants in possession under the leases which affect the Property;

(2) Matters created by or with the written consent of Grantee;

(3) Non-delinquent liens for real estate taxes and assessments;

(4) Any exceptions disclosed by that certain pro forma title policy dated as of March 10, 2005 under Order No. 3204811 issued by Commonwealth Land Title Insurance Company, and any amendments or supplements thereto (the "Title Report"); and

(5) Any other exceptions to title recorded against title in the public records or which would be disclosed by an inspection and/or survey of the Property.

Appendix C

Additional Documentation

LOS ANGELES COUNTY CERTIFIED UNIFIED PROGRAM AGENCY
ADMINISTERED BY LOS ANGELES COUNTY FIRE DEPARTMENT

CONSOLIDATED PERMIT/LICENSE TO OPERATE

EXPIRATION DATE : 5/20/2008

ISSUED TO: FA0022028
EASTMAN KODAK
12100 RIVERA RD
WHITTIER, CA 90606

FISCAL YEAR: 06/07 **LA Co. CUPA NO:** AR0022029

LOCATION OF BUSINESS BEING PERMITTED/LICENSED: 12100 RIVERA RD, WHITTIER, CA 90606

OWNER: LOIS CASTRONOVA, MANAGER

THIS PERMIT/LICENSE IS ISSUED FOR THE FOLLOWING PROGRAMS:

Administering Agency:	Program Description:
LA COUNTY FIRE DEPARTMENT	CALIFORNIA ACCIDENTAL RELEASE PROGRAM (CALARP)
LA COUNTY FIRE DEPARTMENT	HAZARDOUS MATERIALS DISCLOSURE PROGRAM
LA COUNTY FIRE DEPARTMENT	HAZARDOUS WASTE GENERATOR PROGRAM
LA COUNTY FIRE DEPARTMENT	TIER PROGRAM - CONDITIONALLY AUTHORIZED (CA)

THE CONSOLIDATED PERMIT/LICENSE MUST BE POSTED AT THE FACILITY AT ALL TIMES.

ISSUED BY: P. Michael Freeman
County of Los Angeles Fire Chief

ISSUED ON: Aug 2, 2007

This consolidated permit/license is valid for the above location. The permit/license is non-transferrable. Void upon change in ownership.

SANITATION DISTRICTS OF LOS ANGELES COUNTY
INDUSTRIAL WASTEWATER DISCHARGE PERMIT FACT SHEET

This fact sheet MUST be visibly posted by the discharger.

COMPANY NAME	Eastman Kodak Company	**I.W. NO.**	1658R-4

CHEM PRO LABORATORY, INC.

CHEMICAL ENGINEERS

MATERIAL SAFETY DATA SHEET

Section I - PRODUCT IDENTIFICATION

Manufacturer's Name	Chem Pro Laboratory, Inc.	Trade Name	Chem Pro ED Liquid (ALGAE CONTROL LIQUID)
Address	941 West 190th Street	Common Name	Amines, Diamines
City, State and zip	Gardena, CA 90248-4398	Reference or Preparer	Mike Bortnik
Telephone	(310) 532-8611	Date Prepared	08-17-04 (reviewed)

Section II - HAZARDOUS INGREDIENTS

FOR EMERGENCIES CONTACT 1-800-424-9300(CHEMTREC)

Chemical Names	CAS Numbers	Percent	Exposure limits in air: ACGIH (TLV)	OSHA (PEL)	Others
Poly [Oxyethylene (Dimethyliminio) Ethylene Dichloride	31075-24-8	15%	Not applicable	Not applicable	LD_{50}=3.7 g/kg

Section III - PHYSICAL AND CHEMICAL CHARACTERISTICS

Melting Point, °F	Not applicable	Specific Gravity	1.05 to 1.1
Boiling Point, °F	above 212 °F	Solubility in Water	100%
or Pressure, mm Hg @ 20 °C	Not applicable	Percent Volatile	Not applicable
Vapor Density (Air=1)	Not applicable	Reactivity in Water	None
Evaporation Rate (Water=1)	1	pH (units)	4.0 7.0
Appearance and Odor	Clear brown liquid, slight amine odor.		
How to detect Presence: (Warning Properties)	See above		

Section IV - FIRE AND EXPLOSION DATA

Flash Point, °F (Method Used)	None below 212 °F	Auto Ignition Temperature, °F	Not applicable
Flammable Limits -	LEL Lower: Not applicable	UEL Upper: Not applicable	

Fire Extinguishing Materials:

Water Spray (x) Foam (x) Carbon Dioxide (x) Dry Chemical (x) Others ( )

Special Fire Fighting Procedures:

None

Unusual Fire or Explosion Hazards:

None

The data in this material safety data sheet is accurate to the best of our knowledge. However, since data, safety standards, and government regulations are subject to change and the conditions of handling and use, or misuse are beyond our control, Chem Pro Laboratory, Inc. MAKES NO WARRANTY, EITHER EXPRESS OR IMPLIED, WITH RESPECT TO THE COMPLETENESS OR CONTINUING ACCURACY OF THE INFORMATION CONTAINED HEREIN AND DISCLAIMS ALL LIABILITY FOR RELIANCE THEREON. User should have relative technical skills and satisfy himself that he has all current data relevant to his particular product and its applications.

CHEM PRO LABORATORY, INC.

CHEMICAL ENGINEERS

MATERIAL SAFETY DATA SHEET

Section I - PRODUCT IDENTIFICATION

Manufacturer's Name	Chem Pro Laboratory, Inc.	Trade Name	Chem Pro 3040
Address	941 West 190th Street	Common Name	Organic Blend with Sulfuric Acid
City, State and zip	Gardena, CA 90248-4398	Reference or Preparer	Michael Bortnik/ Keith Johnson
Telephone	(310) 532-8611	Date Prepared	2-23-2004 (reviewed)

Section II - HAZARDOUS INGREDIENTS

FOR EMERGENCIES CONTACT 1-800-424-9300(CHEMTREC)

Chemical Names	CAS Numbers	Percent	Exposure limits in air: ACGIH (TLV)	OSHA (PEL)	Others
Sulfuric Acid	7664-93-9	10%	1 mg/m_3	1 mg/m_3	1mg/m_3NIOSH

Section III - PHYSICAL AND CHEMICAL CHARACTERISTICS

Melting Point, °F	30 to 35 °F	Specific Gravity	1.14
ng Point, °F	200 °F	Solubility in Water	Complete
Vapor Pressure, mm Hg @ 20 °C	10mm 18 °F	Percent Volatile	Not applicable
Vapor Density (Air=1)	>1	Reactivity in Water	Not applicable
Evaporation Rate (Water=1)	<1	pH (units)	<1.0 unit
Appearance and Odor	Clear brown odorless liquid.		
How to detect Presence: (Warning Properties)	N/A		

Section IV - FIRE AND EXPLOSION DATA

Flash Point, °F (Method Used)	Non flammable	Auto Ignition Temperature, °F	Non flammable
Flammable Limits -	LEL Lower: Not applicable	UEL Upper:	Not applicable

Fire Extinguishing Materials:

Water Spray ( ) Foam ( ) Carbon Dioxide ( ) Dry Chemical (x) Others ( )

Special Fire Fighting Procedures:

H_2SO_4 or SO_3 can be released at high temperatures. Use respirator approved by NIOSH.
Use respirator approved by NIOSH.

Unusual Fire or Explosion Hazards:

Reacts with most metals to form hydrogen gas which can form explosive mixture with air.

The data in this material safety data sheet is accurate to the best of our knowledge. However, since data, safety standards, and government regulations are subject to change and the conditions of handling and use, or misuse are beyond our control, Chem Pro Laboratory, Inc. MAKES NO WARRANTY, EITHER EXPRESS OR IMPLIED, WITH RESPECT TO THE COMPLETENESS OR CONTINUING ACCURACY OF THE INFORMATION CONTAINED HEREIN AND DISCLAIMS ALL LIABILITY FOR RELIANCE THEREON. User should have relative technical skills and satisfy himself that he has all current data relevant to his particular product and its applications.

Section V - HEALTH HAZARDS

Health Effects or Risk from Exposure

Respiratory irritation and inflammation. Chronic: Lung damage. Dental erosion. Causes severe burns.

Symptoms of Over-exposure

1. Inhaled:	Inhalation of mist can be injurious to lungs.
2. Contact With skin or Eyes:	Skin and eye irritation.
3. Absorption Through skin:	Skin irritation.
4. Swallowed:	Burning. LD_{50} for sulfuric acid in rates 2.14 g/kg.

FIRST AID: Emergency Procedures

1. Eye Contact:	Flush with large quantities of water for at least 20 minutes, lifting upper and lower lids occasionally. Contact a physician.
2. Skin Contact:	Flush thoroughly with water; wash with soap/water while removing all contaminated clothing and shoes. Contact a physician.
3. Inhaled:	On over-exposure, remove to fresh air; get medical attention.
4. Swallowed:	Do not induce vomiting; dilute by giving milk or water if conscious. Get medical attention immediately.

Suspected cancer agent: This Product's Ingredients Are Not Found In The List:

No (x) Yes ( ) Federal OSHA ( ) NTP ( ) IARC ( ) Cal-OSHA ( )

Medical Conditions Aggravated By Exposure:

N/A

Section VI - REACTIVITY DATA

Stability: Stable (x) Unstable ( )

Conditions to Avoid:

mperatures above 150 °F, Base (Alkali), nitrites, carbides, chlorates and metal powders. Contact with organic ostances and metals

Hazardous Decomposition Products:

Sulfur trioxide gas (SO_3) at high temperatures.

Hazardous Polymerization: May Occur ( ) Will Not Occur (x)

Section VII - SPILL OR LEAK PROCEDURES

Spill Response Procedures:

Flush with plenty of water and neutralize acid with soda ash, lime or bicarbonate of soda.
Note: Neutralization will release CO_2 gas requiring adequate ventilation.

Preparing Wastes For Disposal:

Neutralize acid with alkali and flush to sewer with plenty of water if permitted by local and state regulations.

Section VIII - SPECIAL HANDLING INFORMATION

Respiratory Protection: The use of respiratory protection depends on vapor concentration above the time-weighted TLV; use NIOSH approved cartridge respirator or gas mask.

Ventilation: Local Exhaust ( ) Mechanical (general) (x) Special: Other:

Protective Gloves: Rubber or impermeable gloves. Eye Protection: Safety glasses, chemical goggles and or face shield.

Other Protective clothing or Equipment: Impermeable aprons are advised. The availability of eye washes and safety showers in work area is recommended.

Work/Hygienic Practices: N/A

Section IX - LABELING, SPECIAL PRECAUTIONS

DOT: UN2796

HMIS Ratings: Health: 3 Flammability: 0 Reactivity: 0

Special Precaution: Avoid all handling and storage procedures that may result in spills, leaks or punctures. Handle and store in areas with unlimited water supply.

CHEM PRO LABORATORY, INC.

CHEMICAL ENGINEERS

MATERIAL SAFETY DATA SHEET

Section I - PRODUCT IDENTIFICATION

Manufacturer's Name	Chem Pro Laboratory, Inc.	Trade Name	Kemklor II
Address	941 West 190th Street	Common Name	Sodium Hypochlorite
City, State and zip	Gardena, CA 90248-4398	Reference or Preparer	Mike Bortnik/ Keith Johnson
Telephone	(310) 532-8611	Date Prepared	3/23/2001 (revised)

Section II - HAZARDOUS INGREDIENTS

FOR EMERGENCIES CONTACT 1-800-424-9300(CHEMTREC)

Chemical Names	CAS Numbers	Percent	Exposure limits in air: ACGIH (TLV)	OSHA (PEL)	Others
Sodium Hypochlorite	7681-52-9	7.5-12.5%	3 mg/m^3 as Cl_2		0.5 mg/m^3

Section III - PHYSICAL AND CHEMICAL CHARACTERISTICS

Melting Point, °F	Not applicable	Specific Gravity	1.1 to 1.2
Boiling Point, °F	Decomposes	Solubility in Water	Complete
Vapor Pressure, mm Hg @ 20 °C	Variable	Percent Volatile	Variable
Vapor Density (Air=1)	Not applicable	Reactivity in Water	None
Evaporation Rate (Water=1)	1.1	pH (units)	12.5 - 13.5
Appearance and Odor	Yellow green liquid - Disagreeable odor.		
How to detect Presence: (Warning Properties)	N/A		

Section IV - FIRE AND EXPLOSION DATA

Flash Point, °F (Method Used)	Not applicable	Auto Ignition Temperature, °F	Not applicable
Flammable Limits -	LEL Lower: Not applicable	UEL Upper:	Not applicable

Fire Extinguishing Materials:

Water Spray (x) Foam ( ) Carbon Dioxide (x) Dry Chemical ( ) Others ( )

Special Fire Fighting Procedures:

Use NIOSH certified gas mask with canister for chlorine or use self-contained breathing apparatus.

Unusual Fire or Explosion Hazards:

Material is strong oxidizer; contact with combustible materials may initiate or promote combustion. Acid and heat accelerate decomposition. Decomposition products may include chlorine.

The data in this material safety data sheet is accurate to the best of our knowledge. However, since data, safety standards, and government regulations are subject to change and the conditions of handling and use, or misuse are beyond our control, Chem Pro Laboratory, Inc. MAKES NO WARRANTY, EITHER EXPRESS OR IMPLIED, WITH RESPECT TO THE COMPLETENESS OR CONTINUING ACCURACY OF THE INFORMATION CONTAINED HEREIN AND DISCLAIMS ALL LIABILITY FOR RELIANCE THEREON. SECTION I. PRODUCT IDENTIFICATION
****

PRODUCT NAME: SULFURIC ACID 48 - 93%

MSDS #: P13493V

DATE ISSUED: 11/21/91

****
SECTION II. IDENTITY
****

CHEMICAL NAME: Sulfuric acid, Electrolyte grade Cesspool acid

CHEMICAL FAMILY: Mineral Acid, Inorganic acid

MOLECULAR FORMULA: H2SO4

CAS NUMBER: 7664-93-9 with more than 51% Sulfuric Acid
UN2796 with not more than 51% Sulfuric acid

HAZARD NUMBER: UN1830

WHMIS CLASSIFICATION: Class E - corrosive, Class D1A packaging group II

NFPA RATINGS:
Health - 3 (High)
Flammability - 0 (Minimal)
Reactivity - 2 (Moderate)
Water Reactive

NPCA-HMIS RATINGS:
Health - 3 (High)
Flammability - 0 (Minimal)
Reactivity - 2 (Moderate)

****
SECTION III. EXPOSURE LIMITS
****

TLV (ACGIH): 1 mg/m3 - 8 hr TWA
STEL: 3 mg/m3
PEL (OSHA): 1 mg/m3 - 8 hr TWA
AQUATIC TOXICITY: The 48-hour TLm in flounder is 100-300 ppm.

****
SECTION IV. PHYSICAL DATA
****

PHYSICAL STATE: Liquid
APPEARANCE: Clear and odorless
BOILING POINT: 48% - 250 deg. F 93% - 529 deg. F
FREEZING POINT: 48% - 30 deg. F 93% - -21 deg. F
VAPOR PRESSURE: <0.3 mm hg at 77 deg. F
VAPOR DENSITY: 3.4
EVAPORATION RATE: Less than 1
WATER SOLUBILITY: 100% soluble
pH: Less than 1

****
SECTION V. COMPONENTS
****

Sulfuric Acid CAS# 7664-93-9	Water CAS# 7732-18-5	Specific Gravity @ 60 deg. F

77.67%	22.33%	1.705
93%	7%	1.835

****
SECTION VI. FIRE AND EXPLOSION DATA
****

FLASH POINT: Will not burn, non-flammable

AUTOIGNITION TEMPERATURE: Not combustible

FLAMMABILITY LIMITS IN AIR (%): UEL: Not applicable LEL: Not applicable

HAZARDS: Reacts with most metals, especially when dilute, to give flammable, potentially explosive hydrogen gas. Follow appropriate National Fire Protection Assoc. (MFPA) codes.

EXTINGUISHING MEDIA: Use media appropriate for surrounding material. Use water spray to cool containers exposed to fire; do not get water inside containers.

SPECIAL INSTRUCTIONS: Evacuate personnel to a safe area. Keep personnel removed and upwind of fire. Generates heat upon addition of water, with possible spattering. Wear full protective clothing. Runoff from fire control may cause pollution. Neutralize runoff with lime, soda ash, etc. Wear self-contained breathing apparatus if fumes or mists are present.

****
SECTION VI. HAZARDOUS REACTIVITY
****

INSTABILITY: Stable, but reacts violently with water and organic materials with evolution of heat.

DECOMPOSITION: Releases sulfur dioxide at extremely high temperatures.

POLYMERIZATION: Polymerization will not occur.

MATERIALS TO AVOID: Vigorous reactions with water; alkaline solutions; metals, metal powder; carbides; chlorates; fuminates; nitrates; picrates; strong oxidizing, reducing, or combustible organic materials. hazardous gases re evolved on contact with chemicals such as cyanides, sulfides, and carbides.

****
SECTION VII. HEALTH HAZARD DATA
****

CAUSES SEVERE BURNS TO EYES, SKIN, AND ALL BODY TISSUE. EYE DAMAGE MAY BE PERMANENT. DESTRUCTION OF TISSUE MAY RESULT FROM DIRECT CHEMICAL REACTION WITH TISSUE, FROM THERMAL BURNS, AND FROM DEHYDRATION (REMOVAL OF WATER) OF THE TISSUE.

ANIMAL DATA:
INHALATION 1 HOUR LC50: 347 PPM IN RATS
ORAL LD50: 2140 MG/KG IN RATS

THE CONCENTRATED COMPOUND IS CORROSIVE TO THE SKIN AND EYES OF ANIMALS CAUSING CORROSION OF MUCOSAL SURFACES. TOXIC EFFECTS DESCRIBED IN ANIMALS FROM SINGLE

EXPOSURES BY INHALATION INCLUDE RESPIRATORY IRRITATION.

EXPOSURE TO THE LIQUID BY SKIN OR EYE CONTACT MAY CAUSE EYE CORROSION WITH CORNEAL OR CONJUNCTIVAL ULCERATION; OR SKIN BURNS OR ULCERATION. INGESTION OF THE LIQUID MAY CAUSE SEVERE BURNS TO THE MUCOUS MEMBRANES OF THE MOUTH AnD ESOPHAGUS. REPEATED OR PROLONGED CONTACT WITH MISTS MAY CAUSE EYE IRRITATION WITH DISCOMFORT, TEARING OR BLURRING OF VISION; OR SKIN IRRITATION WITH DISCOMFORT OR RASH. PROLONGED OR REPEATED EXPOSURE MAY RESULT IN IMPAIRED LUNG FUNCTION AND POSSIBLE DISCOLORATION AND EROSION OF TEETH. INDIVIDUALS WITH PREEXISTING DISEASES OF THE LUNGS MAY HAVE INCREASED SUSCEPTIBILITY TO THE TOXICITY OF EXCESSIVE EXPOSURES.

SECTION VIII. CARCINOGENICITY

NONE OF THE COMPONENTS IN THIS MATERIAL IS LISTED BY IARC, NTP, OSHA, OR ACGIH AS A CARCINOGEN.

SECTION IX. FIRST AID

INHALATION: Move victim to fresh air. Give artificial respiration ONLY if breathing has stopped. Give CPR if there is no breathing AND no pulse. Obtain medical attention IMMEDIATELY.

INGESTION: If swallowed, do not induce vomiting. Give large quantities of water. Call a physician. do not neutralize the acid. Never give anything by mouth to an unconscious person.

SKIN OR EYE CONTACT: In case of contact, immediately (within seconds) flush eyes or skin with plenty of cold water for at least 15 minutes while removing contaminated clothing and shoes. Call a physician. While the patient is being transported to a medical facility apply compresses if iced water. If medical treatment must be delayed, immerse the affected area in iced water or apply compresses of iced water to affected areas. Do not freeze tissue.

NOTES TO PHYSICIAN: Continued washing of the affected area with cold or iced water will be helpful in removing the last traces of sulfuric acid. Creams or ointments should not be applied before or during the washing phase of treatment.

SECTION X. PRECAUTIONS FOR SAFE HANDLING

GOOD GENERAL VENTILATION SHOULD BE PROVIDED TO KEEP VAPOR AND MIST CONCENTRATIONS BELOW THE EXPOSURE LIMITS.

HAVE AVAILABLE AND WEAR AS APPROPRIATE FOR EXPOSURE CONDITIONS WHEN HANDLING CONTAINERS OR OPERATING EQUIPMENT CONTAINING SULFURIC ACID: CHEMICAL SPLASH GOGGLES; FULL-LENGTH FACE SHIELD/CHEMICAL SPLASH GOGGLE COMBINATION;ACID-PROOF GAUNTLET GLOVES, APRON, AND BOOTS; LONG SLEEVE WOOL, ACRYLIC OR POLYESTER CLOTHING; ACID PROOF SUIT AND HOOD; AND APPROPRIATE NIOSH/MSHA RESPIRATORY PROTECTION. IN CASE OF EMERGENCY OR WHERE THERE IS A STRONG POSSIBILITY OF CONSIDERABLE EXPOSURE, WEAR A COMPLETE ACID SUIT WITH HOOD, BOOTS, AND GLOVES. IF ACID VAPOR OR MIST ARE PRESENT AND EXPOSURE LIMITS MAY BE EXCEEDED, WEAR APPROPRIATE NIOSH/MSHA RESPIRATORY PROTECTION.

ALWAYS ADD ACID TO WATER - NOT WATER TO ACID.

SPILLS: EPA and Superfund reportable discharge is 1000 lbs. Stop flow if possible. Use appropriate protective equipment during clean up. Soak up small spills with dry sand, clay or diatomaceous earth. Dike large spills, and cautiously dilute and neutralize with lime or soda ash, and transfer to waste

water treatment system. Prevent liquid from entering sewers, waterways or low areas. Comply with federal, state and local regulations.

WASTE: Cleaned-up material may be a RCRA hazardous waste on disposal. Do not flush to surface water or sanitary sewer system. Comply with federal, state and local regulations. If approved, neutralize and transfer to waste treatment system.

STORAGE: keep out of sun and away from heat, sparks and flame. Keep container tightly closed to prevent leakage. Loosen closure carefully; relieve internal pressure when received and at least weekly thereafter. Do not use pressure to empty. Do not wash out container or use it for other purposes. Replace closure after each use.

****

POTENTIAL HEALTH EFFECTS

ROUTES OF ENTRY:
INHALATION, INGESTION.

TARGET ORGANS:
EYES, SKIN, RESPIRATORY TRACT, GASTROINTESTINAL TRACT.

IRRITANCY:
LIQUID, VAPORS OR MIST MAY BE IRRITATING TO EYES, SKIN AND RESPIRATORY TRACT.

SENSITIZING CAPABILITY:
NONE KNOWN.

REPRODUCTIVE EFFECTS:
NONE KNOWN.

CANCER INFORMATION:
NONE KNOWN.

SHORT-TERM EXPOSURE (ACUTE)

INHALATION:
EXPOSURE TO VAPOR, MIST OR LIQUID CAN PRODUCE BURNS OF THE RESPIRATORY TRACT.

SEVERE EXPOSURES COULD RESULT IN CHEMICAL PNEUMONIA.

EYES:
CONTACT CAN CAUSE SEVERE DAMAGE INCLUDING BURNS AND BLINDNESS.

THE SEVERITY OF THE EFFECTS DEPEND ON CONCENTRATION AND HOW SOON AFTER EXPOSURE THE EYES ARE WASHED.

SKIN:
CORROSIVE.

CONTACT MAY CAUSE BURNS AND TISSUE DESTRUCTION.

NOTE THAT IRRITATION MAY FOLLOW AN INITIAL LATENCY (DELAY BETWEEN THE TIME THAT THE EXPOSURE OCCURS AND WHEN THE SENSE OF IRRITATION STARTS). THE LATENT PERIOD CAN VARY AS MUCH AS HOURS FOR A DILUTE SOLUTION (0.04%) TO MINUTES WITH MORE CONCENTRATED SOLUTIONS (25-50%).

PROLONGED OR REPEATED CONTACT, EVEN TO DILUTE CONCENTRATIONS, CAN CAUSE A HIGH DEGREE OF TISSUE DESTRUCTION.

INGESTION:
CORROSIVE.

SEVERE BURNS AND COMPLETE TISSUE PERFORATION OF MUCOUS MEMBRANES OF MOUTH, THROAT AND STOMACH.

REPEATED EXPOSURE (CHRONIC)
NO KNOWN CHRONIC EFFECTS.

SYNERGISTIC MATERIALS:
NONE KNOWN.

MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE:
NONE KNOWN.

4. FIRST AID MEASURES

EYES:
IMMEDIATELY FLUSH EYES WITH A DIRECTED STREAM OF WATER FOR AT LEAST 15 MINUTES, FORCIBLY HOLDING EYELIDS APART TO ENSURE COMPLETE IRRIGATION OF ALL EYE AND LID TISSUE. WASHING EYES WITHIN SEVERAL SECONDS IS ESSENTIAL TO ACHIEVE MAXIMUM EFFECTIVENESS. GET MEDICAL ATTENTION IMMEDIATELY.

SKIN:
FLUSH THOROUGHLY WITH COOL WATER UNDER SHOWER WHILE REMOVING CONTAMINATED CLOTHING AND SHOES. DISCARD NON-RUBBER SHOES. WASH CLOTHING BEFORE REUSE. GET MEDICAL ATTENTION AS SOON AS POSSIBLE.

INHALATION:
REMOVE TO FRESH AIR. IF BREATHING IS DIFFICULT, HAVE TRAINED PERSON

ADMINISTER OXYGEN. IF RESPIRATION STOPS, HAVE A TRAINED PERSON ADMINISTER ARTIFICIAL RESPIRATION. GET MEDICAL ATTENTION IMMEDIATELY.

INGESTION:
NEVER GIVE ANYTHING BY MOUTH TO AN UNCONSCIOUS PERSON. IF SWALLOWED, DO NOT INDUCE VOMITING. GIVE LARGE QUANTITIES OF WATER. (IF AVAILABLE, GIVE SEVERAL GLASSES OF MILK.) IF VOMITING OCCURS SPONTANEOUSLY, KEEP AIRWAY CLEAR AND GIVE MORE WATER. GET MEDICAL ATTENTION IMMEDIATELY.

NOTES TO PHYSICIAN:
NO SPECIALIZED PROCEDURES. TREAT FOR CLINICAL SYMPTOMS.

5. FIRE FIGHTING MEASURES

FLASH POINT: NON-FLAMMABLE

METHOD: NON-FLAMMABLE

AUTOIGNITION TEMPERATURE: NON-FLAMMABLE

FLAMMABLE LIMITS IN AIR, BY % VOLUME
UPPER: NON-FLAMMABLE
LOWER: NON-FLAMMABLE

EXTINGUISHING MEDIA:
NON-FLAMMABLE / NON-COMBUSTIBLE.

USE WATER SPRAY TO KEEP FIRE-EXPOSED CONTAINERS COOL.

FIRE FIGHTING PROCEDURES:
USE WATER TO COOL CONTAINERS BUT AVOID GETTING WATER INTO CONTAINERS. WEAR NIOSH/MSHA APPROVED POSITIVE-PRESSURE SELF-CONTAINED BREATHING APPARATUS AND FULL PROTECTIVE CLOTHING.

FIRE AND EXPLOSION HAZARD:
DIRECT CONTACT WITH WATER CAN CAUSE A VIOLENT EXOTHERMIC REACTION.

SENSITIVITY TO MECHANICAL IMPACT:
NOT SENSITIVE.

SENSITIVITY TO STATIC DISCHARGE:
NOT SENSITIVE.

6. ACCIDENTAL RELEASE MEASURES

PERSONAL PRECAUTIONS:
EVACUATE UNNECESSARY PERSONNEL.

FOLLOW PROTECTIVE MEASURES PROVIDED UNDER PERSONAL PROTECTION IN SECTION 8.

ENVIRONMENTAL PRECAUTIONS:

ACCORDING TO 40 CFR 302 TABLE 302.4 (CERCLA), ENVIRONMENTAL RELEASES THAT EXCEED THE RQ MUST BE REPORTED TO THE NATIONAL RESPONSE CENTER BY CALLING 800-424-8802 (202-426-2675) AND THE STATE EMERGENCY RESPONSE COMMISSION AND THE LOCAL EMERGENCY PLANNING COMMITTEE (40 CFR 355.40) AS APPROPRIATE.

CONTAIN LIQUIDS AND PREVENT DISCHARGES TO STREAMS OR SEWERS, CONTROL OR STOP THE LOSS OF VOLATILE MATERIALS TO THE ATMOSPHERE. LARGE LEAKS MAY REQUIRE ENVIRONMENTAL CONSIDERATION AND POSSIBLE EVACUATION. DO NOT APPLY WATER TO THE LEAK. SPILLS OR RELEASES SHOULD BE REPORTED, IF REQUIRED, TO THE APPROPRIATE LOCAL, STATE AND FEDERAL AGENCIES.

CONTAIN SPILL WITH DIKE TO PREVENT ENTRY INTO SEWERS OR WATERWAYS.

CAUTION: THIS PRODUCT MAY REACT STRONGLY WITH ACIDS AND WATER.

NEVER FLUSH TO SEWER.

METHODS FOR CLEANING UP:

DRY MATERIAL CAN BE SHOVELED UP, LIQUID MATERIAL CAN BE REMOVED WITH A VACUUM TRUCK. NEUTRALIZE REMAINING TRACES WITH ANY DILUTE INORGANIC ACID (HYDROCHLORIC, SULFURIC OR ACETIC ACID). FLUSH SPILL AREA WITH WATER FOLLOWED BY A LIBERAL COVERING OF SODIUM CARBONATE. ALL CLEAN-UP MATERIAL SHOULD BE REMOVED FOR PROPER TREATMENT OR DISPOSAL. SPILLS ON OTHER THAN PAVEMENT (EG. DIRT OR SAND) MAY BE HANDLED BY REMOVING THE AFFECTED SOIL AND PLACING IN APPROVED CONTAINERS.

7. HANDLING AND STORAGE

HANDLING:

AVOID BREATHING MIST.

AVOID BREATHING VAPORS.

HAZARDOUS CARBON MONOXIDE GAS CAN FORM UPON CONTACT WITH FOOD AND BEVERAGE PRODUCTS IN ENCLOSED SPACES AND CAN CAUSE DEATH. FOLLOW APPROPRIATE TANK ENTRY PROCEDURES (ANSI Z117.1).

CONTAINERS, EVEN THOSE THAT HAVE BEEN EMPTIED, WILL RETAIN PRODUCT RESIDUE AND VAPOR AND SHOULD BE HANDLED AS IF THEY WERE FULL.

DO NOT GET IN EYES, ON SKIN OR CLOTHING.

PRODUCT: CAUSTIC SODA LIQUID (ALL GRADES)

ORDER NO: 959357
PROD NO : 238341

DO NOT TAKE INTERNALLY

KEEP AWAY FROM ACIDS, TO AVOID POSSIBLE VIOLENT REACTION.

WASH CONTAMINATED CLOTHING BEFORE REUSE.

WASH THOROUGHLY AFTER HANDLING; EXPOSURE CAN CAUSE BURNS WHICH ARE NOT IMMEDIATELY PAINFUL OR VISIBLE.

WEAR PERSONAL PROTECTIVE EQUIPMENT AS DESCRIBED IN EXPOSURE CONTROLS/PERSONAL PROTECTION (SECTION 8) OF THE MSDS.

IF PRODUCT IS ADDED TOO RAPIDLY, OR WITHOUT STIRRING, AND BECOMES CONCENTRATED AT BOTTOM OF MIXING VESSEL, EXCESSIVE HEAT MAY BE GENERATED, RESULTING IN DANGEROUS BOILING AND SPATTERING, AND A POSSIBLE IMMEDIATE AND VIOLENT ERUPTION OF HIGHLY CAUSTIC SOLUTION.

SPECIAL MIXING AND HANDLING INSTRUCTIONS:
CONSIDERABLE HEAT IS GENERATED WHEN PRODUCT IS MIXED WITH WATER. THEREFORE, WHEN MAKING SOLUTIONS ALWAYS CAREFULLY FOLLOW THESE STEPS:

ALWAYS WEAR ALL PROTECTIVE CLOTHING DESCRIBED ABOVE. NEVER ADD WATER TO PRODUCT. ALWAYS ADD PRODUCT, WITH CONSTANT STIRRING, SLOWLY TO SURFACE OF LUKEWARM (80-100 F) WATER, TO ASSURE PRODUCT IS BEING COMPLETELY DISSOLVED AS IT IS ADDED.

PRODUCT CAN REACT EXPLOSIVELY WITH ACIDS, ALDEHYDES, AND MANY OTHER ORGANIC CHEMICALS, ADD PRODUCT VERY GRADUALLY, WHILE STIRRING CONSTANTLY. IF PRODUCT IS ADDED TOO RAPIDLY, OR WITHOUT STIRRING, AND BECOMES CONCENTRATED AT BOTTOM OF MIXING VESSEL, EXCESSIVE HEAT MAY BE GENERATED, RESULTING IN DANGEROUS BOILING AND SPATTERING, AND A POSSIBLE IMMEDIATE AND VIOLENT ERUPTION OF HIGHLY CAUSTIC SOLUTION.

ALWAYS EMPTY AND CLEAN CONTAINERS OF ALL RESIDUES BEFORE ADDING PRODUCT, TO AVOID POSSIBLE EXPLOSIVE REACTION BETWEEN PRODUCT AND UNKNOWN RESIDUE.

RETURNABLE CONTAINERS SHOULD BE SHIPPED IN ACCORDANCE WITH SUPPLIER'S RECOMMENDATIONS. RETURN SHIPMENTS SHOULD COMPLY WITH ALL FEDERAL, STATE, AND DOT REGULATIONS. ALL RESIDUE SHOULD BE REMOVED FROM CONTAINERS PRIOR TO DISPOSAL.

AVOID CONTACT WITH ALUMINUM, TIN, ZINC, AND ALLOYS CONTAINING THESE METALS. AVOID CONTACT WITH LEATHER, WOOL, ACIDS, ORGANIC HALOGEN COMPOUNDS AND ORGANIC NITRO COMPOUNDS.

STORAGE:

KEEP CONTAINER TIGHTLY CLOSED AND PROPERLY LABELED.

DIKE STORAGE CONTAINERS TO CONTAIN 110% OF TANK VOLUME.

UNDER NORMAL CONDITIONS, THIS PRODUCT CAN BE STORED SATISFACTORILY IN MILD STEEL WITHOUT AN INTERIOR LINING. ALUMINUM IS NOT RECOMMENDED FOR STORAGE AND HANDLING.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

ENGINEERING CONTROLS:

NO SPECIAL VENTILATION REQUIRED UNDER NORMAL USE.

NOTE: WHERE CARBON MONOXIDE MAY BE GENERATED, SPECIAL VENTILATION MAY BE REQUIRED.

WHERE ENGINEERING CONTROLS ARE NOT FEASIBLE USE ADEQUATE LOCAL EXHAUST VENTILATION WHEREVER MIST, SPRAY OR VAPOR MAY BE GENERATED.

PERSONAL PROTECTION

RESPIRATORY:

RESPIRATORY PROTECTION IS NOT REQUIRED UNDER NORMAL USE.

WEAR A NIOSH/MSHA APPROVED RESPIRATOR FOLLOWING MANUFACTURER'S RECOMMENDATIONS, WHERE AIRBORNE CONTAMINANTS MAY OCCUR.

EYE/FACE:

WEAR CHEMICAL SAFETY GOGGLES PLUS FULL FACE SHIELD TO PROTECT AGAINST SPLASHING WHEN APPROPRIATE (ANSI Z87.1).

SKIN:

WEAR CHEMICAL RESISTANT GLOVES SUCH AS RUBBER, NEOPRENE OR VINYL.

WASH CONTAMINATED CLOTHING AND DRY BEFORE REUSE.

WHENEVER THERE IS A POSSIBILITY OF SPLASH OR CONTACT WEAR A CHEMICAL RESISTANT FULL BODY SUIT AND BOOTS.

OTHER:

STANDARD WORK CLOTHING CLOSED AT THE NECK AND WRISTS.

DISCARD SHOES THAT CANNOT BE DECONTAMINATED.

EMERGENCY SHOWER AND EYEWASH FACILITY SHOULD BE IN CLOSE PROXIMITY (ANSI Z358.1).

PRODUCT: CAUSTIC SODA LIQUID (ALL GRADES)

ORDER NO: 959357
PROD NO : 238341

THIS MATERIAL HAS PRODUCED SLIGHT TO MODERATE TOXICITY IN LABORATORY TESTS WITH AQUATIC ORGANISMS. THIS MATERIAL IS STRONGLY ALKALINE. IF RELEASED TO SURFACE WATER, THIS COMPOUND WILL CAUSE THE PH TO RISE DEPENDENT ON THE BUFFERING CAPACITY OF THE WATERBODY. AQUATIC ORGANISMS BECOME INCREASINGLY STRESSED AS PH EXCEEDS 9, WITH MANY AQUATIC SPECIES BEING INTOLERANT OF PH IN EXCESS OF 10. THIS COMPOUND DOES NOT BIOACCUMULATE IN ORGANISMS. DUE CAUTION SHOULD BE EXERCISED TO PREVENT THE ACCIDENTAL RELEASE OF THIS MATERIAL TO THE ENVIRONMENT.

ENVIRONMENTAL FATE DATA

SODIUM CHLORIDE (NACL) IS A NATURALLY OCCURRING INORGANIC SALT IN SURFACE WATERS, GROUNDWATER AND THE EARTH'S CRUST. BIOLOGICAL SYSTEMS TYPICALLY MAINTAIN A NECESSARY OSMOTIC BALANCE OF CRITICAL SALTS INCLUDING SODIUM CHLORIDE. THE TOLERANCE OF AQUATIC SPECIES TO NACL IS VARIABLE DEPENDING UPON WHETHER THE ORGANISM IS FRESHWATER OR MARINE, OR IF THE ORGANISM IS CAPABLE OF MOVING BETWEEN FRESHWATER AND MARINE ENVIRONMENTS. IN GENERAL NACL HAS LOW TO MODERATE TOXICITY TO AQUATIC OR TERRESTRIAL SPECIES. CONTINUOUS DISCHARGE OF SALT TO FRESHWATER ENVIRONMENTS CAN LEAD TO INCREASED SALINITY OVER TIME. BULK RELEASES COULD IMPACT SALT INTOLERANT AQUATIC SPECIES AND SESSILE TERRESTRIAL LIFEFORMS. DUE CARE SHOULD BE TAKEN TO AVOID THE ACCIDENTAL RELEASE OF THIS MATERIAL TO AQUATIC OR TERRESTRIAL ENVIRONMENTS.

REACTIVE OXIDIZER OF ORGANIC MATERIAL

THERE IS LIMITED DATA ON THE ENVIRONMENTAL FATE AND EFFECTS OF SODIUM CHLORATE (CHLORIC ACID, SODIUM SALT). LABORATORY TEST DATA INDICATE THAT SODIUM CHLORATE IS MODERATELY TOXIC TO AQUATIC AND TERRESTRIAL ORGANISMS. THIS MATERIAL IS HIGHLY SOLUBLE IN WATER. IT MAY PERSIST UP TO 5 YEARS IN LOCATIONS WITH LOW ANNUAL RAINFALL. DUE CAUTION SHOULD BE EXERCISED TO AVOID THE ACCIDENTAL RELEASE OF THIS MATERIAL TO AQUATIC AND TERRESTRIAL ENVIRONMENTS.

13. DISPOSAL CONSIDERATIONS

RECOVERY AND REUSE, RATHER THAN DISPOSAL, SHOULD BE THE ULTIMATE GOAL OF HANDLING EFFORTS.

DISPOSE OF ALL WASTE AND CONTAMINATED EQUIPMENT IN ACCORDANCE WITH ALL APPLICABLE FEDERAL, STATE AND LOCAL HEALTH AND ENVIRONMENTAL REGULATIONS.

ENSURE THAT ALL RESPONSIBLE FEDERAL, STATE, AND LOCAL AGENCIES RECEIVE PROPER NOTIFICATION OF SPILL AND DISPOSAL METHODS.

SHIPMENTS OF WASTE MATERIALS MAY BE SUBJECT TO MANIFESTING REQUIREMENTS PER APPLICABLE REGULATIONS. APPROPRIATE DISPOSAL WILL DEPEND ON THE NATURE OF EACH WASTE MATERIAL AND SHOULD BE DONE BY A COMPETENT AND PROPERLY PERMITTED CONTRACTOR.

THE MATERIALS RESULTING FROM CLEAN-UP OPERATIONS MAY BE HAZARDOUS WASTES AND, THEREFORE, SUBJECT TO SPECIFIC REGULATIONS. PACKAGE, STORE, TRANSPORT, AND DISPOSE OF ALL (CLEAN-UP) MATERIALS AND ANY CONTAMINATED EQUIPMENT IN ACCORDANCE WITH ALL APPLICABLE FEDERAL, STATE, AND LOCAL REGULATIONS.

15. REGULATORY INFORMATION

U.S. FEDERAL REGULATIONS:
OSHA STANDARD 29 CFR 1910.1200 REQUIRES THAT INFORMATION BE PROVIDED TO EMPLOYEES REGARDING THE HAZARDS OF CHEMICALS BY MEANS OF A HAZARD COMMUNICATION PROGRAM INCLUDING LABELING, MATERIAL SAFETY DATA SHEETS, TRAINING AND ACCESS TO WRITTEN RECORDS. WE REQUEST THAT YOU, AND IT IS YOUR LEGAL DUTY TO, MAKE ALL INFORMATION IN THIS MATERIAL SAFETY DATA SHEET AVAILABLE TO YOUR EMPLOYEES.

TO AID OUR CUSTOMERS IN COMPLYING WITH REGULATORY REQUIREMENTS, SARA TITLE III HAZARD CATEGORIES FOR THIS PRODUCT ARE INDICATED BELOW. IF THE WORD "YES" APPEARS NEXT TO ANY CATEGORY, THIS PRODUCT MAY BE REPORTABLE BY YOU UNDER THE REQUIREMENTS OF 40.CFR.370. PLEASE CONSULT THOSE REGULATIONS FOR DETAILS.

TSCA:
ALL COMPONENTS OF THIS PRODUCT THAT ARE REQUIRED TO BE ON THE TSCA INVENTORY ARE LISTED ON THE INVENTORY.

SARA/TITLE III HAZARD CATEGORIES:
IMMEDIATE(ACUTE) HEALTH: _YES_ REACTIVE HAZARD _YES_
DELAYED(CHRONIC) HEALTH: _NO__ SUDDEN RELEASE OF PRESSURE _NO__
FIRE HAZARD: _NO__

HMIS HAZARD RATINGS:
HEALTH HAZARD: __3__ FIRE HAZARD: __0__ REACTIVITY: __1__

STATE REGULATIONS:
SEE SECTION 2, COMPOSITION/INFORMATION ON INGREDIENTS LIST LEGEND FOR APPLICABLE STATE REGULATION.

INTERNATIONAL REGULATIONS:
CONSULT THE REGULATIONS OF THE IMPORTING COUNTRY.

CANADA:
WHMIS HAZARD CLASS: D1B, E

17. WARNING LABEL INFORMATION

SIGNAL WORD:
DANGER

HAZARD WARNINGS:
MAY CAUSE BURNS TO THE EYES, SKIN, AND MUCOUS MEMBRANES.

MAY CAUSE PERMANENT EYE DAMAGE.

INHALATION OF DUST, MIST, OR SPRAY CAN CAUSE SEVERE LUNG DAMAGE.

CAN REACT VIOLENTLY WITH WATER, ACIDS AND OTHER SUBSTANCES.

PRECAUTIONS:

AVOID CONTACT WITH EYES, SKIN AND CLOTHING.

AVOID BREATHING DUST, VAPORS OR MIST.

DO NOT SWALLOW.

USE WITH ADEQUATE VENTILATION AND WEAR RESPIRATORY PROTECTION WHEN EXPOSURE TO DUST, MIST, OR SPRAY IS POSSIBLE.

WEAR SAFETY GLASSES WITH SIDE SHIELDS OR CHEMICAL SPLASH GOGGLES, PROTECTIVE CLOTHING AND CHEMICAL RESISTANT GLOVES.

WASH THOROUGHLY AFTER HANDLING; EXPOSURE CAN CAUSE BURNS WHICH ARE NOT IMMEDIATELY PAINFUL OR VISIBLE.

KEEP CONTAINER TIGHTLY CLOSED AND PROPERLY LABELED.

PRODUCT CAN REACT VIOLENTLY WITH WATER, ACIDS AND OTHER SUBSTANCES. SEE HANDLING AND STORAGE (SECTION 7) OF THE MSDS FOR INSTRUCTIONS BEFORE USING.

AVOID CONTACT WITH ALUMINUM, TIN, ZINC, AND ALLOYS CONTAINING THESE METALS. AVOID CONTACT WITH LEATHER, WOOL, ACIDS, ORGANIC HALOGEN COMPOUNDS AND ORGANIC NITRO COMPOUNDS.

HAZARDOUS CARBON MONOXIDE GAS CAN FORM UPON CONTACT WITH FOOD AND BEVERAGE PRODUCTS IN ENCLOSED SPACES AND CAN CAUSE DEATH. FOLLOW APPROPRIATE TANK ENTRY PROCEDURES (ANSI Z117.1).

FIRST AID

EYES:

IMMEDIATELY FLUSH EYES WITH A DIRECTED STREAM OF WATER FOR AT LEAST 15 MINUTES, FORCIBLY HOLDING EYELIDS APART TO ENSURE COMPLETE IRRIGATION OF ALL EYE AND LID TISSUE. WASHING EYES WITHIN SEVERAL SECONDS IS ESSENTIAL TO ACHIEVE MAXIMUM EFFECTIVENESS. GET MEDICAL ATTENTION IMMEDIATELY.

SKIN:

FLUSH THOROUGHLY WITH COOL WATER UNDER SHOWER WHILE REMOVING CONTAMINATED CLOTHING AND SHOES. DISCARD NON-RUBBER SHOES. WASH CLOTHING BEFORE REUSE. GET MEDICAL ATTENTION AS SOON AS POSSIBLE.

INHALATION:

PRODUCT: CAUSTIC SODA LIQUID (ALL GRADES)

ORDER NO: 959357
PROD NO : 238341

REMOVE TO FRESH AIR. IF BREATHING IS DIFFICULT, HAVE TRAINED PERSON ADMINISTER OXYGEN. IF RESPIRATION STOPS, HAVE A TRAINED PERSON ADMINISTER ARTIFICIAL RESPIRATION. GET MEDICAL ATTENTION IMMEDIATELY.

INGESTION:
NEVER GIVE ANYTHING BY MOUTH TO AN UNCONSCIOUS PERSON. IF SWALLOWED, DO NOT INDUCE VOMITING. GIVE LARGE QUANTITIES OF WATER. (IF AVAILABLE, GIVE SEVERAL GLASSES OF MILK.) IF VOMITING OCCURS SPONTANEOUSLY, KEEP AIRWAY CLEAR AND GIVE MORE WATER. GET MEDICAL ATTENTION IMMEDIATELY.

IN CASE OF SPILL OR LEAK:
LEAKS SHOULD BE STOPPED.

CAUTION: THIS PRODUCT MAY REACT STRONGLY WITH ACIDS AND WATER.

SCOOP OR SWEEP UP ALL SPILLED PRODUCT AND OTHER CONTAMINATED MATERIAL AND PLACE IN MARKED DISPOSAL CONTAINERS

NEUTRALIZE RESIDUE WITH DILUTE ACID AND FLUSH SPILL AREA WITH WATER FOLLOWED BY A LIBERAL COVERING OF SODIUM CARBONATE.

DISPOSE OF WASH WATER AND SPILL BY-PRODUCTS ACCORDING TO FEDERAL, STATE AND LOCAL REGULATIONS.

SPILLS OF 1000 POUNDS OR MORE MUST BE REPORTED TO THE NATIONAL RESPONSE CENTER, 1-800-424-8802.

STATE AND LOCAL REGULATIONS MAY HAVE ADDITIONAL REPORTING REQUIREMENTS, CHECK WITH THE PROPER STATE AND LOCAL AUTHORITIES.

WEAR NEOPRENE OR RUBBER GLOVES.

FIRE:
MATERIAL DOES NOT BURN.

USE EXTINGUISHING MEDIUM AS APPROPRIATE FOR SURROUNDING FIRE.

HANDLING AND STORAGE:
CONSIDERABLE HEAT IS GENERATED WHEN PRODUCT IS MIXED WITH WATER. THEREFORE, WHEN MAKING SOLUTIONS ALWAYS CAREFULLY FOLLOW THESE STEPS:

ALWAYS WEAR ALL PROTECTIVE CLOTHING DESCRIBED ABOVE. NEVER ADD WATER TO PRODUCT. ALWAYS ADD PRODUCT, WITH CONSTANT STIRRING, SLOWLY TO SURFACE OF LUKEWARM (80-100 F) WATER, TO ASSURE PRODUCT IS BEING COMPLETELY DISSOLVED AS IT IS ADDED.
UNKNOWN RESIDUE.

PRODUCT: CAUSTIC SODA LIQUID (ALL GRADES)

Re: Chiller Installation for Premises Located at:
12100 Rivera Road
Whittier, CA 90606

Dear Debbie:

It has been brought to our attention that Eastman Kodak Company would like to install a chiller at the above referenced premises.

Pacific Gulf Properties will authorize Certified Air to cut a hole in the necessary wall, which will enable the new chiller to be installed pursuant to the modifications indicated in the attached drawings.

Please contact me at (714) 899-6006 if you have any questions.

Sincerely,

PACIFIC GULF PROPERTIES INC.

Jaime Ervine
Property Manager

Scott Williams
Eastman Kodak Company
12100 Rivera Road
Whittier, CA 90606

Dear Mr. Williams:

Flow Monitoring System Calibration Conducted on 1/18/2001
Permit No. 01658

12100 Rivera Road
Whittier, CA 90606

The Sanitation Districts have reviewed the calibration report recently submitted by your company for the above situs address and permit number. The information submitted is in compliance with the Districts' flow monitoring system maintenance and calibration check requirements. The next instrumentation calibration must be conducted by January 15, 2002 and the calibration report must be submitted to the Districts within thirty (30) days from the date of the calibration.

Thank you for your cooperation. If you have any questions about this letter, please contact me at extension 2923. Enclosed are the calibration report forms for your future use.

Very truly yours,
James F. Stahl

Subject: Effluent Flow Meter Calibration at:
Eastman Kodak Company

I. W. Permit No. 1658

Dear Mr. Giljum:

Enclosed is our report on the effluent flow meter hydraulic calibration completed at the subject facility on January 18, 2001. The calibration was conducted in accordance with the requirements of the Sanitation Districts, and the meter was determined to be operating within the specified ±5% accuracy limits throughout the normal operating range.

If you have any questions regarding this calibration report, please contact me directly, or Mr. Scott Williams at Eastman Kodak Company.

Sincerely,

Firas Tsipena, P.E.

FLOW MONITORING SYSTEM CALIBRATION CHECK RECORD

Company Name: **Eastman Kodak Company** I.W. Permit No. **1658**

Discharge Address **12100 Rivera Road** **Whittier, CA 90606**

Mailing Address: **12100 Rivera Road** **Whittier, CA 90606**

Flow Monitoring System Description (state type, brand and size of primary element and sensor):

Primary Element: **30 Degree V-Notch Weir (Non-Standard)**

Instrumentation: **ISCO 4230 Bubbler Flow Meter**

Recorder's 100% span: 50 GPM

Totalizer Units: 1 Gallons per Count

Sampling Signal Contact Closure Frequency: 1 closure per **10** gallons discharged

Current Discharge Rate as Determined by Calibrating Eng. Average **10 *** GPM Peak **20 ***

Calibration Check Results: Date **1/18/01** Type of Calibration: **Hydraulic**

Calibrating System		Existing Meter				Error (%)	
Flow Rate (GPM)	Total Discharge (Gallons)	Primary Element's Head	Flow Rate (GPM) Indicator	Recorder	Total Discharge (Gallons)	Recorder	Totalizer
6.6	20.9	0.198	6.5	6.5	20.0	-1.5%	-4.3%
28.3	92.0	0.369	29.9	29.0	96.5	2.5%	4.9%
47.5	150.5	0.447	47.4	47.0	144.2	-1.1%	-4.2%

A copy of all data collected and any calculations performed must be attached to this form

Method of Calibration (attach additional sheets if necessary) :

Fresh water was discharged through a 1" test meter into the weir box. The test flow rate and volume were compared to the existing recorder and totalizer readings to determine the system accuracy.

Corrective Measures(Describe condition of flow meter prior to calibration and state if any adjustment were made):

None were required.

*** Estimated**

FLOW MONITORING SYSTEM

CERTIFICATION OF CALIBRATION CHECK

(Certification of Test Results by a California Registered Professional Engineer)

CERTIFICATION OF TEST RESULTS BY A CALIFORNIA REGISTERED PROFESSIONAL ENGINEER

I hereby certify that I am knowledgeable in the field of wastewater flow measurement and that I have supervised the calibration of the flow monitoring system as described on the previous page and also have reviewed and approved all details of the method of calibration. I consider the calibration method and procedures used to be technically sound, and assume professional responsibility for the validity and accuracy of the results reported.

REGISTERED PROFESSIONAL ENGINEER FIRAS R. TSIPENA C57055 CIVIL STATE OF CALIFORNIA

(Signature) 1/30/01 (Date)

Firas R. Tsipena, P.E.
(Calif. RCE No. C57055, Expires 6/30/01)

CERTIFICATION OF TEST RESULTS BY AN ADMINISTRATIVE OFFICIAL OF THE COMPANY

Eastman Kodak Company (Company Name) 1658 (I.W. Permit No.)

I hereby certify that the flow monitoring system certified as properly calibrated above is so arranged and operated, so as to accurately measure and record the industrial wastewater flow to the sewer system.

JAMES F. STAHL
Chief Engineer and General Manager

September 6, 2000
File: 18-00-1658
Account No. 1484312

Mr. Mario Irizarry
Eastman Kodak Company
12100 Rivera Road
Whittier, CA 90670

Dear Mr. Irizarry:

Flow Monitoring System Deficiency, I.W. Permit No. 1658

During a routine sampling of the wastewater discharge at your facility on August 1-2, 2000, a Sanitation Districts' Industrial Waste Monitoring Crew member was unable to obtain access to the sampling point (flowmeter). Availability of access to the sampling point is a condition of your wastewater discharge permit; thus denial of access is a violation of the ***Wastewater Ordinance***.

The Sanitation Districts' wastewater monitoring requirements, as established under the provision of ***Section 206*** of the ***Wastewater Ordinance***, specify that wastewater dischargers shall provide immediate access to all related sewage facilities.

A statement of the preventative measure you intend to take in the future must be submitted to Wilfrido Mejia of the Sanitation Districts' Industrial Waste Section within 30 days of the date of this letter. A minimum of three contact persons must be listed, one of which will always be available. Please note that unavailability of any company contact person is not an acceptable reason to deny access. Immediate access must be provided during all business hours and discharge times.

It should be noted that the above deficiency must be corrected within 30 days of the date of this letter to avoid the initiation of enforcement actions against your company.

For additional information concerning the flow monitoring requirements, please refer to the Sanitation Districts' "Industrial Wastewater Flow Measurement Requirements," copy enclosed. If you have any questions regarding this matter, please contact Wilfrido Mejia at (562) 699-7411 extension 2958.

Very truly yours,

James F. Stahl

Mr. Wilfrido Mejia
County Sanitation Districts of Los Angeles County
P.O. Box 4998
Whittier, Ca. 90607-4998

Mr. Mejia –

In response to the 'Flow Monitoring System Deficiency' letter dated September 6, 2000 (file: 18-00-1658), I would like to make the following comments:

- Available access to the sampling point of our clarifier is completely unrestricted. There is clear access via the Chetle street entrance to the property.
- While there is no direct access with regards to the flow meter without entering the facility, there is a sample pacing socket available to the monitoring crew member within three feet of the sample box. This socket may be used to down load flow data directly from the flow meter.
- If a need arises to directly access the flow meter or other related sewage facilities, you may reach myself, Doug Bell or Lois Castronova for assistance. We may be contacted by entering our 'Will Call' office on the east side of the building (enter from Rivera Rd.) and asking for us or by dialing one of the following extensions:

  Scott Williams – ext. 2410
  Doug Bell – ext. 2404
  Lois Castronova – ext. 2487

- I would like to request your records be updated to indicate myself as the primary point of contact for this facility with regards to any questions the Sanitation District may have. My direct phone number is: 562-789-2410.
- Lastly, this matter may have been the result of unfamiliarity with our facility and operation by the waste monitoring crew member whom call on us August 1-2, 2000. I know we have been called on by Georgia Blaszchak in the past and there has never been any problems or issues noted.

If there are any further concerns or questions, please do not hesitate to contact me directly. Thank you for your assistance in this matter.

Scott Williams

Dear Mr. Williams:

Flow Monitoring System Deficiency, IW Permit No. 1658

During routine sampling of the wastewater discharge at your facility on **March 18, 2004**, a Sanitation Districts' Industrial Waste Monitoring Technician observed the following deficiency:

_____ Sampling pacing socket inoperable.

__✓__ Pulse indicator inoperable.

_____ Contact closure rate (pulse rate) and totalizer multiplier not posted.

_____ Flowmeter inoperable.

_____ Unable to obtain access.

__✓__ Other: Specifically, the contact closure rate posted appears to be incorrect. Using the posted rate the Districts' sampler overflowed. Please check and post the correct pulse interval and totalizer multiplier.

The Sanitation Districts' *Wastewater Ordinance*, Section 414C requires that all permitted industrial wastewater dischargers shall install and maintain a monitoring facility for wastewater sampling. In addition, this monitoring facility may include wastewater flow measurement equipment, automatic flow-proportional sampling equipment and automatic wastewater analysis and data recording equipment. Failure to comply with these requirements to install or maintain this equipment is a violation of the Wastewater Ordinance and therefore subject to enforcement actions against your company. In order to prevent enforcement actions the above referenced deficiency must be corrected by **May 19, 2004**.

If you have any questions regarding this letter please call Robert M. Wienke at (562) 699-7411, extension 2905.

Your cooperation in complying with Sanitation Districts' requirements will be appreciated.

Very truly yours,

James F. Stahl

FLOW MONITORING SYSTEM CALIBRATION CHECK RECORD

Company Name: **Eastman Kodak Company** I.W. Permit No. **1658**

Discharge Address **12100 Rivera Road, Whittier, CA 90606**

Mailing Address: **12100 Rivera Road, Whittier, CA 90606**

Flow Monitoring System Description (state type, brand and size of primary element and sensor):

Primary Element: **30-Degree V-Notch Weir**

Instrumentation: **ISCO 4230 Bubbler Flow Meter**

Recorder's 100% span: **50** GPM

Totalizer Units: **1** Gallons per Count

Sampling Signal Contact Closure Frequency: 1 closure per **10** gallons discharged

Current Discharge Rate as Determined by Calibrating Eng. Average **10 *** GPM Peak **20 *** GPM

Calibration Check Results: Date **1/10/03** Type of Calibration: **Instrumentation**

Calibrating System		Existing Meter				Error (%)	
Flow Rate (GPM)	Total Discharge (Gallons)	Simulation Head (ft)	Flow Rate (GPM) Indicator	Recorder	Total Discharge (Gallons)	Recorder	Totalizer
4.92	15.2	0.17	4.80	5	15.3	1.6%	0.7%
12.7	39.1	0.26	13.1	13	40.4	2.4%	3.3%
24.6	75.8	0.34	24.6	25	78.1	1.6%	3.0%
38.2	118	0.41	39.6	39	122.1	2.1%	3.5%
45.1	139	0.44	46.4	46	144.0	2.0%	3.6%

A copy of all data collected and any calculations performed must be attached to this form

Method of Calibration (attach additional sheets if necessary) :

Various flow rates were simulated by placing the bubbler tube at different heights in a vessel of water. The theoretical volume and flow rate were compared to the existing meter totalizer volume and recorder flow rate to determine the system accuracy.

Corrective Measures(Describe condition of flow meter prior to calibration and state if any adjustment were made):

Calibration conducted after repair of flow meter. Zero was set.

*** Estimated.**

Flow Monitoring System Maintenance
Required and Recommended Activities
(Applicable to open channel flow meters)

Required Activities

- Clean Primary element (flume or weir plate) frequently to prevent buildup of solids.
- For bubbler meters, clean tube frequently to prevent partial or complete plugging
- For weir systems, clean weir box as necessary to prevent accumulation of solids.
- Record flow meter totalizer reading at least once every two weeks. Record maintenance activities in a log book.
- Inspect system frequently. Look for signs of sewer back-up, solid build-up, excessive turbulence, foam, excessive steam, etc. Investigate and take corrective action.
- Perform routine flow meter accuracy and system zero checks.
- Conduct annual calibration and certification of the system.

Recommended activities

- Clean primary element (flume or weir plate) at least weekly
- For bubbler systems, purge bubbler tube using high-pressure compressed air at least weekly. Clear bubbler tube using wire at least once every two weeks.
- Perform routine flow meter accuracy and system zero checks at least once every two months.
- Record both the wastewater flow meter readings and the city water meter readings at least weekly. Compare the water consumption to the wastewater discharge for the same period at least monthly. Take corrective action if the relationship between discharge and consumption is erroneous. For most facilities the discharge is typically 75%-95% of consumption. If collection of city water meter readings is difficult, compare the wastewater discharge to the water consumption shown on the water bills, for the same period.

Monthly comparison of water consumption and wastewater discharge is highly recommended. It alerts the discharger to potential flow meter errors at an early stage. Please contact Enviro-Flow immediately if discrepancies are discovered. It is the responsibility of the discharger to maintain the flow meter in good working condition. The Sanitation Districts may not accept the use of the adjusted-metered water supply method in lieu of the effluent flow meter readings, simply because the recorded discharge exceeds the water consumption.

FLOW MONITORING SYSTEM

CERTIFICATION OF CALIBRATION CHECK

(Certification of Test Results by a California Registered Professional Engineer)

CERTIFICATION OF TEST RESULTS BY A CALIFORNIA REGISTERED PROFESSIONAL ENGINEER

I hereby certify that I am knowledgeable in the field of wastewater flow measurement and that I have supervised the calibration of the flow monitoring system as described on the previous page and also have reviewed and approved all details of the method of calibration. I consider the calibration method and procedures used to be technically sound, and assume professional responsibility for the validity and accuracy of the results reported.

(Signature) 1/28/03 (Date)

Whittier, CA 90602

Dear Mr. Miller:

Industrial Wastewater Discharge Permit No. 1658R-4

Eastman Kodak Company
12100 Rivera Rd.
Whittier, CA 90606

Enclosed are two (2) copies of the approved Industrial Wastewater Discharge Permit for the subject company. This permit application was submitted in accordance with Ordinance requirements to apply for a permit revision upon a substantial decrease in wastewater quantity and in accordance with Federal regulations outlined in 40 CFR Part 403.8 that require all Industrial Wastewater Discharge Permits for significant industrial users to be renewed every five (5) years. Please review these for compliance with your requirements, and retain the copies you require for your files. The applicant's copy of the approved Industrial Wastewater Discharge Permit, along with a copy of this letter and requirement list, should be forwarded to the applicant. A copy of this letter is forwarded to the applicant as notification of the Districts' permit requirements, which are in force from the current date. If any additional permit requirements are issued to the applicant by your agency, copies should be forwarded to the Districts for our records. Existing plans currently on file were used for evaluation purposes.

Approval of the permit is subject to compliance with all applicable Ordinance requirements, and upon the items indicated on the attached requirement list. Failure to comply with all items on the requirement list, invalidates this approval and issuance. Invalidation of this permit will result in the applicant being deemed to be operating without a valid permit and subject to immediate discontinuance of sewer services for industrial operations. Successful compliance with all conditions of approval will result in a formal approval that will expire five (5) years from the date of this letter.

Recycled Paper

If you have any questions concerning these requirements, please call Jyoti Banaji of the Districts' Industrial Waste Section at extension 2906.

Very truly yours,

James F. Stahl

INDUSTRIAL WASTEWATER DISCHARGE PERMIT

REQUIREMENT LIST

COMPANY NAME: Eastman Kodak Company

INDUSTRIAL WASTEWATER DISCHARGE PERMIT NUMBER: 1658R-4

ACCOUNT NUMBER: 1484312

DATE OF APPROVAL: July 9, 2003 EXPIRATION DATE: July 9, 2008

The approval and issuance of this permit is being made conditionally and subject to Eastman Kodak Company being in compliance with all indicated items on this list. Satisfactory evidence of compliance with these conditions should be supplied to the Districts where requested. Satisfactory evidence will consist of a minimum of written notification signed by a responsible company official, and in some cases may involve the submission of additional drawings and data, or verification by a Districts representative. Failure to comply with all items on the requirement list, including all deadlines specified, invalidates this approval and issuance. Invalidation of this permit will result in Eastman Kodak Company being deemed to be operating without a valid permit and subject to immediate discontinuance of sewer services for industrial operations.

1. This Industrial Wastewater Discharge Permit is issued only for the discharge of treated wastewater from aqueous photo chemicals from damaged containers, cooling tower and boiler blowdown. The discharge of any other type of waste will require prior approval from the Districts. This approved permit will expire five (5) years from the date of the accompanying transmittal letter.

2. The permittee is required to notify the Districts of any change in the status of the subject facility, if ownership or operating responsibility changes, or if the industrial waste connection is legally abandoned.

3. A new permit application must be submitted when there is a significant change in wastewater quantity (25 percent or more) or quality from that given in the approved permit information. The completed application should be submitted to the local governmental agency for initial processing prior to Districts' review. Approval must be obtained prior to any construction of new facilities.

4. Waste haulers reports must be obtained and kept on file for a period of at least four (4) years for any solid wastes from the wastewater pretreatment system and liquid wastes leaving the plant other than in the sewer system. These reports must be made available to representatives of the Districts upon request.

5. All wastewater discharged to the sewer must have a temperature lower than 140°F (60°C) and a closed cup flash point greater than 140°F (60°C).

6. All wastewater discharged to the sewer must not contain over 0.1 milligram/liter of dissolved sulfides.

7. The pH of the wastewater must be maintained at or above 6.0 at all times. Proper neutralization procedures must be observed to assure that this limit is not violated.

8. Numerical limits have been established by the Districts for the maximum concentrations of heavy metals, and other toxic materials, permissible in an industrial discharge to the public sewers. The limits are those shown in the following list of "Industrial Wastewater Local Effluent Limitations." Eastman Kodak Company is advised that any discharge in excess of these limits requires corrective action by the discharger. Penalties applicable to violations of these limits will be strictly enforced by the Districts.

Mercury	2
Nickel	12
Silver	5
Zinc	25
Cyanide (Total)	10
Total Identifiable Chlorinated Hydrocarbons**	Essentially None

* - Maximum concentration at any time

** - Total Identifiable Chlorinated Hydrocarbons (TICH) comprise:
Aldrin and Dieldrin
Chlordane (cis & trans), trans-nonachlor, oxychlordane, heptachlor and heptachlor epoxide
DDT and derivatives: p, p', and o, p' isomers of DDT, DDD, and DDE
Endrin
HCH: sum of α, β, γ, δ isomers of hexachlorocyclohexane
Toxaphene
Polychlorinated biphenyls (PCB's)

9. Regular calibration and maintenance of the existing flow measurement system (30 V-notch weir and bubbler flow meter) will be required in accordance with the enclosed "Industrial Wastewater Flow Measurement Requirements." Specifically, hydraulic calibrations of the system shall be performed at least once every three years while instrument calibrations shall be performed at least once per year.

10. The permittee must implement a regular program of cleaning, checking and maintaining all components of the existing flow measurement system. This program must include frequent cleaning of the primary element and probes, performing independent checks and calibrations to evaluate the system's accuracy, etc. All maintenance performed on the flow measurement system must be recorded on the enclosed "Flow Monitoring System Maintenance Records".

11. The "Flow Monitoring System Maintenance Records" form must be maintained by the company or the consultant at the recorder location, or another location easily accessible for inspection by Districts' employees. Maintenance activities, recorded on the above mentioned form, shall be submitted to the Districts with all calibration report submittals. These activities include: checking the "zero flow" level of the system, cleaning the system (including the primary element, depth measurement probe, and upstream/downstream piping), changing the recorder's chart, performing independent checks to evaluate the system's accuracy, etc. Furthermore, the maintenance records must contain totalizer readings together with the date and time that the data was gathered. This information must also be concurrently noted on the recorder chart, which should be annotated on a regular basis (preferably daily but no less than weekly).

12. The automatic continuous pH recording instrument must be maintained to monitor the pH of the wastewater discharge stream entering the public sewer. The probe for the pH instrument must be located in the sampling box downstream from the clarifier to monitor and record final effluent pH. PH records for at least the previous 180 days of operation must be kept on file at the discharge address and must be made available for inspection by representatives of the Districts at any time during business hours. If pH records indicate periods of acidic or highly alkaline discharge, the permittee may be required to upgrade the existing pH neutralization system.

    The pH equipment must be regularly calibrated and maintained in good working order. The probe and recorder must be in place and operating 24 hours per day, every day of the year, except for periods of routine pH equipment maintenance. During periods of extended maintenance, either calibrated back-up equipment must be used or hourly pH readings must be manually recorded during operating hours.

    On a weekly, or more frequent basis, the pH chart must be annotated with the following information: date, time, name of person annotating the chart, and the pH reading from a secondary sensing device such as pH paper or an alternate calibrated pH meter. In addition, whenever the equipment is calibrated, the chart must be annotated with the above information and the word "calibration". Periods of maintenance or abnormal operation should be indicated on the pH chart and detailed in the facility's log book. The pH chart paper should have a scale of 0 to 14.

13. Pretreatment data for each batch of process solution discharged must be kept in a log book that must be made available for inspection by representatives of the Districts at any time during business hours. This log book must contain the following information:

    a) The date and time a batch treatment begins
    b) The type of treatment provided
    c) The initial and final pH of the wastewater
    d) The date and time a batch is discharged to the sewer
    e) The volume of wastewater discharged
    f) Initials of the operator with any comments on difficulties encountered during treatment

14. The existing sampling box on the west side of the building downstream from the V-notch weir and clarifier is hereby designated as the legal sampling point for Eastman Kodak Company. The permittee is responsible for maintaining and cleaning the sampling point to prevent any build-up of oil and grease, sediment or sludge; failure to do so does not invalidate sampling test results. Analytical results from samples taken from this location according to accepted sampling procedure shall be accepted as binding. Safe and convenient access to the sampling point must be provided for representatives of the Districts. Should Districts' staff determine that the sampling location is unsafe, difficult to access or require modification, Eastman Kodak Company must propose alternatives which will provide a sampling facility acceptable to the Districts.

15. The Districts' personnel may provide a split of any composite sample collected if sufficient sample volume is available. Districts' personnel may also provide split, concurrent, or sequential grab samples. These samples will be left with a designated company representative. If the designee is not available, these samples will be left with whomever is available.

    The permittee is required to follow appropriate preservation techniques, analytical procedures, and holding periods specified in 40 CFR 136, if the analytical test results from these samples are to be used for compliance or surcharge reporting purposes. Failure to follow the prescribed procedures will invalidate the test results.

16. The permittee is advised that additional industrial wastewater pretreatment equipment may be required if inspection or monitoring indicates prohibited materials are discharged to the public sewer.

17. Any plans for changes in equipment or processes must be submitted (for approval before implementation) to the Districts.

18. The permittee should provide trained personnel for proper operation and regular maintenance of all components of the proposed pretreatment system to ensure compliance at all times with applicable industrial wastewater effluent limits. The permittee should also maintain an adequate supply of treatment chemicals for key components of the pretreatment system.

19. Self-monitoring of the industrial wastewater must be performed at the intervals indicated on the enclosed Self-Monitoring Requirement Form and reported on the Self-Monitoring Report (SMR) form. The Districts will send the necessary SMR forms before each reporting period. All indicated

analyses must be performed by a State or Districts' certified laboratory. The certification section of the SMR form must be completed and signed by a responsible company official. For each reporting period, the completed SMR form and the corresponding laboratory report must be submitted to the Districts' Industrial Waste Section no later than the due date indicated on the form. The wastewater samples analyzed must be collected in such a way that they are representative of the total discharge generated by a typical day's operations. Each representative sample (composite and/or grab) should be collected over one 24-hour period and analyzed for all parameters in Table 1 of the Self-Monitoring Requirements form. All representative samples must meet all applicable limits. It is the responsibility of Eastman Kodak Company to submit results from any additional self-monitoring, and to notify the Districts of any other toxic materials which are known to be present in the wastewater.

20. If Eastman Kodak Company is required or chooses to file a Long Form Surcharge Statement, surcharge tests of the industrial wastewater must be performed at the intervals indicated on the enclosed table of Surcharge Test Frequency and submitted annually with the wastewater treatment surcharge statement. Eastman Kodak Company is reminded that the surcharge testing requirements are independent of the tests for self-monitoring reports required in Item No. 19.

21. If the wastewater flowrate and strength data indicate an increase in the sewerage capacity unit usage by 25 percent or more, Eastman Kodak Company may be required to revise their permit, and will be required to pay a corresponding connection fee should existing sewerage baseline capacity units be insufficient to accommodate discharge at that time.

22. Any floor drains shall have grated covers with 3/8" maximum openings to prevent larger particles from clogging the sewer.

23. In the event of the discharge of any prohibited waste, excessive quantities or concentrations of any restricted waste, or of the discharge of material not covered under this permit, the company must immediately notify the Districts by calling 562-699-7411, extension 2907, during office hours or the Long Beach Pumping Plant, 562-437-6520, during non-office hours.

    The Districts must also be notified of any circumstances affecting plant processes or facility operations that may potentially result in the discharge of similarly prohibited or restricted wastes, including but not limited to the malfunction, upset or improper operation of plant processes, pretreatment systems, spill containment facilities, or diversion/bypass mechanisms. Failure to immediately notify the Districts of any such event or condition is a violation of the *Wastewater Ordinance*.

24. The accompanying Sanitation Districts of Los Angeles County Industrial Wastewater Discharge Permit Fact Sheet **must** be visibly posted by the permittee near the legal sampling point.

25. This approval of the existing pretreatment system by the Districts is for only the general concept presented. The proper maintenance and operation of the system is the responsibility of the permittee and his contractors.

SANITATION DISTRICTS OF LOS ANGELES COUNTY
INDUSTRIAL WASTEWATER DISCHARGE PERMIT FACT SHEET

This fact sheet MUST be visibly posted by the discharger.

COMPANY NAME	Eastman Kodak Company	**I.W. NO.**	1658R-4

PERMIT EVALUATION SUMMARY

Company Name Eastman Kodak Company Date January 9, 2003

Evaluation Summary By Jyoti Banaji I.W. No. 1658R-4

Account No. 1484312 Flow, gpd 1,120 Peak Flow, gpm 29

District No. 18 SIC No.(s) 5043

EPA Category Non-categorical Code SNPHOT BMR Submitted: No

Permit Type: Revision and five year renewal Existing Connection: Existing Existing Discharge: Yes

Situs Address: 12100 Rivera Rd., Whittier, CA 90606

1. **Type of Industry and Process Description.**

   Company warehouses photo finishing chemicals for other Kodak companies. Aqueous based photochemicals from damaged containers and spent photo finishing chemicals are discharged to the public sewer. The chemicals are mainly corrosives and a list provided by the company is enclosed with the package. Existing plans on file were used for evaluation.

2. **Reason for Submittal.**

   Five year renewal and revision in flow due to greater than 25% decrease. There are no changes in the operations.

3. **Listing of Other Permits at Situs.**

   None - IW 3554 was voided on 02/14/96.

4. **Brief Permit History (previous approvals and/or rejections).**

   APP 11/13/97 at 1793 gpd (Company classified as INPHOT with limited SMR requirements).
   PRV 08/15/96 Permit reactivated due to high strengths. (Company discharges spent chemicals.)
   VPN 02/14/96 Exemption from filing an IW permit due to low flow.
   APP 04/04/86 at 11,400 GPD (Company updated to SNPHOT on 09/16/94 per ATH.)
   REJ 09/30/85
   APP 11/16/84 at 4106 GPD
   REJ 04/03/84
   AAD 08/14/79 Addendum for the installation of a new clarifier with sample box.
   AAD 06/19/79
   APP 05/14/74 at 5442 GPD

5. **Inspection/Enforcement Status.**

   The Inspection reports for 4/17/2000 and 4/19/2000 state that there was heavy sulfide odor in the clarifier. However, there are no such reports before and after this period. Inspection reports for past five years (1998-2003) show normal operation at the facility. Two samples SJ83268 and SJ86026 were analyzed in March and April 2003 respectively

The company's last violation was in 1995 for non-submittal of permit renewal application. In 1997, the company had violated the dissolved sulfide limit but was not cited for it. The company is not under enforcement at this time.

6. Sources of Wastewater and Flow Verification.

Company discharges wastewater only when it neutralizes liquid products(fixer or developer.). Neutralization is done when containers leak or are damaged in the warehouse. Third stage of clarifier is used as a neutralization process. A V-notch weir is up stream of the 3 stage clarifier. pH probe is in the sampling box. Effluent pH recorded on pH chart.

IW producing operations include chiller/cooling tower bleed off and boiler blowdown. In addition, aqueous based photochemicals from damaged containers are also discharged. Any chemical which cannot be re-boxed or disposed of on-site is transported to Rochester, NY where it is incinerated.

The company was required to install a flowmeter downstream from the chemical dump station at the time of the permit renewal in 1997. Therefore, flow meter data is reported in Form B. This flow is also identical to the Surcharge data.

Flowmeter data reported for July 2001-June 2002 - 0.28 MGY

For 250 working days, the average flow is 1,120 gpd. For a 9 hour operation, the average flow rate is 2 gpm. For a P/A ratio of 2, the peak flow rate would be 4 gpm, however, the company has reported a peak flow of 29 gpm in the permit application, that has been approved by the City of Whittier (local agency).

7. Schematic Flow Diagram or List of Pretreatment Systems.

There is no processing at the facility. For the occasional 1 to 5 gallon photochemical box contents that are disposed through the chemical dump room, there is a three stage clarifier and manual pH neutralization.

Boilers: All floor trenches surrounding the boilers are covered by means of metal plates. The blowdown is collected in a drum and transferred to the chemical dump for disposal into the clarifier and sample box.

Chillers/Cooling Towers: New above ground 2-inch PVC line runs directly to the chemical dump from the two existing cooling towers. The bleed off flows directly to the chemical dump for disposal into the clarifier and sample box.

8. Approved Sampling Point Location And Description.

Existing sample box on the west side of the building, downstream from the V-notch weir and clarifier.

9. Other (Spill containment, Rainwater, Groundwater, Special Limits, etc.)

Spill Containment:

No spill containment is currently needed. Inspection report from 4/19/2000 suggests that there is no spill containment required, because the caustic and acid for neutralization are stored in 55 gallon drums. Per Districts' current spill containment policy, the company is not required to be on spill containment program.

Rainwater Diversion:

Rainwater diversion is not needed since all operations occur indoors.

pH Meter and Recorder:

The company has installed an automatic pH meter and recorder in a room, but the pH probe is installed in the sampling box. The company also has pH neutralization in the third stage of the clarifier.

Assessor's Map Book No.:

The Assessor's Map Book Number entered in the Districts' mainframe Surcharge system is incorrect. The correct MPP No. is 8168-028-003 per Metroscan records. A parcel verification by the company contact is enclosed with the package.

Classification:

The company is classified as a Non-categorical Significant Industrial User due to its COD concentration. The company's sample obtained on 4/8/02 (SJ 64299) by the Districts showed very high COD and suspended solids concentration. This raised a question whether the company should be a SIU or Nonsig company. The company's contact Scott Williams informed me that it was a rare incident when the company dumped several leaking photochemical containers at the same time. However, the company has historically had COD concentrations much higher than the Districts' short form averages. In order to verify the company's current operations, two new grab samples were collected by Inspector Neil Tran on 3/3/03 (SJ83268) and 4/24/03 (SJ86026). The analyses results show high COD concentration. These samples verify that the company is likely to discharge high COD effluent on a regular basis. Therefore, the EPA code is recommended to be changed from INPHOT to SNPHOT. The company's historical and current SMR and Districts' sample results are shown below.

Log#	Date	COD (mg/l)	SS (mg/l)	Flow (gpd)
SMR	9/11/96	10911	130	120
SMR	3/3/97	39830	494	120
SMR	7/9/97	29975	270	120
SMR	10/14/98	197	12	690
SMR	12/1/99	5998	90	151
SJ12572	11/1/99	164	124	
SMR	8/15/00	1329	13	1408
SJ29553	8/1/00	1450	<20	
Surcharge	12/12/01	3941	400	
Surcharge	2/05/02	6531	254	
Surcharge	6/04/02	4480	6	
SMR	4/9/02	9530	3440	233
SJ64299	4/8/02	29800	116200	
SMR	4/9/03	354	<6	117
SJ83268	3/3/03	3050	65	
SJ86026	4/24/03	11500	49	

SMR:

The company was classified as INPHOT when the five year renewal was approved in 1997 and the company was required to do yearly self monitoring for COD, SS, sulfide, flow, pH and silver. Although, the company's flow is less than 5000 gpd, based on the results above, the company is recommended to be SNPHOT code with SMR requirement for flow, COD, SS, pH, S, Ag and Hg once every six months.

Baseline:

The company has a baseline of 56.87 CU. The XYZ date is December 1981. Baseline is established from Surcharge (76-77) and connection fee payment. Calculations are based on new formula. The company released 11.29 CU to pacific gulf properties. The baseline reflects this deduction.

Connection Fee:

Based on an annual flow of 0.28 MGY for 2001-2002 (1,120 gpd), 48 employees, 6,121 mg/l Average COD and 1025 mg/l average suspended solids concentration, and 250 working days per year, the company requires 16.80 CU. Since the required capacity units are much less than the available baseline units (56.87 CU), no connection fee is due.

Recommend: Approval

23	/ /									
24	/ /									
	Annual Average					Annual Total		0.22	15.84	5.28

NOTES:

1/ Frequency of surcharge parameter measurements should follow the requirements in Table A, according to the total yearly flow volume of the discharge outlet. If more than 24 tests are required or performed during the fiscal year, please attach additional sheets.

2/ Mg/l corresponds to milligrams per liter - also equivalent to PPM or parts per million. All sample results must be reported in whole numbers.

3/ Companies determining wastewater flows by an effluent flow meter must have a value for flow volume in this column for every required sampling time period. These flow volumes should be used to calculate the quantities of COD and SS discharged.

4/ Companies using metered or adjusted metered water supplies should calculate the annual average for COD and SS and use these values and the total annual flow volume to calculate the total annual wastewater quantities of COD and SS discharged.

5/ Submit copies of laboratory analyses for ALL 24-hour composite samples which were analyzed for either COD or SS concentrations.

6/ The flow-weighted COD and SS in thousands of pounds is determined by:

[Flow Volume Discharged in Millions of Gallons (to two decimal places)] X [Chemical Oxygen Demand or Suspended Solids Concentration in Milligrams per Liter (mg/l)] X [8.34 / 1,000] = [Thousands of Pounds of Chemical Oxygen Demand or Suspended Solids (to two decimal places)]

Dear Mr. Williams:

Requirement for Batch Discharge Notification
Industrial Wastewater Discharge Permit No. 1658R-4

Eastman Kodak Company
12100 Rivera Rd.
Whittier, CA 90606

The Districts' Industrial Waste Monitoring staff have been attempting to collect an industrial wastewater sample from your facility in the past several months but have been unsuccessful due to the intermittent discharge from your facility. In order to facilitate collection of sample in the future, your company is now required to notify the Districts at least 24 hours in advance of an anticipated discharge from permit number #1658R-4. Notification should be made by telephone to (562) 699-7411 x2907. Batches should be discharged Monday - Thursday only. (Notification for Monday discharges should be made by 3:00 p.m. on the previous Friday). If the Districts have obtained adequate samples, this notification requirement may be temporarily suspended. Eastman Kodak Company will be verbally notified of a suspension and given a date for resumption of the notification requirement.

If you have any questions concerning these requirements, please contact Jyoti Banaji of the Districts' Industrial Waste Section at extension 2906.

Very truly yours,

James F. Stahl

Recycled Paper

January 7, 2005
File: 18-05-001658
Account No.: 1484312

Mr. Scott Williams
Eastman Kodak Company
12100 Rivera Rd.
Whittier, CA 90606

Dear Mr. Williams:

Added Requirements to Industrial Wastewater Discharge Permit No. 001658

12100 Rivera Rd.
Whittier, 90606

Per a recent audit of the Districts' pretreatment program by the Los Angeles Regional Water Quality Control Board, the Districts are required to add the following requirements to Industrial Wastewater Discharge Permits (permits) of all Significant Industrial Users (SIUs). As your company is currently designated by the Districts as an SIU, the following requirements are added to your permit as of the date of this letter. These requirements supercede any similar requirements which may already be contained in your permit. All other permit requirements previously issued remain in effect. Compliance with the Districts' *Wastewater Ordinance* continues to be required as a condition of discharge.

Added Requirements:

1. Every person or permittee violating any provision of this Industrial Wastewater Discharge Permit (permit) or the Districts' *Wastewater Ordinance* (*Ordinance*) is guilty of a misdemeanor, and upon conviction is punishable as provided by law (California Health & Safety Code Section 4766 currently allows for a fine not to exceed $1000, or imprisonment for not more than thirty (30) days, or both. Misdemeanor violations of California Health & Safety Code Section 25189.5 currently allow for a fine not to exceed $100,000 and imprisonment not to exceed one year. Misdemeanor violations of the Clean Water Act, 33 USC 1319(c) currently allow for a fine not to exceed $25,000 and imprisonment not to exceed one year.) Each day during which any violation continues shall constitute a separate offense. The Chief Engineer is authorized to seek, through the office of the District Attorney of Los Angeles County or other appropriate authority, prosecution of criminal charges against any person violating any provision of the permit or the *Ordinance*. Violations of discharge limitations established under this permit or the *Ordinance* may also be violations of state and federal environmental laws which may be punishable as felonies and which may also carry substantial fines and penalties (California Health & Safety Code 25189.5 currently allows for a fine not to exceed $100,000 (except the fine can be up to $250,000 for great bodily injury or substantial probability of death) and imprisonment up to 3

years and 33 USC Section 13.19(c) currently allows for a fine not to exceed $1,000,000 for a first conviction and imprisonment of up to 15 years.)

In addition, any person or permittee who violates any provision of the *Ordinance* or any term or condition of any permit issued pursuant to the *Ordinance* or plan approval that prohibits or limits the discharge of any waste or imposes any pretreatment requirement shall be civilly liable to the Districts in the maximum sum provided by law for each day in which such violation occurs (California Government Code Section 54740 currently allows for civil penalties which include, but are not limited to, a fine of up to $25,000 per day of violation.)

2. The permittee shall maintain records of all information resulting from any monitoring activities required by 40 CFR 403.12, including self-monitoring reports and baseline monitoring reports. Such records shall include for all samples:

   A. The date, exact place, method, and time of sampling and the name of the person or persons taking the samples;
   B. The dates analyses were performed;
   C. Who performed the analyses;
   D. The analytical techniques/methods used; and
   E. The results of such analyses.

   The permittee is required to retain for a minimum of 4 years any records of monitoring activities and results (whether or not such monitoring activities are required by 40 CFR 403.12) and shall make such records available for inspection and copying by the Districts. This period of retention shall be extended during the course of any unresolved litigation regarding the permittee or when requested by the Districts.

3. Self-monitoring of the industrial wastewater must be performed at the intervals indicated on the Self-Monitoring Requirement Form. Required data must be reported on the Self-Monitoring Report (SMR) form. The Districts will send the necessary SMR forms before each reporting period. All indicated analyses must be performed by a State or Districts' certified laboratory. The certification section of the SMR form must be completed and signed by a responsible company official. For each reporting period, the completed SMR form and the corresponding laboratory report must be submitted to the Districts' Industrial Waste Section no later than the due date indicated on the form. The wastewater samples analyzed must be collected in such a way that they are representative of the total discharge generated by a typical day's operations. Each representative sample (composite and/or grab) should be collected over one 24-hour period and analyzed for all parameters in Table 1 of the Self-Monitoring Requirements form. All representative samples must meet all applicable limits. If the permittee is subject to EPA Categorical Pretreatment Standards, violations of effluent categorical limitations must be reported to the Districts within 24 hours of the discharger becoming aware of the violation ((562) 699-7411, extension 2907). Additional sampling and analysis must be conducted for all categorical parameters in violation. The results of the repeat analysis must be submitted within 30 days of becoming aware of the violation. It is the permittee's responsibility to submit results from any

additional self-monitoring, and to notify the Districts of any other toxic materials, which are known to be present in the wastewater.

4. In accordance with federal regulations found at 40 CFR Part 403.17, the permittee must not bypass required pretreatment equipment unless the bypass was unavoidable to prevent loss of life, personal injury or severe property damage and there were no feasible alternatives to the bypass and the permittee notified the Districts at least 10 days prior to an anticipated bypass or within 24 hours of an unanticipated bypass. Severe property damage does not include economic loss due to production delays. Feasible alternatives include use of auxiliary treatment facilities, retention of untreated wastes or cessation of production.

   The permittee shall submit oral notice of an unanticipated bypass that exceeds applicable categorical effluent limitations to the Districts within 24 hours from the time the permittee becomes aware of the bypass.

   A written submission shall also be provided within 5 days of the time that the permittee becomes aware of the bypass. The written submission shall contain a description of the bypass and its cause; the duration of the bypass, including exact dates and times, and, if the bypass has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the bypass. The Districts may waive the written report on a case-by-case basis if the oral report has been received within 24 hours.

   The Permittee may allow any bypass to occur which does not cause Pretreatment Standards or Requirements to be violated, but only if it also is for essential maintenance (i.e. pipe or pump failures) to assure efficient operation. However, routine maintenance should be conducted during normal periods of production downtime. Notification is not required for bypasses that do not result in federal categorical violations.

   The Districts will determine whether the permittee has met all bypass criteria above thus avoiding enforcement action for violation of federal categorical regulations. However, this does not relieve a discharger of the responsibility to comply with Districts' *Ordinance* or effluent limitations at all times. Any repair or maintenance costs to Districts' facilities associated with any bypass of pretreatment equipment will be borne by the permittee.

5. Upon request by the Districts, the permittee is required to develop a Slug Discharge Control Plan which complies with the Districts' Spill Containment Guidelines and includes, at a minimum, the following elements:

   A. Description of discharge practices, including non-routine batch discharges (non-routine batch discharges are not allowed unless specified as an approved discharge in the permit);
   B. Description of stored chemicals;
   C. Procedures for immediately notifying the Districts of slug discharges, including any discharge that would violate a prohibition under 40 CFR 403.5(b), with procedures for follow-up written notification within five days;

D. If necessary, procedures to prevent adverse impact from accidental spills, including inspection and maintenance of storage areas, handling and transfer of materials, loading operations, control of plant site run-off, worker training, building of containment structures or equipment, measures for containing toxic organic pollutants (including solvents), and/or measures and equipment for emergency response.

3. This plan must be maintained at the discharge location and must be made available for review by Districts' personnel. Copies may be required to be submitted to the Districts for review.

Facilities operating under a temporary permit are advised that such permits are considered fully enforceable legal control mechanisms. If your company is operating under a temporary permit, the following requirements are added to the temporary permit.

6. The temporary permit requires that the permittee apply for an Industrial Wastewater Discharge Permit within 30 days (of issuance of the temporary permit.) Failure to apply within the prescribed period may result in enforcement action against the permittee. Upon issuance of an Industrial Wastewater Discharge Permit, the temporary permit will become null and void. Under no circumstances will the temporary permit be valid for more than five years from the date of issuance. Failure of the discharger to obtain a permit before the five-year deadline may result in the discontinuance of sewer services for industrial operations.

7. The temporary permit is not transferable to a new business location or to a new business. The permittee must immediately notify the Districts in writing of any change in its name or legal capacity. The temporary permit shall be voidable by the Districts upon non-use, cessation of discharge, transfer of business ownership, or the issuance of a new permit for the same sewer connection.

If you have any questions concerning this letter, please contact the Industrial Waste Section at extension 2900.

Very truly yours,

James F. Stahl

Notice of Results of Sanitation Districts' Industrial Waste Monitoring

Attached please find the results of recent Sanitation Districts' wastewater sampling at your company's discharge sewer corresponding to the permit shown on the analysis sheet.

This sampling was made pursuant to Section 414 of the Sanitation Districts' *Wastewater Ordinance* as part of a random verification monitoring program conducted at significant dischargers of industrial wastes. The District' sample results are being provided to you to make you aware of any changes at your facility which may result in higher than anticipated industrial waste discharges to the sewerage system. It is your responsibility to investigate any differences in the wastewater sample results provided by the Districts and the results of your self-monitoring. For companies that file long form surcharge statements, these Districts-obtained sample results should be combined with your wastewater self-monitoring results on the annual wastewater treatment surcharge statement.

As stated in the Districts' *Connection Fee Ordinance*, after December 15, 1981 a 25 percent increase in wastewater discharge (quantity and/or quality) above your company's previous wastewater discharges during the 1976-77 through 1981-82 fiscal years may require that your company purchase additional sewer discharge rights. For wastewater capacity increases that occur during the 2006-07 fiscal year, this connection fee charge ranges from $1,560 to $3,190 for wastewater capacity increases equivalent to that of a typical single-family home (260 gallons per day).

These Districts-obtained sample results will be used, along with your wastewater self-monitoring results, in determining your capacity usage of the sewerage system and the validity of data submitted in your annual surcharge statement. Transmittal of these data to you at this time does not relieve your company of the responsibility to obtain all of the self-monitoring samples required in your Industrial Wastewater Discharge Permit.

If you have any questions about this program for furnishing industrial wastewater discharge information, please call Brent Perry at extension 2930.

Very truly yours,

Stephen R. Maguin

RE: 12100 RIVERA RD, WHITTIER CA 90606

I, the undersigned, being the Custodian or the Keeper of Records certify that a thorough search for the records you requested was carried out under my direction and control.

This search revealed no records.

It should be understood that this does not mean that the records you requested do not exist. It is possible th such records may be misfiled; exist under another spelling, name, or classification; or were not located. However, with the information furnished to our office, and to the best of our knowledge, no records were located.

If you have any questions regarding your request, please contact our office at (323) 890-7801.

Sincerely yours,

Samuel Kaddis, Deputy Health Officer

Dear Mr. Wechsler:

We have received your Public Records Act Request for records from the Department of Toxic Substances Control.

After a thorough review of our files we have found that no such records exist at this office pertaining to the site/facility referenced above.

We would like to inform you about Envirostor, a database that provides information and documents on over 5,000 DTSC cleanup sites. EnviroStor can be accessed at: http://www.envirostor.dtsc.ca.gov/public. Also, a computer is available in the Central Files of each DTSC Regional Office for use by community members to view EnviroStor.

If you have any questions, would like further information regarding your request or would like an appointment to visit Glendale's Central Files, please contact me at (818) 551-2886.

Sincerely,

Jone Barrio/jv
Regional Records Coordinator

Report:

On 3/6/02, I met with Mr. Scott Williams, HSE Coordinator, tel. 562-789-2410. According to Mr. Williams, the two spray booths with permit numbers M28672 and P68325 and the two boilers with permit numbers P50272 and P50273 were all removed from the facility several years ago. However, there are two 1.9mm BTU boilers installed in place of what was removed. There were two Model WEG-2000 boilers made by AJAX BOILER Inc. both model number WEG-2000 and serial numbers 83414 and 83415. I issued Mr. Williams a N/C # C74985 to send an application per Rule 222 using the application form that I provided. I left the facility.

PUBLIC RECORDS REQUEST FORM

Office Use Only

CONTROL NUMBER

☞ **ATTENTION REQUESTOR:** To expedite your request for District records, please fill out this form completely, and identify specifically the type of records you are requesting from the list below. Where applicable, a description of what you are requesting is advisable. **NOTE:** There is a limit of one facility or one site address per request, and three items may be checked off per request. Requests for records must be for clearly identifiable records in the District's possession, and for facilities within the District's jurisdiction. The District is not required by law to create a new record or list from an already existing record.

J02 07/31/98 SULFURIC ACID 48 - 93%

****
SECTION I. PRODUCT IDENTIFICATION
****

PRODUCT NAME: SULFURIC ACID 48 - 93%

MSDS #: P13493V

DATE ISSUED: 11/21/91

****
SECTION II. IDENTITY
****

CHEMICAL NAME: Sulfuric acid, Electrolyte grade Cesspool acid

CHEMICAL FAMILY: Mineral Acid, Inorganic acid

MOLECULAR FORMULA: H2SO4

CAS NUMBER: 7664-93-9 with more than 51% Sulfuric Acid
UN2796 with not more than 51% Sulfuric acid

HAZARD NUMBER: UN1830

WHMIS CLASSIFICATION: Class E - corrosive, Class D1A packaging group II

NFPA RATINGS:
Health - 3 (High)
Flammability - 0 (Minimal)
Reactivity - 2 (Moderate)
Water Reactive

NPCA-HMIS RATINGS:
Health - 3 (High)
Flammability - 0 (Minimal)
Reactivity - 2 (Moderate)

****
SECTION III. EXPOSURE LIMITS
****

TLV (ACGIH): 1 mg/m3 - 8 hr TWA
STEL: 3 mg/m3
PEL (OSHA): 1 mg/m3 - 8 hr TWA
AQUATIC TOXICITY: The 48-hour TLm in flounder is 100-300 ppm.

****
SECTION IV. PHYSICAL DATA
****

PHYSICAL STATE: Liquid
APPEARANCE: Clear and odorless
BOILING POINT: 48% - 250 deg. F 93% - 529 deg. F
FREEZING POINT: 48% - 30 deg. F 93% - -21 deg. F
VAPOR PRESSURE: <0.3 mm hg at 77 deg. F
VAPOR DENSITY: 3.4
EVAPORATION RATE: Less than 1
WATER SOLUBILITY: 100% soluble
pH: Less than 1

****
SECTION V. COMPONENTS
****

Sulfuric Acid CAS# 7664-93-9	Water CAS# 7732-18-5	Specific Gravity @ 60 deg. F
48%	52%	1.380
50%	50%	1.400
60%	40%	1.500
68-74%	31.26%	1.600
70%	30%	1.616
77.67%	22.33%	1.705
93%	7%	1.835

****
SECTION VI. FIRE AND EXPLOSION DATA
****

FLASH POINT: Will not burn, non-flammable

AUTOIGNITION TEMPERATURE: Not combustible

FLAMMABILITY LIMITS IN AIR (%): UEL: Not applicable LEL: Not applicable

HAZARDS: Reacts with most metals, especially when dilute, to give flammable, potentially explosive hydrogen gas. Follow appropriate National Fire Protection Assoc. (MFPA) codes.

EXTINGUISHING MEDIA: Use media appropriate for surrounding material. Use water spray to cool containers exposed to fire; do not get water inside containers.

SPECIAL INSTRUCTIONS: Evacuate personnel to a safe area. Keep personnel removed and upwind of fire. Generates heat upon addition of water, with possible spattering. Wear full protective clothing. Runoff from fire control may cause pollution. Neutralize runoff with lime, soda ash, etc. Wear self-contained breathing apparatus if fumes or mists are present.

****
SECTION VI. HAZARDOUS REACTIVITY
****

INSTABILITY: Stable, but reacts violently with water and organic materials with evolution of heat.

DECOMPOSITION: Releases sulfur dioxide at extremely high temperatures.

POLYMERIZATION: Polymerization will not occur.

MATERIALS TO AVOID: Vigorous reactions with water; alkaline solutions; metals, metal powder; carbides; chlorates; fuminates; nitrates; picrates; strong oxidizing, reducing, or combustible organic materials. hazardous gases re evolved on contact with chemicals such as cyanides, sulfides, and carbides.

****
SECTION VII. HEALTH HAZARD DATA
****

CAUSES SEVERE BURNS TO EYES, SKIN, AND ALL BODY TISSUE. EYE DAMAGE MAY BE PERMANENT. DESTRUCTION OF TISSUE MAY RESULT FROM DIRECT CHEMICAL REACTION WITH TISSUE, FROM THERMAL BURNS, AND FROM DEHYDRATION (REMOVAL OF WATER) OF T TISSUE.

ANIMAL DATA:
INHALATION 1 HOUR LC50: 347 PPM IN RATS
ORAL LD50: 2140 MG/KG IN RATS

THE CONCENTRATED COMPOUND IS CORROSIVE TO THE SKIN AND EYES OF ANIMALS CAUSING CORROSION OF MUCOSAL SURFACES. TOXIC EFFECTS DESCRIBED IN ANIMALS FROM SINGLE

EXPOSURES BY INHALATION INCLUDE RESPIRATORY IRRITATION.

EXPOSURE TO THE LIQUID BY SKIN OR EYE CONTACT MAY CAUSE EYE CORROSION WITH CORNEAL OR CONJUNCTIVAL ULCERATION; OR SKIN BURNS OR ULCERATION. INGESTION OF THE LIQUID MAY CAUSE SEVERE BURNS TO THE MUCOUS MEMBRANES OF THE MOUTH AnD ESOPHAGUS. REPEATED OR PROLONGED CONTACT WITH MISTS MAY CAUSE EYE IRRITATION WITH DISCOMFORT, TEARING OR BLURRING OF VISION; OR SKIN IRRITATION WITH DISCOMFORT OR RASH. PROLONGED OR REPEATED EXPOSURE MAY RESULT IN IMPAIRED LUNG FUNCTION AND POSSIBLE DISCOLORATION AND EROSION OF TEETH. INDIVIDUALS WITH PREEXISTING DISEASES OF THE LUNGS MAY HAVE INCREASED SUSCEPTIBILITY TO THE TOXICITY OF EXCESSIVE EXPOSURES.

****

SECTION VIII. CARCINOGENICITY

****

NONE OF THE COMPONENTS IN THIS MATERIAL IS LISTED BY IARC, NTP, OSHA, OR ACGIH AS A CARCINOGEN.

****

SECTION IX. FIRST AID

****

INHALATION: Move victim to fresh air. Give artificial respiration ONLY if breathing has stopped. Give CPR if there is no breathing AND no pulse. Obtain medical attention IMMEDIATELY.

INGESTION: If swallowed, do not induce vomiting. Give large quantities of water. Call a physician. do not neutralize the acid. Never give anything by mouth to an unconscious person.

SKIN OR EYE CONTACT: In case of contact, immediately (within seconds) flush eyes or skin with plenty of cold water for at least 15 minutes while removing contaminated clothing and shoes. Call a physician. While the patient is being transported to a medical facility apply compresses if iced water. If medical treatment must be delayed, immerse the affected area in iced water or apply compresses of iced water to affected areas. Do not freeze tissue.

NOTES TO PHYSICIAN: Continued washing of the affected area with cold or iced water will be helpful in removing the last traces of sulfuric acid. Creams or ointments should not be applied before or during the washing phase of treatment.

****

SECTION X. PRECAUTIONS FOR SAFE HANDLING

****

GOOD GENERAL VENTILATION SHOULD BE PROVIDED TO KEEP VAPOR AND MIST CONCENTRATIONS BELOW THE EXPOSURE LIMITS.

HAVE AVAILABLE AND WEAR AS APPROPRIATE FOR EXPOSURE CONDITIONS WHEN HANDLING CONTAINERS OR OPERATING EQUIPMENT CONTAINING SULFURIC ACID: CHEMICAL SPLASH GOGGLES; FULL-LENGTH FACE SHIELD/CHEMICAL SPLASH GOGGLE COMBINATION;ACID-PROOF GAUNTLET GLOVES, APRON, AND BOOTS; LONG SLEEVE WOOL, ACRYLIC OR POLYESTER CLOTHING; ACID PROOF SUIT AND HOOD; AND APPROPRIATE NIOSH/MSHA RESPIRATORY PROTECTION. IN CASE OF EMERGENCY OR WHERE THERE IS A STRONG POSSIBILITY OF CONSIDERABLE EXPOSURE, WEAR A COMPLETE ACID SUIT WITH HOOD, BOOTS, AND GLOVES. IF ACID VAPOR OR MIST ARE PRESENT AND EXPOSURE LIMITS MAY BE EXCEEDED, WEAR APPROPRIATE NIOSH/MSHA RESPIRATORY PROTECTION.

ALWAYS ADD ACID TO WATER - NOT WATER TO ACID.

SPILLS: EPA and Superfund reportable discharge is 1000 lbs. Stop flow if possible. Use appropriate protective equipment during clean up. Soak up small spills with dry sand, clay or diatomaceous earth. Dike large spills, and cautiously dilute and neutralize with lime or soda ash, and transfer to waste

water treatment system. Prevent liquid from entering sewers, waterways or low areas. Comply with federal, state and local regulations.

WASTE: Cleaned-up material may be a RCRA hazardous waste on disposal. Do not flush to surface water or sanitary sewer system. Comply with federal, state and local regulations. If approved, neutralize and transfer to waste treatment system.

STORAGE: keep out of sun and away from heat, sparks and flame. Keep container tightly closed to prevent leakage. Loosen closure carefully; relieve internal pressure when received and at least weekly thereafter. Do not use pressure to empty. Do not wash out container or use it for other purposes. Replace closure after each use.

POTENTIAL HEALTH EFFECTS

ROUTES OF ENTRY:
INHALATION, INGESTION.

TARGET ORGANS:
EYES, SKIN, RESPIRATORY TRACT, GASTROINTESTINAL TRACT.

IRRITANCY:
LIQUID, VAPORS OR MIST MAY BE IRRITATING TO EYES, SKIN AND RESPIRATORY TRACT.

SENSITIZING CAPABILITY:
NONE KNOWN.

REPRODUCTIVE EFFECTS:
NONE KNOWN.

CANCER INFORMATION:
NONE KNOWN.

SHORT-TERM EXPOSURE (ACUTE)

INHALATION:
EXPOSURE TO VAPOR, MIST OR LIQUID CAN PRODUCE BURNS OF THE RESPIRATORY TRACT.

SEVERE EXPOSURES COULD RESULT IN CHEMICAL PNEUMONIA.

EYES:
CONTACT CAN CAUSE SEVERE DAMAGE INCLUDING BURNS AND BLINDNESS.

PRODUCT: CAUSTIC SODA LIQUID (ALL GRADES)

ORDER NO: 959357
PROD NO : 238341

THE SEVERITY OF THE EFFECTS DEPEND ON CONCENTRATION AND HOW SOON AFTER EXPOSURE THE EYES ARE WASHED.

SKIN:
CORROSIVE.

CONTACT MAY CAUSE BURNS AND TISSUE DESTRUCTION.

NOTE THAT IRRITATION MAY FOLLOW AN INITIAL LATENCY (DELAY BETWEEN THE TIME THAT THE EXPOSURE OCCURS AND WHEN THE SENSE OF IRRITATION STARTS). THE LATENT PERIOD CAN VARY AS MUCH AS HOURS FOR A DILUTE SOLUTION (0.04%) TO MINUTES WITH MORE CONCENTRATED SOLUTIONS (25-50%).

PROLONGED OR REPEATED CONTACT, EVEN TO DILUTE CONCENTRATIONS, CAN CAUSE A HIGH DEGREE OF TISSUE DESTRUCTION.

INGESTION:
CORROSIVE.

SEVERE BURNS AND COMPLETE TISSUE PERFORATION OF MUCOUS MEMBRANES OF MOUTH, THROAT AND STOMACH.

REPEATED EXPOSURE (CHRONIC)
NO KNOWN CHRONIC EFFECTS.

SYNERGISTIC MATERIALS:
NONE KNOWN.

MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE:
NONE KNOWN.

4. FIRST AID MEASURES

EYES:
IMMEDIATELY FLUSH EYES WITH A DIRECTED STREAM OF WATER FOR AT LEAST 15 MINUTES, FORCIBLY HOLDING EYELIDS APART TO ENSURE COMPLETE IRRIGATION OF ALL EYE AND LID TISSUE. WASHING EYES WITHIN SEVERAL SECONDS IS ESSENTIAL TO ACHIEVE MAXIMUM EFFECTIVENESS. GET MEDICAL ATTENTION IMMEDIATELY.

SKIN:
FLUSH THOROUGHLY WITH COOL WATER UNDER SHOWER WHILE REMOVING CONTAMINATED CLOTHING AND SHOES. DISCARD NON-RUBBER SHOES. WASH CLOTHING BEFORE REUSE. GET MEDICAL ATTENTION AS SOON AS POSSIBLE.

INHALATION:
REMOVE TO FRESH AIR. IF BREATHING IS DIFFICULT, HAVE TRAINED PERSON

PRODUCT: CAUSTIC SODA LIQUID (ALL GRADES)

ORDER NO: 959357
PROD NO : 238341

ADMINISTER OXYGEN. IF RESPIRATION STOPS, HAVE A TRAINED PERSON ADMINISTER ARTIFICIAL RESPIRATION. GET MEDICAL ATTENTION IMMEDIATELY.

INGESTION:
NEVER GIVE ANYTHING BY MOUTH TO AN UNCONSCIOUS PERSON. IF SWALLOWED, DO NOT INDUCE VOMITING. GIVE LARGE QUANTITIES OF WATER. (IF AVAILABLE, GIVE SEVERAL GLASSES OF MILK.) IF VOMITING OCCURS SPONTANEOUSLY, KEEP AIRWAY CLEAR AND GIVE MORE WATER. GET MEDICAL ATTENTION IMMEDIATELY.

NOTES TO PHYSICIAN:
NO SPECIALIZED PROCEDURES. TREAT FOR CLINICAL SYMPTOMS.

5. FIRE FIGHTING MEASURES

FLASH POINT: NON-FLAMMABLE

METHOD: NON-FLAMMABLE

AUTOIGNITION TEMPERATURE: NON-FLAMMABLE

FLAMMABLE LIMITS IN AIR, BY % VOLUME
UPPER: NON-FLAMMABLE
LOWER: NON-FLAMMABLE

EXTINGUISHING MEDIA:
NON-FLAMMABLE / NON-COMBUSTIBLE.

USE WATER SPRAY TO KEEP FIRE-EXPOSED CONTAINERS COOL.

FIRE FIGHTING PROCEDURES:
USE WATER TO COOL CONTAINERS BUT AVOID GETTING WATER INTO CONTAINERS. WEAR NIOSH/MSHA APPROVED POSITIVE-PRESSURE SELF-CONTAINED BREATHING APPARATUS AND FULL PROTECTIVE CLOTHING.

FIRE AND EXPLOSION HAZARD:
DIRECT CONTACT WITH WATER CAN CAUSE A VIOLENT EXOTHERMIC REACTION.

SENSITIVITY TO MECHANICAL IMPACT:
NOT SENSITIVE.

SENSITIVITY TO STATIC DISCHARGE:
NOT SENSITIVE.

6. ACCIDENTAL RELEASE MEASURES

PERSONAL PRECAUTIONS:
EVACUATE UNNECESSARY PERSONNEL.

PRODUCT: CAUSTIC SODA LIQUID (ALL GRADES)

ORDER NO: 959357
PROD NO : 238341

FOLLOW PROTECTIVE MEASURES PROVIDED UNDER PERSONAL PROTECTION IN SECTION 8.

ENVIRONMENTAL PRECAUTIONS:

ACCORDING TO 40 CFR 302 TABLE 302.4 (CERCLA), ENVIRONMENTAL RELEASES THAT EXCEED THE RQ MUST BE REPORTED TO THE NATIONAL RESPONSE CENTER BY CALLING 800-424-8802 (202-426-2675) AND THE STATE EMERGENCY RESPONSE COMMISSION AND THE LOCAL EMERGENCY PLANNING COMMITTEE (40 CFR 355.40) AS APPROPRIATE.

CONTAIN LIQUIDS AND PREVENT DISCHARGES TO STREAMS OR SEWERS, CONTROL OR STOP THE LOSS OF VOLATILE MATERIALS TO THE ATMOSPHERE. LARGE LEAKS MAY REQUIRE ENVIRONMENTAL CONSIDERATION AND POSSIBLE EVACUATION. DO NOT APPLY WATER TO THE LEAK. SPILLS OR RELEASES SHOULD BE REPORTED, IF REQUIRED, TO THE APPROPRIATE LOCAL, STATE AND FEDERAL AGENCIES.

CONTAIN SPILL WITH DIKE TO PREVENT ENTRY INTO SEWERS OR WATERWAYS.

CAUTION: THIS PRODUCT MAY REACT STRONGLY WITH ACIDS AND WATER.

NEVER FLUSH TO SEWER.

METHODS FOR CLEANING UP:

DRY MATERIAL CAN BE SHOVELED UP, LIQUID MATERIAL CAN BE REMOVED WITH A VACUUM TRUCK. NEUTRALIZE REMAINING TRACES WITH ANY DILUTE INORGANIC ACID (HYDROCHLORIC, SULFURIC OR ACETIC ACID). FLUSH SPILL AREA WITH WATER FOLLOWED BY A LIBERAL COVERING OF SODIUM CARBONATE. ALL CLEAN-UP MATERIAL SHOULD BE REMOVED FOR PROPER TREATMENT OR DISPOSAL. SPILLS ON OTHER THAN PAVEMENT (EG. DIRT OR SAND) MAY BE HANDLED BY REMOVING THE AFFECTED SOIL AND PLACING IN APPROVED CONTAINERS.

7. HANDLING AND STORAGE

HANDLING:

AVOID BREATHING MIST.

AVOID BREATHING VAPORS.

HAZARDOUS CARBON MONOXIDE GAS CAN FORM UPON CONTACT WITH FOOD AND BEVERAGE PRODUCTS IN ENCLOSED SPACES AND CAN CAUSE DEATH. FOLLOW APPROPRIATE TANK ENTRY PROCEDURES (ANSI Z117.1).

CONTAINERS, EVEN THOSE THAT HAVE BEEN EMPTIED, WILL RETAIN PRODUCT RESIDUE AND VAPOR AND SHOULD BE HANDLED AS IF THEY WERE FULL.

DO NOT GET IN EYES, ON SKIN OR CLOTHING.

PRODUCT: CAUSTIC SODA LIQUID (ALL GRADES)

ORDER NO: 959357
PROD NO : 238341

DO NOT TAKE INTERNALLY

KEEP AWAY FROM ACIDS, TO AVOID POSSIBLE VIOLENT REACTION.

WASH CONTAMINATED CLOTHING BEFORE REUSE.

WASH THOROUGHLY AFTER HANDLING; EXPOSURE CAN CAUSE BURNS WHICH ARE NOT IMMEDIATELY PAINFUL OR VISIBLE.

WEAR PERSONAL PROTECTIVE EQUIPMENT AS DESCRIBED IN EXPOSURE CONTROLS/PERSONAL PROTECTION (SECTION 8) OF THE MSDS.

IF PRODUCT IS ADDED TOO RAPIDLY, OR WITHOUT STIRRING, AND BECOMES CONCENTRATED AT BOTTOM OF MIXING VESSEL, EXCESSIVE HEAT MAY BE GENERATED, RESULTING IN DANGEROUS BOILING AND SPATTERING, AND A POSSIBLE IMMEDIATE AND VIOLENT ERUPTION OF HIGHLY CAUSTIC SOLUTION.

SPECIAL MIXING AND HANDLING INSTRUCTIONS:
CONSIDERABLE HEAT IS GENERATED WHEN PRODUCT IS MIXED WITH WATER. THEREFORE, WHEN MAKING SOLUTIONS ALWAYS CAREFULLY FOLLOW THESE STEPS:

ALWAYS WEAR ALL PROTECTIVE CLOTHING DESCRIBED ABOVE. NEVER ADD WATER TO PRODUCT. ALWAYS ADD PRODUCT, WITH CONSTANT STIRRING, SLOWLY TO SURFACE OF LUKEWARM (80-100 F) WATER, TO ASSURE PRODUCT IS BEING COMPLETELY DISSOLVED AS IT IS ADDED.

PRODUCT CAN REACT EXPLOSIVELY WITH ACIDS, ALDEHYDES, AND MANY OTHER ORGANIC CHEMICALS, ADD PRODUCT VERY GRADUALLY, WHILE STIRRING CONSTANTLY. IF PRODUCT IS ADDED TOO RAPIDLY, OR WITHOUT STIRRING, AND BECOMES CONCENTRATED AT BOTTOM OF MIXING VESSEL, EXCESSIVE HEAT MAY BE GENERATED, RESULTING IN DANGEROUS BOILING AND SPATTERING, AND A POSSIBLE IMMEDIATE AND VIOLENT ERUPTION OF HIGHLY CAUSTIC SOLUTION.

ALWAYS EMPTY AND CLEAN CONTAINERS OF ALL RESIDUES BEFORE ADDING PRODUCT, TO AVOID POSSIBLE EXPLOSIVE REACTION BETWEEN PRODUCT AND UNKNOWN RESIDUE.

RETURNABLE CONTAINERS SHOULD BE SHIPPED IN ACCORDANCE WITH SUPPLIER'S RECOMMENDATIONS. RETURN SHIPMENTS SHOULD COMPLY WITH ALL FEDERAL, STATE, AND DOT REGULATIONS. ALL RESIDUE SHOULD BE REMOVED FROM CONTAINERS PRIOR TO DISPOSAL.

AVOID CONTACT WITH ALUMINUM, TIN, ZINC, AND ALLOYS CONTAINING THESE METALS. AVOID CONTACT WITH LEATHER, WOOL, ACIDS, ORGANIC HALOGEN COMPOUNDS AND ORGANIC NITRO COMPOUNDS.

STORAGE:

PRODUCT: CAUSTIC SODA LIQUID (ALL GRADES)

ORDER NO: 959357
PROD NO : 238341

KEEP CONTAINER TIGHTLY CLOSED AND PROPERLY LABELED.

DIKE STORAGE CONTAINERS TO CONTAIN 110% OF TANK VOLUME.

UNDER NORMAL CONDITIONS, THIS PRODUCT CAN BE STORED SATISFACTORILY IN MILD STEEL WITHOUT AN INTERIOR LINING. ALUMINUM IS NOT RECOMMENDED FOR STORAGE AND HANDLING.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

ENGINEERING CONTROLS:

NO SPECIAL VENTILATION REQUIRED UNDER NORMAL USE.

NOTE: WHERE CARBON MONOXIDE MAY BE GENERATED, SPECIAL VENTILATION MAY BE REQUIRED.

WHERE ENGINEERING CONTROLS ARE NOT FEASIBLE USE ADEQUATE LOCAL EXHAUST VENTILATION WHEREVER MIST, SPRAY OR VAPOR MAY BE GENERATED.

PERSONAL PROTECTION

RESPIRATORY:

RESPIRATORY PROTECTION IS NOT REQUIRED UNDER NORMAL USE.

WEAR A NIOSH/MSHA APPROVED RESPIRATOR FOLLOWING MANUFACTURER'S RECOMMENDATIONS, WHERE AIRBORNE CONTAMINANTS MAY OCCUR.

EYE/FACE:

WEAR CHEMICAL SAFETY GOGGLES PLUS FULL FACE SHIELD TO PROTECT AGAINST SPLASHING WHEN APPROPRIATE (ANSI Z87.1).

SKIN:

WEAR CHEMICAL RESISTANT GLOVES SUCH AS RUBBER, NEOPRENE OR VINYL.

WASH CONTAMINATED CLOTHING AND DRY BEFORE REUSE.

WHENEVER THERE IS A POSSIBILITY OF SPLASH OR CONTACT WEAR A CHEMICAL RESISTANT FULL BODY SUIT AND BOOTS.

OTHER:

STANDARD WORK CLOTHING CLOSED AT THE NECK AND WRISTS.

DISCARD SHOES THAT CANNOT BE DECONTAMINATED.

EMERGENCY SHOWER AND EYEWASH FACILITY SHOULD BE IN CLOSE PROXIMITY (ANSI Z358.1).

PRODUCT: CAUSTIC SODA LIQUID (ALL GRADES)

ORDER NO: 959357
PROD NO : 238341

THIS MATERIAL HAS PRODUCED SLIGHT TO MODERATE TOXICITY IN LABORATORY TESTS WITH AQUATIC ORGANISMS. THIS MATERIAL IS STRONGLY ALKALINE. IF RELEASED TO SURFACE WATER, THIS COMPOUND WILL CAUSE THE PH TO RISE DEPENDENT ON THE BUFFERING CAPACITY OF THE WATERBODY. AQUATIC ORGANISMS BECOME INCREASINGLY STRESSED AS PH EXCEEDS 9, WITH MANY AQUATIC SPECIES BEING INTOLERANT OF PH IN EXCESS OF 10. THIS COMPOUND DOES NOT BIOACCUMULATE IN ORGANISMS. DUE CAUTION SHOULD BE EXERCISED TO PREVENT THE ACCIDENTAL RELEASE OF THIS MATERIAL TO THE ENVIRONMENT.

ENVIRONMENTAL FATE DATA

SODIUM CHLORIDE (NACL) IS A NATURALLY OCCURRING INORGANIC SALT IN SURFACE WATERS, GROUNDWATER AND THE EARTH'S CRUST. BIOLOGICAL SYSTEMS TYPICALLY MAINTAIN A NECESSARY OSMOTIC BALANCE OF CRITICAL SALTS INCLUDING SODIUM CHLORIDE. THE TOLERANCE OF AQUATIC SPECIES TO NACL IS VARIABLE DEPENDING UPON WHETHER THE ORGANISM IS FRESHWATER OR MARINE, OR IF THE ORGANISM IS CAPABLE OF MOVING BETWEEN FRESHWATER AND MARINE ENVIRONMENTS. IN GENERAL NACL HAS LOW TO MODERATE TOXICITY TO AQUATIC OR TERRESTRIAL SPECIES. CONTINUOUS DISCHARGE OF SALT TO FRESHWATER ENVIRONMENTS CAN LEAD TO INCREASED SALINITY OVER TIME. BULK RELEASES COULD IMPACT SALT INTOLERANT AQUATIC SPECIES AND SESSILE TERRESTRIAL LIFEFORMS. DUE CARE SHOULD BE TAKEN TO AVOID THE ACCIDENTAL RELEASE OF THIS MATERIAL TO AQUATIC OR TERRESTRIAL ENVIRONMENTS.

REACTIVE OXIDIZER OF ORGANIC MATERIAL

THERE IS LIMITED DATA ON THE ENVIRONMENTAL FATE AND EFFECTS OF SODIUM CHLORATE (CHLORIC ACID, SODIUM SALT). LABORATORY TEST DATA INDICATE THAT SODIUM CHLORATE IS MODERATELY TOXIC TO AQUATIC AND TERRESTRIAL ORGANISMS. THIS MATERIAL IS HIGHLY SOLUBLE IN WATER. IT MAY PERSIST UP TO 5 YEARS IN LOCATIONS WITH LOW ANNUAL RAINFALL. DUE CAUTION SHOULD BE EXERCISED TO AVOID THE ACCIDENTAL RELEASE OF THIS MATERIAL TO AQUATIC AND TERRESTRIAL ENVIRONMENTS.

13. DISPOSAL CONSIDERATIONS

RECOVERY AND REUSE, RATHER THAN DISPOSAL, SHOULD BE THE ULTIMATE GOAL OF HANDLING EFFORTS.

DISPOSE OF ALL WASTE AND CONTAMINATED EQUIPMENT IN ACCORDANCE WITH ALL APPLICABLE FEDERAL, STATE AND LOCAL HEALTH AND ENVIRONMENTAL REGULATIONS.

ENSURE THAT ALL RESPONSIBLE FEDERAL, STATE, AND LOCAL AGENCIES RECEIVE PROPER NOTIFICATION OF SPILL AND DISPOSAL METHODS.

SHIPMENTS OF WASTE MATERIALS MAY BE SUBJECT TO MANIFESTING REQUIREMENTS PER APPLICABLE REGULATIONS. APPROPRIATE DISPOSAL WILL DEPEND ON THE NATURE OF EACH WASTE MATERIAL AND SHOULD BE DONE BY A COMPETENT AND PROPERLY PERMITTED CONTRACTOR.

THE MATERIALS RESULTING FROM CLEAN-UP OPERATIONS MAY BE HAZARDOUS WASTES AND, THEREFORE, SUBJECT TO SPECIFIC REGULATIONS. PACKAGE, STORE, TRANSPORT, AND DISPOSE OF ALL (CLEAN-UP) MATERIALS AND ANY CONTAMINATED EQUIPMENT IN ACCORDANCE WITH ALL APPLICABLE FEDERAL, STATE, AND LOCAL REGULATIONS.

PRODUCT: CAUSTIC SODA LIQUID (ALL GRADES)

ORDER NO: 959357
PROD NO : 238341

14. TRANSPORT INFORMATION

DOT PROPER SHIPPING NAME: SODIUM HYDROXIDE, SOLUTION

DOT HAZARD CLASS: 8

DOT IDENTIFICATION NO: UN1824

DOT PACKING GROUP: II

DOT HAZARDOUS SUBSTANCE: RQ 1,000 LBS. (SODIUM HYDROXIDE)

DOT MARINE POLLUTANT(S): NOT APPLICABLE

ADDITIONAL DESCRIPTION REQUIREMENT: NOT APPLICABLE

15. REGULATORY INFORMATION

U.S. FEDERAL REGULATIONS:
OSHA STANDARD 29 CFR 1910.1200 REQUIRES THAT INFORMATION BE PROVIDED TO EMPLOYEES REGARDING THE HAZARDS OF CHEMICALS BY MEANS OF A HAZARD COMMUNICATION PROGRAM INCLUDING LABELING, MATERIAL SAFETY DATA SHEETS, TRAINING AND ACCESS TO WRITTEN RECORDS. WE REQUEST THAT YOU, AND IT IS YOUR LEGAL DUTY TO, MAKE ALL INFORMATION IN THIS MATERIAL SAFETY DATA SHEET AVAILABLE TO YOUR EMPLOYEES.

TO AID OUR CUSTOMERS IN COMPLYING WITH REGULATORY REQUIREMENTS, SARA TITLE III HAZARD CATEGORIES FOR THIS PRODUCT ARE INDICATED BELOW. IF THE WORD "YES" APPEARS NEXT TO ANY CATEGORY, THIS PRODUCT MAY BE REPORTABLE BY YOU UNDER THE REQUIREMENTS OF 40.CFR.370. PLEASE CONSULT THOSE REGULATIONS FOR DETAILS.

TSCA:
ALL COMPONENTS OF THIS PRODUCT THAT ARE REQUIRED TO BE ON THE TSCA INVENTORY ARE LISTED ON THE INVENTORY.

SARA/TITLE III HAZARD CATEGORIES:
IMMEDIATE(ACUTE) HEALTH: _YES_ REACTIVE HAZARD _YES_
DELAYED(CHRONIC) HEALTH: _NO__ SUDDEN RELEASE OF PRESSURE _NO__
FIRE HAZARD: _NO__

HMIS HAZARD RATINGS:
HEALTH HAZARD: __3__ FIRE HAZARD: __0__ REACTIVITY: __1__

STATE REGULATIONS:
SEE SECTION 2. COMPOSITION/INFORMATION ON INGREDIENTS LIST LEGEND FOR APPLICABLE STATE REGULATION.

PRODUCT: CAUSTIC SODA LIQUID (ALL GRADES)

ORDER NO: 959357
PROD NO : 238341

INTERNATIONAL REGULATIONS:
CONSULT THE REGULATIONS OF THE IMPORTING COUNTRY.

CANADA:
WHMIS HAZARD CLASS: D1B, E

16. OTHER INFORMATION

MSDS LEGEND:

ACGIH = AMERICAN CONFERENCE OF GOVERNMENTAL INDUSTRIAL HYGIENISTS

CAS = CHEMICAL ABSTRACTS SERVICE REGISTRY NUMBER

PEL = PERMISSIBLE EXPOSURE LIMIT (OSHA)

STEL = SHORT TERM EXPOSURE LIMIT (15 MINUTES)

TDG = TRANSPORTATION OF DANGEROUS GOODS (CANADA)

TLV = THRESHOLD LIMIT VALUE (ACGIH)

TWA = TIME WEIGHTED AVERAGE (8 HOURS)

WHMIS = WORKER HAZARDOUS MATERIALS INFORMATION SYSTEM (CANADA)

* = SEE SECTION 3 HAZARDS IDENTIFICATION - REPEATED EXPOSURE(CHRONIC) INFORMATION

17. WARNING LABEL INFORMATION

SIGNAL WORD:
DANGER

HAZARD WARNINGS:
MAY CAUSE BURNS TO THE EYES, SKIN, AND MUCOUS MEMBRANES.

MAY CAUSE PERMANENT EYE DAMAGE.

INHALATION OF DUST, MIST, OR SPRAY CAN CAUSE SEVERE LUNG DAMAGE.

PRODUCT: CAUSTIC SODA LIQUID (ALL GRADES)

ORDER NO: 959357
PROD NO : 238341

CAN REACT VIOLENTLY WITH WATER, ACIDS AND OTHER SUBSTANCES.

PRECAUTIONS:

AVOID CONTACT WITH EYES, SKIN AND CLOTHING.

AVOID BREATHING DUST, VAPORS OR MIST.

DO NOT SWALLOW.

USE WITH ADEQUATE VENTILATION AND WEAR RESPIRATORY PROTECTION WHEN EXPOSURE TO DUST, MIST, OR SPRAY IS POSSIBLE.

WEAR SAFETY GLASSES WITH SIDE SHIELDS OR CHEMICAL SPLASH GOGGLES, PROTECTIVE CLOTHING AND CHEMICAL RESISTANT GLOVES.

WASH THOROUGHLY AFTER HANDLING; EXPOSURE CAN CAUSE BURNS WHICH ARE NOT IMMEDIATELY PAINFUL OR VISIBLE.

KEEP CONTAINER TIGHTLY CLOSED AND PROPERLY LABELED.

PRODUCT CAN REACT VIOLENTLY WITH WATER, ACIDS AND OTHER SUBSTANCES. SEE HANDLING AND STORAGE (SECTION 7) OF THE MSDS FOR INSTRUCTIONS BEFORE USING.

AVOID CONTACT WITH ALUMINUM, TIN, ZINC, AND ALLOYS CONTAINING THESE METALS. AVOID CONTACT WITH LEATHER, WOOL, ACIDS, ORGANIC HALOGEN COMPOUNDS AND ORGANIC NITRO COMPOUNDS.

HAZARDOUS CARBON MONOXIDE GAS CAN FORM UPON CONTACT WITH FOOD AND BEVERAGE PRODUCTS IN ENCLOSED SPACES AND CAN CAUSE DEATH. FOLLOW APPROPRIATE TANK ENTRY PROCEDURES (ANSI Z117.1).

FIRST AID

EYES:

IMMEDIATELY FLUSH EYES WITH A DIRECTED STREAM OF WATER FOR AT LEAST 15 MINUTES, FORCIBLY HOLDING EYELIDS APART TO ENSURE COMPLETE IRRIGATION OF ALL EYE AND LID TISSUE. WASHING EYES WITHIN SEVERAL SECONDS IS ESSENTIAL TO ACHIEVE MAXIMUM EFFECTIVENESS. GET MEDICAL ATTENTION IMMEDIATELY.

SKIN:

FLUSH THOROUGHLY WITH COOL WATER UNDER SHOWER WHILE REMOVING CONTAMINATED CLOTHING AND SHOES. DISCARD NON-RUBBER SHOES. WASH CLOTHING BEFORE REUSE. GET MEDICAL ATTENTION AS SOON AS POSSIBLE.

INHALATION:

PRODUCT: CAUSTIC SODA LIQUID (ALL GRADES)

ORDER NO: 959357
PROD NO : 238341

REMOVE TO FRESH AIR. IF BREATHING IS DIFFICULT, HAVE TRAINED PERSON ADMINISTER OXYGEN. IF RESPIRATION STOPS, HAVE A TRAINED PERSON ADMINISTER ARTIFICIAL RESPIRATION. GET MEDICAL ATTENTION IMMEDIATELY.

INGESTION:
NEVER GIVE ANYTHING BY MOUTH TO AN UNCONSCIOUS PERSON. IF SWALLOWED, DO NOT INDUCE VOMITING. GIVE LARGE QUANTITIES OF WATER. (IF AVAILABLE, GIVE SEVERAL GLASSES OF MILK.) IF VOMITING OCCURS SPONTANEOUSLY, KEEP AIRWAY CLEAR AND GIVE MORE WATER. GET MEDICAL ATTENTION IMMEDIATELY.

IN CASE OF SPILL OR LEAK:
LEAKS SHOULD BE STOPPED.

CAUTION: THIS PRODUCT MAY REACT STRONGLY WITH ACIDS AND WATER.

SCOOP OR SWEEP UP ALL SPILLED PRODUCT AND OTHER CONTAMINATED MATERIAL AND PLACE IN MARKED DISPOSAL CONTAINERS

NEUTRALIZE RESIDUE WITH DILUTE ACID AND FLUSH SPILL AREA WITH WATER FOLLOWED BY A LIBERAL COVERING OF SODIUM CARBONATE.

DISPOSE OF WASH WATER AND SPILL BY-PRODUCTS ACCORDING TO FEDERAL, STATE AND LOCAL REGULATIONS.

SPILLS OF 1000 POUNDS OR MORE MUST BE REPORTED TO THE NATIONAL RESPONSE CENTER, 1-800-424-8802.

STATE AND LOCAL REGULATIONS MAY HAVE ADDITIONAL REPORTING REQUIREMENTS, CHECK WITH THE PROPER STATE AND LOCAL AUTHORITIES.

WEAR NEOPRENE OR RUBBER GLOVES.

FIRE:
MATERIAL DOES NOT BURN.

USE EXTINGUISHING MEDIUM AS APPROPRIATE FOR SURROUNDING FIRE.

HANDLING AND STORAGE:
CONSIDERABLE HEAT IS GENERATED WHEN PRODUCT IS MIXED WITH WATER. THEREFORE, WHEN MAKING SOLUTIONS ALWAYS CAREFULLY FOLLOW THESE STEPS:

ALWAYS WEAR ALL PROTECTIVE CLOTHING DESCRIBED ABOVE. NEVER ADD WATER TO PRODUCT. ALWAYS ADD PRODUCT, WITH CONSTANT STIRRING, SLOWLY TO SURFACE OF LUKEWARM (80-100 F) WATER, TO ASSURE PRODUCT IS BEING COMPLETELY DISSOLVED AS IT IS ADDED.
UNKNOWN RESIDUE.

Dear Mr. Stern:

GEOLOGICA INC. is pleased to submit this report for a Phase I Environmental Site Assessment for the property located at 12100 Rivera Road, Whittier, California 90606.

It has been our pleasure to provide environmental consulting services to Eastman Kodak Company for this project. Should you have any questions, please do not hesitate to contact us at 949-548-9348 or 415-597-7883.

Very truly yours,
GEOLOGICA INC.

Phase I Environmental Site Assessment

Regional Distribution Center
12100 Rivera Road
Whittier, California 90606

Executive Summary

Purpose

This Phase I Environmental Site Assessment (ESA) was prepared by GEOLOGICA INC. (GEOLOGICA) to identify Recognized Environmental Conditions (RECs) at or near the above-identified *Site* or *Subject Property* as part of Project Discovery, an NPEC, Inc. (NPEC) program for assessment of contingent environmental liabilities associated with selected owned, leased and/or formerly owned Eastman Kodak Company (Kodak) properties.

The purpose of this Phase I ESA was to review past and present land use practices and activities at and near the subject property for evidence of Recognized Environmental Conditions (RECs) that could result in impacts to soil, surface water, and/or groundwater at, beneath, or originating from, the subject property. The result of this Phase I ESA is a listing of identified Recognized Environmental Conditions, defined by ASTM as "*... the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property.*"

Scope of Services

Work was conducted in general conformance with the scope and limitations of the American Society for Testing Materials (ASTM) Standard Practice for Environmental Site Assessment: Phase I Environmental Site Assessment Process (Standard Designation E1527-00) and Draft Project Management Plan (PMP) for Project Discovery. This assessment was accomplished through, and limited to, the following tasks:

- Interviews with knowledgeable personnel;
- Site walk-through and windshield survey of subject property vicinity;
- Review of records reasonably available at local and regional public agencies through agency visits, telephone contacts, and environmental database search;
- Investigation of site history through interviews and review of readily available historic documentation such as: aerial photos, topographic maps, Sanborn Fire Insurance Maps, historic city directories, agency files, chains-of-title, and previous site investigation documents; and,
- Review of readily available relevant documentation available through standard resources regarding environmental, physiographic, hydrologic, geologic, and hydrogeologic conditions.

Exclusions

The collection of air, soil, groundwater, surface water, drinking water, wastewater, process water, potential asbestos-containing material (ACM), or lead-based paint, or performance of analytical laboratory testing for hydrocarbons, lead, radon, or other compounds, was not included as a part of the scope of services, nor is the sampling and testing of these materials within the normal scope of a Phase I ESA. This work did not constitute comprehensive evaluation with respect to regulatory compliance, endangered species, wetlands, indoor air quality, or high voltage power lines.

Site Location and Surrounding Area

The subject property is located at 12100 Rivera Road in the City of Whittier, Los Angeles County, California and includes a single-story, approximately 218,000-square-foot building and about 7,000 square feet of parking area located in a principally commercial and industrial area of Whittier, California.

General Site Operations

The Office and Distribution Center, also referred to as the Warehouse Building, was constructed, and is still used as, a regional distribution center for finished products for the western U.S. The facility handles approximately 60–70% consumer goods and the remainder professional and medical products, including: one-time use cameras, film, photochemicals, limited photographic equipment, anesthetics, and dental x-ray film. The facility incorporates an "automated" warehouse to handle stored, shipped and received goods. The facility employs approximately 50 individuals from 0600 – 1800 hours, five days/week.

The site is identified as a small quantity generator of hazardous waste, EPA ID CAD054854377. Hazardous waste is generated principally due to damaged containers of photofinishing products handled or received at the facility. Certain of these products are discharged to the active clarifier (see below). Others are repackaged for appropriate off-site transportation and disposal.

Approximately 20-30 gallons of oil generated from fork-truck hydraulic maintenance is removed for off-site disposal four times/year. There is a Safety Kleen parts cleaner located in the maintenance area.

Principal chemicals used for facility operations include cleaning, painting and maintenance supplies normally used and stored in consumer-sized amounts. Hazardous chemicals stored at the facility include primarily photoprocessing chemicals.

Subsurface Structures

Two "clarifiers" were identified. One is located in the maintenance area at the northeast corner of the Warehouse Building and was reportedly "self-closed" by the company in about 1986 by welding the unit shut. It is not known if this unit was filled in. The construction and use history of this unit have not been documented; it was reportedly installed as an oil-water separator.

The second clarifier was installed in 1979 at the southwest corner of the building. This unit is permitted by the City of Whittier for use to discharge certain materials to the sanitary sewer (corrosives, photochemicals and cooling tower blow-down). Chromium, low pH (<1), high pH (>12), solvents and flammables are not discharged. Construction details have not been identified for this unit.

Three Underground Storage Tanks (USTs) have reportedly been removed from the subject property; formal documentation is unavailable for two of the three UST's.

A 1,000-gallon underground "trap" tank was reportedly removed during construction in approximately 1984-5 from where Cold Storage Room 10 (west side of building) is now located. The tank was said to be intended for spill or release containment, but was reportedly never used or connected to the sanitary sewer. A "test well" has been identified in the southeastern portion of the building. Kodak personnel and documentation reviewed indicate it is a monitoring well installed in conjunction with 1,000-gallon tank removal in 1984 (see above).

A 1,000-gallon underground waste photofinishing chemical storage tank was reportedly located near the existing southeast corner of the Warehouse Building and was reportedly removed along with approximately 30 cubic yards of soil in about 1984.

A third underground tank (size unknown) was reportedly located adjacent to the Maintenance Shop/Will-Call Area (near east side of property). Independent confirmation has not been identified for this tank's use, location and closure status. The tank was reportedly used for backup fuel oil storage for the facility's boiler; reportedly no sampling or testing of soil or groundwater was conducted in conjunction with the tank closure.

Floor drains were observed in several areas throughout the facility; detailed information regarding the construction and flow paths has not been identified. It is presumed that all floor drains eventually connect to the sanitary sewer; though it is not known if all drains connect to the active clarifier prior to discharge to the sanitary sewer.

Physical Environment

The City of Whittier is located in the eastern portion of the Los Angeles Coastal Plain in the West Coast Basin subarea. Surface materials in the general site area have been mapped as "urban land" (e.g. fill), alluvial gravels, sands and silts. Groundwater has been recorded at a depth of about 30 feet at the subject property.

No significant surface water bodies are present within one mile of the site, though the site has been mapped within a 500-year floodplain. The San Gabriel River is located approximately two miles west of the subject property.

Public water wells within approximately three miles of the subject property are known to be impacted by Volatile Organic Chemicals (VOCs).

Site History

The subject property appears to have been used for agricultural purposes from at least 1928 through the site's first reported development by the Eastman Kodak Company in 1959, when the Office and Distribution Center was constructed. Kodak appears to have

leased at least a portion of the property to the City of Whittier in 1964. The property was sold to Pacific Gulf Properties in about 1998 and leased back to Kodak.

Site buildings and configurations have changed over time. A small Technical Building was built in 1959, along with the original Distribution/Warehouse Building, which now comprises the northeastern portion of the current Office and Distribution Center. The Distribution/Office Building was expanded several times, reportedly most recently in 1985. Another small Marketing Building was constructed in 1975. A small Flammable Storage Building was added in 1985. The northern portion of the building was used for hazardous materials storage; the southern portion was reportedly leased to a plastics recycling company. The Technical Building, Marketing Building, and Flammable Storage Building were removed in approximately 1999.

Previous Environmental Investigations and Remedial Activities

Two Phase I Environmental Site Assessments and three (3) UST removals have been performed at the subject property.

1998 Phase I Environmental Site Assessment

Dames & Moore completed a Phase I Environmental Site Assessment for the subject property in March 1998. The ESA was conducted for Pacific Gulf Properties, Inc. (current property owner) prior to their subsequent purchase of the property. Dames & Moore concluded:

- Former on-site operations may have created a recognized environmental condition.
- No documentation exists for a diesel underground storage tank reportedly removed in 1984.
- A clarifier is used for discharge of photochemicals to the sanitary sewer.
- A second clarifier is located in the machine shop.

Dames & Moore recommended a review of on-site plans to identify the location of the removed diesel UST and a limited soil investigation in: (1) the vicinity of the removed UST, (2) adjacent to the two clarifiers to evaluate the soils for VOCs and (3) within the former hazardous materials storage area to evaluate soils for VOCs. It is not known if these recommendations were carried out; but, no documentation or evidence of a Phase II has been identified.

1997 Phase I Environmental Site Assessment

Conestoga-Rovers & Associates completed a Phase I Environmental Site Assessment for the subject property in November 7, 1997 and identified the following RECs:

- No closure assessment or soil/groundwater sampling and analysis reportedly were conducted at the time the fuel oil UST was removed.
- A former photographic chemical UST located exterior to the south wall of the distribution building was closed by removal in 1984 following a tank overfill. One soil boring and one groundwater well were drilled and installed. Soil and groundwater samples analyzed for priority pollutant metals, volatile organic chemicals (VOCs) and base-neutral-acid extractable organic compounds were reported present below applicable criteria.

- A number of adjacent properties are listed as RCRIS small quantity generators; the impact of activities conducted on these properties, if any, to subject property soil and groundwater, is unknown.
- The site was identified as located in a Level 2 radon zone; no site-specific radon testing was conducted.
- Asbestos-containing materials were identified in some pipe insulation, floor tile, mastic and roof felt; but, these materials were observed in generally good condition.

UST Removals

Documentation for the three previously summarized UST removals is limited to IT Corporation's *Assessment of Tank Leakage* for the facility in October 1984, which describes removal and investigation activities associated with the former 1,000-gallon "trap" tank from the Cold Room 10 area (see above). Formal documentation for removal of the other two UST's was not available.

Off-site Sources

National Priority List, large and small quantity hazardous waste generators, leaking underground storage tank and other sites located within ASTM radii of review have the potential to impact the site environmental media.

Recognized Environmental Conditions

Based on the information reviewed and observations at the time of the site visit, GEOLOGICA identifies the following Recognized Environmental Conditions associated with the subject property.

- The potential presence and condition of unknown subsurface drains, conduits, or other constructed pathways to the subsurface media, based on facility's age and history of redevelopment.
- Inconsistent and limited information regarding construction, installation, use and closure of facility USTs.
- Limited information regarding construction, installation, use and closure of maintenance area clarifier or oil-water separator.
- Presence of inactive test well.
- The presence of numerous nearby off-site hazardous waste generators, leaking UST sites and other sites with the potential to impact subsurface environmental media.

The following environmental-related items are noted:

- ACM present in reportedly non-accessible areas of facility, and
- Facility is located in an area with Level 2 radon gas levels.

1.0 Introduction

1.1 Purpose

This Phase I Environmental Site Assessment (ESA) was prepared by GEOLOGICA INC. (GEOLOGICA) to identify Recognized Environmental Conditions (RECs) at or near the above-identified Site or Subject Property as part of Project Discovery, an NPEC program for assessment of contingent environmental liabilities associated with selected owned, leased and/or formerly-owned Eastman Kodak Company (Kodak) properties.

The purpose of this Phase I ESA was to review past and present land use practices and activities at and near the subject property for evidence of Recognized Environmental Conditions (RECs) that could result in impacts to soil, surface water, and/or groundwater at, beneath, or originating from, the subject property. The result of this Phase I ESA is a listing of identified Recognized Environmental Conditions, defined by ASTM as "*... the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property.*"

1.2 Scope of Services

Work was conducted in general conformance with the scope and limitations of the American Society for Testing Materials (ASTM) Standard Practice for Environmental Site Assessment: Phase I Environmental Site Assessment Process (Standard Designation E1527-00) and Draft Project Management Plan (PMP) for Project Discovery. This assessment was accomplished through, and limited to, the following tasks:

- Interviews with knowledgeable personnel;
- Site walk-through and windshield survey of subject property vicinity;
- Review of records reasonably available at local and regional public agencies through agency visits, telephone contacts, and environmental database search;
- Investigation of site history through interviews and review of readily available historic documentation such as: aerial photos, topographic maps, Sanborn Fire Insurance Maps, historic city directories, agency files, chains-of-title, and previous site investigation documents; and,
- Review of readily available relevant documentation available through standard resources regarding environmental, physiographic, hydrologic, geologic, and hydrogeologic conditions.

1.3 Exclusions

The collection of air, soil, groundwater, surface water, drinking water, asbestos, or lead-based paint, or performance of analytical laboratory testing for hydrocarbons, lead, radon, or other compounds, was not included as a part of the scope of services, nor is the sampling and testing of these materials within the normal scope of a Phase I ESA. This work did not constitute comprehensive evaluation with respect to regulatory

compliance, endangered species, wetlands, indoor air quality, or high voltage power lines.

1.4 Credentials

This report has been prepared under the professional supervision of the principal(s) whose signature(s) and resume(s) appear herein. The information contained in this report has received appropriate technical review and approval. The conclusions represent professional judgments and are founded upon the findings of the investigations identified in the report and the interpretation of such data based on experience and expertise according to the existing standards of care for work of this kind.

2.0 Site and Surrounding Area Location and Description

This section summarizes information regarding the subject property area location and physical description based on available information and a site walk-through conducted on September 17, 2002. The walk-through was conducted by Charles E. Wechsler (GEOLOGICA), Brian F. Aubry (GEOLOGICA), Joseph G. Gabriel (NPEC) and Steven Di Lella (NPEC). Accompanying the above-listed individuals were Kodak site personnel Dennis Westling, Doug Bell, Lois Castronova and Scott Williams. Photographs of site observations are included as Appendix A.

2.1 Location and Physical Description

The subject property is located in Township 3 South, Range 14 West within the City of Whittier, Los Angeles County, California (Refer to Figure 1 – Site Location Map). The subject property elevation is approximately 150 feet above Mean Sea Level with a slight local topographic downgradient to the southwest. The subject property itself is essentially flat.

2.2 Adjacent Properties and Surrounding Area

The site is located in a mostly commercial and industrial area. A new commercial building constructed during the 1999 renovation of the subject property and Rivera Road borders the subject property to the north. Commercial properties border the subject site to the east, south and west. Some residential properties were observed further to the east of the site.

3.0 Site Area Physical Environment

This section describes physical environment for the subject site and surrounding area.

3.1 Physiography and Geomorphology

The subject property is located in the eastern portion of the Los Angeles Coastal Plain in the West Coast Basin subarea. This subarea is located in the central structural block of the Los Angeles Basin. This alluvial plain is bounded by the Santa Ana Mountains and the San Joaquin Hills to the east and southeast. The Whittier fault zone is the north-northeast border with the Newport-Inglewood fault zone to the west and southwest and the Santa Monica Mountains to the northwest. Northwest trending, doubly plunging synclinal features are the dominant structures in the block.

3.2 Site and Local Topography

Topographic gradient in the general site area is to the southwest.

3.3 Surficial Geology and Soils

Surface materials in the general site area generally consist of coarse-grained, unconsolidated alluvial deposits including gravels, sands, and silts of valleys and flood plains.

3.4 Surface Water

No significant surface water bodies are present within one mile of the site, though the site has been mapped within a 500-year floodplain. The San Gabriel River is located approximately two miles west of the subject property.

3.5 Groundwater

Groundwater at the site has been measured in the test well at approximately 30 feet below grade.

3.6 Public Wells

Public wells within an approximately three-mile radius of the subject property are known to be contaminated with VOCs and metals.

4.0 Site Operations

This section describes the general site operations, subsurface structures, chemical and material storage and handling practices. Related project documentation is reproduced in Appendix B. A Site Layout Plan is provided in Figure 2.

4.1 General Site Operations

The warehouse building was constructed, and is still used as, a regional distribution center for finished products for the western US. The facility handles approximately 60%-70% consumer goods and the remainder professional and medical products, including: one-time use cameras, film, photochemicals, limited photographic equipment, anesthetics, and dental x-ray film. The facility incorporates an "automated" warehouse to handle stored, shipped and received goods. The facility employs approximately 50 individuals from 0600 – 1800 hours, five days/week.

The site is identified as a small quantity generator of hazardous waste, EPA ID CAD054854377. Hazardous waste is generated principally due to damaged containers of photofinishing products handled or received at the facility. Certain of these products are discharged to the active clarifier (see below). Others are repackaged for appropriate off-site transportation and disposal.

Approximately 20-30 gallons of oil generated from fork-truck hydraulic maintenance is removed for off-site disposal four times/year. There is a Safety Kleen parts cleaner located in the maintenance area.

Principal chemicals used for facility operations include cleaning, painting and maintenance supplies normally used and stored in consumer-sized amounts. Hazardous chemicals stored at the facility include primarily photoprocessing chemicals.

4.2 Chemical and Material Handling, Storage and Use

Drums and various-sized containers of hazardous photofinishing chemicals are stored in a Hazardous Chemicals Storage Area of the building. Portable secondary containment is available as needed for specific drums or containers. Sulfuric acid and caustic soda are stored in the Hazardous Chemicals Storage Area for use in pH balancing in the clarifier.

Flammable materials are stored in a flammable materials storage cabinet.

4.3 Subsurface Structures

This section summarizes information related to subsurface structures.

4.3.1 Clarifiers

Two "clarifiers" have been identified. One is located in the maintenance area and was reportedly "self-closed" by the company in 1986 by welding the unit shut; it is not known if the unit was filled in. The unit does not appear to have been formally closed and documented under applicable procedures. The use history of this unit has not been documented; it was reportedly installed as an oil-water separator. The second clarifier

was installed in 1979. This unit is permitted by the City of Whittier for use to discharge certain materials to the sanitary sewer (corrosives and photochemicals). Chromium, low pH (<1), high pH (>12), solvents and flammables are not discharged.

4.3.2 Floor Drains

Several floor drains were observed at the subject property; it is likely that others are present but were not observed or were not visible at the time of the site visit. It is not known which floor drains are connected to the operating clarifier.

The facility has been added onto and renovated several times. Construction drawings detailing the construction and flowpaths of the sewers have not been identified or reviewed.

4.3.3 Monitoring Well

A "test well" has been identified in the southeastern portion of the building. Kodak personnel and documentation reviewed indicate it is a monitoring well installed in conjunction with a 1,000-gallon underground tank removal in 1984 (see above). Analytical results for priority pollutant metals, semi-volatile organic and volatile organic compounds were reported as either non-detectable or below CA total threshold limit concentrations.

4.4 Underground Storage Tanks

No formal documentation has been identified for two (2) of the three (3) USTs which were reportedly removed from the facility.

A 1,000-gallon underground "trap" tank was removed during construction in approximately 1984-5 from where Cold Storage Room 10 (west side of building) is now located. The tank was said to be intended for spill or release containment, but was reportedly never used or connected to the sanitary sewer. This tank was removed by the IT Corporation in 1984 (Refer to Section 6.3).

A 1,000-gallon underground waste photofinishing chemical storage tank was reportedly located near the existing southeast corner of the warehouse building and was reportedly removed along with approximately 30 cubic yards of soil in about 1984.

A third underground tank (size unknown) was reportedly located adjacent to the Maintenance Shop/Will-Call Area (near east side of property). Independent confirmation has not been identified for this tank's use, location and closure status. The tank was reportedly used for backup fuel oil storage for the facility's boiler; reportedly no sampling or testing of soil or groundwater was conducted in conjunction with the tank closure.

4.5 Waste Disposal

Specified photoprocessing chemicals from leaking or damaged containers are discharged into an on-site clarifier located near the western wall of the building. This clarifier is permitted by the City of Whittier. Materials containing compounds prohibited from disposal into the clarifier are placed in appropriate "overpacking" containers and manifested off-site for treatment or disposal.

There is a solid waste compactor located at the facility. Solid waste is removed for off-site disposal by the City of Whittier.

Approximately 20-30 gallons of oil generated from fork-truck hydraulic maintenance is removed for off-site disposal four times/year. There is a Safety Kleen parts cleaner located in the maintenance area.

Used or spent forklift batteries are replaced and removed from the site.

4.6 Utilities

The site is connected to the following utilities: Natural Gas (Southern California Gas Company), Electricity (Southern California Edison), Water, Sanitary Sewer and Solid Waste Removal (City of Whittier).

5.0 Other Environmental Considerations

This section addresses miscellaneous other site-specific environmental considerations.

5.1 Polychlorinated Biphenyls

No PCBs or PCB-containing equipment are known to have been present on-site. Pole mounted transformers observed on-site were not labeled with respect to PCB content; however, no signs of leakage or release were observed.

Three pad-mounted transformers were labeled "Non-PCB" and no indications of spills or releases were observed.

6.0 Site and Surrounding Property History

This section describes the subject property history as evidenced by anecdotal information and review of readily available historical documentation, including topographic maps, aerial photographs and city directories. Historical documentation is reproduced in Appendix C.

6.1 Summary Site History

The subject property appears to have been used for agricultural purposes from at least 1928 throughout the site's first reported development by the Eastman Kodak Company in 1958-9, when the Office and Distribution Center was constructed.

Site buildings and configurations have changed over time. A small Technical Building was built in 1959, along with the original Distribution/Warehouse Building, which now comprises the northeastern portion of the current Office and Distribution Center. The Distribution/Office building has been expanded several times, reportedly most recently in 1985. Another small Marketing Building was constructed in 1975. A small Flammable Storage Building was added in 1985. The northern portion of the building was used for hazardous materials storage; the southern portion was reportedly leased to a plastics recycling company. The Technical Building, Marketing Building, and Flammable Storage Building were removed in 1999.

6.2 1928 - 1958: Agricultural

A 1928 aerial photograph shows several unidentifiable buildings and structures in the northern portion of the subject site, which may be agricultural-related and would be consistent with apparent agricultural uses of surrounding areas to the north, east and south of the subject site.

The 1928 aerial photo also shows at least five (5) aboveground storage tanks (possible petroleum product-related storage) visible less than 0.5-mile south-southwest of the subject property.

A 1947 historical topographical map continues to show no development in the subject property area. The 1947 map does represent two large storage tanks approximately 0.5-mile south of the site.

The five (5) aboveground storage tanks visible in the 1928 photograph are not depicted in the 1947 topographic map and appear to have been removed in a 1949 aerial photograph. Increasing urban growth to the southeast of the subject site is visible in the 1949 aerial photograph and to the north in a 1952 aerial photograph, though the subject site itself appears essentially unchanged with several buildings (possible a farmhouse and related structures).

6.3 1958 - Present: Distribution Center and Related Operations

The subject property was purchased by Eastman Kodak Company in 1955; the Office/Distribution Center was constructed in 1958.

The Office and Distribution Center and Technical Building are depicted in a 1965 topographic map and visible in a 1968 aerial photograph. The surrounding area is mostly developed, except for the area adjacent to the east of site.

The subject property address is first listed in a 1966 telephone directory, and is variously identified as the Eastman Kodak Company, Eastman Kodak Company Marketing Division, Eastman Kodak Company Business Imaging and others through 1995, at which time it is listed in a 1995 directory as Eastman Kodak Company Manufacturers of Ink-Jet.

An apparent addition to the Office and Distribution Center is shown in a 1972 topographic map, which also indicates a heliport adjacent to the south side of the subject property. The former Marketing Building is visible in a 1976 aerial photograph, which also shows several buildings on the eastern adjacent area of the site, previously seen as undeveloped.

The site and adjacent areas are essentially fully developed as seen in 1989 and 1994 aerial photographs.

7.0 Previous Investigations and Remedial Activities

7.1 1998 Phase I Environmental Site Assessment

Dames & Moore completed a Phase I Environmental Site Assessment for the subject property in March, 1998. The ESA was conducted for Pacific Gulf Properties, Inc. (current property owner) prior to their subsequent purchase of the property. Dames & Moore concluded:

- Former on-site operations may have created a recognized environmental condition.
- No documentation exists for a diesel underground storage tank reportedly removed in 1984.
- A clarifier is used for discharge of photochemicals to the sanitary sewer.
- A second clarifier is located in the machine shop.

Dames & Moore recommended a review of on-site plans to identify the location of the removed diesel UST and a limited soil investigation in: (1) the vicinity of the removed UST, (2) adjacent to the two clarifiers to evaluate the soils for VOCs and (3) within the former hazardous materials storage area to evaluate soils for VOCs.

It is not known if subsequent subsurface investigation activities were conducted; but, it is believed that they were not.

Dames & Moore reached the following conclusions in their 1998 report:

- At least one clarifier is permitted, but, it was not obvious which one.
- "Kodak did not routinely follow Los Angeles County Sanitation District regulations regarding discharge".

Additional sewer-related identified by Dames & Moore is summarized below:

- Two industrial waste discharge permits #1658 and #3554 are on record for the facility. Permit #1658 was first granted in 1974 for discharge to the sanitary sewer from four on-site cooling towers; a renewal was filed in 1981.
- An application for permit #3554 was filed in 1975 for the former Marketing Building; a waiver was issued because less than 50 gallons/week of photochemicals were used.
- A 1983 application for Permit #1658 R-1 for on-site cooling tower discharge and photochemicals from leaking or damaged containers was rejected in 1984 and followed by a revised permit application in 1985 (along with a later permit for 500 gallons/week discharge of photochemicals from leaking containers); this permit was also rejected [in 1985].
- An application for Permit #1658 R-2 for discharge from on-site cooling tower bleed-off and vehicle and maintenance flow wash was filed in 1986. A 1986 letter from Kodak to the Sanitation District indicates that plans to build a hazardous waste storage and collection system along the south wall of the warehouse was cancelled due to Sanitation Department objections.
- A Notice of Violation was issued to Kodak in 1994 for failure to submit a five-year permit renewal application. Plans for a three-stage clarifier were also submitted.
- Permit #1658 R-3 was voided in 1996 due to a low-flow exemption. A Sanitation Department memo regarding permits #1659 [sic] and #3554 recommends reactivating Permit #1658 and installing a meter to the property irrigation line.

Construction details from City of Whittier Building Department file information are summarized below:

Year	Permit #	Description
1958	1741	For construction of 138,800 square-foot warehouse and office building
1960	-	Certificate of occupancy for above
1961	M11643	Refrigeration system installation permit
1966	36075	Addition of two volatile materials storage rooms to warehouse
1968	49609	Addition of 47,000 square feet to warehouse and office building
1972	65200	Addition of 37,870 square feet of space (location unknown)
1983	10281	Construction of a cold storage room
1984	11704	New maintenance and storage building
1984	13080	East side of property parking lot
1984	14833	New addition to warehouse
1984	15436	Installation of an interceptor tank outside a building to remove a section of block wall and install a floor drain to the tank (tank location not identified).
1985	15733	New addition to warehouse
1985	15577	Installation of wood frame vault
1986		Permit application for installation of hazardous waste storage tank and containment structure along south wall of warehouse building; subsequently cancelled.

7.2 1997 Phase I Environmental Site Assessment

Conestoga-Rovers & Associates completed a Phase I Environmental Site Assessment for the subject property in November 7, 1997 and identified the following RECs:

- No closure assessment or soil/groundwater sampling and analysis reportedly were conducted at the time the fuel oil UST was removed.
- A former photographic chemical UST was located exterior to the south wall of the Distribution Building which was subsequently covered up by the construction of "Room 5". The UST was closed by removal in 1984 following a tank overfill. A limited soil and groundwater investigation was conducted which included advancement of one soil boring and installation of one groundwater well. Soil and groundwater samples collected and analyzed for priority pollutant metals, volatile organic chemicals (VOCs) and base-neutral-acid extractable organic compounds

were reported present below criteria. UST closure information was reportedly submitted to the LARWQCB, but was not available at the time the CRA Phase I ESA was completed.

- A number of adjacent properties listed as RCRIS small quantity generators; the impact of activities conducted on these properties, if any, to subject property soil and groundwater, is unknown.
- The site was identified as located in a Level 2 radon zone; no site-specific radon testing was conducted.

7.3 1984 Assessment of Tank Leakage

IT Corporation completed an Assessment of Tank Leakage for the facility in October 1984. The following is summarized from their report.

7.3.1 Assessment Activities

In July 1984, Eastman Kodak detected an overfill of a 1,000-gallon UST which received photographic chemicals discharged from leaking or damaged containers into a disposal sink. Subsequent excavation around the upper part of the tank revealed a leak in the pipeline that carried materials into the tank and impacted soils in the tank backfill. The tank and "obviously contaminated" soils were removed for off-site disposal.

Eastman Kodak Company identified (IT Corporation 1984) the following (>2%) chemicals comprising the UST waste photochemicals: Benzyl Alcohol (29.4%), Triethanolamine (18.2%), Potassium (7.7%), Acetate (6.3%), Sulfite (5.5%), Thiosulfate (5.3%), Carbonate (3.8%), Diethylene Glycol (2.0%) and Triethylene Glycol (2.0%).

One borehole was drilled using a 12-inch outside diameter hollow stem augur; 12 soil samples were collected using a California ring sampler. Boring log data shows the top 10 feet to comprise sands, underlain by clayey silts to a depth of 18 feet. Sands with small amounts of silt or clay were observed to the bottom of the borehole, completed at 41 feet below ground surface (bgs). The borehole was completed as a 4-inch PVC monitoring well to a depth of 60 feet (40 feet of casing and 20 feet of 20-slot screen). The well was developed prior to sampling. Depth to water was measured between 26.5 and 26.8 feet bgs.

7.3.2 Soil and Groundwater Testing

Seven split soil samples and one water sample (with duplicate) were collected and analyzed for Priority Pollutant Metals, VOCs and Base-Neutral-Acid Extractable Compounds by two different laboratories.

Groundwater Analyses

Groundwater samples were analyzed by both Brown and Caldwell and Montgomery Laboratories. Brown and Caldwell did not detect any Priority Pollutant Metals above laboratory detection limits. Montgomery Laboratories detected mercury at 0.0003 mg/l, below the EPA and California Standards of 0.002 mg/l. Nickel was detected at 0.013 mg/l; there is no primary standard for nickel. Cyanide was detected at 0.072 mg/l.

No VOCs were detected by Brown and Caldwell; this lab also did not detect any Priority Pollutant Metals above laboratory detection limits. Montgomery Laboratories identified 1,1,1-trichloroethane and chloroform at 0.2 mg/l and 0.1 mg/l respectively.

Non-quantifiable indications of 1,1-dichloroethane, 1,1-dichloroethene and tetrachloroethene were also detected.

Soil Analyses

Soil samples were analyzed by both Brown and Caldwell and Montgomery Laboratories. All Priority Pollutant Metals were detected below applicable California total threshold limit concentration and soluble limit threshold concentrations.

Montgomery Laboratories detected methylene chloride in five samples at decreasing concentrations with increasing depth, ranging from 0.060 mg/kg to 0.015 mg/kg, respectively. Methylene chloride was not detected in samples tested below 20 feet. Methylene chloride was not identified as a component of the UST waste material by Eastman Kodak and is a common laboratory contaminant. Decane and nonanal were also detected at concentrations of 0.003 and 0.004 mg/l.

8.0 Government Agency File and Database Information

This section summarizes government agency file and database information for the subject property and off-site locations within the ASTM radius of review. GEOLOGICA subcontracted with Environmental Data Resources (EDR) of Southport, Connecticut to provide the government environmental database report, which is reproduced in Appendix D.

8.1 Subject Property

8.1.1 Direct Agency Contacts

The following summarizes information obtained by GEOLOGICA correspondence with the following government agencies (related documentation is provided in Appendix B).

- Los Angeles Regional Water Quality Control Board
- Los Angeles County Department of Health Services

Los Angeles Regional Water Quality Control Board (LARWQCB)

LARWQCB personnel have reported no UST or general information files for the subject property.

Los Angeles County Department of Health Services (LACDOHS)

Files maintained by LACDOHS were reviewed by GEOLOGICA personnel on October 15, 2002. Applicable information is summarized in Section 4.3.

8.1.2 Government Environmental Database Records

The subject site was identified on the following government environmental databases:

- RCRIS Small Quantity Generator
- HAZNET
- HMIRS
- FINDS

The Resource Conservation and Recovery Information System (RCRIS) is provided on a variable basis by EPA and the National Technical Information System (NTIS) and includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Eastman Kodak Company was identified as a Small Quantity Generator (SQG) with United States Environmental Protection Agency ID Number CAD054854377. No violations are reported. HAZNET information indicates the site is reported as generating oil/water separation sludge and aqueous solution with less than 10% organic residues.

The site's presence in the HMIRS database indicates an incident occurred in which the U.S. Department of Transportation was notified. No other information was identified. The site's presence on the FINDS database is attributed to its SQG status.

8.1.3 Off-site Properties

Environmental Data Resources (EDR) was subcontracted to provide listings of government-provided, environmental-related databases.

Nearby National Priority List, large and small quantity hazardous waste generators, leaking underground storage tank and other sites were identified in the general site vicinity with an elevated potential to impact site environmental media. Two NPL sites are reviewed below.

8.1.4 National Priorities List Sites

There are two NPL sites within one mile of the subject property with the potential to impact site subsurface groundwater. Information about these two NPL sites is summarized below.

Waste Disposal, Inc.

The Waste Disposal, Inc. (WDI) Superfund site is located about 0.5-mile south/southwest of the subject site in the City of Santa Fe Springs, on approximately 40 acres of land divided into multiple parcels. The site is surrounded by commercial and industrial areas to the north, west and south, residential areas to the east, and a school athletic field along the northeastern corner. At its center, the WDI site contains a buried 42-million gallon capacity concrete-lined reservoir originally constructed for crude petroleum storage. The reservoir was decommissioned in the late 1920s, but was used until the mid-1960s for disposal of a variety of hazardous substances including both liquid and solid wastes. Wastes disposed of at the site include petroleum-related chemicals, solvents, sludges, construction debris, drilling muds, and other waste materials. The reservoir and portions of the site area were covered with soil during the 1960s. 15,000 residents obtain drinking water from wells within three miles of the site. The closest residence is within 50 yards of the site.

The soil is contaminated with metals, polynuclear aromatic hydrocarbons (PAHs) and volatile organic compounds (VOCs) with the primary VOCs being benzene, vinyl chloride, trichloroethene (TCE), and tetrachloroethene (PCE). Most of the contamination has been detected in subsurface soils, which are covered with relatively clean fill. The EPA erected a fence around the site in 1988 to prevent the potential for direct contact with site contaminants.

The main potential source of contamination was the reservoir; however, areas outside of the reservoir were identified as potential sources of subsurface (i.e. under the ground's surface) contamination at the site. Several areas surrounding the reservoir were used as unlined containment ponds for waste disposal, and other areas may have been contaminated by the migration of subsurface liquid wastes or gases.

The Amended Record of Decision was signed in 2002 and provides for:

- A multi-layer engineered cap that meets Resource Conservation and Recovery Act standards, over the reservoir and selected areas outside the reservoir
- Graded soil, asphalt, concrete, or building foundations covering other areas outside the reservoir
- Landfill gas extraction, collection, and treatment

- Leachate and free liquids collection for off-site treatment and disposal
- Physical barriers or venting systems at or within existing or new buildings to prevent exposure to indoor air contamination; or demolition of buildings where this is not feasible
- Bioventing wells or soil vapor extraction systems along the perimeter of the waste near buildings to prevent migration of landfill gas
- Institutional controls including zoning ordinances, access controls, and use restrictions to ensure the integrity of the remedy over time
- Long-term monitoring to ensure that the site is not contaminating groundwater
- Long-term operations and maintenance to ensure the remedy continues to function effectively

Omega Chemical

The Omega Chemical Superfund Site is a result of improper waste disposal at a former hazardous waste treatment and storage facility, known as the Omega Chemical Corporation (OCC), which operated from 1976 to 1991. The former OCC facility was located at 12504 and 12512 East Whittier Boulevard in the City of Whittier approximately 0.5-mile northeast of the site, and is a 40,000-square foot parcel that is zoned for industrial use. The surrounding area is a mix of industrial, commercial and residential property.

OCC operated as a spent solvent and refrigerant recycling and treatment facility. During its years of operation, drums and bulk loads of waste solvent and chemicals from various industrial activities were processed to form commercial products. Chemical, thermal and physical treatment processes are believed to have been used to recycle and reuse the waste materials.

Analytical results indicate that subsurface soil and groundwater at the Omega property are contaminated with high concentrations of tetrachloroethene (PCE), trichloroethene (TCE), other chlorinated hydrocarbons and Freon. There are thirty-five drinking water supply wells within four miles of the site that supply 284,270 people. The nearest well to the site is 1.3 miles to the west. Nearly two-thirds of the wells within four miles draw water from the Lakewood and Upper San Pedro formation aquifers.

Analytical results indicated that subsurface soil at the Omega property is contaminated with chlorinated solvents, primarily PCE, TCE, other chlorinated hydrocarbons, Freons and metals. PCE contamination was detected in soil at concentrations ranging from 1.9 milligrams per kilogram (mg/kg) to 510 mg/kg. Groundwater samples collected at the Omega property contained PCE up to 86,000 micrograms per liter as well as significant concentrations of other chlorinated hydrocarbons and Freon. The presence of PCE and TCE was also detected in groundwater at locations approximately 0.1, 0.25, 0.5, and 0.75 mile down-gradient of the Omega Property in the City of Santa Fe Springs.

The groundwater samples were collected in the shallow regional aquifer of the Lakewood Formation. Most of the municipal drinking water wells draw water from the deeper San Pedro Formation. California Department of Water Resources hydrogeologic cross-sections of the Lakewood and Upper San Pedro Formations indicate, however, that the aquifers are interconnected within two (2) miles of the Omega property.

8.1.5 Other Sites

Other sites (cases open) were identified on state databases indicating impact to surrounding soils and groundwater(s).

9.0 Non-ASTM Items

This section provides site-related information.

9.1 Asbestos-Containing Materials (ACM)

ACM was identified by Dames and Moore (1998) in some pipe insulation, floor tile, mastic and roof felt. Kodak personnel report some ACM was removed in about 1998-1999, and that remaining ACM is located in areas not accessible to employees.

10.0 Conclusions

Based on the information reviewed and observations at the time of the site visit, GEOLOGICA identifies the following Recognized Environmental Conditions associated with the subject property.

- The potential presence and condition of unknown subsurface drains, conduits, or other constructed pathways to the subsurface media, based on facility's age and history of redevelopment.
- Inconsistent and limited information regarding construction, installation, use and closure of facility USTs.
- Limited information regarding construction, installation, use and closure of maintenance area clarifier or oil-water separator.
- Presence of inactive test well.
- The presence of numerous nearby off-site hazardous waste generators, leaking UST sites and other sites with the potential to impact subsurface environmental media.

The following environmental-related items are noted:

- ACM present in reportedly non-accessible areas of facility, and
- Facility is located in an area with Level 2 radon gas levels.

Dear Mr. Miller:

Transmitted with this letter are three copies of our report entitled "Phase I Environmental Site Assessment" for the property located on 12100 Rivera Road, Whittier, California. Thank you for the opportunity to be of assistance on this project.

We trust this report provides you with the information you require at this time. Should you have any questions regarding the information presented in this report, or need further assistance, please contact us.

Sincerely,
DAMES & MOORE

Appendix B - VISTA Report

EXECUTIVE SUMMARY

Dames & Moore has conducted a Phase I Environmental Site Assessment (ESA) of the subject property located on 12100 Rivera Road, Whittier, California. This assessment was accomplished by, and limited to, a site reconnaissance, a drive-by survey of the site vicinity, and a review of available pertinent documentation available through Dames & Moore's standard resources regarding past and current land use for indications of the manufacture, generation, use, storage and/or disposal of hazardous substances at the site.

The scope of work performed is in accordance with our proposal between Pacific Gulf Properties, Inc. and Dames & Moore dated January 16, 1998. The format and content of this Phase I ESA is in general accordance with the ASTM Standard Practice for Environmental Site Assessments: Phase I Site Assessment Process E-1527.

The purpose of this ESA was to review past and present land use practices and site conditions to assess potential environmental impacts and to identify recognized environmental conditions in connection with the subject property. By definition under ASTM designation E-1527, the term "recognized environmental conditions" means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property.

The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

The subject property consists of a former Kodak facility located on 12100 Rivera Road, Whittier, County of Los Angeles, California. The historical data reviewed dates back to 1953, when the site was shown as an agricultural property on an historical aerial photograph. The current facility was constructed in 1958. The site was used as a regional distribution center for Kodak products in the western United States.

Based on the scope of services performed for this ESA, evidence was found to suggest that former onsite operations may have created a recognized environmental condition. No documentation exists for a diesel underground storage tank reportedly removed in 1984. Kodak operates a clarifier through which photochemicals are passed before discharge to the sanitary sewer. A second clarifier is located in the machine shop. Dames & Moore recommends a review of onsite plans be performed to identify the location of the removed diesel underground storage tank (UST). In addition, we recommend a limited soil investigation be performed in the vicinity of the removed diesel UST to test for the presence of petroleum products, adjacent to the two clarifiers to evaluate soils for volatile organic compounds (VOCs), and within the former hazardous materials storage area to evaluate soils for VOCs..

1.0 INTRODUCTION

Presented in this report are the results of Dames & Moore's Environmental Site Assessment (ESA), conducted on the subject property located at 12100 Rivera Road, Whittier, California.

1.1 PURPOSE

The purpose of this ESA was to review past and present land use practices and site conditions to assess potential environmental impacts and to identify recognized environmental conditions in connection with the subject property. This assessment includes a preliminary evaluation of the potential for soil and/or groundwater contamination resulting from past and present site land use activities and nearby offsite operations, based upon the scope of services described.

By definition under ASTM designation E-1527, the term "recognized environmental conditions" means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property.

The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

1.2 SPECIAL TERMS AND CONDITIONS

The scope of work performed is in accordance with our proposal between Pacific Gulf Properties, Inc. and Dames & Moore dated January 16, 1998. The format and content of this Phase I ESA is in general accordance with the ASTM Standard Practice for Environmental Site Assessments: Phase I Site Assessment Process E-1527.

1.3 LIMITATIONS AND EXCEPTIONS OF THE ASSESSMENT

The conclusions presented in this report are professional opinions based solely upon indicated data described in this report, visual observations of the site and vicinity, and our interpretation of the available historical information and documents reviewed, as described in this report. The conclusions are intended exclusively for the purpose outlined herein and the site locations and project indicated. The scope of services performed in execution of this investigation may not be appropriate to satisfy the needs of other users, and any use or reuse of this document or the findings, conclusions, or recommendations presented herein is at the sole risk of said user.

It should be recognized that this study was not intended to be a definitive investigation of contamination at the subject property and the recommendations provided are not necessarily inclusive of all the possible conditions. Given that the scope of services for this investigation was limited and that exploratory borings, soil and/or groundwater sampling were not undertaken, it is possible that currently unrecognized contamination may exist at the site.

Opinions and recommendations presented herein apply to the site conditions existing at the time of our investigations and cannot necessarily apply to site changes of which Dames & Moore is not aware and has not had the opportunity to evaluate. Changes in the conditions of this property may occur with time due to natural processes or the works of man on the subject site or adjacent properties. Changes in applicable standards may also occur as a result of legislation or the broadening of knowledge. Accordingly, the findings of this report may be invalidated, wholly or in part, by changes beyond our control.

1.4 LIMITING CONDITIONS AND METHODOLOGY USED

This assessment was accomplished by, and limited to, a site reconnaissance, a drive-by survey of the site vicinity, and a review of available pertinent documentation available through Dames & Moore's standard resources regarding past and current land use for indications of the manufacture, generation, use, storage and/or disposal of hazardous substances at the site. To meet the objective of this assessment, Dames & Moore completed the following tasks:

- Reviewed pertinent, available documents and maps regarding local physiographic and hydrogeologic conditions in the site vicinity.

- Reviewed and interpreted available historical aerial photographs of the site and vicinity for evidence of previous site activities and development which would suggest the potential presence of hazardous substances at the site. The source, year, flight and frame numbers, and the approximate scale for each photograph reviewed are listed in the References Section of this report.

- Reviewed and interpreted Dames & Moore's archival U.S. Geological Survey (USGS) topographic maps of the site and the area within a ¼-mile radius of the subject property for information regarding historical land use potentially involving the manufacture, generation, use, storage and/or disposal of hazardous substances. The quadrangle and years reviewed are provided in the References Section of this report.

- Contacted Sanborn Mapping and Geographic Information Service in New York regarding the availability of historical fire insurance maps of the site and vicinity. No maps for the site vicinity are available.

- Performed a reconnaissance survey of the subject property to make visual observations of existing site conditions and activities, and a drive-by survey of the area within a ¼-mile radius of the site to observe types of general land use within the search area. Photographs of site are provided in Appendix A.

- Conducted interviews with site personnel to evaluate the site history, and operation and maintenance procedures.

- Reviewed the federal, state, and local database list search provided by VISTA Information Solutions, Inc. (VISTA) of known or potential hazardous waste sites or landfills, and sites currently under investigation for environmental violations. The agency lists and search radii are provided in Appendix B.

- Conducted inquiries in person, by telephone, or in writing to the appropriate regulatory agencies for information regarding environmental permits, violations or incidents, and/or the status of enforcement actions at the subject property.

- Prepared this report describing the research performed and presenting Dames & Moore's findings and professional opinions regarding the potential for adverse environmental impacts to the subject site.

2.0 SITE DESCRIPTION

2.1 ADDRESS

The subject property is located at 12100 Rivera Road in the City of Whittier, Los Angeles County, California.

2.2 SPECIALIZED USER KNOWLEDGE

Interviews were conducted with Ms. Linda Bickerstaff and Mr. Scott Williams, both of whom have been employed at the Kodak facility for 25 years. Mr. Peter Landers and Mr. Mario Irrizary, both of Eastman Kodak Co. were contacted for information regarding onsite underground storage tanks (USTs).

2.3 SITE RECONNAISSANCE & INTERVIEWS

On March 10, 1998, Ms. Rebecca Charlton, a Dames & Moore representative, conducted a reconnaissance of the subject property. The reconnaissance consisted of the observation and documentation of existing site conditions and nature of the neighboring property development within ¼ mile of the site.

Four structures are present onsite; the technical building, the marketing and training building, the office/warehouse building and the flammable storage building. The distribution and marketing buildings were vacant at the time of the site visit. The technical building and the northeast portion of the warehouse building were constructed in 1959. An addition to the warehouse building was constructed in 1985. The marketing building was constructed in 1975. The flammable materials storage building was also constructed in 1985. The EPA ID # of the subject property is CAD 054 854 377.

The following utilities service the site:

Gas:	The Southern California Gas Company
Electrical:	Southern California Edison
Water:	City of Whittier
Sewer:	City of Whittier
Solid Waste:	City of Whittier

2.3.1 Hazardous Substances

Drums and containers of hazardous photochemicals are stored in the hazardous chemicals storage area of the warehouse. Secondary containment is available and is used only for leaking drums and containers. Sulfuric acid and caustic soda are stored onsite in the hazardous materials area to balance the pH of the fluid in the clarifier. Flammable materials and photochemicals are stored in a separate building on the southeastern portion of the subject property.

Freon is used in the cooling systems of the cold storage rooms, which are serviced by Farley.

2.3.2 Storage Tanks

One aboveground storage tank containing water for emergency use was observed onsite south of the warehouse building.

2.3.3 Polychlorinated Biphenyls (PCBs)

Three dry-type transformers were observed in the distribution building. Two large transformers owned by Southern California Edison (SCE) are present to the west of the office/warehouse building. No evidence of staining was observed associated with the transformers. SCE has stated that its transformers are cooled with mineral oil and do not contain PCBs. If requested, SCE will test the fluid for a fee.

2.3.4 Waste Disposal

Onsite hazardous materials are disposed by an outside contractor. One trash compactor is located in the distribution building. Leaking photochemicals are washed into the onsite clarifier located on the western wall of the warehouse building. According to Los Angeles County Sanitation District records, 'non-sewerable" wastes are packed on 50-gallon poly drums and removed offsite by an outside contractor. Spent batteries from forklifts used onsite are removed by Motif, which provides battery service for the forklifts.

2.3.5 Wetlands

Wetlands were not observed onsite or adjacent to the property.

2.3.6 Drums/other Chemical Containers

Drums and containers of hazardous and non-hazardous chemicals are stored onsite in the warehouse and the flammable materials building awaiting shipping. One drum of motor oil and one drum of degreasing solvent (111 DF) are stored in the flammable materials building. Both are in-use and are stored on their side on stands. The motor oil drum is anchored to its stand. The cleaning solvent drum is not anchored to its stand and could easily tip over during an earthquake.

Several drums are stored in the vicinity of clarifier. Due to construction activities at the time of the site visit, Dames & Moore was unable to inspect the drums. The drums reportedly contain sulfuric acid and caustic soda.

Typical household cleaners in 5-gallon containers are stored in the janitor's facility in the distribution building.

2.3.7 Dumping

None observed.

2.3.8 Pits, Ponds, Lagoons, Septic Systems, Cisterns, Sumps, Drains

One oil-water clarifier was observed in the machine shop. At the time of the site visit, Dames & Moore observed that the drain leading into the clarifier was nearly full. The Los Angeles County Sanitation District does not appear to have records for this clarifier.

One drain was observed in the loading bay of the flammable storage building. The drain appeared clogged at the time of the site visit.

One clarifier was observed in the hazardous chemical storage area of the warehouse. Access to the clarifier was prohibited due to work being performed on the clarifier at the time of the site visit, therefore Dames & Moore did not observe this clarifier. According to Mr. Williams, all wastewater from inside the warehouse building passes through the clarifier, where the water is treated to neutralize pH. According to records at the Los Angeles County Sanitation District, the clarifier was installed in 1979. The clarifier is also permitted by the City of Public Works.

A cafeteria is present in the distribution building visit.

2.3.9 Pesticide Use

None observed.

2.3.10 Staining and Discolored Soils

Minor staining was observed on the linoleum floor in the marketing building. Minor staining was also observed on the sealed concrete floors of the warehouse building in the maintenance area, the area where the forklifts are recharged, and the hazardous materials storage area. White staining was observed on the concrete floor of the flammable materials storage room. The amount of staining is minimal and is not considered a recognized environmental condition.

2.3.11 Stressed Vegetation

At the time of the site visit, there were four patches of stressed vegetation visible on the lawn south of the warehouse building. The stressed vegetation appears to be caused by gophers burrowing underneath the lawn.

2.3.12 Unusual Odors

An odor of photochemicals was observed in the clarifier within the hazardous chemicals storage area.

2.3.13 Onsite Wells

According to Mr. Williams, one monitoring well is present onsite, though it could not be found at the time of the site visit.

2.3.14 Other Concerns

Two underground storage tanks (USTs) have reportedly been removed from the subject property. One diesel UST of unknown size was reportedly located adjacent to the north wall of the maintenance shop/will call area (Conestoga-Rovers & Associates, 1997). This tank was removed in 1985. No closure documents or permits for removal exist for this UST. A conversation with Mr. Mario Irrizary confirmed that the tank was near the door to the maintenance shop on the east side of the property. Dames & Moore was unable to find an accurate record of the tank location through interviews with onsite personnel and through agency reviews.

One 1000 gallon UST used for storage of waste photographic chemicals was located exterior to the south wall of the distribution building. This tank is depicted in 1960 plans on record at the Los Angeles County Sanitation District as a 1000 gallon UST located south of the existing southeast corner of the warehouse building. The UST was removed along with 30 cubic yards of soil in 1984 following an overflow and leak of photochemicals. A soil and groundwater investigation conducted at this time detected no analytes above the Federal Safe Drinking Water Act and Federal Site Screening Level threshold (Conestoga-Rovers & Associates, 1997). Proper closure documents have

reportedly been issued for this UST, however, they have not been provided to Dames & Moore for review.

The location of the removed tanks is covered due to construction of additions to the warehouse building in 1985. A concrete patch inset with a metal grate is present in the parking lot along the western wall of the warehouse building. This patch is of unknown origin, however, it is likely connected to the storm drain or sewer.

2.4 HISTORICAL USE

Dames & Moore conducted personal interviews and reviewed selected historical aerial photographs, archival topographic maps, and City of Whittier Department of Building and Safety (WDBS) records. These references were reviewed for evidence of activities which would suggest the potential presence of hazardous substances at the site and to evaluate the potential for the site to be impacted by offsite sources of contamination. The following paragraphs are a chronological summary of the review:

1949 A United States Geologic Survey (USGS) map depicts the subject property as vacant undeveloped land. A large building is depicted to the west of the subject property. Rivera Road is present north of the subject property. Two oil reservoirs are present approximately one mile south of the subject property.

1953 Based on an aerial photograph, the subject property and surrounding properties appear vacant and agriculturally developed. An industrial warehouse-type building is present adjacent to the west of the site. Eleven circles of stressed vegetation approximately 400 feet in diameter are present to the south of the subject property, and appear to mark areas where aboveground storage tanks have been removed. Residential properties are present to the north.

1960 Based on an aerial photograph, the subject property is developed. Additional commercial development has occurred west and north of the site. The circles of stressed vegetation are still present south of the subject property. A drive-in theater has been constructed to the east of the subject property. Areas to the west and south of the site remain agricultural.

1965 Based on an aerial photograph, the subject property is developed. Additional commercial development has occurred in the site vicinity. The areas of stressed vegetation south of the site have been covered by asphalt.

1971 Based on an aerial photograph, the subject property appears developed with a large industrial building. The site vicinity has been completely developed with commercial and industrial properties. One parcel to the northwest of the site is still undeveloped.

1973 Based on an aerial photograph, the subject property appears unchanged from the previous photograph.

1976 Based on an aerial photograph, the subject property appears unchanged from the previous photograph. The vacant parcel to the northwest of the site has been developed.

1978 Based on an aerial photograph, the subject property appears unchanged from the previous photograph. The facility adjacent to the west of the site have been removed and replaced with commercial development of comparable size.

1983 Based on an aerial photograph, the subject property appears unchanged from the previous photograph. Buildings adjacent to the east of the subject property have been removed and replaced with buildings of comparable size.

1987 Based on an aerial photograph, the subject property and surrounding areas appears unchanged from the previous photograph.

1990 Based on an aerial photograph, the subject property appears unchanged from the previous photograph. The buildings constructed over the areas of stressed vegetation south of the site have been removed.

1992 Based on an aerial photograph, the subject property appears unchanged from the previous photograph. The industrial warehouse type buildings have been constructed south of the site.

1993 Based on an aerial photograph, the subject property appears unchanged from the previous photograph. A building north of the subject property has been removed.

1995 Based on an aerial photograph, the subject property appears unchanged from the previous photograph. A new building has been constructed south of the site.

2.4.1 Oil and Gas Well Maps

A review of the Munger Map Book of California-Alaska Oil and Gas Fields, June 1997 edition, identified uncompleted abandoned oil wells within a 1-mile radius of the site. None are located onsite.

2.4.2 Building Department File Review

The City of Whittier Building and Safety Department was visited on March 10, 1998 by a Dames & Moore representative. The following is a chronological summary of the review:

1958 Permit #1741 issued to Eastman Kodak Co. (Kodak) for construction of a 138,800 square foot built-up office and warehouse.

1960 Certificate of Occupancy issued to Kodak for the warehouse and office building.

1961 Permit #M11643 to Kodak to install a refrigeration system.

1966 Permit # 36075 to Kodak for the addition of two volatile materials storage rooms to the warehouse.

1968 Permit #49609 issued to Kodak for a 47,000 square foot addition to the warehouse.

1972 Permit #65200 to Kodak for the addition of 37, 870 square feet of space, denoted as areas 'A' and 'G'. Permit #65200 issued to Kodak for addition of areas 'A' and 'B' to an existing facility.

1983 Permit #10281 to Kodak for construction of a cold storage room.

1984 Permit #11704 to Kodak for a new maintenance and storage building.

1984 Permit #13080 for a parking lot on the east side of the property.

1984 Permit #14833 to Kodak for a new addition to the warehouse.

1984 Permit #15436 to Kodak for the installation of an interceptor tank outside a building, to remove a section of block wall, and to install a floor drain to tank. The location of the tank is not indicated on the permit application.

1985 Permit #15733 to Kodak for an addition to the warehouse.

1985 Permit #15577 to Kodak to install a wood frame vault.

1986 Permit application to install a hazardous waste storage tank and containment structure along the south wall of the warehouse building..

1986 Permit application to install hazardous waste storage tank and containment structure canceled.

2.5 CURRENT USES OF ADJACENT PROPERTY

The site is located within an area primarily comprised of commercial properties in Whittier, California (Figure 2). In general, prominent adjoining land uses are as follows:

North:	Rivera Road, with commercial properties beyond.
South:	Commercial properties.
East:	Commercial properties, with residential properties beyond.
West:	Commercial properties.

3.0 RECORDS REVIEW

Dames & Moore reviewed readily available records regarding past and current site use, contacted applicable agencies regarding environmental concerns at the site, and reviewed the agency database list search for environmental concerns at surrounding properties. The information obtained during the records review is provided in the following sections.

3.1 AGENCY RECORD REVIEW

3.1.1 Data Base List Search

Dames & Moore contracted VISTA Information Solutions, Inc. (VISTA) of San Diego, California to provide a review of the publicly available federal state, and local databases of known or potential hazardous waste sites or landfills and sites currently under investigation for environmental violations for the site address and the surrounding area. The VISTA report is included in Appendix B. Facilities located adjacent to or hydraulically upgradient from the site with respect to the inferred southwest groundwater flow direction, are discussed below.

VISTA -listed properties interpreted as hydraulically downgradient or cross-gradient from the site relative to regional groundwater flow direction are in our opinion unlikely to impact the site with hazardous materials and are therefore excluded from the following discussion. Uppermost groundwater reportedly flows to the southwest (see Section 3.2.2).

3.1.1.1 Site

The subject property was identified on the VISTA database report as a large quantity RCRA generator, producing at least 1000 kilograms per month of non-acutely hazardous waste.

3.1.1.2 Offsite

Federal or State Superfund listings were not noted within one mile of the site. Four US EPA CORRACTS facilities were identified within one mile of the site. One NPL facility is listed within one mile of the site. Nine CORTESE facilities are listed within ½ mile of the site. Transfer, Storage, or Disposal (TSD) facilities were not identified within one mile of the site. Two State SWLF were identified within ½ mile of the site. Three TRIS facilities were identified within 1/4 mile of the site. Two State equivalent CERCLIS sites were identified within one mile of the site. Fifteen listed LUST (leaking underground storage tank) sites are listed within ½ mile of the site. Ten registered underground storage tank sites are located within ¼ mile of the site. Fifteen RCRA Hazardous Waste Generators are listed within 1/8 mile of the site.

- Falcon Auto Delivery (1A) is located at 12115 East Rivera Road, adjacent to the east of the subject property. This facility is identified on the RCRA Large Quantity Generator database. Based on the absence of this facility from agency databases which indicate a release, it is the opinion of Dames & Moore that the potential for this facility to impact the subject property is low.

- Petroleum Testing Service (1B) is located at 12051 Rivera Road, adjacent to the west of the subject property. This facility is identified on the RCRA Small Quantity Generator database. The State Underground Storage Tank (UST) database identifies this facility for one UST. Based on the absence of this facility from agency databases which indicate a release, it is the opinion of Dames & Moore that the potential for this facility to impact the subject property is low.

- Arviso Graphics (3A) is located at 8116 Byron Road, 0.06 miles east of the subject property. This facility is identified on the RCRA Small Quantity Generator database. Based on the absence of this facility from agency databases which indicate a release, it is the opinion of Dames & Moore that the potential for this facility to impact the subject property is low.

- Ultra Sonic Deburring (3B) is located at 8136 Byron Road, 0.07 miles east of the subject property. This facility is identified on the RCRA Small Quantity Generator database. Based on the absence of this facility from agency databases which indicate a release, it is the opinion of Dames & Moore that the potential for this facility to impact the subject property is low.

- Fairchild Inc. (3B) is located at 8146 Byron Road, 0.07 miles east of the subject property. This facility is identified on the State UST database for one underground storage tank. Based on the absence of this facility from agency databases which indicate a release, it is the opinion of Dames & Moore that the potential for this facility to impact the subject property is low.

- Refractory Composites Inc. (4) is located at 12220A Rivera Road, 0.07 miles northeast of the subject property. This facility is identified on the RCRA Small Quantity Generator database. Based on the absence of this facility from agency databases which indicate a

release, it is the opinion of Dames & Moore that the potential for this facility to impact the subject property is low.

- Bals Auto Service (4) is located at 12221 Rivera Road, 0.08 miles northeast of the subject property. This facility is identified on the RCRA Small Quantity Generator database. Based on the absence of this facility from agency databases which indicate a release, it is the opinion of Dames & Moore that the potential for this facility to impact the subject property is low.

- DNS Auto Body (5A) is located at 12130 Washington Boulevard, 0.07 miles north of the subject property. This facility is identified on the RCRA Small Quantity Generator database. Based on the absence of this facility from agency databases which indicate a release, it is the opinion of Dames & Moore that the potential for this facility to impact the subject property is low.

- Blower Drive Service (5A) is located at 12140 East Washington Boulevard, 0.07 miles northeast of the subject property. This facility is identified on the RCRA Large Quantity Generator database. Based on the absence of this facility from agency databases which indicate a release, it is the opinion of Dames & Moore that the potential for this facility to impact the subject property is low.

- Inter Health Equipment Co. (5B) is located at 12102 East Washington Boulevard, 0.07 miles north of the subject property. This facility is identified on the State UST database for one underground storage tank. Based on the absence of this facility from agency databases which indicate a release, it is the opinion of Dames & Moore that the potential for this facility to impact the subject property is low.

- Chevron USA SS 9-7441 (11) is located at 12376 East Washington Boulevard, 0.25 miles east of the subject property. This facility is identified on the State UST database for one UST of unspecified status and one removed UST. The State and Regional Leaking Underground Storage Tank (LUST) databases identify the site for a gasoline leak affecting groundwater, discovered on October 22, 1991. At the time of the VISTA report, the status is listed as case closed/cleanup complete. This facility is also identified on the CORTESE database for a leaking tank. Based on the case closed/cleanup complete status, it is the

opinion of Dames & Moore that the potential for this facility to impact the subject property is low.

- American Medical Enterprises (18) is located at 12508 East Lambert Road, 0.37 miles east of the subject property. This facility is identified on the CORTESE database for a leaking tank. The State and Regional LUST databases identify this facility for a waste oil leak affecting groundwater discovered on July 17, 1990. At the time of the VISTA report, a preliminary assessment had been performed. Based on the distance of this facility from the site, it is the opinion of Dames & Moore that the potential for this facility to impact the subject property is low.

- GM Oil Co. (18) is located at 12559 East Lambert Road, 0.42 miles east of the subject property. This facility is identified on the State and Regional LUST databases for a hydrocarbon leak affecting groundwater discovered on March 27, 1995. At the time of the VISTA report, a contamination assessment had been performed at this facility. Based on the distance of this facility from the site, it is the opinion of Dames & Moore that the potential for this facility to impact the subject property is low.

- Fred Rippy Inc. (19) is located at 12741 East Washington Boulevard, 0.42 miles east of the subject property. This facility is identified on the Regional CERCLIS database for organics, aboveground drums and contaminated blaco-thane. The CERCLIS database also identifies this facility as a RCRA regulated generator and NOTIS 1032 site. The NFRAP database identifies this facility for the discovery on an unspecified contaminant. At the time of the VISTA report, a preliminary assessment had been performed for this facility. Based on the distance of this facility from the site, it is the opinion of Dames & Moore that the potential for this facility to impact the subject property is low.

- Tune Tech (23) is located at 12612 East Lambert Road, 0.47 miles east of the subject property. This facility is identified on the Regional and State LUST databases for a gasoline leak affecting groundwater on March 15, 1994. At the time of the VISTA report, the State UST database indicates that a prelimanary assessment had been performed for this facility, with a recommendation to excavate and dispose. Based on the distance of this facility from the subject property, it is the opinion of Dames & Moore that the potential for this facility to impact the subject property is low.

- 7-11/Southland Corp. (24) is located at 8438 Santa Fe Springs Road, 0.48 miles east of the subject property. This facility is identified on the Regional and State LUST databases for a gasoline leak affecting groundwater on March 15, 1994. The CORTESE facility also identifies this facility for a leaking tank. At the time of the VISTA report, the State UST database indicates that the status is case closed/cleanup complete. Based on the regulatory status, it is the opinion of Dames & Moore that the potential for this facility to impact the subject property is low.

- Omega Chemical Site (27) is located at 12504 East Whittier Boulevard, 0.63 miles east of the subject property. This facility is identified on the CORRACTS database, and on the RCRA-TSD CORRACTS database as receiving and storing of-site waste. Based on the distance of this facility from the subject property, it is the opinion of Dames & Moore that the potential for this facility to impact the subject property is low.

3.1.2 Agency Contacts

In addition to the database list search, Dames & Moore contacted state and local regulatory agencies to obtain information regarding the environmental condition of the subject property. The following information was received from these agencies:

- Cal-EPA, Department of Toxic Substances does not have a file for the subject property.

- California Regional Water Quality Control Board, Los Angeles Region, does not have a file for the subject property.

- Los Angeles County Department of Public Works does not have a file for the subject property.

- Los Angeles County Sanitation District has two permits on file for the subject property. Sanitation Department files for the subject property were reviewed by a Dames & Moore representative on March 13, 1998. A summary of this review is presented in Section 3.1.3 of this report.

- South Coast Air Quality Management District (SCAQMD) provided Dames & Moore with records for the subject property. Two permits were issued in 1972 for operation of onsite boilers. One permit was issued in 1976 to operate a paint and solvent spray booth. A second permit to operate a paint and solvent spray booth was issued in 1982. All permits are currently inactive. An 1988 inspection of the facility by SCAQMD personnel did not identify any violations.

- City of Whittier Department of Building and Safety permit files were reviewed by a Dames & Moore representative on February 16, 1997 for information regarding site use history and potential indications of facility features that could affect environmental conditions at the property. A summary of this review is presented in Section 2.4 of this report.

3.1.3 Los Angeles County Sanitation District File Review

The Los Angeles County Sanitation District was visited by a Dames & Moore representative on March 13, 1998. Two industrial waste discharge permits, #1658 and #3554, are on record for the subject property. The Kodak facility is described in the permit records as a regional distribution center for the western United States.

Permit #1658 was first granted in 1974 for discharge to the sanitary sewer from four onsite cooling towers. An application for this permit number was filed in 1981 to renew the permit.

An application for Permit #3554 was filed by Kodak in 1975 for photochemicals used to demonstrate equipment to potential customers at the marketing building. The Sanitation District issued a Waiver of Industrial Waste Discharge Permit Requirements to Kodak because less than 50 gallons/week of photochemicals were used in house.

In 1979, plans on record at the Sanitation District indicate that a new storage room and maintenance area with a new clarifier were added to the subject property.

In 1983, Kodak applied for Permit #1658 R-1 for discharge from onsite cooling towers and product leakers (photochemicals). This permit was rejected by the Sanitation District in 1984. A revised permit to increase the amount of product discharge from 250 gallons/week to 500 gallons/week was

filed by Kodak in 1985, along with a later permit application for 500 gallons/week of photochemical discharge from leaking containers. The Sanitation District rejected this permit in 1985.

In 1986, Kodak applied for Permit #1658 R-2 for discharge from onsite cooling tower bleed-off and vehicle and maintenance flow wash. A 1986 letter from Kodak to the Sanitation District indicates that plans to build a new hazardous waste storage and collection system along the south wall of the warehouse were canceled because of objections from the Sanitation District. A new clarifier that had been built along the south wall was sealed off at the sample box in early 1986. The new industrial waste sewer line installed along the south wall is not in use by Kodak.

In 1990, an inspection report by the Sanitation District reports that I.W. #1658 is still active. The unpermitted clarifier along the south wall was sealed in April 1986. The abandoned sewer connection was permanently sealed.

In 1992, two Notices of Violation (N.O.V.) Were issued to Kodak for failure to submit a self-monitoring report.

In 1994, a N.O.V. was issued to Kodak for failure to submit a self-monitoring report. Plans for a three-stage clarifier were submitted to the Sanitation District. A Spill Containment Report from the Sanitation District reported that four 55-gallon drums of sulfuric acid are stored next to floor drains.

In 1996, a N.O.V. was issued to Kodak for failure to submit a five-year permit renewal application. Permit #1658 R-3 was voided by the Sanitation District because Kodak was declared exempt from filing for an Industrial Waste Discharge Permit due to low flow. A memo from the Sanitation District to Kodak in regard to Permits #1659 and #3554 recommends that Permit #1658 be reactivated in Kodak was required to file a surcharge report due to the amount of flow from the property. The memo also recommended that Kodak install a meter on the irrigation line to the property.

Based on the file review, the following conclusions are made:

- Kodak operates at least one permitted clarifier onsite. It was not obvious to Dames & Moore which of the two clarifiers is permitted.

- Kodak did not routinely follow Los Angeles County Sanitation District regulations regarding discharge.

3.2 PHYSICAL SETTING

Dames & Moore reviewed pertinent maps and readily available literature for information on the physiography and hydrogeology of the site. A summary of this information is presented in the following subsections.

3.2.1 Topography

The subject property is located in Township 3 South, Range 14 West within the City of Whittier, County of Los Angeles, California (Figure 1). Topographic map coverage of the site vicinity is provided by the U.S. Geological Survey (USGS), 7.5 minute "Whittier, California" quadrangle (1965, photo revised 1981). The subject property elevation is approximately 150 feet above Mean Sea Level (MSL) and the local topographic gradient is approximately 5 feet per mile to the southwest as measured from the topographic map (Figure 1). There is little discernible topographic relief across the subject property.

The nearest surface water is the San Gabriel River, located approximately 4 miles to the west of the subject property.

3.2.2 Area Soils and Hydrogeology

The site is located in the eastern portion of the Los Angeles Coastal Plain within the hydrographic subarea of the coastal plain known as the West Coast Basin. The site is located within the central structural block of the Los Angeles Basin (Yerkes, et al, 1965). The central block, an alluviated lowland plain, is bounded by the Santa Ana Mountains and the San Joaquin Hills to the east and southeast, the Whittier fault zone to the north and northeast, the Newport-Inglewood fault zone to the west and southwest, and the Santa Monica Mountains to the northwest. The structure of the block is dominated by northwest trending, doubly plunging synclinal features. Surface materials within the central block generally consist of coarse-grained, unconsolidated alluvial deposits (Yerkes, et al., 1965).

The site is located within the central structural block of the Los Angeles Basin (Yerkes et al., 1965). The central block, an alluviated lowland plain, is bounded Santa Ana Mountains and the San Joaquin Hills to the east and southeast, the Whittier fault zone to the north and northeast, the Newport-Inglewood fault zone to the west and southwest, and the Santa Monica Mountains to the northwest. The structure of the block is dominated by northwest trending, plunging synclinal features. Surface materials within the central block generally consists of coarse-grained, unconsolidated alluvial deposits.

A telephone conversation with the Los Angeles County Department of Public Works, Hydrologic Records, indicated that the most recent measurement of depth to groundwater in the site vicinity is approximately 31.5 feet below ground surface (bgs) as measured on September 21, 1996 from well #1622J (surface elevation is 157.4 feet MSL) located approximately 2-mile west of the site. The direction of groundwater flow is reported to be to the east-southeast. The groundwater flow direction under the subject property has not been evaluated. A subsurface investigation would be needed to further evaluate the groundwater flow direction. However, based on local topography, the direction of groundwater flow in the vicinity of the site is west-southwest towards the San Gabriel River.

4.0 CONCLUSION AND RECOMMENDATIONS

Based on the scope of services performed for this ESA, evidence was found to suggest that onsite operation may have created a recognized environmental condition. This conclusion was reached, in part, on the following:

- No documentation exists for the diesel underground storage tank reportedly removed in 1984.
- Kodak operates a clarifier through which photochemicals are passed before discharge to the sanitary sewer. Dames & Moore was not allowed to see this clarifier.
- A second clarifier is located within the maintenance area or the warehouse building.

Dames & Moore recommends a review of onsite plans be performed to identify the location of the removed diesel underground storage tank. In addition, we recommend a limited soil investigation be performed in the vicinity of the removed diesel UST to test for the presence of petroleum

products, adjacent to the two clarifiers to evaluate soils for volatile organic compounds (VOCs), and within the former hazardous materials storage area to evaluate soils for VOCs.

SITE ASSESSMENT PLUS REPORT

DESCRIPTION OF DATABASES SEARCHED

A) DATABASES SEARCHED TO 1 MILE

NPL
SRC#: 3622

VISTA conducts a database search to identify all sites within 1 mile of your property.
The agency release date for NPL was September, 1997.

The National Priorities List (NPL) is the EPA's database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the Superfund program. A site must meet or surpass a predetermined hazard ranking system score, be chosen as a state's top priority site, or meet three specific criteria set jointly by the US Dept of Health and Human Services and the US EPA in order to become an NPL site.

SPL
SRC#: 4233

VISTA conducts a database search to identify all sites within 1 mile of your property.
The agency release date for Calsites Database: Annual Workplan Sites was October, 1997.

This database is provided by the Cal. Environmental Protection Agency, Dept. of Toxic Substances Control. The agency may be contacted at: 916-323-3400.

CORRACTS
SRC#: 4244

VISTA conducts a database search to identify all sites within 1 mile of your property.
The agency release date for HWDMS/RCRIS was October, 1997.

The EPA maintains this database of RCRA facilities which are undergoing "corrective action". A "corrective action order" is issued pursuant to RCRA Section 3008 (h) when there has been a release of hazardous waste or constituents into the environment from a RCRA facility. Corrective actions may be required beyond the facility's boundary and can be required regardless of when the release occurred, even if it predates RCRA.

B) DATABASES SEARCHED TO 1/2 MILE

CERCLIS
SRC#: 3859

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for CERCLIS was July, 1997.

The CERCLIS List contains sites which are either proposed to or on the National Priorities List(NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL. The information on each site includes a history of all pre-remedial, remedial, removal and community relations activiies or events at the site, financial funding information for the events, and unrestricted enforcement activities.

Cal Cerclis
SRC#: 2462

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for Ca Cerclis w/Regional Utility Description was June, 1995.

This database is provided by the U.S. Environmental Protection Agency, Region 9. The agency may be contacted at: . These are regional utility descriptions for California CERCLIS sites.

NFRAP
SRC#: 3860

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for CERCLIS-NFRAP was July, 1997.

NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly, or the contamination was not serious enough to require Federal Superfund action or NPL consideration.

SCL
SRC#: 4232

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for Calsites Database: All Sites except Annual Workplan Sites (incl. ASPIS) was October, 1997.

This database is provided by the Department of Toxic Substances Control. The agency may be contacted at: .

The CalSites database includes both known and potential sites. Two- thirds of these sites have been classified, based on available information, as needing "No Further Action" (NFA) by the Department of Toxic Substances Control. The remaining sites are in various stages of review and remediation to determine if a problem exists at the site. Several hundred sites have been remediated and are considered certified. Some of these sites may be in long term operation and maintenance.

RCRA-TSD
SRC#: 4244

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for HWDMS/RCRIS was October, 1997.

The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Facilities database is a compilation by the EPA of facilities which report generation, storage, transportation, treatment or disposal of hazardous waste. RCRA TSDs are facilities which treat, store and/or dispose of hazardous waste.

SWLF
SRC#: 4323

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for Ca Solid Waste Information System (SWIS) was December, 1997.

This database is provided by the Integrated Waste Management Board. The agency may be contacted at: 916-255-4021.

The California Solid Waste Information System (SWIS) database consists of both open as well as closed and inactive solid waste disposal facilities and transfer stations pursuant to the Solid Waste Management and Resource Recovery Act of 1972, Government Code Section 2.66790(b). Generally, the California Integrated Waste Management Board learns of locations of disposal facilities through permit applications and from local enforcement agencies.

LAC-Landfills
SRC#: 3835

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for Los Angeles County Landfills and Transfer Stations was May, 1997.

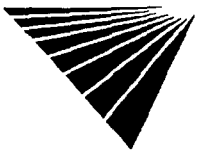
This database is provided by the Public Health Invesitgations, Hazardous Material Control Program. The agency may be contacted at: 213-881-4151.

WMUDS
SRC#: 3938

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for Waste Management Unit Database System (WMUDS) was May, 1997.

This database is provided by the State Water Resources Control Board. The agency may be contacted at: 916-892-0323. This is used for program tracking and inventory of waste management units. This system contains information from the following eight main databases: Facility, Waste Management Unit, SWAT Program Information, SWAT Report Summary Information, Chapter 15 (formerly Subchapter 15), TPCA Program Information, RCRA Program Information, Closure Information; also some information from the WDS (Waste Discharge System). This database con

The WMUDS system also accesses information from the following databases from the Waste Discharger System (WDS): Inspections, Violations, and Enforcements. The sites contained in these databases are subject to the California Code of Regulations - Title 23. Waters.



LUST
SRC#: 4319

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for Region #4-SLIC List was November, 1997.

This database is provided by the Regional Water Quality Control Board, Region #4. The agency may be contacted at: 916-266-7582.

LUST
SRC#: 4324

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for Lust Information System (LUSTIS) was October, 1997.

This database is provided by the California Environmental Protection Agency. The agency may be contacted at: 916-445-6532.

LUST RG6
SRC#: 4157

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for Region #6-Leaking Underground Storage Tank Listing was October, 1997.

This database is provided by the Regional Water Quality Control Board, Region #6. The agency may be contacted at: 619-241-6583.

LUST RG4
SRC#: 4229

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for Region #4-UST Leak List was October, 1997.

This database is provided by the Regional Water Quality Control Board, Region #4. The agency may be contacted at: 916-266-7582.

CORTESE
SRC#: 2298

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for Cortese List-Hazardous Waste Substance Site List was February, 1995.

This database is provided by the Office of Environmental Protection, Office of Hazardous Materials. The agency may be contacted at: 916-445-6532.

The California Governor's Office of Planning and Research annually publishes a listing of potential and confirmed hazardous waste sites throughout the State of California under Government Code Section 65962.5. This database (CORTESE) is based on input from the following: (1)CALSITES-Department of Toxic Substances Control, Abandoned Sites Program Information Systems; (2)SARA Title III Section III Toxic Chemicals Release Inventory for 1987, 1988, 1989, and 1990; (3)FINDS; (4)HWIS-Department of Toxic Substances Control, Hazardous Waste Information System. Vista has not included one time generator facilities from Cortese in our database.; (5)SWRCB-State Water Resources Control Board; (6)SWIS-Integrated Waste Management Control Board (solid waste facilities); (7)AGT25-Air Resources Board, dischargers of greater than 25 tons of criteria pollutants to the air; (8)A1025-Air Resources Board, dischargers of greater than 10 and less than 25 tons of criteria pollutants to the air; (9)LTANK-SWRCB Leaking Underground Storage Tanks; (10)UTANK-SWRCB Underground tanks reported to the SWEEPS systems; (11)IUR-Inventory Update Rule (Chemical Manufacturers); (12)WB-LF- Waste Board - Leaking Facility, site has known migration; (13)WDSE-Waste Discharge System - Enforcement Action; (14)DTSCD-Department of Toxic Substance Control Docket.

Deed Restrictions SRC#: 1703

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for Deed Restriction Properties Report was April, 1994.

This database is provided by the Department of Health Services-Land Use and Air Assessment. The agency may be contacted at: 916-323-3376. These are voluntary deed restriction agreements with owners of property who propose building residences, schools, hospitals, or day care centers on property that is "on or within 2,000 feet of a significant disposal of hazardous waste".

California has a statutory and administrative procedure under which the California Department of Health Services (DHS) may designate real property as either a "Hazardous Waste Property" or a "Border Zone Property" pursuant to California Health Safety Code Sections 25220-25241. Hazardous Waste Property is land at which hazardous waste has been deposited, creating a significant existing or potential hazard to public health and safety. A Border Zone Property is one within 2,000 feet of a hazardous waste deposit. Property within either category is restricted in use, unless a written variance is obtained from DHS. A Hazardous Waste Property designation results in a prohibition of new uses, other than a modification or expansion of an industrial or manufacturing facility on land previously owned by the facility prior to January 1, 1981. A Border Zone Property designation results in prohibition of a variety of uses involving human habitation, hospitals, schools and day care center.

Toxic Pits SRC#: 2229

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for Summary of Toxic Pits Cleanup Facilities was February, 1995.

This database is provided by the Water Quality Control Board, Division of Loans Grants. The agency may be contacted at: 916-227-4396.

C) DATABASES SEARCHED TO 1/4 MILE

RCRA-Viols/Enf

VISTA conducts a database search to identify all sites within 1/4 mile of your property.
The agency release date for HWDMS/RCRIS was October, 1997.

The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Facilities database is a compilation by the EPA of facilities which report generation, storage, transportation, treatment or disposal of hazardous waste. RCRA Violators are facilities which have been cited for RCRA Violations at least once since 1980. RCRA Enforcements are enforcement actions taken against RCRA violators.

UST's SRC#: 573

VISTA conducts a database search to identify all sites within 1/4 mile of your property.
The agency release date for Fullerton Underground Storage Tank List was June, 1992.

This database is provided by the Fullerton Fire Department. The agency may be contacted at: ; Caution-Many states do not require registration of heating oil tanks, especially those used for residential purposes.

UST's SRC#: 1612

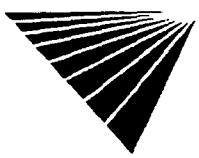
VISTA conducts a database search to identify all sites within 1/4 mile of your property.
The agency release date for Underground Storage Tank Registrations Database was January, 1994.

This database is provided by the State Water Resources Control Board, Office of Underground Storage Tanks. The agency may be contacted at: 916-227-4337; Caution-Many states do not require registration of heating oil tanks, especially those used for residential purposes.

UST's SRC#: 3935

VISTA conducts a database search to identify all sites within 1/4 mile of your property.
The agency release date for San Francisco Current Active UST List was July, 1997.

This database is provided by the San Francisco Department of Health. The agency may be contacted at: 415-252-3900; Caution-Many states do not require registration of heating oil tanks, especially those used for residential purposes.



UST's
SRC#: 3945

VISTA conducts a database search to identify all sites within 1/4 mile of your property.
The agency release date for Alameda County UST List was June, 1997.

This database is provided by the Department of Environmental Health. The agency may be contacted at: 510-567-6713; Caution-Many states do not require registration of heating oil tanks, especially those used for residential purposes.

UST's
SRC#: 4006

VISTA conducts a database search to identify all sites within 1/4 mile of your property.
The agency release date for Kern County Sites and Tanks Listing was August, 1997.

This database is provided by the Kern County Environmental Health Department. The agency may be contacted at: 805-862-8700; Caution-Many states do not require registration of heating oil tanks, especially those used for residential purposes.

UST's
SRC#: 4008

VISTA conducts a database search to identify all sites within 1/4 mile of your property.
The agency release date for Sutter County UST Owner List was July, 1997.

This database is provided by the Sutter County Agricultural Department. The agency may be contacted at: 916-822-7504; Caution-Many states do not require registration of heating oil tanks, especially those used for residential purposes.

UST's
SRC#: 4087

VISTA conducts a database search to identify all sites within 1/4 mile of your property.
The agency release date for Ventura County "BWT" (Business, Waste, Tanks) List was August, 1997.

This database is provided by the Ventura County Environmental Health Division. The agency may be contacted at: 805-654-2813; Caution-Many states do not require registration of heating oil tanks, especially those used for residential purposes.

UST's
SRC#: 4090

VISTA conducts a database search to identify all sites within 1/4 mile of your property.
The agency release date for Los Angeles County UST "Street Number" Book was August, 1997.

This database is provided by the Los Angeles County Department of Public Words, Environmental Programs. The agency may be contacted at: 818-458-3514; Caution-Many states do not require registration of heating oil tanks, especially those used for residential purposes.

UST's
SRC#: 4155

VISTA conducts a database search to identify all sites within 1/4 mile of your property.
The agency release date for San Bernardino County UST List was August, 1997.

This database is provided by the San Bernardino County Fire Department, Hazardous Materials Division. The agency may be contacted at: 909-387-3200; Caution-Many states do not require registration of heating oil tanks, especially those used for residential purposes.

UST's
SRC#: 4228

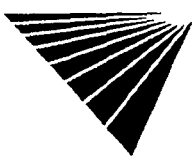
VISTA conducts a database search to identify all sites within 1/4 mile of your property.
The agency release date for Riverside County UST List was October, 1997.

This database is provided by the Riverside County Environmental Health. The agency may be contacted at: 909-358-5055; Caution-Many states do not require registration of heating oil tanks, especially those used for residential purposes.

AST's
SRC#: 4320

VISTA conducts a database search to identify all sites within 1/4 mile of your property.
The agency release date for Aboveground Storage Tank Database was December, 1997.

This database is provided by the State Water Resources Control Board. The agency may be contacted at: 916-227-4364.



LAC-Site Miti.
SRC#: 4012

VISTA conducts a database search to identify all sites within 1/4 mile of your property.
The agency release date for LA County-Site Mitigation Complaint Control Log was July, 1997.

This database is provided by the Department of Health Services, LA County Public Health Investigations. The agency may be contacted at: 213-890-7806.

TRIS
SRC#: 3716

VISTA conducts a database search to identify all sites within 1/4 mile of your property.
The agency release date for TRIS was December, 1996.

Section 313 of the Emergency Planning and Community Right-to-Know Act (also known as SARA Title III) of 1986 requires the EPA to establish an inventory of Toxic Chemicals emissions from certain facilities(Toxic Release Inventory System). Facilities subject to this reporting are required to complete a Toxic Chemical Release Form(Form R) for specified chemicals.

D) DATABASES SEARCHED TO 1/8 MILE

ERNS
SRC#: 4144

VISTA conducts a database search to identify all sites within 1/8 mile of your property.
The agency release date for was September, 1997.

The Emergency Response Notification System (ERNS) is a national database used to collect information on reported releases of oil and hazardous substances. The database contains information from spill reports made to federal authorities including the EPA, the US Coast Guard, the National Response Center and the Department of transportation. A search of the database records for the period October 1986 through July 1997 revealed information regarding reported spills of oil or hazardous substances in the stated area.

RCRA-LgGen
SRC#: 4244

VISTA conducts a database search to identify all sites within 1/8 mile of your property.
The agency release date for HWDMS/RCRIS was October, 1997.

The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Facilities database is a compilation by the EPA of facilities which report generation, storage, transportation, treatment or disposal of hazardous waste. RCRA Large Generators are facilities which generate at least 1000 kg./month of non-acutely hazardous waste (or 1 kg./month of acutely hazardous waste).

RCRA-SmGen
SRC#: 4244

VISTA conducts a database search to identify all sites within 1/8 mile of your property.
The agency release date for HWDMS/RCRIS was October, 1997.

The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Facilities database is a compilation by the EPA of facilities which report generation, storage, transportation, treatment or disposal of hazardous waste. RCRA Small and Very Small generators are facilities which generate less than 1000 kg./month of non-acutely hazardous waste.

End of Report

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Eastman Kodak Company
Regional Marketing & Distribution Center
Whittier, California

Prepared for:
Eastman Kodak Company

NOVEMBER 1997
REF. NO. 11234 (1)
This report is printed on recycled paper.

CONESTOGA-ROVERS & ASSOCIATES

EXECUTIVE SUMMARY

Conestoga-Rovers & Associates was retained by Eastman Kodak Company to complete a Phase I Environmental Site Assessment of the Regional Marketing & Distribution Center (Property or Site) in Whittier, California. The Phase I Environmental Site Assessment was completed between October 21 and November 7, 1997.

Based on the Phase I Environmental Site Assessment including the Property inspection, information provided by facility representatives and regulatory agencies, documents reviewed, and the environmental database searches, the following recognized environmental conditions, as defined in ASTM Standard E1527-97, were identified at the Site.

i) **Historic Operations/Petroleum UST**: One petroleum underground storage tank (UST) previously was owned and operated on Site for storage of backup fuel oil for the distribution center's boiler. The UST was located adjacent to the north wall of the maintenance shop/will call area and was closed by removal in 1985. No closure assessment or soil/groundwater sampling and analysis reportedly were conducted at the time the fuel oil UST was removed.

ii) **Historical Operations/Waste Photofinishing Chemical UST**: One UST was operated on Site for storage of waste photographic chemicals. The photographic chemical UST was located exterior to the south wall of the distribution building. Building construction has since occurred in this area, which is currently occupied by "Room 5". The UST was closed by removal in 1984 following detection of an overfill of the tank. The soil and groundwater beneath the UST were investigated by IT Corporation. The investigation included the advancement of one soil boring and the installation of one groundwater monitoring well. Soil and groundwater samples were collected and analyzed for priority pollutant metals, volatile organic compounds and base/neutral/extractable organic compounds. Where detected, analytes were present at concentrations below the Federal Safe Drinking Water Act and Federal Site Screening Level threshold criteria. Reportedly, all UST closure documentation was

submitted to the Regional Water Quality Control Board and Los Angeles County. No documentation verifying approval of the UST closure by the regulatory agencies is presently available.

iii) **Adjacent Properties**: A number of adjacent commercial properties presently are listed on the RCRIS-SG list as small quantity generators of hazardous waste and include a variety of commercial business operations. The impact of activities conducted on these properties, if any, to the soils and/or groundwater beneath the Site presently is unknown.

iv) **Radon Gas**: The Site area is classified by USEPA as a Level 2 radon zone potentially having moderately high radon levels. No testing to determine if elevated levels of radon gas are present at the Site has been conducted to date.

v) **Asbestos-Containing Materials (ACM)**: Asbestos containing materials are present in limited quantity in some pipe insulation, floor tile, mastic and roof felt in the building. ACM observed were generally in good structural condition.

With the exception of potential issues associated with the operation of the former USTs, no evidence of significant environmental impairment of the Property from current or former operations at the Site was identified by the Phase I ESA.

Site operations primarily consist of receipt, warehousing and shipping of photographic materials. The Site is a small quantity generator of hazardous wastes. In general, wastes generated at the Site are discharged to the municipal sanitary sewer or disposed of off Site as appropriate. No issues with respect to compliance or good management practices were identified at the Site.

1.0 INTRODUCTION

Conestoga-Rovers & Associates (CRA) was retained by Eastman Kodak Company to conduct a Phase I Environmental Site Assessment (ESA) of the Regional Marketing & Distribution Center (Kodak) Property and building located at 12100 Rivera Road in Whittier, California (Site). The purpose of the Phase I ESA was to identify actual or potential recognized environmental conditions at the facility. A Site location map is provided on Figure 1.

The Phase I ESA has been conducted in accordance with ASTM Standard E1527-97 for conducting environmental assessments. The assessment included an environmental database search and historical records review, a Property inspection, and interviews with key employees of Eastman Kodak Company Regional Marketing & Distribution Center and with regulatory agencies. The following tasks were conducted during this assessment:

- review of federal and state environmental databases and historical records including Sanborn Fire Insurance Maps;
- review of property title records;
- review of past and current property usage and adjacent property occupancy;
- inspection of the facilities, equipment, utility services, operations, and associated records for the Property;
- observations of any conditions that represented potential environmental concerns;
- review of chemical use and storage and spill/release incidents;
- review of the compliance status of environmental permits and registrations;
- review of waste handling, accumulation, storage, and disposal practices;
- review of air emissions and wastewater discharges;
- review of equipment that potentially contains polychlorinated biphenyls (PCBs);
- identification of potential asbestos-containing materials (ACM);
- review of employee and community notification programs;
- review of aboveground and underground storage tank records; and
- review of the structural condition of all buildings located on the Site and their associated servicing components.

Whittier, California

CRA

11234(1) OCT 23, 97 REV.0 (C)

CRA relied on information obtained from facility employees and regulatory officials as accurate unless contradicted by written documentation or field observations.

The following report summarizes the information gathered by CRA during the Phase I ESA and identifies recognized environmental conditions and compliance/good management practices associated with Property.

This Phase I ESA has been prepared for the use of Eastman Kodak Company, and should not be relied upon by any other party without written concurrence from CRA.

2.0 ENVIRONMENTAL DATABASES SEARCH AND HISTORICAL RECORDS REVIEW

2.1 ENVIRONMENTAL DATABASES SEARCH

CRA contracted Environmental Risk Information and Imaging Services (ERIIS) to conduct a search of Federal and state environmental databases. Based on the address of the Site, the database searches were completed to assist in the identification of conditions at the Site and within a radius distance specified in ASTM Standard E1527-97. The following databases were searched with the findings as noted:

2.1.1 Federal Databases

1. National Priority List (NPL) - The NPL is a United States Environmental Protection Agency (USEPA) listing of the nation's worst uncontrolled or abandoned hazardous waste sites. NPL Sites are targeted for possible long-term remedial action under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980. In addition, the NPL Report includes information concerning cleanup agreements between the USEPA and potentially responsible parties, any liens filed against contaminated properties, as well as the past and current USEPA budget expenditures tracked within the Superfund Consolidated Accomplishments Plan (SCAP).

   FINDING: The Site was not reported to be on the NPL. No adjacent sites were reported to be on the NPL. One site within a one-mile radius of the Site was reported to be on the NPL, this being Waste Disposal, Inc., located at 12731 Los Nietos Road, which was reported to be on the final NPL.

2. Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) - The CERCLIS List is a comprehensive listing of known or suspected uncontrolled or abandoned hazardous

waste sites. These sites have either been investigated or are currently under investigation by the USEPA for the release or threatened release of hazardous substances. Once a site is placed in CERCLIS, it may be subjected to several levels of review and evaluation and may ultimately be placed on the NPL. In addition to site events and milestone dates, the CERCLIS List contains financial information from the SCAP. As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" have been removed from the CERCLIS List..

FINDING: The Site was not reported to be on the CERCLIS List. No sites within a half-mile radius of the Site were reported to be on the CERCLIS List.

3. No Further Remedial Action Planned (NFRAP) Sites Report - The NFRAP Sites Report, also known as the CERCLIS Archive, contains information pertaining to sites which have been removed from the USEPA's CERCLIS Database. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require federal Superfund action or NPL consideration.

FINDING: The Site was not reported to be listed in the NFRAP Sites Report. No adjacent sites were reported to be listed in the NFRAP Sites Report. The following sites within a half-mile radius of the Site were reported to be listed in the NFRAP Sites Report:

Facility	*Address*
Fred R Rippy Inc.	12471 Washington Boulevard
Western Screw Products	11780 Slauson Avenue
Cal Western Paint Corp.	11748 Slauson Avenue
Vacant Lot, Whittier	Washington Blvd. at Putnam St.
Foremost McKesson Inc.	9005 Sorensen Avenue

4. Resource Conservation and Recovery Information System - Treatment, Storage and Disposal Facilities (RCRIS-TS) Report - The RCRIS-TS Report contains information regarding those facilities that either treat, store or dispose of USEPA regulated hazardous waste. The following information also is included in the RCRIS-TS Report: information regarding the status of facilities tracked by the Resource Conservation and Recovery Act (RCRA) Administrative Action Tracking System (RAATS); inspections and evaluations conducted by Federal and State Agencies; all reported facility violations, the environmental statutes violated and any proposed and actual penalties; and a complete listing of USEPA regulated hazardous wastes which are generated or stored on-site.

   FINDING: The Site was not reported to be listed in the RCRIS-TS Report. No sites within a half-mile radius of the Site were reported to be listed in the RCRIS-TS Report.

5. Resource Conservation and Recovery Information System - Corrective Action (CA) Report - The RCRIS-CA Report contains information pertaining to hazardous waste treatment, storage and disposal facilities (RCRA TSDs) which have conducted or are currently conducting corrective actions as regulated by the Resource Conservation and Recovery Act. The following information also is included in the RCRIS-CA Report: information regarding the status of facilities tracked by the RAATS; inspections and evaluations conducted by Federal and State Agencies; all reported facility violations, the environmental statutes violated and any proposed and actual penalties; information pertaining to corrective actions undertaken by the facility or the USEPA; and a complete listing of USEPA regulated hazardous wastes which are generated or stored on-site.

   FINDING: The Site was not reported to be listed in the RCRIS-CA Report. No adjacent sites were reported to be listed in the RCRIS-CA Report. The following sites within a one-mile radius of the Site were reported to be listed in the RCRIS-CA Report:

Facility	*Address*
Omega Chemical Site PRP Org GP	12504 Whittier Boulevard
Phibro Tech Inc.	8851 Dice Road

6. Resource Conservation and Recovery Information System - Large Quantity Generators (RCRIS-LG) Report - The RCRIS-LG Report contains information regarding facilities that either generate more than 1,000 kilograms (kg) of USEPA regulated hazardous waste per month or meet other applicable requirements of RCRA. The following information also is included in the RCRIS-LG Report: information regarding the status of facilities tracked by the RAATS; inspections and evaluations conducted by Federal and State Agencies; all reported facility violations, the environmental statutes violated and any proposed and actual penalties; information pertaining to corrective actions undertaken by the facility or the USEPA; and a complete listing of USEPA regulated hazardous wastes which are generated or stored on-site.

FINDING: The Site was not reported to be listed in the RCRIS-LG Report. No adjacent sites were reported to be listed in the RCRIS-LG Report. The following sites within a quarter-mile radius of the Site were reported to be listed in the RCRIS-LG Report:

Facility	*Address*
Foss Plating	8140 Secura Way
Cal-Tron Plating Inc.	11919 Rivera Road

7. Resource Conservation and Recovery Information System - Small Quantity Generators (RCRIS-SG) Report - The RCRIS-SG Report contains information regarding facilities that either generate between 100 kg and 1,000 kg of USEPA regulated hazardous waste per month or meet other applicable requirements of RCRA. The following information also is included in the RCRIS-SG Report: information regarding the status of facilities tracked by the RAATS; inspections and evaluations conducted by Federal and State Agencies; all reported facility violations, the

environmental statutes violated and any proposed and actual penalties; information pertaining to corrective actions undertaken by the facility or the USEPA; and a complete listing of USEPA regulated hazardous wastes which are generated or stored on-site.

FINDING: The Site was reported to be listed in the RCRIS-SG Report for generating hazardous waste codes D001, D002, D004, F017 and F018 (see Section 3.8 for discussion). The following sites were located adjacent to the Site were listed in the RCRIS-SG Report:

Facility	*Address*
Petroleum Testing Services	12051 Rivera Road
Falcon Auto Delivery	12115 Rivera Road
Hi Lite Mfg. Co., Inc.	8515 Chetle Avenue
Clutch Systems	8421 Chetle Avenue
Compu Aire Inc.	8167 Byron Road
Russ Bassett Corp.	8199 Byron Road

The following sites within a quarter-mile radius of the Site were reported to be listed in the RCRIS-SG Report:

Facility	*Address*
Bals Auto Service	12221 Rivera Road
Arviso Graphics	8116 Byron Road
Refractory Composites Inc.	12220A Rivera Road
Ultra Sonic Deburring	8136 Byron Road
Blower Drive Service	12140 Washington Blvd.
DNS Auto Body	12130 Washington Blvd.
BB Plant & Body Center	11506 Washington Blvd.
The Tin Plating Company	11748 1/4 Washington Blvd.
Bab Hydraulics Inc.	11606 Washington Blvd.
Marco Equipment	11642 Washington Blvd.

Poles By Lamplighter Inc.	8400 Secura Way
Whittier Intercommunity Medical Group	12291 Washington Blvd.
NBS Systems Inc.	8332 Secura Way
RPM Centerless Grinding Co.	12105 Slauson Avenue
Brownell Truck Bodies Inc.	12201 Slauson Avenue
Nu Car Prep Inc.	12140 Slauson Avenue
Steel Heat Treating Company	8226A Sorensen Avenue
Chevron Station 97441	12376 Washington Blvd.
Pryor Giggey Company	12393 Slauson Avenue
Bemmers Fleet Service	12500 Slauson Avenue
Tiny's Auto Body	8949 Santa Fe Springs Road

8. Emergency Response Notification System - ERNS is a national computer database system that is used to store information on the sudden and/or accidental release of hazardous substances, including petroleum, into the environment. The ERNS reporting system contains preliminary information on specific releases including the spill location, the substance released and the responsible party. The information in the ERNS Report

pertains only to those releases that occurred between 1987 and June 11, 1997.

FINDING: The Site was not reported to be listed in the ERNS.

9. Toxic Release Inventory (TRI) System of 1994- The 1994 TRI Report contains information on the industrial release and/or transfer of toxic chemicals as reportable under Title III of the Superfund Amendments and Reauthorization Act of 1986 (SARA Title III).

FINDING: The Site was not reported to be listed in the 1994 TRI Report. No adjacent sites were reported to be listed in the 1994 TRI Report. The following sites within a one-mile radius of the Site were reported to be listed in the 1994 TRI Report:

Facility	*Address*
Ormond Inc.	12020 Rivera Road

2.2 HISTORICAL RECORDS REVIEW

2.2.1 Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps assist in the identification of historic land use and commonly indicate the existence and location of

aboveground and underground storage tanks, structures, improvements and facility operations. No Sanborn Maps were reported to be available for the Site for the period covering the years 1867 to 1990.

2.2.2 Property Title Search

CRA contracted Milliken & Michaels Credit Services to conduct a search of property title records and other documents (lease agreements, easements, etc.), dated from at least 1940 (or the date of the first recorded deed) to the present, associated with ownership or occupation of the Site. The following entities were reported to be associated with ownership or occupation of the Site during the specified time periods:

J.B. & Mary Edith McGee	Unreported - June 1940
John & Faye Rade	June 1940 - January 1944
Faye Rade	January 1944 - January 1944
Harry Lavigne	January 1944 - April 1944
Adelaide Denoria	April 1944 - Unreported
Corporation of America, Trustee (Foreclosure Deed)	Unreported - December 1944
Manuel R. & Marie C. Craveiro	December 1944 - March 1958
Eastman Kodak Company	March 1958 - Present

One lease was reported to be associated with the Site, this being a memorandum of lease by and between Eastman Kodak Company, as lessor and the City of Whittier, as lessee, recorded March 25, 1964.

The following easements were reported to be associated with the Site:

Grantor	*Grantee*	*Date Recorded*
Eastman Kodak Co.	Southern California Edison	March 17, 1959
Eastman Kodak Co.	General Telephone Co. of California	June 9, 1959
Eastman Kodak Co.	Southern California Edison	September 15, 1972
Eastman Kodak Co.	Southern California Edison	January 26, 1973
Eastman Kodak Co.	Southern California Edison	January 30, 1984

No environmental liens were reported to be associated with the Site.

A copy of the title search documents in enclosed as Appendix A.

3.0 SITE INSPECTION

An inspection of the Site was completed by representatives of CRA on October 21, 1997. CRA was accompanied by Mr. Mario Irizarry, the manager of facilities for Kodak. Additional information was provided by Mr. Scott Williams, the health, safety and environmental coordinator. Mr. Irazzary has worked at the facility for 30 years while Mr. Williams has worked at the Site for approximately 25 years.

3.1 SITE OVERVIEW

The subject Site is located at 12100 Rivera Road on the west side of Whittier, Los Angeles County, California. The Site is situated in a commercial/industrial area on the south side of Rivera Road at the intersection of Rivera Road and Chetle Avenue.

The Site consists of a 23 acre parcel on which four buildings comprising a total of approximately 323,000 square feet of space are located. The on-Site buildings consist of the technical building, distribution building, marketing building and dry storage building. The technical building and the northeast portion of the distribution building were constructed in 1959. The technical building presently is vacant. The distribution building was expanded a number of times over the years with the most recent expansion occurring on the southeast side (Room 5) and the northeast side (maintenance shop/will call) in 1985. The marketing building, utilized principally for office space, was constructed in 1975. The dry storage building, constructed in 1985, is divided into two sections. The northern portion of the dry storage building is a specifically designed hazardous materials storage bunker while the southern portion is leased to Plastic Innovations, Inc., an unrelated company involved in recycling plastic.

The Site was purchased by Kodak in 1958. According to Site personnel, prior to development the Site was undeveloped or in agricultural production.

The majority of the active building space at the Site is occupied by the distribution center building which houses a large warehouse/shipping/receiving area, three cold storage rooms, maintenance shop, boiler room and a chemical waste accumulation area (wastewater treatment area). A lobby, computer room, several offices, a former nursing office and cafeteria also are located in the building. The dry storage building also is in active use by the plastics recycling company and for storage of a small quantity of hazardous materials used and shipped by Kodak from the facility.

Operations at the Site consist of the receipt, warehousing and shipping of Kodak photographic products including pre-packaged photographic film, photofinishing chemicals, photofinishing paper and accessories. As part of the on-Site operations, Kodak manages photographic chemicals from packages that have leaked or spilled while in transit. Photofinishing chemicals which can be discharged to the municipal sanitary sewer system are chemically neutralized prior to discharge to the municipal sanitary sewer system. Concentrated photographic chemicals or photographic chemicals which have been determined to be hazardous are segregated and over packed for off-Site disposal or recycling.

3.2 ENVIRONMENTAL SETTING/adjacent properties

The Site is located on Rivera Road in a predominantly commercial/industrial area of Whittier, Los Angeles County, California. Approximately three-quarters of the Site is covered by the office, distribution center and dry storage buildings and associated asphalt paved driveways, parking and access areas for material off-loading and shipping. The remaining areas of the Site consist of an unimproved grassed field on the south side of the facility and relatively small areas of landscaping along the office building and Property perimeters.

The Site is bordered to the north by Rivera Road, an unidentified group of metal buildings, one of which houses Falcon Auto

Delivery, Petroleum Testing Services and L. A. Sleeve Company; to the east by Sprinkler Fitters U. S. A., Taylor , Compu Aire, Inc., Russ Bassett Corp. and Byron Road; to the south by a number of commercial businesses including EMPAC White Rock Company, USA and Cal Air Co along Slauson Avenue; and to the west by Chetle Avenue and a number of commercial/industrial businesses along Chetle Avenue including Hi Lite Mfg. Co., Inc. and Clutch Systems. No adverse impact to the Site from adjacent properties was observed by CRA during the Site inspection. One adjacent property to the east of the Site, Taylor Engines, appeared to have an engine cleaning operation adjacent to the east Property fence line. Six adjacent businesses were listed in the RCRIS-SG Report including Petroleum Testing Services, Falcon Auto Delivery, Hi Lite Mfg. Co, Inc., Clutch Systems, Compu Aire, Inc. and Russ Bassett Corp. No sites listed on any of the other databases searched are located adjacent to the Site.

The majority of the Site is occupied by the four buildings and by asphalt surfaced parking, loading and access drive areas. The vegetated areas of the Site consist primarily of landscaping in front of the building along Rivera Road and a large grassed field on the south side of the Site. There also is a railroad track spur which enters the south side of the Property that at one time serviced the facility. No stressed vegetation, stained soils, significantly stained exterior surfaces or evidence of on-Site fill was observed on Site by CRA at the time of the Site inspection.

The Site is situated on relatively level terrain in the South Coast Basin of Los Angeles County. Based on review of a drilling log for a soil boring/groundwater monitoring well completed at the Site in 1984 (see Section 3.3), the Site soils consist of alluvial deposits of sand, silt and clay. There is no surface water on the Property. Surface water from the Site is directed to on-Site stormwater drainage swales that discharge off Site at the south end of the Property and into the public stormwater sewer system.

The Site is located in flood zone B which is defined as an area of moderate or minimal flooding determined to be between the limits of the 100-year and 500-year flood plain. The National Flood Insurance Program (NFIP) Community-Panel number for the Site is 060169-0003B, effective

January 16, 1981. The Federal Emergency Management Agency Standard Flood Hazard Determination for the Site is provided in Appendix B.

Photographs of the facility and Property are provided in Appendix C.

3.3 UNDERGROUND STORAGE TANKS (USTs)

On the basis of information provided by Mr. Irizarry and by CRA field observations, there are currently no USTs owned or operated at the Site by Kodak. The Site was not reported to be listed on the California UST or LUST databases. CRA did not observe any physical evidence (e.g., vent pipes, fill ports, etc.) suggesting the presence of USTs on Site during the Site inspection.

Based on discussions with Mr. Irizarry and a review of on-Site documentation, two USTs previously were owned and operated on Site by Kodak. One UST, a 500-gallon to 1,000-gallon petroleum UST, was located adjacent to the north wall of the maintenance shop/will call area. The UST was used for storage of backup heating fuel oil for the facility boiler and was closed by removal in approximately 1985. No closure assessment or collection and analyses of soil and groundwater samples reportedly were conducted at the time the fuel oil UST was removed.

The second UST was a 2,000-gallon to 4,000-gallon tank used for storage of waste photographic chemicals generated from prepackaged photographic chemicals that spilled or leaked. The waste photographic chemical UST was located exterior to the south wall of the main distribution building. Building construction has since occurred in this area, which is currently occupied by "Room 5". In July 1984, Kodak detected an overfill of the UST which subsequently was investigated and closed by IT Corporation. Activities completed included removal of the UST, removal and disposal of contaminated soil, and completion of a hydrologic investigation of the soil and groundwater beneath the tank. Results of the UST closure program are documented in the IT Corporation report, "Assessment of Tank Leakage, Eastman Kodak Company,

Whittier, California" dated October 1984. The hydrologic investigation consisted of advancing one soil bore hole approximately 6 feet south of the former UST location and completing the borehole as a groundwater monitoring well. Soil and groundwater samples were collected and analyzed for priority pollutant metals, volatile organic compounds and base/neutral/extractable organic compounds. Analysis of the water sample from the facility indicated low levels of organic and inorganic chemicals present. Where detected, all analyte concentrations were below the applicable Safe Drinking Water Act threshold criteria. Organic compounds detected in the soil samples included methylene chloride at low concentrations. Low concentrations of priority pollutant metals were also detected in the soil samples. All detected analytes were present at concentrations below USEPA Site Screening Levels. The UST closure documents reportedly were submitted to the California Regional Water Quality Control Board and Los Angeles County. No regulatory agency approval of the UST closure was available in facility files.

The IT UST assessment report and the manifests documenting the disposal of the wastes generated from the UST closure are reproduced in Appendix C.

3.4 ABOVEGROUND STORAGE TANKS (ASTs)

Based on information provided by Mr. Irizarry and by CRA field observations, there is currently one AST located and in service at the Site. The AST is a 4,000-gallon potable water storage tank for use in an emergency such as an earthquake. The water tank is located exterior to the distribution center on the south west side of the Site.

No other ASTs have historically been operated at the Site according to Mr. Irizarry. CRA did not observe any evidence of former AST use or releases during the Site inspection.

3.5 UTILITY SERVICES

Potable water and sanitary sewer service are provided by the municipal water supply and sanitary sewer systems. Mr. Irizarry was unaware of the presence of a water well or a septic system on the Site. No evidence of a water well or septic system was observed by CRA during the Site inspection.

The electrical supply is provided to the Site by Southern California Edison through several pad mounted transformers located on the Property. There are two large transformers enclosed in a fenced area exterior to the west side of the distribution building. A smaller transformer serving the marketing building is located on the east side of the Site between the distribution building and marketing building. The electrical supply for the technical building and the northern area of the distribution building is supplied from an electrical room on the south side of the technical building. Natural gas service is supplied by Southern California Gas through underground service connections. Heating for the distribution building is provided through a natural gas fired boiler. Cooling for the cold storage rooms in the distribution center is provided by Freon 22 based chillers. Heating and air conditioning in the marketing and technical buildings is provided through roof mounted HVAC units.

3.6 RAW MATERIAL AND CHEMICAL USE AND STORAGE

Operations conducted on Site include the temporary storage and distribution of prepackaged finished photofinishing chemicals. The photofinishing chemical products received and shipped from the Site are generally considered moderately corrosive and highly water soluble. These chemicals are mixtures which contain such hazardous constituents as potassium carbonate, potassium hydroxide, sodium carbonate, sodium hydroxide, acetic acid, ammonium thiocyanate, benzyl alcohol, boric acid, diethanolamine, methanol, phosphoric acid, sodium metabisulfite, sulfuric acid, hydroquinone, formaldehyde and aqueous ammonia solution. Acutely hazardous materials stored at the Site include hydroquinone, sulfuric acid, aqueous ammonia and

formaldehyde. The majority of the photofinishing products are stored in sealed containers in the distribution warehouse.

Chemicals stored and used at the Site are primarily associated with the maintenance shop and the wastewater treatment area. These chemicals consist of hydraulic oil, gasoline, parts cleaning solvent (petroleum naptha), sodium hydroxide, sulfuric acid, compressed gases, boiler treatment chemicals and chiller chemicals. The maintenance shop utilizes primarily hydraulic oil which is stored in 30-gallon drums or 5-gallon containers in the maintenance shop. Gasoline is stored in 5-gallon containers in the hazardous materials storage bunker on the north side of the dry storage building. Parts cleaning solvent is stored in one Safety-Kleen parts washing unit located in the maintenance shop. Sodium hydroxide and sulfuric acid utilized in wastewater treatment are stored in 55-gallon drums in the wastewater treatment area or just outside of the area in the distribution warehouse. Smaller quantities of photofinishing chemicals are used within the research and development area in the marketing building Graphics Department lab as part of product development and testing.

The majority of the flammable chemicals utilized on Site are properly stored in the hazardous materials bunker. The hazardous materials bunker was designed for storage of hazardous materials and has a recessed concrete floor, concrete berms, and explosion proof lighting. Materials stored in the hazardous materials bunker include flammables used in the maintenance department and a number of prepackaged photofinishing products labeled as being flammable or corrosive (e.g., Kodak Glacial Acetic Acid, Color Developer, Indicator Stop Bath, Eastman Antifog No. 9, etc.). During the Site inspection, a number of containers of miscellaneous chemicals were observed in the hazardous materials bunker including six 5-gallon containers of gasoline, one 55-gallon drum of Tellus 46 Hydraulic Oil, one 55-gallon drum of Solvent 111DF, one 55-gallon drum of Formula 0-88 and one unidentified 30-gallon capacity black carboy. The containers were in good condition and no evidence of a release was observed.

No evidence of a release of chemical or petroleum products at the Site was observed by CRA during the Site inspection with the exception of an area of petroleum hydrocarbon staining on the floor in the secondary chiller room on the west side of the distribution building. There were no floor drains in the vicinity of the stained areas.

The facility maintains a Hazardous Materials Business Plan (HMBP) with the Los Angeles County Fire Department which was most recently updated in December 1996. The HMBP includes a hazardous material inventory for the chemicals stored and used on Site.

3.7 SOLID WASTE

Solid wastes generated at the Site consist of general office wastes and refuse, cardboard, waste batteries, contaminated cardboard, used spill absorbent, used oil, spent petroleum naptha, unusable photofinishing chemicals from pre-package products that have spilled or leaked and, periodically, wastewater/oil from the maintenance shop oil/water separator. The general office and paper waste is disposed of in a trash compactor on Site which is owned and serviced by the City of Whittier. Cardboard is generally recycled off Site. Waste batteries for the forklift trucks are returned to the supplier when new batteries are purchased.

Contaminated cardboard from leakage of prepackaged photofinishing chemicals is collected and stored in 55-gallon drums in the wastewater treatment area. Spent spill absorbent is stored in 55-gallon drums in the wastewater treatment area. The contaminated cardboard and spent absorbent typically are handled as non-hazardous waste based on the pH of the waste. The contaminated cardboard and spent absorbent are transported off-site for disposal.

Used oil generated in the maintenance department is stored in 30-gallon or 55-gallon drums and is transported off-Site for disposal by recycling at the Chemical Waste Management, Azusa, California facility (USEPA

Identification Number CAD008302903). Wastewater and oil generated as a result of cleaning the maintenance shop oil/water separator also is disposed of at the Chemical Waste Management Azusa, California facility.

Spent petroleum naptha generated in the Safety-Kleen parts washer at the Site is transported to the Safety-Kleen El Monte, California facility (USEPA Identification Number CAT000613893) for disposal by recycling.

Prepackaged photofinishing chemical products that have spilled or leaked are characterized and managed appropriately as either non-hazardous or hazardous waste. Based on discussions with Mr. Williams, the majority of photofinishing chemicals processed in the wastewater treatment area are classified as non-hazardous. Dilute non-hazardous photofinishing chemical wastes typically are discharged to the sink or floor drain in the wastewater treatment area for on-Site pretreatment prior to discharge to the sanitary sewer system (Section 3.9). The empty photofinishing containers are stored in 55-gallon drums in the wastewater treatment area and are handled as non-hazardous waste. Any photofinishing chemicals classified as a hazardous waste based on pH are collected in designated, labeled 55-gallon drums which are stored in this area. Other waste photofinishing products generated on Site from spills or other damage include lithium batteries, single use cameras and films. These materials are segregated and generally handled as non-hazardous waste. The photofinishing product wastes discussed above are generated in limited quantity and are transported off-Site for disposal by recycling or incineration.

Mr. Irizarry was not aware of any on-Site disposal of solid waste at the Property. No evidence of on-Site solid waste disposal was observed by CRA during the Site inspection.

3.8 HAZARDOUS WASTE

The facility is registered as a small quantity generator of hazardous waste having USEPA Generator Identification Number CAD054854377. The facility also maintains Los Angeles County Hazardous

Waste Control License Number SIC 5043-101-500. Hazardous wastes generated at the Site include used oil, spent petroleum naptha from a parts washing unit, and waste photofinishing products from containers that have spilled or leaked. The used oil and spent petroleum naptha are recycled off Site as discussed in Section 3.7. The waste photofinishing chemicals typically contain dilute concentrations of chemical constituents including acetic acid, sulfuric acid and caustic. All waste photofinishing chemicals are segregated based on hazard characteristics and stored in overpacked drums in the wastewater treatment area. The photofinishing product wastes determined to be hazardous are transported off-Site for disposal by incineration.

3.9 WASTEWATER

Wastewaters generated at the Site and discharged to the municipal sanitary sewer system include domestic wastewater from facility toilets and sinks, boiler blowdown water, chiller cooling tower blowdown water and treated wastewater from the on-site wastewater treatment area. The wastewater pre-treatment area discharge generally contains dilute concentrations of photofinishing chemical products that are slightly alkaline. The photofinishing chemical wastewater is discharged into a sink or floor drain located in the southwest area of the chemical dump room. The floor drain and sink convey the wastewater to an in-ground clarifier located exterior to the west side of the wastewater pretreatment area. The effluent is treated by pH adjustment by addition of acid or alkali. The wastewater flows from the clarifier into the municipal sanitary sewer system.

An additional floor drain in the facility is an oil/water separation sump located in the maintenance shop. This drain appeared to be in good structural condition.

The clarifier discharge is permitted by the Los Angeles County Sanitation District under Industrial Wastewater Discharge Permit Number 1658. Based on discussions with representatives of the Sanitation District, the facility is in good standing with the conditions of its discharge

permit with no outstanding violations or enforcement issues. An industrial wastewater permit renewal application has been submitted to the Sanitation District and, reportedly, has been approved but not yet issued. Effluent limitations of the clarifier discharge include pH, suspended solids, dissolved sulfide, chemical oxygen demand, mercury and silver.

3.10 STORMWATER

Stormwater at the Property consists of rain water from building roofs, parking areas, loading areas and the Site grounds. All stormwater generated at the Site discharges by sheet flow to concrete drainage swales located throughout the Property. The drainage swales in turn direct surface water to the south side of the Property and off Site to the County stormwater drainage system.

Based on discussions with Mr. Irizarry and by CRA field observations, no significant outdoor industrial activity occurs at the facility which, potentially, could adversely impact stormwater quality. There are no chemical or petroleum substances stored exterior to the facility. All products shipped by Kodak are stored within the distribution building warehouse area.

The facility has not experienced flooding problems according to Mr. Irizarry. The Property is not located in a flood hazard area.

3.11 ASBESTOS-CONTAINING MATERIALS (ACM)

According to Mr. Irizarry and documents reviewed by CRA, an asbestos survey of the four on-Site buildings was completed in 1989 by EPA asbestos accredited building inspectors. Samples were taken of pipe and boiler insulations, wall plasters, wallboard, ceiling tiles, floor tile, linoleum and other suspect material. Asbestos was detected in some pipe insulation, floor tile, mastic and roof felt located throughout the buildings. The dry storage building which houses the hazardous materials bunker was found to be asbestos free. The

only friable ACM observed at the Site at the time of the Site inspection was boiler insulation and pipe wrapping which was observed to be in good condition.

The Health and Environmental Laboratories Industrial Hygiene Report containing results of the asbestos survey is provided in Appendix E.

3.12 POLYCHLORINATED BIPHENYLS (PCBs)

Electricity is provided to the Site through pad mounted transformers from Southern California Edison. Two large transformers (Identification Numbers PH707 and PAD1621) are located in a fenced area on the west side of the distribution building. A smaller transformer (Identification Number B5058813) is located between the distribution building and marketing building. The transformers are believed to be owned by Southern California Edison. As the owner of the transformers, Southern California Edison would be responsible for maintaining the equipment and responding to any release incidents, and for conducting inspections and reporting. Kodak owns the step down transformers located within the electrical supply rooms and in the distribution building warehouse. The step down transformers located within the facility are dry type and do not contain any dielectric fluid. At the time of the inspection, no evidence of any releases in the vicinity of the transformers was observed. No other electrical equipment potentially containing PCBs was observed by CRA during the Site inspection or is known to be stored or used on Site based on information provided by Mr. Irizarry with the exception of lighting ballasts. Any lighting ballasts removed from the facility are transported off Site for disposal as a hazardous waste using Uniform Hazardous Waste Manifests.

3.13 AIR EMISSIONS

Air emissions from the Site are limited to emissions from natural gas fired boilers. The facility utilizes a number of compressor based

chilling systems which utilize Freon 22. The chilling systems are serviced by an outside contractor certified to handle refrigerants.

3.14 IONIZING RADIATION

Mr. Irizarry was unaware of the use of commercial sources of ionizing radiation (e.g., fill level controllers) at the facility and none were observed by CRA during the Property inspection. Mr. Irizarry was unaware of any radon gas testing having been conducted at the Site. The USEPA has determined Los Angeles County to be in a Level 2 radon zone. The predicted indoor screening levels of radon gas are expected to be between 2 and 4 pCi/L.

3.15 SPILLS/RELEASES

According to Mr. Irizarry, there have been no reportable spills or releases of hazardous substances at the Property attributable to Kodak's operations at the Site, with the exception of the release from the former waste photofinishing chemical UST. As discussed in Section 3.3, the UST was removed and the area was investigated. The only surface staining observed by CRA at the time of the Site inspection was an area of petroleum hydrocarbon staining on the floor in the secondary chiller room in the vicinity of an air compressor which was leaking. There were no floor drains in the area and the staining is not considered by CRA to be of significant environmental concern.

3.16 CERCLA LIABILITY POTENTIAL

The Property is not listed on the NPL or in the Docket database. According to Mr. Irizarry, the facility has never received notification from any government agency or third party of liability as a potential responsible party for any hazardous waste storage, treatment, or disposal site. The facility has never defended any environmental-related claims or litigation asserted by

any governmental agency or third party and no potential claims or litigation presently exist according to Mr. Irizarry.

3.17 WORKER RIGHT TO KNOW (WRTK)/HEALTH AND SAFETY

On the basis that the chemicals used and stored on Site include photofinishing chemicals which contain hazardous substances, the facility is subject to Federal OSHA WRTK regulations (29 CFR 1910.1200). The facility has developed and implemented a number of safety related programs including the required written Hazard Communication Program which includes material safety data sheets (MSDS) for the chemicals used and stored on Site. Other programs prepared for the facility include Hazardous Materials Procedures, Spill Procedures and a Waste Minimization Plan. There is an 8-member spill team on staff at the facility whose members undergo annual training through Kodak's corporate fire department/hazardous materials squad. The required OSHA employee WRTK training is conducted on an annual basis at the facility.

As previously discussed, the facility maintains a Hazardous Materials Business Plan with the Los Angeles County Fire Department which was most recently updated in December 1996. The HMBP includes a hazardous material inventory for the chemicals stored and used on Site.

3.18 SARA TITLE III - EMERGENCY PLANNING AND COMMUNITY RIGHT TO KNOW ACT (EPCRA)

Mr. Irizarry stated that the facility has not made any notifications under Sections 311, 312, or 313 of EPCRA. No significant quantity of hazardous substances are stored or used on Site based on information provided by Mr. Irizarry and CRA's observations at the time of the Site inspection. On the basis of current Site conditions, the facility is not subject to reporting pursuant to EPCRA. As previously discussed, the facility maintains a Hazardous Materials Business Emergency Plan and hazardous material inventory with Los Angeles County Fire Department.

4.0 SUMMARY OF IDENTIFIED ENVIRONMENTAL ISSUES

4.1 RECOGNIZED ENVIRONMENTAL CONDITIONS

Based on the Phase I Environmental Site Assessment including the Property inspection, information provided by facility representatives and regulatory agencies, documents reviewed, and the environmental database searches, the following recognized environmental conditions, as defined in ASTM Standard E1527-97, were identified at the Site.

i) **Historic Operations/Fuel Oil UST**: One fuel oil UST previously was owned and operated on Site for storage of backup heating oil for the distribution center boiler. The UST was located adjacent to the north wall of the maintenance shop/will call area and was closed by removal in 1985. No closure assessment or soil/groundwater sampling and analysis reportedly was conducted at the time the UST was removed.

ii) **Historical Operations/Waste Photofinishing Chemical UST**: One UST was operated on Site for storage of waste photographic chemicals. The photographic chemical UST was located exterior to the south wall of the distribution building. Building construction has since occurred in this area, which is currently occupied by "Room 5". The UST was closed by removal in 1984 following detection of an overfill of the tank. The soil and groundwater beneath the UST were investigated by IT Corporation. The investigation included the advancement of one soil boring and the installation of one groundwater monitoring well. Soil and groundwater samples were collected and analyzed for priority pollutant metals, volatile organic compounds and base/neutral/extractable organic compounds. Analysis of the water and soil samples indicated the presence of low levels of organic and inorganic chemicals. Reportedly, all UST closure documentation was submitted to the Regional Water Quality Control Board and Los Angeles County. No documentation verifying approval of the UST closure by the regulatory agencies is presently available.

iii) **Adjacent Properties**: A number of adjacent commercial properties presently are listed on the RCRIS-SG list as small quantity generators of hazardous waste and include a variety of commercial business operations. The impact of activities conducted on these properties, if any, to the soils and/or groundwater beneath the Site presently is unknown.

iv) **Radon Gas**: The Site area is classified by USEPA as a Level 2 radon zone potentially having moderately high radon levels. No testing to determine if elevated levels of radon gas are present at the Site has been conducted to date.

v) **Asbestos-Containing Materials (ACM)**: Asbestos containing materials are present in some pipe insulation, floor tile, mastic and roof felt in the building.

No compliance or good management practice issues were identified for the Site.

All of Which is Respectfully Submitted,
CONESTOGA-ROVERS & ASSOCIATES

1.0 INTRODUCTION

During late July and early August 1984, IT Corporation (IT) investigated potential environmental contamination that may have resulted from overfilling and/or leakage from an underground storage tank at Eastman Kodak Company (Kodak) facilities, 12100 Rivera Road, Whittier, California. This report summarizes the investigations that were performed by IT, findings, and conclusions.

1.1 SITE DESCRIPTION

Kodak facilities in Whittier, California (location shown on Figure 1), serve as a distribution center for photographic products. As part of the operation, Kodak disposes of photographic chemicals from packages that have leaked or become outdated. Chemicals to be disposed of are poured into a disposal sink which is piped to a storage tank. The tank is regularly emptied by a vacuum truck for disposal as a hazardous waste. Approximate composition of the material is shown in Table 1.

In July 1984, Kodak detected an overfill of the tank and requested IT to perform cleanup of the spill and investigate possible contamination. Excavation around the upper part of the tank revealed a leak in the pipeline that carried materials to the tank and contamination of the backfill around the tank. The tank was subsequently removed by IT and hauled to a hazardous waste site. Soil that was obviously contaminated also was removed and hauled to a disposal site.

After tank removal and disposal, IT conducted a hydrologic investigation to assess soil and ground-water contamination. Methods used are described in section 2.0 of this report, and results and conclusions are given in sections 3.0 and 4.0.

1.2 HYDROGEOLOGIC SETTING

The Kodak facility in Whittier is located in the South Coast Basin. The flat, alluvial plain of the basin is underlain by alluvial sedimentary material--clay, silt, sand, gravel, and cobbles. Ground water occurs at depths ranging from approximately 30 to more than 100 feet. Data from monitoring wells located about three miles of the facility indicate a southerly or southwesterly gradient, with a slope of approximately 10 to 20 feet per mile.

2.0 SCOPE OF WORK

IT's field investigation included drilling and sampling soils from a single borehole located approximately six feet south of the former tank location. A monitoring well was then completed in the borehole, the well was consequently purged and sampled, and samples were analyzed for a broad range of chemical pollutants.

2.1 DRILLING AND SOIL SAMPLING

Information from nearby wells indicated a southerly or southwesterly groundwater gradient under the site. Consequently, a drilling site was selected immediately, but at a safe working distance, south of the open tank excavation.

The borehole was drilled using a 12-inch outside diameter (O.D.), 6 1/4-inch inside diamater (I.D.) hollow-stem auger. Drilling began on the morning of July 31, and drilling, well construction, and well development were completed on August 2.

During drilling, soil samples were collected using a California ring sampler driven through the center of the auger. Sampling intervals were five feet or less as shown on the boring log (Figure 3). Twelve samples were collected, and seven samples were selected for chemical analysis. Each sample analyzed was split into an upper (a) half, for analyses by one laboratory, and a lower (b) half for analyses by a second laboratory. Samples were kept in a cooler with ice until delivery to the labs and not taken out of their sampling tubes until analyzed. IT's chain-of-custody procedures and sample identification records were maintained to ensure the integrity of samples delivered to the labs

2.2 MONITORING WELL

The borehole drilled by IT was completed as a monitoring well using 4-inch I.D. schedule-40, flush-joint, threaded PVC casing. Casing was installed to a depth of 40 feet through the center of the hollow-stem auger. The bottom 20 feet is composed of 0.020-inch slotted screen and the screened interval is packed with Monterey No. 3 sand. There is a bentonite seal above the screened interval. The bottom and the top ends of the casing are fitted with PVC caps. An outer steel casing with a locking cap protects the PVC pipe above the ground surface. Details of the monitoring well are shown on Figure 3.

After placing, packing, and setting the casing, the well was developed by pumping until the water was clear. Pumping was accomplished using a vacuum truck fitted with a new suction hose and air hose for added lift. This arrangement allowed the well to be pumped dry quickly which was done 6 times. A volume of approximately 15 barrels (630 gallons) of water was pumped from the well.

2.3 SAMPLING OF GROUND WATER

On August 8, the monitoring well was sampled for chemical analyses. A thoroughly cleaned 3-inch submersible pump equipped with a new hose was used to pump approximately 5 well volumes (about 50 gallons) of water before sampling.

Sampling was accomplished using a Teflon bladder pump discharging through new Teflon tubing. Several (at least 5) pump and tube volumes were purged through the pump system before the actual samples were collected. After samples were collected, they were packed on ice, logged into IT's chain-of-custody procedures, and delivered to analytical laboratories.

2.4 LABORATORY ANALYSES

All soil and water samples were analyzed in duplicate using the services of two laboratories:

- Montgomery Laboratories, Pasadena, California
- Brown and Caldwell Analytical Laboratories, Pasadena, California.

Analyses performed on soil and water samples were:

- Priority pollutant metals,
- Volatile organic compounds, and
- Base/neutral/extractable organic compounds.

In addition, water samples were analyzed for major ions and characteristics (i.e., pH, conductance, hardness).

Duplicate water samples were obtained by first filling bottles for one laboratory and then bottles for the other. Soil samples were split between the two laboratories by sending the upper 0.5-foot section of each sample to Montgomery, and sending the lower 0.5-foot section to Brown and Caldwell.

3.0 RESULTS

3.1 HYDROGEOLOGY

The Kodak facility is underlain by alluvial deposits of clays, silts, and sands. Sands make up the top 10 feet and are underlain by clayey silts to depths of approximately 18 feet. Sands, with small amounts of silt or clay were throughout the remaining depth drilled, to a total depth of 41 feet.

During drilling, no free contaminant liquids were encountered in the upper zone--the zone where the waste tank had existed. Ground water was first encountered at a depth of approximately 31 feet. Depth to water below the ground surface was measured at 26.5 feet on August 2 and 26.8 feet on August 8.

3.2 CHEMICAL ANALYSES OF GROUND WATER

Results of chemical analyses of metals and major constituents in ground-water samples collected on August 8 are given in Table 2. The water is a calcium bicarbonate type with a pH of approximately 8.0, dissolved solids (by addition) concentration of 320 milligrams per liter (mg/ℓ), and specific conductance of 560 to 580 micromhos per centimeter.

Analyses of priority pollutant metals by Brown and Caldwell found all concentrations below levels of detection. On the other hand, analyses by Montgomery Laboratories found two metals above detection limits.

Mercury was found by Montgomery Laboratories at a concentration of 0.0003 mg/ℓ, which is considerably below the U.S. EPA primary drinking water standard and California drinking water standard of 0.002 mg/ℓ. Montgomery Laboratories also detected nickel at 0.013 mg/ℓ. There is no primary standard for nickel in water, but by comparison, there are criteria of 0.2 and 2.0 mg/ℓ for livestock, and the California soluble threshold limit concentration is 20 mg/ℓ.

Cyanide was reported at a concentration of 0.072 mg/ℓ by Montgomery Laboratories, but was not found above detection limit (0.02 mg/ℓ) by Brown and Caldwell. There is no drinking water standard for cyanide, but a human health criterion of 200 micrograms per liter (0.2 mg/ℓ) has been established by USEPA.

Analyses of priority pollutant organic compounds by Brown and Caldwell detected no compounds at concentrations above the laboratory's detection limits (Table 3). Limits are shown in Appendix A.

Analyses of organic compounds by Montgomery Laboratories detected the priority pollutants 1,1,1-trichloroethane at 0.2 microgram per liter (ug/ℓ) and chloroform at 0.1 microgram per liter (ug/ℓ). For comparison, USEPA has established a human health criterion of 18.4 mg/ℓ for 1,1,1-trichloroethane, and a criterion of 1.9 ug/ℓ for chloroform (10^{-5} cancer risk level).

Analyses by Montgomery Laboratories also found very low, non-quantitated amounts of the priority pollutants 1,1-dichloroethane, 1,1-dichloroethene, and tetrachloroethene. In addition, the non-priority pollutants detected were 1,1,2,2-tetrachlolo-1,2-difluoroethane at 0.2 ug/ℓ, and 1,1,2-trichloro-1,2-difluorethane at 0.1 ug/ℓ (both tentative values based on response of ethylbenzene standard). No water quality standards or criteria exist for either substance.

3.3 CHEMICAL ANALYSES OF SOILS

Analyses of priority pollutant metals in seven soil samples by two laboratories are given in Table 4. The last two columns of the table also list the applicable California total threshold limit concentration (TTLC) and the California soluble threshold limit concentration (STLC) for each metal. All concentrations analyzed are well below the TTLC values--most are less than one percent, and all are less than two percent. None exceeds 10 times the STLC.

Analyses of soils for organic priority pollutants found five above detection limits (Table 5). Limits for the two laboratories are given in Appendix B.

Montgomery Laboratories detected methylene chloride in five soil samples at decreasing concentrations ranging from 0.060 mg/kg at a depth of 5 to 5.5 feet, to 0.015 mg/kg at a depth of 20 to 20.5 feet. Methylene chloride was not detected by Montgomery Laboratories, however, in the two deepest samples (25 to 25.5 feet and 30 to 30.5 feet). In comparing the data from the two laboratories, it must be noted that Montgomery Laboratory has a detection limit for methylene chloride of 0.001 mg/kg, whereas Brown and Caldwell reports a detection limit of 0.5 mg/kg. In addition, staff of Montgomery Laboratories have acknowledged that the low ranges of methylene chloride found might be due to laboratory contamination. There are no standards or criteria for methylene chloride in soil, but U.S. EPA has a proposed human health criterion of 1.9 ug/ℓ in water (assuming 10^{-5} cancer risk). Using a factor of 100, commonly used when developing criteria for soil compared to water, the allowable level would be 0.190 mg/kg.

From the soil data and water data, assuming that analyses were not affected by laboratory contamination, it is likely that small amounts of methylene chloride exist in soils to a depth of about 20 feet. Using the above criteria the soil would not be considered hazardous nor has the methylene chloride migrated to the water table in detectable amounts.

Montgomery Laboratories also detected small amounts of decane in two samples and nonanal in one sample. Neither of these compounds is listed as a hazardous substance.

4.0 CONCLUSIONS

Chemical analyses of water samples from the Kodak facility indicate very low levels of pollution by organic and inorganic chemicals. Concentrations of priority pollutant metals and cyanide are below the applicable water quality standards.

Small amounts of chloroform and 1,1,1-trichloroethane were detected in water by one laboratory, but the concentrations found are below water-quality criteria (assume 10^{-5} risk for chloroform), and the finding was not supported by analyses of the second laboratory. Two non-priority pollutant organic substances also were found in water samples--no quality criteria or standards exist for either substance.

Analyses of organic compounds in soils detected the primary pollutant methylene chloride at very low concentrations (less than 0.060 mg/kg) in samples to a depth of about 20 feet. Methylene chloride was not detected in samples deeper than 20 feet and was not found in ground water. The only other organic substances detected in soil are the non-priority pollutants, decane and nonanal. These materials are not designated as hazardous substances.

Concentrations of metals in soils were mostly less than 1 percent of the applicable total threshold limit concentrations.

The excavation of soil in July removed contaminated and stained soils in the tank cavity, and surrounding areas. Soils in the adjacent boring had no chemicals at significant concentrations. Ground water sampled in Boring 1 is unaffected by the spill/leak; therefore, no additional work is required to mitigate the spill.

Respectfully submitted,
IT Corporation

GAS CHROMATOGRAPHY/MASS SPECTROMETRY RESULTS - EPA METHOD 624

This method will analyze for all priority pollutants stated in the EPA Method 624 of the July, 1982, Methods for Organic Chemical Analysis of Municipal and Industrial Wastewater, EPA-600/4-82-057. In addition, all other peaks appearing in the reconstructed ion chromatogram (RIC) above the detection limit will be quantitated based on the nearest internal standard. Hard copies of RICs and compound identifications are available upon request.

Other purgeable priority pollutants	< 1

GAS CHROMATOGRAPHY/MASS SPECTROMETRY RESULTS - EPA METHOD 625

This method will analyze for all priority pollutants stated in the EPA Method 625 of the July, 1982, Methods for Organic Chemical Analysis of Municipal and Industrial Wastewater, EPA-600/4-82-057. In addition, the five most prominent peaks appearing in the reconstructed ion chromatogram (RIC) above the detection limit will be quantitated based on the nearest internal standard. Hard copies of RICs and compound identifications are available upon request.

BC Log Number P84-08-095: 08081610 MW-1

GAS CHROMATOGRAPHY/MASS SPECTROMETRY RESULTS - EPA METHOD 8240

This method will analyze for all priority pollutants stated in the EPA Method 8240 of the July, 1982, Test Methods for Evaluating Solid Waste, SW-846. In addition, all other peaks appearing in the reconstructed ion chromatogram (RIC) above the detection limit will be quantitated based on the nearest internal standard. Hard copies of RICs and compound identifications are available upon request.

Environmental Data Resources, Inc.
City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist professionals in evaluating potential liability on a target property resulting from past activities. ASTM E 1527-00, Section 7.3 on Historical Use Information, identifies the prior use requirements for a Phase I environmental site assessment. The ASTM standard requires a review of *reasonably ascertainable standard historical sources. Reasonably ascertainable means information that is publicly available, obtainable from a source with reasonable time and cost constraints, and practically reviewable.*

To meet the prior use requirements of ASTM E 1527-00, Section 7.3.4, the following *standard historical sources* may be used: aerial photographs, fire insurance maps, property tax files, land title records (although these cannot be the sole historical source consulted), topographic maps, city directories, building department records, or zoning/land use records. ASTM E 1527-00 requires *"All obvious uses of the property shall be identified from the present, back to the property's obvious first developed use, or back to 1940, whichever is earlier. This task requires reviewing only as many of the standard historical sources as are necessary, and that are reasonably ascertainable and likely to be useful."* (ASTM E 1527-00, Section 7.3.4, page 12.)

EDR's City Directory Abstract includes a search and abstract of available city directory data.

City Directories
City directories have been published for cities and towns across the U.S. since the 1700s. Originally a list of residents, the city directory developed into a sophisticated tool for locating individuals and businesses in a particular urban or suburban area. Twentieth century directories are generally divided into three sections: a business index, a list of resident names and addresses, and a street index. With each address, the directory lists the name of the resident or, if a business is operated from this address, the name and type of business (if unclear from the name). While city directory coverage is comprehensive for major cities, it may be spotty for rural areas and small towns. ASTM E 1527-00 specifies that a *"review of city directories (standard historical sources) at less than approximately five year intervals is not required by this practice." (ASTM E 1527-00, Section 7.3.4, page 12.)*

4. SUMMARY

- ***City Directories:***

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2000. (These years are not necessarily inclusive.) A summary of the information obtained is provided in the text of this report.

This report compiles information by geocoding the subject properties (that is, plotting the latitude and longitude for such subject properties and obtaining data concerning properties within 1/8 of a mile of the subject properties). There is no warranty or guarantee that geocoding will report or list all properties within the specified radius of the subject properties and any such warranty or guarantee is expressly disclaimed. Accordingly, some properties within the aforementioned radius and the information concerning those properties may not be referenced in this report.

Address in Research Source

Indicates that a property is listed at a different address than the one provided by the user. Generally occurs when a property is located on a corner or, when the physical address of a property is different than its mailing address.

Address Not Listed in Research Source

Occurs when a specific site address is not listed in city directories and/or fire insurance maps.

Adjoining

Any property that is contiguous, or a property that would be contiguous if not for a public thoroughfare, to the target property. *To differentiate from each adjoining property, stand at the target property's "front door" facing the street.*

Adjoining Back

Property directly to the rear of the target property. (Applies only to fire insurance map data.)

Adjoining Front

Property directly in front of the target property. (Applies only to fire insurance map data.)

Adjoining Left

Property directly to the left of the target property. (Applies only to fire insurance map data.)

Adjoining Right

Property directly to the right of the target property. (Applies only to fire insurance map data.)

Adjoining Surrounding Area

Property that may adjoin the target property but due to lack of specific map information cannot be located precisely. This situation typically occurs when city directory information, but not fire insurance map information, is available.

C.A.S

C.S.S.

Aerial photograph flyer: Commodity Stabilization Service (Federal).

Cartwright

Aerial photograph flyer: Cartwright (private)

CD

City Directory

Commercial

Any property including, but not limited to, property used for industrial, retail, office, agricultural, other commercial, medical, or educational purposes; property used for residential purposes that has more than four residential dwelling units.

Commercial or Industrial

Property that has either a commercial *or* an industrial use. Examples include retail stores, manufacturing facilities, factories, and apartment buildings.

D.N.R.

D.O.T.

Aerial photograph flyer: Department of Transportation (state).

Fairchild

Aerial photograph flyer: Fairchild (private).

FIM

Fire Insurance Map

Flood Insurance Rate Maps

Flood Insurance Rate Maps are produced by the Federal Emergency Management Agency (FEMA). These maps indicate special flood hazard areas, base flood elevations and flood insurance risk zones.

Flood Prone Area Maps

Flood Prone Area maps are produced by the United States Geological Survey (USGS). Areas identified as flood prone have been determined by available information gathered from past floods.

F.S.

Aerial photograph flyer: Forest Service (Federal).

Geonex

Aerial photograph flyer: Geonex (private).

M.C.

Aerial photograph flyer: Metropolitan Council of the Twin Cities Area (state).

Mark Hurd

Aerial photograph flyer: Mark Hurd (private)

N.A.P.P.

Aerial photograph flyer: National Aerial Photography Program (Federal).

National Wetland Inventory Maps

National Wetland Inventory Maps are produced by the U.S. Fish and Wildlife Service, a division of the U.S. Department of the Interior. Wetland and deepwater habitat information is identified on a 7.5 minute U.S.G.S. topographic map. The classification system used categorizes these habitats into five systems: marine, estuarine, riverine, lacustrine and palustrine.

No Return

Indicates that site owner was unavailable at time of surveyor's contact. *(Applies only to city directories.)*

No Structure Identified on Parcel

Used when site boundaries and/or site address is indicated on a fire insurance map; no structure details exist.

Other

Occurs when the site's classification is different that EDR's standard categories. Examples may include undeveloped land and buildings with no specified function.

P.M.A.

Aerial photograph flyer: Production and Marketing Administration (Federal).

Pacific Aerial

Aerial photograph flyer: Pacific Aerial (private)

Portion

Refers to the fire insurance map information identified on the four quadrants of a target or adjoining property. The portions are referred to as *Frontright*, *Frontleft*, *Backright*, and *Backleft* and are determined as if one were standing at the front door, facing the street.

Property Not Defined

Used when property is not clearly demarcated on a fire insurance map.

Residential

Any property having fewer than five dwelling units used exclusively for residential purposes.

Residential with Commercial Uses (a.k.a. Multiple Purpose Address)

A business (firm) and residence at the same address. Examples include a doctor, attorney, etc. working out of his/her home.

Sidwell

Aerial photograph flyer: Sidwell (private).

Site Not Mapped

Occurs when an adjoining property has not been mapped by fire insurance map surveyors. (Applies only to fire insurance map data.)

Teledyne

Aerial photograph flyer: Telcdyne (private)

Topographic Maps

Topographic maps are produced by the United States Geological Survey (USGS). These maps are color coded line and symbol representations of natural and selected artificial features plotted to scale.

Turnbow

Aerial photograph flyer: Michael Turnbow (private)

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

TARGET PROPERTY INFORMATION

ADDRESS

12100 RIVERA ROAD
RIVERA, CA 90606

EDR PROPRIETARY HISTORICAL DATABASES

See the EDR Proprietary Historical Database Section for details

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS 1 degree Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. EDR's definition of a site with an elevation equal to the target property includes a tolerance of +/- 10 feet. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property (by more than 10 feet). Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL ASTM STANDARD

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 04/22/2002 has revealed that there are 2 NPL sites within approximately 1 mile of the target property.

NOTIFY 65: Notify 65 records contain facility notifications about any release that could impact drinking water and thereby expose the public to a potential health risk. The data come from the State Water Resources Control Board's Proposition 65 database.

A review of the Notify 65 list, as provided by EDR, has revealed that there are 2 Notify 65 sites within approximately 1 mile of the target property

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method The source is the Department of Toxic Substance Control is the agency

A review of the HAZNET list, as provided by EDR, has revealed that there are 33 HAZNET sites within approximately 0.25 miles of the target property.

Site Description. The 43-acre Waste Disposal, Inc (WDI) Superfund site is located in the city of Santa Fe Springs, Los Angelos County, California The facility is bordered on the northwest by Santa Fe Springs Road, on the northeast by Fedco Food Distribution Center (Fedco) and St Paul High School, on the southwest by Los Nietos Road, and on the southeast by Greenleaf Avenue Residences are located across from the facility on Greenleaf Avenue The remaining areas on and across Los Nietos Road and Santa Fe Sp rings Road are occupied by industrial complexes. The WDI site contains a 42 million gallon capacity concrete reservoir originally constructed for crude petroleum storage. The reservoir was decommissioned in the late 1920s for product storage, and w as subsequently used for disposing of a variety of industrial wastes Disposal activities continued unregulated until 1949, and thereafter under permit from Los Angelos County, until closure in 1964. WDI stopped accepting wastes in 1964, bringing i n fill and covering the site, including the reservoir
The site was placed on the National Priorities List in 1987. Following the site listing, EPA sent general notice letters to 28 potentially responsible parties (PRPs). However, no party came forward with a good faith offer to conduct the remedial in vestigation (RI), so, EPA began the RI In 1988, EPA undertook a removal action, erecting a fence around one corner of the site to improve site security and prevent accidental exposure to surface contamination. EPA completed the RI in November 199 0, and initiated a feasibility study (FS) In January 1992, EPA began three quarters of ground water monitoring, culminating in the January 1993 Groundwater Sampling Report EPA decided to divide the site into two operable units so that more inform ation could be collected for ground water without delaying the decision for the remaining contaminated media In August 1993, EPA completed the FS for contaminated soils and subsurface gases. The contamination present on-site at WDI exists in the s oil and ground water matrices, and in the form of subsurface gases Present in on-site soils are large amounts of oil well drilling muds and sludges and waste products, metals, low concentrations of volatile organic compounds and semivolatile organ ic compounds, low concentrations of pesticides and PCBs, and lead. Methane is the most prevalent subsurface gas, with the highest concentrations in the reservoir area Volatile organic compounds (vinyl chloride and benzene) also were detected in th e subsurface gas both within and outside the reservoir area. This ROD does not address ground water.

RCRIS Corrective Action Summary

Event	Current Human Exposures under Control, More information is needed to make a determination
Event Date	08/11/2000
Event:	Igration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected
Event Date	08/11/2000
Event:	CA Responsibility Referred To A Non-RCRA Federal Authority, Corrective Action referred to another non-RCRA Federal Authority
Event Date:	05/19/1998
Event.	Igration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected
Event Date	05/19/1998
Event	Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility
Event Date:	05/19/1998
Event	CA Prioritization, Facility or area was assigned a medium corrective action priority.
Event Date	06/16/1994
Event:	Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1) it appears to be technically infeasible or inappropriate (NF) or 2) there is a lack of technical information (IN) Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.
Event Date:	06/15/1994
Event:	Stabilization Construction Completed
Event Date	12/17/1993
Event	Corrective Measures Design Approved

RCRIS Corrective Action Summary:
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.
Event Date 03/29/2002

Event Igration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected.
Event Date 03/29/2002

Event. Current Human Exposures under Control, Current human exposures are NOT under control
Event Date 05/04/2000

Event: Igration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected.
Event Date 05/04/2000

Event. Current Human Exposures under Control, Current human exposures are NOT under control
Event Date 05/06/1999

Event Igration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected.
Event Date: 05/06/1999

Event Date For Remedy Selection (CM Imposed)

EPA Waste Codes Addendum

Code	Description
D001	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE
D002	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
D004	ARSENIC
D007	CHROMIUM
D008	LEAD
F006	WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES. (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List
Source: EPA
Telephone: N/A
National Priorities List (Superfund) The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program NPL sites may encompass relatively large areas As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices

Date of Government Version: 04/22/02
Date Made Active at EDR: 06/21/02
Database Release Frequency: Semi-Annually
Date of Data Arrival at EDR: 05/06/02
Elapsed ASTM days: 46
Date of Last EDR Contact: 08/01/02

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
Source: EPA
Telephone: 703-413-0223
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 05/15/02
Date Made Active at EDR: 08/08/02

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Source: EPA
Telephone: 703-413-0223
As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration EPA has removed approximetely 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites

Date of Next Scheduled EDR Contact: 09/30/02

NPL LIENS: Federal Superfund Liens
Source. EPA
Telephone 205-564-4267
Federal Superfund Liens. Under the authority granted the USEPA by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner receives notification of potential liability USEPA compiles a listing of filed notices of Superfund Liens

Date of Government Version: 10/15/91
Database Release Frequency No Update Planned

Date of Last EDR Contact 08/26/02
Date of Next Scheduled EDR Contact: 11/25/02

PADS: PCB Activity Database System
Source EPA
Telephone 202-564-3887
PCB Activity Database PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities

Date of Government Version 03/01/02
Database Release Frequency Annually

Date of Last EDR Contact 08/02/02
Date of Next Scheduled EDR Contact 11/11/02

RAATS: RCRA Administrative Action Tracking System
Source. EPA
Telephone 202-564-4104
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database

Date of Government Version. 04/17/95
Database Release Frequency No Update Planned

Date of Last EDR Contact: 06/10/02
Date of Next Scheduled EDR Contact 09/09/02

TRIS: Toxic Chemical Release Inventory System
Source EPA
Telephone 202-260-1531
Toxic Release Inventory System TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313

Date of Government Version: 12/31/99
Database Release Frequency. Annually

Date of Last EDR Contact: 06/24/02
Date of Next Scheduled EDR Contact 09/23/02

TSCA: Toxic Substances Control Act
Source EPA
Telephone: 202-260-5521
Toxic Substances Control Act TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list It includes data on the production volume of these substances by plant site

Date of Government Version: 12/31/98
Database Release Frequency: Every 4 Years

Date of Last EDR Contact: 06/10/02
Date of Next Scheduled EDR Contact: 09/09/02

FTTS INSP: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

Database Release Frequency: Semi-Annually — Date of Next Scheduled EDR Contact 10/07/02

HAZNET: Hazardous Waste Information System
Source: California Environmental Protection Agency
Telephone 916-255-1136
Facility and Manifest Data The data is extracted from the copies of hazardous waste manifests received each year by the DTSC The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

EDR PROPRIETARY HISTORICAL DATABASES

EDR Historical Gas Station and Dry Cleaners: EDR has searched select national collections of business directories and has collected listings of potential dry cleaner and gas station/filling station/service station sites that were available to EDR researchers EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning and gas station/filling station/service station establishments The categories reviewed included, but were not limited to: *gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, dry cleaner, cleaners, laundry, laundromat, cleaning/laundry, wash & dry, etc*

This information is meant to assist and complement environmental professionals in their conduct of environmental site assessments, and is not meant to be a substitute for a full historical investigation as defined in ASTM E1527 **The** information provided in this proprietary database may or may not be complete, i.e., the absence of a dry cleaner or gas station/filling station/service station site does not necessarily mean that such a site did not exist in the area covered by this report.

(A note on "dry cleaning" sites: it is not possible for EDR to differentiate between establishments that use PERC on-site as a cleaning solvent and sites that function simply as drop-off and pick-up locations or that are traditional wet cleaning/laundry facilities Therefore, it is essential for environmental professionals to incorporate professional judgment in the evaluation of each site.)

Former Manufactured Gas (Coal Gas) Sites: The existence and location of Coal Gas sites is provided exclusively to EDR by Real Property Scan, Inc. ©Copyright 1993 Real Property Scan, Inc. For a technical description of the types of hazards which may be found at such sites, contact your EDR customer service representative.

Disclaimer Provided by Real Property Scan, Inc.

The information contained in this report has predominantly been obtained from publicly available sources produced by entities other than Real Property Scan While reasonable steps have been taken to insure the accuracy of this report, Real Property Scan does not guarantee the accuracy of this report. Any liability on the part of Real Property Scan is strictly limited to a refund of the amount paid. No claim is made for the actual existence of toxins at any site. This report does not constitute a legal opinion

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report

Oil/Gas Pipelines/Electrical Transmission Lines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps It was extracted from the transportation category including some oil, but primarily gas pipelines and electrical transmission lines

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA) Data depicts 100-year and 500-year flood zones as defined by FEMA

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S Fish and Wildlife Service

GEOCHECK®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

DISCOVERY CA PILOT - WHITTIER
12100 RIVERA ROAD
RIVERA, CA 90606

TARGET PROPERTY COORDINATES

Latitude (North):	33.964500 - 33° 57' 52.2"
Longitude (West):	118.053101 - 118° 3' 11.2"
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	402703.8
UTM Y (Meters).	3758525.0

EDR's GeoCheck Physical Setting Source Addendum has been developed to assist the environmental professional with the collection of physical setting source information in accordance with ASTM 1527-00, Section 7.2.3. Section 7.2.3 requires that a current USGS 7.5 Minute Topographic Map (or equivalent, such as the USGS Digital Elevation Model) be reviewed It also requires that one or more additional physical setting sources be sought when (1) conditions have been identified in which hazardous substances or petroleum products are likely to migrate to or from the property, and (2) more information than is provided in the current USGS 7.5 Minute Topographic Map (or equivalent) is generally obtained, pursuant to local good commercial or customary practice, to assess the impact of migration of recognized environmental conditions in connection with the property. Such additional physical setting sources generally include information about the topographic, hydrologic, hydrogeologic, and geologic characteristics of a site, and wells in the area.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted

USGS TOPOGRAPHIC MAP ASSOCIATED WITH THIS SITE

Target Property: 2433118-H1 WHITTIER, CA
Source: USGS 7 5 min quad index

GENERAL TOPOGRAPHIC GRADIENT AT TARGET PROPERTY

Target Property: General SW

Source: General Topographic Gradient has been determined from the USGS 1 Degree Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

NWI Quad at Target Property	NWI Electronic Data Coverage
WHITTIER	Not Available

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Site-Specific Hydrogeological Data*:

Search Radius:	2.0 miles
Location Relative to TP	1/2 - 1 Mile West
Site Name:	WEST BENT BOLT
Site EPA ID Number.	CAD004295572
Groundwater Flow Direction:	NOT AVAILABLE
Inferred Depth to Water	approximately 100 feet in the Gaspur aquifer.
Hydraulic Connection	Thick layers of clay are present between the ground surface and a depth of 70 feet. The Gaspur and underlying aquifers are interconnected in the site vicinity
Sole Source Aquifer	No information about a sole source aquifer is available
Data Quality.	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW^

Search Radius: 2.000 Miles.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

According to ASTM E 1527-00, Section 7 2.2, "one or more additional state or local sources of environmental records may be checked, in the discretion of the environmental professional, to enhance and supplement federal and state sources... Factors to consider in determining which local or additional state records, if any, should be checked include (1) whether they are reasonably ascertainable, (2) whether they are sufficiently useful, accurate, and complete in light of the objective of the records review (see 7.1 1), and (3) whether they are obtained, pursuant to local, good commercial or customary practice." One of the record sources listed in Section 7.2.2 is water well information. Water well information can be used to assist the environmental professional in assessing sources that may impact groundwater flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

FEDERAL WATER WELLS

PWS: Public Water Systems
Source EPA/Office of Drinking Water
Telephone 202-260-2805
Public Water System data from the Federal Reporting Data System A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source EPA/Office of Drinking Water
Telephone 202-260-2805
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS)

USGS Water Wells: In November 1971 the United States Geological Survey (USGS) implemented a national water resource information tracking system. This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on more than 900,000 wells, springs, and other sources of groundwater

1.0 Introduction and Purpose

GEOLOGICA Inc. (GEOLOGICA) is pleased to submit this *Groundwater Investigation Work Plan* (Work Plan) for the Eastman Kodak Company (Kodak) Western Division Warehouse located at 12100 Rivera Road in Whittier, California (Site or Subject Site or Subject Property), as shown in **Figure 1**. The site is owned by *CLPF Whittier Industrial LP* (CLPF). The purpose of this Work Plan is to: (1) evaluate potential groundwater impact to the site near the locations of two former underground storage tanks (USTs), two former clarifiers and a former flammables storage building; and, (2) evaluate site-wide groundwater flow direction.

2.0 Site Description

The site includes a single-story, approximately 218,000-square-foot building with about 7,000 square feet of parking space located in a principally commercial and industrial area of Whittier, California (**Figure 2**). The site was constructed, and is still used as, a regional distribution center for Kodak products. *Ryder System, Inc.* (Ryder) operates the facility for Kodak. The facility employs approximately 50 individuals from 0600 – 1800 hours, five days/week.

3.0 General Site History

Prior to site development for its current use, the subject property appears to have been used for agricultural purposes from at least 1928 through the Site's first reported development by Kodak in 1959, when the current building, known as the *Office and Distribution Center* was constructed. Site buildings and configurations have changed over time. A small *Technical Building* was built in 1959, along with the original *Warehouse Building*, which now comprises the northeastern portion of the current *Office and Distribution Center*. The *Office and Distribution Center* was expanded several times, reportedly most recently in 1985. Another small Marketing Building was constructed in 1975. A small *Flammable Storage Building* was added in 1985. The northern portion of the building was used for hazardous materials storage; the southern portion was reportedly leased to a plastics recycling company. The *Technical Building*, *Marketing Building*, and *Flammable Storage Building* were demolished in approximately 1999.

Kodak sold the subject property to *Pacific Gulf Properties Inc.* (Pacific Gulf) in 1998 and leased back the facility from Pacific Gulf. The property was subsequently sold by Pacific Gulf. The current property owner is CLPF. Kodak leased the facility from CLPF until 2007, when the lease was assigned to Ryder.

3.1 Former USTs Investigations and Removals

Two former UST sites were investigated during July and August 2008. Background information and key investigation activities and findings are summarized below. The UST locations are shown in **Figure 2**.

3.1.1 Former Photochemicals UST

In July 1984, Kodak detected an overfill of a 1,000-gallon UST which received photochemicals discharged from leaking or damaged containers into a disposal sink. Subsequent excavation around the upper part of the tank revealed a leak in the pipeline that conveyed materials from the sink into the tank and impacted soils in the tank backfill. The tank and "obviously contaminated" soils were removed for off-site disposal. Soil sample analytical results were reported to be below relevant criteria. UST closure information was reportedly submitted to the Los Angeles Regional Water Quality Control Board (LARWQCB); however, related records have not been identified.

Investigation Activities (GEOLOGICA 2008). A preliminary soil and groundwater investigation was conducted at the Former Photochemicals UST site in July 2008, which included advancement of two direct-push soil borings and installation of one temporary groundwater well. Soil and groundwater samples were collected for laboratory analysis.

Soil Quality. Soil samples were collected primarily for lithologic-logging purposes; however, one soil sample from each boring was analyzed for mercury as part of a site-wide background concentration assessment. The resulting concentrations (34 – 96 µg/kg) marginally exceed one potentially applicable criterion (risk-based soil screening level of 33 µg/kg).

Groundwater Quality. The groundwater sample was analyzed for suites of petroleum hydrocarbons, volatile organic compounds (VOCs), metals, and photochemical-specific constituents. Nitrate (46,000 µg/L) was the only constituent that exceeded potential applicable criteria (USEPA and California Maximum Contaminant level [MCL] of 10,000 µg/L).

3.1.2 Former Fuel Oil UST

A former Fuel Oil UST of unknown size was located adjacent to the Maintenance Area near the northeast corner of the building (**Figure 2**). The UST was reportedly used to store diesel fuel oil as backup fuel for the facility's boilers, and was reportedly removed in the mid-1980's. No evidence of soil or groundwater characterization or formal closure documentation was identified.

Investigation Activities (GEOLOGICA 2008). Two direct-push soil borings were drilled in locations near the Former Fuel Oil UST (July 2008). Soil samples were collected at five-foot intervals to a maximum depth of 35 feet below ground surface (bgs). A temporary well was installed in each of the borings. Soil and groundwater samples were collected from both borings / wells and analyzed for suites of the following parameters: Total Petroleum Hydrocarbons (TPH), VOCs, and pH.

Soil Quality. TPH as Volatile Fuel Hydrocarbons (TPH-VFH) was detected in only one of eight soil samples tested at a concentration of 92 µg/kg, below potentially applicable criteria. TPH-VFH was not detected in the two successively deeper samples from the corresponding boring. No VOCs were detected.

Groundwater Quality. TPH-VFH was the only hydrocarbon detected, in one of the two groundwater samples, at a concentration of 380 µg/L. There are no USEPA or California MCLs for TPH-VFH. Chloroform and trichlorofluoromethane were detected at concentrations below potentially applicable USEPA and California MCLs. The following VOCs were detected in the two groundwater samples at concentrations above potentially applicable MCLs: 1,1-Dichloroethylene at 64 µg/L and 110 µg/L; Tetrachloroethylene (PCE) at 28 µg/L and 77 µg/L; Trichloroethylene (TCE) at 340 µg/L and 580 µg/L; and, 1,2-cis-Dichloroethylene at 29 µg/L and 42 µg/L.

3.2 *Clarifier Areas Investigations and Closures*

Two subsurface clarifiers were investigated and closed during July and August 2008. Background information plus key activities and findings are summarized below.

3.2.1 Former Exterior Clarifier and Associated Interior Drain

The Former Exterior Clarifier was located near the exterior southwest corner of the building and was permitted by the Los Angeles County Sanitation District (LACSD) to discharge certain materials to the sanitary sewer, including out-of-specification and other photochemicals, via a sink into an interior floor drain (Associated Interior Drain) in the southwest building interior.

Investigation Activities (GEOLOGICA 2008). Soil samples were collected from multiple borings drilled before the Former Exterior Clarifier was decommissioned, and then from excavation wall/floor locations during excavation activities. Temporary wells were installed in two of the borings and one groundwater sample was subsequently collected from each well. Soil and groundwater samples were analyzed for suites of petroleum hydrocarbons, VOCs, metals, photochemical-specific constituents, and pH. Soil samples were also collected from the Associated Interior Drain site and analyzed for the same suite of constituents.

Soil Quality. TPH as Extractable Fuel Hydrocarbon (TPH-EFH) was detected at concentrations (10,000 µg/kg – 63,000 µg/kg) below potentially applicable criteria. Only one VOC, styrene, was detected in one soil sample, at a concentration of 5.0 µg/kg, below potentially applicable criteria. Cadmium and chromium were detected in several soil samples at concentrations below potentially applicable criteria. Mercury was detected at concentrations ranging from 35 µg/kg to 520 µg/kg, below EPA residential and industrial soil Preliminary Remediation Goal (PRG) values and consistent with background soil concentrations in California. Cyanide was detected in one soil sample (1,300 µg/kg), below potentially applicable criteria.

Nitrate was detected in the majority of the soil samples at concentrations below potentially applicable criteria. Nitrite was detected in one soil sample at a concentration of 2,300 µg/kg, below potentially applicable criteria. Sulfate was detected in soil samples at concentrations ranging from 40,000 µg/kg to 2,900,000 µg/kg. There are no listed criteria for sulfate. Ammonia was detected in two soil samples at concentrations below potentially applicable criteria.

Groundwater Quality. Neither TPH-VFH nor TPH-EFH was detected in either of the two groundwater samples analyzed. Trichloroethylene (TCE) was the only VOC detected in one groundwater sample at a concentration of 5.2 µg/L, marginally above the 5.0 µg/L USEPA and California MCL. None of the target metals (cadmium, chromium, mercury, and silver) were detected in the groundwater samples tested. Cyanide was detected in one of the groundwater samples at a concentration of 34 µg/L, below potentially applicable criteria.

Nitrate, nitrite, and sulfate were each detected above USEPA and or California MCLs in one or both groundwater samples tested. Ammonia was detected in the two groundwater samples tested at concentrations ranging from 1,000 to 1,300 µg/L. There are no listed criteria for ammonia.

Decommissioning Activities. The Former Exterior Clarifier was decommissioned during field activities conducted during July and August 2008. Principal activities included: removing residual materials; pressure-washing/rinsing internal clarifier and weir chambers; disconnecting and capping inlet/outlet pipes; physically removing the clarifier and adjacent soil; and, backfilling the excavation with compacted granular material and applying reinforced-concrete ground surface. The Associated Interior Drain area was decommissioned by: removing pH adjustment lines; removing the tile and concrete flooring; excavating the sub-floor soil; disconnecting and capping inlet/outlet pipes; backfilling the excavated area with compacted granular material; and, finishing the floor with reinforced-concrete.

3.2.2 Former Maintenance Area Clarifier

A decommissioned and closed-in-place, subsurface clarifier (Maintenance Area Clarifier) is located in the Maintenance Area near the northeast corner of the building, adjacent to the Former Fuel Oil UST site described above. This clarifier was installed at an unknown time prior to about 1985, reportedly as a clarifier and oil-water separator for Maintenance Area floor wash water discharge. Facility personnel discontinued use of this Maintenance Area Clarifier in approximately 1986.

Investigation Activities (2008). Three direct-push soil borings were drilled in July 2008 at locations adjacent to the clarifier. Soil samples were collected for laboratory analysis from each boring to a maximum depth of 20 feet bgs. No groundwater characterization was performed as part of this investigation. Soil samples were generally analyzed for: TPH-VFH, TPH-EFH, VOCs, and pH.

Soil Quality. Neither TPH-VFH nor TPH-EFH was detected in the soil samples. VOCs detected in three of the soil samples included: tetrachloroethylene (PCE) at a concentration of 2.1 µg/kg in two samples; toluene at a concentration of 2.4 µg/kg; and, 1,1,1-trichloroethane (1,1,1-TCA) at concentrations of 2.7 µg/kg and 3.9 µg/kg. Tetrachloroethylene (PCE) at 2.1 µg/kg was the only VOC exceeding a potentially applicable criteria value (Risk-Based SSL of 0.052 µg/kg).

Two soil samples were analyzed for total mercury for screening purposes only to assist with evaluating area-wide concentrations. Concentrations of 40 µg/kg and 36 µg/kg, both below EPA residential and industrial soil PRGs and consistent with background soil

concentrations in California, though above the Risk-Based SSL of 33 µg/kg) were detected.

Decommissioning Activities. After the above-described sampling and analysis activities, the clarifier was closed in place in August 2008. Closure activities included: Removal of residual liquids and solids; triple-rinsing clarifier; disconnecting plumbing; slurry-filling the clarifier; and, refinishing the floor with rebar-reinforced concrete.

4.0 Investigation Scope of Work

The Investigation Scope of Work is divided into six tasks, described below. Soil and groundwater sampling activities will be performed in general agreement with the LARWQCB's *Interim Site Assessment and Cleanup Guidebook: May 1996 California Regional Water Quality Control Board Los Angeles And Ventura Counties Region 4*.

4.1 *Task 1 – Preliminary Field Activities*

Prior to the initiation of field activities, GEOLOGICA will: (1) coordinate with appropriate site personnel for site access and mark sampling locations prior to the commencement of excavation activities; (2) review available as-built blueprints; and, (3) contact Underground Services Alert of California to help establish the approximate location of subsurface utilities in the proposed monitoring well locations.

4.2 *Task 2 – New Monitoring Wells Installation, Development, Sampling, and Surveying*

Five monitoring well installation permits will be obtained from the Los Angeles County Department of Public Health. Wells will be constructed with two-inch diameter, Schedule 40, PVC screen (0.010-inch slot-size) and riser and completed with flush-mount well boxes. The wells will be constructed such that the screened-interval corresponds to the apparent water table surface, with anticipated maximum 10-foot screen length. The wells will be installed at the locations shown in **Figure 2**.

During well construction, soil samples will be collected at five-foot intervals using a standard split spoon or direct-push sampler for lithologic description purposes only, and will be screened using a field Organic Vapor Analyzer (OVA) or Photo Ionization Detector (PID). If elevated OVA or PID readings are encountered, soil samples may selectively be collected using United States Environmental Protection Agency (USEPA) Method 5035 field preservation protocols for VOC analysis by USEPA Method 8260B.

Monitoring wells will be developed by purging a minimum of 10 casing volumes of groundwater. Groundwater samples will be collected immediately after well development and analyzed for the following constituents: TPH-VFH, TPH-EFH, VOCs (by USEPA Method 8260B), total cyanide, cadmium, chromium, mercury, and silver, ammonia, nitrate, nitrite, sulfate, and pH.

Groundwater samples will be submitted under applicable chain-of-custody protocols to TestAmerica, Inc.'s Irvine, California Laboratory, a California Department of Health Services-certified analytical testing laboratory.

Monitoring well elevations and locations will be surveyed to within 0.01-foot vertically and 0.1-foot vertically by a California-licensed surveyor. A minimum of one round of monitoring well water levels will be collected after the installation, development, sampling, and surveying of the monitoring wells.

Residual soil cuttings, sampling equipment cleaning water, development and purge water, and sampling expendables will be containerized in 55-gallon drums and held on-site pending receipt of laboratory analytical testing results. These materials will then be disposed of in an appropriate manner.

4.3 *Task 3 – Existing Monitoring Well Destruction*

An historic monitoring well is located near the Former Photochemicals UST location. No construction records or other information regarding the existing well installation, well materials, or geologic log are available; the well is considered unsuitable for further investigation work. GEOLOGICA will submit a monitoring well destruction permit application requesting a variance otherwise to abandon the existing monitoring well (**Figure 2**) by removing the upper five feet of casing and tremie-grouting the well from the bottom. If the variance is not granted, then, the monitoring well may be closed by overdrilling and then tremie-grounting. The surface will be refinished with rebar-reinforced concrete.

4.4 *Task 4 - Reporting*

A summary report will be prepared for submission to the Los Angeles Regional Water Quality Control Board and will include appropriate documentation, such as: discussion of field activities; site plan and sampling location map(s); groundwater contour map, summary analytical data; raw analytical and QA/QC data; and, data interpretation/discussion of findings.

5.0 Schedule

Field activities will be scheduled as soon as possible after review and response to any LARWQCB comments regarding this Work Plan. A summary technical report will be issued within approximately 60 days after the completion of the field activities.

RE: **Closure Report**
Maintenance Area Clarifier
Eastman Kodak Company
Western Zone Warehouse
12100 Rivera Road
Whittier, California 90606

Dear Mr. Gabriel:

GEOLOGICA, Inc. (GEOLOGICA) is pleased to present this report describing the activities and findings for the Closure of the Maintenance Area Clarifier at the Eastman Kodak Company Western Zone Warehouse in Whittier, California. The purpose of the scope of work developed by GEOLOGICA and NPEC, Inc. was to decommission the Maintenance Area Clarifier that had not been used since approximately 1986, in conjunction with the transfer of site operations to Ryder System, Inc. and at the request of the property owner (identified as CLPF Whittier Industrial, LP).

We have enjoyed working with you on this project and appreciate the opportunity to be of service. Should you have any questions, please do not hesitate to contact us at (949) 548-9348 or (415) 597-7883.

Very truly yours,
GEOLOGICA, Inc.

Charles E. Wechsler

EASTMAN KODAK COMPANY
WESTERN ZONE WAREHOUSE
12100 RIVERA ROAD
WHITTIER, CALIFORNIA 90606

1.0 INTRODUCTION

GEOLOGICA, Inc. ("GEOLOGICA") is pleased to submit this report summarizing closure activities for the Maintenance Area Clarifier at the Eastman Kodak Company ("Kodak") Western Zone Warehouse located at 12100 Rivera Road, Whittier, California ("site," "subject property," or "property"), as shown in **Figure 1**. The purpose of the scope of work developed by GEOLOGICA and NPEC, Inc. was to decommission the Maintenance Area Clarifier that had not been used since approximately 1986, in conjunction with the transfer of Kodak site operations to Ryder System, Inc. (Ryder) and at the request of the property owner (identified as CLPF Whittier Industrial, LP). This clarifier was closed in-place with a slurry fill by Kodak in August 2008.

1.1 SITE DESCRIPTION

The subject property includes a single-story, approximately 218,000-square-foot building and a 7,000-square-foot parking area located in a principally commercial and industrial area of Whittier, California (**Figure 2**). The site building, generally known as the *Office and Distribution Center*, also referred to as the Warehouse Building, was constructed as, and is still used as, a regional distribution center for Kodak finished products for the western United States. The facility handles approximately 60–70% consumer goods and the remainder professional and medical products, including: one-time use cameras, film, photochemicals, limited photographic equipment, anesthetics, and dental x-ray film. The facility incorporates an "automated" warehouse to handle stored, shipped and received goods. The facility employs approximately 50 individuals twelve hours/day, five days/week.

1.2 GENERAL SITE HISTORY

Prior to site development for its current use the subject property appears to have been used for agricultural purposes from at least 1928 through the site's first reported development by Kodak in 1959, when the Office and Distribution Center was constructed. Kodak appears to have leased at least a portion of the property to the City of Whittier in 1964. Site buildings and configurations have changed over time. A small Technical Building was built in 1959, along with the original Warehouse Building, which now comprises the northeastern portion of the current Office and Distribution Center. The Distribution/Office Building was expanded several times, reportedly most recently in 1985. Another small Marketing Building was constructed in 1975. A small Flammable Storage Building was added in 1985. The northern portion of the

building was used for hazardous materials storage; the southern portion was reportedly leased to a plastics recycling company. The Technical Building, Marketing Building, and Flammable Storage Building were demolished in approximately 1999. Kodak sold the subject property to Pacific Gulf Properties Inc. (Pacific Gulf) in 1998 and leased back the facility from Pacific Gulf. The property was subsequently sold by Pacific Gulf. The current property owner is CLPF Whittier Industrial, LP. Kodak leased the facility from CPLF until 2007, when the lease was assigned to Ryder.

1.3 MAINTENANCE AREA CLARIFIER

A decommissioned and closed-in-place, subsurface (below floor slab) clarifier is located in the maintenance area at the northeast corner of the building (**Appendix A, Project Photographs**). This clarifier (Maintenance Area Clarifier) was installed at an unknown time prior to about 1985, reportedly as a clarifier and oil-water separator for Maintenance Area floor wash water discharge. Facility personnel discontinued use of this Maintenance Area Clarifier in approximately 1986.

2.0 PURPOSE AND SUMMARY OF WORK PERFORMED

The scope of work for the Clarifier closure was developed by GEOLOGICA and NPEC in conjunction with the transfer of site operations to Ryder and at the request of the site owner (CLPF Whittier Industrial, LP). The initial scope of work was described in GEOLOGICA's April 2008 Work Plan (Work Plan).

2.1 GOVERNMENT AGENCY COMMUNICATIONS AND PERMITTING

GEOLOGICA submitted letters to the Los Angeles County Sewer District (LACSD) Industrial Waste Section and the Los Angeles County Department of Public Works (LACDPW) Environmental Programs Division. Copies of the letters are reproduced in **Appendix B**. These agencies indicated verbally by telephone, but would not provide written confirmation, that:

- No specific permits are required by LACSD for removal of the clarifier;
- There are no minimum or specific, soil or groundwater sampling requirements for clarifier closures; and,
- There is no requirement for submittal of closure documentation to the LACDPW Environmental Programs Division.

Based on this, a decision was made to follow general procedures that might be required for in-place closure of an underground storage tank (UST). The approach was to sample soil in the vicinity of the Clarifier and, if there is no evidence of a significant release, close the Clarifier in place, due to the limited access of the location and to minimize disruption to current area walls, structures, and operations.

2.2 PRELIMINARY SITE ACTIVITIES

To assess the presence of subsurface utilities prior to the commencement of excavation and subsurface sampling activities, GEOLOGICA coordinated with site personnel for: site access;

mark-out of sampling locations; and, review of available as-built plans. Underground Services Alert of Southern California was contacted prior to the start of work. GEOLOGICA also engaged a commercial firm to locate and "clear" related on-site subsurface utilities; however, the presence of steel-reinforced concrete and subsurface piping precluded the use geophysical equipment for clearance.

2.3 PRE-CLOSURE SOIL SAMPLING ACTIVITIES

As described in the Work Plan, a total of three direct-push soil borings (B-6, B-7, B-8) were drilled in locations adjacent to the interior clarifier (**Figure 3**). Soil samples were collected at approximately five-foot intervals to a maximum depth of 20 feet bgs at each soil boring. For the direct-push soil sampling, pre-cleaned and expendable sampling tooling was used in each soil boring; no on-site decontamination of down hole sampling equipment was required. No groundwater characterization was performed as part of this investigation.

Soil samples were placed in laboratory-supplied sample jars, and transported to TestAmerica, Inc., in Irvine, California, under appropriate chain-of-custody protocols in a cooler filled with wet ice. Volatile Organic Compound (VOC) samples were collected using Terracore samplers and in-field preservation, in general compliance with Los Angeles Regional Water Quality Control Board (LARWQCB) requirements.

Soil samples from the 6-foot and 10-foot intervals from soil borings B-6, B-7, and B-8 were generally tested for: Total Petroleum Hydrocarbons – Volatile Fuel Hydrocarbons (TPH-VFH); Total Petroleum Hydrocarbons – Extractable Fuel Hydrocarbons (TPH-EFH); VOCs; and, pH. Soil samples from the 15-foot interval from soil borings B-6 and B-7 and the soil sample from the 20-foot interval from soil boring B-7 were analyzed for VOCs.

3.0 SOIL CRITERIA AND ANALYTICAL TESTING FINDINGS

Soil sample analytical testing results are summarized in **Table 1**. Soil data were compared to potentially applicable: (1) USEPA Region 9 Preliminary Remediation Goals (PRGs); (2) California Human Health Screening Levels (CHHSLs); and, (3) Maximum Soil Screening Levels for TPH and BTEX above Drinking Water Aquifers, as listed in the LARWQCB's 1996 *Interim Site Assessment & Cleanup Guidebook* (1996 Guidebook).

3.1 SOIL CONDITIONS

Soils encountered generally consisted of fine sands with varying amounts of silt and clay. All three soil borings had one or more intervals including some degree of clayey-materials. Refer to the **Soil Boring Logs** provided in **Appendix C**.

3.2 SOIL SAMPLES ANALYTICAL TESTING FINDINGS

Key findings from the soil analytical testing are tabulated in the attached **Table 1**, and summarized below.

- **TPH-VFH.** *TPH-VFH* was not detected in any of the six soil samples tested.

- **TPH-EFH.** *TPH-EFH* was not detected in any of the six soil samples tested.
- **VOCs.** *VOCs* detected in three of the soil samples tested included: tetrachloroethylene (PCE) at a concentration of 2.1 micrograms per kilograms (µg/kg) in B-6/6' and B-7/6'; toluene at a concentration of 2.4 µg/kg in B-7/10'; and, 1,1,1-trichloroethane (1,1,1-TCA) at concentrations of 2.7 and 3.9 µg/kg in B-6/6' and B-7/6', respectively. Tetrachloroethylene (PCE) and 1,1,1-trichloroethane (1,1,1-TCA) were detected in soil samples B-6/6' and B-7/6', but were not detected in the two successively deeper soil samples tested from their respective soil borings. The concentrations of PCE are below potentially applicable PRG criteria for Residential and Industrial Soils (570 µg/kg and 2,700 µg/kg, respectively), but exceed the USEPA Risk-Based Soil Screening Level for Groundwater Protection of 0.052 µg/kg. There are no criteria listed for PCE in the 1996 Guidebook. The concentrations of 1,1,1-TCA and toluene detected are well below potentially applicable USEPA and California criteria.
- **Metals.** Soil samples B-6/6'and B-6/10' were analyzed for total mercury. These samples were analyzed beyond holding time; however, these samples were analyzed for screening purposes only to assist with evaluating site and background concentrations. Concentrations of 40 µg/kg and 36 µg/kg, respectively, were detected. Concentrations of total mercury exceed the USEPA PRG of 33 µg/kg for the Risk-based Soil Screening Level for the protection of groundwater. These concentrations are below the mean concentration of mercury, as measured in 50 different California soils and reported in the 1996 Kearney Foundation Special Report *Background Concentrations of Trace and Major Elements in California Soils* (Kearney Report).

Based on these data, it was determined that clarifier closure was appropriate, as described below.

4.0 CLARIFIER CLOSURE

After the above-described sampling and testing activities, the clarifier was closed in place with the concurrence of the property owner's environmental consultant. August 2008 closure activities included:

- Removed approximately 40 gallons of residual liquids and one pound of residual solids from the clarifier. Containerized residual liquids and solid material on-site, pending analyses and off-site disposal.
- The clarifier was triple-rinsed using Alconox and a pressure washer. Approximately 35 gallons of rinse water were containerized on-site with the 40 gallons of residual liquids described above, pending analyses and off-site disposal.
- The concrete clarifier "cap" (the concrete flooring over the clarifier's three settling chambers and two "discharge" compartments) was sawcut, and the concrete flooring removed for off-site disposal as non-hazardous, construction and demolition materials.
- An "overflow" pipe that discharged from the adjacent maintenance room sink into the clarifier and the discharge point from the clarifier to the sanitary sewer were capped prior to filling the clarifier.
- The clarifier was filled with concrete slurry, and the floor refinished with rebar-reinforced concrete.

5.0 KEY FINDINGS AND CONCLUSIONS

Key findings and conclusions regarding the Maintenance Area Clarifier investigation and closure are based on the above-described scope of work and subsequent findings.

5.1 SOILS

Three soil borings were advanced at the Maintenance Area Clarifier site from ground surface to a depth of approximately 20 feet. Soil samples were collected from multiple intervals at each soil boring for laboratory analysis including total petroleum hydrocarbons, volatile organic compounds, mercury, and pH. VOCs detected included PCE, 1,1,1-TCA, and toluene. PCE concentrations detected in soil samples from Soil Borings B-6/6' and B-7/6' are below potentially applicable PRG criteria for Residential and Industrial Soils (570 µg/kg and 2,700 µg/kg, respectively). These concentrations of PCE exceed the USEPA Risk-Based Soil Screening Level for groundwater protection of 0.052 µg/kg. There are no criteria listed for PCE in the 1996 Guidebook. PCE was not detected in two successively deeper samples tested from each of the borings. All detected concentrations of 1,1,1-TCA and toluene are well below potentially applicable USEPA and California criteria. Concentrations of total mercury exceed the USEPA PRG of 33 µg/kg for the Risk-based Soil Screening Level for the protection of groundwater. The concentrations are consistent with and well below reported background concentration data for mercury in California.

5.2 CLARIFIER DECOMMISSIONING

The inactive Maintenance Area Clarifier was decommissioned in August 2008 by removing residual materials, cleaning the clarifier surfaces (detergent/power-washing/rinsate removal), disconnecting/capping related inlet/outlet pipes, and filling /surface-covering the cleaned clarifier structure with reinforced-concrete.

Innovative Strategies for Managing Environmental Liability

April 11, 2008

County of Los Angeles Department of Public Works
Environmental Programs Division
400 South Fremont Avenue
Annex Building, Third Floor
Alhambra, California 91803

Attention: Mr. Fred Rubin

Subject: **Permitting and Technical Requirements for Clarifier Closure**
Eastman Kodak Company Western Division Warehouse
12100 Rivera Road
Whittier, California 90606

Dear Mr. Rubin:

GEOLOGICA, INC. (GEOLOGICA) is transmitting this letter to request written confirmation regarding permitting and technical requirements for clarifier closures at the above-referenced facility. Please note that this clarifier is permitted by the Sanitation Districts of Los Angeles County Industrial Waste Section (Permit # 001658). Specifically, GEOLOGICA requests that the County of Los Angeles Department of Public Works (LACDPW) Environmental Programs Division confirm:

- No specific permits are required for removal of a clarifier;
- There are no minimum or specific, soil or groundwater sampling requirements for clarifier closures; and,
- There is no requirement for submittal of closure documentation to the County of Los Angeles Department of Public Works (LACDPW) Environmental Programs Division.

Thank you in advance for your assistance with this matter. I will telephone you during the week of April 14, 2008 to follow up. Should you have any questions, please do not hesitate to contact us at (949) 548-9348.

Very truly yours,
GEOLOGICA, INC.

Charles E. Wechsler
Project Manager

Innovative Strategies for Managing Environmental Liability

April 11, 2008

Sanitation Districts of Los Angeles County
Industrial Waste Section
1955 Workman Mill Road
Whittier, California 90601
Phone: (562) 908-4288 ext 2900

Attention: Suzanne Wienke

Subject: **Permitting and Technical Requirements for Clarifier Closure**
Permit # 001658 - Eastman Kodak Company Western Division Warehouse
12100 Rivera Road
Whittier, California 90606

Dear Ms. Wienke:

GEOLOGICA, INC. (GEOLOGICA) is transmitting this letter to request written confirmation regarding the planned closure of the clarifier located at the above-referenced facility. This clarifier is permitted by the Sanitation Districts of Los Angeles County Industrial Waste Division (Permit # 001658). Specifically, GEOLOGICA requests that the Industrial Waste Section confirm:

- No specific permits are required for removal of the clarifier;
- There are no minimum or specific, soil or groundwater sampling requirements for clarifier closures;
- The Industrial Waste Section will "close out" the permit after performing a post-removal inspection and receiving a copy of closure documentation.

Thank you in advance for your assistance with this matter. I will telephone you during the week of April 14, 2008 to follow up. Should you have any questions, please do not hesitate to contact us at (949) 548-9348.

Very truly yours,
GEOLOGICA, INC.

LABORATORY REPORT

Prepared For: Geologica
303 La Jolla Drive
Newport Beach, CA 92663
Attention: Charles Wechsler

Project: Eastman Kodak Company
NPEC03: EKC WHITTIER WAREHOUSE
Sampled: 07/01/08-07/03/08
Received: 07/03/08
Revised: 07/22/08 12:33

NELAP #01108CA California ELAP#1197 CSDLAC #10256

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain(s) of Custody, 6 pages, are included and are an integral part of this report.
This entire report was reviewed and approved for release.

VOLATILE FUEL HYDROCARBONS BY GC/MS (EPA 5035/CA LUFT)

Analyte	Method	Batch	Reporting Limit	Sample Result	Dilution Factor	Date Extracted	Date Analyzed	Data Qualifiers
Sample ID: IRG0312-01 (B-5/5' - Soil)				**Sampled: 07/01/08**				
Reporting Units: ug/kg								
Volatile Fuel Hydrocarbons (C4-C12)	TPH by GC/MS	8G07013	90	ND	0.899	7/1/2008	7/7/2008	
Surrogate: Dibromofluoromethane (80-135%)				*100 %*				
Surrogate: Toluene-d8 (80-120%)				*103 %*				
Surrogate: 4-Bromofluorobenzene (75-120%)				*96 %*				
Sample ID: IRG0312-02 (B-5/10' - Soil)				**Sampled: 07/01/08**				
Reporting Units: ug/kg								
Volatile Fuel Hydrocarbons (C4-C12)	TPH by GC/MS	8G07013	98	ND	0.982	7/1/2008	7/7/2008	
Surrogate: Dibromofluoromethane (80-135%)				*102 %*				
Surrogate: Toluene-d8 (80-120%)				*104 %*				
Surrogate: 4-Bromofluorobenzene (75-120%)				*97 %*				
Sample ID: IRG0312-03 (B-5/15' - Soil)				**Sampled: 07/01/08**				
Reporting Units: ug/kg								
Volatile Fuel Hydrocarbons (C4-C12)	TPH by GC/MS	8G09014	84	ND	0.836	7/1/2008	7/9/2008	
Surrogate: Dibromofluoromethane (80-135%)				*104 %*				
Surrogate: Toluene-d8 (80-120%)				*97 %*				
Surrogate: 4-Bromofluorobenzene (75-120%)				*103 %*				
Sample ID: IRG0312-09 (B-6/6' - Soil)				**Sampled: 07/02/08**				
Reporting Units: ug/kg								
Volatile Fuel Hydrocarbons (C4-C12)	TPH by GC/MS	8G07013	100	ND	1.04	7/2/2008	7/7/2008	
Surrogate: Dibromofluoromethane (80-135%)				*107 %*				
Surrogate: Toluene-d8 (80-120%)				*101 %*				
Surrogate: 4-Bromofluorobenzene (75-120%)				*91 %*				
Sample ID: IRG0312-10 (B-6/10' - Soil)				**Sampled: 07/02/08**				
Reporting Units: ug/kg								
Volatile Fuel Hydrocarbons (C4-C12)	TPH by GC/MS	8G07013	82	ND	0.818	7/2/2008	7/7/2008	
Surrogate: Dibromofluoromethane (80-135%)				*105 %*				
Surrogate: Toluene-d8 (80-120%)				*104 %*				
Surrogate: 4-Bromofluorobenzene (75-120%)				*98 %*				
Sample ID: IRG0312-13 (B-7/6' - Soil)				**Sampled: 07/02/08**				
Reporting Units: ug/kg								
Volatile Fuel Hydrocarbons (C4-C12)	TPH by GC/MS	8G07013	80	ND	0.804	7/2/2008	7/7/2008	
Surrogate: Dibromofluoromethane (80-135%)				*105 %*				
Surrogate: Toluene-d8 (80-120%)				*102 %*				
Surrogate: 4-Bromofluorobenzene (75-120%)				*92 %*
