Paul sounds interested in presenting an alternative interpretation of (preliminary) results from the Ohio Mn work compared to what was expressed in the July 2013 public meeting presentation and material (http://www.epa.gov/nheerl/mnstudy). If so, a different title than the one currently listed in the draft agenda ("East Liverpool, Ohio Manganese Study") would be needed, as some of the more interesting preliminary results already reflect combinations of E. Liverpool results combined with those of Marietta and Mt. Vernon results, i.e. not just East Liverpool. And the study investigators (e.g. statistician) are still working with the combined (unpublished) data, so caution regarding interpretation still seems appropriate.

Thanks. I'm copying George so he isn't caught by surprise!

Jackie,
I am willing to make presentation, but George worked on the project more than I did, so I will ask him what he would like to do. Our interpretation of the results is not exactly the same, so it will be an interesting time. Will talk to him about it and let you know…….

Paul,

I wanted to follow up with you on the manganese presentation. Were you going to make a presentation, were you expecting Region 5 (George B.) to make a presentation or did you envision co-presenting?

Thanks.

Jackie

Subject: Draft Agenda for Annual Air Toxics Meeting: October 22-23, 2013

Good morning,

Thank you all for the great topics suggested for the annual air toxics meeting in October. Based on the suggestions, I have developed the attached agenda. In the interest of time, the ethylene oxide potency factor discussion will need to be discussed at the next quarterly conference call (in late-January, early-February). I am looking for feedback on the topics (additions/deletions/revisions) and timeframes for each session. Once the agenda is set, I will ask that you send your presentations to me and I will upload onto a password protected site for download.

Please provide your feedback no later than Wednesday, September 4th so that presenters have ample time to prepare and I have time to upload presentations/materials.

Thank you.

Jackie
