Michelle,
Thanks for the heads up. With our agency budget constraints, it is doubtful that we'd be able to attend in person. Attendance by webinar/ live meeting would be doable, if this option is available to us. We have been looking at several manganese PBPK models available in the scientific literature , including those created by experts at Hamner Institute.
Thanks again for letting us know.
Kim

Kim and Clem-

I found out today that EPA researchers have been working on a Mn PBPK model for quite some time (see below, and attachment). There may be some value in contacting the group working on this; It appears that the Hamner Institute is far along on this research. October 30-31 a big meeting will occur in research triangle park on this topic, that you could attend. The contact is Will Boyes (919-541-7538), and our contact at RTP on our study said he is a very nice guy and could give you the details and make sure you are included in the discussions.

Maybe it would be helpful to schedule a call with Will. Danelle or George-should we do that directly or would either of you be interested in facilitating that?

Thanks!
Michelle

Hi George –

At the end of October, the Afton Corp is organizing a 2-day workshop on Manganese and the Manganese PBPK models. It will be held at the Hamner Institute in RTP, but I have the impression that they will try to set up a webinar also. I'm not sure if you (or others in R5) are interested in attending this meeting, but if so, Will Boyes is the person you need to contact. I've attached a draft agenda, and the original information email from Will is below.

Darcie

I am sending this out as a place holder. Afton would like to organize a two-day workshop on Manganese and the Manganese PBPK models to be held at the Hamner institute in RTP. My understanding is that the first day would be more scientific and focused on delivery of the final human PBPK models under the 211(b) Alternative Tier 2 Test Rule. This may involve a meeting of the Technical Advisory Panel as well.

I think the second day will be focused generally on the risk assessment needs for manganese and how the models may be used in that regard.

I do not have a schedule for the meetings at this time.

I have been asked to identify and suggest likely EPA participants and attendees. That is why you are receiving this meeting invitation. I believe they will try to set up a webinar for participants who cannot travel to RTP.

Please let me know if you have questions or especially if there is someone else who should be involved or notified.

Thanks

Will Boyes
