Will,

Thank you for agreeing to give me some guidance on Manganese exposure issues. We have decided that I cannot be the lead author on a Biomarkers paper for the Region 5 RARE Project because I am the COR on Rosemarie Bowler's Contract and this paper would be considered one of her Deliverables. However, I have agreed to help someone else write the Biomarkers paper. I have an extensive background in Drinking Water Arsenic exposures and health effects (Rebecca Calderon and David Thomas). I Have also worked on simulated air pollution and am somewhat knowledgeable on the various air measurement methodologies. I have work with Jane Gallagher on her Mechanistic Indicators of Childhood Asthma (MICA) Study and we added some questions to address manganese exposures in the Detroit area.

Which review papers would you recommend to give me a general background on manganese health effects, exposure and manganese in the diet? Any help you can give me will be greatly appreciated,

Hi Will,

I hope all is well with you. The community meeting went well back in July. Thank you for all of your efforts in reviewing our materials.

I wanted to introduce to you Ed Hudgens. Ed is a chemist in our group and he has agreed to take on the biomarkers paper (we have blood, hair and toenails) for the Region 5 air Mn study. He may be contacting you for some insight into key papers he should be reading on Mn.

Thank you!!

Danelle
