I do not know if we did or didn't. It would have come from Shilpa.

Shilpa and Margaret-

Didn't ARD send a 114 requesting activity/production records? I remember Carl saying that was the next step., but that was a few months ago...

Phil - Thanks for passing on the meteorological data. See attached. Windroses for the high-Mn dates (March 5 and May 7) confirm SHBell as the source. Maybe Shilpa/Michelle/EPA have figured something out regarding facility activities on those dates (?). Per your earlier messages, they may be doing something routine and extra-manganesey on Tuesdays.

Copying Shilpa, sorry I think I left you off on some of the earlier notes.

Subject: RE: Daily results graph

Hi Phil - Thanks for sharing - this is interesting. There are two specific Tuesdays with peak Mn values that are driving the average (March 5 and May 7, 2013). So I think the question is whether that's just a coincidence, or is there something different that the facility is routinely doing on Tuesdays. Maybe there is some type of shipping activity that occurs on the 1st Tuesday of each month that involves loading/unloading? Do you have wind direction data for those peak value dates? That could help identify the emissions point. Please keep me in the loop on follow-up discussions and analyses. Thanks!

Subject: Daily results graph

I have attached a graph of the daily concentrations to compare Mn levels Sunday through Saturday.
