I think the enforcement was ongoing prior to the deployment of the SAT monitors….

Per voice mail…….

Did the SAT Report have an impact on influencing the need for (influence) the enforcement action???

Thanks!!

For the east Chicago and Gary I would say no. they had an ongoing case and their cases don't have manganese in them. I would say yes for East Liverpool. You can verify with Brian Dickens if you want to double check.

Margaret.

SAT---would you be willing to say that the Reports did in fact bolster and support the 3 enforcement actions that 3 of the schools have (had)-- (E Chicago, Gary and E Liveropool?) Do you think we need to check with the enforcement staff?

I just finished meeting with Sara Breneman regarding items to be included on the poster.

Energy Star stays in.

Semi-continuous metals -Out. Sara's comment - just measuring data.

GMAP – Out. Sara's comment - no results.

Special purpose/114 monitoring – Out. Sara's comment - Absolutely not.

RARE- In. Carl: Need to provide a photo.

School Air Toxics: Out, but maybe borderline Out. My hunch is if it's something new and not a continuation of the work from the past couple years and to really justify the inclusion by saying something more significant than '…completed reports'. Need something to bolster justification and then make the case again for inclusion.

- Can you tell me about
- Special purpose and 114 monitoring studies:
    1. Bear Run Mine, Sullivan County, IN (PM10)
    2. Indiana CAFO (Elizabeth, IN H2S SPM)
    3. Chippewa Falls, WI (PM)

Anna,

here's what I have so far ATAB for the description due to Jeff Kelly by COB today:

- Energy Star Totals for the Region (Regional and/or State totals still being gathered to include items such as…Energy Savings in BTUs; Emissions Savings; Emissions Equivalent - # Passenger Vehicles

- Semi-continuous metals study sites in EJ Areas. This work advanced the understanding of specific processes at steel plants across the Midwest that are contributing elevated Mn concentrations in fence line communities; advanced targeted emission reductions in ongoing enforcement cases and voluntary actions.
    1. US Steel Yard ballpark, Gary, IN
    2. East Alton, IL
    3. Zug Island, Detroit, MI

- GMAP investigations. Found H2S exceeding the ATSDR health benchmark
    1. Northern Oaks Landfill 11/5 - 11/9/2012 Harrison MI

2. Aux Sable 5/21/2013 Morris IL
3. US Global 5/22/2013 Franklin Park IL
4. Washington Mills 6/4 - 6/5/2013 Hennepin IL
5. Indiana Harbor 7/18/2013
6. Bridgeport 9/3 - 9/6/2013 Bridgeport IL
7. OH Landfills (Apex and Sunny Farm) & Fostoria OH 9/22 - 9/29/2013 Amsterdam

- Special purpose and 114 monitoring studies:
    4. Bear Run Mine, Sullivan County, IN (PM10)
    5. Indiana CAFO (Elizabeth, IN H2S SPM)
    6. Chippewa Falls, WI (PM)

- RARE project in East Liverpool and Marietta, OH. Advanced the science for human exposure to toxic metals and which will establish a new health benchmark for manganese and national regulatory efforts.

- School Air Toxics. Completed reports to characterize air toxics impacts on schools.
    1. East Liverpool, OH
    2. Marietta, OH
    3. Gary, IN
    4. East Chicago, IN

I also talked to Sara Cervak in Doug Aburano's group who will be gather stats for areas that were redesignated into attainment. And to Charmagne Ackerman who is gathering Permit info. I'll pass anything I get from Sara or Charmagne on to you.
