Material Recovered from Six Separator

The volumes shown below were not released into the lake

- In the 24 hour period ending midnight April 1, a total of 252 barrels of water and oil mix were recovered from Six Separator. Current content is almost entirely water by volume.
- A total of 4,601 barrels of water and oil mix have been recovered since the onset of the incident March 24, 2014.
- As of March 29, 2014 2200, all water being skimmed from Six Separator is being collected and stored in three 21,000 gallon Rain-for-Rent frac tanks. This allows for a more direct measurement of the very slight amount of oil being recovered as part of the skimming operations.
