November and December 1996 Upper and Lower Aquifer Monitoring Well Sample Data Comparison
American Chemical Services, Inc.

Introduction

Black & Veatch Special Projects Corp. (BVSPC), under the Alternative Remedial Contracting Strategy, has been tasked by the U.S. Environmental Protection Agency (USEPA) to provide field oversight during the remedial design and expedited remedial action to USEPA Region V in their endeavor to complete remediation of the American Chemical Services site. The Respondents are the ACS Technical Committee, and their contractor is Montgomery Watson.

Purpose

The purpose of this document is to present BVSPC's evaluation and comparison of groundwater split sample analytical results with Montgomery Watson's data. BVSPC representatives collected twelve split samples during groundwater sampling of Upper and Lower Aquifer monitoring wells by Montgomery Watson.

Sampling Effort

From November 5 to 7, 1996, and from December 26 to 27, 1996, twelve split samples were collected during the field oversight. Table 1 shows the corresponding USEPA Contract Laboratory Program (CLP) numbers. Sampling was performed in accordance with the USEPA-approved field sampling plan and quality assurance project plan.

Laboratory

The USEPA split samples were analyzed by CLP analytical services in accordance with the procedures outlined in the User's Guide to the CLP, USEPA, February 1995. USEPA Region V Central Regional Laboratory (CRL), Chicago, Illinois, analyzed the inorganic samples and Mitkem, Warwick, Rhode Island, and Rollins, Ann Arbor, Michigan, analyzed the organic samples. Montgomery Watson's samples were analyzed by IEA for organic and inorganic analyses.

Data Validation

USEPA Region V CRL validated the split sample data and BVSPC reviewed the validated data using the USEPA CLP National Functional Guidelines for Organic Data Review (EPA 540/R-94/012, February 1994) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (EPA 540/R-94/013, February 1994). Montgomery Watson did not provide validation narratives of the data analyzed by their laboratories. It is unknown if Montgomery Watson used the USEPA CLP guidelines for their organic and inorganic data review.

The USEPA split sample analytical results were acceptable; however, due to minor analytical quality control problems, some of the compounds/analytes were qualified. Appendix A is a copy of raw data sheets from USEPA for split samples. Qualifiers are fully explained in the narratives.

Montgomery Watson did not report if the overall quality of data from their laboratory was good with any significant instrument problems or if the calculations were acceptable. Appendix B is a copy of raw data sheets for the Montgomery Watson data.

Data Comparison

BVSPC compared the validated split sample data to Montgomery Watson's data. Table 1 presents the Upper and Lower Aquifer monitoring well sample data comparison. Both data sets were consistent except for the following:

- It should be noted that the groundwater data results reported by Montgomery Watson in the January 1997 Technical Memorandum 1996 Groundwater Sampling Results Report for wells MW52 and MW53 were inconsistent with the results of the corresponding USEPA split samples collected from these wells. BVSPC has determined that the USEPA split samples from wells MW52 and MW53 were incorrectly identified on the traffic report based on the sample analytical results and the Montgomery Watson field notes.
- A few volatile and semivolatile organic compounds were analyzed for by USEPA's laboratory that were not analyzed by Montgomery Watson's laboratory; conversely, some organic compounds were analyzed for by Montgomery Watson's laboratory that were not analyzed by USEPA's laboratory.
- Generally, detection limits of organic compounds in Montgomery Watson's data were higher than the USEPA split sample data.

Volatile Organic Compounds

MW8. Both samples indicated non-detect. No tentatively identified compounds (TICs) were identified.

MW19. Both samples indicated non-detect. Chloroethane was detected in both samples. USEPA data indicated two TICs; Montgomery Watson data indicated no TICs.

MW12. Chlorobenzene and one TIC were detected in both samples. USEPA data indicated trans-1,2-dichloroethene and benzene; Montgomery Watson data indicated non-detect.

MW9. Chloroethane and benzene were detected in both samples. USEPA data contained acetone; Montgomery Watson data indicated non-detect. USEPA data indicated six TICs; Montgomery Watson data indicated no TICs.

MW10C. Both samples indicated non-detect. One TIC was identified in both samples.

MW51. Both samples indicated non-detect. USEPA data indicated no TICs; Montgomery Watson data indicated one TIC.

MW50. Both samples indicated non-detect. No TICs were identified.

MW13. Both samples indicated non-detect. Chloroethane and benzene were detected in both samples. USEPA data indicated three TICs; Montgomery Watson data indicated one TIC.

MW55. USEPA data indicated acetone, chloroform, 2-butanone, and bromodichloromethane; Montgomery Watson data indicated non-detect. No TICs were identified.

MW54. USEPA data indicated chloroethane; Montgomery Watson data indicated non-detect. No TICs were identified.

MW53. Acetone and toluene were detected in both samples. USEPA data indicated bromodichloromethane; Montgomery Watson data indicated non-detect. USEPA data indicated two TICs; Montgomery Watson data indicated four TICs.

MW52. Acetone and toluene were detected in both samples. USEPA data indicated 2-butanone; Montgomery Watson data indicated non-detect. USEPA data indicated two TICs; Montgomery Watson data indicated one TIC.

Semivolatile Organic Compounds

MW8. Both samples indicated non-detect. USEPA data indicated one TIC; Montgomery Watson data indicated five TICs.

MW19. Bis(2-chloroethyl)ether was detected in both samples. USEPA data indicated 20 TICs; Montgomery Watson data indicated five TICs.

MW12. 2,2'-oxybis(1-chloropropane) was detected in both samples. USEPA data indicated one TIC; Montgomery Watson data indicated three TICs.

MW9. Bis(2-chloroethyl)ether and 20 TICs were detected in both samples. USEPA data indicated phenol and di-n-octylphthalate; Montgomery Watson data indicated non-detect. Montgomery Watson data indicated nitrobenzene; USEPA data indicated non-detect.

MW10C. USEPA data indicated phenol, isophorone, and diethylphthalate; Montgomery Watson data indicated non-detect. USEPA data indicated 23 TICs; Montgomery Watson data indicated 20 TICs.

MW51. Both samples indicated non-detect. USEPA data indicated 17 TICs; Montgomery Watson data indicated 20 TICs.

MW50. USEPA data indicated 2,2'-oxybis(1-chloropropane); Montgomery Watson data indicated non-detect. USEPA data indicated three TICs; Montgomery Watson data indicated six TICs.

MW13. USEPA data indicated 2,2'-oxybis(1-chloropropane); Montgomery Watson data indicated non-detect. USEPA data indicated three TICs; Montgomery Watson data indicated 16 TICs.

MW55. Both samples indicated non-detect. USEPA data indicated no TICs; Montgomery Watson data indicated four TICs.

MW54. USEPA data indicated bis(2-ethylhexyl)phthalate; Montgomery Watson data indicated non-detect. USEPA data indicated four TICs; Montgomery Watson data indicated 15 TICs.

MW53. Phenol and isophorone were detected in both samples. USEPA data indicated 4-methylphenol and di-n-octylphthalate; Montgomery Watson data indicated non-detect. USEPA data indicated 15 TICs; Montgomery Watson data indicated 13 TICs.

MW52. USEPA data indicated bis(2-chloroethyl)ether; Montgomery Watson data indicated non-detect. Montgomery Watson data indicated phenol;

USEPA data indicated non-detect. USEPA data indicated three TICs; Montgomery Watson data indicated 20 TICs.

Pesticides/PCBs

The pesticide/PCB results from all USEPA samples and corresponding Montgomery Watson samples were non-detect. The USEPA endosulfan sulfate results were qualified as R, unusable.

Inorganic Analytes

Generally, the data are comparable. Montgomery Watson reported inorganic results for filtered and unfiltered samples; however, the USEPA split samples were not filtered and therefore the sample results were compared to the associated Montgomery Watson unfiltered sample data.

Precision of the laboratory analyses was assessed by comparing the detected concentrations for each sample for organic and inorganic analysis. The relative percent difference (RPD) was calculated for each pair of results using the following equation:

$$RPD = \frac{Pc - Dc}{(Pc + Dc) / 2} \times 100$$

where:

P_c = Primary Concentration (assumed USEPA's data)

D_c = Duplicate Concentration (assumed Montgomery Watson's data)

Table 2 presents the sample variation comparison for organic and inorganic analyses. Compounds/analytes that exceeded the 30% RPD criteria included the following:

Organic Compounds	Inorganic Analytes	
Chloroethane	Aluminum	Lead
Methylene chloride	Antimony	Mercury
Acetone	Arsenic	Nickel
Toluene	Chromium	Potassium
Benzene	Cobalt	Thallium

2,2'-oxybis(1-chloropropane)	Copper	Vanadium
Bis(2-chloroethyl)ether	Iron	Zinc

All other compounds/analytes were consistent, comparable, and within the 30% RPD range between USEPA and Montgomery Watson's data; however, BVSPC recommends that the detected compounds/analytes with higher concentrations should be viewed with caution.

Conclusions

The overall sample analytical results between USEPA and Montgomery Watson's data were comparable; however, differences in concentrations for some compounds/analytes between USEPA and Montgomery Watson's data were noted. These compounds/analytes should be viewed carefully in future sampling events.

BVSPC has determined that the USEPA split samples from wells MW52 and MW53 were incorrectly identified on the traffic report based on the sample analytical results and the Montgomery Watson field notes.

NARRATIVE

Contractor:	Mitkem	Case:	25256
Site:	American Chemical Svcs (IN)	SDG:	EBSJ9

This case consists of 11 low concentration water samples EBSK0, EBSK1, EBSK2, EBSK3, EBSK4, EBSJ4, EBSJ5, EBSJ6, EBSJ7, EBSJ8, and EBSJ9. These samples were all collected on December 26 and 27, 1996 and were received by the laboratory on December 27 and 28, 1996. All samples except EBSJ4, EBSJ7, and EBSK3 were analyzed for the volatiles, semi-volatiles, and pesticide/PCB organic analytes. Samples EBSJ4, EBSJ7, and EBSK3 were designated as trip blanks and was only analyzed for volatiles. All samples were analyzed according to CLP Low Concentration Water (OLC02.1).

The VOA analyses were performed within the technical holding time of 14 days after sample collection, for preserved water samples; therefore, the results are acceptable. All semivolatile and pesticide/PCB samples were extracted within the 7 day holding time for water samples, and analyzed within the 40 day hold time; therefore, the results are acceptable.

From the record of communication enclosed as part of this narrative, the new CLP sample numbers listed shows that sample EBSK0 was designated as a rinsate blank. Samples EBSJ5 and EBSJ6 were field duplicates as were EBSK1 and EBSK2.

The reviewer's narrative and data qualifiers are noted in the following pages.

NARRATIVE

Contractor:	Mitkem	Case:	25256
Site:	American Chemical Svcs (IN)	SDG:	EBSJ9

1.HOLDING TIMES

This case consists of 11 low concentration water samples EBSK0, EBSK1, EBSK2, EBSK3, EBSK4, EBSJ7, EBSJ4, EBSJ5, EBSJ6, EBSJ8, and EBSJ9. These samples were all collected on December 26 and 27, 1996 and were received by the laboratory on December 27 and 28, 1996. All samples except EBSJ4, EBSJ7, and EBSK3 were analyzed for the volatiles, semi-volatiles, and pesticide/PCB organic analytes. Samples EBSJ4, EBSJ7, and EBSK3 were designated as trip blanks and was only analyzed for volatiles. All samples were analyzed according to CLP Low Concentration Water (OLC02.1).

The VOA analyses were performed within the technical holding time of 14 days after sample collection, for preserved water samples; therefore, the results are acceptable. All semivolatile and pesticide/PCB samples were extracted within the 7 day holding time for water samples, and analyzed within the 40 day hold time; therefore, the results are acceptable.

2.GC/MS TUNING

All GC/MS tuning complied with the mass list and ion abundance criteria for BFB, and all samples were analyzed within the 12 hour periods for instrument performance checks.

All GC/MS tuning complied with the mass list and ion abundance criteria for DFTPP, and all samples were analyzed within the 12 hour periods for instrument performance checks. GC Resolution Check Mixes met the 60% resolution criteria. Endrin and DDT degradation checks using PEM MIX on DB-608 and DB-1701 columns were <20%; therefore, the results are acceptable. The Florisil Cartridge Check met QC criteria; therefore, the results are acceptable.

3.CALIBRATION

Initial and continuing calibrations of the volatile, semivolatile, and pesticide/PCBs were evaluated for the target compound list and outliers are recorded on the forms included as part of the narrative.

4.BLANKS

VOA:

The volatile water blank VBLK01 was found to contain the common laboratory chemical methylene chloride. The presence of the common laboratory chemical in the samples as well as the volatile holding blank associated with blank VBLK01, are flagged as undetected (U) if the concentration in the sample is less than ten times the blank concentration. There were no TICs found in this blank. The volatile method blank summary (Form IVVOA) lists the samples associated with these blanks.

SVOA:

Reviewed by: M. Kaminsky Lockheed-Martin ESAT
Date: January 24, 1997

NARRATIVE

Contractor:	Mitkem	Case:	25256
Site:	American Chemical Svcs (IN)	SDG:	EBSJ9

SBLK01 was found to contain the common laboratory chemical bis (2-ethylhexyl) phthalate and no TICs. The presence of the common laboratory contaminant in any sample associated with the blank SBLK01 is flagged as undetected (U) when the sample results are less than ten (10) times the blank contamination. The semivolatile method blank summary (Form IV SVOA) lists the samples associated with these blanks.

PESTICIDE/PCB:

The pesticide blank PBLK01 was found to be clean. The pesticide/PCB blank summary (Form IV PEST) lists the samples associated with this blank.

5.SYSTEM MONITORING COMPOUND AND SURROGATE RECOVERY

VOA:

The volatile water system monitoring compounds were within the QC limits for all samples; therefore the results are acceptable.

SVOA:

The semivolatile water system monitoring compounds were within the QC limits for all samples, therefore all results are acceptable.

PESTICIDE/PCB:

The pesticide surrogate TCX (tetrachloro-m-xylene) had high recovery on one column for the following samples; PBLK01, PLCS01, EBSK2, EBSK0, EBSJ5, EBSJ6, and EBSJ9. The cause of this high recovery is an impurity that is coeluting on the DB-1701 column. In the opinion of this reviewer this high recovery on one column does not adversely impact the data so no qualification is needed.

6. LABORATORY CONTROL SAMPLE

VOA:

All recoveries for the volatile water samples were within QC limits; therefore, the results are acceptable.

SVOA:

All recoveries for the semivolatile water samples were within QC limits; except for N-nitrosodiphenylamine which was high. Therefore; positive hits of this compound in the associated samples should be considered estimated (J) and nondetects need no qualification.

Reviewed by: M. Kaminsky Lockheed-Martin ESAT
Date: January 24, 1997

NARRATIVE

Contractor: Mitkem Case: 25256
Site: American Chemical Svcs (IN) SDG: EBSJ9

PESTICIDE/PCB:

All recoveries for the pesticide/PCB water samples were within QC limits; therefore, the results are acceptable.

7.FIELD BLANKS AND FIELD DUPLICATES

Trip blanks EBSJ4 and EBSK3 were found to contain ~~one each~~ no one each volatile TCLs and no TICs. Trip blank EBSJ7 contained 1 TCL and no TICs. Rinsate blank EBJK0 contained 2 volatile TCLs and no volatile TICs, no semivolatile TCLs and TICS, and no pesticide/PCBs TCLs. Sample EBSJ5 contained 2 volatile TCLs no volatile TICs, 1 semivolatile TCL and 2 semivolatile TICs, and no pesticide/PCBs TCLs. Its duplicate EBSJ6 contained 4 volatile TCLs no volatile TICs, 1 semivolatile TCL and 2 semivolatile TICs, and no pesticide/PCBs TCLs. Sample EBSK1 contained 4 volatile TCLs no volatile TICs, no semivolatile TCLs and no semivolatile TICs, and no pesticide/PCBs TCLs. Its duplicate EBSK2 contained 4 volatile TCLs no volatile TICs, no semivolatile TCLs and no semivolatile TICs, and no pesticide/PCBs TCLs.

01/28/97

8.INTERNAL STANDARDS

VOA:

No problems were reported.

SVOA:

No problems were reported.

9.COMPOUND IDENTIFICATION

After reviewing the mass spectra and chromatograms it appears that all VOA, SVOA, and pesticide/PCB compounds were properly identified.

10.COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

All CRQLs were properly reported and no dilutions were performed All target compounds were properly reported.

11.SYSTEM PERFORMANCE

GC/MS and pesticide baselines indicated acceptable performance.

12.ADDITIONAL INFORMATION

None.

ORGANIC DATA QUALIFIER DEFINITIONS

For the purpose of defining the flagging nomenclature utinized in this document, the following code letters and associated definitions are provide:

VALUE-if the results is a value greater than or equal to the Contract Required Quantitation Limit (CRQL).

U Indicates that the compound was analyzed for, but not detected. The sample quantitation limit corrected for dilution and percent moisture is reported.

J Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of a compound but the result is less than the sample quantitation limit, but greater than zero. The flag is also used to indicate a reported result having an associated QC problem.

R Indicates the data are unusable. (Note: The analyte may or may not be present.)

N Indicates presumptive evidence of a compound. This flag is only used for a tentatively identified compound, where the identification is based on a mass spectral library search.

P Indicates a pesticide/Aroclor target analyte when there is greater than 25% difference for the detected concentrations between the two GC columns. The lower of the two results is reported.

C Indicates pesticide results that have been confirmed by GC/MS.

B Indicates the analyte is detected in the associated blank as well as the sample.

E Indicates compounds whose concentrations exceed the calibration range of the instrument.

D Indicates an identified compound in an analysis has been diluted. This flag alerts the data user to any differences between the concentrations reported in the two analysis.

A Indicates tentatively identified compounds that are suspected to be aldol condensation products.

G Indicates the TCLP Matrix Spike Recovery was greater than the upper limit of the analytical method.

L Indicates the TCLP Matrix Spike Recovery was less than the lower limit of the analytical method.

T Indicates the analyte is found in the associated TCLP extraction blank as well as in the sample.

X, Y, Z are reserved for laboratory defined flags.

SUBJECT: Review of Region V CLP Data
Received for Review on Jan 17, 1997

FROM: Stephen L. Ostrodka, Chief (HSRL-5J)
Superfund Technical Support Section

TO: Data User: B+V PJS for Steve Ostrodka 01/28/97

We have reviewed the data for the following case:

SITE NAME: American Chem SVCS (IN)

CASE NUMBER: 25256 SDG NUMBER: ~~EBSK2~~ EBSJ9 MK 1-21-97

Number and Type of Samples: 11 (water)

Sample Numbers: EBSK0-4 EBSJ7, 4-6, 8-9 PJS 01/27/97

Laboratory: Mitkem Hrs. for Review: 13+1.5

Following are our findings:

The data are acceptable and usable with the qualifications described in the attached narrative

Patricia J Scott

cc: Regional TPO
Brian Freeman
HSMC-5J

NARRATIVE

Contractor:	Mitkem	Case:	25256
Site:	American Chemical Svcs (IN)	SDG:	EBSJ9

This case consists of 11 low concentration water samples EBSK0, EBSK1, EBSK2, EBSK3, EBSK4, EBSJ4, EBSJ5, EBSJ6, EBSJ7, EBSJ8, and EBSJ9. These samples were all collected on December 26 and 27, 1996 and were received by the laboratory on December 27 and 28, 1996. All samples except EBSJ4, EBSJ7, and EBSK3 were analyzed for the volatiles, semi-volatiles, and pesticide/PCB organic analytes. Samples EBSJ4, EBSJ7, and EBSK3 were designated as trip blanks and was only analyzed for volatiles. All samples were analyzed according to CLP Low Concentration Water (OLC02.1).

The VOA analyses were performed within the technical holding time of 14 days after sample collection, for preserved water samples; therefore, the results are acceptable. All semivolatile and pesticide/PCB samples were extracted within the 7 day holding time for water samples, and analyzed within the 40 day hold time; therefore, the results are acceptable.

From the record of communication enclosed as part of this narrative, the new CLP sample numbers listed shows that sample EBSK0 was designated as a rinsate blank. Samples EBSJ5 and EBSJ6 were field duplicates as were EBSK1 and EBSK2.

The reviewer's narrative and data qualifiers are noted in the following pages.

NARRATIVE

Contractor:	Mitkem	Case:	25256
Site:	American Chemical Svcs (IN)	SDG:	EBSJ9

1.HOLDING TIMES

This case consists of 11 low concentration water samples EBSK0, EBSK1, EBSK2, EBSK3, EBSK4, EBSJ7, EBSJ4, EBSJ5, EBSJ6, EBSJ8, and EBSJ9. These samples were all collected on December 26 and 27, 1996 and were received by the laboratory on December 27 and 28, 1996. All samples except EBSJ4, EBSJ7, and EBSK3 were analyzed for the volatiles, semi-volatiles, and pesticide/PCB organic analytes. Samples EBSJ4, EBSJ7, and EBSK3 were designated as trip blanks and was only analyzed for volatiles. All samples were analyzed according to CLP Low Concentration Water (OLC02.1).

The VOA analyses were performed within the technical holding time of 14 days after sample collection, for preserved water samples; therefore, the results are acceptable. All semivolatile and pesticide/PCB samples were extracted within the 7 day holding time for water samples, and analyzed within the 40 day hold time; therefore, the results are acceptable.

2.GC/MS TUNING

All GC/MS tuning complied with the mass list and ion abundance criteria for BFB, and all samples were analyzed within the 12 hour periods for instrument performance checks.

All GC/MS tuning complied with the mass list and ion abundance criteria for DFTPP, and all samples were analyzed within the 12 hour periods for instrument performance checks. GC Resolution Check Mixes met the 60% resolution criteria. Endrin and DDT degradation checks using PEM MIX on DB-608 and DB-1701 columns were <20%; therefore, the results are acceptable. The Florisil Cartridge Check met QC criteria; therefore, the results are acceptable.

3.CALIBRATION

Initial and continuing calibrations of the volatile, semivolatile, and pesticide/PCBs were evaluated for the target compound list and outliers are recorded on the forms included as part of the narrative.

4.BLANKS

VOA:

The volatile water blank VBLK01 was found to contain the common laboratory chemical methylene chloride. The presence of the common laboratory chemical in the samples as well as the volatile holding blank associated with blank VBLK01, are flagged as undetected (U) if the concentration in the sample is less than ten times the blank concentration. There were no TICs found in this blank. The volatile method blank summary (Form IVVOA) lists the samples associated with these blanks.

SVOA:

Reviewed by: M. Kaminsky Lockheed-Martin ESAT
Date: January 24, 1997

NARRATIVE

Contractor: Mitkem Case: 25256
Site: American Chemical Svcs (IN) SDG: EBSJ9

SBLK01 was found to contain the common laboratory chemical bis (2-ethylhexyl) phthalate and no TICs. The presence of the common laboratory contaminant in any sample associated with the blank SBLK01 is flagged as undetected (U) when the sample results are less than ten (10) times the blank contamination. .The semivolatile method blank summary (Form IV SVOA) lists the samples associated with these blanks.

PESTICIDE/PCB:

The pesticide blank PBLK01 was found to be clean. The pesticide/PCB blank summary (Form IV PEST) lists the samples associated with this blank.

5.SYSTEM MONITORING COMPOUND AND SURROGATE RECOVERY

VOA:

The volatile water system monitoring compounds were within the QC limits for all samples; therefore the results are acceptable.

SVOA:

The semivolatile water system monitoring compounds were within the QC limits for all samples, therefore all results are acceptable.

PESTICIDE/PCB:

The pesticide surrogate TCX (tetrachloro-m-xylene) had high recovery on one column for the following samples; PBLK01, PLCS01, EBSK2, EBSK0, EBSJ5, EBSJ6, and EBSJ9. The cause of this high recovery is an impurity that is coeluting on the DB-1701 column. In the opinion of this reviewer this high recovery on one column does not adversely impact the data so no qualification is needed.

6. LABORATORY CONTROL SAMPLE

VOA:

All recoveries for the volatile water samples were within QC limits; therefore, the results are acceptable.

SVOA:

All recoveries for the semivolatile water samples were within QC limits; except for N-nitrosodiphenylamine which was high. Therefore; positive hits of this compound in the associated samples should be considered estimated (J) and nondetects need no qualification.

Reviewed by: M. Kaminsky Lockheed-Martin ESAT
Date: January 24, 1997

NARRATIVE

Contractor: Mitkem Case: 25256
Site: American Chemical Svcs (IN) SDG: EBSJ9

PESTICIDE/PCB:

All recoveries for the pesticide/PCB water samples were within QC limits; therefore, the results are acceptable.

7.FIELD BLANKS AND FIELD DUPLICATES

Trip blanks EBSJ4 and EBSK3 were found to contain ~~one each~~ NO ONE Each volatile TCLs and no TICs. Trip blank EBSJ7 contained 1 TCL and no TICs. Rinsate blank EBJK0 contained 2 volatile TCLs and no volatile TICs, no semivolatile TCLs and TICS, and no pesticide/PCBs TCLs. Sample EBSJ5 contained 2 volatile TCLs no volatile TICs, 1 semivolatile TCL and 2 semivolatile TICs, and no pesticide/PCBs TCLs. Its duplicate EBSJ6 contained 4 volatile TCLs no volatile TICs, 1 semivolatile TCL and 2 semivolatile TICs, and no pesticide/PCBs TCLs. Sample EBSK1 contained 4 volatile TCLs no volatile TICs, no semivolatile TCLs and no semivolatile TICs, and no pesticide/PCBs TCLs. Its duplicate EBSK2 contained 4 volatile TCLs no volatile TICs, no semivolatile TCLs and no semivolatile TICs, and no pesticide/PCBs TCLs.

01/28/97

8.INTERNAL STANDARDS

VOA:

No problems were reported.

SVOA:

No problems were reported.

9.COMPOUND IDENTIFICATION

After reviewing the mass spectra and chromatograms it appears that all VOA, SVOA, and pesticide/PCB compounds were properly identified.

10.COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

All CRQLs were properly reported and no dilutions were performed All target compounds were properly reported.

11.SYSTEM PERFORMANCE

GC/MS and pesticide baselines indicated acceptable performance.

12.ADDITIONAL INFORMATION

None.

ORGANIC DATA QUALIFIER DEFINITIONS

For the purpose of defining the flagging nomenclature utinized in this document, the following code letters and associated definitions are provide:

VALUE-if the results is a value greater than or equal to the Contract Required Quantitation Limit (CRQL).

U Indicates that the compound was analyzed for, but not detected. The sample quantitation limit corrected for dilution and percent moisture is reported.

J Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of a compound but the result is less than the sample quantitation limit, but greater than zero. The flag is also used to indicate a reported result having an associated QC problem.

R Indicates the data are unusable. (Note: The analyte may or may not be present.)

N Indicates presumptive evidence of a compound. This flag is only used for a tentatively identified compound, where the identification is based on a mass spectral library search.

P Indicates a pesticide/Aroclor target analyte when there is greater than 25% difference for the detected concentrations between the two GC columns. The lower of the two results is reported.

C Indicates pesticide results that have been confirmed by GC/MS.

B Indicates the analyte is detected in the associated blank as well as the sample.

E Indicates compounds whose concentrations exceed the calibration range of the instrument.

D Indicates an identified compound in an analysis has been diluted. This flag alerts the data user to any differences between the concentrations reported in the two analysis.

A Indicates tentatively identified compounds that are suspected to be aldol condensation products.

G Indicates the TCLP Matrix Spike Recovery was greater than the upper limit of the analytical method.

L Indicates the TCLP Matrix Spike Recovery was less than the lower limit of the analytical method.

T Indicates the analyte is found in the associated TCLP extraction blank as well as in the sample.

X, Y, Z are reserved for laboratory defined flags.

Discussion/Issue:

12/30/96, 8:45 AM: Mark Shipple, MITKEM, called CLASS and informed us that he received the shipments for the samples but there were no CLP sample numbers assigned to the case. CLASS stated that we needed the traffic reports (TR) so we can let the Region know the circumstances.

12/30/96, 9:00 AM: CLASS called Bal Berena, sampler, and explained the issue. He stated CLASS should assign CLP sample numbers to the samples.

Resolution:

12/30/96, 9:30 AM: CLASS called Cecilia Luckett, RSCC, and left a message stating CLASS would assign the CLP sample numbers to the samples.

12/30/96, 2:00 PM: CLASS called Mark and gave him the new sample numbers from the TR as follows:

SDG Narrative

The enclosed data package is submitted by Mitkem Corporation in response to USEPA Case # 25256 and SDG# EBSJ9. Analyses were performed for eleven (11) aqueous samples that were received on December 27 and 28, 1996. The analysis was performed under USEPA Contract# 68-D6-0063.

The following samples are submitted in this data package:

Client ID	Analysis
EBSK0	V, S, P
EBSK1	V, S, P
EBSK2	V, S, P
EBSK3	V
EBSK4	V, S, P
EBSJ4	V, S, P
EBSJ5	V
EBSJ6	V, S, P
EBSJ7	V
EBSJ8	V, S, P
EBSJ9	V, S, P

17 07
CHICAGO, ILLINOIS 60605

V = Volatile Organics
S = Semivolatile Organics
P = Pesticides/PCB

The analyses were performed using USEPA CLP Low Concentration Water (OLC02.1) protocols.

The instruments used for the analyses are as follows:

Volatile Analysis

V2 Hewlett Packard Model 5972 GC/MS with 30 m x 0.25 mm id (1.4 um film thickness) RTX-624 capillary column
Purge and Trap system fitted with an OI Molecular Sieve/Tenax/Silica three stage trap

Semivolatile Analysis

S1 Hewlett Packard Model 5922 GC/MS with 30 m x 0.25 mm id DB-5MS capillary column

Pesticides/PCB Analysis

SC3 Hewlett Packard Model 5890 GC/ECD with 30 m x 0.53 mm id DB-608 and 30 m x 0.53 mm id DB-1701 megabore columns

The analyses were performed with strict adherence to the SOW with the following exceptions and observations:

1. Overall Observation:

The wrong EPA ID were recorded on the chain of custody form. Per discussion with SMO (see communication logs), the EPA ID were changed.

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required.

2. Volatile Analysis:

All of the samples' pH were determined to be less than 2.
VIBLK01 was performed due to the high TIC concentration in EBSJ8.

An OI Molecular sieve/Tenax/Silica gel trap was used for the Purge and Trap Instrument on V2. Based on the performance, the laboratory manager certified that

- the alternate trap material meets the technical acceptance criteria listed in SOW 9.3.5 and 9.4.5
- the low point initial calibration standard analysis has adequate sensitivity to meet the volatile CRQLs
- the high point initial calibration standard analysis was not overloaded
- the alternate trap material did not introduce contaminants which interfered with the identification and/or quantitation of the compounds listed in SOW Exhibit C (Volatiles)

3. Semivolatile Analysis:

None

4. Pesticides/PCB Analysis:

Due to coeluting interferences, TCX exhibited high recovery on the DB-1701 column.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette (diskette not submitted here) has been authorized by the laboratory manager or his designee, as verified by the following signature.

Kin S. Chiu, 1/15/97
Laboratory Manager

REGION 5 CENTRAL REGIONAL LABORATORY

536 SOUTH CLARK STREET

CHICAGO, ILLINOIS 60605

Date: 1-13-97

Subject: Review of Region 5 Data for American Chemical Services Code:J7

From: Charles T. Elly, Director Chuck Elly
Region 5 Central Regional Laboratory

To: B & V

Attached are the results for American Chemical Services Code:J7
CRL request number 970042
for analyses for Antimony, Arsenic, Cadmium, Lead, Selenium and Thallium
Results are reported for sample designations: 97ZB02S01, 97ZB02D01, 97ZB02S02, 97ZB02S03, 97ZB02S04, 97ZB02S05, 97ZB02D05 and 97ZB02R01

Results Status:
(x) Acceptable for Use
( ) Data Qualified, but Acceptable for use
( ) Data Unacceptable for Use

(x) Sewer Disposal Criteria Met; Exceptions: Acid preserved samples must be neutralized prior to disposal. Samples 97ZB02S01, 97ZB02D01, 97ZB02S03 and 97ZB02S04 exceed the disposal criterion for particulate matter, and 97ZB02D01 and 97ZB02S04 meet or exceed the lead criterion.

Comments on Data Quality by Reviewer

All samples except 97ZB02S05 and 97ZB02D05 were analyzed for antimony by graphite furnace atomic absorption, because the high solids created problems for the flow injection system of the hydride generation method. Lead results for sample 97ZB02S04 should properly be reported as 120 μg Pb/L to use the correct number of significant figures for the measurement, given the dilution necessary.

WAD Number: 05-96-0-04

GFAA NARRATIVE for Data Set 970042

Five ground water samples, 97ZB02S01, D01, S02, S03 and S04, two surface water 97ZB02S05 and D05 and one field blank 97ZB02R01 were collected from the American Chemical Services site. The samples were submitted for the analysis of total arsenic, cadmium, lead, selenium and thallium by GFAA. Samples 97ZB02S01, R01, S02, S03, S04 and R01 were analyzed by GFAA for antimony due to matrix interference. The samples were collected on 12/26/96 and 12/27/96 and were received properly preserved by the CRL on 12/27/96. All samples were part of data set 970042.

All samples were digested on 12/31/96. Two sets of duplicates and spikes were digested because two types of water matrices were analyzed.

Analytical results were stored in .DAT files CDBY105.DAT, TLBY103.DAT, ASBY102.DAT, ASBY103.DAT, PBBY105.DAT, PBBY106.DAT, SEBY1231.DAT and SEBY102.DAT and .LPT file SBBY108.LPT.

Arsenic

Data Files ASBY102.DAT and ASBY103.DAT

Arsenic was analyzed without incident.

All QC was within the specified control limits.

Cadmium

Data File CDBY105.DAT

Cadmium was analyzed without incident.

All QC was within the specified control limits.

Lead

Data Files PBBY105.DAT and PBBY106.DAT

Lead was analyzed without incident.

All QC was within the specified control limits.

Narrative by: B. Yuen ESAT
Date: 1-9-97

Thallium

Data File TLBY103.DAT

Thallium was analyzed without incident.

All QC was within the specified control limits.

Selenium

Data Files SEBY102.DAT and SEBY1231.DAT

Selenium was analyzed without incident.

All QC was within the specified control limits.

Antimony

Data file SBBY108.LPT

Antimony was analyzed without incident.

All QC was within the specified control limits.

Acceptable results for arsenic, antimony, cadmium, lead, selenium and thallium were obtained for the samples.

Narrative by: B. Yun ESAT
Date: 1-9-97

Method Number: 3114B
Date Generated: January 08, 1997
TDF Number: 5104-078

SiteName: AMERICAN CHEM.SERVICE
Charge Number: ESE-51-251
Work Assignment Number: 05-96-0-04

FIAS NARRATIVE for Data Set 970042

8 water samples from data set 970042 (97ZB02S01-05, D01, D05 and R01) were submitted for the analysis of total antimony by hydride AA. The water samples were collected on 12-26-96 and were received by the CRL properly preserved on 12-27-96.

All samples and standards were digested following standard CRL FIAS digestion protocols for waters on 01-06-97 and analyzed on 01-07-97. The data for samples 97ZB02S05, S05DUP, S05SPK and D05, D05SPK and all required QC were acceptable. The spikes results for the rest of the samples from data set 970042 were below the lower acceptance range (85% R), therefore these samples were redigested on 01-07-97 and rerun on 01-08-97. The matrix spike recoveries were still unacceptable and samples 97ZB02S01-S04, D01 and R01 were rerun on 01-08-97 by MSA.

The hold time for metals is six months. All samples were analyzed within the six month hold time for metals. A spiked blank, used as a laboratory control sample (LFM), was digested and analyzed with the set of samples. Analytical results for 97ZB02S05 and D05 were stored in .DAT file SBLL0107.DAT.

To: B&V

Attached are the results for American Chemical Services Code:J7
CRL request number 970042
for analyses for ICP
Results are reported for sample designations: 97ZB02S01, 97ZB02D01, 97ZB02S02, 97ZB02S03, 97ZB02S04, 97ZB02S05, 97ZB02D05 and 97ZB02R01

Results Status:
(x) Acceptable for Use
( ) Data Qualified, but Acceptable for use
( ) Data Unacceptable for Use
(x) Sewer Disposal Criteria Met; Exceptions: Acid preserved samples must be neutralized prior to disposal. Samples 97ZB02S01, 97ZB02D01, 97ZB02S03 and 97ZB02S04 exceed the disposal criterion for iron and particulate matter.

Comments on Data Quality by Reviewer

Matrix spikes and duplicates were performed on both samples selected by the field contractor. Sample 97ZB02S03 represented the groundwater matrix, and sample 97ZB02S05 represented the surface water matrix. The vanadium matrix spike recovery for the spike of 97ZB02S05 was only 81%, outside the CRL's 100±15% acceptance window. The vanadium matrix spike recovery for the spike of 97ZB02S03 was 90%, so the groundwater data are unaffected. There is a chance of a low bias for vanadium for the surface water samples, but because both samples were well below detection, it is unlikely to affect the data.

ICP NARRATIVE

This narrative covers the analysis of 8 water samples (970042) from the above named site sampled on December 26th and 27th for ICP metals analysis.

Data Set	Sample Nos.
970042	97ZB02S01, D01, R01, S02, S03, S04, S05, D05

Routine CRL microwave digestion procedures were used to prepare the samples for ICP analysis. Since two types of water matrices (groundwater and surface water) were present with this 8 sample set of waters, two sets of laboratory duplicate and matrix spike QC audits were prepared and analyzed. The sample digests were analyzed using the TJA 1160 unit; the SED5_AL analysis run method was used. ICP analysis results were stored to file RUN 691. Since the K channel on the 1160 unit was not fully operable, K was analyzed using the TJA 61 unit; K analysis run results were stored to file RUN691K.

RUN 691

The following lists the out-of-control QC CHECK audit results for RUN 691 ICP data:

(Note: Since the K channel was not usable, the K values indicated in the raw run data and in the QC reports are not included in the listing below.)

Blanks: Instr Blank 2: Li, 10.94 µg/L

AQC checks: AQC 2: Ba - 5.2% deviation

Matrix spike: 97ZB02S05: V 81%R

All As, Cd, and Pb sample concentrations were too low to be reliably reported using ICP analysis. Refer to GFAA analysis and / or FIAS hydride AA analysis data for these results.

Li results were not of concern for this data set.

The final AQC (AQC 2) check results for Ba exceeded CRL QC control limits of ± 5% but did not exceed CLP limits of ± 10% deviation. All other QC audit values for Ba are in control. Ba sample results are usable.

SD
1-6-97

RUN 691 (continued)

The matrix spike recovery for V for 97ZB02S05 exceeded CRL control limits of 100 ± 15%R but not CLP limits of 100 ± 25%R. All remaining control audits for V met CRL control limits. All V sample results are usable.

Data for the first two IEC solutions (Cu and Al solutions) were not used. IEC values were zeroed out and then new IEC data acquisition was resumed by beginning over again with the Cu IEC solution. No sample result data were adversely affected by this and the data are usable.

RUN 691 K

All QC check audits for K were within CRL control limits. All K samples are usable.

Analytical Data
December 1996

Date: FEB 07 1997

Subject: Review of Region 5 Data for **AMERICAN CHEMICAL SERVICES INC.**

From: Charles T. Elly, Director Chuck Elly
Region 5 Central Regional Laboratory

To:

Attached are the results for **AMERICAN CHEMICAL SERVICES INC.**
CRL request number **970042**
for analyses for **Cyanide and Mercury**.
Results are reported for sample designations: 96ZB02S01, 96ZB02D01, 96ZB02S02, 96ZB02S03, 96ZB02S04, 96ZB02S05, 96ZB01D05 and 96ZB02R01.

Results Status:

(X) Acceptable for Use: **Cyanide and Mercury**
( ) Data Qualified, but Acceptable for use:
( ) Data Unacceptable for Use:

( ) Sewer Disposal Criteria Met;

Mercury: All portion of the above samples which were collected and submitted for mercury analysis are preserved with acid/dichromate reagents. Those samples should be disposed of in a drum. The preservative utilized is toxic.

Cyanide: Portions of all of the above samples which were collected and submitted for cyanide analyses are preserved with sodium hydroxide reagents. All the samples should be neutralized prior to disposal down the drain provided that the concentrations of other analytes are less than the laboratory detection or other controlling limits. Cyanide concentrations in those samples are below the laboratory detection limit.

Comments on Data Quality by Reviewer:

All the samples submitted for Cyanide and Mercury analysis were assayed and the results are attached. Required quality control criteria for the laboratory, method, and system performance audits were evaluated and determined to be within the limits. Cyanide and Mercury results are acceptable for use.

Comments on Sample Results:

Mercury results for samples 96ZB02S02 and 96ZB02S04 were found to be above the laboratory detection limit of 0.0001 mg/L (0.1 μg/L). Mercury in those samples could pose some risk. Mercury concentrations in the remaining samples and Cyanide results for all samples were found to be below the laboratory detection limit. The laboratory detection limit for Cyanide is 0.008mg/L (8 μg/L). All those samples are considered safe with respect to Cyanide and Mercury.

SUBJECT: Review of Region V CLP Data
Received for Review on NOV 25 1996

FROM: Stephen L. Ostrodka, Chief (HSRL-5J) for Steve Ostrodka
Superfund Technical Support Section Richard L Bryant
12/31/96

TO: Data User: B+V

We have reviewed the data for the following case:

SITE NAME: American Chem. Svs (IN)

CASE NUMBER: 25125 SDG NUMBER: 97ZB01S01

Number and Type of Samples: 16 (water)

Sample Numbers: 97ZB01S01-S08 97ZB01TB01-TB06, 97ZB01R01, 97ZB01D01, PQ858, PQ070, PV214

Laboratory: Rollins Hrs. for Review: 16+1.5

Following are our findings:

the data are usable and acceptable with the qualifications described in the attached narrative.

Richard L Bryant

cc: Regional TPO
Brian Freeman
HSMC-5J

NARRATIVE

LABORATORY: Rollins Environmental **CASE: 25125**

SITE NAME: American Chemical Systems **SDG: 97ZB01S01**

Below is a summary of the out-of-control audits and the possible effect on the data for this case:

This review covers sixteen water samples numbered 97ZB01S01 - S08, 97ZB01TB01 - TB06, 97ZB01R01, 97ZB01D01 and three performance evaluation (PE) samples numbered PQ858, PV070 and PV214. Samples were collected on November 5, 6 and 7, 1996. Rollins Environmental of Ann Arbor, MI received the samples on November 6, 7 and 8, 1996 in good condition. Samples 97ZB01S01 - S08, D01 and R01 were analyzed for volatile, semivolatile and pesticide/PCB fractions. Samples 97ZB01TB01- TB06 and PV214 were analyzed for volatiles only. Sample PV070 was analyzed for semivolatiles only. Sample PQ858 was analyzed for pesticides/PCBs only.

All sample analyses were performed following the CLP SOW OLC02.1 protocol.

All volatile analysis were performed within the technical holding time of fourteen days after sample collection for acid preserved water samples. The results are acceptable.

All semivolatile extractions and reextractions were performed within seven days except 97ZB01S05RE. All analytes were flagged estimated, "J" or "UJ", for this sample. All analyses were performed within forty days after extraction.

All pesticide extractions were performed within seven days. All pesticide reextractions were performed after hold time requirements. For samples 97ZB01S01RE - S07RE all analytes were flagged estimated, "J" or "UJ". All analyses were performed within forty days after extraction.

Sample 97ZB01R01 was identified as a field blank. Samples 97ZB01TB01- TB06 were identified as trip blanks.

The PE samples (PQ858, PV070 and PV214) were not included in the chain of custody. These samples were assigned at a later date (see letter dated 10/29/96 included in this data package).

Sample 97ZB01D01 was mislabeled in all fractions as 97ZB01001.

The reviewer's narrative and data qualifiers are noted in the following pages.

NARRATIVE

LABORATORY: Rollins Environmental **CASE: 25125**

SITE NAME: American Chemical Systems **SDG: 97ZB01S01**

1.HOLDING TIME

This review covers sixteen water samples numbered 97ZB01S01 - S08, 97ZB01TB01 - TB06, 97ZB01R01, 97ZB01D01 and three performance evaluation (PE) samples numbered PQ858, PV070 and PV214. Samples were collected on November 5, 6 and 7, 1996. Rollins Environmental of Ann Arbor, MI received the samples on November 6, 7 and 8, 1996 in good condition. Samples 97ZB01S01 - S08, D01 and R01 were analyzed for volatile, semivolatile and pesticide/PCB fractions. Samples 97ZB01TB01- TB06 and PV214 were analyzed for volatiles only. Sample PV070 was analyzed for semivolatiles only. Sample PQ858 was analyzed for pesticides/PCBs only.

All sample analyses were performed following the CLP SOW OLC02.1 protocol.

All volatile analysis were performed within the technical holding time of fourteen days after sample collection for acid preserved water samples. The results are acceptable.

All semivolatile extractions and reextractions were performed within seven days except 97ZB01S05RE. All analytes were flagged estimated, "J" or "UJ", for this sample. All analyses were performed within forty days after extraction.

All pesticide extractions were performed within seven days. All pesticide reextractions were performed after hold time requirements. For samples 97ZB01S01RE - S07RE all analytes were flagged estimated, "J" or "UJ". All analyses were performed within forty days after extraction.

2.GC/MS TUNING PERFORMANCE

All GC/MS tuning complied with the mass list and ion abundance criteria for BFB, and all samples were analyzed within the twelve hour periods for instrument performance checks.

All GC/MS tuning complied with the mass list and ion abundance criteria for DFTPP, and all samples were analyzed within the twelve hour periods for instrument performance checks.

The GC Resolution Check Mix met the 60% resolution criteria. DDT and Endrin degradation checks were acceptable (<20%).

Reviewed by: _____Robert D. Kuhajda__Lockheed/ESAT
Date:__December 6th, 1996__

NARRATIVE

LABORATORY: Rollins Environmental **CASE: 25125**

SITE NAME: American Chemical Systems **SDG: 97ZB01S01**

The Florisil Cartridge Check met with QC criteria. The results are acceptable.

3.CALIBRATION

Initial and continuing calibration standards of volatile, semivolatile and pesticide/PCB were evaluated for the Target Compounds List (TCLs) and outliers were recorded on the outlier forms included as a part of this narrative.

4.METHOD BLANK

Volatile:

VBLK06, VBLK07, VBLK08 and VBLK09 are the volatile method blanks. VBLK06 contained methylene chloride (0.7 ug/L). Methylene chloride IS A common laboratory contaminant. The presence of common laboratory contaminants in the samples were flagged as not detected "U" when sample results are less than ten times the blank results. VBLK07 contained methylene chloride (0.8 ug/L) and 1,2,4-trichlorobenzene (0.6 ug/L). Methylene chloride is a common laboratory contaminant. The presence of common laboratory contaminants in the samples were flagged as not detected "U" when sample results are less than ten times the blank results. 1,2,4-Trichlorobenzene was flagged not detected, "U", in samples when the results were less than five times the blank results. VBLK08 contained methylene chloride (1 ug/L) and one TIC. Methylene chloride is a common laboratory contaminant. The presence of common laboratory contaminants in the samples were flagged as not detected "U" when sample results are less than ten times the blank results. TICs were flagged not detected, "U", in samples when the results were less than five times the blank results. VBLK09 contained methylene chloride (2 ug/L), acetone (1 ug/L) and 1,2,4-trichlorobenzene (0.5 ug/L). Methylene chloride and acetone are common laboratory contaminants. The presence of common laboratory contaminants in the samples were flagged as not detected "U" when sample results are less than ten times the blank results. 1,2,4-Trichlorobenzene were flagged not detected, "U", in samples when the results were less than five times the blank results. The volatile method blank summary (FORM IV VOA) lists the associated samples.

VHBLK05, the volatile storage blank, reported methylene chloride (1 ug/L) and acetone (4 ug/L).

Reviewed by: Robert D. Kuhajda Lockheed/ESAT
Date: December 6th, 1996

NARRATIVE

LABORATORY: Rollins Environmental **CASE:** 25125

SITE NAME: American Chemical Systems **SDG:** 97ZB01S01

Semivolatile:
SBLK01, SBLK02, SBLK03 and SBLK04 were the semivolatile method blanks. SBLK01 reported no TCLs and one TIC. SBLK02 reported no TCLs and six TICs. SBLK03 reported bis(2-ethylhexyl)phthalate (1 ug/L) and one TIC. SBLK04 reported no TICs or TCLs. Bis(2-ethylhexyl)phthalate is a common laboratory contaminant. The presence of the common laboratory contaminants in the samples were flagged as non-detected "U" when sample results are less than ten times the blank results. TICs were flagged as "U" when sample results are less than five times the blank results. The semivolatile method blank summary (FORM IV SV) lists the associated samples.

Pesticide/PCB:
PBLKW1, PBLKW2 and PBLKW3 are the pesticide/PCB method blanks. No TCLs were reported in the method blanks.

5.SYSTEM MONITORING COMPOUND AND SURROGATE RECOVERY

Volatile:
The system monitoring compound was within the QC limits for all samples except PV214 was out of control limits high (126% R). All detected analytes were flagged estimated "J" and non-detected analytes were not flagged.

Semivolatile:
The surrogates were within the QC limits for all samples except 97ZB01S05 reported one acid surrogate out of control limits low. The method allows one surrogate per fraction out of control limits without flagging the data.

Pesticide/PCB:
Sample PBLKW1, 97ZB01S02, 97ZB01S02RE, 97ZB01S04RE, 97ZB01S06RE, 97ZB01S08 and PLCSW1 reported high recovery for decachlorobiphenyl on column #2. The samples were flagged estimated "J" for detected analytes and not flagged for nondetects.

6.LABORATORY CONTROL SAMPLES (LCS)
Volatile:
All spike recoveries were within the QC limits. The results are acceptable.

Semivolatile:

Reviewed by: Robert D. Kuhajda Lockheed/ESAT
Date: December 6th, 1996

NARRATIVE

LABORATORY: Rollins Environmental **CASE: 25125**

SITE NAME: American Chemical Systems **SDG: 97ZB01S01**

All spike recoveries were within the QC limits. The results are acceptable.

Pesticide/PCB:

PLCSW1: dieldrin and endrin reported high recovery for column 2. The samples were flagged estimated "J" for these analytes when reported and not flagged for nondetects. Endosulfan sulfate reported low recoveries for both columns. The samples were flagged estimated "J" for this analyte when reported and flagged unusable "UR" for nondetects.

PLCSW3: All spike recoveries were within the QC limits. The results are acceptable.

PLCSW3 is associated with all reextracted samples. PLCSW1 is associated with all the original samples.

7a.FIELD BLANK AND FIELD DUPLICATE

No field duplicate was included. Sample 97ZB01D01 is listed as collected at the same time as sample 97ZB01S08 but at a different location. Sample 97ZB01R01 was identified as a field blank. Samples 97ZB01TB01- TB06 were identified as trip blanks. The compounds detected in the field and trip blanks are presented in the Table below:

Compound	-R01	-TB01	-TB02	-TB03	-TB04	-TB05	-TB06
			(µg/L)				
VOA:							
chloroethane	-	-	1	-	-	-	-
acetone	-	2	-	-	-	-	-
chloroform	0.7	-	-	-	-	0.5	3
#VOA TICs	-	1	1	-	-	-	1
SVOA:							
# SVOA TICs	1						
Pest/PCB:	-						

7b.PERFORMANCE EVALUATION SAMPLES

Volatile:

The volatile performance evaluation sample (PE) numbered PV214 reported chloromethane, chlorobenzene and 1,1-dichloroethane within warning limits. 2-Hexanone was reported as within action limits, warning high. Bromoform, 1,1,2,2-tetrachloroethane, styrene and 1,2-dibromo-3-chloropropane

Reviewed by: _____Robert D. Kuhajda__Lockheed/ESAT
Date:__December 6th, 1996__

NARRATIVE

LABORATORY: Rollins Environmental **CASE: 25125**

SITE NAME: American Chemical Systems **SDG: 97ZB01S01**

were reported as outside of action limits high. A dilution was analyzed for 1,1,2,2-tetrachloroethane. This also reported action high.

No target compounds were missed. There were ~~three~~ two target contaminants; ~~methylene chloride,~~ RXB 12/27/96 chloroform and trichloroethene. RXB 12/27/96

2-Chlorotoluene was missed as a TIC. No TIC contaminants were reported.

Semivolatile:

The semivolatile PE sample numbered PU070 reported naphthalene, 4-chloro-3-methylphenol, hexachlorocyclopentadiene, 2-chloronaphthalene, acenaphthene, phenanthrene, di-n-butylphthalate, pyrene and benzo (B) fluoroanthene within warning limits. No target compounds were outside of warning or action limits.

No target compounds were missed. One target compound was a contaminant, bis (2-ethylhexyl) phthalate.

Endrin was missed as TICs. No TIC contaminants were reported.

Pesticide/PCB:

The pesticide/PCB PE sample numbered PQ858 reported alpha-BHC, aldrin and 4,4'-DDE within warning limits. No target compounds were outside of warning or action limits.

Delta-BHC, endosulfan I, dieldrin, methoxychlor and endrin ketone were missed target compounds.

8. INTERNAL STANDARDS

Volatile:

The internal standards area counts and retention time were within the QC limits. The results are acceptable.

Semivolatile:

97ZB01S05 reported low IS areas for IS 6. Analytes associated with this internal standards were flagged estimated "J" or "UJ". See Table 4 for a list of internal standards and associated compounds.

9. COMPOUND IDENTIFICATION

SVCS01
VLCS01

Reviewed by: Robert D. Kuhajda Lockheed/ESAT
Date: December 6th, 1996

NARRATIVE

LABORATORY: **Rollins Environmental** **CASE: 25125**

SITE NAME: **American Chemical Systems** **SDG: 97ZB01S01**

The target compounds and TICs for the volatile, semivolatile and pesticide/PCB fractions were correctly identified.

10.COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

The volatile and pesticide/PCB Target Compounds (TCLs) and Tentative Identified Compounds (TICs) were properly quantitated and the CRQLs were properly listed. The data is acceptable.

11.SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance.
GC baselines for the pesticide/PCB analysis was acceptable.

12.ADDITIONAL INFORMATION

Volatile:
1,1,2,2-Tetrachloroethane exceeded calibration range in sample PV214; use the diluted sample for this analyte. Chloroethane exceeded calibration range in 97ZB01D01 and 97ZB01S08; use the -DL diluted samples for this analyte in the respective samples. Do not use 97ZB01D01DL2. Vinyl chloride, chloroethane and benzene exceeded calibration range in 97ZB01S04; use -DL2 for benzene and -DL3 for chloroethane. Vinyl chloride is diluted out in -DL, -DL2 and -DL3. The value in the undiluted sample must therefore be used for vinyl chloride. Do not use 97ZB01S04DL. Sample 97ZB01S05 reported only diluted values. Flag all analytes "D".

Semivolatile:
2,2'-Oxybis(1-chloropropane) exceeded calibration range in samples 97ZB01S03 and 97ZB01S07; use the diluted sample for this analyte. Sample 97ZB01S05 reported IS 6 low. Sample 97ZB01S05RE was extracted after hold time. The reviewer recommends the use of 97ZB01S05.

Pesticide/PCB:
Endosulfan sulfate was out of control low for both columns in PLCSW1. All samples associated with this LCS flag endosulfan sulfate estimated "J" for detects and unusable "R" for nondetects. Samples reextracted after hold time were flagged estimated "J" or "UJ" for all analytes. The reviewer recommends that the reextracted samples be used for endosulfan sulfate where nondetects occur and the original sample where detects occur, this avoids the "R" flag.

ORGANIC DATA QUALIFIER DEFINITIONS

For the purpose of defining the flagging nomenclature utinized in this document, the following code letters and associated definitions are provide:

VALUE-if the results is a value greater than or equal to the Contract Required Quantitation Limit (CRQL).

U Indicates that the compound was analyzed for, but not detected. The sample quantitation limit corrected for dilution and percent moisture is reported.

J Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of a compound but the result is less than the sample quantitation limit, but greater than zero. The flag is also used to indicate a reported result having an associated QC problem.

R Indicates the data are unusable. (Note: The analyte may or may not be present.)

N Indicates presumptive evidence of a compound. This flag is only used for a tentatively identified compound, where the identification is based on a mass spectral library search.

P Indicates a pesticide/Aroclor target analyte when there is greater than 25% difference for the detected concentrations between the two GC columns. The lower of the two results is reported.

C Indicates pesticide results that have been confirmed by GC/MS.

B Indicates the analyte is detected in the associated blank as well as the sample.

E Indicates compounds whose concentrations exceed the calibration range of the instrument.

D Indicates an identified compound in an analysis has been diluted. This flag alerts the data user to any differences between the concentrations reported in the two analysis.

A Indicates tentatively identified compounds that are suspected to be aldol condensation products.

G Indicates the TCLP Matrix Spike Recovery was greater than the upper limit of the analytical method.

L Indicates the TCLP Matrix Spike Recovery was less than the lower limit of the analytical method.

T Indicates the analyte is found in the associated TCLP extraction blank as well as in the sample.

X, Y, Z are reserved for laboratory defined flags.

TABLE 4

(For Low Concentration water)

VOLATILE INTERNAL STANDARDS WITH CORRESPONDING TCL ANALYTES ASSIGNED FOR QUANTITATION

1,4-Difluorobenzene	Chlorobenzene-d_5	1,4-Dichlorobenzene-d_4
Chloromethane	4-Methyl-2-pentanone	Bromoform
Bromomethane	1,1,1-Trichloroethane	1,2-Dibromo-3-chloropropane
Vinyl chloride	Carbon tetrachloride	1,2-Dichlorobenzene
Chloroethane	Bromodichloromethane	1,3-Dichlorobenzene
Methylene chloride	1,2-Dichloropropane	1,4-Dichlorobenzen
Acetone	trans-1,3-Dichloropropene	
Carbon disulfide	Trichloroethene

Volatile Analyses	17	1	7	25
Semivolatile Analyses	11	1	2	14
Pesticide/PCB Analyses	11	1	0	12

Total Analyses: 12 FULL + 13 VOA + 2 BNA

This Deliverables Package is assembled in accordance with instructions in Section B, OLC02.1 revision of the Contract Laboratory Program - Statement of Work. A copy of this deliverable has been distributed to SMO and Region V.

The following is a detailed description of quality control, shipment, and/or analytical problems that were encountered in the processing of these samples.

Sample Login

ENCOTEC received nineteen samples from Federal Express on November 06, 1996 through November 08, 1996. Standard Chain of Custody procedures were followed. The samples were stored at 4°C and/or chemically preserved as required by EPA protocol. The samples were scheduled for Full Organic Analysis.

Sample Analysis - Volatile

Sample analysis was performed without incident and within holding times. Chain of custody was maintained, and samples were analyzed according to EPA SOW OLC02.1. Quality control results are summarized as follows:

- Analyses of surrogates were performed on all samples; please see FORM II LCV for results.

- The method blanks contained the following target analytes: Methylene Chloride, Acetone, and 1,2,4-Trichlorobenzene near or below the CRQL. One Tentatively Identified Compounds (TICs) was detected. Please see method blank Forms I LCV-TIC for results.

- A Laboratory control sample was performed with this SDG. Please see Form III LCV for results.

- All EICP areas and retention times were within QA/QC. Please see FORM VIII LCV for results.

Summary

The samples revealed several positively detected Target Compounds. Several Tentatively Identified Compounds were detected in the samples. Samples 97ZB01S01, 97ZB01S04, 97ZB01S08, and PV214 required reanalyses at secondary dilutions due quantitated concentrations exceeding the range established by the calibration standards. Please see FORM's I LCV for results.

Sample Extraction

The semivolatile samples were continuous liquid-liquid extracted on November 07, 1996 through November 18, 1996. The Pesticide/PCB samples were separatory funnel extracted on November 08, 1996 through November 19, 1996. All extracts were processed according to CLP protocol. Final extracts were given to the GC/MS group on November 8, 1996 through November 19, 1996 and to the GC group on November 12, 1996 through November 19, 1996.

Sample Analysis - Semivolatile

Sample analysis was performed without incident and within holding times with the following exception. Sample 97ZB01S05 was reextracted outside of holding times and reanalyzed due to a surrogate recovery outlier in the original sample analysis. Chain of custody was maintained, and samples were analyzed according to EPA SOW OLC02.1. Quality control results are summarized as follows:

- Analyses of surrogates were performed on all samples; please see FORM II LCSV for results.

- The method blank revealed the following target analyte: bis(2-Ethylhexyl) phthalate. Several TICs were identified. Please see method blank FORM's I LCSV-1, LCSV-2 and LCSV-TIC for results.

- A Laboratory Control Sample was analyzed with this SDG. Please see Form III LCSV for results.

- EICP areas and retention times were within QA/QC windows. Please see FORM's VIII LCSV-1 and LCSV-2 for results.

Summary

The samples revealed several positively detected Target compounds. Several TIC's were detected in the samples. Samples 97ZB01S03 and 97ZB01S07 required reanalyses at secondary dilutions due quantitated concentrations exceeding the range established by the calibration standards. Please see FORM's I LCSV-1, LCSV-2, and LCSV-TIC for results.

Sample Analysis - Pesticide/PCB

Sample analysis was performed without incident and within holding times. Chain of custody was maintained, and samples were analyzed according to EPA SOW OLC02.1. Quality control results are summarized as follows:

- Analyses of surrogates were performed on all samples; please see FORM II LCP for results.

- The method blanks did not contain any target analytes at or above the CRQL.

- A Laboratory Control Sample was analyzed with this SDG. Please see FORM III LCP for results.

Summary

Target analytes were found in sample PQ858 above the CRQL. Several samples were reextracted outside of holding times and reanalyzed due to a low surrogate recovery with PBLKW1 and low recoveries in PLCSW1. Please see all FORM I LCP for results.

Any technical questions regarding the data present in this deliverable should be addressed to the individual whose name appears at the end of this case narrative. Any manual integrations/compound identifications were done so on account the automatic software either failing to properly identify/quantitate the analyte of interest.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions implied or detailed above. Release of the information contained in this hardcopy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

SEMIVOLATILE METHOD BLANK SUMMARY

EPA SAMPLE NO.

SBLK01

Lab Name: REI Contract: 68-D2-0061

Lab Code: ROLLIN Case No.: 25125 SAS No.: SDG No.: 97ZB01S01

Lab File ID: LWBK071A Lab Sample ID: LWBK071A

Instrument ID: 024 Date Extracted: 11/07/96

Matrix: (soil/water) WATER Date Analyzed: 11/14/96

Level:(low/med) LOW Time Analyzed: 1719

THIS METHOD BLANK APPLIES TO THE FOLLOWING SAMPLES AND LCS:

	EPA SAMPLE NO.	LAB SAMPLE ID	LAB FILE ID	DATE ANALYZED
01	97ZB01S01	02671B	02671B	11/14/96
02	97ZB01S02	02672B	02672B	11/14/96

File I.7

Date: 1-6-97

Subject: Review of Region 5 Data for **AMERICAN CHEMICAL SERVICES INC.**

From: Charles T. Elly, Director Chuck Elly
Region 5 Central Regional Laboratory

To: B&V

Attached are the results for **AMERICAN CHEMICAL SERVICES INC.**
CRL request number **970022**
for analyses for **Cyanide and Mercury**. 97ZB01
Results are reported for sample designations: ~~96~~ZB01S01, ~~96~~ZB01S02, ~~96~~ZB01S03, ~~96~~ZB01S04, ~~96~~ZB01S05, ~~96~~ZB01S06, ~~96~~ZB01S07, ~~96~~ZB01S08, ~~96~~ZB01D08 and ~~96~~ZB01R01.

Results Status:

(X) Acceptable for Use: **Cyanide and Mercury**
( ) Data Qualified, but Acceptable for use:
( ) Data Unacceptable for Use:

( ) Sewer Disposal Criteria Met;

Mercury: All portion of the above samples which were collected and submitted for mercury analysis are preserved with acid/dichromate reagents. Those samples should be disposed of in a drum. The preservative utilized is toxic.

Cyanide: Portions of all of the above samples which were collected and submitted for cyanide analyses are preserved with sodium hydroxide reagents. All the samples should be neutralized prior to disposal down the drain provided that the concentrations of other analytes are less than the laboratory detection or other controlling limits. Cyanide concentrations in those samples are below the laboratory detection limit.

Comments on Data Quality by Reviewer:

All the samples submitted for Cyanide and Mercury analysis were assayed and the results are attached. Required quality control criteria for the laboratory, method, and system performance audits were evaluated and determined to be within the limits. Cyanide and Mercury results are acceptable for use.

Comments on Sample Results:

Mercury results for samples 96ZB01S02 and 96ZB01S05 were found to be above the laboratory detection limit of 0.0001 mg/L (0.1 μg/L).Mercury in those samples could pose some risk. Mercury concentrations in the remaining samples and Cyanide results for all samples were found to be below the laboratory detection limit. The laboratory detection limit for Cyanide is 0.008mg/L (8 μg/L). All those samples are considered safe with respect to Cyanide and Mercury.

Subject: Review of Region 5 Data for American Chemical Services Code:J7

From: Charles T. Elly, Director Chuck Elly
Region 5 Central Regional Laboratory

To:

Attached are the results for American Chemical Services Code:J7
CRL request number 970022
for analyses for Antimony, Arsenic, Cadmium, Lead, Selenium and Thallium
Results are reported for sample designations: 97ZB01S01, 97ZB01S02, 97ZB01S03, 97ZB01S04, 97ZB01S05, 97ZB01S06, 97ZB01S07, 97ZB01S08, 97ZB01D08 and 97ZB01R01

Results Status:
(x) Acceptable for Use
( ) Data Qualified, but Acceptable for use
( ) Data Unacceptable for Use

(x) Sewer Disposal Criteria Met; Exceptions: Acid preserved samples must be neutralized prior to disposal. From the ICP analysis, all samples **except** 97ZB01S01 and 97ZB01R01 exceed the criterion for iron.

Comments on Data Quality by Reviewer

Most samples were diluted 2-fold for selenium due to analytical spikes falling outside the 90-110% acceptance window. The lead matrix spike had a high analytical spike (112.6%), although the actual matrix spike recovery was 91%. The samples were redigested due to suspected cadmium contamination. The redigested aliquots showed no cadmium.

(x) Sewer Disposal Criteria Met; Exceptions: Acid preserved samples must be neutralized prior to disposal. All samples **except** 97ZB01S01 and 97ZB01R01 exceed the criterion for iron.

Comments on Data Quality by Reviewer

Iron is very high in most of these samples. Aluminum may be biased slightly low, as the instrument blanks were -58 and -59 μg Al/L (within the limit of $\pm$the detection limit) and the digestion blank was -84 μg Al/L (outside the limit). This could be explained by some aluminum contamination in the calibration blank. This would result in a low bias of the amount of the contamination. It would not seriously affect the slope of the calibration.

ICP NARRATIVE

This narrative covers the analysis of 10 water samples (970022) from the above named site sampled on November 5th, 6th, and 7th for ICP metals analysis. Also included is the November PE sample (970020) for metals analysis.

Data Set	Sample Nos.
970022	97ZB01S01, R01,,S02, S03, S04, S05, S06, S07, S08, D08
970020	97OI03S01

Routine CRL microwave digestion procedures were used to prepare the samples for ICP analysis. An LCS / MDL check audit sample was also prepared. The sample digests were analyzed using the TJA 1160 unit; the SED5_AL analysis run method was used. ICP analysis results were stored to file RUN 669. For the November PE sample, the submitted sample concentrate was diluted tenfold by pipetting 20 ml of sample concentrate and diluting to 200 ml; this dilution contained 2% HNO_3; a 50 ml aliquot of this dilution was then digested and analyzed. Since the K channel on the 1160 unit was not fully operable, K was analyzed using the TJA 61 unit; K analysis run results were stored to file RUN669K.

RUN 669

The following lists the out-of-control QC CHECK audit results for RUN 669 ICP data:

(Note: Since the K channel was not usable, the K values indicated in the raw run data and in the QC reports are not included in the listing below.)

Blanks: Digestion Blank: Al, - 83.84 µg/L

AQC checks:	AQC 1:	B	6.4% deviation
		Li	7.5% "
		Mg	5.5% "
		Sr	6.4% "

PD
11-13-96

RUN 669 (continued)

AQC 2:	Li	12.6% deviation
	Sr	11.0% "

Matrix spike: 97ZB01S03: Li 205%R

All As, Cd, and Pb sample concentrations were too low to be reliably reported using ICP analysis. Refer to GFAA analysis and / or FIAS hydride AA analysis data for these results.

B, Li and Sr results were not of concern for this data set.

The low Al response for the digestion blank does not significantly affect the Al values reported for the samples. The remaining QC check audit values for Al gave acceptable values.

The final AQC (AQC 2) check results for a number of analytes exceeded CRL QC control limits of ± 5% but did not exceed CLP limits of ± 10% deviation. These analytes included Al, Ba, Be, Ca, Co, Cu, Fe, Mn, Ni, and Ag. All other QC audit values for these are in control. Sample results for these analytes are usable.

For Mg, the low level Mg channel had AQC 1 and AQC 2 values of +5.5% and +7.2% deviation, respectively. These values exceeded the ± 5% CRL control limits but did not exceed the ± 10% CLP limits. Only two samples had Mg values in the range for the Mg low level channel to be used, 97OI03S01 and 97ZB01R01. For these latter two samples, the Mg values were below limits of detection. For the remaining samples, the Mg results were reported using the high level Mg channel which gave in control QC check audit results. All Mg sample results are usable.

RUN 669K

All QC check audits for K were within CRL control limits. All K samples are usable.
