Hi Diane,

Please see the attachment for a map of the canister sampling locations during the first EPA sampling campaign. Let me know if you have any questions on the map.

During the second campaign, we sampled 8 grab samples (2 duplicates, all inside the facility) and 6 24-hour composite samples (2 upwind, 4 downwind). I am not certain when the preliminary report will be released to us for the second sampling campaign. I will have to check with our lab to see when they would be able to release a draft to OEPA. I will get back to you on that.

Thanks,

Justin Coughlin

Justin,
I appreciate your verbal update on June 19 2018 regarding the locations for U.S. EPA's canister samples that were collected on May 7-8, 2018. Our management would also like to know how many other canister samples were collected by U.S.EPA and when we can expect to receive additional results (preliminary or final).
Thanks,
Diane

Hi again Diane - got your voicemail about locations, durations etc. associated with the preliminary R5 data. I checked with our air monitoring group. They suggested you get in touch with Justin Coughlin (coughlin.justin@epa.gov; 312-886-0778). If it's too late today Justin said he's in tomorrow. thanks

Hi Bob,

Please find the preliminary results for samples collected near AK Steel on May 7th and 8th.

This data is considered preliminary. The instrument raw data and associated quality control information have not been reviewed against our laboratory standard operating procedures (SOPs) by the primary analyst and a second, trained analyst. The data are pending a final data verification as specified in our laboratory data verification SOP. Until the final report is issued, these preliminary results are subject to change.

Our lab is preparing a similar package for samples collected on May 23rd and 24th. We will transmit as soon as it is available, as well as the final reports.
