Is Harold Coming?

6/23/03

Jimmy - Opening - understands - We have not asked for you to bring shovel & dig up the River -
We ~~have~~ can step clock on Order
We need

Jane Gardner - Head of Reuters
Rory McCluse
Tiny Perrus
Rombsey
Lester

We all want to see the PCBs in Rome taken care of expeditious - We thought we had done that -

What do you think are the GAPs are & why do think GA Court Handler fr.

- We want to share technical -

- Glad to have you are not concerned w/ Ceosa

10526541

2.5 ppm - DLe falls at Hudson wises you they had ---
The Cleanup levels on the Hudson are ~~[illegible]~~ higher than there -

EPD - & EPA has this Fish data
92 -

.05 when they

.5 PPM

Jimmy (303(D) - list) - indicator of what is going on -

When you see recovery took place -

1 - .5 you can't measure difference

Shifts from ~~water~~ Sediments to Water -

So They have the information that shows that the water has no PCBs -

How did you Sample? ... did you use High Volume Sampler? NO

How did you sample -

I don't want to get into that row.

Steve Ramsey has focused on Samedi's

This afternoon

I am unaware of any Data that supports the opinion that GW is discharging to surface.

If you have any evidence we have not seen it.

RFI - we are going to do each permit

Plant Site

Creeks

GW

Pump: Treat is operating & is working (How deep)

In all the work you have done so that you can drawn the plumbs

We have -

I have to ask about the original
overs contamination -

Landfill A

~~Way~~ way the contures are drawn -
This landfill operated -
We are worried

Landfill B & C

1st tunnel

Then if there was a continuing release
our two well systems would capture
them. -

One that surrounds the plant - a second.

Hydrological study - you need to do

Harold → this River Coosa US -

400 Million gallons a day - discussed the flow
of the River.
1/10 of this water in River Coosa from GW

So What is his Point? - 100 ma or less

a day - So the water is going to be deluded before it goes to the water. → hits water goes dilution.

So Again what is his point?

15 PPB MCLs is what is in GW and

11 ppT at Hudson Falls

Kay did a good job and they all started laughing

"Why would we not see sediment -"

we have found not any in sediments

But w/ GW discharge - Seepage - recontribution could occur

The Seeps - are a Concern

Tyler fills identify the GAPs that exist -

Referred to Harold letter - uncontrolled releases from site.

We just don't feel that you have not found

There are Contractor BBC said

it was Karst

They say that the plant is not Kerst

fractured hydrological —

does not seem like they understand the hydrogeology...

How deep are the wells?

Is yours it is the ditch: Surface water by the contamination??

-> Visual - [illegible] results from lab

1 foot - below

All soil down to top of Grand water
-> Stay.

-> Do you are

25 PPM -

We will take Confirmation Samples
1.55

25 PPM

They will not Sample below GW -

1PPM - don't own

25PP we own

- Did you do refining at the Site

Pyrenol - "Tri & Tetra Chlorinate were we blend" filtered went into landfill A

did Blending on Site.

Do you specific list of DATA GAPS

Steve Sayre has have given you all Stuff.

How can you do modeling w/o ⇒

Conceptual Models

1) What we know

2) what we think we know

3) what we don't know

GW - plume
RI/ investigations

near complexity of RFI

6/13 – meeting w/ JP / Ramsey

1) Hydrohydrolysis
2) Horizontally contains no vertical
3) We are not doing confirmation
Cross Contamination / Pump treat
3)

What is purpose of the Congeners?
TEQ

PCBs are
126 (Coplanar) Now weathering

We know that

→ May 1996 – SMUS

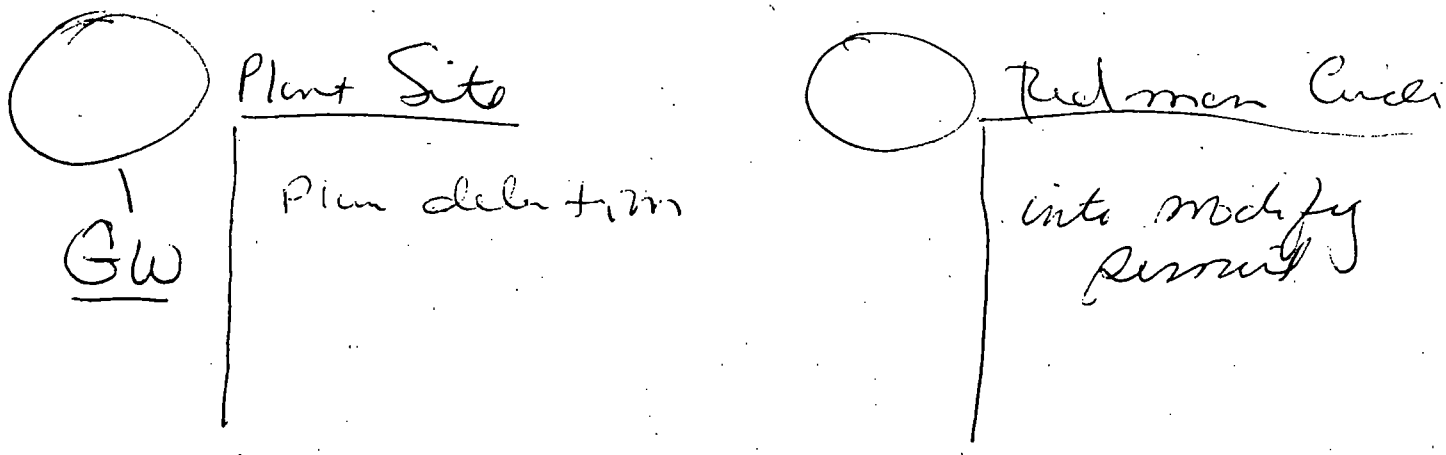
You have gotten copies – RFI – why did we not raise –

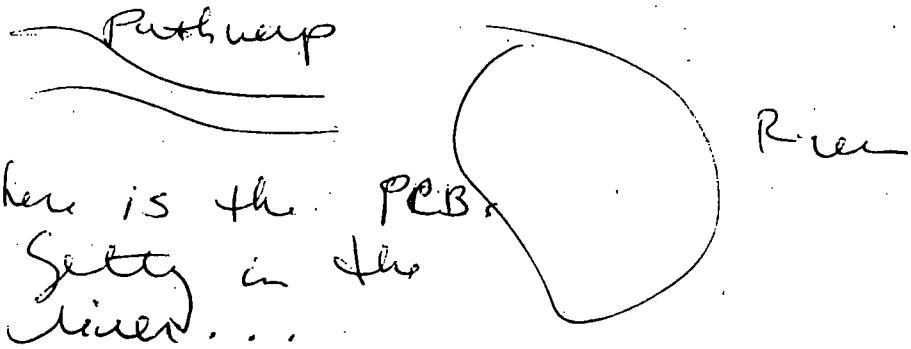
6/23 Not a final remedy
Ramsey

Built into Permit

They said they will do more work...

Keep telling about Permit.





When is the PCB settling in the river...

Risk Assessment:

RIF work - Phase 3 of RFI - (no fish data)

October - the RIF done

11th + 20 = 31st - 5 days

124 Acre
all Clean-up

Site: What is appropriate remedy for on Site Contamination — Higher Permit Modification

"Still don't know what is under the building"
Harold

Have you studied where the Contamination

We wish we could get something from EPA to tell you what you want

DATA GAPs

"Conceptual Site Model" Why not?

↳ We will litigate this issue.

Substance / Form

Why don't you remove Source off the facility

~~We want to do~~

Push this Ball
