TAB 1
Project Summary

Removal of hazardous materials including PCB-containing caulking, asbestos-containing caulking, PCB-contaminated light fixtures and mercury-containing light tubes was performed at Sky Valley Education Center located at 351 Short Columbia Street, Monroe, Washington. The hazardous materials abatement activities were performed in the Administration, Annex, Gymnasium, Classroom Pod/Library, and the Technology Buildings during summer 2016.

NorthStar of Issaquah, Washington was sub-contracted by the Monroe School District to perform removal and disposal of the PCB-containing materials and mercury-containing materials associated with this project. All abatement work was performed in accordance with the project specifications and drawings.

PCB removal notifications were submitted to the Environmental Protection Agency (EPA) Region 10 by the Monroe School District.

PBS Engineering + Environmental, Inc. (PBS) was retained by the Monroe School District to prepare project specifications and drawings, conduct air monitoring, contractor observation and project documentation for the Sky Valley Education Center hazardous materials abatement project. PBS monitored the abatement and related operations, from July 26 – September 9, 2016. A project specification and abatement plans were prepared by PBS AHERA Project Designer, Gregg Middaugh. See Tab 2 for project specifications and abatement drawings showing the building areas where hazardous materials were removed during this project.

The intent of this project was to remove all caulking throughout the campus that contained 50 parts per million PCBs or greater. Some of that caulking was also found to contain asbestos. The project also included the removal of fluorescent light fixtures that had been contaminated from leaking PCB-containing ballasts.

The overall abatement process included removal of all interior caulking inside isolated negative pressure enclosures. All exterior caulking removal was performed inside non-isolated regulated areas.

Cel Alvarez was the PBS Industrial Hygienist who performed the onsite air monitoring, contractor observation and project documentation throughout the abatement portions of the project on behalf of the Monroe School District. The attached PBS Field Observation Reports, located at Tab 3, provides daily observations of the abatement and other related activities.

Accessible PCB-containing caulking was removed from the following areas of the Gymnasium, Pod/Library, Administration, Annex and Technology Buildings:

Gymnasium

- PCB-containing caulking located on the exterior and interior metal window frame on the Girls Locker Room North Perimeter window – 44 linear feet (lf),
- PCB-containing caulking on the exterior metal window frames on all windows at the south and west elevation of the large gym building. This includes caulking that exists around each window infill panel metal frame transition on the west elevation. These window infill panels are constructed of cement asbestos board – 205 lf,
- PCB-containing caulking located on interior side of the three lower window and the upper window bank east vertical in the gathering place as shown -106 lf,
- PCB-containing caulking of interior window frame verticals in the CTE Room – 9 lf,
- PCB-containing caulking on interior side of North exterior Girl's Locker Entry Door – 18 lf,
- PCB-containing caulking on exterior side of North CTE Entry door-18 lf,
- PCB-containing caulking on the interior side of the Northwest perimeter entry door frame of the small gym – 18 lf,
- PCB-containing caulking located on all vertical structural metal column transitions throughout the east elevation of the large gym. This includes the removal of all caulking on the interior demising wall metal beams (vertical and horizontal) between the daycare and the gathering place/cafeteria. The caulking is heavily painted throughout the work scope area – 352 lf,
- PCB-containing caulking located on all exterior vertical structural metal column transitions throughout the lower west and south elevations of the large gym building – 526 lf.

Pod/Library Building

- PCB-containing caulking located on interior perimeter metal window frame to brick transition verticals on each of Classrooms #1 through #20 – 400 lf,
- PCB-containing caulking on the interior and exterior sides of the cement asbestos board (CAB) window infill panels. Caulking remains behind the unit ventilators in each of the twenty Pod Classrooms. The caulking fills the gap between the metal window frame and CAB transition in each of Classrooms #1 through #20 – 1,040 lf.

Administration Building

- PCB-containing caulking located on all interior metal window sill transitions and all exterior metal window frame transitions throughout the Administration Building – 410 lf,
- PCB-containing caulking located on all exterior vertical structural metal beam transitions throughout the Administration Building – 175 lf.

Annex Building

- PCB-containing caulking located on the interior perimeter metal window frame transition. This includes removal of caulking which exists on exterior metal window frame transitions on the North and South building elevation windows – 141 lf,
- PCB-containing caulking on wood ceiling/soffit beams at perimeter wall/ceiling transition in Rooms E, F and Prep Room F – 36 lf,
- PCB-containing and asbestos-containing tan caulking located on various vertical and horizontal metal window frame transitions on the North and South elevations of the Annex Building – 490 lf,

Technology Building

- PCB-containing caulking located on exterior louvers, exhaust vents and exhaust ducting on metal transitions on the west and east exterior elevations of the Technology Building – 50 lf.

Fluorescent light fixtures in various areas throughout the campus had been contaminated by previously leaking PCB-containing ballasts. The work scope included removal of all older fluorescent light fixtures that may have potentially contained these PCB-containing ballasts. Northstar removed all fluorescent light fixtures from the Annex Building, Pod/Library Building, Gymnasium Building Gathering Place and Locker Rooms and from portions of the Technology Building. The removal process included wrapping each fixture in polyethylene sheeting and duct tape, unfastening the fixtures from the ceiling and then packaging the fixtures in 55-gallon drums for transport to a disposal site.

PBS documented a total of 669 mercury-containing light tubes removed by Northstar from the Sky Valley Education Center campus.

Clearance Activities

Post abatement clearance testing was conducted by PBS in each area (i.e. regulated area) where PCB-containing caulk and fluorescent light fixture removal was performed. Clearance testing included collecting representative air, surface wipe and soil samples, as appropriate for each location. Representative surface wipe and air samples were collected from each interior regulated areas. Representative surface wipes or soil samples were collected from each exterior regulated area depending on the surface beneath (i.e. soils or asphalt/concrete) the abated material. Laboratory reports and field drawings showing samples locations for all air, wipe and soil samples are provided in Tabs 4, 5 and 6, respectively. If an area failed to meet the clearance criteria the contractor was required to perform additional cleaning and the area was retested until the criteria was met.

Final clearance samples for each regulated area met the established clearance criteria and were in accordance with EPA guidelines and the Washington Model Toxics Control Act (MTCA - WAC 173-340) cleanup criteria (soils) for unrestricted land use.

- EPA PCB Air Clearance Criteria – 100 nanograms per cubic meter (ng/m^3)
- EPA PCB Surface Wipe Clearance Criteria – 10 micrograms (μg) per 100 square centimeters (cm^2)
- Washington PCB Soil Clearance Criteria – 1 part per million (ppm)

PCB-containing caulk sealed the gap between the window inset panels and the metal window framing of the classroom pod building. The window inset panels are constructed of cement asbestos. Scraping the caulk from the window inset panel/framing caused minor damage to the asbestos-containing material. These activities were conducted by Northstar inside an isolated regulated area. PBS performed asbestos clearance air testing in each of the regulated areas in the Classroom Pod/Library Building in accordance with 40 CFR Part 763 AHERA. See Tab 7 for laboratory data sheets and field drawings depicting sample locations.

- Asbestos Air Clearance Criteria – 0.01 fibers per cubic centimeter (f/cc)

Final asbestos clearance samples for each regulated area met the established clearance criteria in accordance with 40 CFR Part 763 AHERA.

Sample Collection and Laboratory Analysis

The following is a description of the air, surface and soil sample collection and analysis process.

PCB Air Samples

PBS collected post abatement air samples using the Low Volume Polyurethane Foam Sampling Method. This method uses a vacuum pump with a glass tube that is fitted with a polyurethane foam (PUF) plug and no pre-filter. The PUF tube was pre-assembled and provided by the laboratory. Post abatement samples were collected in each interior regulated area after PCB abatement and handling activities were completed. The air pump is calibrated before and after testing with a pre-calibrated rotameter. The rotameter is calibrated annually with a primary standard. The samples were labeled with unique identification numbers, packaged and delivered with chain-of-custody documentation to ALS Laboratories in Salt Lake City, Utah and Cincinnati, Ohio. The samples were analyzed by EPA Method T0-10A for PCBs. Field Blanks were collected and included with each batch of air samples that were sent to the laboratory. "Blanks" are unused PUF tubes that were

handled similarly to all other samples; however, no air was drawn through these "blank" tubes. Blanks are analyzed with each batch of air samples to help determine if the sample media or the handling process has influenced the final results.

All final post abatement air samples were found by laboratory analysis to be non-detect for PCBs. See Tab 4 for field drawings and laboratory data.

Surface Wipe Samples

Pre-abatement surface wipe data consisted of samples collected during the indoor air quality investigation performed in early 2016 and supplemental data collected just prior to abatement activities.

Sampling was performed using the wipe sampling method in 40 CFR Part 761. This method uses includes a gauze pad wetted with hexane and placed in a glass jar. The sample media was provided by the laboratory. The hexane wetted gauze pad is wiped over a 100 cm^2 area using a disposable template as a guide and then placed in a glass jar. PBS personnel wore disposable nitrile gloves to protect against cross-contamination between samples. The post abatement samples were collected from various horizontal surfaces within each regulated area. The samples were labeled with unique identification numbers, packaged and delivered with chain-of-custody documentation to ALS Laboratories in Salt Lake City, Utah and Onsite Environmental located in Redmond, Washington. The samples were analyzed by EPA Method SW 8082 for PCBs. Field Blanks were collected and included with each batch of wipe samples that were sent to the laboratory. "Blanks" are unused hexane soaked wipes that were handled similarly to all other samples, however, were not wiped on any surfaces.

All final post abatement surface wipe samples were less than the EPA criteria of 10 *u*g/100 cm^2 PCBs. See Tab 5 which provides pre-abatement and final post abatement wipe sample lab data. Tab 5 also includes field drawings showing locations for all pre-abatement and post abatement clearance samples.

Soil Samples

Pre-abatement and post abatement soil samples were collected in each area where exterior PCB-containing caulk was removed and exposed soil or landscaping was present beneath. Soil sample collection was at the surface cover layer beneath the abatement location. A stainless steel hand spade was used to remove 0-2" of the ground cover (i.e. soils or landscaping materials) from three separate spots in each regulated area and then composited in a bowl. Soil retained for analysis was packed into laboratory-provided glass containers with zero headspace, sealed and labeled and chain of custody documentation initiated. PBS personnel wore disposable nitrile gloves to protect against cross-contamination between samples. All sampling equipment was decontaminated with a detergent and distilled water rinse between each regulated area. The samples were labeled

with unique identification numbers, packaged and delivered with chain-of-custody documentation to Onsite Environmental, Redmond, Washington. The samples were analyzed by EPA Method SW 8082A.

All final post abatement soil samples were below the MTCA unrestricted land use criteria of 1 ppm PCBs. See Tab 6 for field drawings and laboratory data.

Asbestos Air Samples

PBS collected post abatement asbestos air clearance samples in the Pod/Library Building where cement asbestos window infill panels were disturbed during caulking abatement. This method uses a high volume vacuum pump that is fitted with a 25 mm cassette with a 0.8 micron MCE filter. The air pump is calibrated before and after testing with a pre-calibrated rotameter. The rotameter is calibrated annually with a primary standard. The samples were labeled with unique identification numbers, packaged and delivered with chain-of-custody documentation to our in-house lab in Seattle, Washington. The samples were analyzed by NIOSH Method 7400 Phase Contrast Microscopy. Field Blanks were collected and included with each batch of air samples that were sent to the laboratory. "Blanks" are unused cassettes that were handled similarly to all other samples; however, no air was drawn through these “blank” cassettes.

All final post abatement asbestos air samples were less than the EPA AHERA criteria 0.01 f/cc. See Tab 7 for field drawings and laboratory data.

Contractor Closeout Documents

The project specifications required the abatement contractor (i.e. NorthStar) to provide post job submittals which documents their abatement related activities at this project site. PBS reviewed the post job submittals provided by NorthStar and found them to generally conform to the project specifications. The contractors’ closeout documents have been attached to this report for convenience, see Tab 8.

Review of the project submittals by PBS is only for general conformance with the design concept of the project and general compliance with the information given in the Contract Documents. Any action indicated is subject to the requirements of the contract. The Contractor is responsible for adherence to the requirements of the Contract Documents, which take precedence over any information, recommendations, or requests contained herein.

GENERAL NOTES

1. ALL ABATEMENT RELATED ACTIVITIES AT THIS PROJECT SITE SHALL COMPLY WITH DIVISION 01 AND 02 AND SPECIFICALLY SECTION 028400 PCB ACTIVITIES. CONTRACTOR TO VERIFY ALL ITEMS SHOWN, LOCATIONS AND QUANTITIES OF MATERIALS TO BE REMOVED, AND DIMENSIONS PRIOR TO REMOVAL. ANY DEVIATIONS FROM THE SPECIFICATION THAT ARE DISCOVERED BY THE CONTRACTOR SHALL BE REPORTED TO THE OWNERS REPRESENTATIVE PRIOR TO REMOVAL. THE DRAWINGS ARE FOR DIAGRAMMATIC PURPOSES ONLY. GENERAL LOCATIONS OF PCB-CONTAINING MATERIALS ARE DEPICTED DIAGRAMMATICALLY ON THE DRAWINGS. THE REMAINING MATERIAL LOCATIONS ARE DESCRIBED TEXTUALLY ON THESE DRAWINGS. QUANTITIES OF HAZARDOUS MATERIALS LISTED ON THIS SHEET ARE CONSIDERED ACCURATE TO WITHIN +/- 10%. THE CONTRACTOR SHALL PROVIDE ALL LABOR, MATERIALS, EQUIPMENT AND PERMITS FOR THE REMOVAL AND DISPOSAL OF THE QUANTITIES OF HAZARDOUS MATERIALS PROVIDED PLUS AN ADDITIONAL 10%. THE CONTRACTOR WILL BE COMPENSATED FOR QUANTITIES WHICH ARE GREATER THAN 110% OF THE TOTAL AND THE OWNER WILL DEDUCT FROM THE CONTRACT SUM QUANTITIES THAT ARE 90% OR LESS OF THE TOTAL.
2. REMOVAL OF HAZARDOUS MATERIALS MAY COMPROMISE THE SECURITY OF THE SITE. THE CONTRACTOR IS FULLY RESPONSIBLE FOR MAINTAINING SITE SECURITY AND PUBLIC SAFETY THROUGHOUT THE PROJECT. SEE SPECIFICATIONS REGARDING SECURITY AND PUBLIC SAFETY.
3. ABATEMENT CONTRACTOR TO COORDINATE ALL ACTIVITIES WITH ALL OTHER ONSITE WORK INCLUDING, BUT NOT LIMITED TO: SCHEDULE, ACCESS, STAGING, ETC. ABATEMENT CONTRACTOR TO REPORT LOCATIONS AND QUANTITIES OF ALL HAZARDOUS MATERIALS TO BE REMOVED, TO THE OWNERS REPRESENTATIVE PRIOR TO ABATEMENT/DEMOLITION.
4. THE CONTRACTOR SHALL REMOVE ALL ACCESSIBLE CAULKING IN ALL AREAS WITHOUT PERFORMING DEMOLITION OF BUILDING COMPONENTS.

KEY NOTES

(1) REMOVE APPROX. 20 LF OF PCB-CONTAINING CAULKING LOCATED ON THE EXTERIOR AND INTERIOR METAL WINDOW FRAME ON THE GIRLS LOCKER ROOM NORTH PERIMETER WINDOW AS SHOWN.

(2) REMOVE APPROX. 300 LF OF PCB-CONTAINING CAULKING ON THE EXTERIOR METAL WINDOW FRAMES ON ALL WINDOWS AT THE SOUTH AND WEST ELEVATIONS OF THE LARGE GYM BUILDING AS SHOWN. THIS INCLUDES CAULKING THAT EXISTS AROUND EACH WINDOW INFILL PANEL METAL FRAME TRANSITION ON THE WEST ELEVATION. THESE INFILL PANELS ARE CEMENT ASBESTOS BOARD.

(3) REMOVE APPROX. 40 LF OF PCB-CONTAINING CAULKING LOCATED ON INTERIOR SIDE OF THE THREE LOWER WINDOWS AND THE UPPER WINDOW BANK EAST VERTICAL IN THE GATHERING PLACE AS SHOWN.

(4) REMOVE APPROX. 10 LF OF PCB-CONTAINING OF CAULK ON INTERIOR WINDOW FRAME VERTICALS IN THE CTE ROOM AS SHOWN.

(5) REMOVE APPROX. 18 LF OF PCB-CONTAINING OF CAULK ON INTERIOR SIDE OF NORTH EXTERIOR GIRLS LOCKER ENTRY DOOR AS SHOWN.

(6) REMOVE APPROX. 18 LF OF PCB-CONTAINING OF CAULK ON EXTERIOR SIDE OF NORTH CTE ENTRY DOOR AS SHOWN.

(7) REMOVE APPROX. 18 LF OF PCB-CONTAINING OF CAULK ON THE INTERIOR SIDE OF THE NORTHWEST PERIMETER ENTRY DOOR FRAME OF THE SMALL GYM AS SHOWN.

(8) REMOVE APPROX. 500 LF OF PCB-CONTAINING CAULKING LOCATED ON ALL VERTICAL STRUCTURAL METAL COLUMN TRANSITIONS THROUGHOUT THE EAST ELEVATION OF THE LARGE GYM AS SHOWN. THIS INCLUDES THE REMOVAL OF ALL CAULKING ON THE INTERIOR DEMISING WALL METAL BEAMS (VERTICAL AND HORIZONTAL) BETWEEN THE DAYCARE AND THE GATHERING PLACE/CAFETERIA AS SHOWN. THE CAULKING IS HEAVILY PAINTED THROUGHOUT THE WORK SCOPE AREA.

(9) REMOVE APPROX. 780 LF OF PCB-CONTAINING CAULKING LOCATED ON ALL EXTERIOR VERTICAL STRUCTURAL METAL COLUMN TRANSITIONS THROUGHOUT THE LOWER WEST AND SOUTH ELEVATIONS OF THE LARGE GYM BUILDING AS SHOWN.

MONROE SCHOOL DISTRICT

TECHNOLOGY BUILDING
CAULKING ABATEMENT PLAN

SKY VALLEY EDUCATIONAL CENTER

SKY VALLEY EDUCATIONAL CENTER
351 SHORT COLUMBIA STREET
MONROE, WASHINGTON

PROJECT:	41373.000
DRAWN:	JHD
CHECKED:	GM
DATE:	JUNE 2016
DWG NO.	SHEET NO.
HM5	5 OF 5

L:\Projects\41\41373.000\Materials\PCB\Final\41373.000_CheckSurveyDocuments.dwg Jun 15, 2016 05:18pm jlohrer

PART 1 - GENERAL

1.01 SCOPE

A. Contractor shall provide all labor, materials, equipment, services, utility or power shutdowns, permits EPA approvals and insurance required to complete the handling, removal, cleanup, containerization, transport and proper disposal of PCB-containing caulking (sealants) located throughout Sky Valley Education Center on interior and exterior door frames, window frames and panels, column joints, expansion joints, mechanical systems, plumbing systems, and various other penetrations and junctions. Some of the sealants included in the work scope also contain asbestos.

B. The Contractor shall refer to the attached Drawings HM1-HM5 for approximate locations and quantities of PCB-containing and asbestos-containing caulking.

C. The intent of this project is to remove all visible caulking (sealants) from metal, masonry, gypsum wallboard and wood that contain greater than 50 ppm PCB's, located in various areas throughout campus. It is not the intent of this project to perform demolition of building components to remove these PCB-containing materials. The concentrations of PCBs in caulking (sealants) at this site ranged from "None Detect" to 140,000 ppm.

D. This project includes pre-cleaning the substrates prior to applying the specified epoxy sealant to all substrates from which the PCB materials have been removed. The epoxy sealant shall extend a minimum of 2" beyond all edges of the removed PCB materials. See Part 2-Products, for the approved epoxy sealer.

E. Be aware that a significant amount of other work will be taking place over the summer at this site and as such, the Contractor shall coordinate with and accommodate all other onsite trades/personnel.

F. The work includes the removal of sealants that have been applied at various times over the last 55 years. The characteristics of the sealants and substrates vary greatly from location to location and the contractor shall expect varying degrees of difficulty in adequately removing the caulk (sealants).

1.02 RELATED SECTIONS

A. General Conditions, Modifications to the General Conditions, Supplemental Conditions to the General Conditions and Drawings, and Division 01 apply to this Section.

1.03 DEFINITIONS

A. Authorized Visitor: The Owner or designated representative, or a representative of any regulatory or other agency having jurisdiction over the project, and having required training, medical approval, fit test, etc.

B. Controlled Area: Area that only qualified and properly protected workers or authorized visitors has access.

C. Caulk: Any type of sealant use for weatherproofing or filling a void or gap.

D. Decontamination Area: enclosed area adjacent and connected to controlled/regulated work

area, consisting of an equipment room and clean room, which is used to decontaminate workers, materials, and equipment. Where PCB removal is done in conjunction with asbestos or lead abatement the decontamination area for asbestos or lead may be used for this purpose.

E. Disposal: Procedures necessary to transport and deposit the PCB materials in an approved waste disposal site in compliance with EPA and other applicable regulations. Disposal Site shall be an Owner approved and designated landfill, incinerator or recycling company for PCB-containing waste.

F. Owner's Environmental Consultant: Environmental consultant specializing in hazardous materials abatement - PBS Engineering and Environmental - or any subcontractor designated by PBS.

G. Incineration: The destruction of PCBs by an EPA-approved facility. The facility must be a TSCA-permitted incinerator and a licensed TSDF, Transportation Storage and Disposal Facility. All operating permits must be current and valid.

H. Polychlorinated Biphenyls (PCBs): A class of chlorinated hydrocarbon compounds containing a variable number of chlorine atoms. Commercially available products contain mixtures of as many as 40 to 70 PCB compounds (isomers). A compound containing more than 50 ppm of PCBs is considered by EPA to be PCB-containing. PCBs range from oily liquids to white, crystalline solids to hard, noncrystalline resins or waxy solids.

I. SDS: Safety Data Sheet supplied by manufacturer provides information on a product listed in OSHA 29 CFR 1910.1200(g-2).

J. Substantial Completion: All abatement activities completed, confirmation testing performed and passed, containment removed, and both layers of epoxy encapsulant applied.

K. Waste Shipment Records: Form similar to *Uniform Hazardous Waste Manifest*, or an EPA approved state form.

1.04 DOCUMENTS INCORPORATED BY REFERENCE

A. The current issue of each document shall govern. Where conflict among requirements or with these Specifications exists, the most stringent requirements shall apply.

1. U.S. Environmental Protection Agency Toxic Substance Control Act, TSCA, (Code of Federal Regulations Title 40, Part 761)
2. U.S. Environmental Protection Agency Office of Toxic Substances Guidance Document, *Summary of PCB Regulations*, EPA Document No. 910-S-94-002.
3. U.S. Department of Labor, Occupational Safety and Health Administration (OSHA), 40 CFR 1910.120.
4. RCRA, Resource Conservation and Recovery Act, 40 CFR Part 761, Subpart D.
5. Washington State Department of Ecology, Dangerous Waste Regulations, Chapter 173-303 WAC
6. U.S. Environmental Protection Agency National Emissions Standards for Hazardous Air Pollutants (NESHAPS). (Code of Federal Regulations Title 40, Part 61, Subparts A and B.)
7. U.S. Environmental Protection Agency Office of Toxic Substances Guidance Document, *Guidance for Controlling Friable Asbestos-Containing Materials in Build-*

ings, EPA Report Number 560/5-85-024 ("Purple Book").

8. U.S. Department of Labor Occupational Safety and Health Administration (OSHA):

   a. Title 29 Code of Federal Regulations Section 1910.1001--General Industry Standard For Asbestos.
   b. Title 29 Code of Federal Regulations Section 1910.134--General Industry Standard For Respiratory Protection.
   c. Title 29 Code of Federal Regulations Section 1910 *et al.*--Occupational Exposure to Asbestos; Final Rule.
   d. Title 29 Code of Federal Regulations 1926.1101--Construction Standard for Asbestos.
   e. Title 29 Code of Federal Regulations Section 1910.2--Access to Employee Exposure and Medical Records.
   f. Title 29 Code of Federal Regulations Section 1910.1200--Hazard Communication.
   g. Environmental Protection Agency 40 CFR Part 763, AHERA, Asbestos-Containing Materials in Schools.
   h. National Institute for Occupational Safety and Health (NIOSH), 30 CFR, Part II, Respirators.
   i. American National Standards Institute (ANSI) NY; ANSI Standard Z 88.2-1980 *American National Standards Practice for Respiratory Protection*, latest edition.
   j. CERCLA, Comprehensive Environmental Response, Compensation, and Liability Act (42 U.S.C. 9601 et. seq.)
   k. RCRA, Resource Conservation and Recovery Act.
   l. Washington State General Occupational Health Standards, WISHA Chapter 296-62 Washington Administrative Code (WAC); Chapter 296-65 WAC Asbestos Removal & Encapsulation; Chapter 296-155 WAC Safety Standards for Construction Work.
   m. Puget Sound Clean Air Agency (PSCAA) Regulations.
   n. Washington Industrial Safety and Health Act (WISHA).
   o. International Building Code (I.B.C.), latest edition, regulations as applicable.
   p. Electrical work shall be performed in accordance with the National Electrical Code.
   q. All local ordinances, regulations, or rules pertaining to asbestos, including its storage, transportation, and disposal.

1.05 SUBMITTALS AND NOTICES

A. Contractor shall submit electronic copies of the following information 10 days prior to beginning work:

1. WORK PLAN. Submit a written "work plan" satisfactory to the Owner and Environmental Consultant describing the schedule for PCB and asbestos abatement, specific methods and work practices, worker protection, and worker training. The work plan shall also include and not limited to regulated work area restrictions, worker protection and personnel protective equipment to be employed, personnel monitoring of workers, methods to be employed for the stripping/removal of caulking (sealant), decontamination and cleanup procedures for designated surface areas in the scope, environmental and building protection, a specific schedule for each work area, and information regarding storage and handling of all waste. In the event that on-site activities will require departure from any and all aspects of the information

outlined in the pre-approved Work Plan, submit written clarification/modification of proposed changes to the Owner and Environmental Consultant for review and approval prior to performing that work.

2. CONTINGENCY PLAN. This will include emergency control measures and cleanup procedures in event of spills or releases.
3. WRITTEN RESPIRATOR PROGRAM AND FIT TESTING. Submit written proof that all employees requiring respiratory protection participate in a written respiratory protection program. The Contractor shall provide written proof of the existence of a respiratory protection program.
4. TRAINING: Submit written proof that all employees performing PCB-related work will have completed all necessary training. Training shall include, at a minimum, hazard communications training and Hazardous Waste Operations and Emergency Response (HAZWOPER) in compliance with WAC Chapters 296-843. Submit written proof that all employees performing asbestos-related work will have completed all necessary asbestos-related training in compliance with WAC Chapters 296-62 and 296-65. The Owner and/or the Environmental Consultant reserves the right to remove a certified asbestos worker from the work at any time during the project for any reason at no additional costs or schedule delays to the owner.
5. CERTIFIED ASBESTOS SUPERVISOR (CAS): Submit the name, Asbestos Supervisor Certification and resume of experience of the assigned on-site CAS's. At a minimum, the foreman shall have successfully completed a supervisor training course in compliance with WAC Chapter 296-65-007. References and work on similar projects must be provided and will be reviewed. The CAS's working on this project must show a minimum of 5 years experience as a CAS. The Owner and Environmental Consultant reserves the right to remove the CAS from the work at any time during the project for any reason. The Contractor shall then submit another on-site CAS for approval as described above and at no additional costs or schedule delays to the owner.
6. NOTIFICATIONS AND POLICIES: Submit copy of all required notifications and permits obtained by the Contractor (including but not limited to Washington State Department of Labor and Industries, and PSCAA) and copies of all types of specified bonds and insurance. Submit upon receipt any approved amendments to notifications or re-notifications for multi-phase activities. The Owner will provide EPA notifications and approvals for PCB caulking abatement.
7. CHEMICALS. Submit SDS sheets and technical specifications for all chemicals used at this site for pre-approval by the owner.
8. DISPOSAL PLAN. It is the intent of this project to dispose of all PCB Caulk and any contaminated building materials together. The Contractor will manage the packaging, transportation and disposal of PCB bulk waste generated from caulking (sealant) abatement. Submit written proof that all required permits and arrangements for transport and disposal of PCB-containing materials, supplies, and waste at a site approved by EPA have been obtained. Provide specific information relating to storage, transport and disposal. Provide name and address of the designated transporter and proposed disposal site at which any waste material generated during the project will be disposed and furnish evidence of all necessary regulatory approvals of disposal prior to any waste leaving the site. Prior to requesting payment for completion of PCB abatement, the Contractor shall submit Waste Shipment Records completely filled out and signed by all handlers.

B. Refer to EPA, OSHA, and other standards referenced herein for further information and regulatory requirements not included above.

C. Coordination lead time: The contractor shall account for waste disposal coordination with the Owner. This is typically requiring seven calendar days.

D. POST JOB SUBMITTALS: Post-Job Submittals shall be delivered to the Owner within 15-days of completion of PCB-related work as specified by these Contract Documents and shall include the following:

1. Certification: Provide written certification from the Abatement Subcontractor's Project Manager or Supervisor that the Abatement Subcontractor has fully inspected the work area and completed work in strict accordance with the Specifications.
2. Air Monitoring: Submit documentation of all employee personal air monitoring results relative to OSHA and WISHA respiratory protection level compliance. Include copies of all air monitoring data sheets, chain-of-custody documentation and analysis reports for sampling conducted at the site.
3. Project Record Documents: Provide project records including documentation of all contract changes, and copies of worksite entry logs, work area entry/exit logs, safety logs, changes to the work, safety meeting sign-in sheets, and supervisor's daily field reports.
4. Disposal Manifests: Submit copies of all waste transportation and disposal manifests including signed receipts from the landfill, and or chain-of-custody. A copy of the disposal information for PCB and asbestos waste shall be submitted within 5 days of leaving the project site. The intent of this requirement is to track the disposition of the waste at all times. No progress payments will be approved without proper documentation of transportation and disposal.

1.06 PERSONNEL PROTECTION

A. Training

1. Prior to commencement of work, ensure all workers have been trained in accordance with in WAC Hazard Communications for PCB related activities and Hazardous Waste Operations and Emergency Response (HAZWOPER) in compliance with WAC Chapters 296-843 and WAC 296-65.
2. Provide and post decontamination, respirator, and work procedures to be followed by the workers.

B. Personnel Protective Equipment for PCB Removal

1. Worker personal protective equipment (PPE) shall consist of PCB-resistant gloves and clothing, eye, hearing, head and fall protection as necessary.
2. Respiratory protection shall include, at a minimum, the use of combination organic vapor/P100 cartridges when performing dust generation activities or working with solvents.
3. Provide additional personnel and respiratory protection to minimize any possible exposure from inhalation. Provide PCB and asbestos exposure assessment for workers. Refer to below testing limits in Section 1.15 for worker exposure requirements for PCBs.

C. Worker Decontamination Area

1. Where PCB abatement is performed in conjunction with asbestos, lead abatement or other hazardous materials abatement, a multiple use decontamination area shall be

ED_004522_00089866-00021

established.

2. The Contractor shall provide a decontamination/emergency clean up area consisting of PCB-resistant sheeting (drop cloth) with absorbent material and other necessary equipment. Washing facilities with hot water and cleanser that is capable of removing oily compounds without injury to human skin. Showers must be provided when dust is generated during removal.
3. Eating and drinking is prohibited in the regulated work area. Smoking is prohibited on any School District property.

1.07 AIR MONITORING BY CONTRACTOR

A. Industrial Hygienist: An Independent Testing Laboratory shall be retained by the Abatement Subcontractor for PCB and asbestos air sample analysis. Air sample collection may be performed by an Industrial Hygienist or the Abatement Contractor's foreman. Perform sampling and analysis of air samples for PCB and asbestos in compliance with WAC Chapter 296-841.

B. Sample Documentation: Documentation shall be kept for each filter sample procured as to worker sampled, social security number, activity, work area location, date and time taken, volume of air drawn through filter, pump identification number and calibration. Documentation shall indicate in what areas tests were taken and shall clearly indicate the specified maximum allowable concentrations for each area tested. Report all data within 48 hours. Submit chain-of-custody records along with all samples.

C. Controls: The Contractor's testing laboratory shall submit sample analysis results, chain-of-custody and equipment calibration records to the Environmental Consultant within 24 hours from the time of collection.

D. Contractor's Sampling During Abatement

1. Sample Collection: Air monitoring shall be performed to determine worker exposure during the period of abatement in each work area. Begin sampling when removal commences and during each 8-hour work shift until abatement is complete.
2. Most Contaminated Worker: The Contractor shall determine which worker(s) in each work area is probably experiencing the most severe exposure. This is the "Most Contaminated Worker(s)". 8-hour TWA and excursion samples shall be collected on this worker(s). This worker shall wear a personal sampling pump and the sample shall be drawn from the breathing zone of this worker.
3. The number of air samples collected shall be in accordance with the Contractor's approved work plan; however, a minimum of one sample per work area must be collected daily.

1.08 AIR MONITORING BY OWNER

A. Industrial Hygienist: The Owner will retain an experienced Industrial Hygienist/Environmental Consultant to collect and analyze air samples from various areas during abatement activities. Any airborne PCB or asbestos concentrations in excess of regulatory limits will be reported. Documentation of sample results will be forwarded to the Contractor as appropriate.

B. Any expedited after “hours” analysis or weekend analysis requested by the contractor is subject to the approval by the Owner of resulting additional costs.

C. The Owner reserves the right to monitor Contractor's performance via air samples on abatement workers and wipe samples inside and outside the regulated work areas, in addition to the Contractor's air monitoring.

1.09 WORKING HOURS

A. Work hours are 6 am to 4:30 pm Monday through Saturday unless otherwise pre-approved by the owner. Submit proposed work hours and calendar schedule to Owner prior to commencement of work for pre-approval.

1.10 PERMITS AND NOTIFICATIONS

A. The Contractor is responsible for obtaining all permits and notifications as required for the completion of the work by the Washington State Department of Labor and Industries, the Puget Sound Clean Air Agency and any other permitting agency involved with the completion of the work included herein. For each phase of the work the Contractor shall notify the Environmental Consultant in writing a minimum of 72 hours prior to commencing any hazardous material related work at the project site.

B. The Owner will coordinate and provide EPA approvals for PCB-containing materials abatement activities. The contractor shall work and coordinate with the Owner for such approvals.

1.11 SAFETY

A. With regard to the work of this contract, the safety of the Contractor's employees, the Owner's employees, and the public is the sole responsibility of the Contractor.

1.12 LIABILITY

A. The Contractor is an independent contractor and not an employee of the Owner, Architect or Environmental Consultant. The Owner, Architect and the Environmental Consultant shall have no liability to the Contractor or any third persons for Contractor's failure to faithfully perform and follow the provisions of these Specifications and the requirements of the governing agencies. Notwithstanding the failure of the Owner, Architect or the Environmental Consultant to discover a violation by the Contractor of any of the provisions of these Specifications, or to require the Contractor to fully perform and follow any of them, such failure shall not constitute a waiver of any of the requirements of these Specifications which shall remain fully binding upon the Contractor.

1.13 SUBCONTRACTORS

A. Subcontractors employed by the Contractor shall be bound to all the work and safety standards specified. Subcontractor's personnel shall meet requirements as specified, and shall be supervised by the Contractor during performance of this work.

1.14 QUALITY ASSURANCE

A. Environmental Consultant shall perform periodic inspections to observe work, handling and packaging procedures. Environmental Consultant may perform surface wipe, bulk and air testing to determine possible contamination and environmental exposure, and verify that PCB and asbestos levels have not exceeded pre-abatement levels, regulatory levels and those specified in

this document.

B. Post Removal: Environmental Consultant shall perform visual inspections of each regulated area after the removal is complete. The Abatement Subcontractor shall assist the Environmental Consultant with the visual inspection and provide the necessary equipment to conduct such inspections. The Abatement contractor's supervisor shall escort the Consultant on all such inspections. The Abatement contractor shall give a minimum of 24 hour written notice for all visual inspections of regulated work areas. The Environmental Consultant will perform wipe sample testing for PCBs in each regulated area after all enclosures and protection have been removed. Representative pre-abatement wipe samples have been collected in all areas. Post abatement samples will be compared to the pre-abatement samples and the EPA regulatory criteria. Post abatement wipe samples shall be in compliance with Section 1.15 or the pre-abatement samples, whichever is lower.

C. Observation: Environmental Consultant shall perform observations regarding: integrity of isolation barriers, decontamination facilities, worker protection, Contractor's air monitoring program, performance of abatement operations, and conformance to the Specification, EPA, OSHA, WISHA and PSCAA regulations.

D. Stop Work: Environmental Consultant shall notify the Contractor in writing to stop work if the Environmental Consultant determines that work practices are in violation of regulations, these Specifications or work is endangering workers or occupants of the building. The Contractor shall continue work when conditions and actions are corrected and when written authorization is received from the Environmental Consultant.

E. Air Monitoring

1. Notification: If, at any time during the work, analysis of an air sample or wipe taken by the Contractor, Owner, or Environmental Consultant, indicates a PCB or asbestos concentration in excess of the applicable Maximum Allowable Concentration, the laboratory that analyzed the air sample shall immediately notify the Contractor, the Contractor's Superintendent, and the Environmental Consultant. See Testing Limits Section 1.15 and WAC 296-62-07.
2. Procedures: Immediately upon being notified of concentrations in excess of the limits identified in Section 1.15 and appropriate regulatory references, the Abatement Subcontractor shall perform the following steps in the order presented, at no additional cost to the Owner:

    a. Stop abatement work.
    b. Identify source of elevated PCBs or asbestos.
    c. Corrective Actions: Immediately correct containment breaches, pressure differential changes and potential cause of the elevated hazardous material. The Environmental Consultant will determine the affected area considered to be contaminated. The Environmental Consultant will determine the actions to be taken by the Abatement Subcontractor at no additional cost to the Owner.
    d. Clean the affected area. Cleaning will include wet methods and HEPA vacuuming.
    e. Re-sample air and surfaces until PCB and or asbestos concentrations are determined to be below the specified maximum testing levels.
    f. As appropriate, secure and repair containment barriers, repair or add equipment.
    g. Modify work procedures, and make other changes to reduce levels.

3. Document these activities in writing in detail and provide to Owner for review.
4. Resume work and air monitoring.
5. Additional Costs: The Contractor shall be responsible for all costs of any testing and associated labor, cleanup, repair, down time loss, etc. that is a result of the Contractor's negligence, poor maintenance of isolated areas, improper procedures and or failed clearance inspections and testing.

F. Performance: Work shall be performed in a skillful manner representing industry standards and following all EPA and WAC guidelines. All work shall be performed by employees with a minimum of 5 years experience directly related to the work scope of this project. Environmental Consultant shall require Contractor to remove from the work site employees and subcontractors the Environmental Consultant deems incompetent, careless or objectionable.

1.15 TESTING LIMITS

A. PCB levels for airborne, cleanup and hazardous waste disposal are as follows:

1. The contractor is responsible for air monitoring of all personnel performing PCB work.
2. Worker/personnel airborne concentrations shall be below 0.5 mg/m^3 (microgram per cubic meter) or pre-abatement background levels (where available), whichever is lower. The contractor shall provide negative exposure assessment for PCB exposure of employees/workers for each work activity.
3. Ambient air samples concentrations at all outside work areas shall be below 0.001 mg/m^3 or pre-abatement background levels (where available), whichever is lower.
4. Concentrations shall be below $10ug/100cm^2$ (microgram per square centimeter) or pre-abatement levels, whichever is lower, for wipe samples on all building surfaces.
5. Concentrations below 2 parts per million for general construction solid waste disposal.

B. Following the clean-up of suspect PCB-containing materials the Contractor shall follow all appropriate regulatory references and guidelines for disposal.

PCB level in (ppm)	Waste Designation	Disposal
< 2	"Construction Debris"	Municipal Landfill; Contractor is responsible for handling and disposal of construction debris.
≥2 to <49	"Special Regulated Waste"	Hazardous waste landfill (Owner approved facility); Contractor shall coordinate disposal with Owner. Contractor to handle the disposal of the waste.
≥ 50	"TSCA Waste"	Contractor shall coordinate with Owner and Contractor to handle the disposal of the waste.

C. All testing limits for asbestos related activities shall be in accordance with WAC 296-62-07 and 40 CFR Part 763 AHERA.

PART 2 - PRODUCTS

A. Plastic Sheet: Plastic sheeting shall be flame-retardant polyethylene material. It shall not dissolve on contact with PCB compounds or any chemicals used by the contractor for abatement/decontamination. The minimum thickness shall be 6-mil.

B. Storage Containers: Storage containers shall be suitable to receive and retain any PCB-containing or

contaminated materials until disposal or incineration at an approved site. They shall comply with container specifications set forth in 49 CFR 178.80, 178.82, 178.102 or 178.116. Containers shall be labeled with waterproof print and permanent adhesive in accordance with WAC, OSHA, DOT, UN and EPA regulations.

C. Warning labels on all disposal containers/drums shall be according to EPA Region 10 Toxic Substances Section, PCB and Asbestos Regulations. The Contractor will provide storage/waste containers and labels for this project.

D. Warning Signs: Unless other signs or security access is provided, and for a temporary measure, warning signs shall be provided and displayed at each regulated area during Work to warn of the presence of PCB and Asbestos removal activities. Upon completion of cleanup and clearance, these barriers and warning signs shall be removed.

E. Cleaning detergent or degreaser: Simple Green Industrial Cleaners and Degreasers (biodegradable) or TSP solution to clean surfaces or other pre-approved product. The cleaner shall be in accordance with the pre-approved Epoxy Sealer to be used on this project. The contractor shall follow the manufacturer's instructions for pre-cleaning of surfaces post abatement. Provide in the submittal package all SDS for products to be used to complete the project.

F. All necessary tools and equipment to complete the remediation and cleanup efforts.

G. Protective Clothing: Provide approved clothing per WAC 296-62 for all workers and all official representatives of the Owner, State or other governmental entity, and the Environmental Consultant who may inspect the project.

H. Filtration Equipment: All air filtration equipment including PPE shall be combination HEPA (for capturing airborne asbestos fibers) and Organic Vapor (for capturing PCB vapors).

I. Epoxy Sealer: SIKAGARD 62, manufactured by Sika is the approved epoxy sealer for this project. There shall be no substitutions without prior express written approval from the Owner. See attached Data Sheets for SIKAGARD 62.

PART 3 - EXECUTION

3.01 WORK AREA PREPARATION

A. Performance: Contractor shall perform the following procedures in the order in which they are presented for work according to the approved work plan.

1. Shut down HVAC systems. Seal openings with two separate layers of plastic sheeting.
2. Restrict access to work area and post warning signs. Do not perform abatement work in an occupied area.
3. Completely pre-clean visible accumulation of all debris in work area using HEPA vacuum equipment or wet cleaning methods.
4. Set up worker decontamination enclosure system satisfying requirements of WAC 296-62 at any location where there is a possibility of dust generation or PCB off-gassing. Once this system is installed and abatement commences, it shall be utilized in the specified manner for the ingress and egress of abatement personnel only. All personnel shall sign the Worksite Entry Log Book each time they pass in or out of the modified decontamination enclosure system. Remote decontamination enclosure

systems are not allowed.

5. Install airtight enclosure and air-purifying pressure differential fan system (negative pressure enclosure) at all interior areas. Discharge from air-purifying equipment shall be ducted outside the building.
6. Cover floors, walls and other objects below work area with plastic sheeting. Seal openings as directed by the Environmental Consultant.
7. Have emergency cleanup equipment and supplies, including HEPA vacuum, amended water, disposal bags, mop, buckets, towels and sponges, on hand prior to start of abatement work.

B. Compliance: No abatement work shall occur unless the work area has been found acceptable for Specification compliance by the Environmental Consultant. Notifications to perform PCB and asbestos abatement shall be posted at the work site. Abatement Subcontractor shall post appropriate PCB and Asbestos warning signs at entrances to work areas and warning/danger tape shall be posted on fence barriers at construction boundaries.

C. Isolated work area enclosure system maintenance. The Abatement Subcontractor shall be responsible for daily documentation of the following:

1. Prior to the first use and at the beginning of each shift during abatement work, containments shall be given a complete visual inspection by the Abatement Contractor's supevisor. This shall include inspection of the air-purification system and associated filters. A smoke tube test by the shift foreman shall then be made of the worker decontamination enclosure system and other critical areas to verify that the isolated area is under negative air pressure. Work shall not begin until the inspection is completed and all defects have been repaired.
2. Periodic inspections shall be made before, during and after each shift to ensure the proper functioning of the enclosure and HEPA filtered differential pressure fan system to prevent potential contaminant migration. The Contractor shall make every effort to ensure the integrity of the negative pressure enclosure at all times.

3.02 REMOVAL OF PCB-CONTAINING CAULKING AND CLEANUP

A. Perform all PCB related work and comply with the general safety and health provisions in conformance with Washington Administrative Code. Remove and properly dispose of all PCB-containing materials indicated in the Contract Documents in accordance with general work practices, and work practices for removal as specified in 40 CFR Part 761, all EPA guidance regarding the removal of PCB-containing caulking (sealant) and other appropriate work procedures approved by the Environmental Protection Agency (EPA), Washington Department of Labor and Industries, Washington Department of Health and Puget Sound Clean Air Agency, or as more stringently specified herein.

B. Contractor shall maintain a safe and uncluttered work site including staging area, work area, worker decontamination system, and waste load-out area at all times.

C. Contractor will isolate each work area and perform work at times and in a manner that will not result in the release or discharge of PCBs or asbestos in the air or dust, or the exposure to employees or other building occupants.

D. All building HVAC systems located in or near the regulated work area shall be shut down and isolated/sealed to prevent contamination.

E. Local HEPA-filtered exhaust ventilation is required anytime the potential for dust generation exists during the work activities.

F. Installation of a negative pressure enclosure is required when using mechanical removal methods, the potential for dust generation exists, or anytime indoor abatement work is occurring. All mechanical removal tools shall be equipped with HEPA-filtered dust collection system.

G. The work area shall be regulated and restricted from entry.

H. Contractor will account for and include all coordination and interface with other trades and the owner.

I. Contractor will be responsible for worker and environmental protection during remediation procedures as well as fall protection identification and its management for worker safety. Provide and manage all required worker personal protective equipment necessary to accomplish the work safely.

J. Carefully handle removed waste and equipment to prevent contaminant migration outside of the regulated work area.

K. Contractor shall remove all accessible caulking (sealants) located in the work scope areas using hand tools. No demolition of substrates will be performed as part of this work. No visible caulk residue shall remain in accessible locations. The contractor shall make every effort to minimize damage to substrates.

L. All PCB/asbestos contaminated materials shall be cleaned up and properly stored at the end of each work shift.

M. Remove caulking (sealant), wrap product in plastic sheeting (6-mil) or place in clear bags and deposit item into covered 55-gallon UN/DOT approved drums. Provide all necessary cleanup and spill response measures.

N. Contractor shall thoroughly clean the PCB-contaminated substrates to remain according to the Contractor's Work Plan included in the pre-work submittals and the instructions included with the epoxy sealer. The intent of this activity is to pre-clean all substrates for the application of the epoxy sealer. The contractor shall provide the products and all necessary equipment to apply the cleaner and the epoxy sealer.

O. Contractor will use all necessary engineering controls to prevent dust emissions during demolition. Vacuum machines shall be equipped with HEPA filters that are approved for hazardous materials remediation operations. All debris, tape, poly sheeting and worker/environmental protection equipment associated with PCB remediation shall be placed into the covered 55-gallon drums for proper disposal.

P. If necessary, sampling of the drums with PCB-containing materials and worker protection equipment shall be completed by the Environmental Consultant for confirmation waste disposal requirements.

Q. All tools that have come into contact with PCB and asbestos contaminated materials shall be properly cleaned prior to removal from the regulated work area.

R. If demolition of the PCB and asbestos-containing material creates dust and debris, these areas shall be thoroughly cleaned by wet wiping and HEPA vacuuming or other method to completely remove all contamination. No visible airborne dust or debris is allowed outside of the regulated work area or containment enclosure.

S. The Contractor is responsible for site security during the work.

3.03 EPOXY SEALER APPLICATION

A. The approved PCB epoxy sealer for this project is Sikagard 62, which contains no VOC's. The sealer must be used as intended by the manufacturer for the applicable substrate. All pre-application substrate cleaning must be in strict accordance with the manufacturer. The contractor shall follow all safety, handling, cleanup and disposal instructions.

B. The epoxy sealer must be applied over all locations where caulking was removed and a minimum of 2", in all directions, beyond all removed caulk boundaries. All epoxy coating boundaries must be taped to create straight lines.

C. The contractor shall apply two different colored coats of the epoxy sealer in all locations. The first coat of sealer must be the same RED color throughout the entire work scope area and shall fully and completely cover the substrate. The second coat of sealer must be the same TAN color throughout the entire work scope area and shall fully and completely cover the first coat so that the RED color of the first coat is not visible. The Environmental Consultant shall inspect and approve each coat of epoxy for complete coverage.

D. All drips and spills on building finishes must be fully cleaned up and repaired.

E. All equipment used for applying the epoxy sealer shall be presumed PCB and Asbestos contaminated and disposed of properly. The contractor shall not remove the enclosure until the epoxy has been properly applied as described above. All remaining epoxy sealer must be turned over to the Owner at the completion of the project.

3.04 DISPOSAL

A. The Contractor shall determine current waste handling, transportation, and disposal regulations for the work site and for each waste disposal facility. The Contractor must comply with these regulations and U.S. Department of Transportation and EPA requirements.

B. The Contractor shall supervise the packaging, storage, movement around the site and loading of all wastes.

C. Unless permitted by the Owner, Contractor shall remove containers from site within ten calendar days after collection for disposal or incineration at a site operated in accordance with the provisions of 40 CFR 761, no exceptions. Notify disposal site in advance of delivery to ensure immediate disposal.

D. The Contractor must notify the Owners Representative 72 hours prior to removal of the PCB-containing waste from the project site. No waste shall leave the site without the Owners Authorization. No exceptions.

E. The Contractor is responsible for ensuring that appropriate documentation completed and returned to the Owners Representative on a timely basis in accordance with the following; the signed transportation manifest from the hauler must be provided to the Owners Representative/Environmental Consultant within 24 hours of the waste leaving the site, Waste manifest signed by the waste acceptance facility must be provided to the Owners Representative/Environmental Consultant within 3 days of delivery to the waste facility.

F. Progress and or final payments will NOT be approved without the above disposal documentation properly signed and filled out. The intent of this requirement is to track the disposition of the "waste" at all times.

END OF SECTION 02 84 00

March 2001

SikaGard® 62

High Build Epoxy Coating

Technical Data Sheet

DESCRIPTION

Sikagard 62 is a two-component solvent free, high build coloured epoxy resin coating with high chemical resistance and approved for use in contact with potable (drinking) water.

USES

* On steel or concrete.
* Reservoir coatings.
* Bund linings.
* Food production areas.
* Cleanroom floors and walls.
* Pipe linings.
* Metal tank coating and lining.
* Nuclear industries.
* Aquariums.
* Process areas.

ADVANTAGES

* Excellent decontaminability.
* Hygienic.
* Non-taint.
* High film thickness.
* Solvent free.
* Excellent chemical resistance.
* Good abrasion resistance.
* Durable.
* Sprayable.
* Damp tolerant (no vapour pressure).
* Vapour proof.
* Suitable for drinking water contact.

FLOOR COATING SYSTEM

2 - 3 x **Sikagard 62**.	Can also be applied as a self smoothing topping if required. (Ensure use of spiked roller).
Material consumption:	Approx 0.2 - 0.4 kg/m^2 per coat. 0.2 kg/m^2 = 150µ D.F.T.

Technical Data (typical)

Colour:	Refer to colour chart and current price list for availability and minimum order quantities.		
Specific gravity:	Approx. 1.35 kg/litre		
Volume solids:	Approx 100%		
Application temperatures & humidity conditions:	+5°C min, +30°C max (Substrate and ambient) RH 90% max		
Substrate MC & RH:	≤4% by Wt or ≤75% RH		
Heat resistance:	Continuous exposure 60°C		
CHEMICAL RESISTANCE:	Refer to chart (Consult Sika Ltd for additional information)		
Additional application information:	+10°	+20°C	+30°C
Pot Life:	60 mins	30 mins	15 mins
Waiting time between coats			
min	18 hrs	10 hrs	5 hrs
max	3 days	2 days	1 day
Final drying times:			
Foot traffic	24 hrs	17 hrs	8 hrs
Lightly serviceable	6 days	4 days	2 days
Fully serviceable	15 days	12 days	9 days

Approved for potable water contact.
Certification available on request.

All above values are approximate.

SURFACE PREPARATION

The cementitious substrate should be sound and of sufficient compressive strength. (Min 25 N/ mm ^{2}) . Minimum pull off strength 1.5 N/mm ^{2}.

The surfaces must be dry and free of all contaminants eg oils, grease, surface treatments and coatings etc. The substrate must be prepared mechanically to achieve an open textured fine gripping surface, free of cement laitance. Weak concrete should be removed and surface defects such as blowholes and voids must be fully exposed.

All dust, loose and friable material must be completely removed from all surfaces before application of the coating preferably by brush and vacuum.

Repairs to cementitious substrate and filling of blowholes levelling of irregularities etc should be carried out using an appropriate product form the **SikaDur® Sikafloor®** or **SikaGard®** range of materials.

Steel surfaces should be prepared to bright metal and subsequently degreased prior to coating.

MIXING

Prior to mixing, stir component A (resin), add all of component B (Hardener) and mix both components thoroughly with a low speed electric stirrer (300-600 rpm) for a minm of 3 minutes until a uniform mix has been achieved.Leave material to stand in container until the majority of air bubbles have dispersed.

APPLICATION

Prior to application, confirm substrate moisture content and RH. If >4% by wt or >75% RH, **Sikafloor® EpoCem®** may be applied as a D.P.M. system

Three coats should be used for areas requiring high chemical and/or mechanical resistance.

The use of differing colours on each coat is recommended to aid correct coverage.

Apply by brush, roller or airless spray to the correct film thickness.

IMPORTANT NOTES

* Do not apply **SikaGard 62** on substrates in which significant vapour pressure may occur.
* **Thinner C** is flammable. NO NAKED FLAMES.
* Always ensure good ventilation when using **SikaGard 62** in a confined space.
* Quartz silica sand can be sprinkled on to **SikaGard 62** then sealed to form a slip resistance surface
* Freshly applied **SikaGard 62** should be protected from damp, condensation and water for at least 24 hours.
* Avoid puddles on surface.
* When intercoat times are exceeded abrade, wipe with Thinner **C** and recoat.
* For damp substrates scrub the first coat into the substrate.

CLEANING EQUIPMENT

Use **Thinner C**. Hardened material may have to be mechanically removed.

PACKAGING

Refer to latest price list

CONSUMPTION

Approximately 0.2 - 0.4 kg/m^2 (These figures do not allow for surface porosity, profile or wastage).
Maximum yield per pack - refer to current price list.

STORAGE AND SHELF LIFE

Minimum 1 year in sealed containers stored in dry warehouse conditions (+5°C - +25°C).

Handling Precautions
Sika products are generally harmless provided that certain precautions normally taken when handling chemicals are observed. The materials must not, for instance, be allowed to come in contact with foodstuffs or food utensils and measures should also be taken to prevent the uncured materials from coming in contact with the skin, since people with particularly sensitive skin may be affected. The use of protective clothing, goggles, barrier creams and rubber gloves is required. The skin should be thoroughly cleaned at the end of each working period either by washing with soap and warm water or by using a resin-removing cream - the use of powerful solvents is to be avoided. Disposable paper towels - not cloth towels - should be used to dry the skin. Adequate ventilation of the working area is recommended. In case of accidental eye or mouth contact, flush with water - consult a doctor immediately. Health and Safety information on Sika Products is available and we strongly advise that this is read prior to their use. Sika products are for professional use and should be stored in sealed containers away from the reach of children.

Important Note
The information, and, in particular, the recommendations relating to the application and end-use of Sika products, are given in good faith based on Sika's current knowledge and experience of the products when properly stored, handled and applied under normal conditions. In practice, the differences in materials, substrates and actual site conditions are such that no warranty in respect of merchantability or of fitness for a particular purpose, nor any liability arising out of any legal relationship whatsoever, can be inferred either from this information, or from any written recommendations, or from any other advice offered. The proprietary rights of third parties must be observed. All orders are accepted subject to our current terms of sale and delivery. Users should always refer to the most recent issue of the Technical Data Sheet for the product concerned, copies of which will be supplied on request.

Please consult our Technical Sales Department for further information

Other Personnel on Site: MSD, Backflow NW

WORK DESCRIPTION: Exterior window PCB removal

WORKER PROTECTION: Double tyvek suits and ½ face respirator w/ double staeh cartridge

METHOD OF REMOVAL: PCB caulking removal method - see spec Sec. 028400

OBSERVATIONS: 6:00 NorthStar arrives onsite and have their morning stretch and flex. They also have their safety meeting and discuss their work plan. They begin setting up for exterior window at the SW area of the Annex building. They are placing drop poly under windows and use asbestos banner tape to regulate the area.
7:00 Workers completed setting up and regulating the area. They are suiting up and wearing 2 suits. They also are using a HEPA vacuum and wearing nitrile gloves. Advised N.S. to close all windows even if they are working on exterior. Per N.S., they were told to keep it open. Advised it needs to be closed. MSD reminded superviser to make sure workers wear gloves.
7:30 Workers were ready for clearance at the exterior of the girls restroom but they only removed the caulk on the metal frame. Advised they also need to remove the caulking on the bricks. Per supervisor, they are doing a better job using a razor scraper over a utility knife on a 5 in1. They are setting the girls restroom exterior again.
8:30 - Visually cleared window at Girl R.R. on the Annex Building Cont—

METHOD OF REMOVAL:

OBSERVATIONS: Cont. - Worker did a good job removing caulking from window frame (metal) and from brick. Visual passed.

9:00 - NS started at the NW corner exterior windows. They regulated the area with banner tape and have a poly drop cloths. They are setting up at the exterior of Room F and the green house of the Annex.

11:30

12:00 Workers break for lunch

12:15 Workers return from lunch. They do double suit and wear stack ½ face respirators before they start abating

13:00 - Workers continue to scrap caulking from the exterior of the south side and continue working at the north side. They also have their PUF tubes so they can work inside. They are working at Room E removing caulk from the inside. Worker wearing double suit, stack cartridge ½ face respirator, negative pressure, and using nitrile gloves.

14:30 - Workers removed all poly sheets from exterior walls and removed banner tape. They will continue tomorrow. PBS and N.S. leaving site.

WORK DESCRIPTION: Caulking removal on exterior and interior window framing.

WORKER PROTECTION: Standard ½ face respirator, double suits, nitrile gloves

METHOD OF REMOVAL: Razor scraping, metal brushing, oscilating tool scrapper, etc.

OBSERVATIONS: 6:00 Arrived onsite and met up with NS supervisor. The scope of work is to continue with setting up in the Pod and Library. They are going to be working inside containment at rooms F east and west. They are prepping for caulking removal still. They are expecting to receive the encapsulant sometime next week. For now, we are just removing the caulk.
7:00 Observing workers wearing ½ face respirator, Double tyvek suits, and nitrile gloves inside containment. They also have a negative air machine running and venting out the window.
8:00 - Jason, supervisor, and I go over our quantities on the Annex building. My total quantity in the south side is 363.75 LF but in quantities are more, so we spend time walking through the Annex building just to see what areas and quantities he has removed.
10:00 - Debora Perlin P. is onsite with other contractors, he is showing contractors the Annex building and other area. He asked how we are doing. He also wanted to know which areas he can take his contractors through. I advised him to not enter any of the containments cause we have not cleared it yet. NS also advises him they still don't have the encapsulant and sealants.

METHOD OF REMOVAL:

OBSERVATIONS:

11:00 Devlin also wanted to confirm I took pictures of the areas where caulking was removed per EPA's request. I advised him we are definitely doing that. NS also breaks for lunch. Devlin also wanted to know if we sample the ceilings in the pod/library. I advised him I will find out by checking the reports. If we did not, we can sample it for him.

12:00 - Going to sample a piece of the ~~ballast~~ fixtures that house the ballast. I had to use some metal cutting shears to get a piece. I place the piece in a glass jar. Taking sample to Onsite enviromental for 5 day TAT.

1300 - Workers continue to abate caulking at the exterior of POD 18, 19, 20. They are wearing their PPE. They are also working at the Northwest exterior and interior of the Annex building.

14:10 - Workers start to wrapp thing up for the day. Advise supervisor to seal all containments.

14:30 - PBS Leaving Site.

WORK DESCRIPTION: Remove of caulking around exterior and interior of building

WORKER PROTECTION: Double stacked 1/2 face respirators, double suits, nitrile gloves

METHOD OF REMOVAL: Razor scraping, metal brushing,

OBSERVATIONS: 6:00 - Arrived onsite. NS is doing morning stretch and flex. They are continuing working at the pods/Library.
8:00 - Gregg M. shows up onsite. 11:15: Gregg leaves site.
Gregg reviewed areas in the Annex NW rooms. There was debris on the inside and outside of containment, negative pressure machine must have charcoal filters attach and vent to the outside, seal top of unit vents so debri doesn't fall inside. He also noticed the smell of chemical still lingering in the Annex and suggested to air it out more. I will open windows and try to get some air moving in the Annex. We also have to sample for lead in the pods, Library, and Annex at the ceilings - Per NS, they will go back and redo everything that was pointed out.
11:15 Gregg leaves site.
11:45 Advised Monitored work by Ventilation Power Cleaning, Inc. and noticed while they were cleaning ducts that they were not removing all the dust in the duct work. I asked their scope of work and they said they were to only clean the duct and did not have a scope of work. cont.

K DESCRIPTION: Caulk Abatement

OBSERVATIONS: Devlin also inspects the duct work above the Pods. He asked the VPC to remove one of the panels they just cleaned. Devlin was able to feel out the surface inside the duct work and had dust on his fingers. He asked them the go back and clean out the areas they did again but leave the panels open.

11:00 - NS breaks for lunch.

11:45 NS returns from lunch. They suit up and continue working at Pods 6, 5, 4. They are using Goof Off to remove the final film of caulking on the metal and scrubbing the brick with metal brushes

12:45 - Jason and I inspected rooms in the Annex. They have the Prep Room ready. Visual clearance passed for that area. The other area that passed my visual was #9 (Pod).

1400 Receive call from Gregg M. NS should be sending in a change in method request if they are going to be using Goof Off. I notified NS supervisor and he'll let his Manager know. Advised them to only use it on metal surfaces. Advised they it is volatile and may ~~may~~ ignite after for another.

1430 - PBS Leaving site.

WORK DESCRIPTION: Caulking removal

WORKER PROTECTION: ½ face respirators with Stucle filters.

METHOD OF REMOVAL: Razor scrapping, metal brushing, and some chemical w/ "Goof Off"

OBSERVATIONS: 6:00 Arrived onsite with NS doing Stretch and Flex. I also opened all accessable windows and have left all the fans running all night.
6:20 Derlon P. shows up onsite to view the duct work. Also would like NS to remove the all light fixtures in the Annex and North Pod by monday. Also would like the buildings cleared for all PCB caulking so we can run PCB air clearances.
7:00 - Advised NS that their air sample (personal) was above the TWA PEL results. Advised supervisor they to maintain wearing their respirator and tyvek suits.
8:00 work continues and repeating cleaning Room F Prep room. They are also redoing the rooms in the PODs. Workers are wearing their tyvek suits and using a HEPA Vac to clean up the debri. Per supervisor, they still are not receiving their sealant.
9:00 - Going through pods to try and visually clear. We are trying to clear Rooms 20 through 1. They have going through it again but using different tools to remove some tough stucle areas.
10:30 - So far only rooms I've cleared is Pod #18.

ITEMS OF CONCERN: PODs

CHANGES IN SCOPE: None

QUANTITY AND TYPE OF MATERIAL REMOVED THIS SHIFT/ PHASE:	BUILDING/AREA/LOCATION
Caulk	Annex

WORK DESCRIPTION: Caulking and Light Fixture Removal

WORKER PROTECTION: ½ face respirator with stacked filters/double tyvek suit/nitril gloves

METHOD OF REMOVAL: Razor scraping, metal brush, Goof off (caulk), Light fixture is wrap i cut

OBSERVATIONS: 6:00- Arrived on site and opened all the accessable window at the Annex and kept the fans running. NS employees do their morning stretches. They are going to remove the light fixtures in the Annex building and continue with the caulking removal today.
8:00- Jason and I spent time visually inspection the rooms in the POD. They have containment built inside the rooms. They have a negative air machine w/ a Leco charcoal filters in pod they are actively abating the caulk. They are wearing their ½ face respirators, tyvek suits (double), nitrile gloves. Jason Olson and I go inside to the pods to visually inspect the containments- I cleared #7, 5, 8, 13, & 17, & 20. The floors were clean of debris also the vent units. There was no caulking on the metal vertical panels and the brick and also on the CMU panels in these pods. They still need to clean some more Pods. but they are getting there.
10:00 NS continue to remove caulking the Pods. They have negative air machines in some of the containments but per Jason they've has ordered more but that is still none available.
11:00- Workers break for lunch

ITEMS OF CONCERN: None

WORK DESCRIPTION: PCB caulk removal & Light fixtures

WORKER PROTECTION: 1/2 face respirator w/ stock filters/tyvek suits/ nitrile gloves

METHOD OF REMOVAL: Razor scraping, wire brush, Goof Off / wrap and remove Light fixtures

OBSERVATIONS: 6:00 Arrived onsite to observe the odor in the Annex. I entered and noticed the odor has improved from over the weekend. We will continue to open all the windows and run the fans when we start our shift. NS does their stretches befor shift. The plan for today is to continue with the caulking remove at the POD and complete the light fixture removal at the Annex and Pod Library.
7:00 - Workers suit up w/ 1/2 face respirator and tyvek suits. They wrap up the light fixtures using a scissor lift to reach the fixtures. Workers wrap it with poly and duct tape. They are in Room B.
8:00 - Jason Olson and I inspected Rooms 1, 2, 3, and 10. All these rooms passed inspection. All the gray caulks has been removed from the vertical metal slates.
9:45 - Recieve phone call from Gregg M., we discussed the work being done inside the containments. Since NS failed their PEL on PCB put samples, at 1 ppm, we determined they should have all containments to have all of them with negative pressure.

ITEMS OF CONCERN: Containments need to be in negative pressure - Personal Air samples did not pass PEL, we asked them to ~~resample~~ continue resampling.

WORK DESCRIPTION: Caulking and light fixtures

WORKER PROTECTION: ½ face respirator, tyvek suits and nitrile gloves

METHOD OF REMOVAL: Weyboss pressure release, razor scrapping

OBSERVATIONS:

6:00 Arrived onsite w/ NS. I still observed odor in the room with the Annex even though we are still leaving the windows open during the day and running fans to air out the smell. NS is doing their daily stretch and flex. The scope of work today is to prep the Annex with containments for the caulking removal. They are also taping the edges and prepping for roof removal. They are also removing the light fixtures in the Annex. Workers are using a LFA and PPE to seal w/ poly and remove the light fixtures.

7:00 Per Gregg, I need to run air clearance for the Pods. Today I will be running air clearances for the North Pods/Rooms 15-20. This is for asbestos because NS was scraping caulk on the CMU. The rooms did have containment set up and passed visuals.

11:00 Pulled the last air clearance. NS takes their lunch. I will be reading my air samples later.

12:00 - NS continues to prep the Annex for epoxy application.

ITEMS OF CONCERN: Pod ACM air clearance

WORK DESCRIPTION: Caulking removal and painting sealant

WORKER PROTECTION: ½ face respirator, tyvek suits, nitrile gloves

METHOD OF REMOVAL: Razor scrapping, wire brushing in containment

OBSERVATIONS:

7:00 Arrived onsite and NS is already prepping Annex on the exterior of building for painting base layer. Per assistant supervisor, 2 of the mixing agent was is expired but they had some that was not. Worker painting is wearing tyvek suit and ½ face w/ stock cartiges. I advised the supervisor that regarding containments need to have exhaust filtered neg air machine. Painting will start at the SW room of the Annex.
8:00 - Per NS, the paint harden before they could apply it to the wall and the window. Supervisor called manufacturer and they are suppose to mix only small batches. They going to wait till they find out what to do with the rest of the remaining paint.
9:00 - Workers removing exterior paint at the east side of the pods from the CMU panels. They regulated the area and use a drop poly taped to the floor and they have a HEPA vac close by. They are using razor scrappers, no scrubbers, and some goof off. They are wearing their ½ face respirator and tyvek suits with nitrile gloves. All the caulk is being placed in asbestos waste labelled bags.

ITEMS OF CONCERN: Window caulking and light fixtures

WORK DESCRIPTION: Caulking removal and light fixture

WORKER PROTECTION: ½ face respirator, tyvek suit, nitrile ghores

METHOD OF REMOVAL: Razor scraping, wire brush, scrubbing pads/wrap and cut fixtures.

OBSERVATIONS:

6:00 Arrive onsite with NS morning stretch and flex. The plan for the day is to remove more light fixtures in the common area of the pods and the library. They are also replacing the charcoal filters for the first time today. They are replacing their ½ face respirator cartridge at least once a week. They are also removing the caulking at the north end of the the Admin building.

9:00 I set up the lead monitoring low flow pump on an Mcleantry employee, Sean Miller, for TWA. They will be attaching light fixtures in the Pods/Library today and will be drilling into CMP in the ceiling.

8:00 Workers continue to remove more light fixtures from the Pods along the meeting area and in the library. They are continuing from removing caulk on the exterior of the Admin at the north end.

9:00 Per supervisor, they are going to receive the encapsulant/epoxy this afternoon. We will are going to take photos of the work.

They have been working on the plan on disposing of the caulking from the exterior of the Admin Building.

WORK DESCRIPTION: Caulking removal and light fixture removal.

WORKER PROTECTION: ½ face respirator, tyvek suits, nitrile gloves

METHOD OF REMOVAL: razor scraping, wire brush, hepa vac, wrap and cut light fixtures

OBSERVATIONS:

6:00 - Arrived onsite. NS will be setting up outside of the Admin south windows. They are going to re-apply more epoxy base layer at Room 14 + 15 in the pods, and they are continuing for removing the light fixtures.

7:00 - I was inspecting the windows of the Annex windows in Room F and Room E. Looks like sealant is coating the surfaces very well. They covering all the edges where there was caulking. Advised supervisor there were locations in the Annex that still needed touch up.

8:00 Gregg Middaugh shows up onsite to discuss the work that is going on at the School. Per Gregg, there was some caulking still outside on the grass of the Annex. He advised that they should do a better job at tape the poly sheets up against the wall spread out a wider area to cover. He also inspected the base layer and said they don't always have to paint up to the grass. The area where it goes should be fine. He also asked me to remind NS supervisor that all containments need to be sealed by tomorrow.

WORK DESCRIPTION: Caulking Removal

WORKER PROTECTION: ½ face respirator, tyvek suits, nitrile gloves

METHOD OF REMOVAL: Razor Scraping, steel brushing

OBSERVATIONS:

6:00 setting Annex with 12 air samples for PCB tube sampling clearance for PCBs. I also meet up with Peter, NS supervisor. He is going to remove all the negative air machines in the Annex before I start the air sample. The plan for DS today is continue setting up in the Gym containments for caulking removal. All their equipment is stored in the small gym. They are also removing containments in the Pod. They are completely done with the Admin building. They left the containments up till after clearance. There is a red oil based coat of top paint where they removed the caulking.

Workers working in the gym removing caulking in the daycare. They are wearing tyvek suits and ½ face respirators. They are using nitrile gloves. They also have a negative air machine and charcoal filters. They have a barrel where they store the caulking. I am also setting up for clearance PCB samples for the Annex. They later, I will start with my wipe samples. George McGlaughlin should be arriving later today to bring more sampling supplies and help me with the clearance.

WORKER PROTECTION: ½ face respirator, tyvek suits, nitrile gloves

METHOD OF REMOVAL: Razor scrapping under negative air

OBSERVATIONS:

6:00 Arrived onsite and started prepping for PBA clearance tomorrow at the Admin building. There are 9 areas that need to be cleared. Workster is planning to finish the interior gym building. I will visually inspect the areas.

7:00 workers suit up with tyvek and ½ face respirators. They worked late last night setting up containment inside the small gym.

9:00 visually cleared the inside of the CTE room, the Day care Room, and the Girls locker Rm East window. Also had them redo the south windows. There was still some caulking behind the window frame. I also opened all the windows in the Annex cause there was still an odor.

10:00 Amanda from the Monroe Health Department shows up on site. She did ask what is the smell coming from the Annex. Dustin advised her that they had to use chemical remover to get rid of the resin black mastic from the pitted floors.

11:00 Breaking for lunch

WORK DESCRIPTION: Caulk removal and epoxy coating / Air clearance and wipe sampling

WORKER PROTECTION: ½ Face respirator, hypek suit, nitrile gloves

METHOD OF REMOVAL: Razor scrapers, steel brush, oscillating tools

OBSERVATIONS:

6:00 - Today NS is going to complete caulking abatement of the little gym and coat it with epoxy in both layers. They have the CTE Gathering Room, Girls Locker Room and all of the Pods completed. They still have some areas that have the contaminants up in the Pods but I will ask them to remove it. PBS also will start air sampling in the Admin Building. I will also collect some wipe samples also.

7:00 - Workers removing caulk at the exterior of the Admin building at the SW corner. They are also abating the south exterior windows of the Gym (East). Workers regulate the area, add drop poly on the floor and tape it against the wall, wear their ½ face and hypek suits.

8:00 - Gave visual clearance for small gym. They are also prepping this area for epoxy coating. They are going to apply the 1st coat today. They could not remove the wood panels on the top of the columns. So they remove the most they can. They should be good. They also had a rep on site running what they abated the caulk.

WORKER PROTECTION: 1/2 face respirator

METHOD OF REMOVAL: Razor scrapping, wire brush, wrap N cut light fixtures

OBSERVATIONS:

6:00 PBS setting up PCB air clearances in Rooms 14-20 at the North Pod. Facilities has moved in some furniture and book case to make room for the Library so NS can remove the light fixtures. Advise NS to stay out of rooms 14-20. NS has workers at the west side of the Gym doing caulking removal. They are also ~~po~~ applying epoxy 1st layer to complete the Admin so they can apply the tan epoxy.

7:00 Advised NS supervisor there are not apply 2" of epoxy on the exterior of the brick wall of the Admin building. Advised they need to coat completely before I clear it.

8:45- Devlin advised that the small gym will be ready for clearance on Thursday, September 1. He also said that his concern about the jagged edges will be covered with caulking. I advised him that it needs to be 2" from where the caulking was. He also mention the flooring contractor assured him once the flooring gets installed, the smell will go away. I returned from Walmart were I purchased a cooler and gauze for more sampling.

ITEMS OF CONCERN: Jagged edges on areas where the coated both layers of epoxy.

METHOD OF REMOVAL: —

OBSERVATIONS:

6:00 - NS arrives onsite. They plan for NS is to complete the epoxy application on the Pods and the rest of the gym. They partially applied the first layer in the Gym at the south east windows on the south elevation. They have no sealant yet at the pods.
9:00. Discussed w/ Gregg about the the soil contaminated w/ PCB. I will suggest to NS that they clean 3 ft from wall of Annex and only the top ~~sp~~ surface.
8:00 - NS and I placed banner tape around the Annex. They agreed to remove the top soil.
8:30 - Gregg M. shows up onsite
10:30 - Per Perlin, NS will be removing soil at the Annex today. We inspected the Annex w/ Gregg for final QC. I will has NS touch up some areas that were missed.
12:00 - ~~Gregg~~ is leaving site. I will go over with NS about what areas need to be touched up. NS returns from lunch and continue painting red epoxy at the pods and the Tech Building. cont

ITEMS OF CONCERN: Unpainted red sealant w/ tan epoxy

CHANGES IN SCOPE: None

QUANTITY AND TYPE ~~OF~~ REMOVED THIS SHIFT/ PHASE:	BUILDING/AREA/LOCATION
None	Admin / Annex / Gym / Pod-Library / Tech Bldg

The individual signing certifies that the above information is correct and accurate.

Project Name: SVEC
Project No.: 413173 Date: 9/7/16
Report No.: 29 Time: 6:00 am/pm
Page: 1 of 2
Weather: Rain Temperature: 65 F
Summary Phase Status: —
Other Personnel on Site: Mckenstry, Flowers

WORK DESCRIPTION: Epoxy Application

WORKER PROTECTION: ½ face respirator w/ tyvek suits and nitrile gloves

METHOD OF REMOVAL: —

OBSERVATIONS:

6:00 - Arrived onsite to visually inspect the west side door of the Gym. It is the north door. I passed clearance and all caulk is gone. Advise NS supervisor to apply epoxy 1st layer (red). I also visually inspected all the areas that were to be painted w/ epoxy and notified the supervisor they need to cover all the red paint in areas that had caulk. No red can show through the tan caulk. I also notified supervisor they need to extend the epoxy covered beyond 2" at the corners of the area of the windows in the Admin building. Supervisor said they did not because it would not look good and frames will be present now that the area has been reoccupied.

7:00 I sampled all the soil area that showed some PCB results at the Annex.

8:00 - Left job sight to deliver samples to the lab.

10:00 - Returned back on sight

11:00 - Per Derlin, NS has to fullfill there specs for the Admin room pass 2" on the Gypsum wall board and talked it over w/ NS supervisor.

ITEMS OF CONCERN: Epoxy Coverage.

CHANGES IN SCOPE: None

QUANTITY AND TYPE M REMOVED THIS SHIFT/ PHASE:	BUILDING/AREA/LOCATION
None	Gym/Annex/Gym

ABATEMENT CONTRACTOR: NorthStar | PBS OBSERVER: Cel Alvarez | PAGE: 2 of 2

WORK DESCRIPTION: Epoxy Application

OBSERVATIONS:

11:30 - Devlin will work it out with Karen regarding applying epoxy in the Admin room.

12:30 - NS is going to paint epoxy in Admin in the corners of the window. PBS decided to assist NS to tape and prep the interior of the Admin building.

13:30 - Workers continue to paint the exterior of the Pods and the exterior of the Tech Bldg. and the Annex.

14:00 - NS also getting to load up the PCB light fixtures/ballest to load out but the dump ~~dump~~ reclaim truck will be arriving tomorrow.

individual signing certifies that the above mation is correct and accurate.

Weather Overcast Temperature 57 F
Summary Phase Status Final
Other Personnel on Site Mekenstrey, MSD etc.

WORK DESCRIPTION: Touch up with epoxy and final clean.

WORKER PROTECTION: ½ face and tyvek suits.

METHOD OF REMOVAL: —

OBSERVATIONS:

6:00 - Arrived onsite and advised supervisor to remove some residual caulking at the southside of the gym on top of the column where the covered walkway used to be. Supervisor painted the areas in the Admin building they missed on the corners in the interior. I also scraped the residual caulking myself since there was only 2 of them. They are also expecting their PCB waste barrels to be taken offsite today.

7:30 - Recorded wipe samples for the Pods, the Gym, and the Admin. Advise the VP, Gary , that the samples were below EPA threshold but they were above our pre-~~sampling~~ abatement sampling results. Will have NS go back and clean those locations: 1) Admin SW Corner and 2) SE corner 3) Room 16 4) Room 7, 5) Gym Commons Exterior West Area 6) Gym exterior of the girls locker room window at the North end, 7) Small gym's wood floor.

8:00 - Advised NS supervisor that Rm 11 needs touch up on the tan paint, Rm 10, Rm 9, Rm 1, on the exterior windows.

ITEMS OF CONCERN: None

CHANGES IN SCOPE: None

WORK DESCRIPTION: Epoxy touch up

WORKER PROTECTION: ½ face respirator and tyvek suit

METHOD OF REMOVAL: None

OBSERVATIONS:

6:00 - Per Gregg Middaugh, I sampled the the floor of the Exterior SE corner of the Admin building and the internal flooring of the Gym floor. NS supervisor is going to touch up all the areas that needed touch up Tan epoxy for the Gym, Admin, and the Pod classrooms.
7:00 - I called the lab and the can accept samples now. Heading to Onsite environmental to complete the wipe samples. Leaving site to take samples to Onsite.
8:00 - Returned back to campus. NS supervisor is still touching up the tan paint that needs to be covered up. Also repainting the sharp edges. By painting the edges, it gets rid of the sharp edges.
11:00 Break for lunch.
11:45 Returned for lunch and continue touching up red exposed epoxy in the Pods interior and exterior of the classroom.
1400. We completed touching up all locations where the tan paint was light. We will now quantify the amount of caulking abated during the project.

ITEMS OF CONCERN: None

CHANGES IN SCOPE: None

GENERAL NOTES

1. ALL ABATEMENT RELATED ACTIVITIES AT THIS PROJECT SITE SHALL COMPLY WITH DIVISION 01 AND 02 AND SPECIFICALLY SECTION 028400 PCB ACTIVITIES. CONTRACTOR TO VERIFY ALL ITEMS SHOWN, LOCATIONS AND QUANTITIES OF MATERIALS TO BE REMOVED, AND DIMENSIONS PRIOR TO REMOVAL. ANY DEVIATIONS FROM THE SPECIFICATION THAT ARE DISCOVERED BY THE CONTRACTOR SHALL BE REPORTED TO THE OWNERS REPRESENTATIVE PRIOR TO REMOVAL. THE DRAWINGS ARE FOR DIAGRAMMATIC PURPOSES ONLY. GENERAL LOCATIONS OF PCB-CONTAINING MATERIALS ARE DEPICTED DIAGRAMMATICALLY ON THE DRAWINGS. THE REMAINING MATERIAL LOCATIONS ARE DESCRIBED TEXTUALLY ON THESE DRAWINGS. QUANTITIES OF HAZARDOUS MATERIALS LISTED ON THIS SHEET ARE CONSIDERED ACCURATE TO WITHIN +/- 10%. THE CONTRACTOR SHALL PROVIDE ALL LABOR, MATERIALS, EQUIPMENT AND PERMITS FOR THE REMOVAL AND DISPOSAL OF THE QUANTITIES OF HAZARDOUS MATERIALS PROVIDED PLUS AN ADDITIONAL 10%. THE CONTRACTOR WILL BE COMPENSATED FOR QUANTITIES WHICH ARE GREATER THAN 110% OF THE TOTAL AND THE OWNER WILL DEDUCT FROM THE CONTRACT SUM QUANTITIES THAT ARE 90% OR LESS OF THE TOTAL.
2. REMOVAL OF HAZARDOUS MATERIALS MAY COMPROMISE THE SECURITY OF THE SITE. THE CONTRACTOR IS FULLY RESPONSIBLE FOR MAINTAINING SITE SECURITY AND PUBLIC SAFETY THROUGHOUT THE PROJECT. SEE SPECIFICATIONS REGARDING SECURITY AND PUBLIC SAFETY.
3. ABATEMENT CONTRACTOR TO COORDINATE ALL ACTIVITIES WITH ALL OTHER ONSITE WORK INCLUDING, BUT NOT LIMITED TO: SCHEDULE, ACCESS, STAGING, ETC. ABATEMENT CONTRACTOR TO REPORT LOCATIONS AND QUANTITIES OF ALL HAZARDOUS MATERIALS TO BE REMOVED, TO THE OWNERS REPRESENTATIVE PRIOR TO ABATEMENT/DEMOLITION.
4. THE CONTRACTOR SHALL REMOVE ALL ACCESSIBLE CAULKING IN ALL AREAS WITHOUT PERFORMING DEMOLITION OF BUILDING COMPONENTS.

KEY NOTES

① REMOVE APPROX. 20 LF OF PCB-CONTAINING CAULKING LOCATED ON THE EXTERIOR AND INTERIOR METAL WINDOW FRAME ON THE GIRLS LOCKER ROOM NORTH PERIMETER WINDOW AS SHOWN.

② REMOVE APPROX. 380 LF OF PCB-CONTAINING CAULKING ON THE EXTERIOR METAL WINDOW FRAMES ON ALL WINDOWS AT THE SOUTH AND WEST ELEVATIONS OF THE LARGE GYM BUILDING AS SHOWN. THIS INCLUDES CAULKING THAT EXISTS AROUND EACH WINDOW INFILL PANEL METAL FRAME TRANSITION ON THE WEST ELEVATION. THESE INFILL PANELS ARE CEMENT ASBESTOS BOARD.

③ REMOVE APPROX. 40 LF OF PCB-CONTAINING CAULKING LOCATED ON INTERIOR SIDE OF THE THREE LOWER WINDOWS AND THE UPPER WINDOW BANK EAST VERTICAL IN THE GATHERING PLACE AS SHOWN.

④ REMOVE APPROX. 10 LF OF PCB-CONTAINING OF CAULK ON INTERIOR WINDOW FRAME VERTICALS IN THE CTE ROOM AS SHOWN.

⑤ REMOVE APPROX. 18 LF OF PCB-CONTAINING OF CAULK ON INTERIOR SIDE OF NORTH EXTERIOR GIRLS LOCKER ENTRY DOOR AS SHOWN.

⑥ REMOVE APPROX. 18 LF OF PCB-CONTAINING OF CAULK ON EXTERIOR SIDE OF NORTH CTE ENTRY DOOR AS SHOWN.

⑦ REMOVE APPROX. 18 LF OF PCB-CONTAINING OF CAULK ON THE INTERIOR SIDE OF THE NORTHWEST PERIMETER ENTRY DOOR FRAME OF THE SMALL GYM AS SHOWN.

⑧ REMOVE APPROX. 500 LF OF PCB-CONTAINING CAULKING LOCATED ON ALL VERTICAL STRUCTURAL METAL COLUMN TRANSITIONS THROUGHOUT THE EAST ELEVATION OF THE LARGE GYM AS SHOWN. THIS INCLUDES THE REMOVAL OF ALL CAULKING ON THE INTERIOR DEMISING WALL METAL BEAMS (VERTICAL AND HORIZONTAL) BETWEEN THE DAYCARE AND THE GATHERING PLACE/CAFETERIA AS SHOWN. THE CAULKING IS HEAVILY PAINTED THROUGHOUT THE WORK SCOPE AREA.

⑨ REMOVE APPROX. 780 LF OF PCB-CONTAINING CAULKING LOCATED ON ALL EXTERIOR VERTICAL STRUCTURAL METAL COLUMN TRANSITIONS THROUGHOUT THE LOWER WEST AND SOUTH ELEVATIONS OF THE LARGE GYM BUILDING AS SHOWN.

KEY NOTES

(1) REMOVE APPROX. 20 LF OF PCB-CONTAINING CAULKING LOCATED ON THE EXTERIOR AND INTERIOR METAL WINDOW FRAME ON THE GIRLS LOCKER ROOM NORTH PERIMETER WINDOW AS SHOWN.

(2) REMOVE APPROX. 300 LF OF PCB-CONTAINING CAULKING ON THE EXTERIOR METAL WINDOW FRAMES ON ALL WINDOWS AT THE SOUTH AND WEST ELEVATIONS OF THE LARGE GYM BUILDING AS SHOWN. THIS INCLUDES CAULKING THAT EXISTS AROUND EACH WINDOW INFILL PANEL METAL FRAME TRANSITION ON THE WEST ELEVATION. THESE INFILL PANELS ARE CEMENT ASBESTOS BOARD.

(3) REMOVE APPROX. 48 LF OF PCB-CONTAINING CAULKING LOCATED ON INTERIOR SIDE OF THE THREE LOWER WINDOWS AND THE UPPER WINDOW BANK EAST VERTICAL IN THE GATHERING PLACE AS SHOWN.

(4) REMOVE APPROX. 18 LF OF PCB-CONTAINING OF CAULK ON INTERIOR WINDOW FRAME VERTICALS IN THE CTE ROOM AS SHOWN.

(5) REMOVE APPROX. 18 LF OF PCB-CONTAINING OF CAULK ON INTERIOR SIDE OF NORTH EXTERIOR GIRLS LOCKER ENTRY DOOR AS SHOWN.

(6) REMOVE APPROX. 18 LF OF PCB-CONTAINING OF CAULK ON EXTERIOR SIDE OF NORTH CTE ENTRY DOOR AS SHOWN.

(7) REMOVE APPROX. 18 LF OF PCB-CONTAINING OF CAULK ON THE INTERIOR SIDE OF THE NORTHWEST PERIMETER ENTRY DOOR FRAME OF THE SMALL GYM AS SHOWN.

(8) REMOVE APPROX. 500 LF OF PCB-CONTAINING CAULKING LOCATED ON ALL VERTICAL STRUCTURAL METAL COLUMN TRANSITIONS THROUGHOUT THE EAST ELEVATION OF THE LARGE GYM AS SHOWN. THIS INCLUDES THE REMOVAL OF ALL CAULKING ON THE INTERIOR DEMISING WALL METAL BEAMS (VERTICAL AND HORIZONTAL) BETWEEN THE DAYCARE AND THE GATHERING PLACE/CAFETERIA AS SHOWN. THE CAULKING IS HEAVILY PAINTED THROUGHOUT THE WORK SCOPE AREA.

(9) REMOVE APPROX. 780 LF OF PCB-CONTAINING CAULKING LOCATED ON ALL EXTERIOR VERTICAL STRUCTURAL METAL COLUMN TRANSITIONS THROUGHOUT THE LOWER WEST AND SOUTH ELEVATIONS OF THE LARGE GYM BUILDING AS SHOWN.

POD / LIBRARY BUILDING
NOT TO SCALE

GENERAL NOTES

1. ALL ABATEMENT RELATED ACTIVITIES AT THIS PROJECT SITE SHALL COMPLY WITH DIVISION 01 AND 02 AND SPECIFICALLY SECTION 028408 PCB ACTIVITIES. CONTRACTOR TO VERIFY ALL ITEMS SHOWN, LOCATIONS AND QUANTITIES OF MATERIALS TO BE REMOVED, AND DIMENSIONS PRIOR TO REMOVAL. ANY DEVIATIONS FROM THE SPECIFICATION THAT ARE DISCOVERED BY THE CONTRACTOR SHALL BE REPORTED TO THE OWNERS REPRESENTATIVE PRIOR TO REMOVAL. THE DRAWINGS ARE FOR DIAGRAMMATIC PURPOSES ONLY. GENERAL LOCATIONS OF PCB-CONTAINING MATERIALS ARE DEPICTED DIAGRAMMATICALLY ON THE DRAWINGS. THE REMAINING MATERIAL LOCATIONS ARE DESCRIBED TEXTUALLY ON THESE DRAWINGS. QUANTITIES OF HAZARDOUS MATERIALS LISTED ON THIS SHEET ARE CONSIDERED ACCURATE TO WITHIN +/- 10%. THE CONTRACTOR SHALL PROVIDE ALL LABOR, MATERIALS, EQUIPMENT AND PERMITS FOR THE REMOVAL AND DISPOSAL OF THE QUANTITIES OF HAZARDOUS MATERIALS PROVIDED PLUS AN ADDITIONAL 10%. THE CONTRACTOR WILL BE COMPENSATED FOR QUANTITIES WHICH ARE GREATER THAN 110% OF THE TOTAL AND THE OWNER WILL DEDUCT FROM THE CONTRACT SUM QUANTITIES THAT ARE 90% OR LESS OF THE TOTAL.
2. REMOVAL OF HAZARDOUS MATERIALS MAY COMPROMISE THE SECURITY OF THE SITE. THE CONTRACTOR IS FULLY RESPONSIBLE FOR MAINTAINING SITE SECURITY AND PUBLIC SAFETY THROUGHOUT THE PROJECT. SEE SPECIFICATIONS REGARDING SECURITY AND PUBLIC SAFETY.
3. ABATEMENT CONTRACTOR TO COORDINATE ALL ACTIVITIES WITH ALL OTHER ONSITE WORK INCLUDING, BUT NOT LIMITED TO: SCHEDULE, ACCESS, STAGING, ETC. ABATEMENT CONTRACTOR TO REPORT LOCATIONS AND QUANTITIES OF ALL HAZARDOUS MATERIALS TO BE REMOVED, TO THE OWNERS REPRESENTATIVE PRIOR TO ABATEMENT/DEMOLITION.
4. THE CONTRACTOR SHALL REMOVE ALL ACCESSIBLE CAULKING IN ALL AREAS WITHOUT PERFORMING DEMOLITION OF BUILDING COMPONENTS.

KEY NOTES

① REMOVE APPROX. 500 LF OF PCB-CONTAINING CAULKING LOCATED ON INTERIOR PERIMETER METAL WINDOW FRAME TO BRICK TRANSITION VERTICALS IN EACH OF CLASSROOMS 1-20 AS SHOWN.

② REMOVE APPROX. 1,400 LF OF PCB-CONTAINING CAULKING ON THE INTERIOR AND EXTERIOR SIDES OF THE CEMENT ASBESTOS BOARD (CAB) WINDOW INFILL PANELS. THE CAULKING FILLS THE GAP BETWEEN THE METAL WINDOW FRAME AND CAB TRANSITION IN EACH OF CLASSROOMS 1-20 AS SHOWN.

Re: SVEC; 41373.000 Work Order: **1608812**

Dear Gregg,

ALS Environmental received 14 samples on 23-Aug-2016 09:44 AM for the analyses presented in the following report.

This is a REVISED REPORT. The Case Narrative provides information discussing the reason for issuing a revised report. The total number of pages in this revision is 20.

If you have any questions regarding these test results, please feel free to contact me.

Sincerely,

Shawn Smythe

Electronically approved by: Shawn Smythe

Case Narrative

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

Results relate only to the items tested and are not blank corrected unless indicated.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

Revision 1: Sample results were re-calculated.

Re: SVEC; 41373.000 Work Order: **1608893**

Dear Gregg,

ALS Environmental received 11 samples on 25-Aug-2016 09:58 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Laboratory Group. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 17.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Shawn Smythe

Electronically approved by: Shawn Smythe

Re: SVEC; 41373.000 Work Order: **16081051**

Dear Gregg,

ALS Environmental received 20 samples on 30-Aug-2016 10:13 AM for the analyses presented in the following report.

This is a REVISED REPORT. The Case Narrative provides information discussing the reason for issuing a revised report. The total number of pages in this revision is 16.

If you have any questions regarding these test results, please feel free to contact me.

Sincerely,

Shawn Smythe

Case Narrative

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

Results relate only to the items tested and are not blank corrected unless indicated.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

Revision 1: Sample results were changed from mg/m3 to ng/m3.

Re: SVEC; 41373.000 Work Order: **16081106**

Dear Gregg,

ALS Environmental received 8 samples on 31-Aug-2016 09:18 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Laboratory Group. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 10.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Shawn Smythe

Electronically approved by: Shawn Smythe

Re: SVEC; 41373.000 Work Order: **1609095**

Dear Gregg,

ALS Environmental received 3 samples on 06-Sep-2016 09:45 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Laboratory Group. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 9.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Shawn Smythe

Electronically approved by: Shawn Smythe

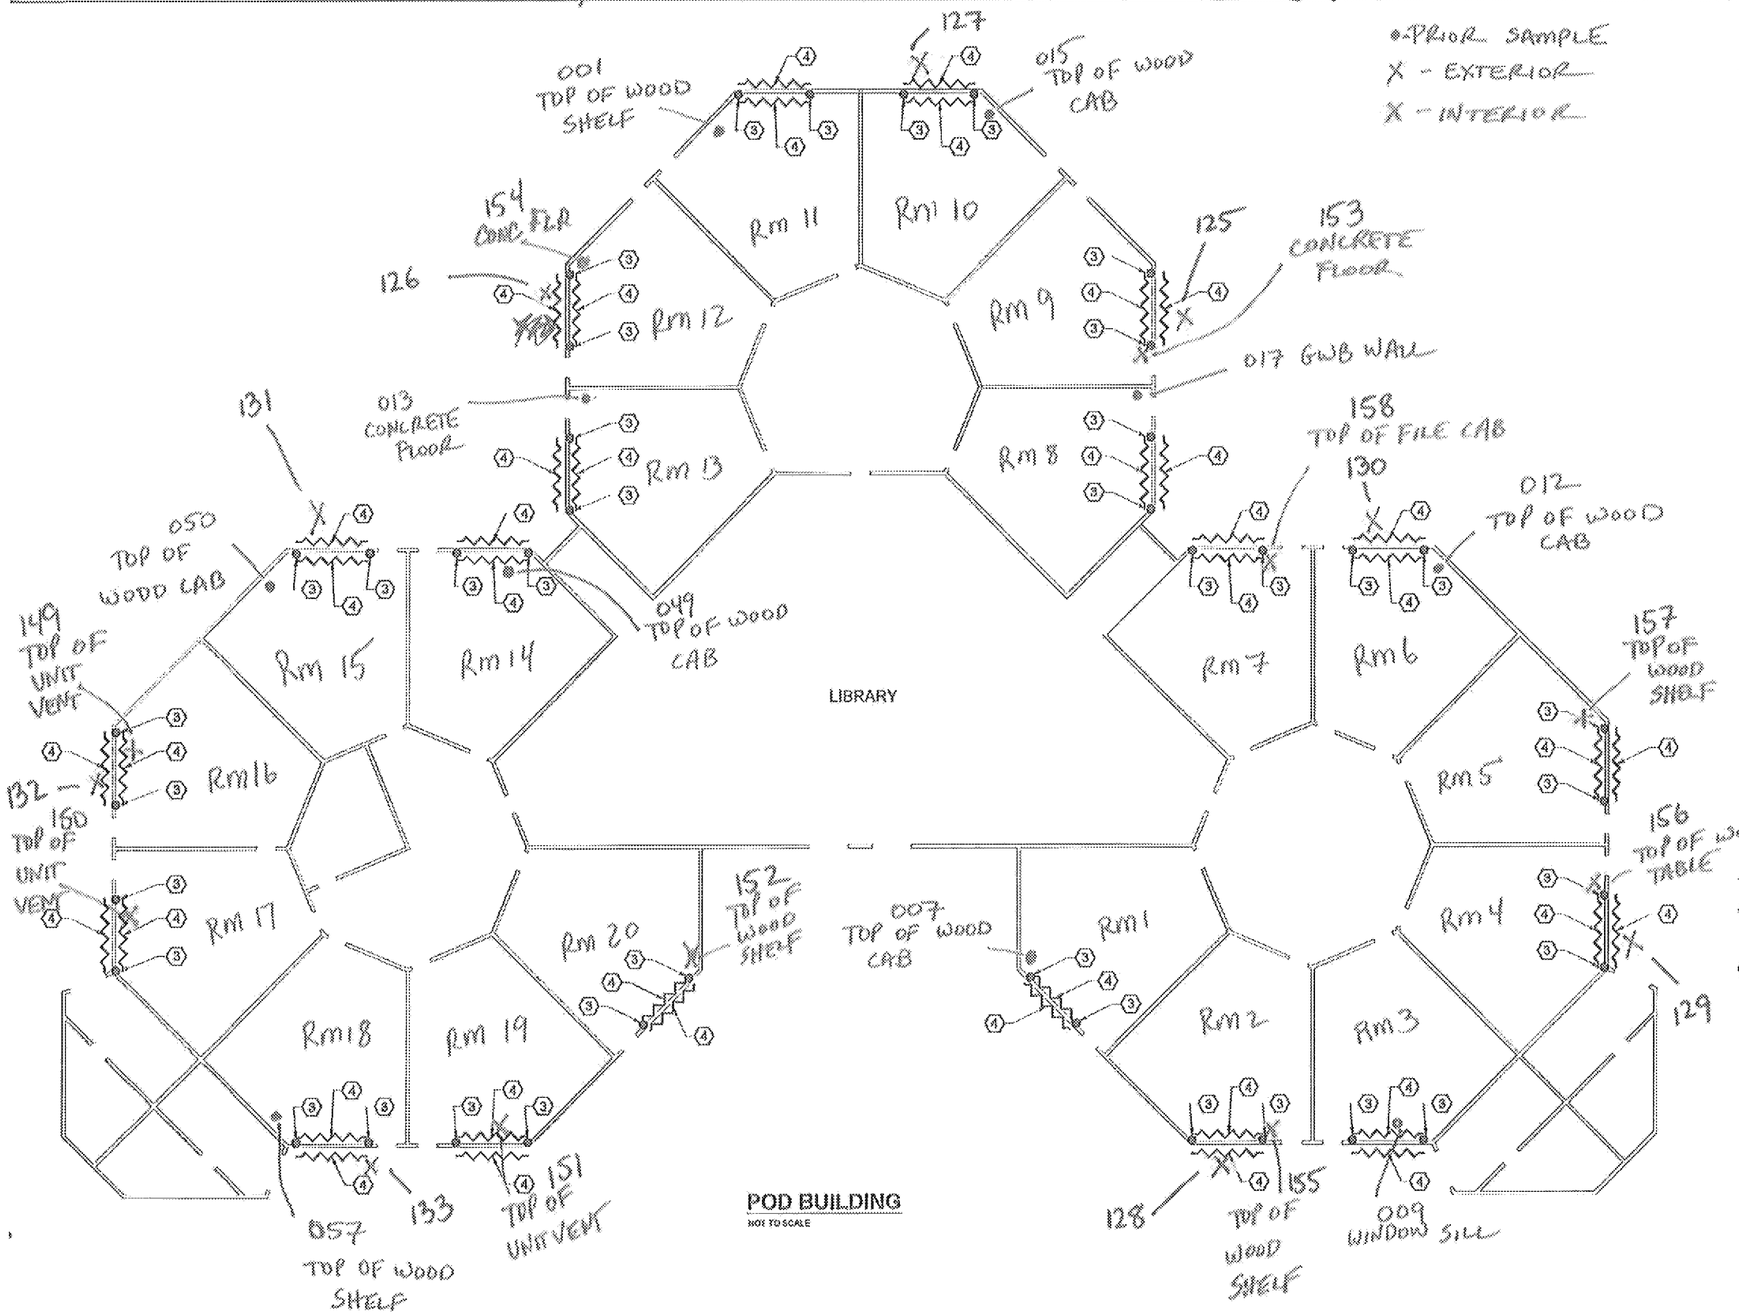
PCB WIPE SAMPLES 6/15/16 - PRE ABATEMENT



POD BUILDING
NOT TO SCALE

ALL SAMPLES - # - PCB-W

GENERAL NOTES

1. ALL ABATEMENT RELATED ACTIVITIES AT THIS PROJECT SITE SHALL COMPLY WITH DIVISION 01 AND 02 AND SPECIFICALLY SECTION 028400 PCB ACTIVITIES. CONTRACTOR TO VERIFY ALL ITEMS SHOWN, LOCATIONS AND QUANTITIES OF MATERIALS TO BE REMOVED, AND DIMENSIONS PRIOR TO REMOVAL. ANY DEVIATIONS FROM THE SPECIFICATION THAT ARE DISCOVERED BY THE CONTRACTOR SHALL BE REPORTED TO THE OWNERS REPRESENTATIVE PRIOR TO REMOVAL. THE DRAWINGS ARE FOR DIAGRAMMATIC PURPOSES ONLY. GENERAL LOCATIONS OF PCB-CONTAINING MATERIALS ARE DEPICTED DIAGRAMMATICALLY ON THE DRAWINGS. THE REMAINING MATERIAL LOCATIONS ARE DESCRIBED TEXTUALLY ON THESE DRAWINGS. QUANTITIES OF HAZARDOUS MATERIALS LISTED ON THIS SHEET ARE CONSIDERED ACCURATE TO WITHIN +/- 10%. THE CONTRACTOR SHALL PROVIDE ALL LABOR, MATERIALS, EQUIPMENT AND PERMITS FOR THE REMOVAL AND DISPOSAL OF THE QUANTITIES OF HAZARDOUS MATERIALS PROVIDED PLUS AN ADDITIONAL 10%. THE CONTRACTOR WILL BE COMPENSATED FOR QUANTITIES WHICH ARE GREATER THAN 110% OF THE TOTAL AND THE OWNER WILL DEDUCT FROM THE CONTRACT SUM QUANTITIES THAT ARE 90% OR LESS OF THE TOTAL.
2. REMOVAL OF HAZARDOUS MATERIALS MAY COMPROMISE THE SECURITY OF THE SITE. THE CONTRACTOR IS FULLY RESPONSIBLE FOR MAINTAINING SITE SECURITY AND PUBLIC SAFETY THROUGHOUT THE PROJECT. SEE SPECIFICATIONS REGARDING SECURITY AND PUBLIC SAFETY.
3. ABATEMENT CONTRACTOR TO COORDINATE ALL ACTIVITIES WITH ALL OTHER ONSITE WORK INCLUDING, BUT NOT LIMITED TO: SCHEDULE, ACCESS, STAGING, ETC. ABATEMENT CONTRACTOR TO REPORT LOCATIONS AND QUANTITIES OF ALL HAZARDOUS MATERIALS TO BE REMOVED, TO THE OWNERS REPRESENTATIVE PRIOR TO ABATEMENT/DEMOLITION.

DRAWING NOTES

1. REMOVE APPROX. 500 LF OF PCB-CONTAINING SOFT GREY CAULKING LOCATED ON INTERIOR PERIMETER METAL WINDOW FRAME TO BRICK TRANSITION VERTICALS IN EACH OF CLASSROOMS 1-20 AS SHOWN. SEE FLOOR PLAN KEY NOTES FOR APPROXIMATE LOCATIONS.
2. REMOVE APPROX. 1,400 LF OF PCB-CONTAINING SOFT GREY CAULKING ON THE INTERIOR AND EXTERIOR SIDES OF THE CEMENT ASBESTOS BOARD (CAB) WINDOW INFILL PANELS. THE CAULKING FILLS THE GAP BETWEEN THE METAL WINDOW FRAME AND CAB TRANSITION IN EACH OF CLASSROOMS 1-20 AS SHOWN. SEE FLOOR PLAN KEY NOTES FOR APPROXIMATE LOCATIONS.

KEY NOTES

(3) REMOVE PCB-CONTAINING SOFT GREY CAULKING. SEE DRAWING NOTE 1

(4) REMOVE PCB-CONTAINING SOFT GREY CAULKING. SEE DRAWING NOTE 2.

3. ABATEMENT CONTRACTOR TO COORDINATE ALL ACTIVITIES WITH ALL OTHER ONSITE WORK INCLUDING, BUT NOT LIMITED TO: SCHEDULE, ACCESS, STAGING, ETC. ABATEMENT CONTRACTOR TO REPORT LOCATIONS AND QUANTITIES OF ALL HAZARDOUS MATERIALS TO BE REMOVED, TO THE OWNERS REPRESENTATIVE PRIOR TO ABATEMENT/DEMOLITION

DRAWING NOTES

REMOVE APPROX. 125 LF OF PCB-CONTAINING SOFT LIGHT GREY CAULKING LOCATED ON THE EXTERIOR AND INTERIOR METAL WINDOW FRAME TO BRICK TRANSITION ON THE GIRLS LOCKER ROOM NORTH PERIMETER WINDOW. THIS ALSO INCLUDES THE REMOVAL OF THE SOFT LIGHT GREY CAULK ON THE INTERIOR SIDE OF THE NORTH EXTERIOR GIRLS LOCKER ENTRY DOOR, ON THE INTERIOR SIDE OF THE TWO SOUTH DAYCARE WINDOWS, ON THE SMALL WINDOW IN THE SOUTHEAST CORNER OF THE GATHERING PLACE/CAFETERIA, A SMALL SECTION ON THE UPPER WINDOW IN THE SOUTHEAST CORNER OF THE GATHERING PLACE/CAFETERIA, ON THE NORTH EXTERIOR DOOR FRAME AND SOUTH WINDOW FRAME VERTICAL IN THE CTE ROOM AS SHOWN. SEE FLOOR PLAN KEY NOTES FOR APPROXIMATE LOCATIONS.

1. REMOVE APPROX. 475 LF OF PCB-CONTAINING SOFT WHITE AND TAN LAYERED CAULKING LOCATED ON ALL VERTICAL STRUCTURAL METAL BEAM TRANSITIONS LOCATED THROUGHOUT THE EAST (FORMER GYM EXTERIOR) ELEVATION OF LARGE GYM, WHICH IS NOW THE WEST INTERIOR WALL OF THE SMALL GYM. THIS INCLUDES REMOVAL OF THE CAULKING THAT EXISTS ON THE INTERIOR SIDE OF THE NORTHWEST PERIMETER ENTRY DOOR FRAME OF THE SMALL GYM AS SHOWN. THE SOFT WHITE AND TAN CAULKING IS BEEN HEAVILY PAINTED THROUGHOUT THE WORK SCOPE AREA. SEE FLOOR PLAN KEY NOTES FOR APPROXIMATE LOCATIONS.
2. REMOVE APPROX. 825 LF OF PCB-CONTAINING SOFT TO HARD, LIGHT GREY CAULKING LOCATED ON ALL EXTERIOR VERTICAL STRUCTURAL METAL BEAM TO BRICK TRANSITIONS THROUGHOUT THE LOWER WEST AND SOUTH ELEVATIONS OF THE LARGE GYM BUILDING. THIS ALSO INCLUDES THE REMOVAL OF ALL GREY CAULKING ON THE INTERIOR DEMISING WALL METAL BEAMS (VERTICAL AND HORIZONTAL) BETWEEN THE DAYCARE AND THE GATHERING PLACE/CAFETERIA AS SHOWN. SEE FLOOR PLAN KEY NOTES FOR APPROXIMATE LOCATIONS.
3. REMOVE APPROX. 300 LF OF PCB-CONTAINING SOFT TO HARD GREY CAULKING ON THE EXTERIOR METAL WINDOW FRAME TO BRICK TRANSITIONS ON ALL WINDOWS AT THE SOUTH AND WEST ELEVATIONS OF THE LARGE GYM BUILDING. THIS ALSO INCLUDES CAULKING THAT EXISTS AROUND EACH CEMENT ASBESTOS BOARD WINDOW INFILL PANEL TO METAL FRAME TRANSITION ON THE WEST ELEVATION. SEE FLOOR PLAN KEY NOTES FOR APPROXIMATE LOCATIONS.

THE CONTRACTOR SHALL PROVIDE ALL LABOR, MATERIALS, EQUIPMENT AND PERMITS FOR THE REMOVAL AND DISPOSAL OF THE QUANTITIES OF HAZARDOUS MATERIALS PROVIDED PLUS AN ADDITIONAL 10%. THE CONTRACTOR WILL BE COMPENSATED FOR QUANTITIES WHICH ARE GREATER THAN 110% OF THE TOTAL AND THE OWNER WILL DEDUCT FROM THE CONTRACT SUM QUANTITIES THAT ARE 90% OR LESS OF THE TOTAL.
2. REMOVAL OF HAZARDOUS MATERIALS MAY COMPROMISE THE SECURITY OF THE SITE. THE CONTRACTOR IS FULLY RESPONSIBLE FOR MAINTAINING SITE SECURITY AND PUBLIC SAFETY THROUGHOUT THE PROJECT. SEE SPECIFICATIONS REGARDING SECURITY AND PUBLIC SAFETY.
3. ABATEMENT CONTRACTOR TO COORDINATE ALL ACTIVITIES WITH ALL OTHER ONSITE WORK INCLUDING, BUT NOT LIMITED TO: SCHEDULE, ACCESS, STAGING, ETC. ABATEMENT CONTRACTOR TO REPORT LOCATIONS AND QUANTITIES OF ALL HAZARDOUS MATERIALS TO BE REMOVED, TO THE OWNERS REPRESENTATIVE PRIOR TO ABATEMENT/DEMOLITION.

DRAWING NOTES

1. REMOVE APPROX. 60 LF OF PCB-CONTAINING SOFT GREY CAULKING LOCATED ON EXTERIOR LOUVERS, VENTS AND DUCTING ON METAL TO BRICK TRANSITIONS ON THE WEST AND EAST EXTERIOR ELEVATIONS OF THE TECHNOLOGY BUILDING AS SHOWN. SEE FLOOR PLAN CROSS-SECTIONS FOR APPROXIMATE LOCATIONS.

KEY NOTES

(4) REMOVE PCB-CONTAINING SOFT GREY CAULKING. SEE DRAWING NOTE 1.

GENERAL NOTES

1. ALL ABATEMENT RELATED ACTIVITIES AT THIS PROJECT SITE SHALL COMPLY WITH DIVISION 01 AND 02 AND SPECIFICALLY SECTION 028400 PCB ACTIVITIES. CONTRACTOR TO VERIFY ALL ITEMS SHOWN, LOCATIONS AND QUANTITIES OF MATERIALS TO BE REMOVED, AND DIMENSIONS PRIOR TO REMOVAL. ANY DEVIATIONS FROM THE SPECIFICATION THAT ARE DISCOVERED BY THE CONTRACTOR SHALL BE REPORTED TO THE OWNERS REPRESENTATIVE PRIOR TO REMOVAL. THE DRAWINGS ARE FOR DIAGRAMMATIC PURPOSES ONLY. GENERAL LOCATIONS OF PCB-CONTAINING MATERIALS ARE DEPICTED DIAGRAMMATICALLY ON THE DRAWINGS. THE REMAINING MATERIAL LOCATIONS ARE DESCRIBED TEXTUALLY ON THESE DRAWINGS. QUANTITIES OF HAZARDOUS MATERIALS LISTED ON THIS SHEET ARE CONSIDERED ACCURATE TO WITHIN +/- 10%. THE CONTRACTOR SHALL PROVIDE ALL LABOR, MATERIALS, EQUIPMENT AND PERMITS FOR THE REMOVAL AND DISPOSAL OF THE QUANTITIES OF HAZARDOUS MATERIALS PROVIDED PLUS AN ADDITIONAL 10%. THE CONTRACTOR WILL BE COMPENSATED FOR QUANTITIES WHICH ARE GREATER THAN 110% OF THE TOTAL AND THE OWNER WILL DEDUCT FROM THE CONTRACT SUM QUANTITIES THAT ARE 90% OR LESS OF THE TOTAL.
2. REMOVAL OF HAZARDOUS MATERIALS MAY COMPROMISE THE SECURITY OF THE SITE. THE CONTRACTOR IS FULLY RESPONSIBLE FOR MAINTAINING SITE SECURITY AND PUBLIC SAFETY THROUGHOUT THE PROJECT. SEE SPECIFICATIONS REGARDING SECURITY AND PUBLIC SAFETY.
3. ABATEMENT CONTRACTOR TO COORDINATE ALL ACTIVITIES WITH ALL OTHER ONSITE WORK INCLUDING, BUT NOT LIMITED TO, SCHEDULE, ACCESS, STAGING, ETC. ABATEMENT CONTRACTOR TO REPORT LOCATIONS AND QUANTITIES OF ALL HAZARDOUS MATERIALS TO BE REMOVED, TO THE OWNERS REPRESENTATIVE PRIOR TO ABATEMENT/DEMOLITION.

DRAWING NOTES

1. REMOVE APPROX. 200 LF OF PCB-CONTAINING SOFT GREY CAULKING LOCATED ON INTERIOR PERIMETER METAL WINDOW FRAME TO BRICK TRANSITIONS AND WOOD CEILING BEAMS AT PERIMETER WALL/CEILING TRANSITIONS IN ROOMS E, F AND PREP ROOM F. THIS ALSO INCLUDES THE REMOVAL OF THE SOFT GREY CAULKING WHICH EXISTS ON EXTERIOR METAL WINDOW FRAME TO BRICK TRANSITIONS ON THE NORTH AND SOUTH BUILDING ELEVATION WINDOWS OF THE ANNEX BUILDING AS SHOWN. SEE FLOOR PLAN KEY NOTES FOR APPROXIMATE LOCATIONS.
2. REMOVE APPROX. 300 LF OF PCB AND ASBESTOS-CONTAINING TAN BRITTLE/FIRM CAULKING LOCATED ON VARIOUS VERTICAL AND HORIZONTAL METAL WINDOW FRAME TO BRICK TRANSITIONS ON THE NORTH AND SOUTH ELEVATIONS OF THE ANNEX BUILDING AS SHOWN. SEE FLOOR PLAN KEY NOTES FOR APPROXIMATE LOCATIONS.

KEY NOTES

③ REMOVE PCB-CONTAINING SOFT GREY CAULKING. SEE DRAWING NOTE 1

④ REMOVE PCB-CONTAINING TAN BRITTLE CAULKING. SEE DRAWING NOTE 2.

Re: Analytical Data for Project 41373.000
Laboratory Reference No. 1606-219

Dear Gregg:

Enclosed are the analytical results and associated quality control data for samples submitted on June 22, 2016.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

David Baumeister
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: June 30, 2016
Samples Submitted: June 22, 2016
Laboratory Reference: 1606-219
Project: 41373.000

Case Narrative

Samples were collected on June 15, 2016 and received by the laboratory on June 22, 2016. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

Data Qualifiers and Abbreviations

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-napthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

LEGEND

- VERTICAL CAULKING RUN
- HORIZONTAL CAULKING RUNS

GENERAL NOTES

1. ALL ABATEMENT RELATED ACTIVITIES AT THIS PROJECT SITE SHALL COMPLY WITH DIVISION 01 AND 02 AND SPECIFICALLY SECTION 028400 PCB ACTIVITIES. CONTRACTOR TO VERIFY ALL ITEMS SHOWN, LOCATIONS AND QUANTITIES OF MATERIALS TO BE REMOVED, AND DIMENSIONS PRIOR TO REMOVAL. ANY DEVIATIONS FROM THE SPECIFICATION THAT ARE DISCOVERED BY THE CONTRACTOR SHALL BE REPORTED TO THE OWNERS REPRESENTATIVE PRIOR TO REMOVAL. THE DRAWINGS ARE FOR DIAGRAMMATIC PURPOSES ONLY. GENERAL LOCATIONS OF PCB-CONTAINING MATERIALS ARE DEPICTED DIAGRAMMATICALLY ON THE DRAWINGS. THE REMAINING MATERIAL LOCATIONS ARE DESCRIBED TEXTUALLY ON THESE DRAWINGS. QUANTITIES OF HAZARDOUS MATERIALS LISTED ON THIS SHEET ARE CONSIDERED ACCURATE TO WITHIN +/- 10%. THE CONTRACTOR SHALL PROVIDE ALL LABOR, MATERIALS, EQUIPMENT AND PERMITS FOR THE REMOVAL AND DISPOSAL OF THE QUANTITIES OF HAZARDOUS MATERIALS PROVIDED PLUS AN ADDITIONAL 10%. THE CONTRACTOR WILL BE COMPENSATED FOR QUANTITIES WHICH ARE GREATER THAN 110% OF THE TOTAL AND THE OWNER WILL DEDUCT FROM THE CONTRACT SUM QUANTITIES THAT ARE 90% OR LESS OF THE TOTAL.
2. REMOVAL OF HAZARDOUS MATERIALS MAY COMPROMISE THE SECURITY OF THE SITE. THE CONTRACTOR IS FULLY RESPONSIBLE FOR MAINTAINING SITE SECURITY AND PUBLIC SAFETY THROUGHOUT THE PROJECT. SEE SPECIFICATIONS REGARDING SECURITY AND PUBLIC SAFETY.
3. ABATEMENT CONTRACTOR TO COORDINATE ALL ACTIVITIES WITH ALL OTHER ONSITE WORK INCLUDING, BUT NOT LIMITED TO: SCHEDULE, ACCESS, STAGING, ETC. ABATEMENT CONTRACTOR TO REPORT LOCATIONS AND QUANTITIES OF ALL HAZARDOUS MATERIALS TO BE REMOVED, TO THE OWNERS REPRESENTATIVE PRIOR TO ABATEMENT/DEMOLITION.
4. THE CONTRACTOR SHALL REMOVE ALL ACCESSIBLE CAULKING IN ALL AREAS WITHOUT PERFORMING DEMOLITION OF BUILDING COMPONENTS.

KEY NOTES

① REMOVE APPROX. 20 LF OF PCB-CONTAINING CAULKING LOCATED ON THE EXTERIOR AND INTERIOR METAL WINDOW FRAME ON THE GIRLS LOCKER ROOM NORTH PERIMETER WINDOW AS SHOWN.

② REMOVE APPROX. 300 LF OF PCB-CONTAINING CAULKING ON THE EXTERIOR METAL WINDOW FRAMES ON ALL WINDOWS AT THE SOUTH AND WEST ELEVATIONS OF THE LARGE GYM BUILDING AS SHOWN. THIS INCLUDES CAULKING THAT EXISTS AROUND EACH WINDOW INFILL PANEL METAL FRAME TRANSITION ON THE WEST ELEVATION. THESE INFILL PANELS ARE CEMENT ASBESTOS BOARD.

③ REMOVE APPROX. 40 LF OF PCB-CONTAINING CAULKING LOCATED ON INTERIOR SIDE OF THE THREE LOWER WINDOWS AND THE UPPER WINDOW BANK EAST VERTICAL IN THE GATHERING PLACE AS SHOWN.

④ REMOVE APPROX. 10 LF OF PCB-CONTAINING OF CAULK ON INTERIOR WINDOW FRAME VERTICALS IN THE CTE ROOM AS SHOWN.

⑤ REMOVE APPROX. 18 LF OF PCB-CONTAINING OF CAULK ON INTERIOR SIDE OF NORTH EXTERIOR GIRLS LOCKER ENTRY DOOR AS SHOWN.

⑥ REMOVE APPROX. 18 LF OF PCB-CONTAINING OF CAULK ON EXTERIOR SIDE OF NORTH CTE ENTRY DOOR AS SHOWN.

⑦ REMOVE APPROX. 18 LF OF PCB-CONTAINING OF CAULK ON THE INTERIOR SIDE OF THE NORTHWEST PERIMETER ENTRY DOOR FRAME OF THE SMALL GYM AS SHOWN.

⑧ REMOVE APPROX. 500 LF OF PCB-CONTAINING CAULKING LOCATED ON ALL VERTICAL STRUCTURAL METAL COLUMN TRANSITIONS THROUGHOUT THE EAST ELEVATION OF THE LARGE GYM AS SHOWN. THIS INCLUDES THE REMOVAL OF ALL CAULKING ON THE INTERIOR DEMISING WALL METAL BEAMS (VERTICAL AND HORIZONTAL) BETWEEN THE DAYCARE AND THE GATHERING PLACE/CAFETERIA AS SHOWN. THE CAULKING IS HEAVILY PAINTED THROUGHOUT THE WORK SCOPE AREA.

⑨ REMOVE APPROX. 780 LF OF PCB-CONTAINING CAULKING LOCATED ON ALL EXTERIOR VERTICAL STRUCTURAL METAL COLUMN TRANSITIONS THROUGHOUT THE LOWER WEST AND SOUTH ELEVATIONS OF THE LARGE GYM BUILDING AS SHOWN.

Re: SVEC; 41373.000 Work Order: **1608810**

Dear Gregg,

ALS Environmental received 14 samples on 23-Aug-2016 09:44 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Laboratory Group. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 20.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Shawn Smythe

Electronically approved by: Shawn Smythe

Re: SVEC; 41373.000 Work Order: **1608892**

Dear Gregg,

ALS Environmental received 13 samples on 25-Aug-2016 09:58 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Laboratory Group. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 19.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Shawn Smythe

Electronically approved by: Shawn Smythe

Re: SVEC; 41373.000 Work Order: **16081052**

Dear Gregg,

ALS Environmental received 21 samples on 30-Aug-2016 10:15 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Laboratory Group. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 28.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Shawn Smythe

Electronically approved by: Shawn Smythe

Re: SVEC; 41373.000 Work Order: **16081107**

Dear Gregg,

ALS Environmental received 9 samples on 31-Aug-2016 09:18 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Laboratory Group. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 15.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Shawn Smythe

Electronically approved by: Shawn Smythe

Re: SVEC; 41373.000 Work Order: **1609094**

Dear Gregg,

ALS Environmental received 37 samples on 06-Sep-2016 09:44 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Laboratory Group. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 44.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Shawn Smythe

Electronically approved by: Shawn Smythe

Case Narrative

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

Results relate only to the items tested and are not blank corrected unless indicated.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

Sample jar for number 41373-2065 was received broken. The sample was transferred into a new jar and analyzed per client request.

Re: Analytical Data for Project 41373.000
Laboratory Reference No. 1609-093

Dear Gregg:

Enclosed are the analytical results and associated quality control data for samples submitted on September 9, 2016.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

David Baumeister
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: September 9, 2016
Samples Submitted: September 9, 2016
Laboratory Reference: 1609-093
Project: 41373.000

Case Narrative

Samples were collected on September 9, 2016 and received by the laboratory on September 9, 2016. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

Data Qualifiers and Abbreviations

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-napthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

June 24, 2016

Mr. Gregg Middaugh
PBS Environmental
2517 Eastlake Ave. E., Suite 100
Seattle, WA 98102

Dear Mr. Middaugh,

On June 22nd, 7 samples were received by our laboratory and assigned our laboratory project number EV16060145. The project was identified as your 41373.000. The sample identification and requested analyses are outlined on the attached chain of custody record.

No abnormalities or nonconformances were observed during the analyses of the project samples.

Please do not hesitate to call me if you have any questions or if I can be of further assistance.

Sincerely,

ALS Laboratory Group

Rick Bagan
Laboratory Director

GENERAL NOTES

1. ALL ABATEMENT RELATED ACTIVITIES AT THIS PROJECT SITE SHALL COMPLY WITH DIVISION 01 AND 02 AND SPECIFICALLY SECTION 028400 PCB ACTIVITIES. CONTRACTOR TO VERIFY ALL ITEMS SHOWN, LOCATIONS AND QUANTITIES OF MATERIALS TO BE REMOVED, AND DIMENSIONS PRIOR TO REMOVAL. ANY DEVIATIONS FROM THE SPECIFICATION THAT ARE DISCOVERED BY THE CONTRACTOR SHALL BE REPORTED TO THE OWNERS REPRESENTATIVE PRIOR TO REMOVAL. THE DRAWINGS ARE FOR DIAGRAMMATIC PURPOSES ONLY. GENERAL LOCATIONS OF PCB-CONTAINING MATERIALS ARE DEPICTED DIAGRAMMATICALLY ON THE DRAWINGS. THE REMAINING MATERIAL LOCATIONS ARE DESCRIBED TEXTUALLY ON THESE DRAWINGS. QUANTITIES OF HAZARDOUS MATERIALS LISTED ON THIS SHEET ARE CONSIDERED ACCURATE TO WITHIN +/- 10%. THE CONTRACTOR SHALL PROVIDE ALL LABOR, MATERIALS, EQUIPMENT AND PERMITS FOR THE REMOVAL AND DISPOSAL OF THE QUANTITIES OF HAZARDOUS MATERIALS PROVIDED PLUS AN ADDITIONAL 10%. THE CONTRACTOR WILL BE COMPENSATED FOR QUANTITIES WHICH ARE GREATER THAN 110% OF THE TOTAL AND THE OWNER WILL DEDUCT FROM THE CONTRACT SUM QUANTITIES THAT ARE 90% OR LESS OF THE TOTAL.
2. REMOVAL OF HAZARDOUS MATERIALS MAY COMPROMISE THE SECURITY OF THE SITE. THE CONTRACTOR IS FULLY RESPONSIBLE FOR MAINTAINING SITE SECURITY AND PUBLIC SAFETY THROUGHOUT THE PROJECT. SEE SPECIFICATIONS REGARDING SECURITY AND PUBLIC SAFETY.
3. ABATEMENT CONTRACTOR TO COORDINATE ALL ACTIVITIES WITH ALL OTHER ONSITE WORK INCLUDING, BUT NOT LIMITED TO: SCHEDULE, ACCESS, STAGING, ETC. ABATEMENT CONTRACTOR TO REPORT LOCATIONS AND QUANTITIES OF ALL HAZARDOUS MATERIALS TO BE REMOVED, TO THE OWNERS REPRESENTATIVE PRIOR TO ABATEMENT/DEMOLITION.
4. THE CONTRACTOR SHALL REMOVE ALL ACCESSIBLE CAULKING IN ALL AREAS WITHOUT PERFORMING DEMOLITION OF BUILDING COMPONENTS.

KEY NOTES

① REMOVE APPROX. 200 LF OF PCB-CONTAINING CAULKING LOCATED ON INTERIOR PERIMETER METAL WINDOW FRAME TRANSITIONS. THIS INCLUDES REMOVAL OF CAULKING WHICH EXISTS ON EXTERIOR METAL WINDOW FRAME TRANSITIONS ON THE NORTH AND SOUTH BUILDING ELEVATION WINDOWS AS SHOWN.

② REMOVE APPROX. 80 LF OF PCB-CONTAINING CAULKING ON WOOD CEILING/SOFFIT BEAMS AT PERIMETER WALL/CEILING TRANSITIONS IN ROOMS E, F AND PREP ROOM F AS SHOWN.

③ REMOVE APPROX. 300 LF OF PCB AND ASBESTOS-CONTAINING TAN CAULKING LOCATED ON VARIOUS VERTICAL AND HORIZONTAL METAL WINDOW FRAME TRANSITIONS ON THE NORTH AND SOUTH ELEVATIONS OF THE ANNEX BUILDING AS SHOWN.

GENERAL NOTES

1. ALL ABATEMENT RELATED ACTIVITIES AT THIS PROJECT SITE SHALL COMPLY WITH DIVISION 01 AND 02 AND SPECIFICALLY SECTION 028400 PCB ACTIVITIES. CONTRACTOR TO VERIFY ALL ITEMS SHOWN, LOCATIONS AND QUANTITIES OF MATERIALS TO BE REMOVED, AND DIMENSIONS PRIOR TO REMOVAL. ANY DEVIATIONS FROM THE SPECIFICATION THAT ARE DISCOVERED BY THE CONTRACTOR SHALL BE REPORTED TO THE OWNERS REPRESENTATIVE PRIOR TO REMOVAL. THE DRAWINGS ARE FOR DIAGRAMMATIC PURPOSES ONLY. GENERAL LOCATIONS OF PCB-CONTAINING MATERIALS ARE DEPICTED DIAGRAMMATICALLY ON THE DRAWINGS. THE REMAINING MATERIAL LOCATIONS ARE DESCRIBED TEXTUALLY ON THESE DRAWINGS. QUANTITIES OF HAZARDOUS MATERIALS LISTED ON THIS SHEET ARE CONSIDERED ACCURATE TO WITHIN +/- 10%. THE CONTRACTOR SHALL PROVIDE ALL LABOR, MATERIALS, EQUIPMENT AND PERMITS FOR THE REMOVAL AND DISPOSAL OF THE QUANTITIES OF HAZARDOUS MATERIALS PROVIDED PLUS AN ADDITIONAL 10%. THE CONTRACTOR WILL BE COMPENSATED FOR QUANTITIES WHICH ARE GREATER THAN 110% OF THE TOTAL AND THE OWNER WILL DEDUCT FROM THE CONTRACT SUM QUANTITIES THAT ARE 90% OR LESS OF THE TOTAL.
2. REMOVAL OF HAZARDOUS MATERIALS MAY COMPROMISE THE SECURITY OF THE SITE. THE CONTRACTOR IS FULLY RESPONSIBLE FOR MAINTAINING SITE SECURITY AND PUBLIC SAFETY THROUGHOUT THE PROJECT. SEE SPECIFICATIONS REGARDING SECURITY AND PUBLIC SAFETY.
3. ABATEMENT CONTRACTOR TO COORDINATE ALL ACTIVITIES WITH ALL OTHER ONSITE WORK INCLUDING, BUT NOT LIMITED TO: SCHEDULE, ACCESS, STAGING, ETC. ABATEMENT CONTRACTOR TO REPORT LOCATIONS AND QUANTITIES OF ALL HAZARDOUS MATERIALS TO BE REMOVED, TO THE OWNERS REPRESENTATIVE PRIOR TO ABATEMENT/DEMOLITION.
4. THE CONTRACTOR SHALL REMOVE ALL ACCESSIBLE CAULKING IN ALL AREAS WITHOUT PERFORMING DEMOLITION OF BUILDING COMPONENTS.

KEY NOTES

① REMOVE APPROX. 60 LF OF PCB-CONTAINING CAULKING LOCATED ON EXTERIOR LOUVERS, VENTS AND DUCTING ON METAL TRANSITIONS ON THE WEST AND EAST EXTERIOR ELEVATIONS OF THE TECHNOLOGY BUILDING AS SHOWN.

Mr. Gregg Middaugh
PBS Environmental
2517 Eastlake Ave. E., Suite 100
Seattle, WA 98102

Dear Mr. Middaugh,

On June 22nd, 7 samples were received by our laboratory and assigned our laboratory project number EV16060145. The project was identified as your 41373.000. The sample identification and requested analyses are outlined on the attached chain of custody record.

No abnormalities or nonconformances were observed during the analyses of the project samples.

Please do not hesitate to call me if you have any questions or if I can be of further assistance.

Sincerely,

ALS Laboratory Group

Rick Bagan
Laboratory Director

Re: Analytical Data for Project 41373.000
Laboratory Reference No. 1609-001

Dear Gregg:

Enclosed are the analytical results and associated quality control data for samples submitted on September 1, 2016.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

David Baumeister
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: September 2, 2016
Samples Submitted: September 1, 2016
Laboratory Reference: 1609-001
Project: 41373.000

Case Narrative

Samples were collected on August 30, 2016 and received by the laboratory on September 1, 2016. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

Data Qualifiers and Abbreviations

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-napthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

Data Qualifiers and Abbreviations

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-napthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Re: Analytical Data for Project 41373.000
Laboratory Reference No. 1609-087

Dear Gregg:

Enclosed are the analytical results and associated quality control data for samples submitted on September 8, 2016.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

David Baumeister
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: September 9, 2016
Samples Submitted: September 8, 2016
Laboratory Reference: 1609-087
Project: 41373.000

Case Narrative

Samples were collected on September 8, 2016 and received by the laboratory on September 8, 2016. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

GENERAL NOTES

1. ALL ABATEMENT RELATED ACTIVITIES AT THIS PROJECT SITE SHALL COMPLY WITH DIVISION 01 AND 02 AND SPECIFICALLY SECTION 028400 PCB ACTIVITIES. CONTRACTOR TO VERIFY ALL ITEMS SHOWN, LOCATIONS AND QUANTITIES OF MATERIALS TO BE REMOVED, AND DIMENSIONS PRIOR TO REMOVAL. ANY DEVIATIONS FROM THE SPECIFICATION THAT ARE DISCOVERED BY THE CONTRACTOR SHALL BE REPORTED TO THE OWNERS REPRESENTATIVE PRIOR TO REMOVAL. THE DRAWINGS ARE FOR DIAGRAMMATIC PURPOSES ONLY. GENERAL LOCATIONS OF PCB-CONTAINING MATERIALS ARE DEPICTED DIAGRAMMATICALLY ON THE DRAWINGS. THE REMAINING MATERIAL LOCATIONS ARE DESCRIBED TEXTUALLY ON THESE DRAWINGS. QUANTITIES OF HAZARDOUS MATERIALS LISTED ON THIS SHEET ARE CONSIDERED ACCURATE TO WITHIN +/- 10%. THE CONTRACTOR SHALL PROVIDE ALL LABOR, MATERIALS, EQUIPMENT AND PERMITS FOR THE REMOVAL AND DISPOSAL OF THE QUANTITIES OF HAZARDOUS MATERIALS PROVIDED PLUS AN ADDITIONAL 10%. THE CONTRACTOR WILL BE COMPENSATED FOR QUANTITIES WHICH ARE GREATER THAN 110% OF THE TOTAL AND THE OWNER WILL DEDUCT FROM THE CONTRACT SUM QUANTITIES THAT ARE 90% OR LESS OF THE TOTAL.
2. REMOVAL OF HAZARDOUS MATERIALS MAY COMPROMISE THE SECURITY OF THE SITE. THE CONTRACTOR IS FULLY RESPONSIBLE FOR MAINTAINING SITE SECURITY AND PUBLIC SAFETY THROUGHOUT THE PROJECT. SEE SPECIFICATIONS REGARDING SECURITY AND PUBLIC SAFETY.
3. ABATEMENT CONTRACTOR TO COORDINATE ALL ACTIVITIES WITH ALL OTHER ONSITE WORK INCLUDING, BUT NOT LIMITED TO: SCHEDULE, ACCESS, STAGING, ETC. ABATEMENT CONTRACTOR TO REPORT LOCATIONS AND QUANTITIES OF ALL HAZARDOUS MATERIALS TO BE REMOVED, TO THE OWNERS REPRESENTATIVE PRIOR TO ABATEMENT/DEMOLITION.
4. THE CONTRACTOR SHALL REMOVE ALL ACCESSIBLE CAULKING IN ALL AREAS WITHOUT PERFORMING DEMOLITION OF BUILDING COMPONENTS.

KEY NOTES

① REMOVE APPROX. 500 LF OF PCB-CONTAINING CAULKING LOCATED ON INTERIOR PERIMETER METAL WINDOW FRAME TO BRICK TRANSITION VERTICALS IN EACH OF CLASSROOMS 1-20 AS SHOWN.

② REMOVE APPROX. 1,400 LF OF PCB-CONTAINING CAULKING ON THE INTERIOR AND EXTERIOR SIDES OF THE CEMENT ASBESTOS BOARD (CAB) WINDOW INFILL PANELS. THE CAULKING FILLS THE GAP BETWEEN THE METAL WINDOW FRAME AND CAB TRANSITION IN EACH OF CLASSROOMS 1-20 AS SHOWN.

Re: Sky Valley Education Center Project – PCB Caulk & Asbestos Abatement
Northstar Project #: 0761061

Dear John:

This serves as a written certification for the above referenced project. Northstar has fully inspected the work area and completed the removal and disposal of the PCB and asbestos-containing materials as identified in the Contract Documents.

All materials were removed and disposed of at an accredited landfill in accordance with PSCAA, L&I and EPA regulations. This letter should be kept with the permanent records for the property.

Thank you for the opportunity to work with you. We look forward to hearing from you in the future should the need arise.

Sincerely,

Amani Moss
Project Engineer

RE: Asbestos & Other Fiber Analysis; NVL Batch# 1615588.00

Client Project: 0761061
Location: Sky Valley Education Center, 351 Short Columbia Street, Monroe, WA 98272

Dear Ms. Moss,

Enclosed please find test results for the 5 air sample(s) submitted to our laboratory for analysis on 7/29/2016.

Examination of these samples was conducted in accordance with the NIOSH 7400 method. Results are reported in fibers per cubic centimeter (fibers/cc) and in fibers per square millimeter (fibers/mm^2).

The working range for the NIOSH 7400 method is between 100 and 1300 fibers per square millimeter (fibers/mm^2).

Test results not blank corrected unless field blanks were provided.

Samples are archived for two weeks following analysis and will be discarded if not retrieved by the client after that period.

Thank you for using our laboratory services. Please do not hesitate to call if there is anything further we can assist you with.

Sincerely,

Nick Ly, Technical Director

* Samples are analyzed in accordance with the NIOSH 7400 (Issue 2: 15 August 1994). If the samples were not collected by NVL Laboratories, then the accuracy of the results is limited by the methodology and acuity of the sample collector. The LOQ, Limits of Quantification, are the fiber concentrations, for the given volume of the sampled air, above and below which the results may be unreliable. The RL, Reporting Limit defined in Method 7400 as LOD, is the fibers/cc below which the results may not be confidently distinguished from background levels. This report relates only to the items tested. It shall not be reproduced, except in full, without written approval of NVL Laboratories, Inc. . Unless otherwise indicated, the condition of all samples was acceptable at time of receipt. Average Sr values for fiber count load range (Low=0.259; medium=0.151; high=0.122).

Re: **NVL Batch 1615586.00**

Project Name/Number: 0761061

Project location: Sky Valley Education 351 Short Columbia ST. Monroe, WA

Dear Ms. Moss,

Enclosed please find test results for samples submitted to our laboratory for analysis. Preparation and analysis of these samples were conducted in accordance with published industry standards and methods specified on the attached analytical report.

The content of this package consists of the following:

-Case Narrative & Definition of Data Qualifiers
-Analytical Test Results
-Applicable QC Summary
-Client Chain-of-Custody (CoC)
-NVL Receiving Record

The report is considered highly confidential and will not be released without your approval. Samples are archived for two weeks following analysis. Samples that are not retrieved by the client will be discarded after two weeks.

Thank you for using our laboratory services. If you need further assistance, please contact us at 206-547-0100 or 1-888-NVLLABS.

Sincerely,

Nick Ly, Technical Director

Enclosure: Sample Results

Case Narrative:

The following summarizes samples received on date as shown on the accompanied Chain of custody by NVL Laboratories, Inc. from NorthStar CG, LP for Project number:0761061. Samples were logged in for PCB analysis per client request using both customer sample ID's and laboratory assigned ID's as listed on the Chain-of-Custody (CoC). All samples as received were processed and analyzed within specified turnaround time without any abnormalities and deviations that may affect the analytical results. All quality control requirements were acceptable unless stated otherwise. The conditions of all samples were acceptable at time of receipt and all samples submitted with this batch were analyzed unless stated otherwise on the CoC.

Test Results are reported in microgram per cubic meter (ug/m^3) for PCB samples as shown on the analytical reports.

Terms

% Rec	Percent recovery.
<	Below Reporting Limit(RL) or Limit of Quantitation(LoQ) of the instrument.
B	Blank contamination. The recorded results is associated with a contaminated blank.
DF	Dilution Factor
J	The reported concentration is an estimated value because something may be present in the sample that interfered with the analysis.
J1	The reported concentration is an estimated value because the laboratory control sample (LCS) is out of control limits.
J2	The reported concentration is an estimated value because the percent recovery for matrix spike is out of control limits.
J3	The reported concentration is an estimated value because the relative percent difference(RPD) for duplicate analysis is out of control limits.
J4	Percent recovery is outside of established control limits.
LCS	Laboratory Control Sample.
LFS	Laboratory Fortified Spike
Limits	The upper and lower control limits for spike recoveries.
LN	Quality control sample is outside of control limits. This analyte was not detected in the sample.
LOQ	Limit of quantitation(same as RL)
mg/kg	Milligrams per kilogram.
ND	Analyte not detected or below the reporting limit of the instrument or methodology

PPM	Parts per Million.
QC Batch Group	Quality Control Batch Group. The entity that links analytical results and supporting quality control results.
R	The data are not reliable due to possible contamination or loss of material during preparation or analysis. Re-sampling and reanalysis are necessary for verification.
RL	Reporting Limit. The minimum concentration that can be quantified under routine operating conditions.
RPD	Relative Percent Difference. The relative difference between duplicate results(matrix spike, blank spike, or samples duplicate) expressed as a percentage.
RPD Limit	The maximum RPD allowed for a set of duplicate measurements(see RPD).
SMI	Surrogate has matrix interference.
Spike Conc.	The measured concentration, in sample basis units, of a spiked sample.
SURR-ND	Surrogate was not detected due to matrix interference or dilution.
ug/m3	Micrograms per cubic meter.
ug/mL	Micrograms per milliliter
ug	Microgram
ug/m3	microgram per cubic meter

Personal Sample Codes
TWA = Time Weighted Average EX = 30 minute Excursion
Number TWA sample sets: TWA1 = first set, TWA2 = second set
All personal samples are to be collected in the employee's breathing zone

Respirator codes
HF = air purifying half face
FF = air purifying full face
PAPR = powered air purifying respirator
SAP = Type C pressure demand
SAC = Type C continuous flow

Resp. cartridge codes
HE = HEPA
OV = organic vapor
AG = acid gas
ST = stack cartridge

Other PPE codes
CV = coverall
HCV = hooded coverall
B = boots HO = hood
CG = cloth gloves RG = rubber gloves
LG = leather gloves

Area Sample Codes*
OWA= outside work area PR = preabatement IA = inside regulated area
HE = HEPA exhaust DE = outside decon CL = Clearance
*Must use a location description: example - 3' north and 5' west of Column L1, approx 5' high

Control codes
G = Glove bag HV = HEPA vacuum W = Wet methods
NPE = Negative pressure enclosure DV = Decon with vacuum AM = Alternate means
ME = Mini-enclosure DS = Decon with shower PW = Prep Work
WTD = work area tear down

Daily Log

Arrive on site 6:00 am

Crew size: 12 x 8 hrs = 96 hrs.

Took a PCB class in morning.

Sub walk w/crew.

Pre task Stretch + flex

Unload delivery from truck.

Spent the rest of morning building/setting up containments in areas requiring abatement in Admin Bldg + North Pool Bldg. Set up de-con equipped areas w/neg. air w/charcoal filters Pool E, west E, S, Fire E + Rooms 11, 16, 17, 18, 20, 15, 14

To access the Greenhouse + north side of Annex Bldg. A lot of bushes + debris were removed to make room to lay drops + set up ladders. I asked + got approval from School Rep.

We are staying right behind flooring crew. So as they finish the floor in one of the rooms in Pool Bldg. we start setting up mini enclosures w/ de-con.

Daily Log

Arrive on site 6:00 pm

crew size 10. 8 hours = 80 hours

Prebrk, stretch + flex

Power caulking around windows + ceiling beams

caulking has been determined to contain asbestos + PCBs. Outside work today.

Annex Bldg. Ext 5 sides.

We prepped all @ work areas, cleaned out any debris. Lay poly drops. Regulate work area.

Remove caulk using manual methods - razor knives, scrapers, 5 in 1, cut out knife, all hand tools.

Wear all proper PPE. Run personal air monitoring.

HEPA vacuum + final clean work area.

Roll up all drops + remove banner tape at end of shift.

Continue set up in prd (N) Bldg with enclosures, decon + negative.

Left site secured at 2:30 pm

Recvd PUF tubes for personal air monitoring of PCBs. Will start monitoring week on Outside of Bldg in enclosures set up yesterday.

Daily Log

Arrive on site 6:00 AM.
Crew size: 8 x 8 hours = 64
Sketch + Flex. Pretask.

Workers finished detail in N. Pod bldg. rooms 18, 19 + 20. + continue detailing the enclosures in Annex.

1 worker removed the last exterior spot on Annex bldg. where hooks were cleaned. He moved on to remove caulking around CAB panels in N. Pod on last rooms 15+16.

4 workers moved to center pod to remove caulk inside rooms 10, 11, 9+8.

1 worker still detailing in Annex rooms 5. Failed 2 were visuals.

Talked w/my PM + she is bringing out Steve Loewer to help removing the last little bits of caulk.

After arriving I tested out an enclosure + it seems to work very good.

The consultant had to leave so have to fix tomorrow to see if we can get clearances on Annex, then the wash bay.

Locked all windows + doors in Pods + Annex.

Left site secured at 2:30

Daily Log

Arrive on site 6 am

crew size 9 18 hrs = 72 hrs
one guy sent home - 6 hrs = 66 hrs

Stretch & Flex, Pre task

Continue removal of Caulking in Pods
Bldg & trying to pass clearance in Annex.
After 1 day spent detailing Enclosures in Rooms
F, the caulking was still present in way
too many areas & way too much in bulk qty.
worker was sent home after Lhr.

Had 1-worker retailing in Annex
2- retailing in N.Pod & removing in
S. Pod.

1- Enclosure passed inspection in Room Prep F.
1- " " " in Room

4 rooms failed inspection in N. Pod Bldg.
Marked areas of focus & have crew come
back to reclean.

Placed order to warehouse & Picked up Tools on my
hand on my own time.

4 Rooms left to remove in S. Pod bldg.
2 enclosures left to final/pass in Annex.

Locked up doors & windows - tools put away.

Left site secured @ 2:30

Daily Log

ON site 6:00 am

Crew size 10 x8hrs = 80hrs

Stretch flex, Pre-task

Finish Removing light fixtures from Annex.
Start Removing light bulbs & fixtures from Wing
Pod-Rooms 123-130 including rooms NW corner of pod.
Processing light fixtures by cutting out the center of the fixtures where the ballast is housed, disposing of that section with PCB Drums. Then we removing the poly from the rest of the fixture & throw parts metal recycling can. We bag up the poly & dispose of into pcb barrel as contaminated w/ case any dust settled on it during removal transport & processing. All workers working w/ light fixtures in PPE all PPE (suits, gloves, gaiters are going in pcb barrels as contaminated waste.
Awaiting for light tube barrels to haul out all the fluorescent 8'&4' bulbs.

Prepped Annex Bldg (inside) for sealant paint (4 enclosures) taping off a 2" border for the application so it leaves clean finish lines & tape off windows to prevent having to clean.

Locked all doors & windows, most lights are removed so only 1 bldg left to check that lights off.

Left site record 2:30

Northstar Daily Pre-Task Plan

JOB / TASK INFO	
Project Name	Sky Valley Education Center
Project #	0781061
Today's Date	7-26-16
Project Supervisor	Sean Olen
Signature	
Task to be completed	Rip Containments Annex Bldg & B1 Bldg.

TASK STEPS

1. Prep work area
2. Set up containment
3. Set up neg. AFE's

OTHER WORK/ADJACENT TRADES (WHOSE HAZARDS COULD AFFECT NORTHSTAR TASK)

PLANS/PERMITS REQUIRED

	Confined Space		Utilities Locate/Identify
	Fall Protection		Excavation/Trench
	Hot Work		Scaffold Inspection
	Lift Plan		

MINIMUM PPE (CIRCLE)

Hard Hat Gloves Safety Glasses Hi-Visibility Vest/Shirt

ADDITIONAL PPE

	Anti-Vibration Gloves		Double Hearing Protection
	Leather Gloves		Respiratory (PAPR)
	Arm Guards		Respiratory (Full-Face)
	Ear Plugs or Muffins		Respiratory (Half-Face)
	Chainsaw Chaps		Respiratory (Type C)
	Face Shield		Torching Glasses/Shield
	Torching Coveralls		Torching Gloves

SUPERVISOR CLOSING COMMENTS

SAFETY MEASURES REQUIRED (check if needed)

	Banner Tape w/Signage		Secure Area (Drop Zone)
	Cord Inspection		Temporarily Lighting
	Equipment Pre-Use Inspection	✓	Use Proper Lifting Techniques
	Fire Extinguisher/Water Hose		Ventilation (Mechanical)
	Guardrails		Warning Line/Signage
✓	Housekeeping		Work Area Awareness
✓	Negative Pressure Enclosure		CO Monitoring
	Proper Signage		Designated Radio Channel
	Regulated Area		Fall Protection
✓	Stretch and Flex	✓	GFCI
	Trained Operator		HEPA Vacuum
	Verbal Communication		Negative Air Machines
	Wet Methods		Pre-Demolition Structural Survey
	Chemical Properly Labeled		Red Light/Green Light
	Cord Protection		Spotter
	Exhaust Scrubbers		Traffic Route(s)
	Flagger		Utilities Identified
	Hearing Protection		Ventilation (Natural)
	MSDS Onsite/Reviewed/Followed		Wet Abatement Techniques
	Personal Exposure Monitoring		Other
	Radio Communication		Other

HAZARDS (INCLUDING OTHER TRADES/AREAS)

	Asbestos Exposure	✓	Live Utilities
	Carbon Monoxide Exposure		Overloading Equipment
✓	Cuts and Lacerations		Struck by Debris
✓	Falls from Height		Unintended Collapse
	Lead Exposure		Burns
✓	Noise		Chemical Exposure
✓	Slips and Trips		Electric Shock/Electrocution
	Unauthorized Access	✓	Inadequate Communication
✓	Back/Muscle Strain	✓	Misuse of Equipment
	Caught Between		Overloading Suspended Slab
	Dust		Struck by Equipment/Vehicle
	Fire
