RCRA Facility Investigation Phase 1 Report Dow Hanging Rock Plant, Ironton, Ohio

Prepared for

The Dow Chemical Company

April 2012

CH2MHILL

Executive Summary

This Resource Conservation and Recovery Act (RCRA) facility investigation (RFI) report describes the investigation activities associated with The Dow Chemical Company (Dow) Hanging Rock Facility in Ironton, Ohio (facility). The primary objective is to satisfy the U.S. Environmental Protective Agency (USEPA) requirement under Section II.F.2 RFI of the Part B permit "…to thoroughly evaluate the nature and extent of the release of hazardous waste(s) and hazardous constituent(s) from all applicable SWMUs and AOCs identified in Section II.C."

The Phase 1 RFI was conducted from December 2011 to January 2012, in accordance with the RFI Work Plan (CH2M HILL 2011), as approved by USEPA on November 18, 2011. The first phase of the RFI was designed to investigate soil and sediment at the facility. The second phase of the RFI will be designed to complete delineation of the nature and extent of contamination such that risk-based decisions can be made on the need for and scope of corrective measures.

In the first phase of investigation, soil and sediment samples were collected from the 1 area of concern (AOC) and 10 solid waste management units (SWMUs) requiring further investigation in order to identify whether a release had occurred, and if so, to identify the nature and extent of site-related constituents. A total of 40 soil borings were advanced and 6 sediment samples collected. In addition, seven monitoring wells were installed across the facility to provide an understanding of the facility hydrogeology, including subsurface stratigraphy and groundwater flow direction. At selected locations, borings were advanced to bedrock to determine the stratigraphy of the unconsolidated soils. The subsurface stratigraphy was generally consistent across the site with clay and silt overlying sand and gravel, and the bedrock encountered in the deep borings was shale.

Groundwater was encountered at approximately 20 feet below ground surface (bgs) and observed elevations indicate that groundwater is flowing in a southeastern direction, toward the river.

The data collected were screened against conservative industrial risk based human health and ecological screening values. Data were also compared to screening levels based on the soil screening levels that are protective of migration to groundwater in order to determine the need for and scope of the Phase 2 RFI. The results of these screenings showed:

- Arsenic was detected across the site at levels exceeding human health screening values. However, arsenic is not considered to be a constituent of concern for this facility and will not be the focus of future investigations for the following reasons:
  - Arsenic is not known to be a chemical used at the site
  - The concentrations observed were close to established background values
- Screening level human health risk assessment (SLHHRA) and screening-level ecological risk assessment (SLERA) evaluations determined that none of the site-related

constituents would be considered constituents of potential concern (COPCs) based on risk to human or ecological receptors.

- Soil or sediment containing constituents at concentrations exceeding the conservative soil screening level (SSL) values considered to be protective of groundwater were observed at SWMU 1, SWMU 15, SWMU 15, SWMU 17, SWMU 18, SWMU 24, SWMU 25-28, and AOC D. The data and site conditions will be further evaluated for these areas, and if appropriate, additional soil and/or groundwater investigation will be performed in the Phase 2 RFI. Data quality objectives for the Phase 2 RFI will be developed to determine whether the COPCs identified based on the SSLs are present in groundwater at concentrations which could pose an unacceptable risk to human or ecological receptors.

Therefore, based on the results of the investigation, no further investigation is proposed for the following remaining SWMUs: SWMU 11, SWMU 12, SWMU 19, and SWMU 29.

SECTION 1

Introduction

1.1 Introduction and Objectives

This Resource Conservation and Recovery Act (RCRA) Facility Investigation (RFI) report is being submitted pursuant to Section II.F.2.c of the RCRA permit OHD 039 128 913 and describes the results of the Phase 1 RFI performed at The Dow Chemical Company (Dow) Hanging Rock Facility in Ironton, Ohio (facility) in December 2011 and January 2012. The investigation was conducted in accordance with the RFI Work Plan (CH2M HILL 2011), as approved by the U.S. Environmental Protection Agency (USEPA) on November 18, 2011.

The primary objective of the RFI is to "…thoroughly evaluate the nature and extent of the release of hazardous waste(s) and hazardous constituent(s) from all applicable SWMUs and AOCs identified in Section II.C.." as required under Section II.F.2 RFI of the permit. In order to meet the primary objective, two data quality objectives (DQOs) were identified:

- Determine if chemicals in soil and sediment exist at concentrations greater than background and risk-based screening levels protective of potential exposure pathways at each solid waste management unit (SWMU) and area of concern (AOC).
- Determine the facility-wide groundwater flow direction and shallow (to bedrock) subsurface stratigraphy.

To address these DQOs (which are described further in Section 3), soil and sediment samples were collected from the 10 SWMUs and 1 AOC indicated as requiring further investigation under Section II.C.2 of the Part B Permit. In addition, monitoring wells were installed across the facility to provide an understanding of the facility hydrogeology, including subsurface stratigraphy and groundwater flow direction. At three locations, deep borings were advanced to bedrock to determine the stratigraphy to bedrock. Subsequent phases of investigation will be based on information obtained in this first phase.

1.2 Regulatory Framework and Background

The facility submitted a RCRA Part A permit application in 1980 and was issued an Ohio Hazardous Waste Facility Installation and Operation Permit in 1981 (A.T. Kearney 1989). This permit was modified in 1986 to include a hazardous waste storage tank. In 1989, Dow applied for an RCRA permit modification to include an additional storage process using containers. A preliminary review/visual site inspection (PR/VSI) was conducted on behalf of USEPA in 1989 (A.T. Kearney 1989), and a follow-up investigation was completed in 2000 (Tetra Tech 2000).

In 2005, USEPA issued a RCRA permit for the facility. Subsequent negotiations between Dow and USEPA were resolved, and a revised permit was issued in August 2010. The investigation discussed in this report is in accordance with the requirements of the RCRA permit.

1.3 Overview

The work described in this report was completed in accordance with the work plan (CH2M HILL 2011), as approved by USEPA. Deviations from the work plan included collection of groundwater samples from two onsite water supply wells and offsetting proposed soil boring locations based on site conditions. These variations from the work plan are discussed within this report.

As described in the approved Phase 1 RFI Work Plan, soil samples were collected from the 1 AOC and 10 SWMUs requiring further investigation, as determined in the 2010 RCRA permit. Sediment samples were collected from two SWMUs that are onsite drainage ditches. In addition, wells were installed across the facility to provide an understanding of the facility hydrogeology, including subsurface stratigraphy and groundwater flow direction. At three selected locations, deep borings were advanced to bedrock to determine the stratigraphy to bedrock.

The soil and sediment data were evaluated and compared to human health risk screening levels and screening levels considered to be protective of groundwater to delineate nature and extent. In addition, a screening-level human health risk assessment (SLHHRA) and screening-level ecological risk assessment (SLERA) were completed using the data.

SECTION 2

Site Background

2.1 Physical Description of the Facility

The facility is located at 925 County Road 1A in Lawrence County, approximately 4 miles northwest of Ironton, Ohio (Figure 2-1). The facility is between the old and new State Route 52, and occupies only a small portion of the 750-acre parcel (Figure 2-2). The property owned by Dow is bordered on the north by wooded hills; on the west by farmland; on the south by the Ohio River; and on the east by farmland and residences. Big Thief Creek flows east to west through the southern portion of Dow's property and discharges into the Ohio River approximately 1,000 feet south of the property boundary.

2.2 Facility Operational and Waste Management History

2.2.1 Facility Operational History

Dow began operating at the facility in 1957 and currently employs approximately 100 people at the facility. Facility buildings are used for manufacturing operations, as well as warehouse and office space. Five production wells are located onsite; two are used for fire protection and supplemental process water, and the remaining wells are not currently used.

The facility manufactures and ships polymeric beads and foam, most of which are intermediate products used or combined with other materials offsite by other companies. Three plants currently operate at the facility: Styron plant, Styrofoam plant, and Ethafoam plant. The Styron plant, which began operation in 1968, is owned and operated by American Styrenics.

2.2.2 Facility Waste Management

Some of the wastes produced at the facility are characteristic hazardous waste; others contain only small quantities of hazardous constituents (Tetra Tech 2000). Most hazardous wastes historically were generated by the Styron plant as a result of cross-contamination of product and heat transfer fluids, process sampling, residuals from process upsets and cleaning, and condensate collection from the process bypass stream.

Most of the wastes generated in the three plants are characteristic hazardous wastes D001 and D018, including waste oils, DOWTHERM fluid, and methylene chloride waste (Tetra Tech 2000). D001 and D018 wastes reportedly are stored in 55-gallon drums at satellite accumulation areas onsite or transferred directly to the hazardous waste storage area.

Solid wastes generated include partially polymerized styrene, polystyrene, rubber, and acrylonitrile wastes; laboratory wastes; and solvent-contaminated materials such as boots, gloves, rags, and feed filters. The drums are stored at SWMU 5, which was not identified in the Permit as requiring investigation, and then transferred to the hazardous waste container loading area before being transported for disposal to Green Valley Landfill in Smithfield, Kentucky.

The liquid hazardous wastes consist of styrene, ethylbenzene, acrylonitrile, oil solutions, and solvent-contaminated lubricating oils. The drums are stored in the hazardous waste storage area for less than 90 days and are transferred to Safety-Kleen in Bridgeport, New Jersey, for incineration.

2.2.3 Facility Water Usage

Five water supply wells are located onsite. The facility reports that Well 5 is used as needed for the wastewater treatment plant, and Well 2 is used for fire protection. The remaining three wells are not used. Boring logs for the wells are presented in Appendix A.

2.3 Solid Waste Management Units and Areas of Concern

This section briefly presents descriptions of the SWMUs and AOCs identified in the RCRA permit as requiring additional information (*Final May 2006/Modified August 2010, OHD 039 128 913)*. Both the Tetra Tech preliminary assessment/VSI and the A.T. Kearney PR/VSI were used to summarize the SWMUs and AOCs listed below. Figure 1-2 shows the approximate location of each SWMU and AOC. The historical information was presented in the work plan (CH2M HILL 2011).

2.3.1 SWMU 1 – Former Flaring Pad

The former flaring pad was located in the area of the present maintenance building and is reported to have operated from 1957 through 1968. The flaring pad was a concrete pad smaller than the current maintenance building, with a tank used to burn waste using an aspiration system. Byproducts from the Styrofoam process containing styrene, partially polymerized polystyrene, and ethylbenzene were burned on the flaring pad. SWMU 1 was located southwest of Building 505. The pad was drained to the process sewer in that area of the site (Dow 2007). During the October 2010 site visit and the Phase 1 RFI field work, it was observed that the area where the former flaring pad was located had been converted to an asphalt-covered parking lot for Building 505.

2.3.2 SWMU 11 – Satellite Accumulation Area - Ethafoam Plant

SWMU 11 is a 10-foot-square roofed concrete container storage area. Valves, drums of raw material, and hazardous waste were stored for less than 90 days in this area. The containers and valves were stored on pallets. In 2007, the pad was inspected and found to be in "good condition" and any spills would be directed to the process sewer (Dow 2007). During the October 2010 site visit, the pad was inspected and found to be in overall good condition with minor cracks in the concrete to the northwest and northeast corners of the pad. During the December 2011 and January 2012 RFI field activities, soil borings were placed in areas where cracks were observed in the pad. The soil borings indicated that the cracks were only surficial and did not penetrate the entire thickness of the concrete pad. No other information was available for this area.

2.3.3 SWMU 12 – Former Methylene Chloride Cleaning Tank

The former methylene chloride cleaning tank was adjacent to the tank farm on Street A in the northwestern corner of the Styron plant. The tank was 10 feet high, 4 feet in diameter,

and was supported by railroad ties placed on a 10-foot-square concrete pad that had a 6-inch-high curb. The tank was surrounded by sand and covered by 1 inch of Styrofoam (Dow 2007). The tank was used for cleaning partially polymerized polystyrene from equipment used in the polystyrene process. Equipment would be bolted to the tank, and methylene chloride would be pumped through the equipment. The spent methylene chloride then would be pumped into a delivery truck for offsite disposal, and the excess methylene chloride was drummed and taken to the hazardous waste container storage area. The cleaning process took 5 to 7 days, and the methylene chloride was contained during the process. Use of the tank was discontinued in 1993, and the tank was removed and replaced in 1998 (Tetra Tech 2000). In December 2010, CH2M HILL inspected the area of the former methylene chloride cleaning tank. The concrete pad was found to be in good condition with a minor crack to the south of the pad. During the December 2011 and January 2012 RFI field activities, a soil boring was installed in the area where the crack was observed in the concrete.

2.3.4 SWMU 15 – Two Section Septic Tank System

This unit is south of the main office building under a grassy area in front of the building. The unit is 16 feet by 20 feet, constructed of concrete, and has a capacity of 2,600 gallons. The unit has been in operation since 1957 and has received septic wastewater and process wastewater from plant operations. Before 1976, water was discharged to the stormwater drainage system (SWMU 18). After 1976, water was discharged to the wastewater treatment system. During the December 2011 and January 2012 RFI field activities, Mike Ratliff (CH2M HILL Dow site contact) informed CH2M HILL that the septic tank was approximately 13 feet deep. Soil borings (S15-SS02 and S15-SS03 to the east and west, respectively, of the septic tank were installed to depths greater than 13 feet.

2.3.5 SWMU 17 – Stormwater Drainage System

This unit surrounds the Styron plant and is comprised of drainage ditches, sewer lines, and roof drains from the Styrofoam and Ethafoam plants. The system consists of 3-foot-deep natural clay gravel-lined ditches, grates, and concrete sewer lines, and it is approximately 1,554 feet long. The system discharges into the surface drainage ditch to Big Thief Creek (SWMU 18). The drainage ditches have been present since 1957. Stormwater runoff from the Styron, Styrofoam, and Ethafoam plants and the tank farm flows through this drainage system. During the October 2010 site visit, CH2M HILL observed that the section of SWMU 17 at the corner of Fifth Street and A Street had a pool of water. During the December 2011 and January 2012 RFI field activities it was observed that the section of SWMU 17 that holds water only did so for between 2 and 3 days following a rain event.

2.3.6 SWMU 18 – Drainage Ditch to Big Thief Creek

This unit is a grass and gravel-lined surface water drainage ditch that received surface water runoff from the stormwater drainage system and fire pond from 1957 to 1992. It ranges from 3 to 5 feet deep and is approximately 5,400 feet long. The ditch drains by gravity to Big Thief Creek. The ditch currently receives treated water from the wastewater treatment system and discharges to Big Thief Creek under National Pollutant Discharge Elimination System (NPDES) permit OH0099309.

Facility records indicate that two spills occurred to this SWMU. In 1988, a styrene spill occurred in the drainage ditch in the vicinity of the styrene storage tanks. Another spill occurred when process wastewater flowing into the aerated skimmer basin exceeded the pumping capacity to the treatment plant, and the untreated process water discharged directly to the surface drainage ditch to Big Thief Creek. The PR/VSI reported that analysis of the drainage ditch sediments and outfall waters indicated the presence of small but measurable amounts of 1,1,1-trichloroethane (1,1,1-TCA); benzene; ethylbenzene; 1,3- and 1,4-dimethylbenzene; styrene; isopropylbenzene; toluene; and xylenes (A.T. Kearney 1989). The ditch holds water throughout most of the year, especially during periods of high precipitation..

2.3.7 SWMU 19 – Drainage Ditch to North

This unit is a slight depression leading from the northern part of the Styron plant to a ditch that runs along the railroad adjacent to State Route 52. The ditch receives stormwater runoff from the northernmost part of the Styron plant and discharges offsite to the north of the facility. During the December 2011 and January 2012 RFI field activities, it was observed that the lower points (northern and southern ends) of SWMU 19 held water when it rained. The standing water took between 2 and 3 days to infiltrate into the ground. Soil borings completed in the SWMU were installed through the area that held water after rainfall.

2.3.8 SWMU 24 – Process Sewer Line

The unit was constructed of preformed cement pipes packed with oakum caulking. The system receives discharges from most onsite sumps, including forklift wash water, cooling tower and boiler blowdown. Water from SWMU 24 discharges to the onsite wastewater treatment plant. In 1996, a 150-foot length of the sewer line located in the southwest portion of the unit was voluntarily investigated, excavated, and removed as part of the closure plan for the former drum storage area (SWMU 4, located on the ground surface above this portion of SWMU 24). The closure plan for this SWMU was approved by Ohio EPA on September 30, 1996 (Radian 1997), and although this SWMU was closed, it was not included in the final RCRA permit (Radian 1997). Post-excavation sampling demonstrated compliance with industrial and residential soil cleanup standards based on soil saturation values and developed in accordance with *Closure Plan Review Guidance for RCRA Facilities* (Ohio Environmental Protection Agency [Ohio EPA] 1993). Post-excavation data showed concentrations of ethylbenzene that ranged from not detected to 39 milligrams per kilogram (mg/kg) and styrene from not detected to 110 mg/kg (Radian 1997).

In 1996, the portion of the line associated with the closed drum storage area was restored and backfilled with clean soil. A new collection sump was installed, and a portion of the process sewer line was replaced (Radian 1997). The remainder of the sewer line has not been investigated.

2.3.9 SWMU 25-28 – Former Wastewater Treatment System

The former wastewater treatment system consisted of an aerator, clarifier, chlorinator, and two tertiary sand filters. The system was installed in 1976 and was constructed of concrete and built into the ground. Process wastewater from the aerator skimmer basin and sanitary wastewater from the septic tank (SWMU 15) flowed into the 15,000-gallon packaged wastewater treatment plant, consisting of an aerator and clarifier (Dow 2007). The clarified

water was routed to one of two sand filters, sent to the chlorinator, and discharged to the fire pond (SWMU 31, which was closed and not included in the final RCRA permit). The system treated approximately 11,000 gallons of water per day. The units were removed in 1992. During the December 2011 and January 2012 RFI field activities, CH2M HILL used as-built drawings (provided by Dow) and ground penetration radar to locate the footprint of the former Wastewater Treatment System (SWMU 25-28). Soil borings completed in the SWMU were installed within the identified footprint of the SWMU.

2.3.10 SWMU 29 – Former Used Filter Sand Pile

A pile of used filter sand was temporarily located on the ground just a few feet west of the tertiary sand filters pending transport to a landfill. The PR/VSI reported that this activity was not a common practice (A.T. Kearney 1989). The sand had been used to polish wastewater after treatment in the aerated skimmer and the treatment plant (Dow 2007). SWMU 29 became inactive when the wastewater treatment system was replaced in 1992. The general area has been excavated and regraded since the sand was removed. No other information is available for this unit.

2.3.11 AOC D – Underground Catalyst Storage Tank

A former 10,000-gallon steel raw material storage tank housed in an underground concrete vault in the Styron plant was used to store the catalyst 1,1-Di(tert-butylperoxy)cyclohexane, an organic peroxide. This peroxide is typically found as a percent solution in mineral oil and ethylbenzene (Dow 2007). The tank was taken out of service in December 1999 (Tetra Tech 2000). There are no known releases from this AOC. During the October 2010 site visit, CH2M HILL observed that the tank was still in the vault with water that appeared to be rain water inside the vault. During the Phase I RFI field activities, it was observed that the tank had been removed and the vault had been filled with "clean" sand.

2.4 Surrounding Land Use and Area Water Supply

As shown on Figure 2-3, land use in the vicinity of the facility is predominantly agricultural and the land cover is primarily forest. The Dow-owned property, including land leased by others, is bordered to the north by State Route 52, to the south by the Ohio River, and to the east and west by farmland.

Scioto Water Incorporated (SWI) supplies drinking water to most of the residents within the vicinity of the facility. This water is purchased from the City of Portsmouth, Ohio. In a January 27, 2011, telephone conversation, City of Portsmouth personnel said that the Dow facility also purchased potable water from the City. The water supplied to the facility as well as water sold to SWI is from the City's filtration plant located on the Ohio River near New Boston, Ohio, approximately 15 miles upstream of the facility.

To determine whether there were any wells within 1 mile of the facility, the Ohio Department of Natural Resources (ODNR) website was reviewed. According to ODNR data, 10 privately-owned wells are located within 1 mile of the facility. Appendix B contains a list of the wells, an ODNR map showing the locations of the wells, and boring logs for the wells. Three of the wells listed with ODNR are located on the Dow facility and water from the wells is used for the facility fire protection system at the site. Three of the well listed with ODNR are located downgradient (southeast) of the facility, the remaining five wells

are either located upgradient or sidegradient of the facility. Information about use of water from wells located offsite of the facility was not available on the ODNR websites.

The Ohio Source Water Assessment and Protection Program, which also includes the Wellhead Protection Program, was established to protect sources of public water supplies, including streams and aquifers, from contamination. This program designates areas that supply public water supplies. The facility area does not fall within a designated protected area.

2.5 Summary of Previous Investigations and Remedial Activities

In 1988, a styrene monomer spill occurred in the diked pump area near the styrene storage tanks. As part of the cleanup, impacted soil was excavated and disposed of. Post-excavation sampling was not completed as part of the cleanup. The facility also monitored Outfall 011 in Big Thief Creek for styrene, and none was detected.

In 1989, A.T. Kearney and DPRA Inc. conducted the initial PR/VSI at the facility for EPA. The PR/VSI was to identify potential for release of hazardous waste or constituents from the SWMUs and AOCs at the facility and to make recommendations where necessary. The PR/VSI report recommended follow-up activities in SWMUs and AOCs where either the potential existed for release of hazardous material, or where there were documented releases and no documentation of proper cleanup of the releases (A.T. Kearney 1989).

As part of USEPA Region 5 Environmental Priorities Initiatives, Tetra Tech conducted a PR/VSI of the facility in 2000 to characterize the facility's actual and potential release of hazardous material from onsite SWMUs and AOCs (Tetra Tech, 2000).

SWMU 4, the former drum storage area was closed in 1997. Due to elevated concentrations of volatile organic compounds (VOCs) detected in the soil during closure activities, a portion of SWMU 24 that runs beneath SWMU 4 was also investigated. As a result of this investigation, a 150-foot length of the sewer line located in the southwest portion of the unit was voluntarily investigated, excavated, and removed (Radian 1997). In 1996, the portion of the line associated with the closed drum storage area was restored and backfilled with clean soil. A new collection sump was installed, and a portion of the process sewer line was replaced (Radian 1997). The remainder of the sewer line has not been investigated.

SECTION 3

Phase 1 Field Investigation Summary

The Phase 1 RFI field activities took place in December 2011 and January 2012. The investigation consisted of utility locating, surface and subsurface soil sampling, sediment sampling, advancing deep soil borings, and monitoring well installation. These activities are discussed in the following sections. The work was completed in accordance with the USEPA-approved RFI work plan (CH2M HILL 2011); any deviations from the work plan are noted in the sections below.

3.1 Utility Location

Utility locating activities were conducted before starting the field activities. The utility location was performed by a private utility locator, using electromagnetic induction and ground penetrating radar instruments; information provided by Dow; and markings by public utilities companies to clear proposed soil boring and monitoring well locations.

Some of the proposed investigation locations were offset either because the proposed location was too close to identified utilities or because the location was not accessible to the drill rig. The proposed offset locations were presented to USEPA in a letter dated November 30, 2011. The USEPA approved the revised locations in an email dated December 2, 2011. The letter and attachments are provided in Appendix C.

3.2 Soil Sampling

Surface and subsurface soil samples were collected at nine SWMUs and one AOC at the facility. Soil samples were collected from one location in SWMU 15 (S15-SS04) and one location in SWMU 19 (S19-SS02) using a hand auger. Soil samples from all other locations were collected using a direct-push technology (DPT) drill rig. The soil cores were logged in the field and screened for organic vapors using a photo-ionization detector (PID). The boring logs are presented in Appendix A.

Soil samples were collected from the following depth intervals:

- 0 to 2 feet bgs (VOC samples were taken from 0.5 to 2 feet bgs due to potential for volatilization from exposure to the atmosphere)
- 3 to 5 feet bgs
- 8 to 10 feet bgs
- Any other interval that exhibited an elevated PID reading or had signs of potential impact

The soil samples were submitted for laboratory analysis as described below:

- VOCs by SW8260B

- Semivolatile organic compounds (SVOCs) by SW8270C/SW8270C selective ion monitoring
- Metals (arsenic, barium, cadmium, chromium, lead, mercury, selenium and silver) by SW6010B/SW6020

3.3 Sediment Sampling

Surface sediment samples (0 to 6 inches below sediment surface) were collected from the ditches in SWMU 17 and 18 using disposable scoop samplers. Sediment samples were collected from:

- SWMU 17 – one location (S17-SD01)
- SWMU 18 – five locations (S18-SD01 through S18-SD05)

Sediment sampling locations were targeted in locations identified as soft sediment and in areas representative of the stream (ditch) reach. Collection followed procedures outlined in the work plan (CH2M HILL 2011) and the samples were analyzed for VOCs, SVOCs and metals.

3.4 Deep Soil Borings

At three locations co-located with monitoring wells, soil borings were advanced from surface to bedrock to characterize site stratigraphy (Figure 2-1). The borings were advanced to bedrock using sonic drilling methods and were continuously logged and screened for organic vapors with a PID. The soil boring logs for these deep borings are included in Appendix A. The deep borings were sealed with hydrated bentonite chips from top of bedrock to the depths where the monitoring well screens were installed.

3.5 Monitoring Well Installation

Seven monitoring wells (including the three monitoring wells from the deep soil boring section above) were installed across the facility. The monitoring wells were installed to evaluate groundwater flow in the water-bearing unit beneath the facility. The borings were advanced using sonic drilling methods and were continuously logged and screened with a PID. The soil boring logs and monitoring well completion diagram for the monitoring wells are included in Appendix A. The monitoring wells were screened in the upper part of the water-bearing zone identified at the site. After installation, the monitoring wells were developed and gauged. The surveyed top of casing elevations and water levels for the monitoring wells are listed in Table 3-1.

3.6 Groundwater Sampling

During the field investigation, the facility staff directed the drillers to an onsite water source for filling water tanks to be used for drilling. An odor was noted while filling the water tanks. The water was not used and the water tanks were decontaminated. Further discussions with the facility staff determined that this water supply came from a storage tank that was filled from Water Well 5 and Water Well 2. Grab samples were collected from these two wells and from the spigot from which the drillers obtained the water. A sampling

port was opened at each well head and water was purged for 10 minutes. The water was allowed to run from the spigot for 10 minutes. After purging, water quality readings were taken using a YSI multi-parameter meter, and groundwater samples were collected and analyzed for VOCs.

3.7 Surveying

An Ohio-certified surveyor surveyed the monitoring well locations after installation. The locations were tied to the same elevation datum (National Geodetic Vertical Datum [NGVD] 1988) as the topographic maps of the area. The borings were surveyed horizontally to the nearest 0.1 foot and vertically to the nearest 0.1 foot. The top of well casing and ground elevations at each well were surveyed horizontally to the nearest 0.01 foot and vertically to the nearest 0.01 foot. Well coordinates were recorded in Ohio State Plane coordinates.

3.8 Investigation-Derived Waste Management

Investigation-derived waste (IDW), including solids, soil, and water, was contained in 55-gallon drums and stored onsite. Composite samples were collected from soil and water IDW and were analyzed. The analytical results were below regulatory levels and indicated that no characteristic hazardous waste (D codes) codes would apply to this waste. Based on historical communications with Dow, listed hazardous waste codes have been ruled out for all SWMUs and AOC D. Appendix D contains the laboratory data with the results of the analysis.

SECTION 4

Physical Site Setting

This section contains a discussion of regional geology, local hydrogeology, hydrology, and ecological setting at the facility.

4.1 Geology

The facility is in the Ironton Plateau physiographic region of the Allegheny Plateau province. The Ironton Plateau is characterized by moderately high relief (300 feet) dissected plateaus. Coarse-grained, coal-bearing rock sequences are more common in this region than other regions of the Allegheny Plateau province. The geology of the Ironton plateau region consists of Pennsylvanian age sedimentary units of the Allegheny Formation and the Pleistocene age Minford Clay, silt-loam and sand and gravel (ODNR 2006).

Information on the subsurface geology at the facility was obtained from the soil borings and monitoring wells that were installed during the Phase 1investigation as well as boring logs obtained from ODNR dating to 1955. The facility is underlain primarily by a combination of unconsolidated and bedrock geologic material. The unconsolidated material includes surficial fill material (concrete, clay, sand and gravel), clay, sand, and gravel, and the bedrock consists of shale. A cross-section was created using information from the Phase 1 investigation (Figures 4-1, 4-2).

Surficial fill, including silt, clay, asphalt, concrete and sand, was noted in many borings across the site and was encountered from the surface to 0.5 to 2 feet. In general, clay was encountered in the wells from near surface to depths around 10 feet bgs. The clay unit appears to be thicker in the center of the facility. Underlying the clay layer is silt and then a coarse-grained sand and gravel unit that generally extends to the top of bedrock.

Soils in the vicinity of the facility are of the Elkinsville, Weibachsville, and Sciotoville silt loam group (United States Department of Agriculture, Natural Resources Conservation Service 2011). These soils are characterized as gently sloping, moderately well drained, with low to moderate permeability.

4.1.1 Bedrock

The ODNR well logs describe bedrock as occurring between 75 and 80 feet bgs and the deep borings advanced during the Phase 1 investigation encountered bedrock at between 79 and 83 feet bgs. Bedrock encountered in the three deep borings was shale. One of the well logs (ODNR Well ID 233182) located north of the facility described the bedrock as sandstone. It is likely that both the shale and sandstone are members of the Pennsylvanian age Allegheny Formation.

4.1.2 Unconsolidated Soils

The unconsolidated soil described on the ODNR logs and observed during the Phase 1 investigation includes 0.5 to 2 feet of surficial fill material, underlain by up to 10 feet of a fine-grained low permeability (clay, silt, clayey silt and silty clay) layer underlain by up to

70 feet of coarse-grained sand and gravel. The fine-grained low permeability layer is believed to be Ohio River floodplain deposits. The sand and gravel layer beneath the clay is likely alluvial deposits deposited by the Ohio River and colluvium formed when loose material rolled from the top of the moderate grade slope of the Ironton Plateau and built up at the bottom of a low-grade slope.

4.1.3 Local Hydrogeology – Unconsolidated Deposits

Water levels were measured in January 2012 in the seven monitoring wells installed during the Phase1 investigation. Based on these measurements, the shallow groundwater flows from northwest to southeast (Figure 4-3).

The facility lies in an area that has been described to contain permeable deposits of sand and gravel beneath the floodplain adjacent to the Ohio River (Schmidt 1995). The sand and gravel deposits in this area are capable of yielding between 100 and 500 gallons per minute (gpm). Pumping test data obtained from well logs for water wells installed at the facility indicate that the wells were pumped at between 150 and 350 gpm for 24 to 48 hours, and a drawdown of between 8 and 9 feet was recorded. One of the wells closer to the Ohio River was pumped at 217 gpm for 74 hours, and drawdown of 25 feet was recorded. Groundwater Resources of Lawrence and Gallia counties (Schmidt 1995) described bedrock under the facility as alternating layers of shale and thin sandstone capable of yielding less than 2 gpm at depth of less than 125 feet.

4.2 Hydrology

Regional surface water generally drains south toward the Ohio River. Ditches control most of the surface water drainage at the facility, and one drainage ditch in the northwest portion of the facility drains to the north. Figure 4-4 shows the site topography. SWMU 18, which receives treated water from the wastewater treatment system, flows into Big Thief Creek, which discharges to the Ohio River. The section of the Ohio River near the facility flows from east to west.

4.3 Meteorology and Climate

Ironton, Ohio, is approximately 13 miles northwest of Huntington, West Virginia. Precipitation in the Huntington/Ironton area averages approximately 41 inches annually. Records for this area indicate that March through August are the wettest months (greater than 3.5 inches per month) while October, November, and February are the driest (less than 3 inches per month). The average annual snowfall for the area is 25.9 inches. The average daily temperature is 55.2 degrees Fahrenheit (°F). The coldest month is January when the average daily temperature is 32.8 °F. The hottest month is July when the average daily temperature is 75.4 °F. Winds typically are from the south to south-southeast at an average speed of 6.5 miles per hour.

4.4 Ecological Setting

The identified terrestrial and aquatic habitats were based on observations made by a CH2M HILL ecologist during a November 2010 site walk and during sediment sampling

conducted in January 2012. A complete ecological survey (i.e., bird survey, plant, and/or animal survey) was not conducted as part of this site walk.

4.4.1 Potential Terrestrial Habitats

Terrestrial habitats on the active portion of the facility are limited to open grasslands. Small scrub/shrub and woody habitats were found around the perimeter of the facility as well as to the south. The dominant large woody species within the terrestrial habitats included oak, sycamore, maple, and pine. Smaller scrub/shrub species observed included multi-flora rose, honeysuckle, poison ivy, and various shrubs. Several species of birds were noted during the site walk and included the American robin, dove, blue jay, and crow. Other birds were observed, but could not be identified. The only mammals observed during the site walk were squirrels; however, the grassy, scrub/shrub, and woody habitats could support other smaller mammalian species, such as rabbits, voles, shrews, woodchucks, and mice. Given the small riparian buffer, it is unlikely that larger mammals would use these habitats as a significant source of food and/or shelter.

4.4.2 Potential Aquatic Habitats

The only potential onsite aquatic habitats identified during the site walk were the man-made ditches identified in SWMU 17 and SWMU 18. SWMU 17 receives stormwater runoff from the facility and drains east to the SWMU 18 drainage ditch. SWMU 18 receives surface water runoff from the stormwater drainage system and fire pond which drained by gravity to Big Thief Creek to the south. The drainage ditch to the north (SWMU 19) is a relatively small grass-lined ditch approximately 3 feet wide. At the time of the site walk in November 2011, only approximately 6 inches of water was present in the ditch, whereas in January 2012 SWMU 19 was dry. Given that water is present in an intermittent nature (during storm events), SWMU 19 is not considered a potential aquatic habitat. The drainage ditch to Big Thief Creek ranges from 4 to 10 feet wide; the widest portions were found at the southern extent of the ditch. Portions of this ditch are gravel-lined, and water depths ranged from approximately 6 to 24 inches during the site walk. Fish were not observed in either ditch during the site walk, and it is unlikely that either ditch could support a viable fish community. Furthermore, given the channelized nature of the ditches and the lack of a riparian buffer, these drainage ditches are not likely to provide a significant food source for upper trophic aquatic receptors (i.e., birds and mammals).

Offsite aquatic features include Big Thief Creek and the Ohio River. As previously noted, SWMUs 17 and 18 discharge to Big Thief Creek, which in turn discharges to the Ohio River. In addition, during a desktop survey of the National Wetlands Inventory (NWI) database, several small wetlands were identified within the vicinity of the facility (Appendix E). The closest wetlands were approximately 100 feet from the facility boundary, adjacent to the southern extent of the drainage ditch to Big Thief Creek and along Big Thief Creek. These wetlands were identified by NWI as freshwater emergent and/or freshwater forested/shrub wetlands. Although no vegetation indicative of wetlands has been observed on the facility, no formal wetland delineation was conducted during the site walk to confirm the presence of wetlands.

4.4.3 Special Habitats

No existing or proposed state nature preserves are at, or in the vicinity of, the facility, and no known unique ecological sites, geologic features, breeding or non-breeding animal concentrations, champion trees, state parks, state forests, scenic rivers, or wildlife areas are within the project area. The U.S. Fish and Wildlife Service (USFWS) maintains records and databases of rare and endangered species for the state. USFWS lists the Indiana bat (*Myotis sodalist)*, running buffalo clover (*Trifolium stoloniferum),* fanshell mussel (*Cyprogenia stegaria),* and pink mucket pearly mussel (*Lamsilis abupta*) as endangered species, and sheepnose mussel (*Plethobasus cyphyus*) and snuffbox mussel (*Epioblasma triquetra)* as proposed endangered species in Lawrence County. These species were not observed onsite during the site walk in November 2010 or during sampling conducted in January 2012, and given the limited habitats present, it is unlikely that these species would be present onsite.

SECTION 5

Nature and Extent of Contamination

This section presents the results of the soil, sediment and groundwater sampling, and compares the analytical results to screening levels protective of human and ecological receptors and migration to groundwater. The human health screening levels are based on USEPA Regional Screening Levels (RSLs) for chemical constituents in soil (USEPA 2011). Section 6.3.1 presents a detailed discussion of the soil RSLs. The ecological screening levels are based on USEPA ecological soil screening levels (Eco-SSLs), and/or USEPA Region 5 RCRA ecological screening levels for soil and sediment (USEPA 2003) and a detailed description is presented in Section 7.3.1. Per the work plan, soil and sediment results were compared to ecological screening levels for SWMU 17, SWMU 18 (sediment only), SWMU 19, and SWMU 29 only.

The screening levels protective of migration to groundwater are based on the soil screening levels (SSLs) presented in the RSLs table (USEPA 2011). The protection of groundwater SSLs are back-calculated from acceptable groundwater concentrations (i.e., maximum contaminant levels [MCLs] or risk-based tap water RSLs) to determine soil concentrations that have the potential to contaminate groundwater. The MCL-based SSLs were used for screening. In instances when there was not an available MCL-based SSL, the risk-based SSL was used, if available. In both cases, the SSL includes a dilution attenuation factor (DAF) of 20 to account for dilution of the constituent concentration from soil pore water to groundwater. According to USEPA's *Soil Screening Guidance: User's Guide* (USEPA 1996), a default DAF of 20 is considered protective for sources areas up to 0.5 acre in size. Since the SWMUs and AOCs (except possibly SWMU 24) are less than 0.5 acre in size, the DAF of 20 is considered protective for this evaluation.

The SSL methodology was designed for use during the early stages of a site evaluation when information about subsurface conditions may be limited. Because of this constraint, the methodology is based on conservative, simplifying assumptions about the release and transport of contaminants in the subsurface. Therefore, exceeding a groundwater protective SSL only indicates that further evaluation may be warranted and does not necessarily indicate that groundwater contamination is present.

Boring logs for the soil borings and monitoring wells are presented in Appendix B. The analytical laboratory reports are presented in Appendix D. The CH2M HILL project chemist performed data evaluation and verification, and the data quality evaluation is presented in Appendix E.

5.1 Soil Results

The following sections summarize the soil sampling and analytical results for each of the SWMUs and AOCs investigated.

5.1.1 Site-wide Arsenic in Soils

Arsenic was detected across the site in every boring and depth interval at concentrations greater than the human health screening value. The frequency of detection, consistent concentrations, and absence of any historical information suggesting that arsenic was used at the facility suggests that arsenic is naturally occurring. The arsenic concentrations observed at the site range from 2.16 mg/kg to 42.9 mg/kg, with the average of 11.8 mg/kg being consistent with a documented regional background concentration of 13 mg/kg. This background value is documented in Appendix B: Development of Alternate Metal Standards in the *Closure Plan Review Guidance* (Ohio EPA, 2009) which is located at http://epa.ohio.gov/portals/32/pdf/2008CPRG.pdf. Arsenic is not discussed further in the subsequent sections.

5.1.2 SWMU 1: Former Flaring Pad

Nine borings were advanced at SWMU 1 around the former flaring pad location (see Figure 5-1). The types of material that were encountered during drilling activities consisted of asphalt cover to about 0.5 feet bgs, silts and clayey silts to about 7 feet bgs, silty sand to 11 feet bgs, and gravelly sand below 11 feet bgs to the end of boring at each locations.

The planned boring depth was 10 feet bgs; however, four of the nine borings (S01-SS01, S01-SS02, S01-SS05, and S01-SS08) were advanced to 25 feet bgs, and two borings (S01-SS03 and S01-SS06) were advanced to 15 feet bgs based on elevated PID readings observed in the soil samples. An additional sample was collected for laboratory analysis from the last intervals deeper than 10 feet bgs in five of these six borings.

Soil data was compared to human health RSLs and SSLs and the exceedances are shown on Figure 5-1. The analytical data are provided in Table 5-1, with the results summarized as follows:

- No VOCs were detected above RSLs.
- SVOCs exceeded RSLs in the southern borings S01-SS07, S01-SS08, and S01-SS09.
- Benzo(a)anthracene and benzo(a)pyrene was detected above RSLs from 0-2 feet bgs in S01-SS07, S01-SS08, and S01-SS09.
- Benzo(b)fluoranthene, dibenz(a,h)anthracene, and indeno(1,2,3-cd)pyrene) were detected above RSLs from 0-2 feet in S01-SS09.
- Benzene was detected from 3-5 and 8-10 feet above protection of groundwater SSLs at S01-SS02.
- Tetrachloroethene exceeded the protection of groundwater SSLs at 0 through 10 feet at S01-SS02, 3-5 and 8-10 feet at S01-SS08 and 0-2 feet at S01-SS09.
- Trichloroethene exceeded the protection of groundwater SSLs at 0-2 feet at S01-SS02.
- 1,1-bipheyl exceeded the protection of groundwater SSLs from 0-2 feet at S01-SS01, S01-SS-02 and S01-SS06 and from 3-5 and 8-10 feet at S01-SS-02. ,
- Benzo(a)anthracene, benzo(b)fluoranthene, dibenz(a,h)anthracene, indeno(1,2,3-cd)pyrene, and selenium also exceeded the protection of groundwater SSLs at SWMU 1.

5.1.3 SWMU 11: Satellite Accumulation Area - Ethafoam Plant

Five borings were advanced to 10 feet bgs at SWMU 11 around the concrete satellite accumulation storage area. The types of material that were encountered during drilling activities consisted of concrete cover to about 0.5 feet bgs; silts and clayey silts to about 7 feet bgs, with silty sand to 10 feet bgs.

The data are provided in Table 5-2. No VOCs or SVOCs were detected in excess of the RSLs for human health or SSLs for protection of groundwater. The sample locations are shown on Figure 5-2.

5.1.4 SWMU 12: Former Methylene Chloride Cleaning Tank

Two borings were advanced to at least 10 feet bgs at SWMU 12 around the former tank pad location. The types of material that were encountered during drilling activities consisted of concrete cover to about 0.8 feet, gravelly silts and clayey silts to about 7 feet bgs, gravelly silty sand to 10 feet bgs, and gravelly sand below 10 feet bgs.

One boring (S12-SS02) was advanced to 15 feet bgs based on elevated PID readings observed in the soil sample, but no soil samples were collected from 10-15 feet bgs because the highest PID reading was from 8-10 feet bgs.

The data are provided in Table 5-3. No VOCs or SVOCs were detected in excess of the RSLs for human health or SSLs for protection of groundwater. The sample locations are shown on Figure 5-3.

5.1.5 SWMU 15: Two Section Septic Tank System

Four borings were advanced to at least 10 feet bgs at SWMU 15 around the septic tank and a former sewer line. The soil types that were encountered during drilling activities consisted of clayey silts to about 15.5 feet bgs and silty sand to 25 feet bgs.

Boring S15-SS02 was advanced to 25 feet bgs, S15-SS03 was advanced to 15 feet bgs, and S15-SS04 was advanced to 14 feet bgs based on elevated PID readings observed in the soil samples. An additional sample was collected for laboratory analysis from the top of water table (20-22 feet bgs) at S15-SS02 and the bottom of bore hole at S15-SS03. S15-SS04 was advanced using a hand auger due to its proximity to an active utility line.

The exceedances are shown on Figure 5-4. The data are provided in Table 5-4. No VOCs exceeded the screening levels.

- Benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, and dibenz(a,h)anthracene exceeded RSL screening levels and SSLs for protection of groundwater in both samples collected from 0-2 feet bgs in S15-SS03.
- Indeno(1,2,3-cd)pyrene exceeded RSL screening levels in one of the two samples collected from 0-2 feet in S15-SS03. It exceeded SSLs for protection of groundwater in both samples.
- Mercury exceeded SSLs for protection of groundwater and RSLs in the duplicate sample at S15-SS04 from 8-10 feet.

- Selenium exceeded SSLs for protection of groundwater in one of the two samples collected from 8-10 feet bgs in S15-SS04.
- Benzene exceeded SSLs for protection of groundwater in the duplicate sample at S15-SS04 from 8-10 feet and naphthalene exceeded in the normal sample.

5.1.6 SWMU 17: Stormwater Drainage System

Three borings were advanced to at least 10 feet bgs at SWMU 17. The soil types that were encountered during drilling activities consisted of silts to 8 feet bgs in the northern two borings and gravelly sand below 8 feet bgs. The silt layer extended to at least 10 feet in the southern boring.

One boring (S17-SS01) was advanced to 15 feet bgs, and one boring (S17-SS02) was advanced to 20 feet bgs based on elevated PID readings observed in the soil samples. An additional sample was collected for laboratory analysis from 13 to 15 feet bgs at S17-SS01 and 15 to 17 feet bgs at S17-SS02.

The exceedances are shown on Figure 5-5. The data are provided in Table 5-5. No soil VOCs or SVOCs exceeded the human health RSL screening levels. Chromium was detected at concentrations exceeding ecological screening values at the three borings from 0-2 feet. Selenium was detected at concentrations exceeding ecological screening values at S17-SS03 from 0-2 feet. Nitrobenzene was detected at concentrations exceeding protection of groundwater screening levels at S17-SS02 from 8-10 feet.

5.1.7 SWMU 19: Drainage Ditch to North

Two borings were installed at SWMU 19; one was advanced to 10 feet bgs, and the other to 20 feet bgs around the drainage ditch. The soil types that were encountered during drilling activities consisted of clayey silt to 2.5 feet bgs and silty sand below 2.5 feet bgs in the north, with silty sand to 3 feet bgs and gravelly sand below 3 feet bgs in the south.

Boring S19-SS02 was advanced to 20 feet bgs based on elevated PID readings observed in the soil samples. An additional sample was collected for laboratory analysis from 16-18 feet bgs in this borings.

The exceedances are shown on Figure 5-6. The data are provided in Table 5-6. No VOCs or SVOCs exceeded the human health RSLs or protection of groundwater SSL.

5.1.8 SWMU 24: Process Sewer Line

Eight borings were advanced to at least 10 feet bgs at SWMU 24 around the process sewer line. The soil types that were encountered during drilling activities consist of asphalt and gravel cover to 0.5 feet bgs, silts and clayey silts to depths of 8 to 18 feet bgs, underlain by gravelly sand.

Two of the eight borings (S24-SS01 and S24-SS02) were advanced to 25 feet bgs, and two borings (S24-SS04 and S24-SS08) were advanced to 20 feet bgs based on elevated PID readings observed in the soil samples. Additional sample was collected for laboratory analysis from 21-23 feet bgs at S24-SS01, 13-15 feet bgs at S24-SS02, and 13-15 feet bgs at S24-SS08.

The exceedances are shown on Figure 5-7. The data are provided in Table 5-7. The following exceedances of screening levels were noted:

- Ethylbenzene and 1-1 biphenyl exceeded RSL screening levels and the protection of groundwater SSLs from 13-15 feet bgs in S24-SS02. This boring was placed near the area of excavation associated with the closure of the drum storage area. Confirmation sampling after the excavation showed that some of the soil left in place exceeded the current RSL screening levels for ethylbenzene (Radian, 1997). Additional exceedances of the the protection of groundwater SSLs at this location included 1,3,5-Trimethylbenzene, benzene, ethylbenzene, isopropylbenzene, n-propylbenzene, m,p- and o-xylene and styrene.
- Benzo(a)anthracene exceeded RSL screening levels from 0-2 feet bgs in S24-SS01. It also exceeded the protection of groundwater SSLs from 0-2 feet in S24-SS01, S24-SS02, S24-SS-03 and S24-SS06.
- Benzo(a)pyrene exceeded RSLs from 0-2 feet bgs in S24-SS01, S24-SS02, S24-SS04, and S24-SS06.
- Benzo(b)fluoranthene was detected at concentrations exceeding RSLs and protection of groundwater SSLs at S24-SS01 and S24-SS02 from 0-2 feet. It was also detected at concentrations exceeding protection of groundwater SSLs at S24-SS03, and S24-SS04 from 0-2 feet.
- Dibenz(a,h)anthracene was detected at concentrations exceeding RSLs and protection of groundwater SSLs at S24-SS01 and S24-SS02 from 0-2 feet.
- Indeno(1,2,3-cd)pyrene was detected at concentrations exceeding RSLs and protection of groundwater SSLs at S24-SS02 from 0-2 feet.

5.1.9 SWMU 25-28: Former Wastewater Treatment System

Four borings were advanced to at least 10 feet bgs at SWMU 25-28 around the former wastewater treatment system. The soil types that were encountered during drilling activities consisted of gravelly sand to about 2 feet bgs and clayey silt below 2 feet bgs to the end of borehole.

One boring (S25-SS03) was advanced to 15 feet bgs based on elevated PID readings observed in the soil samples, but inadvertently no sample was collected for laboratory analysis from deeper than 10 feet bgs.

The exceedances are shown on Figure 5-8. The data are provided in Table 5-8. No VOCs exceeded the screening levels. SVOCs exceeded screening levels in the southern borings S25-SS03 and S25-SS04.

- 1,1-biphenyl was above the RSL screening level and the protection of groundwater SSLs from 8-10 feet bgs from both samples in S25-SS03.
- Benzo(a)pyrene was detected above the screening level from 0-2 feet bgs in S25-SS03 and from 3-5 feet bgs in S25-SS04. Benzo a)anthracene and benzo(b)fluoranthene were detected above protection of groundwater RSLs at this location.

5.1.10 SWMU 29: Former Used Filter Sand Pile

Two borings were advanced to 10 feet bgs at SWMU 29 around the former used filter sand pile. The soil types that were encountered during drilling activities consisted of top soil or sand to 0.5 or 3 feet bgs and clayey silts under the sand.

The exceedances are shown on Figure 5-9. The data are provided in Table 5-9. No VOCs or SVOCs exceeded the human health or ecological screening levels or protection of groundwater SSLs. Selenium and chromium exceeded ecological screening levels from 0-2 feet bgs in both borings.

5.1.11 AOC D: Underground Catalyst Storage Tank

Two borings were advanced below 10 feet bgs at AOC D around the former catalyst storage tank location. The soil types that were encountered during drilling activities consist of concrete to 3 feet bgs, sand in the northern boring and clay/silt in the southern boring to 12 feet bgs, and gravelly sand below 12 feet bgs.

Boring AOD-SS01 was advanced to 25 feet bgs and boring AOD-SS02 was advanced to 15 feet bgs based on elevated PID readings observed in the soil samples. An additional sample was collected for laboratory analysis from deeper from 21-23 feet bgs at AOD-SS01 and 13-15 feet bgs at AOD-SS02.

The exceedances are shown on Figure 5-10. The data are provided in Table 5-10. No VOCs or SVOCs were detected in excess of RSL screening levels. Benzene exceeded the protection of groundwater SSLs at AOD-SS02 from 0-2 feet.

5.2 Sediment Results

One sediment sample was collected at the stormwater drainage system at SWMU 17. The detections are shown on Figure 5-11 and the data are provided in Table 5-11. Five sediment samples were collected at SWMU 18 at approximately 300 to 1,200-foot intervals within the length of the drainage ditch. The detections are shown on Figure 5-11. The data are provided in Table 5-12.

The data were screened against human health and ecological risk screening levels and protection of groundwater SSLs.

- Acenaphthylene and selenium also exceeded ecological screening levels in the sediment sample. Pentachlorophenol exceeded the protection of groundwater SSLs in sediment sample S17-SD01.
- 2-methylnaphthalene, acetone, anthracene, acenaphthylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, fluoranthene, fluorine, indeno(1,2,3-cd)pyrene and pyrene exceeded RSLs at S18-SD01.
- Benzo(a)anthracene and benzo(a)pyrene exceeded both RSLs and protection of groundwater SSLs at S18-SD01.
- Benzo(b)fluoranthene exceeded protection of groundwater SSLs at S18-SD01.
- Acenaphthylene exceeded its ecological screening level in all samples except S18-SD02.

- Acetone exceeded its ecological screening level in S18-SD01 and both samples from S18-SD02.
- Pyrene exceeded its ecological screening level in S18-SD01, one of the two samples from S18-SD02, and SD04.
- Selenium exceeded ecological screening levels in both samples from S18-SD02, S18-SD04, and S18-SD05.
- 11,1-Biphenyl exceeded protection of groundwater SSLs in S18-SS01 and in the duplicate and normal samples from S18-SD02.

5.3 Groundwater Results

Groundwater grab samples were collected from two onsite wells, Water Well 2 and Water Well 5, as well as from a spigot that was fed by a storage tank that holds water from these two wells. The samples were analyzed for VOCs and the data are presented in Table 5-13. The data was not screened against any screening criteria; however, only one analyte exceeded the reported sample quantitation limit. This analyte, 2-chloroethyl vinyl ether, was rejected because of the of hydrochloric acid (HCl) preservation in the samples and concentrations could not be determined. This analyte is not known to have been used onsite, and there is no historical reason to assume that detected concentrations would be found.

SECTION 6

Screening-Level Human Health Risk Assessment

A screening-level human health risk assessment (SLHHRA) was performed using the Phase 1 RFI data to evaluate potential risks associated with exposure to soil and sediment by potential current and future receptor populations. Based on the objectives of the Phase 1 RFI, only soil and sediment samples were collected for analyses to provide the data necessary to perform an initial site characterization. The results of the SLHHRA provide a preliminary indication of potential risks from chemicals of potential concern (COPCs) and are used to help determine whether the site requires further evaluation (e.g., a baseline risk assessment or additional data collection) or no further action with respect to human health risks associated with soil and sediment under current and future industrial site use.

The basic framework for this risk screening has been derived from the USEPA *Risk Assessment Guidance for Superfund, Part A, Volume 1* (RAGS) and associated guidance documents (USEPA 1989, 1990, 1991). This risk screening includes estimates of human health risks associated with exposure to the soil and sediment as appropriate for each SWMU and AOC. The SLHHRA was performed in a phased approach, as described below.

6.1 Data Evaluation

Soil and sediment samples collected from each SWMU and AOC in December 2011 and January 2012 were evaluated in the SLHHRA. The data evaluated in the SLHHRA are presented in Tables 5-1 through 5-13. The data included in the SLHHRA were validated. The following bullets discuss how the qualified data were evaluated in the risk assessment:

- Rejected ("R" qualified) data were excluded from the risk screening.
- Estimated ("J" qualified) data were treated as detected concentrations in the risk screening.
- For duplicate samples, the maximum concentration between the two samples was used as the sample concentration.

The methodology used in this preliminary COPC screening assessment is consistent with that described in the USEPA-approved work plan (CH2M HILL 2011). Soil samples collected from discrete depths between 0 and 10 feet bgs during the Phase 1 RFI in December 2011 were evaluated. Surface soil samples collected from 0 to 2 feet bgs were used to evaluate the current industrial scenario and current trespasser/recreational user scenario. Because future invasive activities may disturb soil in the shallow subsurface (0 to 10 feet bgs) and bring current subsurface soil to the ground surface where contact may occur, soil from the 0- to 10-foot interval ("total soil") was used to evaluate reasonably foreseeable future scenarios.

6.2 Human Health Conceptual Site Model

The human health conceptual exposure model (CEM) presents an overview of site conditions, potential contaminant migration pathways, and exposure pathways to potential receptors. Section 2 presents the site history and setting, which is summarized below. Figures 6-1 through 6-11 show the conceptual model of potential exposure pathways for each SWMU and AOC. These pathways are described in further detail in the following paragraphs.

The facility currently operates three plants to manufacture and distribute polymeric beads and foam. Facility buildings are used for manufacturing, warehouse, and office space. Currently, construction or excavation activities are not taking place at the site. Future land use is expected to remain similar to current land use and would therefore be either industrial. Future residential development of the site is unlikely.

Under current land use conditions, public access to the site area where operations occur (including the SWMUs and AOC evaluated in the Phase 1 RFI, with the exception of portions of SWMU 18) is restricted by fencing and a staffed guard shack is present at the entrance. Portions of SWMU 18 are not within the fenced and access-restricted areas. Therefore, trespassers could access the site in these areas and the trespasser receptor is considered potentially exposed to surface soils at SWMU 18. Due to existing concrete cover at SWMUs 1, 11, 12, and 15, direct contact to soil is not currently present. Additionally, there is no direct access to AOC D because it is an underground concrete vault. Potential current receptors include site workers and trespassers. The current receptors may come in contact with surface soil; exposure routes may include incidental ingestion, dermal contact, and inhalation of volatile and particulate emissions from the surface soil.

Potential future receptors include construction workers, in addition to the current receptors (site workers and trespassers). Future receptors may also come in contact with surface soil (incidental ingestion, dermal contact, and inhalation of volatile and particulate emissions from the surface soil). In addition, it is assumed that the future site workers and construction workers could be exposed to subsurface soil if future industrial buildings or piping or other underground utilities are repaired or constructed at the site and the soil is re-worked, bringing the subsurface soil to the surface. Exposure routes for the subsurface soil are the same as those for current surface soil (incidental ingestion of the soil, dermal contact with the soil, and inhalation of volatile and particulate emissions from the soil).

There is no current drinking water use of groundwater at the site. Five non-potable water supply wells are located onsite. The facility reports that Well 5 is used as needed for the wastewater treatment plant, and Well 2 is used for fire protection. The remaining three wells are not used. SWI supplies drinking water purchased from the City of Portsmouth, Ohio, to the facility and most of the residents within the vicinity of the facility. This water is supplied from the City of Portsmouth's filtration plant located on the Ohio River approximately 15 miles upstream of the facility. According to ODNR data, 10 privately-owned wells are located within 1 mile of the site and the use of these wells is unknown.

6.3 SLHHRA Approach

The SLHHRA was conducted in two steps. Step 1 identified COPCs in soil and sediment by comparison to risk-based screening levels. The identified COPCs at each SWMU and AOC were evaluated in Step 2 using maximum detected soil and sediment concentrations and a risk ratio approach (USEPA 1991, 2011) to determine whether concentrations pose risks to potential receptor populations above the USEPA risk management levels (target cancer risk of $1x10^{-6}$ to $1x10^{-4}$ and target non-cancer hazard index [HI] of 1). A detailed description of the SLHHRA process is provided below.

6.3.1 Step 1

The COPC screening process was conducted for soil and sediment on a site-specific basis (by SWMU or AOC). Surface soil, subsurface soil, and sediment analytical results were screened against the industrial soil RSLs (USEPA 2011). The RSLs based on non-carcinogenic health endpoints were reduced by a factor of 10 (i.e., adjusted to a hazard quotient [HQ] = 0.1) to account for the potential presence of multiple constituents affecting the same target organ, while no adjustment was made for the RSLs based on carcinogenic health endpoints (i.e., the RSLs were based on a target excess lifetime cancer risk [ELCR] of $1x10^{-6}$). For those constituents with more than one RSL (e.g., carcinogenic-based RSL, non-carcinogenic-based RSL [HQ = 0.1]), the lowest value was selected as the final RSL for that constituent. The industrial RSLs were used for selecting soil and sediment COPCs. Detected constituents that had no RSL were compared to RSLs for surrogate chemicals, if available. Soil and sediment results were screened against the USEPA RSL for trivalent chromium as a surrogate for total chromium because available documentation indicates that chromium has not been utilized in the manufacturing process at the site. Trivalent chromium can occur naturally in soil and groundwater and it is unlikely that hexavalent chromium would be present in soil at the site.

The detection limits for the non-detected constituents were also compared to the screening levels discussed above (Appendix F). The range of detection limits for 1,2-dibromo-3-chloropropane and n-nitroso-di-n-propylamine were slightly higher than the respective screening levels (difference in detection limit and screening level ranging from 0.01 to 0.041). Since these constituents were not detected in the soil samples, they were not identified as COPCs for further evaluation.

If the maximum detected concentration in soil or sediment exceeded the appropriate screening value, the COPC was retained for further evaluation and the screening level risk evaluation proceeded to Step 2.

6.3.2 Step 2

For COPCs retained for further evaluation following Step 1, a corresponding non-cancer hazards and ELCRs were calculated on a site-specific (SWMU and/or AOC) basis using methods described below. For those constituents identified as COPCs based on soil saturation-based RSLs, corresponding hazards and risks were calculated using risk-based RSLs.

Non-cancer Hazard Estimation Methods

For non-cancer effects, the potential for a receptor to develop an adverse effect was estimated by comparing the predicted level of exposure for a particular chemical with the highest level of exposure that is considered protective (i.e., the screening level).

For chemicals identified as COPCs in Step 1, a corresponding HQ was calculated using the following equation:

$$HQ = \frac{\text{Maximum detected soil or sediment concentration (mg/kg) x target hazard (1)}}{\text{Industrial Soil RSL}}$$

mg/kg = milligrams per kilogram

The maximum detected concentration (the same concentration that was used in Step 1) was used in Step 2. RSLs for non-carcinogenic effects were not adjusted by 10 as was done in Step 1. Instead, they are used as presented in the RSL table.

The individual constituent HQs at each SWMU and AOC then were summed to obtain a site-specific HI to assess the potential for non-carcinogenic health effects posed by exposure to multiple constituents (USEPA 1986). The summation of individual constituent HQs to determine the HI assumes that non-carcinogenic hazards associated with exposure to more than one constituent are additive. Synergistic or antagonistic interactions between constituents are not considered. The HI may exceed 1 even if all of the individual HQs are less than 1. An HI greater than 1 indicates that there is some potential for adverse non-carcinogenic health effects associated with exposure to the constituents of concern. However, if the HI is greater than 1, the target organ/effect specific HIs can be calculated (summing all HQs for constituents that affect the same target organ), to determine whether the HI for a specific target organ/effect is greater than 1. If the HI for each target organ/effect is not greater than 1, it can be assumed that there is no unacceptable non-carcinogenic hazard to the receptor. If the cumulative corresponding HI by target organ/effect is greater than 1, then further evaluation of the site may be necessary.

6.3.3 Carcinogenic Risk Estimation

The potential for carcinogenic effects associated with exposure to site-related constituents was evaluated by estimating the ELCR. ELCR is the incremental increase in the probability of developing cancer during one's lifetime in addition to the background probability of developing cancer. For example, an individual exposed to a carcinogen with a calculated cancer risk of $2x10^{-6}$ indicates the probability of the individual getting cancer increases by 2 in 1 million above background levels.

Similar to the approach for non-carcinogenic hazard estimates for each sample location, constituent-specific ELCRs were calculated using a using a risk ratio approach (USEPA 1991).

For chemicals identified as COPCs in Step 1, chemical-specific ELCRs were calculated for each identified using the following equation:

$$\text{ELCR} = \frac{\text{Maximum detected soil or sediment concentration (mg/kg) x target risk level } (1\text{x}10^{-6})}{\text{Industrial Soil RSL}}$$

mg/kg = milligrams per kilogram
ELCR = excess lifetime carcinogenic risk

The individual constituent ELCRs at each SWMU and AOC then were summed to obtain a site-specific ELCR to assess the potential for carcinogenic health effects posed by exposure to multiple constituents (USEPA 1986). As described in the USEPA-approved work plan (CH2M HILL 2011), if it is determined that cumulative risks are within USEPA's risk management range of $1\text{x}10^{-6}$ to $1\text{x}10^{-4}$ for carcinogenic compounds, and the cumulative HI is less than 1, then no further risk evaluation will be recommended.

6.4 SLHHRA Results

Results of the SLHHRA for each potential soil exposure interval are presented in Table 6-1 through Table 6-23, and are summarized below:

- **SWMU 1 Former Flaring Pad:**
  Five polynuclear aromatic hydrocarbons (PAHs) (benzo[a]anthracene, benzo[a]pyrene, benzo[b]fluoranthene, dibenz[a,h]anthracene, indeno[1,2,3-cd]pyrene) and arsenic were identified as COPCs in surface soil and total soil (Table 6-1). Based on constituents in the same class, carcinogenic polynuclear aromatic hydrocarbons (cPAHs) benzo(k)fluoranthene and chrysene were also included in the risk ratio calculations with the five PAHs identified as COPCs. The ELCRs associated with surface soil ($2\text{x}10^{-5}$) and total soil ($2\text{x}10^{-5}$) at SWMU-01 were within USEPA's risk management range of $1\text{x}10^{-6}$ to $1\text{x}10^{-4}$ (Table 6-2). The estimated cumulative non-cancer HIs for surface soil (0.06) and total soil (0.07) were below USEPA's threshold of 1 (Table 6-2). Based on these results, no further evaluation is necessary for potential exposures to soil associated with industrial land use at SWMU 1.

- **SWMU 11 Satellite Accumulation Area – Ethafoam Plant:**
  Arsenic was identified as COPCs in surface soil and total soil (Table 6-3). The ELCRs associated with surface soil ($9\text{x}10^{-6}$) and total soil ($1\text{x}10^{-5}$) at SWMU-11 were within USEPA's risk management range of $1\text{x}10^{-6}$ to $1\text{x}10^{-4}$ (Table 6-4). The estimated cumulative non-cancer HIs for surface soil (0.05) and total soil (0.06) were below USEPA's threshold of 1 (Table 6-4). Based on these results, no further evaluation is necessary for potential exposures to soil associated with industrial land use at SWMU 11.

- **SWMU 12 Former Methylene Chloride Cleaning Tank:**
  Arsenic was identified as COPCs in surface soil and total soil (Table 6-5). The ELCRs associated with surface soil ($8x10^{-6}$) and total soil ($8x10^{-6}$) at SWMU-12 were within USEPA's risk management range of $1x10^{-6}$ to $1x10^{-4}$ (Table 6-6). The estimated cumulative non-cancer HIs for surface soil (0.05) and total soil (0.05) were below USEPA's threshold of 1 (Table 6-6). Based on these results, no further evaluation is necessary for potential exposures to soil associated with industrial land use at SWMU 12.

- **SWMU 15 Two Section Septic Tank System:**
  Five PAHs (benzo[a]anthracene, benzo[a]pyrene, benzo[b]fluoranthene, dibenz[a,h]anthracene, indeno[1,2,3-cd]pyrene) and arsenic were identified as COPCs in surface soil and total soil (Table 6-7).

  Based on constituents in the same class, cPAHs benzo(k)fluoranthene and chrysene were also included in the risk ratio calculations with the five PAHs identified as COPCs. The ELCRs associated with surface soil ($3x10^{-5}$) and total soil ($3x10^{-5}$) at SWMU-15 were within USEPA's risk management range of $1x10^{-6}$ to $1x10^{-4}$ (Table 6-8). The estimated cumulative non-cancer HIs for surface soil (0.04) and total soil (0.05) were below USEPA's threshold of 1 (Table 6-8). Based on these results, no further evaluation is necessary for potential exposures to soil associated with industrial land use at SWMU 15.

- **SWMU 17 Stormwater Drainage System:**
  Arsenic was identified as a COPC in both sediment sample locations and in surface soil and total soil at the same soil sample location (Table 6-9) at SWMU-17. The ELCRs associated with sediment ($7x10^{-6}$) and surface soil and total soil ($9x10^{-6}$) were within USEPA's risk management range of $1x10^{-6}$ to $1x10^{-4}$ (Table 6-10). The estimated cumulative non-cancer HIs for sediment (0.04) and surface soil and total soil (0.05) were below USEPA's threshold of 1 (Table 6-10). Based on these results, no further evaluation is necessary for potential exposures to soil associated with industrial land use at SWMU 17.

- **SWMU 18 Drainage Ditch to Big Thief Creek:**
  Benzo(a)pyrene and arsenic were identified as COPCs in sediment (Table 6-11). Based on constituents in the same class, cPAHs benzo(a)anthracene, benzo(b)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-cd)pyrene were also included in the risk ratio calculations with benzo(a)pyrene. The ELCR associated with sediment ($1x10^{-5}$) at SWMU-18 was within USEPA's risk management range of $1x10^{-6}$ to $1x10^{-4}$ (Table 6-12). The estimated cumulative non-cancer HI for sediment (0.06) was below USEPA's threshold of 1 (Table 6-12). Based on these results, no further evaluation is necessary for potential exposures to soil associated with industrial land use at SWMU 18.

- **SWMU 19 Drainage Ditch to North:**
  Arsenic was identified as a COPC in both surface soil and total soil at the same soil sample location (Table 6-13) at SWMU 19. The ELCR associated with surface soil and total soil ($8x10^{-6}$) was within USEPA's risk management range of $1x10^{-6}$ to $1x10^{-4}$ (Table 6-14). The estimated cumulative non-cancer HIs for surface soil and total soil (0.05) were below USEPA's threshold of 1 (Table 6-14). Based on these results, no

further evaluation is necessary for potential exposures to soil associated with industrial land use at SWMU 19.

- **SWMU 24 Process Sewer Line:**
  Five PAHs (benzo[a]anthracene, benzo[a]pyrene, benzo[b]fluoranthene, dibenz[a,h]anthracene, indeno[1,2,3-cd]pyrene) and arsenic were identified as COPCs in surface soil and total soil (Table 6-15). Based on constituents in the same class, cPAHs benzo(k)fluoranthene and chrysene were also included in the risk ratio calculations with the five PAHs identified as COPCs. The ELCRs associated with surface soil ($2x10^{-5}$) and total soil ($3x10^{-5}$) at SWMU-24 were within USEPA's risk management range of $1x10^{-6}$ to $1x10^{-4}$ (Table 6-16). The estimated cumulative non-cancer HIs for surface soil (0.06) and total soil (0.07) were below USEPA's threshold of 1 (Table 6-16). Based on these results, no further evaluation is necessary for potential exposures to soil associated with industrial land use at SWMU 24.

- **SWMU 25-28 Former Wastewater Treatment System:**
  Arsenic was identified as a COPC in both surface soil and total soil at the same soil sample location (Table 6-17) at SWMU-25-28. 1,1'-Biphenyl and benzo(a)pyrene were also identified as COPCs in total soil (Table 6-17). Based on constituents in the same class, six additional cPAHs (benzo[a]anthracene, benzo[b]fluoranthene, benzo[k]fluoranthene, chrysene, dibenz[a,h]anthracene, and indeno[1,2,3-cd]pyrene) were also included in the risk ratio calculations for total soil. The ELCR associated with surface soil ($3x10^{-5}$) and total soil ($3x10^{-5}$) at SWMU 25-28 were within USEPA's risk management range of $1x10^{-6}$ to $1x10^{-4}$ (Table 6-18). The estimated cumulative non-cancer HIs for surface soil (0.2) and total soil (0.5) were below USEPA's threshold of 1 (Table 6-18). Based on these results, no further evaluation is necessary for potential exposures to soil associated with industrial land use at SWMU 25-28.

- **SWMU 29 Former Used Filter Sand Pile:**
  Arsenic was identified as COPCs in surface soil and total soil (Table 6-19). The ELCRs associated with surface soil ($9x10^{-6}$) and total soil ($1x10^{-5}$) at SWMU 29 were within USEPA's risk management range of $1x10^{-6}$ to $1x10^{-4}$ (Table 6-20). The estimated cumulative non-cancer HIs for surface soil (0.06) and total soil (0.08) were below USEPA's threshold of 1 (Table 6-20). Based on these results, no further evaluation is necessary for potential exposures to soil associated with industrial land use at SWMU 29.

- **AOC D Underground Catalyst Storage Tank:**
  Arsenic was identified as a COPC in surface soil and total soil (Table 6-21). The ELCRs associated with surface soil ($5x10^{-6}$) and total soil ($9x10^{-6}$) at AOC D were within USEPA's risk management range of $1x10^{-6}$ to $1x10^{-4}$ (Table 6-22). The estimated cumulative non-cancer HIs for surface soil (0.03) and total soil (0.05) were below USEPA's threshold of 1 (Table 6-22). Based on these results, no further evaluation is necessary for potential exposures to soil associated with industrial land use at AOC D.

6.5 SLHHRA Summary and Conclusions

A summary of the risk estimates associated with soil and sediment at each SWMU and AOC is provided in Table 6-23. Arsenic was identified as a COPC in all sediment, surface soil,

and subsurface soil samples. The distribution and concentrations of arsenic were similar at all sample locations across the evaluated SWMUs and AOC. These results may be reflective of naturally-occurring concentrations of arsenic rather than site-related impacts. Furthermore, the estimated excess lifetime cancer risks and non-cancer hazards associated with all COPCs, including arsenic, were within USEPA's risk management range for cancer risks and below the USEPA non-cancer threshold. Based on the results of this SLHHRA for soil and sediment exposure scenarios associated with current and anticipated future industrial land use, no further evaluation is necessary for soil and sediment at the evaluated SWMUs and AOC.

SECTION 7

Ecological Risk Screening

This section presents an ecological risk screening for ecologically relevant facility sites included in the Phase 1 RFI. These site-specific screenings represent the initiation of the ecological risk assessment (ERA) process. They were conducted to determine whether COPCs are present at sites, and if so, if additional phases of investigation and assessment are necessary in order to (a) delineate the full extent of contamination, and (b) assess potentially unacceptable ecological risks via formalized and more comprehensive SWMU- and AOC-specific ERAs. Based on the objectives of the Phase 1 RFI, only soil and sediment samples were collected for facility sites to provide data necessary to perform an initial site characterization of AOCs and SWMUs, improve understanding of fate and transport of constituents detected, and provide initial data for future ERAs. Based on the results of the Phase 1 risk screenings, additional media might be considered in subsequent phases of investigation.

7.1 Problem Formulation

These ecological risk screenings were conducted in accordance with *Ecological Risk Assessment Guidance Document* (Ohio EPA 2008) and USEPA guidance (USEPA 1997, 1998). The ERA process consists of three main components: (1) problem formulation; (2) exposure and effects analysis; and (3) risk characterization. The eight-step ERA process is depicted in Figure 7-1. The screening problem formulation, which represents Step 1 of the ERA process, was presented as part of the USEPA-approved work plan (CH2M HILL 2011) to establish the goals, scope, and focus of the ecological investigation of facility sites. Represented here, Step 1 consisted of carrying out the following for each site:

- Characterizing the environmental setting in terms of the habitats and biota known or likely to be present.
- Using available analytical data or knowledge of suspected releases based on known site history (e.g., documented site activities and/or waste streams) to identify potential constituents of interest in ecologically relevant media.
- Developing a conceptual site model (CSM) that identifies and evaluates potential source areas, transport pathways, fate and transport mechanisms, exposure media, exposure pathways and routes, and receptors. The ecological CSM was presented in the work plan and summarized on Figure 7-2.

7.1.1 Selection of Ecologically Relevant Sites

Step 1 (problem formulation) was used to determine which SWMUs or AOCs could be considered ecologically relevant and warrant further evaluation via the ERA process. This initial step was performed during development of the work plan based on information learned by a CH2M HILL ecologist during a site reconnaissance (CH2M HILL 2011). Based on this, the following SWMUs and AOC were identified as ecologically relevant:

- SWMU 17 – Stormwater Drainage Ditch
- SWMU 18 – Drainage Ditch to Big Thief Creek
- SWMU 19 – Drainage Ditch to North
- SWMU 29 – Former Used Filter Sand Pile

Eight sites do not warrant further evaluation within the ERA because they are within or near the current and/or former process areas of the facility; surrounded by buildings, pavement, and/or roads; enclosed partially or completely by fencing or berms; and contain no viable habitats. Therefore, the answer to Question 1 for each of these sites is "No," and so it follows that no receptors or receptor groups are expected to use these sites; thus, there is no potential for complete exposure pathways. As such, ERAs will not be conducted for the following sites, and they are not considered or discussed further:

- Four other sites (SWMUs 25, 26, 27, and 28) that have viable habitats (adjacent terrestrial grasslands) but are located within process areas
- Areas that are either paved or covered with gravel and could not support viable terrestrial receptors

For SWMU 37, the answer to Question 1 also was "Yes" because of a small fire pond. This unit consists of a concrete basin with a 25,000-gallon capacity located north of the wastewater treatment system. The unit receives untreated process water from the process sewer system. Given the nature of this basin (i.e., concrete structure), this SWMU could not likely support aquatic life (other than opportunistic aquatic insects such as fly larvae), and as a result, further evaluation of SWMU 37 is not warranted with respect to ecological risk.

7.1.2 Chemicals of Interest

Chemical analytical data for surface soil and sediment samples collected during the January 2012 field investigation at ecologically relevant sites were used for screening (Table 7-2). Details regarding how and where these samples were collected are summarized in earlier sections of this report. Even though samples were collected from two to three depths at each site, only data for surface soil samples (those collected from 0 to 2 feet bgs) were evaluated. Although some potential receptors may burrow, it was assumed that the majority of the ecological receptors, regardless of trophic level, would most likely only come in contact with constituents in these shallower intervals. Data from subsurface soil samples (e.g., 2 to 3, 3 to 5, and/or 8 to 10 feet bgs) were not used. The samples used for the ecological risk screenings, and parameters analyzed for each, are listed in Table 7-2.

7.2 Exposure Assessment

The objective in this step is the estimation of exposure point concentrations (EPCs), or the COPC concentrations in media to which ecological receptors might be exposed, either directly or indirectly (i.e., through their food webs).

7.2.1 Direct Exposures

The EPC for this assessment was the maximum detected COPC concentration in the site-specific surface soil and surface sediment data sets. Maximum concentrations were used to estimate the EPC in order to conservatively estimate potential exposures for the ecological receptors selected as assessment endpoints (Table 7-3).

7.2.2 Indirect (Food Web) Exposures

COPCs retained as chemicals of potential ecological concern (COPECs) based on direct exposures were further evaluated with respect to indirect exposures using receptor specific food web models. Food web exposures were evaluated for the following receptors used to represent surrogates for receptors that are known to be present or likely to be present based on the CSM:

- Red-tailed hawk (*Buteo jamaicensis*)—avian terrestrial carnivore
- Mallard duck (*Anas platyrhynchos*)—avian semi-aquatic herbivore
- Marsh wren (*Cistothorus palustris*)—avian semi-aquatic insectivore
- Mourning dove (*Zenaida macroura*)—avian terrestrial herbivore
- American robin (*Turdus migratorius)*—avian terrestrial insectivore
- Short-tailed shrew (*Blarina brevicauda*)—mammalian terrestrial insectivore
- White-tailed deer (*OdoCOPCleus virginianus*)—mammalian terrestrial herbivore
- White-footed mouse (*Peromyscus leucopus*)—mammalian terrestrial herbivore
- Red fox (*Vulpes vulpes*)—mammalian terrestrial carnivore
- Muskrat (*Ondatra zibethicus*)—mammalian semi-aquatic herbivore

For screening-level exposure estimates, uptake of COPCs by these receptors from abiotic media via their prey items was modeled using literature-derived, central tendency (median or mean) estimates for bioconcentration factors (BCFs) or bioaccumulation factors (BAFs). Available BCFs and BAFs used in this ERA are presented in Tables 7-4 and 7-5. A default factor of 1 was used only when data were not available in the literature for a COPC. The models and parameter values used for calculating these tissue calculations are outlined in the following subsections.

7.2.2.1 Terrestrial Plants

Tissue concentrations in the aboveground vegetative portion of terrestrial plants were estimated by multiplying the surface soil EPC for each chemical by chemical-specific soil-to-plant BCFs obtained from the literature.

The BCF values were based upon root uptake from soil and upon the ratio between dry-weight soil and dry-weight plant tissue. Literature values based upon the ratio between dry-weight soil and wet-weight plant tissue were converted to a dry-weight basis by dividing the wet-weight BCF by an estimated solids content for terrestrial plants (15 percent [0.15]; Sample et al. 1997).

For organic chemicals without literature-based BCFs, soil-to-plant BCFs were estimated using the algorithm provided in USEPA (2005b):

$$log\ BCF = (-0.229)\ (log\ K_{ow}) + 1.0237$$

where: BCF = Soil-to-plant BCF (unitless; dry-weight basis)
K_{ow} = Octanol-water partitioning coefficient (unitless)

7.2.2.2 Soil Invertebrates (Earthworms)

Tissue concentrations in soil invertebrates were estimated by multiplying the surface soil EPC for each chemical by chemical-specific soil-to-invertebrate BAF values obtained from the literature.

BCFs are calculated by dividing the concentration of a chemical in organism tissue by the concentration of that same chemical in the surrounding environmental medium (in this case, soil) without accounting for uptake via the diet. BAFs consider both direct exposure to soil and exposure via the diet. Since earthworms consume soil, BAFs are more appropriate than BCFs and were used where available. BAFs based upon depurated analyses (soil was purged from the gut of the earthworm prior to analysis) were given preference over undepurated analyses when selecting BAF values because the direct ingestion of soil was accounted for separately in the food web model.

The BAF values selected were based upon the ratio between dry-weight soil and dry-weight earthworm tissue. Literature values based upon the ratio between dry-weight soil and wet-weight earthworm tissue were converted to a dry-weight basis by dividing the wet-weight BAF by the estimated solids content for earthworms (16 percent [0.16]; USEPA 1993). For chemicals without available measured BAFs, an earthworm BAF was estimated using data for similar chemicals or a BAF of 1.0 was assumed.

7.2.2.3 Small Mammals

Whole-body tissue concentrations in small mammals (shrews and mice) were estimated using one of two methodologies. For chemicals with literature-based soil-to-small mammal BAFs, the small mammal tissue concentration was calculated by multiplying the surface soil EPC for each chemical by a chemical-specific soil-to-small mammal BAF obtained from the literature.

The BAF values used were based upon the ratio between dry-weight soil and whole-body dry-weight tissue. Literature values based upon the ratio between dry-weight soil and wet-weight tissue were converted to a dry-weight basis by dividing the wet-weight BAF by the estimated solids content for small mammals (32 percent [0.32]; USEPA 1993). BAFs for shrews were those reported in Sample et al. (1998b) for insectivores (or for general small mammals if values for insectivores were unavailable), for voles were those reported for herbivores, and for mice were those reported for omnivores.

For chemicals without soil-to-small mammal BAF values, an alternate approach was used to estimate whole-body tissue concentrations. Because most chemical exposure for these small mammal species is via the diet, it was assumed that the concentration of each chemical in the small mammal's tissues is equal to the chemical concentration in its diet multiplied by a

diet to whole-body BAF (wet-weight basis) derived from the literature. For chemicals lacking diet to whole-body BAF values, a BAF of 1 was assumed.

7.2.2.4 Aquatic Plants

Tissue concentrations in the vegetative portion of rooted aquatic plants were estimated using the same methodologies described for terrestrial plants except that sediment (not soil) EPCs were used in the calculation.

7.2.2.5 Benthic Invertebrates

Tissue concentrations in benthic invertebrates were estimated by multiplying the sediment EPC for each chemical by chemical-specific sediment-to-invertebrate BAF values obtained from the literature.

The BAF values used were based upon the ratio between dry-weight sediment and dry-weight invertebrate tissue. BAFs based upon depurated analyses (sediment was purged from the gut of the organism prior to analysis) were given preference over undepurated analyses when selecting BAF values because direct ingestion of sediment was accounted for separately in the food web model.

Literature values based upon the ratio between dry-weight sediment and wet-weight invertebrate tissue were converted to a dry-weight basis by dividing the wet-weight BAF by the estimated solids content for benthic invertebrates (21 percent [0.21]; USEPA 1993). For chemicals without available measured BAFs, a BAF was estimated using data for similar chemicals or a BAF of 1.0 was assumed.

7.2.2.6 Fish

Tissue concentrations in whole-body fish were estimated by multiplying the sediment EPC for each chemical by chemical-specific sediment-to-fish BAFs obtained from the literature.

The BAF values were based upon the ratio between dry-weight sediment and dry-weight fish tissue. Literature values based upon the ratio between dry-weight sediment and wet-weight fish tissue were converted to a dry-weight basis by dividing the wet-weight BAF by the estimated solids content for fish (25 percent [0.25]; USEPA 1993). For chemicals without literature-based sediment-to-fish BAFs, a BAF was estimated using data for similar chemicals or a BAF of 1.0 was assumed.

7.2.2.7 Dietary Intake Estimation

The dietary intake (i.e., applied daily dose) of each constituent (in mg of constituent per kg of body weight per day) was calculated for each of the above receptor species using species-specific life history information, where available, and the following formula (modified from USEPA 1993):

$$DI_x = \frac{[[\sum_i (FIR)(FC_{xi})(PDF_i)] + [(FIR)(EPC_x)(PDS)]]}{BW}\left(AUF\right)$$

Where:

DI_x = Dietary intake for COPC x (mg constituent/kg body weight/day)

FIR	=	Food ingestion rate (kg/day, dry-weight)
FC_{xi}	=	Concentration of COPC x in food item i (mg/kg, dry-weight)
PDF_i	=	Proportion of diet composed of food item i (dry-weight basis)
EPC_x	=	Concentration of COPC x in soil (mg/kg, dry-weight)
PDS	=	Proportion of diet composed of soil (dry-weight basis)
BW	=	Body weight (kg, wet-weight)
AUF	=	Area use factor; percent (decimal) of habitat used by receptor

Receptor-specific values used as inputs to this equation are provided in Table 7-6. It was assumed that constituents were 100 percent bioavailable to the receptor, and it also was assumed that each receptor spent 100 percent of its time at the site (that is, an AUF of 1 was assumed). Central tendency estimates (for example, mean or median) for body weight and ingestion rate were used to develop exposure estimates for upper trophic level receptors (Table 7-6). Central tendency estimates for these exposure parameters are more relevant for a screening assessment because these better represent the characteristics of a greater proportion of the individuals in the population.

7.3 Effects Assessment

The purpose here is to establish toxicity screening values that represent conservative thresholds, below which adverse ecological effects from direct or indirect exposure to COPCs in soil or sediment are not expected to occur.

7.3.1 Effects of Direct Exposures

Toxicity screening values protective of terrestrial plants and soil invertebrates in surface soil were selected from one of three primary sources in the following order:

1) USEPA ecological soil screening levels (Eco-SSLs), if available

2) For COPCs without Eco-SSLs, USEPA Region 5 RCRA ecological screening levels (ESLs; USEPA 2003) or USEPA Region 3 Biological Technical Assistance Group (BTAG) values (USEPA 1995)

3) For COPCs without Eco-SSLs, ESLs, or BTAG values, commonly used benchmarks from other sources (e.g., USEPA 2000; Efroymson et al. 1997a, 1997b)

The screening values, and their sources, for COPCs in surface soil are summarized in Table 7-7.

Toxicity screening values protective of aquatic receptors (i.e., benthic invertebrates) in surficial sediment were, first, USEPA Region 5 RCRA ESLs for sediment. If these were not available for a COPC, then USEPA Region 3 BTAG sediment screening values were used. The screening values for analyzed constituents in surface soil and their sources are summarized in Table 7-8.

7.3.2 Effects of Indirect (Food Web) Exposures

Toxicity screening values for ingestion of COPCs by the receptor species were obtained from the literature. Toxicological information for wildlife species most closely related to the receptor species was used, where available, but was supplemented by laboratory studies of non-wildlife surrogate species (such as laboratory mice) where necessary. Preference was

given to toxicity studies involving long-term (chronic, greater than 90 day) exposures. Survival, growth, and reproduction were emphasized as toxicological endpoints because these are the most relevant to maintaining viable populations and are generally the most studied chronic toxicological endpoints for ecological receptors. If several chronic toxicological studies were available in the literature, the most appropriate study was selected for each receptor species based upon study design, study methodology, study duration, study endpoint, and test species. Toxicity screening values for ingestion were chronic no observed adverse effect level (NOAEL) and chronic lowest adverse effect level (LOAEL). Applicable uncertainty factors shown in Table 7-9 were applied to derive these screening values, where necessary. These screening values for mammals and birds are summarized in Tables 7-10 and 7-11, respectively.

7.4 Risk Characterization

An HQ methodology was used to characterize the potential for adverse effects in assessment endpoints from direct and indirect exposure to COPCs in surficial soils and sediment and to identify COPCs. In this method, surface soil and surface sediment EPCs are divided by their corresponding toxicity screening values to derive an estimate of the potential for an adverse effect. HQs exceeding 1.0 indicate the potential for such an effect because the COPC concentration (EPC) is above the toxicity screening value. However, because EPCs and toxicity screening values were both derived using intentionally conservative assumptions, an HQ greater than 1.0 does not necessarily indicate that adverse effects are actually occurring or even very likely. Rather, an HQ greater than 1 identifies a COPC-exposure pathway-receptor combination requiring further evaluation. Conversely, HQs less than 1.0 indicate, with high confidence, that adverse effects are very unlikely (USEPA 1998). Even though HQs were calculated for detected and undetected COPCs, only HQs for detected COPCs were considered for identifying COPCs in order to focus on those chemicals that are both present and potentially significant with respect to adverse effects. A COPC detected above its toxicity screening value (HQ greater than 1.0) in any samples was identified as a COPEC.

7.5 Ecological Screening Results

7.5.1 Direct Exposures

All sample-specific concentration data from ecologically-relevant sites were compared to toxicity screening values with the following detected COPCs identified as COPECs:

- SWMU 17 Surface Sediment: (Table 7-12): Two metals (arsenic and selenium) and one SVOC (acenaphthylene)
- SWMU 17 Surface Soil (Table 7-13): Two metals (chromium and selenium)
- SWMU 18 Surface Sediment (Table 7-14): Three metals (arsenic, chromium and selenium) and 13 PAH constituents
- SWMU 19 Surface Soil (Table 7-15): One metal (chromium)
- SWMU 29 Surface Soil (Table 7-16): Two metals (chromium and selenium)

7.5.2 Indirect (Food Web) Exposures

Constituents retained as COPCs based on direct exposures were further evaluated for indirect effects via receptor-specific food web models using maximum COPC EPCs from each SWMU. Calculated HQs are provided in Tables 7-17 through 7-21 and summarized as follows:

- SWMU 17 Surface Sediment (Table 7-17): Based upon comparison to NOAEL and LOAEL, all HQs were less than 1 for each COPC/exposure scenario combination.
- SWMU 17 Surface Soil (Table 7-18): Based upon comparison to NOAEL, the short-tailed shrew exposure scenario for selenium resulted in HQs greater than 1. ,However, comparison the LOAEL resulted in an HQ less than 1.
- SWMU 18 Surface Sediment (Table 7-19): Based upon comparison to NOAEL and LOAEL, all HQs were less than 1 for each COPC/exposure scenario combination.
- SWMU 19 Surface Soil (Table 7-20): Based upon comparison to NOAEL and LOAEL, all HQs were less than 1 for each COPC/exposure scenario combination.
- SWMU 29 Surface Soil (Table 7-21): Based upon comparison to NOAEL and, LOAEL, all HQs for chromium were less than 1. Based upon comparison to NOAELs, the short-tailed shrew had HQs greater than 1 for selenium. However, comparison the LOAEL resulted in an HQ less than 1.

7.6 Ecological Screening Assessment Conclusions

As summarized in Table 7-22, metals were identified as COPCs in surface soil based on direct exposures at SWMUs 17, 19, and 29. Selenium was identified as a COPEC in surface soil based on indirect (food web) exposures at SWMUs 17 and 29. However, habitat within these SWMUs is too sparse and of too low quality to support viable terrestrial populations. In addition, LOAELs for all surface soil exposure scenarios resulted in HQs less than 1 for all terrestrial receptors. It is thus unlikely that any terrestrial receptors would experience adverse ecological effects within any SWMU evaluated.

Also as summarized in Table 7-22, metals and certain PAHs were identified as COPCs in surface sediment based on direct exposures at SWMUs 17 and 18. However, these channelized drainage ditches present poor quality aquatic habitat (i.e., predominantly silt, clay, and sand substrate; transient flow regimes) that is unlikely to support viable benthic invertebrate or fish communities. In addition, all indirect (food web) exposures resulted in HQs less than 1. It is therefore unlikely that aquatic receptors, or those receptors that prey on them, would experience adverse ecological effects within any SWMUs evaluated.

In the overall context of ecological conditions at the various SWMUs evaluated, it does not appear that the identified COPCs could, in fact, pose a threat to terrestrial or aquatic assessment endpoints. This suggests that these COPCs should neither be retained nor subjected to further, more detailed, risk assessment activities.

SECTION 8

Conclusions

This section presents the conclusions reached based on the results of the sampling and analytical work, and subsequent evaluations.

Both DQOs were met for the RFI. The DQO to determine the facility wide groundwater flow direction and shallow (to bedrock) subsurface stratigraphy was satisfied based on the information from the installation of 40 borings and the 7 wells. The subsurface stratigraphy is clay and silt overlying sand and gravel, and the bedrock encountered in the deep borings was shale. Shallow groundwater is encountered at approximately 20 feet bgs and flows through a sand and gravel aquifer from northwest to southeast toward the Ohio River.

The DQO to determine whether chemicals in soil and sediment exist at concentrations greater than background and risk-based screening levels protective of potential exposure pathways at each SWMU and AOC was satisfied. Sampling and analytical results, comparison of the soil data to appropriately conservative screening levels, and results of the SLHHRA and SLERA show:

- Although arsenic was detected across the site at levels exceeding RSLs, it was not identified as a COPC because it is not a site-related constituent and the concentrations were close to established background values. Further, the SLHRRA determined that arsenic does not pose a risk above target levels and thus is not of concern.
- The SLHHRA and SLERA results demonstrate that none of the other COPCs are present at levels which could pose risks above the target levels. There are no COPCs that need to be carried forward for subsequent phases of investigation based on the results of the SLHHRA and ecological risk screening.
- Ethylbenzene and 1-1 biphenyl were detected at SWMU 24 at 13-15 feet bgs at concentrations that exceeded risk-based screening criteria, but were not considered in the human health or ecological evaluations because of the depth of the boring.

Exceedances of the conservative SSLs protective of groundwater have been observed in soil at SWMU 1, SWMU 15, SWMU 17, SWMU 24, SWMU 25-28, and AOC D, and in the sediment at t SWMU 17 and 18. The data and site conditions will be further evaluated for these areas, and if appropriate, additional soil and/or groundwater investigation will be performed in the Phase 2 RFI. Data quality objectives for the Phase 2 RFI will be developed to determine whether the COPCs identified based on the SSLs are present in groundwater at concentrations which could pose an unacceptable risk to human or ecological receptors.

Therefore, based on the results of the investigation, no further investigation is proposed for the remaining SWMUs (SWMU 11, SWMU 12, SWMU 19, and SWMU 29).

Notes:
[1]USEPA Industrial Regional Screening Level (RSL) based on 1x10^{-6} or HQ = 0.1 (November 2011)
[2]USEPA Protection of Groundwater Soil Screening Level (SSL) based dilution attenuation factor of 20 (November 2011)
NA = Not analyzed
J = The analyte was positively identified: the associated numerical value is the approximate concentration of the analyte in the sample.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and to meet the quality control criteria. The presence or absence of the analyte cannot be verified.
< = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ = The analyte was below the reported sample quantitation limit. However, the reported value is approximate.
mg/kg = Milligrams per Kilogram
ug/kg = Micrograms per Kilogram
Bold indicates the analyte was detected
Shading indicates the result exceeded industrial soil RSL
Box indicates the result exceeded protection of groundwater SSL

Notes:
[1]USEPA Industrial Regional Screening Level (RSL) based on 1x10^{-6} or HQ = 0.1 (November 2011)
[2]USEPA Protection of Groundwater Soil Screening Level (SSL) based dilution attenuation factor of 20 (November 2011)
NA = Not analyzed
J = The analyte was positively identified: the associated numerical value is the approximate concentration of the analyte in the sample.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and to meet the quality control criteria. The presence or absence of the analyte cannot be verified.
< = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ = The analyte was below the reported sample quantitation limit. However, the reported value is approximate.
mg/kg = Milligrams per Kilogram
ug/kg = Micrograms per Kilogram
Bold indicates the analyte was detected
Shading indicates the result exceeded industrial soil RSL
Box indicates the result exceeded protection of groundwater SSL

TABLE 5-2
SWMU 11 Soil Data
Site Investigation Report, Dow Hanging Rock, Ironton, Ohio

Notes:
[1]USEPA Industrial Regional Screening Level (RSL) based on 1x10^{-6} or HQ = 0.1 (November 2011)
[2]USEPA Protection of Groundwater Soil Screening Level (SSL) based dilution attenuation factor of 20 (November 2011)
NA = Not analyzed
J = The analyte was positively identified: the associated numerical value is the approximate concentration of the analyte in the sample.
< = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
mg/kg = Milligrams per Kilogram
ug/kg = Micrograms per Kilogram
Bold indicates the analyte was detected
Shading indicates the result exceeded industrial soil RSL
Box indicates the result exceeded protection of groundwater SSL

Notes:
[1]USEPA Industrial Regional Screening Level (RSL) based on $1x10^{-6}$ or HQ = 0.1 (November 2011)
[2]USEPA Protection of Groundwater Soil Screening Level (SSL) based dilution attenuation factor of 20 (November 2011)
NA = Not analyzed
J = The analyte was positively identified: the associated numerical value is the approximate concentration of the analyte in the sample.
< = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
mg/kg = Milligrams per Kilogram
ug/kg = Micrograms per Kilogram
Bold indicates the analyte was detected
Shading indicates the result exceeded industrial soil RSL
Box indicates the result exceeded protection of groundwater SSL

Notes:
[1]USEPA Industrial Regional Screening Level (RSL) based on 1x10^{-6} or HQ = 0.1 (November 2011)
[2]USEPA Protection of Groundwater Soil Screening Level (SSL) based dilution attenuation factor of 20 (November 2011)
NA = Not analyzed
J = The analyte was positively identified: the associated numerical value is the approximate concentration of the analyte in the sample.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and to meet the quality control criteria. The presence or absence of the analyte cannot be verified.
< = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ = The analyte was below the reported sample quantitation limit. However, the reported value is approximate.
mg/kg = Milligrams per Kilogram
ug/kg = Micrograms per Kilogram
Bold indicates the analyte was detected
Shading indicates the result exceeded industrial soil RSL
Box indicates the result exceeded protection of groundwater SSL

Notes:
[1]USEPA Industrial Regional Screening Level (RSL) based on $1x10^{-6}$ or HQ = 0.1 (November 2011)
[2]USEPA Protection of Groundwater Soil Screening Level (SSL) based dilution attenuation factor of 20 (November 2011)
NA = Not analyzed
J = The analyte was positively identified: the associated numerical value is the approximate concentration of the analyte in the sample.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and to meet the quality control criteria. The presence or absence of the analyte cannot be verified.
< = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ = The analyte was below the reported sample quantitation limit. However, the reported value is approximate.
mg/kg = Milligrams per Kilogram
ug/kg = Micrograms per Kilogram
Bold indicates the analyte was detected

Box indicates the result exceeded protection of groundwater SSL

Notes:
[1]Screening level is based on the minimum between the USEPA Industrial Regional Screening Level (RSL) based on 1x10-6 or HQ = 0.1 (November 2011) and USEPA Ecological Soil Screening Levels
[2]USEPA Protection of Groundwater Soil Screening Level (SSL) based dilution attenuation factor of 20 (November 2011)
NA = Not analyzed
J = The analyte was positively identified: the associated numerical value is the approximate concentration of the analyte in the sample.
< = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ = The analyte was below the reported sample quantitation limit. However, the reported value is approximate.
mg/kg = Milligrams per Kilogram
ug/kg = Micrograms per Kilogram
Bold indicates the analyte was detected
Shading indicates the result exceeded industrial soil RSL
Box indicates the result exceeded protection of groundwater SSL

Notes:
[1]Screening level is based on the minimum between the USEPA Industrial Regional Screening Level (RSL) based on 1x10-6 or HQ = 0.1 (November 2011) and USEPA Ecolgical Soil Screening Level
[2]USEPA Protection of Groundwater Soil Screening Level (SSL) based dilution attenuation factor of 20 (November 2011)
NA = Not analyzed
J = The analyte was positively identified: the associated numerical value is the approximate concentration of the analyte in the sample.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ = The analyte was below the reported sample quantitation limit. However, the reported value is approximate.
mg/kg = Milligrams per Kilogram
ug/kg = Micrograms per Kilogram
Bold indicates the analyte was detected
Shading indicates the result exceeded industrial soil RSL
Box indicates the result exceeded protection of groundwater SSL

Notes:
[1]USEPA Industrial Regional Screening Level (RSL) based on 1x10^{-6} or HQ = 0.1 (November 2011)
[2]USEPA Protection of Groundwater Soil Screening Level (SSL) based dilution attenuation factor of 20 (November 2011)
NA = Not analyzed
J = The analyte was positively identified: the associated numerical value is the approximate concentration of the analyte in the sample.
< = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ = The analyte was below the reported sample quantitation limit. However, the reported value is approximate.
mg/kg = Milligrams per Kilogram
ug/kg = Micrograms per Kilogram
Shading indicates the result exceeded industrial soil RSL
Box indicates the result exceeded protection of groundwater SSL

Notes:
[1]USEPA Industrial Regional Screening Level (RSL) based on 1x10^{-6} or HQ = 0.1 (November 2011)
[2]USEPA Protection of Groundwater Soil Screening Level (SSL) based dilution attenuation factor of 20 (November 2011)
NA = Not analyzed
J = The analyte was positively identified: the associated numerical value is the approximate concentration of the analyte in the sample.
< = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ = The analyte was below the reported sample quantitation limit. However, the reported value is approximate.
mg/kg = Milligrams per Kilogram
ug/kg = Micrograms per Kilogram
Shading indicates the result exceeded industrial soil RSL
Box indicates the result exceeded protection of groundwater SSL

Notes:
[1]USEPA Industrial Regional Screening Level (RSL) based on $1x10^{-6}$ or HQ = 0.1 (November 2011)
[2]USEPA Protection of Groundwater Soil Screening Level (SSL) based dilution attenuation factor of 20 (November 2011)
NA = Not analyzed
J = The analyte was positively identified: the associated numerical value is the approximate concentration of the analyte in the sample.
> = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ = The analyte was below the reported sample quantitation limit. However, the reported value is approximate.
mg/kg = Milligrams per Kilogram
ug/kg = Micrograms per Kilogram
Shading indicates the result exceeded industrial soil RSL
Box indicates the result exceeded protection of groundwater SSL

Notes:
[1]Screening level is based on the minimum between the USEPA Industrial Regional Screening Level (RSL) based on 1x10-6 or HQ = 0.1 (November 2011) and USEPA Ecological Soil Screening Levels
[2]USEPA Protection of Groundwater Soil Screening Level (SSL) based dilution attenuation factor of 20 (November 2011)
NA = Not analyzed
J = The analyte was positively identified: the associated numerical value is the approximate concentration of the analyte in the sample.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
mg/kg = Milligrams per Kilogram
ug/kg = Micrograms per Kilogram
Bold indicates the analyte was detected
Shading indicates the result exceeded the lowest of industrial soil RSL or ecological RSLs
Box indicates the result exceeded protection of groundwater SSL

Notes:
[1]Screening level is based on the minimum between the USEPA Industrial Regional Screening Level (RSL) based on 1x1C^{-6} or HQ = 0.1 (November 2011) and USEPA Ecological Soil Screening Levels
[2]USEPA Protection of Groundwater Soil Screening Level (SSL) based dilution attenuation factor of 20 (November 2011)
NA = Not analyzed
J = The analyte was positively identified: the associated numerical value is the approximate concentration of the analyte in the sample.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and to meet the quality control criteria. The presence or absence of the analyte cannot be verified.
< = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ = The analyte was below the reported sample quantitation limit. However, the reported value is approximate.
mg/kg = Milligrams per Kilogram
ug/kg = Micrograms per Kilogram
Bold indicates the analyte was detected
Shading indicates the result exceeded screening criteria
Box indicates the result exceeded protection of groundwater SSL

Notes:
NA = Not analyzed

R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and to meet the quality control criteria. The presence or absence of the analyte cannot be verified.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ = The analyte was below the reported sample quantitation limit. However, the reported value is approximate.
ug/l = Micrograms per Liter
Bold indicates the analyte was detected
FD = Field duplicate

Note:
J = Estimated Value
Screening Level = USEPA Industrial Regional Screening Level (RSL) based on $1x10^{-6}$ or HQ = 0.1 (November 2011).
FOE = Frequency of Exceedance
NA = Not applicable/not available
RSL value for m-xylene used as surrogate for m,p-xylene
Soil saturation value for cumene used as surrogate for sec-butylbenzene
RSL value for 2-nitroaniline used as surrogate for 3-nitroaniline
RSL value for acenaphthene used as surrogate for acenaphthylene
RSL value for pyrene used as surrogate for benzo(g,h,i)perylene
RSL value for anthracene used as surrogate for phenanthrene
RSL value for chromium III used as surrogate for chromium

Note:
J = Estimated Value
Screening Level = USEPA Industrial Regional Screening Level (RSL) based on $1x10^{-6}$ or HQ = 0.1 (November 2011).
FOE = Frequency of Exceedance
NA = Not applicable/not available
RSL value for pyrene used as surrogate for benzo(g,h,i)perylene
RSL value for anthracene used as surrogate for phenanthrene
RSL value for chromium III used as surrogate for chromium

TABLE 6-6
SWMU 12 Step 2: Risk Ratio Screening for Soil, Maximum Detected Concentration
Site Investigation Report, Dow Hanging Rock, Ironton, Ohio

Surface Soil

Analyte	Maximum Detected Concentration (Qualifier)	Location of Maximum Detection	Frequency of Detection	Industrial Soil RSL	Acceptable Risk Level	Corresponding Hazard Index[a]	Corresponding Cancer Risk[b]	Target Organ/ Critical Effect
Metals (mg/kg)								
Arsenic	1.2E+01	S12-SS02	2 / 2	1.6E+00	1E-06	NA	8E-06	NA
Arsenic	1.2E+01	S12-SS02	2 / 2	2.6E+02	1E+00	0.05	NA	Skin/vascular
Cumulative Corresponding Hazard Index[c]						**0.05**		
Cumulative Corresponding Cancer Risk[d]							**8E-06**	

Total Soil

Analyte	Maximum Detected Concentration (Qualifier)	Location of Maximum Detection	Frequency of Detection	Industrial Soil RSL	Acceptable Risk Level	Corresponding Hazard Index[a]	Corresponding Cancer Risk[b]	Target Organ/ Critical Effect
Metals (mg/kg)								
Arsenic	1.4E+01	S12-SS02	6 / 6	1.6E+00	1E-06	NA	8E-06	NA
Arsenic	1.4E+01	S12-SS02	6 / 6	2.6E+02	1E+00	0.05	NA	Skin/vascular
Cumulative Corresponding Hazard Index[c]						**0.05**		
Cumulative Corresponding Cancer Risk[d]							**8E-06**	

[a] Corresponding Hazard Index equals maximum detected concentration divided by the RSL divided by the acceptable risk level.
[b] Corresponding Cancer Risk equals maximum detected concentration divided by the RSL divided by the acceptable risk level.
[c] Cumulative Corresponding Hazard Index equals sum of Corresponding Hazard Indices for each constituent.
[d] Cumulative Corresponding Cancer Risk equals sum of Corresponding Cancer Risks for each constituent.
Regional Screening Levels (RSLs) for Chemical Contaminants at Superfund Sites (USEPA, November 2011). [Online].
Available: http://epa-prgs.ornl.gov/chemicals/index.shtml.
HI = Hazard Index
mg/kg = milligrams per kilogram
NA = Not available/not applicable

Note:
J = Estimated Value
Screening Level = USEPA Industrial Regional Screening Level (RSL) based on $1x10^{-6}$ or HQ = 0.1 (November 2011).
FOE = Frequency of Exceedance
NA = Not applicable/not available
Soil saturation value for cumene used as surrogate for sec-butylbenzene
RSL value for acenaphthene used as surrogate for acenaphthylene
RSL value for pyrene used as surrogate for benzo(g,h,i)perylene
RSL value for anthracene used as surrogate for phenanthrene
RSL value for chromium III used as surrogate for chromium

Cumulative Corresponding Hazard Index[c]						**0.05**		
Cumulative Corresponding Cancer Risk[d]							**3E-05**	

[a] Corresponding Hazard Index equals maximum detected concentration divided by the RSL divided by the acceptable risk level.
[b] Corresponding Cancer Risk equals maximum detected concentration divided by the RSL divided by the acceptable risk level.
[c] Cumulative Corresponding Hazard Index equals sum of Corresponding Hazard Indices for each constituent.
[d] Cumulative Corresponding Cancer Risk equals sum of Corresponding Cancer Risks for each constituent.
Regional Screening Levels (RSLs) for Chemical Contaminants at Superfund Sites (USEPA, November 2011). [Online].
Available: http://epa-prgs.ornl.gov/chemicals/index.shtml.
HI = Hazard Index
mg/kg = milligrams per kilogram
NA = Not available/not applicable

Note:
J = Estimated Value
Screening Level = USEPA Industrial Regional Screening Level (RSL) based on $1x10^{-6}$ or HQ = 0.1 (November 2011).
FOE = Frequency of Exceedance
NA = Not applicable/not available
RSL value for acenaphthene used as surrogate for acenaphthylene
RSL value for pyrene used as surrogate for benzo(g,h,i)perylene
RSL value for anthracene used as surrogate for phenanthrene
RSL value for chromium III used as surrogate for chromium

TABLE 6-10

SWMU 17 Step 2: Risk Ratio Screening for Soil, Maximum Detected Concentration

Site Investigation Report, Dow Hanging Rock, Ironton, Ohio

Sediment

Analyte	Maximum Detected Concentration (Qualifier)	Location of Maximum Detection	Frequency of Detection	Industrial Soil RSL	Acceptable Risk Level	Corresponding Hazard Index[a]	Corresponding Cancer Risk[b]	Target Organ/ Critical Effect
Metals (mg/kg)								
Arsenic	1.1E+01	S17-SD01	1 / 1	1.6E+00	1E-06	NA	7E-06	NA
Arsenic	1.1E+01	S17-SD01	1 / 1	2.6E+02	1E+00	0.04	NA	Skin/vascular
Cumulative Corresponding Hazard Index[c]						**0.04**		
Cumulative Corresponding Cancer Risk[d]							**7E-06**	

Surface and Total Soil

Analyte	Maximum Detected Concentration (Qualifier)	Location of Maximum Detection	Frequency of Detection	Industrial Soil RSL	Acceptable Risk Level	Corresponding Hazard Index[a]	Corresponding Cancer Risk[b]	Target Organ/ Critical Effect
Metals (mg/kg)								
Arsenic	1.4E+01 J	S17-SS03	3 / 3	1.6E+00	1E-06	NA	9E-06	NA
Arsenic	1.4E+01 J	S17-SS03	3 / 3	2.6E+02	1E+00	0.05	NA	Skin/vascular
Cumulative Corresponding Hazard Index[c]						**0.05**		
Cumulative Corresponding Cancer Risk[d]							**9E-06**	

[a] Corresponding Hazard Index equals maximum detected concentration divided by the RSL divided by the acceptable risk level.

[b] Corresponding Cancer Risk equals maximum detected concentration divided by the RSL divided by the acceptable risk level.

[c] Cumulative Corresponding Hazard Index equals sum of Corresponding Hazard Indices for each constituent.

[d] Cumulative Corresponding Cancer Risk equals sum of Corresponding Cancer Risks for each constituent.

Regional Screening Levels (RSLs) for Chemical Contaminants at Superfund Sites (USEPA, November 2011). [Online].

Note:
J = Estimated Value
Screening Level = USEPA Industrial Regional Screening Level (RSL) based on $1x10^{-6}$ or HQ = 0.1 (November 2011).
FOE = Frequency of Exceedance
NA = Not applicable/not available
Soil saturation value for n-hexane used as surrogate for methylcylcohexane
RSL value for pyrene used as surrogate for benzo(g,h,i)perylene
RSL value for anthracene used as surrogate for phenanthrene
RSL value for chromium III used as surrogate for chromium

TABLE 6-14

SWMU 19 Step 2: Risk Ratio Screening for Soil, Maximum Detected Concentration

Site Investigation Report, Dow Hanging Rock, Ironton, Ohio

Surface and Total Soil

Analyte	Maximum Detected Concentration (Qualifier)	Location of Maximum Detection	Frequency of Detection	Industrial Soil RSL	Acceptable Risk Level	Corresponding Hazard Index[a]	Corresponding Cancer Risk[b]	Target Organ/ Critical Effect
Metals (mg/kg)								
Arsenic	1.3E+01	S19-SS01	2 / 2	1.6E+00	1E-06	NA	8E-06	NA
Arsenic	1.3E+01	S19-SS01	2 / 2	2.6E+02	1E+00	0.05	NA	Skin/vascular
Cumulative Corresponding Hazard Index[c]						**0.05**		
Cumulative Corresponding Cancer Risk[d]							**8E-06**	

[a] Corresponding Hazard Index equals maximum detected concentration divided by the RSL divided by the acceptable risk level.

[b] Corresponding Cancer Risk equals maximum detected concentration divided by the RSL divided by the acceptable risk level.

[c] Cumulative Corresponding Hazard Index equals sum of Corresponding Hazard Indices for each constituent.

[d] Cumulative Corresponding Cancer Risk equals sum of Corresponding Cancer Risks for each constituent.

Regional Screening Levels (RSLs) for Chemical Contaminants at Superfund Sites (USEPA, November 2011). [Online].
Available: http://epa-prgs.ornl.gov/chemicals/index.shtml.

HI = Hazard Index

mg/kg = milligrams per kilogram

NA = Not available/not applicable

Note:
J = Estimated Value
Screening Level = USEPA Industrial Regional Screening Level (RSL) based on $1x10^{-6}$ or HQ = 0.1 (November 2011).
FOE = Frequency of Exceedance
NA = Not applicable/not available
Soil saturation value for n-hexane used as surrogate for methylcylcohexane
RSL value for m-xylene used as surrogate for m,p-xylene
Soil saturation value for cumene used as surrogate for sec-butylbenzene
RSL value for acenaphthene used as surrogate for acenaphthylene
RSL value for pyrene used as surrogate for benzo(g,h,i)perylene
RSL value for anthracene used as surrogate for phenanthrene
RSL value for chromium III used as surrogate for chromium

Cumulative Corresponding Hazard Index[c]						**0.07**		
Cumulative Corresponding Cancer Risk[d]							**3E-05**	

[a] Corresponding Hazard Index equals maximum detected concentration divided by the RSL divided by the acceptable risk level.

[b] Corresponding Cancer Risk equals maximum detected concentration divided by the RSL divided by the acceptable risk level.

[c] Cumulative Corresponding Hazard Index equals sum of Corresponding Hazard Indices for each constituent.

[d] Cumulative Corresponding Cancer Risk equals sum of Corresponding Cancer Risks for each constituent.

Regional Screening Levels (RSLs) for Chemical Contaminants at Superfund Sites (USEPA, November 2011). [Online].
Available: http://epa-prgs.ornl.gov/chemicals/index.shtml.

HI = Hazard Index

mg/kg = milligrams per kilogram

NA = Not available/not applicable

Note:
J = Estimated Value
Screening Level = USEPA Industrial Regional Screening Level (RSL) based on $1x10^{-6}$ or HQ = 0.1 (November 2011).
FOE = Frequency of Exceedance
NA = Not applicable/not available
RSL value for m-xylene used as surrogate for m,p-xylene
Soil saturation value for cumene used as surrogate for sec- and tert-butylbenzene
RSL value for acenaphthene used as surrogate for acenaphthylene
RSL value for pyrene used as surrogate for benzo(g,h,i)perylene
RSL value for anthracene used as surrogate for phenanthrene
RSL value for chromium III used as surrogate for chromium
RSL value for n-hexane used as surrogate for methylcylcohexane

TABLE 6-18

SWMU 25-28 Step 2: Risk Ratio Screening for Soil, Maximum Detected Concentration

Site Investigation Report, Dow Hanging Rock, Ironton, Ohio

Surface Soil

Analyte	Maximum Detected Concentration (Qualifier)	Location of Maximum Detection	Frequency of Detection	Industrial Soil RSL	Acceptable Risk Level	Corresponding Hazard Index[a]	Corresponding Cancer Risk[b]	Target Organ/ Critical Effect

Arsenic	4.3E+01	S25-SS04	12 / 12	2.6E+02	1E+00	0.2	NA	Skin/vascular
Cumulative Corresponding Hazard Index[c]						**0.5**		
Cumulative Corresponding Cancer Risk[d]							**3E-05**	

[a] Corresponding Hazard Index equals maximum detected concentration divided by the RSL divided by the acceptable risk level.

[b] Corresponding Cancer Risk equals maximum detected concentration divided by the RSL divided by the acceptable risk level.

[c] Cumulative Corresponding Hazard Index equals sum of Corresponding Hazard Indices for each constituent.

[d] Cumulative Corresponding Cancer Risk equals sum of Corresponding Cancer Risks for each constituent.

Regional Screening Levels (RSLs) for Chemical Contaminants at Superfund Sites (USEPA, November 2011). [Online].
Available: http://epa-prgs.ornl.gov/chemicals/index.shtml.

HI = Hazard Index

mg/kg = milligrams per kilogram

NA = Not available/not applicable

Note:
J = Estimated Value
Screening Level = USEPA Industrial Regional Screening Level (RSL) based on $1x10^{-6}$ or HQ = 0.1 (November 2011).
FOE = Frequency of Exceedance
NA = Not applicable/not available
Soil saturation value for n-hexane used as surrogate for methylcylcohexane
RSL value for acenaphthene used as surrogate for acenaphthylene
RSL value for pyrene used as surrogate for benzo(g,h,i)perylene
RSL value for anthracene used as surrogate for phenanthrene
RSL value for chromium III used as surrogate for chromium

TABLE 6-20
SWMU 29 Step 2: Risk Ratio Screening for Soil, Maximum Detected Concentration
Site Investigation Report, Dow Hanging Rock, Ironton, Ohio

Surface Soil

Analyte	Maximum Detected Concentration (Qualifier)	Location of Maximum Detection	Frequency of Detection	Industrial Soil RSL	Acceptable Risk Level	Corresponding Hazard Index[a]	Corresponding Cancer Risk[b]	Target Organ/ Critical Effect
Metals (mg/kg)								
Arsenic	1.5E+01	S29-SS01	2 / 2	1.6E+00	1E-06	NA	9E-06	NA
Arsenic	1.5E+01	S29-SS01	2 / 2	2.6E+02	1E+00	0.06	NA	Skin/vascular
Cumulative Corresponding Hazard Index[c]						**0.06**		
Cumulative Corresponding Cancer Risk[d]							**9E-06**	

Total Soil

Analyte	Maximum Detected Concentration (Qualifier)	Location of Maximum Detection	Frequency of Detection	Industrial Soil RSL	Acceptable Risk Level	Corresponding Hazard Index[a]	Corresponding Cancer Risk[b]	Target Organ/ Critical Effect
Metals (mg/kg)								
Arsenic	2.0E+01	S29-SS01	6 / 6	1.6E+00	1E-06	NA	1E-05	NA
Arsenic	2.0E+01	S29-SS01	6 / 6	2.6E+02	1E+00	0.08	NA	Skin/vascular
Cumulative Corresponding Hazard Index[c]						**0.08**		
Cumulative Corresponding Cancer Risk[d]							**1E-05**	

[a] Corresponding Hazard Index equals maximum detected concentration divided by the RSL divided by the acceptable risk level.
[b] Corresponding Cancer Risk equals maximum detected concentration divided by the RSL divided by the acceptable risk level.
[c] Cumulative Corresponding Hazard Index equals sum of Corresponding Hazard Indices for each constituent.
[d] Cumulative Corresponding Cancer Risk equals sum of Corresponding Cancer Risks for each constituent.
Regional Screening Levels (RSLs) for Chemical Contaminants at Superfund Sites (USEPA, November 2011). [Online].

Note:
J = Estimated Value
Screening Level = USEPA Industrial Regional Screening Level (RSL) based on $1x10^{-6}$ or HQ = 0.1 (November 2011).
FOE = Frequency of Exceedance
NA = Not applicable/not available
RSL value for m-xylene used as surrogate for m,p-xylene.
RSL value for pyrene used as surrogate for benzo(g,h,i)perylene.
RSL value for anthracene used as surrogate for phenanthrene.
RSL value for chromium III used as surrogate for chromium.
RSL value for n-hexane used as surrogate for methylcylcohexane.

TABLE 6-22

AOC D Step 2: Risk Ratio Screening for Soil, Maximum Detected Concentration

Site Investigation Report, Dow Hanging Rock, Ironton, Ohio

Surface Soil

Analyte	Maximum Detected Concentration (Qualifier)	Location of Maximum Detection	Frequency of Detection	Industrial Soil RSL	Acceptable Risk Level	Corresponding Hazard Index[a]	Corresponding Cancer Risk[b]	Target Organ/ Critical Effect
Metals (mg/kg)								
Arsenic	8.5E+00	AOD-SS02	2 / 2	1.6E+00	1E-06	NA	5E-06	NA
Arsenic	8.5E+00	AOD-SS02	2 / 2	2.6E+02	1E+00	0.03	NA	Skin/vascular
Cumulative Corresponding Hazard Index[c]						**0.03**		
Cumulative Corresponding Cancer Risk[d]							**5E-06**	

Total Soil

Analyte	Maximum Detected Concentration (Qualifier)	Location of Maximum Detection	Frequency of Detection	Industrial Soil RSL	Acceptable Risk Level	Corresponding Hazard Index[a]	Corresponding Cancer Risk[b]	Target Organ/ Critical Effect
Metals (mg/kg)								
Arsenic	1.4E+01	AOD-SS02	6 / 6	1.6E+00	1E-06	NA	9E-06	NA
Arsenic	1.4E+01	AOD-SS02	6 / 6	2.6E+02	1E+00	0.05	NA	Skin/vascular
Cumulative Corresponding Hazard Index[c]						**0.05**		
Cumulative Corresponding Cancer Risk[d]							**9E-06**	

[a] Corresponding Hazard Index equals maximum detected concentration divided by the RSL divided by the acceptable risk level.

[b] Corresponding Cancer Risk equals maximum detected concentration divided by the RSL divided by the acceptable risk level.

[c] Cumulative Corresponding Hazard Index equals sum of Corresponding Hazard Indices for each constituent.

[d] Cumulative Corresponding Cancer Risk equals sum of Corresponding Cancer Risks for each constituent.

Regional Screening Levels (RSLs) for Chemical Contaminants at Superfund Sites (USEPA, November 2011). [Online].
Available: http://epa-prgs.ornl.gov/chemicals/index.shtml.

HI = Hazard Index

mg/kg = milligrams per kilogram

NA = Not available/not applicable

[1] Surface soil and subsurface soil represent the 0-2 feet and 0-10 feet below ground surface sample depth intervals, respectively. Results for SWMU 18 are for sediment only.

[2] Significant contributors to cumulative cancer risk and cumulative noncancer HI are presented for chemicals of potential concern with cancer risks of 1E-06 or greater and for those with noncancer HIs of 1 or greater.

HI = Hazard Index (noncancer)

-- = Medium not sampled

TABLE 7-1

Determination of Need for Ecological Risk Assessment

Site Investigation Report, Dow Hanging Rock, Ironton, Ohio

Site	Question 1: Are habitats and biota present onsite or directly adjacent?	Question 1: Where/Habitat Type	Question 2: Are exposure pathways potentially complete?	Question 3: Should the ecological risk assessment (ERA) process continue?
SWMU 1 - Former Flaring Pad	No			No
SWMU 11 - Satellite Accumulation Area - Ethafoam Plant	No			No
SWMU 12 - Former Methylene Chloride Cleaning Tank	No			No
SWMU 15 - Two-Section Septic Tank System	No			No
SWMU 17 - Stormwater Drainage System	Yes	onsite/aquatic	Yes	Yes
SWMU 18 - Drainage Ditch to Big Thief Creek	Yes	onsite/aquatic	Yes	Yes
SWMU 19 - Drainage Ditch to North	Yes	onsite/Terrestrial	Yes	Yes
SWMU 25 - 28 - Former Wastewater Treatment System	Yes	adjacent/terrestrial (grassland)	No	No
SWMU 29 - Former Used Filter Sand Pile	Yes	onsite/terrestrial (grassland)	Yes	Yes
SWMU 36 - Former 250-gallon Pressurized Sotrage Tank	Yes	adjacent/aquatic (fire pond)	No	No
SWMU 37 - Fire Protection Collection Basin	Yes	onsite/Aquatic (collection basin)	No	No
AOC D - Underground Catalyst Storage Tank	No			No

TABLE 7-2

List of Sample Used for the Ecological Risk Assessment

Site Investigation Report, Dow Hanging Rock, Ironton, Ohio

Site	Station ID	Sample ID	Depth (feet)	Analytical Paremeters			
				Collection Date	VOCs	SVOCs	Metals
SWMU-17 (surface soil)	S17-SS01	S17-SS01-0002	0 - 2	12/13/2011	X	X	X
	S17-SS02	S17-SS02-0002	0 - 2	12/14/2011	X	X	X
	S17-SS03	S17-SS03-0003	0 - 2	12/8/2011	X	X	X
SWMU-17 (surface sediment)	S17-SD01	S17-SD01	0 - 0.5	1/18/2012	X	X	X
SWMU-18 (surface sediment)	S18-SD01	S18-SD01	0 - 0.5	1/18/2012	X	X	X
	S18-SD02	S18-SD02	0 - 0.5	1/18/2012	X	X	X
		HGR-011812-FD02	0 - 0.5	duplicate	X	X	X
	S18-SD03	S18-SD03	0 - 0.5	1/18/2012	X	X	X
	S18-SD04	S18-SD04	0 - 0.5	1/18/2012	X	X	X
	S18-SD05	S18-SD05	0 - 0.5	1/18/2012	X	X	X

	S29-SS02	S29-SS02-0002	0 - 1	12/8/2011	X	X	X

TABLE 7-3

Assessment Endpoints, Risk Hypotheses, and Measurement Endpoints

Site Investigation Report, Dow Hanging Rock, Ironton, Ohio

Assessment Endpoint	Risk Hypothesis	Measurement Endpoint	Receptor
Terrestrial Habitats			
Survival, growth, and reproduction of terrestrial soil invertebrate communities	Are site related COPC concentrations in surface soils sufficient to adversely affect soil invertebrate communities?	Comparison of constituent concentrations in surface soils with soil screening values	Soil invertebrates (earthworms)
Survival, growth, and reproduction of terrestrial plant communities	Are site-related COPC concentrations in surface soils sufficient to adversely affect terrestrial plant communities?	Comparison of constituent concentrations in surface soils with soil screening values	Terrestrial plants
Survival, growth, and reproduction of terrestrial reptile populations	Are site-related COPC concentrations in surface soil sufficient to adversely affect terrestrial reptile populations?	Comparison of constituent concentrations in surface soils with soil screening values	Reptiles
	Are Facility-related constituent concentrations in surface soil sufficient to cause adverse effects (on growth, survival, or reproduction) to terrestrial reptile populations?	Evidence of potential risk to other upper trophic level terrestrial receptors evaluated in the ERA	
Survival, growth, and reproduction of avian terrestrial herbivore populations	Are site-related constituent concentrations in surface soils sufficient to cause adverse effects (on growth, survival, or reproduction) to avian receptor populations that may consume terrestrial plants from the site?	Comparison of modeled dietary intakes using surface soil concentrations with literature-based ingestion screening values; ratios >1 based upon the NOAEL-LOAEL range indicate an effect	Mourning dove
Survival, growth, and reproduction of avian terrestrial insectivore populations	Are site-related COPC concentrations in surface soils sufficient to cause adverse effects (on growth, survival, or reproduction) to avian receptor populations that may consume terrestrial plants and soil invertebrates from the site?	Comparison of modeled dietary intakes using surface soil concentrations with literature-based ingestion screening values; ratios >1 based upon the NOAEL-LOAEL range indicate an effect	American robin
Survival, growth, and reproduction of avian terrestrial carnivore populations	Are site-related COPC concentrations in surface soils sufficient to cause adverse effects (on growth, survival, or reproduction) to avian receptor populations that may consume small mammals from the site?	Comparison of modeled dietary intakes using surface soil concentrations with literature-based ingestion screening values; ratios >1 based upon the NOAEL-LOAEL range indicate an effect	Red-tailed hawk
Survival, growth, and reproduction of mammalian terrestrial herbivore populations	Are site-related COPC concentrations in surface soils sufficient to cause adverse effects (on growth, survival, or reproduction) to mammalian receptor populations that may consume terrestrial plants from the site?	Comparison of modeled dietary intakes using surface soil concentrations with literature-based ingestion screening values; ratios >1 based upon the NOAEL-LOAEL range indicate an effect	White-tailed deer

TABLE 7-3

Assessment Endpoints, Risk Hypotheses, and Measurement Endpoints

Site Investigation Report, Dow Hanging Rock, Ironton, Ohio

Assessment Endpoint	Risk Hypothesis	Measurement Endpoint	Receptor
Survival, growth, and reproduction of mammalian terrestrial invertivore populations	Are site-related COPC concentrations in surface soils sufficient to cause adverse effects (on growth, survival, or reproduction) to mammalian receptor populations that may consume soil invertebrates from the site?	Comparison of modeled dietary intakes using surface soil concentrations with literature-based ingestion screening values; ratios >1 based upon the NOAEL-LOAEL range indicate an effect	Short-tailed shrew
Survival, growth, and reproduction of mammalian terrestrial omnivore populations	Are site-related COPC concentrations in surface soils sufficient to cause adverse effects (on growth, survival, or reproduction) to mammalian receptor populations that may consume terrestrial plants and soil invertebrates from the site?	Comparison of modeled dietary intakes using surface soil concentrations with literature-based ingestion screening values; ratios >1 based upon the NOAEL-LOAEL range indicate an effect	White-footed mouse
Survival, growth, and reproduction of mammalian terrestrial carnivore populations	Are site-related COPC constituent concentrations in surface soils sufficient to cause adverse effects (on growth, survival, or reproduction) to mammalian receptor populations that may consume small mammals from the site?	Comparison of modeled dietary intakes using surface soil concentrations with literature-based ingestion screening values; ratios >1 based upon the NOAEL-LOAEL range indicate an effect	Red fox
Aquatic Habitats			
Survival, growth, and reproduction of aquatic and benthic invertebrate communities	Are site-related COPC concentrations in sediment sufficient to adversely affect aquatic and benthic invertebrate communities?	Comparison of constituent concentrations in sediment with medium-specific screening values	Aquatic and benthic invertebrates
Survival, growth, and reproduction of aquatic plant communities	Are site-related COPC concentrations in sediment sufficient to adversely affect aquatic plant communities?	Comparison of constituent concentrations in sediment with medium-specific screening values	Aquatic and wetland plants
Survival, growth, and reproduction of amphibian populations	Are site-related constituent concentrations in sediment sufficient to cause adverse effects (on growth, survival, or reproduction) to amphibian populations?	Comparison of constituent concentrations in sediment with medium-specific screening values Evidence of potential risk to other upper trophic level aquatic receptors evaluated in the ERA	Amphibians
Survival, growth, and reproduction of aquatic reptile populations	Are site-related COPC concentrations in sediment sufficient to cause adverse effects (on growth, survival, or reproduction) to aquatic reptile populations?	Comparison of constituent concentrations in sediment with medium-specific screening values Evidence of potential risk to other upper trophic level aquatic receptors evaluated in the ERA	Reptiles

TABLE 7-3

Assessment Endpoints, Risk Hypotheses, and Measurement Endpoints

Site Investigation Report, Dow Hanging Rock, Ironton, Ohio

Assessment Endpoint	Risk Hypothesis	Measurement Endpoint	Receptor
Survival, growth, and reproduction of avian aquatic omnivore populations	Are Site-related COPC concentrations in sediment sufficient to cause adverse effects (on growth, survival, or reproduction) to avian receptor populations that may consume aquatic/wetland prey from the site?	Comparison of modeled dietary intakes using sediment concentrations with literature-based ingestion screening values; ratios >1 based upon the NOAEL-LOAEL range indicate an effect	Marsh wren
Survival, growth, and reproduction of mammalian aquatic omnivore populations	Are Site-related COPC concentrations in sediment sufficient to cause adverse effects (on growth, survival, or reproduction) to mammalian receptor populations that may consume aquatic/wetland prey from the site?	Comparison of modeled dietary intakes using sediment concentrations with literature-based ingestion screening values; ratios >1 based upon the NOAEL-LOAEL range indicate an effect	Raccoon
Survival, growth, and reproduction of avian aquatic herbivore populations	Are Site-related COPC concentrations in sediment sufficient to cause adverse effects (on growth, survival, or reproduction) to avian receptor populations that may consume aquatic plants from the site?	Comparison of modeled dietary intakes using sediment concentrations with literature-based ingestion screening values; ratios >1 based upon the NOAEL-LOAEL range indicate an effect	Mallard duck
Survival, growth, and reproduction of mammalian aquatic herbivore populations	Are Site-related COPC concentrations in sediment sufficient to cause adverse effects (on growth, survival, or reproduction) to mammalian receptor populations that may consume aquatic plants from the site?	Comparison of modeled dietary intakes using sediment concentrations with literature-based ingestion screening values; ratios >1 based upon the NOAEL-LOAEL range indicate an effect	Muskrat

TABLE 7-9

Uncertainty Factors Applied to Ingestion-Based Screening Values

Site Investigation Report, Dow Hanging Rock, Ironton, Ohio

Convert From	Convert To	Uncertainty Factor
Chronic NOAEL	Chronic NOAEL	1
Chronic LOAEL	Chronic NOAEL	5
Subchronic NOAEL	Chronic NOAEL	10
Subchronic LOAEL	Chronic NOAEL	20
Acute NOAEL	Chronic NOAEL	30
Acute LOAEL	Chronic NOAEL	50
LD50	Chronic NOAEL	100

Notes:

Uncertainty factors from: Wentsel. R.S. et al. 1996.

Durations are defined as follows (USEPA, August 1999; Sample et al. 1996):

- Acute: <14 days
- Subchronic: 14 - 90 days
- Chronic: >90 days or during critical life stage

See report Section 9 for complete references.

FIGURE 7-1
Ecological Risk Assessment Process
Phase I RFI Investigation Report
Dow Hanging Rock Facility, Ironton, Ohio

Ecological Risk Assessment Process[1]

Step 1: Screening-Level Problem Formulation and Toxicity Evaluation

- Problem formulation
  - Compile and review existing information on the ecological setting;
  - Compile and review available analytical and biological data;
  - Develop preliminary CSM
  - Develop assessment and measurement endpoints for critical exposure pathways.
- Site visit / initial investigation
- Ecological Effects Assessment

Step 2: Screening-Level Exposure Estimate and Risk Calculation*

- Exposure Assessment
- Risk calculation

Steps 3 to 7 are considered to be part of the Baseline Ecological Risk Assessment

Step 3: Problem Formulation*

- Refine Potential Constituents of Concern
- Contaminant fate and transport
- Mechanisms of toxicity
- Ecosystems potentially at risk
- Exposure pathways
- Assessment endpoints
- Refine Conceptual site model
- Risk questions

Step 4: Study Design and Data Quality Objectives Process*

Step 5: Field Sampling Plan Verification*

Step 6: Site Investigation and Data Analysis*

Step 7: Risk Characterization

Risk estimation and characterization

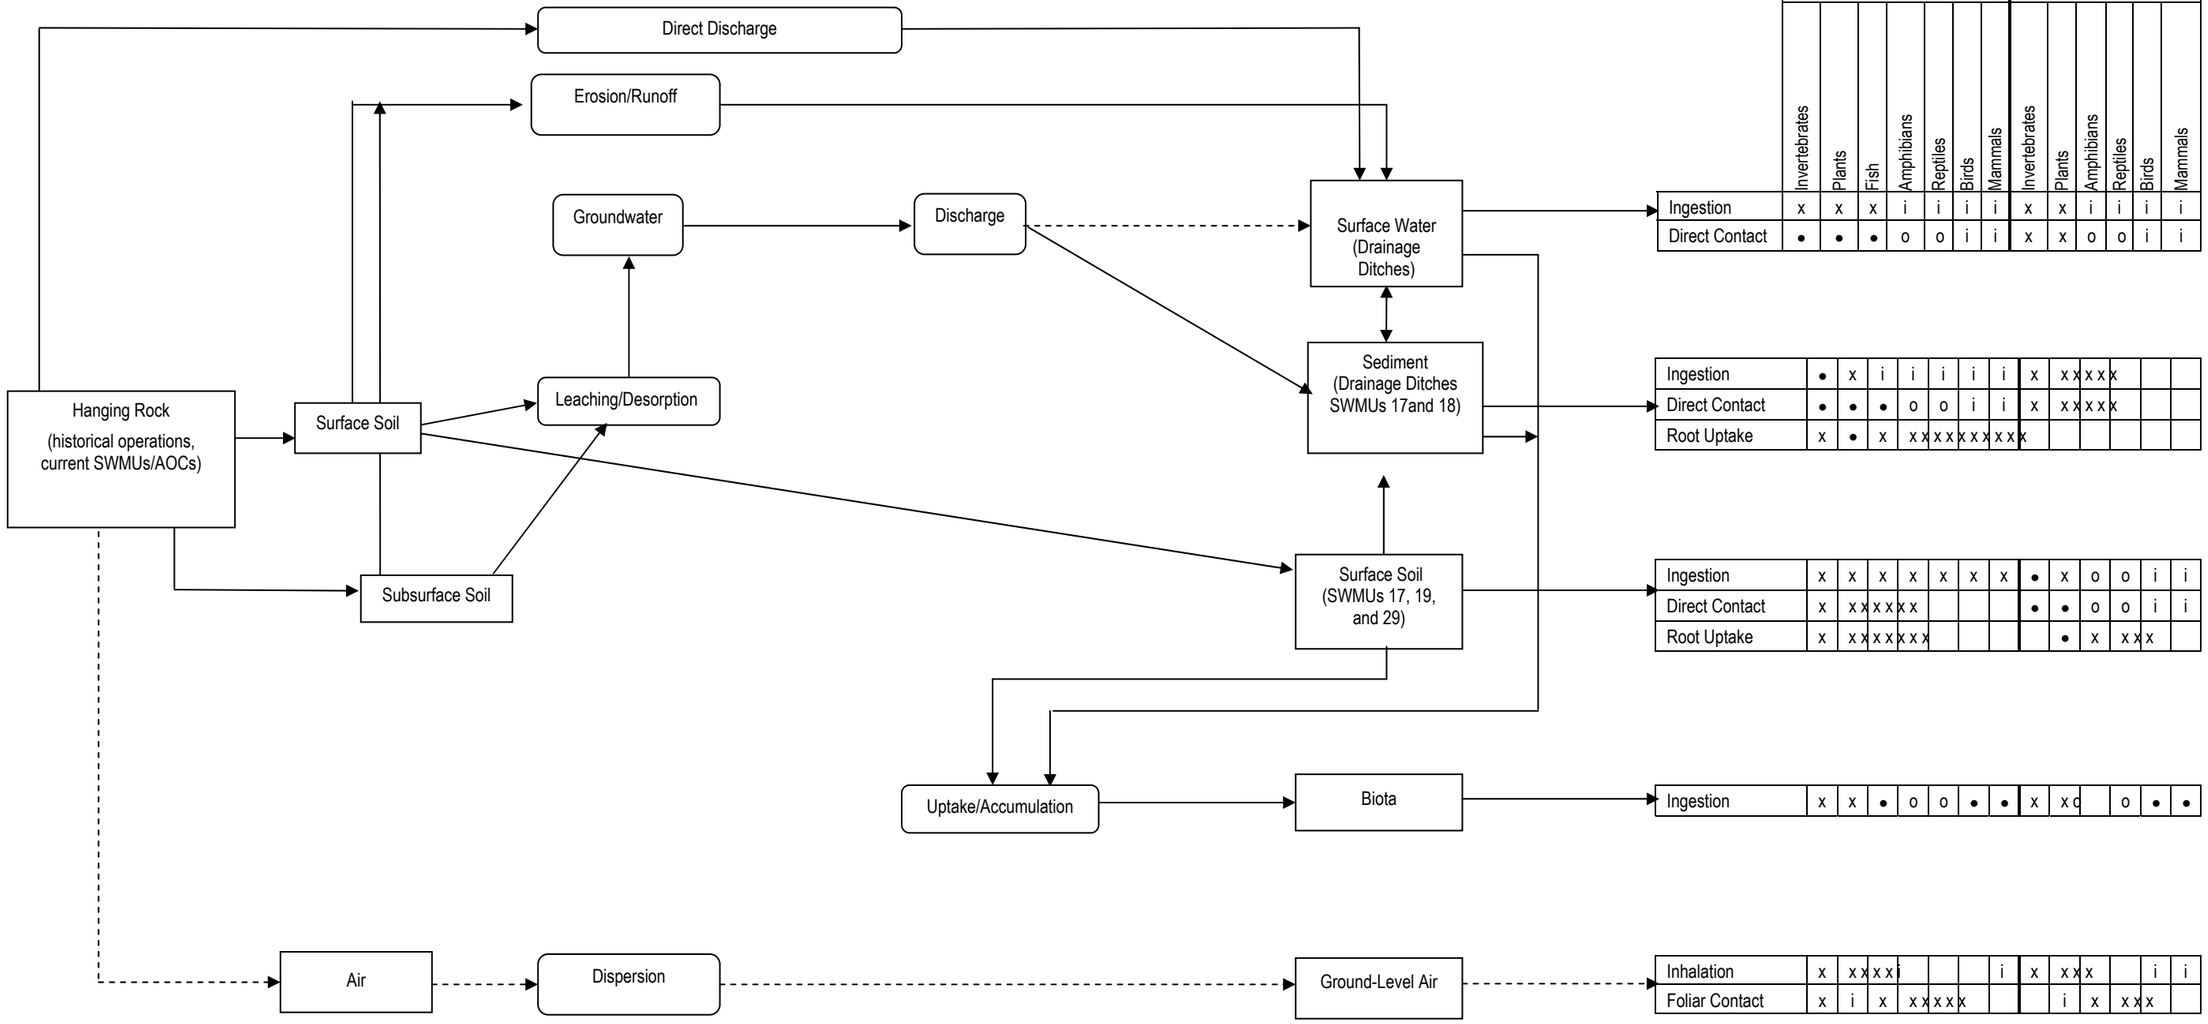
Step 8: Risk Management

Notes:

* These steps are followed by a SMDP, during which it is decided upon appropriate future courses of action, if any.

1 – Adapted from USEPA 1997

Sources | **Transport Pathways** | **Exposure Media** | **Exposure Route** | **Receptors**



Exposure Route	Aquatic							Terrestrial					
	Invertebrates	Plants	Fish	Amphibians	Reptiles	Birds	Mammals	Invertebrates	Plants	Amphibians	Reptiles	Birds	Mammals
Ingestion	x	x	x	i	i	i	i	x	x	i	i	i	i
Direct Contact	•	•	•	o	o	i	i	x	x	o	o	i	i

Exposure Route	Sediment (Drainage Ditches SWMUs 17and 18)												
Ingestion	•	x	i	i	i	i	i	x	x	x	x	x	
Direct Contact	•	•	•	o	o	i	i	x	x	x	x	x	
Root Uptake	x	•	x	x	x	x	x	x	x	x	x	x	

Exposure Route	Surface Soil (SWMUs 17, 19, and 29)												
Ingestion	x	x	x	x	x	x	x	•	x	o	o	i	i
Direct Contact	x	x	x	x	x			•	•	o	o	i	i
Root Uptake	x	x	x	x	x	x			•	x	x	x	

Exposure Route	Biota												
Ingestion	x	x	•	o	o	•	•	x	x	o		o	•	•

Exposure Route	Ground-Level Air												
Inhalation	x	x	x	x	i			i	x	x	x		i	i
Foliar Contact	x	i	x	x	x	x			i	x	x	x		

Primary exposure pathway

Ecologically insignificant exposure pathway

• = Complete and significant pathway - A complete and significant pathway means there is a potential for a contaminant to reach a receptor via the proposed route and there is a high potential that the receptor will receive a significant proportion of the contaminant dose via the proposed route.

○ = Complete and significance unknown – A complete and significant pathway means there is a potential for a contaminant to reach a receptor via the proposed route and that it is unknown if the receptor will receive a significant proportion of the contaminant dose via the proposed route alone. However, the receptor could receive a significant proportion of the contaminant dose when combined with other pathways or other contaminants.

i = Complete and insignificant pathway - A complete and insignificant pathway means there is a potential for a contaminant to reach a receptor via the proposed route and there is a low potential that the receptor will receive a significant proportion of the contaminant dose via the proposed route.

x = Incomplete pathway - An Incomplete pathway means there is no potential for a contaminant to reach a receptor via the proposed route.

Letter Documenting Proposed Sample Location Relocation

CH2M HILL
7927 Nemco Way
Suite 120
Brighton, MI 48116
Tel 810-360-2051

November 30, 2011

Mr. Gregory Rudloff
United States Environmental Protection Agency
Region 5
77 W. Jackson Blvd. LU-9J
Chicago, IL 60604

Subject: Proposed Revisions to Soil Boring and Monitoring Well Locations
RCRA Facility Investigation Phase 1 Work Plan
Dow Hanging Rock Plant, Ironton, Ohio
EPA ID# OHD 039 128 913

Dear Mr. Rudloff:

On behalf of The Dow Chemical Company, CH2M HILL reviewed historical site drawings, performed site reconnaissance, cleared utilities, and surveyed soil boring and monitoring well locations the week of November 15, 2011 in preparation of implementing the Investigation Phase I Work Plan. Based on this work, several of the proposed boring and well locations were identified as needing to be moved since they were not accessible, they were located above underground utilities, and/or the actual location of the solid waste management unit (SWMU) was different than originally expected.

The proposed revised locations are shown in the attached table and figures. The attached table presents the location ID, the offset distance and direction, and the rationale for the change. The affected soil boring locations are in SWMUs 1, 12, 17, 24, 25-28, and 29, and the affected monitoring well locations area MW-01, 04, and 06.

Dow requests your review and approval of the revised soil boring and monitoring well locations. I can be reached at (810) 360-2051 if you have any questions. Thank you.

Sincerely,

Mark E. Holland, PE
CH2M HILL

Dave Boehnker/CH2M HILL
file

Soil Boring and Monitoring Well Location Offsets
Dow Hanging Rock Facility

SWMU	Proposed Location ID	Offset Distance and Direction	Rational for Relocation
1	S1-SS04	5 ft N of planned location	Moved due to sanitary sewer running east-west through the proposed location
	S1-SS05	5 ft N of planned location	Moved due to sanitary sewer running east-west through the proposed location
	S1-SS06	5 ft NW of planned location	Moved due to sanitary sewer line running east-west and overhead obstacle running north-south through the proposed location
	S1-SS07	5 ft W of planned location	Moved due to sanitary sewer running north-south through the proposed location.
12	S12-SS01	9 ft S of planned location	Moved outward toward the edge of the concrete containment area for the methylene chloride tank due to overhead clearance issues for drill rig access due to existing tank and pipelines. Location is still within the containment area
	S12-SS02	11 ft NE of planned location	Moved outward toward the edge of the concrete containment area for the the methylene chloride tank due to overhead clearance issues for drill rig access due to existing tank and pipelines. Location is still within the containment area
17	S17-SS02	10 ft NW of planned location	Moved due to several utilities (including potable water line, fire protection, electric, gas, telephone and others) that run through the proposed location
	S17-SS03	350 ft NE of planned location (S of truck scale along 5th Street)	Based on site reconnaissance, the southern leg of SWMU 17 (drainage system) that runs east-west is actually part of SWMU 18 (drainage ditch). Therefore, the sample location has moved to the southern portion of north-south section of SWMU 17, south of the truck scale, along 5th Street. A sample will be collected from the drainage ditch at the original S17-0003 location as part of SWMU 18, and will be identified as S18-SD06.
24	S24-SS01	75 ft SW of planned location	Location will need to be moved due to truck loading ramp and underground utilities (electric sanitary sewer and water) in the area. A revised location will be identified in the field that is along the sewer north of the originally proposed location which is accessible and away from underground utilities
	S24-SS03	38 ft W of planned location	Location moved to be close to the joint between the north-south and east-west trending sections of the process sewer line. The joint was idenitified in the field near the new location.
	S24-SS05	8 ft N of planned location	Moved due to electrical line running southeast of the proposed location
25-28	S25-SS01	47 ft W of planned location	Blue print of the former waste water treatment system was recently identified and reviewed which showed the location of the treatment system to be different from the location shown in the work plan. Ground penetration radar (GPR) also identified the outline of the foundation of the former waste water system and was consistent with the blue print. Therefore, the locations were moved to be within the revised footprint of the former waste water system.
	S25-SS02	51 ft W of planned Location	
	S25-SS03	62 ft NW of planned location	
	S25-SS04	63 ft NW of planned location	
29	S29-SS01	2ft E of planned location	Moved due to aboveground pipe rack in the proposed location which restricted access
	S29-SS02	4ft N of planned location	Moved due to elbow of aboveground pipe rack in the proposed location which restricted access
MWs	MW-01	75ft N of planned location	Moved due to railroad tracks and a gas transmission pipeline running east-west of the proposed location
	MW-06	60ft S of planned location	Moved because proposed location was in the middle of the road and there is a ditch and utility corridor immediately to the south of the road.
	MW-04	15ft S of planned location	Moved because proposed location is in ditch

Analysis Report

ANALYTICAL RESULTS

Prepared by:

Lancaster Laboratories
2425 New Holland Pike
Lancaster, PA 17605-2425

Prepared for:

CH2M Hill, Inc.
PO Box 241329
Denver CO 80224

December 23, 2011

Project: Dow Hanging Rock, OH

Submittal Date: 12/13/2011
Group Number: 1280700
SDG: DHR06
PO Number: 420671-04
Release Number: DHR06
State of Sample Origin: OH

Client Sample Description	Lancaster Labs (LLI) #
HGR-121211-EB01 Grab Water Sample	6497513
S01-SS03-0002-121211 Composite Soil Sample	6497514

10727	2,4-Dinitrotoluene	121-14-2	1,700		77	1
10727	2,6-Dinitrotoluene	606-20-2	1,800		19	1
10727	1,4-Dioxane	123-91-1	900		120	1
10727	bis(2-Ethylhexyl)phthalate	117-81-7	1,800		77	1
10727	Fluoranthene	206-44-0	1,900		4	1
10727	Fluorene	86-73-7	1,600		4	1
10727	Hexachlorobenzene	118-74-1	1,700		4	1
10727	Hexachlorocyclopentadiene	77-47-4	530	J	190	1
10727	Hexachloroethane	67-72-1	1,500		39	1
10727	Indeno(1,2,3-cd)pyrene	193-39-5	1,800		4	1
10727	Isophorone	78-59-1	1,600		19	1
10727	2-Methylnaphthalene	91-57-6	1,600		4	1
10727	2-Methylphenol	95-48-7	1,600		19	1
10727	4-Methylphenol	106-44-5	1,500		19	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.					
10727	2-Nitroaniline	88-74-4	1,900		19	1
10727	3-Nitroaniline	99-09-2	1,800		77	1
10727	4-Nitroaniline	100-01-6	1,500		77	1
10727	Nitrobenzene	98-95-3	1,700		19	1
10727	2-Nitrophenol	88-75-5	1,800		19	1
10727	4-Nitrophenol	100-02-7	1,400		190	1
10727	N-Nitroso-di-n-propylamine	621-64-7	1,400		19	1
10727	N-Nitrosodiphenylamine	86-30-6	1,900		19	1
	N-nitrosodiphenylamine decomposes in the GC inlet forming diphenylamine. The result reported for N-nitrosodiphenylamine represents the combined total of both compounds.					
10727	Di-n-octylphthalate	117-84-0	1,800		77	1
10727	Pentachlorophenol	87-86-5	1,500		39	1

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	17.9	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

Analysis Report

Sample Description: S01-SS03-0810-121211 Composite Soil Sample
Dow Hanging Rock, OH

LLI Sample # SW 6497519
LLI Group # 1280700
Account # 11372

Project Name: Dow Hanging Rock, OH

Collected: 12/12/2011 10:05 by OO

Submitted: 12/13/2011 09:35
Reported: 12/23/2011 18:49

CH2M Hill, Inc.
PO Box 241329
Denver CO 80224

3-810 SDG#: DHR06-04

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	16.5	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance: carbon disulfide; 1,2-dichloropropane and cis-1,3-dichloropropene.

Wet Chemistry	**SM20 2540 G**		**%**	**%**	
00111	Moisture	n.a.	5.2	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance: carbon disulfide; 1,2-dichloropropane and cis-1,3-dichloropropene.

00111	Moisture	n.a.	18.2	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance: carbon disulfide; 1,2-dichloropropane and cis-1,3-dichloropropene.

The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance: carbon disulfide; 1,2-dichloropropane and cis-1,3-dichloropropene.

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance: carbon disulfide; 1,2-dichloropropane and cis-1,3-dichloropropene.

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance: carbon disulfide; 1,2-dichloropropane and cis-1,3-dichloropropene.

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance: carbon disulfide; 1,2-dichloropropane and cis-1,3-dichloropropene.

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance: carbon disulfide; 1,2-dichloropropane and cis-1,3-dichloropropene.

The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance: carbon disulfide; 1,2-dichloropropane and cis-1,3-dichloropropene.

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance: carbon disulfide; 1,2-dichloropropane and cis-1,3-dichloropropene.

10727	N-Nitroso-di-n-propylamine	621-64-7	20	U	20	1
10727	N-Nitrosodiphenylamine	86-30-6	20	U	20	1
	N-nitrosodiphenylamine decomposes in the GC inlet forming diphenylamine. The result reported for N-nitrosodiphenylamine represents the combined total of both compounds.

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance: carbon disulfide; 1,2-dichloropropane and cis-1,3-dichloropropene.

The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance: carbon disulfide; 1,2-dichloropropane and cis-1,3-dichloropropene.

The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance: carbon disulfide; 1,2-dichloropropane and cis-1,3-dichloropropene.

10727	N-Nitroso-di-n-propylamine	621-64-7	180	U	180	10
10727	N-Nitrosodiphenylamine	86-30-6	180	U	180	10
	N-nitrosodiphenylamine decomposes in the GC inlet forming diphenylamine. The result reported for N-nitrosodiphenylamine represents the combined total of both compounds.

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

Quality Control Summary

Client Name: CH2M Hill, Inc. Group Number: 1280700
Reported: 12/23/11 at 06:49 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	**BMQL**	Below Minimum Quantitation Level
N.D.	none detected	**MPN**	Most Probable Number
TNTC	Too Numerous To Count	**CP Units**	cobalt-chloroplatinate units
IU	International Units	**NTU**	nephelometric turbidity units
umhos/cm	micromhos/cm	**ng**	nanogram(s)
C	degrees Celsius	**F**	degrees Fahrenheit
meq	milliequivalents	**lb.**	pound(s)
g	gram(s)	**kg**	kilogram(s)
ug	microgram(s)	**mg**	milligram(s)
ml	milliliter(s)	**l**	liter(s)
m3	cubic meter(s)	**ul**	microliter(s)

< less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

> greater than

J estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

ppm parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

ppb parts per billion

Dry weight basis Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

U.S. EPA CLP Data Qualifiers:

Organic Qualifiers

A	TIC is a possible aldol-condensation product
B	Analyte was also detected in the blank
C	Pesticide result confirmed by GC/MS
D	Compound quantitated on a diluted sample
E	Concentration exceeds the calibration range of the instrument
N	Presumptive evidence of a compound (TICs only)
P	Concentration difference between primary and confirmation columns >25%
U	Compound was not detected
X,Y,Z	Defined in case narrative

Inorganic Qualifiers

B	Value is <CRDL, but ≥IDL
E	Estimated due to interference
M	Duplicate injection precision not met
N	Spike sample not within control limits
S	Method of standard additions (MSA) used for calculation
U	Compound was not detected
W	Post digestion spike out of control limits
*****	Duplicate analysis not within control limits
+	Correlation coefficient for MSA <0.995

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance: carbon disulfide; 1,2-dichloropropane and cis-1,3-dichloropropene.

The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance: carbon disulfide; 1,2-dichloropropane and cis-1,3-dichloropropene.

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance: carbon disulfide; 1,2-dichloropropane and cis-1,3-dichloropropene.

The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance: carbon disulfide; 1,2-dichloropropane and cis-1,3-dichloropropene.

The GC/MS volatile internal standard peak areas were outside the QC limits. A re-analysis was performed, and the matrix effect was confirmed.

The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance: 2,2-dichloropropane.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	18.4	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

Quality Control Summary

Client Name: CH2M Hill, Inc. Group Number: 1280701
Reported: 12/30/11 at 03:36 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	**BMQL**	Below Minimum Quantitation Level
N.D.	none detected	**MPN**	Most Probable Number
TNTC	Too Numerous To Count	**CP Units**	cobalt-chloroplatinate units
IU	International Units	**NTU**	nephelometric turbidity units
umhos/cm	micromhos/cm	**ng**	nanogram(s)
C	degrees Celsius	**F**	degrees Fahrenheit
meq	milliequivalents	**lb.**	pound(s)
g	gram(s)	**kg**	kilogram(s)
µg	microgram(s)	**mg**	milligram(s)
mL	milliliter(s)	**L**	liter(s)
m3	cubic meter(s)	**µL**	microliter(s)
		pg/L	picogram/liter

< less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

> greater than

J estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

ppm parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

ppb parts per billion

Dry weight basis Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

U.S. EPA CLP Data Qualifiers:

Organic Qualifiers

A	TIC is a possible aldol-condensation product
B	Analyte was also detected in the blank
C	Pesticide result confirmed by GC/MS
D	Compound quantitated on a diluted sample
E	Concentration exceeds the calibration range of the instrument
N	Presumptive evidence of a compound (TICs only)
P	Concentration difference between primary and confirmation columns >25%
U	Compound was not detected
X,Y,Z	Defined in case narrative

Inorganic Qualifiers

B	Value is <CRDL, but ≥IDL
E	Estimated due to interference
M	Duplicate injection precision not met
N	Spike sample not within control limits
S	Method of standard additions (MSA) used for calculation
U	Compound was not detected
W	Post digestion spike out of control limits
*****	Duplicate analysis not within control limits
+	Correlation coefficient for MSA <0.995

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Analysis Report

Sample Description: S11-SS04-0002-121311 Composite Soil Sample
Dow Hanging Rock, OH

LLI Sample # SW 6499034
LLI Group # 1280964
Account # 11372

Project Name: Dow Hanging Rock, OH

Collected: 12/13/2011 08:50 by OO

Submitted: 12/14/2011 09:20
Reported: 12/27/2011 13:47

CH2M Hill, Inc.
PO Box 241329
Denver CO 80224

40002 SDG#: DHR08-02

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	17.8	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

00118	Moisture	n.a.	19.2	0.50	1
00121	Moisture Duplicate	n.a.	18.5	0.50	1

The duplicate moisture value is provided to assess the precision of the moisture test. For comparability purposes, the initial moisture determination is the value used to perform dry weight calculations.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	19.0	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	17.4	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	18.1	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	20.0	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	18.4	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	16.9	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

Analysis Report

Sample Description: S11-SS02-0305-121311 Composite Soil Sample
Dow Hanging Rock, OH

LLI Sample # SW 6499045
LLI Group # 1280964
Account # 11372

Project Name: Dow Hanging Rock, OH

Collected: 12/13/2011 10:00 by OO

Submitted: 12/14/2011 09:20
Reported: 12/27/2011 13:47

CH2M Hill, Inc.
PO Box 241329
Denver CO 80224

20305 SDG#: DHR08-10

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	19.2	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

Sample Description: S11-SS02-0810-121311 Composite Soil Sample
Dow Hanging Rock, OH

LLI Sample # SW 6499046
LLI Group # 1280964
Account # 11372

Project Name: Dow Hanging Rock, OH

Collected: 12/13/2011 10:05 by OO

Submitted: 12/14/2011 09:20
Reported: 12/27/2011 13:47

CH2M Hill, Inc.
PO Box 241329
Denver CO 80224

20810 SDG#: DHR08-11

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	19.9	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	18.8	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	22.5	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	16.4	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	19.0	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	20.6	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

Quality Control Summary

Client Name: CH2M Hill, Inc. Group Number: 1280964
Reported: 12/27/11 at 01:47 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	**BMQL**	Below Minimum Quantitation Level
N.D.	none detected	**MPN**	Most Probable Number
TNTC	Too Numerous To Count	**CP Units**	cobalt-chloroplatinate units
IU	International Units	**NTU**	nephelometric turbidity units
umhos/cm	micromhos/cm	**ng**	nanogram(s)
C	degrees Celsius	**F**	degrees Fahrenheit
meq	milliequivalents	**lb.**	pound(s)
g	gram(s)	**kg**	kilogram(s)
ug	microgram(s)	**mg**	milligram(s)
ml	milliliter(s)	**l**	liter(s)
m3	cubic meter(s)	**ul**	microliter(s)

< less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

> greater than

J estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

ppm parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

ppb parts per billion

Dry weight basis Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

U.S. EPA CLP Data Qualifiers:

Organic Qualifiers

A	TIC is a possible aldol-condensation product
B	Analyte was also detected in the blank
C	Pesticide result confirmed by GC/MS
D	Compound quantitated on a diluted sample
E	Concentration exceeds the calibration range of the instrument
N	Presumptive evidence of a compound (TICs only)
P	Concentration difference between primary and confirmation columns >25%
U	Compound was not detected
X,Y,Z	Defined in case narrative

Inorganic Qualifiers

B	Value is <CRDL, but ≥IDL
E	Estimated due to interference
M	Duplicate injection precision not met
N	Spike sample not within control limits
S	Method of standard additions (MSA) used for calculation
U	Compound was not detected
W	Post digestion spike out of control limits
*****	Duplicate analysis not within control limits
+	Correlation coefficient for MSA <0.995

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	16.0	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

Analysis Report

Sample Description: S19-SS01-0305-121311 Composite Soil Sample
Dow Hanging Rock, OH

LLI Sample # SW 6499054
LLI Group # 1280965
Account # 11372

Project Name: Dow Hanging Rock, OH

Collected: 12/13/2011 14:00 by OO

Submitted: 12/14/2011 09:20
Reported: 12/30/2011 15:39

CH2M Hill, Inc.
PO Box 241329
Denver CO 80224

19305 SDG#: DHR09-02

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	16.7	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

Analysis Report

Sample Description: S19-SS01-0810-121311 Composite Soil Sample
Dow Hanging Rock, OH

LLI Sample # SW 6499055
LLI Group # 1280965
Account # 11372

Project Name: Dow Hanging Rock, OH

Collected: 12/13/2011 14:20 by OO

Submitted: 12/14/2011 09:20
Reported: 12/30/2011 15:39

CH2M Hill, Inc.
PO Box 241329
Denver CO 80224

19810 SDG#: DHR09-03

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	22.0	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
GC/MS Semivolatiles	**SW-846 8270C**		**ug/kg**	**ug/kg**	
10727	2,4-Dinitrotoluene	121-14-2	1,600	81	1
10727	2,6-Dinitrotoluene	606-20-2	1,700	20	1
10727	1,4-Dioxane	123-91-1	780	120	1
10727	bis(2-Ethylhexyl)phthalate	117-81-7	1,800	81	1
10727	Fluoranthene	206-44-0	1,500	4	1
10727	Fluorene	86-73-7	1,600	4	1
10727	Hexachlorobenzene	118-74-1	1,600	4	1
10727	Hexachlorocyclopentadiene	77-47-4	3,100	200	1
10727	Hexachloroethane	67-72-1	1,500	41	1
10727	Indeno(1,2,3-cd)pyrene	193-39-5	1,600	4	1
10727	Isophorone	78-59-1	1,700	20	1
10727	2-Methylnaphthalene	91-57-6	1,600	4	1
10727	2-Methylphenol	95-48-7	1,700	20	1
10727	4-Methylphenol	106-44-5	1,700	20	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.				
10727	2-Nitroaniline	88-74-4	1,700	20	1
10727	3-Nitroaniline	99-09-2	1,600	81	1
10727	4-Nitroaniline	100-01-6	1,300	81	1
10727	Nitrobenzene	98-95-3	1,700	20	1
10727	2-Nitrophenol	88-75-5	1,600	20	1

10727	N-Nitroso-di-n-propylamine	621-64-7	1,500	20	1
10727	N-Nitrosodiphenylamine	86-30-6	1,800	20	1
	N-nitrosodiphenylamine decomposes in the GC inlet forming diphenylamine. The result reported for N-nitrosodiphenylamine represents the combined total of both compounds.				
10727	Di-n-octylphthalate	117-84-0	1,800	81	1
10727	Pentachlorophenol	87-86-5	1,200	41	1
10727	Phenanthrene	85-01-8	1,600	4	1
10727	Phenol	108-95-2	1,700	20	1

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	5.8	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	4.6	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

10727	Isophorone	78-59-1	18	U	18	1
10727	2-Methylnaphthalene	91-57-6	4	U	4	1
10727	2-Methylphenol	95-48-7	18	U	18	1
10727	4-Methylphenol	106-44-5	18	U	18	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.					
10727	2-Nitroaniline	88-74-4	18	U	18	1
10727	3-Nitroaniline	99-09-2	71	U	71	1
10727	4-Nitroaniline	100-01-6	71	U	71	1
10727	Nitrobenzene	98-95-3	18	U	18	1
10727	2-Nitrophenol	88-75-5	18	U	18	1
10727	4-Nitrophenol	100-02-7	180	U	180	1
10727	N-Nitroso-di-n-propylamine	621-64-7	18	U	18	1
10727	N-Nitrosodiphenylamine	86-30-6	18	U	18	1
	N-nitrosodiphenylamine decomposes in the GC inlet forming diphenylamine. The result reported for N-nitrosodiphenylamine represents the combined total of both compounds.					
10727	Di-n-octylphthalate	117-84-0	71	U	71	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Metals	**SW-846 7471A**		**mg/kg**	**mg/kg**	
00159	Mercury	7439-97-6	0.0080 U	0.0080	1
Wet Chemistry	**SM20 2540 G**		**%**	**%**	
00111	Moisture	n.a.	16.2	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

Quality Control Summary

Client Name: CH2M Hill, Inc. Group Number: 1280965
Reported: 12/30/11 at 03:39 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	**BMQL**	Below Minimum Quantitation Level
N.D.	none detected	**MPN**	Most Probable Number
TNTC	Too Numerous To Count	**CP Units**	cobalt-chloroplatinate units
IU	International Units	**NTU**	nephelometric turbidity units
umhos/cm	micromhos/cm	**ng**	nanogram(s)
C	degrees Celsius	**F**	degrees Fahrenheit
meq	milliequivalents	**lb.**	pound(s)
g	gram(s)	**kg**	kilogram(s)
µg	microgram(s)	**mg**	milligram(s)
mL	milliliter(s)	**L**	liter(s)
m3	cubic meter(s)	**µL**	microliter(s)
		pg/L	picogram/liter

< less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

> greater than

J estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

ppm parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

ppb parts per billion

Dry weight basis Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

U.S. EPA CLP Data Qualifiers:

Organic Qualifiers

A	TIC is a possible aldol-condensation product
B	Analyte was also detected in the blank
C	Pesticide result confirmed by GC/MS
D	Compound quantitated on a diluted sample
E	Concentration exceeds the calibration range of the instrument
N	Presumptive evidence of a compound (TICs only)
P	Concentration difference between primary and confirmation columns >25%
U	Compound was not detected
X,Y,Z	Defined in case narrative

Inorganic Qualifiers

B	Value is <CRDL, but ≥IDL
E	Estimated due to interference
M	Duplicate injection precision not met
N	Spike sample not within control limits
S	Method of standard additions (MSA) used for calculation
U	Compound was not detected
W	Post digestion spike out of control limits
*****	Duplicate analysis not within control limits
+	Correlation coefficient for MSA <0.995

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

10727	2-Methylphenol	95-48-7	18	U	18	1
10727	4-Methylphenol	106-44-5	18	U	18	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.					
10727	2-Nitroaniline	88-74-4	18	U	18	1
10727	3-Nitroaniline	99-09-2	70	U	70	1

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Metals	**SW-846 7471A**		**mg/kg**	**mg/kg**	
00159	Mercury	7439-97-6	0.0069 U	0.0069	1
Wet Chemistry	**SM20 2540 G**		**%**	**%**	
00111	Moisture	n.a.	5.3	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

AOD11 SDG#: DHR10-05

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Metals	**SW-846 7471A**		**mg/kg**	**mg/kg**	
00159	Mercury	7439-97-6	0.0071 U	0.0071	1
Wet Chemistry	**SM20 2540 G**		**%**	**%**	
00111	Moisture	n.a.	5.1	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

Sample Description: S17-SS02-0002-121411 Composite Soil Sample
Dow Hanging Rock, OH

LLI Sample # SW 6500553
LLI Group # 1281221
Account # 11372

Project Name: Dow Hanging Rock, OH

Collected: 12/14/2011 14:20 by OO

Submitted: 12/15/2011 09:30
Reported: 01/04/2012 15:54

CH2M Hill, Inc.
PO Box 241329
Denver CO 80224

S1721 SDG#: DHR10-14BKG

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Metals	**SW-846 7471A**		**mg/kg**	**mg/kg**	
00159	Mercury	7439-97-6	0.0112 J	0.0087	1
Wet Chemistry	**SM20 2540 G**		**%**	**%**	
00111	Moisture	n.a.	20.0	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

00118	Moisture	n.a.	20.0	0.50	1
00121	Moisture Duplicate	n.a.	20.3	0.50	1

The duplicate moisture value is provided to assess the precision of the moisture test. For comparability purposes, the initial moisture determination is the value used to perform dry weight calculations.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

Quality Control Summary

Client Name: CH2M Hill, Inc. Group Number: 1281221
Reported: 01/04/12 at 03:54 PM

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

eurofins | Lancaster Laboratories

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	**BMQL**	Below Minimum Quantitation Level
N.D.	none detected	**MPN**	Most Probable Number
TNTC	Too Numerous To Count	**CP Units**	cobalt-chloroplatinate units
IU	International Units	**NTU**	nephelometric turbidity units
umhos/cm	micromhos/cm	**ng**	nanogram(s)
C	degrees Celsius	**F**	degrees Fahrenheit
meq	milliequivalents	**lb.**	pound(s)
g	gram(s)	**kg**	kilogram(s)
µg	microgram(s)	**mg**	milligram(s)
mL	milliliter(s)	**L**	liter(s)
m3	cubic meter(s)	**µL**	microliter(s)
		pg/L	picogram/liter

< less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

> greater than

J estimated value – The result is ≥ the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

ppm parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

ppb parts per billion

Dry weight basis Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

U.S. EPA CLP Data Qualifiers:

Organic Qualifiers

A	TIC is a possible aldol-condensation product
B	Analyte was also detected in the blank
C	Pesticide result confirmed by GC/MS
D	Compound quantitated on a diluted sample
E	Concentration exceeds the calibration range of the instrument
N	Presumptive evidence of a compound (TICs only)
P	Concentration difference between primary and confirmation columns >25%
U	Compound was not detected
X,Y,Z	Defined in case narrative

Inorganic Qualifiers

B	Value is <CRDL, but ≥IDL
E	Estimated due to interference
M	Duplicate injection precision not met
N	Spike sample not within control limits
S	Method of standard additions (MSA) used for calculation
U	Compound was not detected
W	Post digestion spike out of control limits
*****	Duplicate analysis not within control limits
+	Correlation coefficient for MSA <0.995

Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions, and Lancaster hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	19.8	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	17.9	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	17.8	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	13.7	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	20.3	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

Analysis Report

Sample Description: S15-SS02-0002-121511 Composite Soil Sample
Dow Hanging Rock, OH

LLI Sample # SW 6502127
LLI Group # 1281468
Account # 11372

Project Name: Dow Hanging Rock, OH

Collected: 12/15/2011 12:25 by OO

Submitted: 12/16/2011 09:30
Reported: 01/05/2012 10:25

CH2M Hill, Inc.
PO Box 241329
Denver CO 80224

152-1 SDG#: DHR11-11

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	12.8	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

Analysis Report

Sample Description: S15-SS02-0305-121511 Composite Soil Sample
Dow Hanging Rock, OH

LLI Sample # SW 6502128
LLI Group # 1281468
Account # 11372

Project Name: Dow Hanging Rock, OH

Collected: 12/15/2011 12:30 by OO

Submitted: 12/16/2011 09:30
Reported: 01/05/2012 10:25

CH2M Hill, Inc.
PO Box 241329
Denver CO 80224

152-2 SDG#: DHR11-12

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
Wet Chemistry	**SM20 2540 G**		%	%	
00111	Moisture	n.a.	16.0	0.50	1

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance: 1,2,3-trichlorobenzene.

00111	Moisture	n.a.	24.2		0.50	1
	"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.					

General Sample Comments

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.
