Dear Mr. Washburn,

I'm taking this opportunity to write you concerning EPA's proposed remedy for the radioactive materials sitting (illegally) in the West Lake landfill of Bridgeton, MO. This stuff is the unprotected debris of the government's Manhattan Project and Cold War bomb making. It's the government's job to protect people now and to extend that protection to life to come. It's the government's job to remove this and all that it has thus-far contaminated in that landfill as close to 100% as possible, and store it off-site, out of the St. Louis region, in a place that has been prepared to store radioactive materials safely. 70% will not do. Think about the people now in our region, and the innocents to come.

Respectfully,

JONATHAN BECK

[redacted]

I AM PARTICULARLY CONCERNED ABOUT OUR DRINKING WATER – WATER MY CHILDREN DRINK – AND THE POTENTIAL FOR A NATURAL DISASTER – EARTHQUAKE OR STORM – TO CAUSE A MAJOR ENVIRONMENTAL CONTAMINATION PROBLEM. 70% IS NOT GOOD ENOUGH!

30351059

JONATHAN BECK
