RE: Bifenthrin / Talstar Pesticide

Hello George,

I have dropped these associated documents off for your review so that we can better understand the reality of the sprays that were sprayed at the Quest Building, 6101 Yellowstone Road, Ste.'s 259B, 259C, and 259D, Cheyenne, WY. These sheets are available from Presto-X for anyone to have and should have been sought after by your office as part of this investigation.

You should know that a number of the employees had these sheets before your interviews and found your interjections on the chemical being safe as less than accurate. If you read the companies FMC sheets, WHICH CLEARLY STATES THIS IS AN INSECTICIDE NOT HERBASIDE and the first information is stating HAZARDS IDENTIFICATION "the classification of this product is #1 for specific target organ toxicity for a (single exposure) and #1 for specific target organ toxicity for (repeated exposure). Of course we are at the "repeated" exposure.

Next, the data sheet states the "Danger Overview" which goes on to say "Danger - Harmful if swallowed, Harmful if inhaled, Suspected of causing cancer, Causes damage to organs, and last but not least, Causes damage to organs through PROLONGED OR REPEATED EXPOSURE!

Let's move on to FIRST AID MEASURES, skin contact says "Take off contaminated clothing, Rinse skin IMMEDIATELY WITH PLENTY OF WATER FOR 15-20 minutes! Most of us sat in this spray for hours and then went home in our cars, to our homes where we sat and walked, and then MAYBE some of us showered. Some of us went to bed and layered it in our beds. Also, noted "Most important symptoms and effects, BOTH ACUTE AND DELAYED ARE THE CENTRAL NERVOUS SYSTEM.

Now for #6, Accidental Release Measures, "Isolate and post spill (spray) area. WEAR SUITABLE PROTECTIVE CLOTHING, GLOVES AND EYE/FACE PROTECTION. For "Environmental Precautions keep PEOPLE AND ANIMALS AWAY FROM AND UPWIND OF SPILL/LEAK. KEEP MATERIAL OUT OF LAKES, STREAMS, PONDS AND SEWER DRAINS.

I am sure you can follow through these information sheets but I want to draw your attention to the TOXICOLOGICAL INFORMATION TO THE STOT – SINGLE EXPOSURE AND MOST IMPORTANTLY TO THE STOT REPEATED EXPOSURE – "CAUSES DAMAGE TO ORGANS THROUGH PROLONGED OR REPEATED EXPOSURE" TARGETED ORGANS "CENTRAL NERVOUS SYSTEM"

There is much more as I have also dropped off the information with the skull and cross bones discussing the "Pyrethoid Poisoning" of Bifenthrin that labels this chemical as "Moderate Acute Toxicity". So my question to you, is how you in good consciousness could tell the staff that is still sitting in this spray that
