The Dry-dock Tariff calculations are based on the "International Tonnage Certificate" (ITC). This is as per the CGI Tariff, Item G.

G. Definitions GRT: Gross Registered Tonnage as defined in accordance with the provisions of the International Convention on Tonnage Measurement of Ships, 1969, as displayed in the most recent Record of the American Bureau of Shipping (ABS), or other similar classification bureau record. Gross Registered Tonnage will be taken from the International Tonnage Certificate. The highest GRT on the certificate will be used to calculate drydock fees.

The Dry-dock Tariff calculations are based on the "International Tonnage Certificate" (ITC). This is as per the CGI Tariff, Item G.

G. Definitions GRT: Gross Registered Tonnage as defined in accordance with the provisions of the International Convention on Tonnage Measurement of Ships, 1969, as displayed in the most recent Record of the American Bureau of Shipping (ABS), or other similar classification bureau record. Gross Registered Tonnage will be taken from the International Tonnage Certificate. The highest GRT on the certificate will be used to calculate drydock fees.

Utilization 2006	29%	35.84%	80.91%	

The Dry-dock Tariff calculations are based on the "International Tonnage Certificate" (ITC). This is as per the CGI Tariff, Item G.

G. Definitions GRT: Gross Registered Tonnage as defined in accordance with the provisions of the International Convention on Tonnage Measurement of Ships, 1969, as displayed in the most recent Record of the American Bureau of Shipping (ABS), or other similar classification bureau record. Gross Registered Tonnage will be taken from the International Tonnage Certificate. The highest GRT on the certificate will be used to calculate drydock fees.
