MEMORANDUM

DATE: October 16, 1985

TO: John Osborn, FIT RPO, EPA, Seattle

FROM: John Ryding, Chemist, E&E, Seattle
Andrew Hafferty, Senior Chemist, E&E, Seattle

THRU: D.A. Buecker, FIT RPM, E&E, Seattle

SUBJ: QA of Case 4768 (Organics)
Resource Recovery WA 0280

REF: TDD R10-8510-01

CC: Gerald Muth, DPO, EPA, Region X
Harold Takenaka, DPO, EPA, Region IX
Bill Ritthaler, E&E, Seattle

The Quality Assurance review of two samples, Case 4768, collected at Resource Recovery has been completed. Two soil samples were analyzed at low level for semi-volatiles and pesticides/PCBs by EAL Corporation of Richmond, California. The samples were numbered:

JA546 JA547

Data Qualifications

The following comments refer to the laboratory performance in meeting the Quality Control specifications outlined in IFB WA84A-266.

1) Timeliness - Acceptable

2) Instrument Tuning - Acceptable

3) Initial and Continuing Calibration - Acceptable

4) Detection Limits

Limits for multi-component pesticides and PCBs were above the CRDL.

USEPA SF
1371159

5) Pesticide Standards

a) Linearity

On column SP-2250/SP-2401 (quantitation)

Compound	% RSD	QC Limit
Aldrin	15%	10%
Endrin	12%	10%
4,4'-DDT	21%	10%

On column SE-30/SP-2401 (confirmation). This is a questionable choice as a confirmation column.

Compound	% RSD	QC Limit
4,4'-DDT	16%	10%

b) 4,4'-DDT/Endrin Breakdown - Acceptable

c) Dibutylchlorendate Retention Time Shift - Acceptable

d) Standards Summary - Acceptable

6) Blanks

Bis(2-ethylhexyl)phthalate was found in the BNA blank. The pesticide blank is not acceptable. The laboratory should take immediate action to eliminate an ongoing pesticide blank problem noted by the reviewers.

7) Surrogates

Acceptable as reported; however, most of the surrogate recoveries could not be reproduced from the raw data.

8) Matrix Spike and Matrix Spike Duplicate

The following compounds exceeded QC limits for % recovery:

Compound	% Recovery	QC Limit
1,2,4-Trichlorobenzene (MSD)	34	38-107%
Pyrene (MS)	32	35-142%
Pyrene (MSD)	24	35-142%
Lindane (MS)	328	46-127%
Lindane (MSD)	364	46-127%
Heptachlor (MS)	24	35-130%

Heptachlor (MSD)	197	35-130%
Aldrin (MS)	373	34-132%
Aldrin (MSD)	392	34-132%
Endrin (MSD)	153	42-139%
4,4'-DDT (MS)	149	23-134%
4,4'-DDT (MSD)	163	23-134%

The % recoveries could not be reproduced from the raw data.

The following compounds exceed QC limits for RPD:

Compound	RPD	QC Limit
Acenaphthene	41	<19
1,4-Dichlorobenzene	28	<27
Phenol	68	<35
4-Nitrophenol	55	<50
Heptachlor	157	<31

9) Samples

The BNA fraction data was flagged "J" due to the non-reproducibility of the contaminant concentrations and surrogate recoveries. All positive hits of the pesticide fraction were flagged "R" due to severe contamination of the blank. All pesticide data was flagged "J" due to poor linearity.

10) Tentatively Identified Compounds

4-Hydroxy-4-methyl-2-pentanone (diacetone alcohol) was detected and identified on the TIC data sheets in nearly every sample. This compound was detected in the blank but at significantly lower levels than in the samples. However, this compound is an aldol condensation product of an acetone reaction which has been noted in several other EAL data packages, e.g., E&E, QA memo data October 3, 1985; Case 4680 from R. McGinnis and A. Hafferty to J. Osborn, RPO, USEPA, Region X. The data is not reliable and has been deleted from the data sheets in this report.

Data Use

The usefulness of the data is based on the criteria outlined in the "Laboratory Data Validation Functional Guidelines for Evaluating Organic Analyses (R-582-5-5-01)."

Considering the above mentioned factors, the data is useful for LIMITED PURPOSES ONLY.

Pesticide/PCB data is suspect.

Data Qualifiers

U - The material was analyzed for, but was not detected. The associated numerical value is estimated sample quantitation limit.

J - The associated numerical value is an estimated quantity because quality control criteria were not met.

R - Quality Control indicates that data are unusable (compound may or may not be present). Resampling and reanalysis is necessary for verification.

Q - No analytical result.

N - Presumptive evidence of presence of material (tentative identification).

Data Reporting Qualifiers

For reporting results to EPA, the following results qualifiers are used. Additional flags or footnotes explaining results are encouraged. However, the definition of each flag must be explicit.

Value If the result is a value greater than or equal to the detection limit, report the value.

U Indicates compound was analyzed for but not detected. Report the minimum detection limit for the sample with the U (e.g., 10U) based on necessary concentration/dilution actions. (This is not necessarily the instrument detection limit.) The footnote should read: U-Compound was analyzed for but not detected. The number is the minimum attainable detection limit for the sample.

J Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed or when the mass spectral data indicates the presence of a compound that meets the identification criteria but the result is less than the specified detection limit but greater than zero (e.g., 10J).

C This flag applies to pesticide parameters where the identification has been confirmed by GC/MS. Single component pesticides ≥10 ng/ul in the final extract should be confirmed by GC/MS.

B This flag is used when the analyte is found in the blank as well as a sample. It indicates possible/probable blank contamination and warns the data user to take appropriate action.

Other Other specific flags and footnotes may be required to properly define the results. If used, they must be fully described and such description attached to the data summary report.

Data Reporting Qualifiers

For reporting results to EPA, the following results qualifiers are used. Additional flags or footnotes explaining results are encouraged. However, the definition of each flag must be explicit.

Value If the result is a value greater than or equal to the detection limit, report the value

U Indicates compound was analyzed for but not detected. Report the minimum detection limit for the sample with the U (e.g., 10U) based on necessary concentration/dilution actions. (This is not necessarily the instrument detection limit.) The footnote should read: U-Compound was analyzed for but not detected. The number is the minimum attainable detection limit for the sample

J Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed or when the mass spectral data indicates the presence of a compound that meets the identification criteria but the result is less than the specified detection limit but greater than zero (e.g., 10J)

C This flag applies to pesticide parameters where the identification has been confirmed by GC/MS. Single component pesticides ≥10 ng/ul in the final extract should be confirmed by GC/MS

B This flag is used when the analyte is found in the blank as well as a sample. It indicates possible/probable blank contamination and warns the data user to take appropriate action.

Other Other specific flags and footnotes may be required to properly define the results. If used, they must be fully described and such description attached to the data summary report
