Subject: ABOLISHING THE EPA

I think abolishing the EPA is a wonderful idea --- who needs those rules that are so restrictive that you can't drill oil and mine coal in America anymore???!!!

I'm sure those coal miners can't wait to be subjected to more black lung disease; especially without any Obamacare to take care of them. Who needs clean energy that doesn't cause cancer and a host of other diseases anyway???!!!

You know, another Republican, President Richard Nixon signed the Clean Water Act into law as well as the Endangered Species Act – what the Hell was he thinking – right???!!!

I've always wanted to visit China and without those rules keeping the air fit to breathe and the water fit to drink, I won't have to leave home; it will be like China was brought to my front door!

But before you actually abolish anything, it would be great if you would do just a couple or three little teensy-weensy things.

First: Dump the first truck load of nuclear waste at Mar-La-Go;

Second: Dump the second truck load of nuclear waste in front of Trump Tower in NYC; and

Third: Dump the third truck load of nuclear waste on the White House lawn.

Thank You!
