Davenport, Iowa 52802

RE: Current Site Conditions and Required Actions
Former R.V. Hopkins / Quad City Drum Site, 743 Schmidt Road, Davenport, Iowa
EPA ID # IAD022096028

Dear Mr. Schumacher:

The U.S. Environmental Protection Agency Region 7 would like to reiterate the following actions to be completed at the subject site located at 743 Schmidt Road in Davenport, Iowa. It is our understanding that you are the current owner of parcel K0047-04A, as described by the Scott County Government Services, on the subject site. The EPA is requesting your compliance with the conditions of the Findings of Fact, Conclusions of Law and Judgement Entry for Civil Case Number 3-99-CV-60005.

Based upon information gathered during numerous site visits from 2012 through 2016, including the most recent visit on December 01, 2016, the EPA has concluded that closure activities are incomplete as required by the Conclusions of Law items 4 and 5 in the referenced Civil Case and the approved Closure plan dated November 2000. During the site visit illegal storage of hazardous waste in drums was observed. The drums were identified by number and characteristic waste properties during an investigation conducted by the EPA contractors during the week of January 27, 2014. This is the second notice related to drums observed during a site visit. The first notice was dated June 23, 2016. The drums containing hazardous waste must be removed from the property and properly disposed of immediately.

The following items are considered major deficiencies or incomplete actions. The following list does not include all required actions to be taken to complete closure under the approved Closure Plan.

1. Removal of all hazardous waste stored on-site, including but not limited to drums identified in the enclosed Sampling Trip Report.

2. Completion of soil cap in areas of exposed soil with elevated levels of lead contamination.

3. Filing of Environmental Covenant(s) to restrict property usage.

4. Cost estimate and financial assurance documentation for post closure operation and maintenance activities after completion of required closure activities.

5. Final closeout report for abandonment of on-site groundwater wells.
