Total Concentration = 3.44 ng/L 10.2 40.9

Total Nanomoles = 0.013

Average Molecular Weight = 257.5

Number of Calibrated Peaks Found = 1

Internal Standard Retention Time = 46.93 minutes

Internal Standard Peak Area = 154585.9

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Not applicable

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090715-GI30MDOWN-FILTER
Comment: HUDSON RIVER RAMP;COC090715-HNEA-01
Date Acquired: 07/24/2009 19:45:48
Lab Sample ID: AM10096DL1
LRF ID: 09070149-08DL1
Lab File ID: GC16-738-21

Type for Mixed Peak Deconvolution = S

Concentration = 3.44 ng/L

Total Nanomoles = 0.013

Average Molecular Weight = 257.5

Number of Calibrated Peaks Found = 1

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Not applicable

Project Name: GC16_May_2009
Sample Set Name: GC16_071509C
Date Printed: 07/30/2009

Operating Conditions Gas Chromatography

User Name: Keith Friedman
Injection Method: Splitless
Sample Size: 0.5 uL
Column Type: Capillary

Temperature Information

Column Temperature: Program
Injector Temperature: 300 °C
Detector Temperature: 300 °C

Column Temperature Information

Initial Temperature: 50 °C Hold: 2.5 min
Temperature Program: 15 °C/min
Intermediate Temperature: 150 °C
Temperature Program: 4.3 °C/min
Final Temperature: 220 °C Hold: 35.1 min

Column Information

Column ID: Agilent DB-1; 30 meter; 0.25 micron phase thickness
Material: Fused Silica
Length: 30 meter
Internal Diameter: 0.25 mm
Carrier Gas: Helium
Make-up Gas: Nitrogen
Flow Pressure: 28.8 psi
Make-up Flow: 65 mL/min
Split Ratio: None

Detector Information

Detector Name: Detector 1 GC16
Detector Type: ECD
Detector Range: 3

Project Name: GC16_May_2009
Sample Set Name: GC16_072309a
Date Printed: 07/30/2009

Operating Conditions Gas Chromatography

User Name: Inga Hotaling
Injection Method: Splitless
Sample Size: 0.5 uL
Column Type: Capillary

Temperature Information

Column Temperature: Program
Injector Temperature: 300 °C
Detector Temperature: 300 °C

Column Temperature Information

Initial Temperature: 50 °C Hold: 2.5 min
Temperature Program: 15 °C/min
Intermediate Temperature: 150 °C
Temperature Program: 4.3 °C/min
Final Temperature: 220 °C Hold: 35.1 min

Column Information

Column ID: Agilent DB-1; 30 meter; 0.25 micron phase thickness
Material: Fused Silica
Length: 30 meter
Internal Diameter: 0.25 mm
Carrier Gas: Helium
Make-up Gas: Nitrogen
Flow Pressure: 28.8 psi
Make-up Flow: 65 mL/min
Split Ratio: None

Detector Information

Detector Name: Detector 1 GC16
Detector Type: ECD
Detector Range: 3

Total Concentration = 121 ng/mL

Total Nanomoles = 0.427

Average Molecular Weight = 282.8

Number of Calibrated Peaks Found = 102

Internal Standard Retention Time = 46.93 minutes

Internal Standard Peak Area = 126720.7

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: CCC Std 122 ng/mL
Comment: HUDSON RIVER RAMP;COC090715-HNEA-01
Date Acquired: 07/16/2009 03:10:24
Lab Sample ID: CCCS0715C
LRF ID: CCC Std 122 ng/mL
Lab File ID: GC16-731-19

Type for Mixed Peak Deconvolution = S

Concentration = 121 ng/mL

Total Nanomoles = 0.427

Average Molecular Weight = 282.8

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

118	54.62	498.6	23	0.00286	0.00573			

Total Concentration = 120 ng/mL

Total Nanomoles = 0.424

Average Molecular Weight = 282.8

Number of Calibrated Peaks Found = 102

Internal Standard Retention Time = 46.94 minutes

Internal Standard Peak Area = 137181.7

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: CCC Std 122 ng/mL
Comment: HUDSON RIVER RAMP;COC090715-HNEA-01
Date Acquired: 07/16/2009 11:02:09
Lab Sample ID: CCCS0715D
LRF ID: CCC Std 122 ng/mL
Lab File ID: GC16-731-26

Type for Mixed Peak Deconvolution = S

Concentration = 120 ng/mL

Total Nanomoles = 0.424

Average Molecular Weight = 282.8

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Concentration = 119 ng/mL

Total Nanomoles = 0.421

Average Molecular Weight = 283.4

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Total Concentration = 119 ng/mL

Total Nanomoles = 0.419

Average Molecular Weight = 283.9

Number of Calibrated Peaks Found = 102

Internal Standard Retention Time = 46.94 minutes

Internal Standard Peak Area = 132511.7

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: CCC Std 122 ng/mL
Comment: HUDSON RIVER RAMP;COC090715-HNEA-01
Date Acquired: 07/17/2009 00:13:12
Lab Sample ID: CCCS0716B
LRF ID: CCC Std 122 ng/mL
Lab File ID: GC16-732-9

Type for Mixed Peak Deconvolution = S

Concentration = 119 ng/mL

Total Nanomoles = 0.419

Average Molecular Weight = 283.9

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: CCC Std 122 ng/mL
Comment: HUDSON RIVER RAMP;COC090715-HNEA-01
Date Acquired: 07/23/2009 16:33:10
Lab Sample ID: CCCS0723B
LRF ID: CCC Std 122 ng/mL
Lab File ID: GC16-737-8

Type for Mixed Peak Deconvolution = S

Total PCBs in sample = 135 ng/mL

PCB Homolog Distribution

Homologs	Weight %	Mole %
Mono	10.91	16.21
Di	12.64	15.80
Tri	18.41	20.02
Tetra	21.55	20.75
Penta	8.38	7.15
Hexa	7.95	6.22
Hepta	12.78	9.07
Octa	6.77	4.42
Nona	0.61	0.37
Deca	0.00	0.00

Nominal 'Aroclor' Distribution

Aroclor	Indicator Peak (PK # / IUPAC #)	Amount (ng/mL)	Percent Sediment	Percent Biota
A1221	2/001	9.2988	38.7	31.7
A1242	23+24/31+28	7.0873	29.5	24.2
A1254SED	61/100	1.7498	7.29	
A1254BIO	69+75+82/149+153+138	7.0897		24.2
A1260	102/180	4.5500	19.0	15.5
A1268	115/194	1.3203	5.50	4.50

Ortho Cl / biphenyl Residue = 1.57
Meta + Para Cl / biphenyl Residue = 2.09
Total Cl / biphenyl Residue = 3.66

Concentration = 135 ng/mL

Total Nanomoles = 0.481

Average Molecular Weight = 280.3

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Total Concentration = 133 ng/mL

Total Nanomoles = 0.474

Average Molecular Weight = 281.0

Number of Calibrated Peaks Found = 102

Internal Standard Retention Time = 46.93 minutes

Internal Standard Peak Area = 140136.6

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: CCC Std 122 ng/mL
Comment: HUDSON RIVER RAMP;COC090715-HNEA-01
Date Acquired: 07/24/2009 07:23:36
Lab Sample ID: CCCS0723C
LRF ID: CCC Std 122 ng/mL
Lab File ID: GC16-738-10

Type for Mixed Peak Deconvolution = S

Concentration = 133 ng/mL

Total Nanomoles = 0.474

Average Molecular Weight = 281.0

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Concentration = 128 ng/mL

Total Nanomoles = 0.455

Average Molecular Weight = 281.1

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Total Concentration = 129 ng/mL

Total Nanomoles = 0.458

Average Molecular Weight = 280.9

Number of Calibrated Peaks Found = 102

Internal Standard Retention Time = 46.94 minutes

Internal Standard Peak Area = 146484.9

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: CCC Std 122 ng/mL
Comment: HUDSON RIVER RAMP;COC090715-HNEA-01
Date Acquired: 07/25/2009 05:53:10
Lab Sample ID: CCCS0723E
LRF ID: CCC Std 122 ng/mL
Lab File ID: GC16-738-30

Type for Mixed Peak Deconvolution = S

Concentration = 129 ng/mL

Total Nanomoles = 0.458

Average Molecular Weight = 280.9

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

QC Sample Raw Data

PCB SAMPLE ANALYSIS DATA SHEET

Laboratory Name:	Northeast Analytical, Inc.	SDG No:	09070149
ELAP ID No:	11078	LRF ID:	CEBLK-00
Matrix:	Filter	Client ID:	CEBLK-00(METHOD BLANK)
Sample Wt(Dry)/Vol:	7743 mL	Lab Sample ID:	AM10025B
% Moisture:	0.0	Lab File ID:	GC16-738-2
Extraction:	SOXHLET	Date Received:	
Conc. Extract Volume:	5000 uL	Date Extracted:	07/17/2009
Injection Volume:	0.5 uL	Date/Time Analyzed:	07/23/2009 22:24
Analytical SOP Reference:	SOP NE207_03.DOC	Dilution Factor:	1
Extraction SOP Reference:	SOP NE208_03.DOC	Sample Cleanup:	YES
GC Column:	Agilent DB-1; 30 meter; 0.25 micron phase thickness		

OCN (I.S.) Peak Area: 149430

Percent Recovery (50 - 150 %): 107

SAMPLE TOTAL PCB CONCENTRATION: 1.77 ng/L J

Visual Aroclor ID: No Aroclor Pattern Detected

Northeast Analytical, Inc., 2190 Technology Drive, Schenectady, NY 12308

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: METHOD BLANK
Comment: HUDSON RIVER RAMP;COC090715-HNEA-01
Date Acquired: 07/23/2009 22:24:00
Lab Sample ID: AM10025B
LRF ID: CEBLK-00
Lab File ID: GC16-738-2

Type for Mixed Peak Deconvolution = S

Total PCBs in sample = 1.77 ng/L J

PCB Homolog Distribution

Homologs	Weight %	Mole %
Mono	0.00	0.00
Di	17.19	21.42
Tri	14.24	15.33
Tetra	53.32	50.80
Penta	10.54	8.93
Hexa	2.36	1.86
Hepta	2.35	1.66
Octa	0.00	0.00
Nona	0.00	0.00
Deca	0.00	0.00

Nominal 'Aroclor' Distribution

Aroclor	Indicator Peak (PK # / IUPAC #)	Amount ng/L	Percent Sediment	Percent Biota
A1221	2/001		0	0
A1242	23+24/31+28	0.0212	68.0	100
A1254SED	61/100	0.0100	32.0	
A1254BIO	69+75+82/149+153+138			0
A1260	102/180		0	0
A1268	115/194		0	0

Ortho Cl / biphenyl Residue = 2.18

Meta + Para Cl / biphenyl Residue = 1.41

Total Cl / biphenyl Residue = 3.59

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

Concentration = 1.77 ng/L

Total Nanomoles = 0.006

Average Molecular Weight = 278.0

Number of Calibrated Peaks Found = 50

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: LAB CONTROL SPIKE
Comment: HUDSON RIVER RAMP;COC090715-HNEA-01
Date Acquired: 07/23/2009 23:31:27
Lab Sample ID: AM10025L
LRF ID: LCS-00
Lab File ID: GC16-738-3

Type for Mixed Peak Deconvolution = S

Total PCBs in sample = 8.61 ng/L

PCB Homolog Distribution

Homologs	Weight %	Mole %
Mono	1.45	2.05
Di	14.79	17.51
Tri	37.79	39.07
Tetra	39.72	36.29
Penta	5.52	4.52
Hexa	0.73	0.56
Hepta	0.00	0.00
Octa	0.00	0.00
Nona	0.00	0.00
Deca	0.00	0.00

Nominal 'Aroclor' Distribution

Aroclor	Indicator Peak (PK # / IUPAC #)	Amount ng/L	Percent Sediment	Percent Biota
A1221	2/001	0.1253	11.6	11.9
A1242	23+24/31+28	0.8946	83.0	84.8
A1254SED	61/100	0.0585	5.42	
A1254BIO	69+75+82/149+153+138	0.0355		3.36
A1260	102/180		0	0
A1268	115/194		0	0

Ortho Cl / biphenyl Residue = 1.60
Meta + Para Cl / biphenyl Residue = 1.65
Total Cl / biphenyl Residue = 3.25

Concentration = 8.61 ng/L

Total Nanomoles = 0.032

Average Molecular Weight = 266.3

Number of Calibrated Peaks Found = 56

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: METHOD BLANK
Comment: HUDSON RIVER RAMP;COC090715-HNEA-01
Date Acquired: 07/16/2009 04:17:47
Lab Sample ID: AM10089B
LRF ID: CEBLK-71
Lab File ID: GC16-731-20

Type for Mixed Peak Deconvolution = S

Concentration = 1.14 ng/L

Total Nanomoles = 0.005

Average Molecular Weight = 213.5

Number of Calibrated Peaks Found = 49

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

Concentration = 6.04 ng/L

Total Nanomoles = 0.024

Average Molecular Weight = 255.9

Number of Calibrated Peaks Found = 56

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Case Narrative

February 22, 2010

REVISED CASE NARRATIVE

This data package (NEA SDG ID: 09070192) consists of 4 filter samples and 4 water samples received on 07/17/2009. The samples are from Project Name: HUDSON RIVER RAMP.

Revised Data Summary Package

The following correction has been made to the original data package submitted for this sample delivery group:

(1.) The Certificate of Analysis has been replaced for the TOC filter samples. Original results for the TOC filter samples were 1,000X too high due to a unit conversion error. Because of the complexity of this study, data was originally intended to be reported in an excel spreadsheet on a weight basis. The data was later requested to be sent in an up-loadable EDD format requiring manual entry into our LIMS. Reporting units were also changed, as requested, to incorporated volume filtered. The unit conversion error occurred during this time and was entered incorrectly.

This sample delivery group consists of the following samples:

Lab Sample ID	Client ID	Collection Date
AM10366	WNF-TRAN-090717-GI100MDOWN	07/17/2009 14:30
AM10367	WNF-TRAN-090717-GI100MDOWN-FIL	07/17/2009 14:30
AM10368	WNF-TRAN-090717-GI100UP	07/17/2009 12:00
AM10369	WNF-TRAN-090717-GI100UP-FILTER	07/17/2009 12:00
AM10370	WNF-TRAN-090717-GI300MDOWN	07/17/2009 15:42
AM10371	WNF-TRAN-090717-GI300MDOWN-FIL	07/17/2009 15:42
AM10372	WNF-TRAN-090717-GI30MDOWN	07/17/2009 13:20
AM10373	WNF-TRAN-090717-GI30MDOWN-FILT	07/17/2009 13:20

Sample Delivery and Receipt Conditions

(1.) Northeast Analytical provided sample pickup service on 07/17/2009.

(2.) All samples were received at the laboratory intact and within holding times.

(3.) The following cooler temperatures were recorded at sample receipt: 3.7, 9.7, 16.7 degrees Celsius. Coolers with 9.7 and 16.7 degree measurements exceed upper temperature limit of 6.0 degrees Celsius; samples were collected and received at the laboratory on the same day and Ice was present in the coolers.

Total PCBs by Green Bay Method (8L)

Analysis for Total PCBs was performed by NEA SOP NE207_03. Samples were extracted by Soxhlet Extraction Method (EPA - Method 3540C). The following technical and administrative items were noted for the analysis:

(1.) Note: Samples (NEA ID: AM10366, AM10368, AM10370 and AM10372) were field filtered by the client prior to receipt at the laboratory using 0.7 micron pore size filters. Dissolved PCB analysis was performed on the filtered sample aliquot provided for each sample by the client (two-4 Liter bottles) which were designated for CSGB analysis. Analysis for Particulate bound PCB for samples (NEA ID: AM10367, AM10369, AM10371 and AM10373) was performed by Soxhlet extraction and GC Congener analysis of the associated filters which were provided by the client. The final sample volume used for particulate PCB analysis was based on the total volume filtered corrected for the percentage area of the filter that was extracted since a punched out portion of the filter was used for particulate TOC analysis.

(1.) Note: Hudson River Bias Correction applied (v09/23/2004) to GC Column peaks 5, 8, and 14 (which are comprised of congeners IUPAC 4 and 10; IUPAC 5 and 8; and IUPAC 15 and 18, respectively). Please see SOP NE207_03 for details.

(2.) Peak 10, Peak 13, Peak 14, Peak 16, Peak 17, Peak 2, Peak 21, Peak 22, Peak 25, Peak 26, Peak 27, Peak 29, Peak 32, Peak 33, Peak 41, Peak 44, Peak 45, Peak 49, Peak 5, Peak 50, Peak 54, Peak 55, Peak 56, Peak 57, Peak 61, Peak 66, Peak 7, Peak 71, Peak 72, Peak 87, and Peak 94 were observed in the Method Blank samples (NEA ID: AM10366B and/or AM10367B). All associated positive sample concentration results have been flagged (B) to denote the observed contamination.

(3.) Sample(s) (NEA ID: AM10366, AM10367, AM10368, AM10369, AM10371, Am10373 required additional analysis at a dilution for several DB-1 Peaks including Peak 2, Peak 5, Peak 10, Peak 13, Peak 16, Peak 21, Peak 55, Peak 56, and Peak 72 to bring the concentration within the calibration range of the instrument. This analysis is included in this data package and is identified with a NEA ID suffix of DL. The concentration for DB-1 Peaks: Peak 2, Peak 5, Peak 10, Peak 13, Peak 16, Peak 21, Peak 55, Peak 56, and Peak 72 are included in the original analysis to provide the correct PCB total concentration.

(4.) The -5' Nonachlorobiphenyl surrogate was diluted out for the dilution re-analysis for samples AM10366, AM10368, AM10370 and AM10372) Plese see surrogate recover summary form for details.

(5.) The percent recovery for the Octachloronapthalene (OCN) internal standard exceeded method specified limits for the Method Blank sample (NEA ID: AM10366B) and Laboratory Control Spike sample (NEA ID: AM10366L). Please see associated PCB Analysis Data Sheet summary forms for details.

Particulate Total Organic Carbon

Analysis for Particulate Total Organic Carbon was performed by EPA Lloyd Kahn Method with triplicate analysis. The following technical and administrative items were noted for the analysis:

(1.) Note: Analysis for particulate organic carbon was performed on filter punches which were obtained from filters provided by the client after field filtration procedures. Concentrations are based on the total filtered water volume and have been corrected for filter punched sub-sample area based on the ratio of the punched area to the total filter area.

(2.) All quality assurance parameters were met for the analysis.

Dissolved Total Organic Carbon

Analysis for Dissolved Total Organic Carbon in water was performed by Standard Methods SM 5310B. The following technical and administrative items were noted for the analysis:

(1.) Note: Analysis for dissolved organic carbon was performed on filtered water samples which were provided by the client after field filtration procedures.

(2.) All quality assurance parameters were met for the analysis.

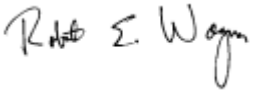
Qualifier Summary

(1.) B-Denotes analyte observed in associated method blank at a concentration exceeding the MDL.

(2.) J-Denotes concentration result greater than the MDL but less than the PQL.

(3.) U-Denotes analyte not observed at a concentration greater than the MDL.

Respectfully submitted,



Robert E. Wagner
Laboratory Director & Founder

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090717-GI100MDOWN
Comment: HUDSON RIVER RAMP;COC090717-HNEA-01
Date Acquired: 07/19/2009 19:14:53
Lab Sample ID: AM10366RR1
LRF ID: 09070192-01RR1
Lab File ID: GC25-120-5

Type for Mixed Peak Deconvolution = S

Concentration = 3970 ng/L

Total Nanomoles = 18.913

Average Molecular Weight = 209.7

Number of Calibrated Peaks Found = 64

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Concentration = 1340 ng/L

Total Nanomoles = 6.005

Average Molecular Weight = 223.1

Number of Calibrated Peaks Found = 1

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610);

Total Concentration = 276 ng/L 10.4 41.7

Total Nanomoles = 1.098

Average Molecular Weight = 251.0

Number of Calibrated Peaks Found = 82

Internal Standard Retention Time = 46.93 minutes

Internal Standard Peak Area = 159757.8

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090717-GI100MDOWN-FIL
Comment: HUDSON RIVER RAMP;COC090717-HNEA-01
Date Acquired: 07/24/2009 23:08:06
Lab Sample ID: AM10367
LRF ID: 09070192-02
Lab File ID: GC16-738-24

Type for Mixed Peak Deconvolution = S

118	54.65	10:4	*209*		23456-23456	-	-

Concentration = 276 ng/L

Total Nanomoles = 1.098

Average Molecular Weight = 251.0

Number of Calibrated Peaks Found = 82

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).

Concentration = 34.2 ng/L

Total Nanomoles = 0.133

Average Molecular Weight = 257.5

Number of Calibrated Peaks Found = 3

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).

Total Concentration = 839 ng/L 17.2 77.0

Total Nanomoles = 3.902

Average Molecular Weight = 215.1

Number of Calibrated Peaks Found = 60

Internal Standard Retention Time = 46.51 minutes

Internal Standard Peak Area = 132751.6

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090717-GI100UP
Comment: HUDSON RIVER RAMP;COC090717-HNEA-01
Date Acquired: 07/19/2009 21:26:01
Lab Sample ID: AM10368RR1
LRF ID: 09070192-03RR1
Lab File ID: GC25-120-7

Type for Mixed Peak Deconvolution = S

Concentration = 839 ng/L

Total Nanomoles = 3.902

Average Molecular Weight = 215.1

Number of Calibrated Peaks Found = 60

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Concentration = 658 ng/L

Total Nanomoles = 3.185

Average Molecular Weight = 206.5

Number of Calibrated Peaks Found = 4

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610);

Total Concentration = 15.4 ng/L 0.999 4.03

Total Nanomoles = 0.060

Average Molecular Weight = 255.9

Number of Calibrated Peaks Found = 80

Internal Standard Retention Time = 46.93 minutes

Internal Standard Peak Area = 159300.9

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090717-GI100UP-FILTER
Comment: HUDSON RIVER RAMP;COC090717-HNEA-01
Date Acquired: 07/25/2009 01:23:03
Lab Sample ID: AM10369
LRF ID: 09070192-04
Lab File ID: GC16-738-26

Type for Mixed Peak Deconvolution = S

Concentration = 15.4 ng/L

Total Nanomoles = 0.060

Average Molecular Weight = 255.9

Number of Calibrated Peaks Found = 80

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).

Concentration = 0.0416 ng/L

Total Nanomoles = 0.000

Average Molecular Weight = 336.8

Number of Calibrated Peaks Found = 1

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Total Concentration = 8220 ng/L 272 1180

Total Nanomoles = 39.353

Average Molecular Weight = 208.8

Number of Calibrated Peaks Found = 63

Internal Standard Retention Time = 46.51 minutes

Internal Standard Peak Area = 140057.7

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090717-GI300MDOWN
Comment: HUDSON RIVER RAMP;COC090717-HNEA-01
Date Acquired: 07/19/2009 23:36:57
Lab Sample ID: AM10370RR1
LRF ID: 09070192-05RR1
Lab File ID: GC25-120-9

Type for Mixed Peak Deconvolution = S

Concentration = 8220 ng/L

Total Nanomoles = 39.353

Average Molecular Weight = 208.8

Number of Calibrated Peaks Found = 63

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Concentration = 7030 ng/L

Total Nanomoles = 34.587

Average Molecular Weight = 203.2

Number of Calibrated Peaks Found = 3

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610);

Total Concentration = 220 ng/L 10.3 41.1

Total Nanomoles = 0.885

Average Molecular Weight = 249.0

Number of Calibrated Peaks Found = 80

Internal Standard Retention Time = 46.93 minutes

Internal Standard Peak Area = 153286.2

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090717-GI300MDOWN-FIL
Comment: HUDSON RIVER RAMP;COC090717-HNEA-01
Date Acquired: 07/25/2009 03:38:04
Lab Sample ID: AM10371
LRF ID: 09070192-06
Lab File ID: GC16-738-28

Type for Mixed Peak Deconvolution = S

Concentration = 220 ng/L

Total Nanomoles = 0.885

Average Molecular Weight = 249.0

Number of Calibrated Peaks Found = 80

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Concentration = 18.8 ng/L

Total Nanomoles = 0.073

Average Molecular Weight = 257.5

Number of Calibrated Peaks Found = 2

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Total Concentration = 973 ng/L 17.5 78.5

Total Nanomoles = 4.538

Average Molecular Weight = 214.4

Number of Calibrated Peaks Found = 60

Internal Standard Retention Time = 46.52 minutes

Internal Standard Peak Area = 136718.1

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090717-GI30MDOWN
Comment: HUDSON RIVER RAMP;COC090717-HNEA-01
Date Acquired: 07/20/2009 01:47:57
Lab Sample ID: AM10372RR1
LRF ID: 09070192-07RR1
Lab File ID: GC25-120-11

Type for Mixed Peak Deconvolution = S

Concentration = 973 ng/L

Total Nanomoles = 4.538

Average Molecular Weight = 214.4

Number of Calibrated Peaks Found = 60

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Concentration = 788 ng/L

Total Nanomoles = 3.807

Average Molecular Weight = 206.9

Number of Calibrated Peaks Found = 4

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610);

Total Concentration = 33.8 ng/L 1.10 4.25

Total Nanomoles = 0.133

Average Molecular Weight = 253.9

Number of Calibrated Peaks Found = 82

Internal Standard Retention Time = 46.94 minutes

Internal Standard Peak Area = 154677.8

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WNF-TRAN-090717-GI30MDOWN-FILT
Comment: HUDSON RIVER RAMP;COC090717-HNEA-01
Date Acquired: 07/25/2009 07:00:32
Lab Sample ID: AM10373
LRF ID: 09070192-08
Lab File ID: GC16-738-31

Type for Mixed Peak Deconvolution = S

Concentration = 33.8 ng/L

Total Nanomoles = 0.133

Average Molecular Weight = 253.9

Number of Calibrated Peaks Found = 82

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

Concentration = 3.21 ng/L

Total Nanomoles = 0.012

Average Molecular Weight = 258.7

Number of Calibrated Peaks Found = 7

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Not applicable

Date Printed: 07/31/2009

Operating Conditions Gas Chromatography

User Name: Inga Hotaling
Sample Size: 0.5 uL
Injection Method: Splitless
Column Type: Capillary

Temperature Information

Column Temperature: Program
Injector Temperature: 300 °C
Detector Temperature: 300 °C

Column Temperature Information

Initial Temperature: 50 °C Hold: 2.5 min
Temperature Program: 15 °C/min
Intermediate Temperature: 150 °C
Temperature Program: 4.3 °C/min
Final Temperature: 220 °C Hold: 35.1 min

Column Information

Column ID: Agilent DB-1; 30 meter; 0.25 micron phase thickness
Material: Fused Silica
Length: 30 meter
Internal Diameter: 0.25 mm
Carrier Gas: Helium
Flow Pressure: 28.8 psi
Split Ratio: None
Make-up Gas: Nitrogen
Make-up Flow: 65 mL/min

Detector Information

Detector Name: Detector 1 GC16
Detector Type: ECD
Detector Range: 3

Project Name: GC16_May_2009
Sample Set Name: GC16_072309a
Date Printed: 07/31/2009

Operating Conditions Gas Chromatography

User Name: Inga Hotaling
Injection Method: Splitless
Sample Size: 0.5 uL
Column Type: Capillary

Temperature Information

Column Temperature: Program
Injector Temperature: 300 °C
Detector Temperature: 300 °C

Column Temperature Information

Initial Temperature: 50 °C Hold: 2.5 min
Temperature Program: 15 °C/min
Intermediate Temperature: 150 °C
Temperature Program: 4.3 °C/min
Final Temperature: 220 °C Hold: 35.1 min

Column Information

Column ID: Agilent DB-1; 30 meter; 0.25 micron phase thickness
Material: Fused Silica
Length: 30 meter
Internal Diameter: 0.25 mm
Carrier Gas: Helium
Make-up Gas: Nitrogen
Flow Pressure: 28.8 psi
Make-up Flow: 65 mL/min
Split Ratio: None

Detector Information

Detector Name: Detector 1 GC16
Detector Type: ECD
Detector Range: 3

Sample Description: CCC Std 122 ng/mL
Comment: HUDSON RIVER RAMP;COC090715-HNEA-01
Date Acquired: 07/16/2009 03:10:24
Lab Sample ID: CCCS0715C
LRF ID: CCC Std 122 ng/mL
Lab File ID: GC16-731-19

Type for Mixed Peak Deconvolution = S

Total PCBs in sample = 121 ng/mL

PCB Homolog Distribution

Homologs	Weight %	Mole %
Mono	10.35	15.52
Di	12.41	15.65
Tri	17.89	19.63
Tetra	21.15	20.54
Penta	8.28	7.13
Hexa	8.21	6.49
Hepta	13.65	9.78
Octa	7.38	4.85
Nona	0.68	0.41
Deca	0.00	0.00

Nominal 'Aroclor' Distribution

Aroclor	Indicator Peak (PK # / IUPAC #)	Amount (ng/mL)	Percent Sediment	Percent Biota
A1221	2/001	7.8085	36.9	29.9
A1242	23+24/31+28	6.1878	29.3	23.7
A1254SED	61/100	1.5152	7.17	
A1254BIO	69+75+82/149+153+138	6.4702		24.8
A1260	102/180	4.3387	20.5	16.6
A1268	115/194	1.2937	6.12	4.96

Ortho Cl / biphenyl Residue = 1.59
Meta + Para Cl / biphenyl Residue = 2.14
Total Cl / biphenyl Residue = 3.73

Concentration = 121 ng/mL

Total Nanomoles = 0.427

Average Molecular Weight = 282.8

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: CCC Std 122 ng/mL
Comment: HUDSON RIVER RAMP;COC090715-HNEA-01
Date Acquired: 07/16/2009 11:02:09
Lab Sample ID: CCCS0715D
LRF ID: CCC Std 122 ng/mL
Lab File ID: GC16-731-26

Type for Mixed Peak Deconvolution = S

Concentration = 120 ng/mL

Total Nanomoles = 0.424

Average Molecular Weight = 282.8

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Concentration = 119 ng/mL

Total Nanomoles = 0.421

Average Molecular Weight = 283.4

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Total Concentration = 119 ng/mL

Total Nanomoles = 0.419

Average Molecular Weight = 283.9

Number of Calibrated Peaks Found = 102

Internal Standard Retention Time = 46.94 minutes

Internal Standard Peak Area = 132511.7

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: CCC Std 122 ng/mL
Comment: HUDSON RIVER RAMP;COC090715-HNEA-01
Date Acquired: 07/17/2009 00:13:12
Lab Sample ID: CCCS0716B
LRF ID: CCC Std 122 ng/mL
Lab File ID: GC16-732-9

Type for Mixed Peak Deconvolution = S

Concentration = 119 ng/mL

Total Nanomoles = 0.419

Average Molecular Weight = 283.9

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Concentration = 135 ng/mL

Total Nanomoles = 0.481

Average Molecular Weight = 280.3

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Total Concentration = 133 ng/mL

Total Nanomoles = 0.474

Average Molecular Weight = 281.0

Number of Calibrated Peaks Found = 102

Internal Standard Retention Time = 46.93 minutes

Internal Standard Peak Area = 140136.6

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: CCC Std 122 ng/mL
Comment: HUDSON RIVER RAMP;COC090715-HNEA-01
Date Acquired: 07/24/2009 07:23:36
Lab Sample ID: CCCS0723C
LRF ID: CCC Std 122 ng/mL
Lab File ID: GC16-738-10

Type for Mixed Peak Deconvolution = S

Concentration = 133 ng/mL

Total Nanomoles = 0.474

Average Molecular Weight = 281.0

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Concentration = 128 ng/mL

Total Nanomoles = 0.455

Average Molecular Weight = 281.1

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Total Concentration = 129 ng/mL

Total Nanomoles = 0.458

Average Molecular Weight = 280.9

Number of Calibrated Peaks Found = 102

Internal Standard Retention Time = 46.94 minutes

Internal Standard Peak Area = 146484.9

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: CCC Std 122 ng/mL
Comment: HUDSON RIVER RAMP;COC090715-HNEA-01
Date Acquired: 07/25/2009 05:53:10
Lab Sample ID: CCCS0723E
LRF ID: CCC Std 122 ng/mL
Lab File ID: GC16-738-30

Type for Mixed Peak Deconvolution = S

Concentration = 129 ng/mL

Total Nanomoles = 0.458

Average Molecular Weight = 280.9

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: CCC Std 122 ng/mL
Comment: HUDSON RIVER RAMP;COC090717-HNEA-01
Date Acquired: 07/19/2009 11:00:24
Lab Sample ID: CCCS0719A
LRF ID: CCC Std 122 ng/mL
Lab File ID: GC25-120-3

Type for Mixed Peak Deconvolution = S

Total PCBs in sample = 127 ng/mL

PCB Homolog Distribution

Homologs	Weight %	Mole %
Mono	12.15	17.92
Di	12.63	15.67
Tri	18.08	19.52
Tetra	21.37	20.42
Penta	8.20	6.95
Hexa	7.51	5.84
Hepta	12.55	8.84
Octa	6.89	4.46
Nona	0.63	0.38
Deca	0.00	0.00

Nominal 'Aroclor' Distribution

Aroclor	Indicator Peak (PK # / IUPAC #)	Amount (ng/mL)	Percent Sediment	Percent Biota
A1221	2/001	9.1034	40.5	33.2
A1242	23+24/31+28	6.4035	28.5	23.4
A1254SED	61/100	1.5689	6.98	
A1254BIO	69+75+82/149+153+138	6.4743		23.6
A1260	102/180	4.1840	18.6	15.3
A1268	115/194	1.2260	5.45	4.48

Ortho Cl / biphenyl Residue = 1.55
Meta + Para Cl / biphenyl Residue = 2.05
Total Cl / biphenyl Residue = 3.60

Total Concentration = 127 ng/mL

Total Nanomoles = 0.456

Average Molecular Weight = 278.3

Number of Calibrated Peaks Found = 102

Internal Standard Retention Time = 46.52 minutes

Internal Standard Peak Area = 126024.9

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: CCC Std 122 ng/mL
Comment: HUDSON RIVER RAMP;COC090717-HNEA-01
Date Acquired: 07/19/2009 11:00:24
Lab Sample ID: CCCS0719A
LRF ID: CCC Std 122 ng/mL
Lab File ID: GC25-120-3

Type for Mixed Peak Deconvolution = S

Concentration = 127 ng/mL

Total Nanomoles = 0.456

Average Molecular Weight = 278.3

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Concentration = 124 ng/mL

Total Nanomoles = 0.444

Average Molecular Weight = 279.2

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*

Total Concentration = <1.00 ng/L 1.00 4.03 U

Total Nanomoles = 0.001

Average Molecular Weight = 231.9

Number of Calibrated Peaks Found = 53

Internal Standard Retention Time = 46.94 minutes

Internal Standard Peak Area = 156704.8

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: METHOD BLANK
Comment: HUDSON RIVER RAMP;COC090717-HNEA-01
Date Acquired: 07/18/2009 04:24:23
Lab Sample ID: AM10366B
LRF ID: CEBLK-78
Lab File ID: GC16-734-4

Type for Mixed Peak Deconvolution = S

Concentration = <1.00 ng/L

Total Nanomoles = 0.001

Average Molecular Weight = 231.9

Number of Calibrated Peaks Found = 53

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

Concentration = 5.44 ng/L

Total Nanomoles = 0.021

Average Molecular Weight = 259.5

Number of Calibrated Peaks Found = 59

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

Total Concentration = 1.40 ng/L 1.03 4.16 J

Total Nanomoles = 0.005

Average Molecular Weight = 276.7

Number of Calibrated Peaks Found = 61

Internal Standard Retention Time = 46.94 minutes

Internal Standard Peak Area = 159197.4

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: METHOD BLANK
Comment: HUDSON RIVER RAMP;COC090717-HNEA-01
Date Acquired: 07/24/2009 20:53:15
Lab Sample ID: AM10367B
LRF ID: CEBLK-82
Lab File ID: GC16-738-22

Type for Mixed Peak Deconvolution = S

Concentration = 1.40 ng/L

Total Nanomoles = 0.005

Average Molecular Weight = 276.7

Number of Calibrated Peaks Found = 61

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: LAB CONTROL SPIKE
Comment: HUDSON RIVER RAMP;COC090717-HNEA-01
Date Acquired: 07/24/2009 22:00:43
Lab Sample ID: AM10367L
LRF ID: LCS-82
Lab File ID: GC16-738-23

Concentration = 7.78 ng/L

Total Nanomoles = 0.030

Average Molecular Weight = 263.7

Number of Calibrated Peaks Found = 56

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

10457 Total Suspended Solids

A well-mixed sample is filtered through a tared gooch crucible. The residue on the filter is dried for one hour at 103-105C. The increase in weight is the total suspended solids.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

N.D.	none detected	**BMQL**	Below Minimum Quantitation Level
TNTC	Too Numerous To Count	**MPN**	Most Probable Number
IU	International Units	**CP Units**	cobalt-chloroplatinate units
umhos/cm	micromhos/cm	**NTU**	nephelometric turbidity units
C	degrees Celsius	**F**	degrees Fahrenheit
Cal	(diet) calories	**lb.**	pound(s)
meq	milliequivalents	**kg**	kilogram(s)
g	gram(s)	**mg**	milligram(s)
ug	microgram(s)	**l**	liter(s)
ml	milliliter(s)	**ul**	microliter(s)
m3	cubic meter(s)	**fib >5 um/ml**	fibers greater than 5 microns in length per ml

< less than – The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

> greater than

ppm parts per million – One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

ppb parts per billion

Dry weight basis Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture.

U.S. EPA data qualifiers:

Organic Qualifiers

A	TIC is a possible aldol-condensation product
B	Analyte was also detected in the blank
C	Pesticide result confirmed by GC/MS
D	Compound quatitated on a diluted sample
E	Concentration exceeds the calibration range of the instrument
J	Estimated value
N	Presumptive evidence of a compound (TICs only)
P	Concentration difference between primary and confirmation columns >25%
U	Compound was not detected
X,Y,Z	Defined in case narrative

Inorganic Qualifiers

B	Value is <CRDL, but ≥IDL
E	Estimated due to interference
M	Duplicate injection precision not met
N	Spike amount not within control limits
S	Method of standard additions (MSA) used for calculation
U	Compound was not detected
W	Post digestion spike out of control limits
*****	Duplicate analysis not within control limits
+	Correlation coefficient for MSA <0.995

Analytical test results for methods listed on the laboratories' accreditation scope meet all requirements of NELAC unless otherwise noted under the individual analysis.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY – In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. SDG NARRATIVE

CLIENT: General Electric Company
SDG: SS002

Miscellaneous Wet Chemistry

Sample #	Client ID	Matrix Liquid	Matrix Solid	Comments
5724069	WNF-TRAN-090714-300MDOWN	X		
5724070	WNF-TRAN-090714-30MDOWN	X		
5724071	WNF-TRAN-090714-GI100MDOWN	X		
5724072	WNF-TRAN-090714-GI100UP	X		

ANALYSIS:

There were no dilutions performed for analyses associated with samples in this SDG.

QUALITY CONTROL AND NONCONFORMANCE SUMMARY:

Matrix QC may not be included if site-specific QC were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method or by the client.

All QC is within specification.

DATA INTERPRETATION:

No further interpretation is necessary for the data submitted.

Abbreviation Key

U = Unspiked (for MS/MSD)	LOQ = Limit of Quantitation
R = Matrix Spike (MS)	MDL = Method Detection Limit
M = Matrix Spike Duplicate (MSD)	ND = Not Detected
BKG = Background (for Duplicate)	J = Estimated Value
D = Duplicate (DUP)	NA = Not Applicable
HS = High Spike	ME = Method
LS = Low Spike	CO = Colorimetric
SS = Soluble Spike	G = Gravimetric
IS = Insoluble Spike	IR = Infrared Spectrophotometry
ISD = Insoluble Spike Duplicate	MTR = Meter
PDS = Post Digestion Spike	OD = Oven Dried
* = Out of Specification	TI = Titration
V = Visual	TOC = Total Organic Carbon
AK = Alpkem	IC = Ion Chromatography
TC = Total Carbon	RA = Rapid Analyzer

10457 Total Suspended Solids

A well-mixed sample is filtered through a tared gooch crucible. The residue on the filter is dried for one hour at 103-105C. The increase in weight is the total suspended solids.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

N.D.	none detected	**BMQL**	Below Minimum Quantitation Level
TNTC	Too Numerous To Count	**MPN**	Most Probable Number
IU	International Units	**CP Units**	cobalt-chloroplatinate units
umhos/cm	micromhos/cm	**NTU**	nephelometric turbidity units
C	degrees Celsius	**F**	degrees Fahrenheit
Cal	(diet) calories	**lb.**	pound(s)
meq	milliequivalents	**kg**	kilogram(s)
g	gram(s)	**mg**	milligram(s)
ug	microgram(s)	**l**	liter(s)
ml	milliliter(s)	**ul**	microliter(s)
m3	cubic meter(s)	**fib >5 um/ml**	fibers greater than 5 microns in length per ml

< less than – The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

> greater than

ppm parts per million – One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

ppb parts per billion

Dry weight basis Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture.

U.S. EPA data qualifiers:

Organic Qualifiers

A	TIC is a possible aldol-condensation product
B	Analyte was also detected in the blank
C	Pesticide result confirmed by GC/MS
D	Compound quatitated on a diluted sample
E	Concentration exceeds the calibration range of the instrument
J	Estimated value
N	Presumptive evidence of a compound (TICs only)
P	Concentration difference between primary and confirmation columns >25%
U	Compound was not detected
X,Y,Z	Defined in case narrative

Inorganic Qualifiers

B	Value is <CRDL, but ≥IDL
E	Estimated due to interference
M	Duplicate injection precision not met
N	Spike amount not within control limits
S	Method of standard additions (MSA) used for calculation
U	Compound was not detected
W	Post digestion spike out of control limits
*****	Duplicate analysis not within control limits
+	Correlation coefficient for MSA <0.995

Analytical test results for methods listed on the laboratories' accreditation scope meet all requirements of NELAC unless otherwise noted under the individual analysis.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY – In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions of Lancaster Laboratories and we hereby object to any conflicting terms contained in any acceptance or order submitted by client.

5724391	WNF-TRAN-090715-GI30MDOWN	X		

ANALYSIS:

There were no dilutions performed for analyses associated with samples in this SDG.

QUALITY CONTROL AND NONCONFORMANCE SUMMARY:

Matrix QC may not be included if site-specific QC were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method or by the client.

All QC is within specification.

DATA INTERPRETATION:

No further interpretation is necessary for the data submitted.

Abbreviation Key

U = Unspiked (for MS/MSD)	LOQ = Limit of Quantitation
R = Matrix Spike (MS)	MDL = Method Detection Limit
M = Matrix Spike Duplicate (MSD)	ND = Not Detected
BKG = Background (for Duplicate)	J = Estimated Value
D = Duplicate (DUP)	NA = Not Applicable
HS = High Spike	ME = Method
LS = Low Spike	CO = Colorimetric
SS = Soluble Spike	G = Gravimetric
IS = Insoluble Spike	IR = Infrared Spectrophotometry
ISD = Insoluble Spike Duplicate	MTR = Meter
PDS = Post Digestion Spike	OD = Oven Dried
* = Out of Specification	TI = Titration
V = Visual	TOC = Total Organic Carbon
AK = Alpkem	IC = Ion Chromatography
TC = Total Carbon	RA = Rapid Analyzer

10457 Total Suspended Solids

A well-mixed sample is filtered through a tared gooch crucible. The residue on the filter is dried for one hour at 103-105C. The increase in weight is the total suspended solids.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

N.D.	none detected	**BMQL**	Below Minimum Quantitation Level
TNTC	Too Numerous To Count	**MPN**	Most Probable Number
IU	International Units	**CP Units**	cobalt-chloroplatinate units
umhos/cm	micromhos/cm	**NTU**	nephelometric turbidity units
C	degrees Celsius	**F**	degrees Fahrenheit
Cal	(diet) calories	**lb.**	pound(s)
meq	milliequivalents	**kg**	kilogram(s)
g	gram(s)	**mg**	milligram(s)
ug	microgram(s)	**l**	liter(s)
ml	milliliter(s)	**ul**	microliter(s)
m3	cubic meter(s)	**fib >5 um/ml**	fibers greater than 5 microns in length per ml

< less than – The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

> greater than

ppm parts per million – One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.

ppb parts per billion

Dry weight basis Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture.

U.S. EPA data qualifiers:

Organic Qualifiers

A	TIC is a possible aldol-condensation product
B	Analyte was also detected in the blank
C	Pesticide result confirmed by GC/MS
D	Compound quatitated on a diluted sample
E	Concentration exceeds the calibration range of the instrument
J	Estimated value
N	Presumptive evidence of a compound (TICs only)
P	Concentration difference between primary and confirmation columns >25%
U	Compound was not detected
X,Y,Z	Defined in case narrative

Inorganic Qualifiers

B	Value is <CRDL, but ≥IDL
E	Estimated due to interference
M	Duplicate injection precision not met
N	Spike amount not within control limits
S	Method of standard additions (MSA) used for calculation
U	Compound was not detected
W	Post digestion spike out of control limits
*****	Duplicate analysis not within control limits
+	Correlation coefficient for MSA <0.995

Analytical test results for methods listed on the laboratories' accreditation scope meet all requirements of NELAC unless otherwise noted under the individual analysis.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY – In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions of Lancaster Laboratories and we hereby object to any conflicting terms contained in any acceptance or order submitted by client.

ANALYSIS:

There were no dilutions performed for analyses associated with samples in this SDG.

QUALITY CONTROL AND NONCONFORMANCE SUMMARY:

Matrix QC may not be included if site-specific QC were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method or by the client.

All QC is within specification.

DATA INTERPRETATION:

No further interpretation is necessary for the data submitted.

Abbreviation Key

U = Unspiked (for MS/MSD)	LOQ = Limit of Quantitation
R = Matrix Spike (MS)	MDL = Method Detection Limit
