CASE NARRATIVE

This data package (NEA SDG ID: 09060316) consists of 30 water samples originally received for modified Green Bay Method analysis as part of the 2009 GE RAMP. EPA requested that General Electric analyze sample extracts to examine the PCB congener bias correction ratios that are applied to DB-1 peaks 5, 8, and 14 during the dredging process in order to examine if changes occur to the established ratios. The following sample extracts were chosen for analysis by the Comprehensive Congener Specific PCB method that baseline separates the 6 PCB congeners that co-elute in the three DB-1 peaks. This data is then utilized to calculate the bias correction values. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

Sample Delivery and Receipt Conditions

(1.) All samples were picked up by Northeast Analytical Inc personnel delivery service on several dates.

(2.) All samples were received at the laboratory intact and within holding times.

Comprehensive Quantitative Congener Specific PCB by NEA SOP NE133_02

Analysis for PCB Congeners was performed by Comprehensive Quantitative Congener Specific (NEA SOP NE133_02) on extracts from mGBM that were originally analyzed during the course of dredging activities.

S:\Lims Data\0906\09060316\Package\CN_09060316_Rev00.doc

Samples were extracted by USEPA SW-846 Method 3535 Solid Phase Extraction. One-liter water samples were extracted by NEA SOP NE178_03. The following technical and administrative items were noted for the analysis:

(1.) No Method Blank or Lab Control Spike was analyzed with this data set.

(2.) The following samples were analyzed outside the required holding time: Sample AM08741 was analyzed 2 days past the 40 day extract holding time and sample AM08742 was analyzed 1 day past the 40 day extract holding time.

(3.) The following PCB congeners were analyzed and reported in this data validation package:

IUPAC 4 and 10 which co-elute in mGBM DB-1 peak 5
IUPAC 5 and 8 which co-elute in mGBM DB-1 peak 8
IUPAC 15 and 18 which co-elute in mGBM DB-1 peak 14

Qualifier Summary

(1.) B-Denotes analyte observed in associated method blank at a concentration exceeding the MDL.

(2.) J-Denotes concentration result greater than the MDL but less than the PQL.

(3.) U-Denotes analyte not observed at a concentration greater than the MDL.

Respectfully submitted,

Subject: FW: Revised Extract List

The extracts listed in the attached table need to be logged in for CQCS analysis 2 week TAT.

Karrie – This is a revised list for two new samples so make sure you use the attached list.

You will be analyzing for only 6 congeners – IUPAC 4 and 10 (mGBM peak 5), IUPAC 5 and 8 (mGBM peak 8) and IUPAC 15 and 18 (mGBM peak 14).

You will also be producing a data validation package.

This will be sent to Dave Blye. It will not be uploaded to the Gensuite database.

Any questions see me.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Corrected PQL:	1.000	ng/L

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Corrected PQL:	1.000	ng/L

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

IUPAC# & BZ#	Guitart et al.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

Notes:

(1) J - Qualifier denotes concentration reported is less than the Practical Quantitation Limit (PQL) but greater than the Method Detection Limit (MDL)

B- Qualifier indicates an estimated value. The analyte was detected in the associated blank at a level exceeding the Practical Quantitation Limit (PQL).

(2) ND - Denotes analyte not detected (concentration less than the MDL)

(3) PQL and MDL for IUPAC #s 1, 2, and 3 are 5 times higher than all other Congeners

(4) The above listed IUPAC numbers and congener names are consistent with the CAS numbering system. Note that G. Frame's 1996 PCB publication used Guitart's proposed renumbering for congeners 107,108, and 109, which has not to date been adopted by CAS, Ballschmiter or IUPAC.

CS-PCB INITIAL MULTI LEVEL CALIBRATION

Northeast Analytical Inc.

Instrument ID: GC15

GC Column: CP-SIL5-C18

Column: GC15 XII 01/04/2008

SDG No.: GE051609

Initial Calibration Date(s): 03/31/2009

Calibration Standard File Names: ICAL0331A; ICAL0331B; ICAL0331C; ICAL0331D

CS-PCB INITIAL MULTI LEVEL CALIBRATION

Northeast Analytical Inc.

Instrument ID: GC15
GC Column: CP-SIL5-C18

Column: GC15 XII 01/04/2008
SDG No.: GE051609
Initial Calibration Date(s): 03/31/2009
Calibration Standard File Names: ICAL0331A; ICAL0331B; ICAL0331C; ICAL0331D

CASE NARRATIVE

This data package (NEA SDG ID: 09060230) consists of 2 water samples received on 06/17/2009. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

Lab Sample ID	Client ID	Collection Date
AM08175	WFF-PE8L-090616-UT001	06/16/2009 17:01
AM08176	WFF-PE1L-090616-UT001	06/16/2009 17:02

Sample Delivery and Receipt Conditions

(1.) All samples were delivered to the laboratory via FEDEX delivery service on 06/17/2009.

(2.) All samples were received at the laboratory intact and within holding times.

(3.) The following cooler temperatures were recorded at sample receipt: 3.8, 5.2 degrees Celsius.

(4.) Electronic chain of custody listed the 1L CSGB test to sample WFF-PE8L-090616-UT001, the test was deleted and the 8L CSGB test was added to that sample.

There were two 4 liter bottles and one 1 liter bottle received by the laboratory, the container information on the electronic chain of custody listed all 3 bottles received as one liter bottles.

Total PCBs by Green Bay Method (8L)

Analysis for Total PCBs was performed by NEA SOP NE207_03. Samples were extracted by USEPA SW-846 Method 3535 Solid Phase Extraction. Eight-liter water samples were extracted by NEA SOP NE208_03. The following technical and administrative items were noted for the analysis:

(1.) Note: Hudson River Bias Correction applied (v09/23/2004) to GC Column peaks 5, 8, and 14 (which are comprised of congeners IUPAC 4 and 10; IUPAC 5 and 8; and IUPAC 15 and 18, respectively). Please see SOP NE207_03 for details.

(2.) Peak 10, Peak 15, Peak 21, Peak 22, Peak 27, and Peak 32 were observed in the Method Blank sample. All associated positive sample concentration results have been flagged (B) to denote the observed contamination.

Total PCBs by Green Bay Method (1L)

Analysis for Total PCBs was performed by NEA SOP NE207_03. Samples were extracted by USEPA SW-846 Method 3535 Solid Phase Extraction. One-liter water samples were extracted by NEA SOP NE178_03. The following technical and administrative items were noted for the analysis:

(1.) Note: Hudson River Bias Correction applied (v09/23/2004) to GC Column peaks 5, 8, and 14 (which are comprised of congeners IUPAC 4 and 10; IUPAC 5 and 8; and IUPAC 15 and 18, respectively). Please see SOP NE207_03 for details.

(2.) Peak 21, Peak 22, and Peak 44 were observed in the Method Blank sample. All associated positive sample concentration results have been flagged (B) to denote the observed contamination.

(3.) Sample AM08176 was reanalyzed to rule out possible auto sampler carryover contamination from previous high PCB level sample. Results for the re-analysis are provided with RR1 sample ID suffix.

(4.) Sample AM08176 required additional analysis at a dilution for Peak 44 to be within the calibration curve range of the instrument. This analysis is included in this data package and is identified with a NEA ID suffix of DL1. The concentration for Peak 44 is included in the original analysis to provide the correct PCB total concentration. Results for both analysis are included in this data summary package.

Qualifier Summary

(1.) B-Denotes analyte observed in associated method blank at a concentration exceeding the MDL.

(2.) J-Denotes concentration result greater than the MDL but less than the PQL.

(3.) U-Denotes analyte not observed at a concentration greater than the MDL.

Robert E. Wagner

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WFF-PE8L-090616-UT001
Comment: HUDSON RIVER RAMP;COC090616-UNEA-01
Date Acquired: 06/19/2009 02:22:10
Lab Sample ID: AM08175
LRF ID: 09060230-01
Lab File ID: GC24-91-8

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: CCC Std 122 ng/mL
Comment: HUDSON RIVER RAMP;COC090616-UNEA-01
Date Acquired: 06/17/2009 17:44:17
Lab Sample ID: CCCS0617B
LRF ID: CCC Std 122 ng/mL
Lab File ID: GC24-90-6

Type for Mixed Peak Deconvolution = S

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: CCC Std 122 ng/mL
Comment: HUDSON RIVER RAMP;COC090616-UNEA-01
Date Acquired: 06/18/2009 22:55:11
Lab Sample ID: CCCS0618B
LRF ID: CCC Std 122 ng/mL
Lab File ID: GC24-91-5

Type for Mixed Peak Deconvolution = S

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

Average Molecular Weight = 281.8

Number of Calibrated Peaks Found = 47

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)

CASE NARRATIVE

This data package (NEA SDG ID: 09120010) consists of 4 water samples received on 12/01/2009. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

Lab Sample ID	Client ID	Collection Date
AM21745	WNF-TRAN-091201-FT001	12/01/2009 11:27
AM21746	WNF-TRAN-091201-FT002	12/01/2009 11:34
AM21747	WNF-TRAN-091201-FT003	12/01/2009 11:39
AM21748	WNF-TRAN-091201-FT004	12/01/2009 11:51

Sample Delivery and Receipt Conditions

(1.) Northeast Analytical provided sample pickup service on 12/01/2009.

(2.) All samples were received at the laboratory intact and within holding times.

(3.) The following cooler temperature was recorded at sample receipt: 5.4 degrees Celsius. Please see Chain of Custody for details.

Total Suspended Solids by SM 2540D

Analysis for Total Suspended Solids (TSS) was performed by SM 2540D (NEA SOP NE117). The following technical and administrative items were noted for the analysis:

(1.) All quality assurance parameters were met for the analysis.

Qualifier Summary

(1.) B-Denotes analyte observed in associated method blank at a concentration exceeding the MDL.

(2.) J-Denotes concentration result greater than the MDL but less than the PQL.

(3.) U-Denotes analyte not observed at a concentration greater than the MDL.

CASE NARRATIVE

This data package (NEA SDG ID: 09120019) consists of 4 water samples received on 12/02/2009. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

Lab Sample ID	Client ID	Collection Date
AM21792	WNF-TRAN-091202-FT001	12/02/2009 09:18
AM21793	WNF-TRAN-091202-FT002	12/02/2009 09:25

Sample Delivery and Receipt Conditions

(1.) Northeast Analytical provided sample pickup service on 12/02/2009.

(2.) All samples were received at the laboratory intact and within holding times.

(3.) The following cooler temperature was recorded at sample receipt: 4.9 degrees Celsius. Please see Chain of Custody for details.

Total Suspended Solids by SM 2540D

Analysis for Total Suspended Solids (TSS) was performed by SM 2540D (NEA SOP NE117). The following technical and administrative items were noted for the analysis:

(1.) All quality assurance parameters were met for the analysis.

Qualifier Summary

(1.) B-Denotes analyte observed in associated method blank at a concentration exceeding the MDL.

(2.) J-Denotes concentration result greater than the MDL but less than the PQL.

(3.) U-Denotes analyte not observed at a concentration greater than the MDL.

Sample Delivery and Receipt Conditions

(1.) Northeast Analytical provided sample pickup service on 12/02/2009.

(2.) All samples were received at the laboratory intact and within holding times.

(3.) The following cooler temperature was recorded at sample receipt: 4.9 degrees Celsius. Please see Chain of Custody for details.

Total Suspended Solids by SM 2540D

Analysis for Total Suspended Solids (TSS) was performed by SM 2540D (NEA SOP NE117). The following technical and administrative items were noted for the analysis:

(1.) The relative percent difference between the sample and the duplicate sample was outside quality acceptance limits for: AM21805D. Please see associated duplicate form for details.

Qualifier Summary

(1.) B-Denotes analyte observed in associated method blank at a concentration exceeding the MDL.

(2.) J-Denotes concentration result greater than the MDL but less than the PQL.

(3.) U-Denotes analyte not observed at a concentration greater than the MDL.

CASE NARRATIVE

This data package (NEA SDG ID: 09120035) consists of 4 water samples received on 12/03/2009. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

Lab Sample ID	Client ID	Collection Date
AM21847	WNF-TRAN-091203-FT001	12/03/2009 09:31
AM21848	WNF-TRAN-091203-FT002	12/03/2009 09:38

AM21850	WNF-TRAN-091203-FT004	12/03/2009 09:55

Sample Delivery and Receipt Conditions

(1.) Northeast Analytical provided sample pickup service on 12/03/2009.

(2.) All samples were received at the laboratory intact and within holding times.

(3.) The following cooler temperatures were recorded at sample receipt: 4.6, 9.6 degrees Celsius; which exceeds the six degree temperature limit. Samples were collected and received at the laboratory on the same day and ice was present in the cooler.

Total Suspended Solids by SM 2540D

Analysis for Total Suspended Solids (TSS) was performed by SM 2540D (NEA SOP NE117). The following technical and administrative items were noted for the analysis:

(1.) All quality assurance parameters were met for the analysis.

Qualifier Summary

(1.) B-Denotes analyte observed in associated method blank at a concentration exceeding the MDL.

(2.) J-Denotes concentration result greater than the MDL but less than the PQL.

(3.) U-Denotes analyte not observed at a concentration greater than the MDL.

CASE NARRATIVE

This data package (NEA SDG ID: 09120037) consists of 17 water samples received on 12/03/2009. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

Lab Sample ID	Client ID	Collection Date
AM21855	WNF-BDUP-091203-JT001	12/02/2009

Sample Delivery and Receipt Conditions

(1.) Northeast Analytical provided sample pickup service on 12/03/2009.

(2.) All samples were received at the laboratory intact and within holding times.

(3.) The following cooler temperatures were recorded at sample receipt: 4.6, 9.6 degrees Celsius, which exceeds the six degree temperature limit. Samples were collected and received at the laboratory on the same day and ice was present in the cooler.

Total Suspended Solids by SM 2540D

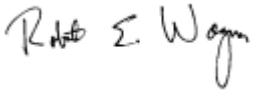
Analysis for Total Suspended Solids (TSS) was performed by SM 2540D (NEA SOP NE117). The following technical and administrative items were noted for the analysis:

(1.) All quality assurance parameters were met for the analysis.

Qualifier Summary

(1.) B-Denotes analyte observed in associated method blank at a concentration exceeding the MDL.
(2.) J-Denotes concentration result greater than the MDL but less than the PQL.
(3.) U-Denotes analyte not observed at a concentration greater than the MDL.

Respectfully submitted,



Robert E. Wagner

CASE NARRATIVE

This data package (NEA SDG ID: 09120051) consists of 4 water samples received on 12/04/2009. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

Lab Sample ID	Client ID	Collection Date
AM21945	WNF-TRAN-091204-FT001	12/04/2009 09:19
AM21946	WNF-TRAN-091204-FT002	12/04/2009 09:27

AM21948	WNF-TRAN-091204-FT004	12/04/2009 09:44

Sample Delivery and Receipt Conditions

(1.) Northeast Analytical provided sample pickup service on 12/04/2009.

(2.) All samples were received at the laboratory intact and within holding times.

(3.) The following cooler temperature was recorded at sample receipt: 5.3 degrees Celsius. Please see Chain of Custody for details.

Total Suspended Solids by SM 2540D

Analysis for Total Suspended Solids (TSS) was performed by SM 2540D (NEA SOP NE117). The following technical and administrative items were noted for the analysis:

(1.) All quality assurance parameters were met for the analysis.

Qualifier Summary

(1.) B-Denotes analyte observed in associated method blank at a concentration exceeding the MDL.

(2.) J-Denotes concentration result greater than the MDL but less than the PQL.

(3.) U-Denotes analyte not observed at a concentration greater than the MDL.

Sample Delivery and Receipt Conditions

(1.) Northeast Analytical provided sample pickup service on 12/04/2009.

(2.) All samples were received at the laboratory intact and within holding times.

(3.) The following cooler temperatures were recorded at sample receipt: 4.8, 5.3 degrees Celsius.

Total Suspended Solids by SM 2540D

Analysis for Total Suspended Solids (TSS) was performed by SM 2540D (NEA SOP NE117). The following technical and administrative items were noted for the analysis:

(1.) Sample (NEA ID: AM21929) result is < 5*PQL. RPD control limit is not applied. Absolute difference between sample and dup is < PQL.

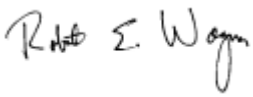
Qualifier Summary

(1.) B-Denotes analyte observed in associated method blank at a concentration exceeding the MDL.

(2.) J-Denotes concentration result greater than the MDL but less than the PQL.

(3.) U-Denotes analyte not observed at a concentration greater than the MDL.

Respectfully submitted,



Robert E. Wagner

CASE NARRATIVE

This data package (NEA SDG ID: 09120184) consists of 3 water samples received on 12/23/2009. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

Lab Sample ID	Client ID	Collection Date
AM22565	WFF-LOC5-091223-AT001	12/21/2009 12:50
AM22566	WFF-TIDA-091223-AT001	12/21/2009 13:02
AM22567	WFF-WAFA-091223-AT001	12/21/2009 12:05

Sample Delivery and Receipt Conditions

(1.) Northeast Analytical provided sample pickup service on 12/23/2009.

(2.) All samples were received at the laboratory intact and within holding times.

(3.) The following cooler temperature was recorded at sample receipt: 3.6 degrees Celsius. Please see Chain of Custody for details.

Total PCBs by Green Bay Method (1L)

Analysis for Total PCBs was performed by NEA SOP NE207_03. Samples were extracted by USEPA SW-846 Method 3535 Solid Phase Extraction. One-liter water samples were extracted by NEA SOP NE178_03. The following technical and administrative items were noted for the analysis:

(1.) Note: Hudson River Bias Correction applied (v09/23/2004) to GC Column peaks 5, 8, and 14 (which are comprised of congeners IUPAC 4 and 10; IUPAC 5 and 8; and IUPAC 15 and 18, respectively). Please see SOP NE207_03 for details.

(2.) Peak 10, Peak 21, Peak 44, Peak 49, Peak 51, Peak 52, Peak 55, Peak 57, and Peak 7 were observed in the Method Blank sample. All associated positive sample concentration results have been flagged (B) to denote the observed contamination.

Dissolved Total Organic Carbon

Analysis for Dissolved Total Organic Carbon was performed by NEA SOP NE128_06. The following technical and administrative items were noted for the analysis:

(1.) All quality assurance parameters were met for the analysis.

Particulate Organic Carbon

Analysis for Particulate Organic Carbon was performed by NEA SOP NE128_06. The following technical and administrative items were noted for the analysis:

(1.) All quality assurance parameters were met for the analysis.

Total Suspended Solids by SM 2540D

Analysis for Total Suspended Solids (TSS) was performed by SM 2540D (NEA SOP NE117). The following technical and administrative items were noted for the analysis:

(1.) All quality assurance parameters were met for the analysis.

Qualifier Summary

(1.) B-Denotes analyte observed in associated method blank at a concentration exceeding the MDL.
(2.) J-Denotes concentration result greater than the MDL but less than the PQL.
(3.) U-Denotes analyte not observed at a concentration greater than the MDL.

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WFF-TIDA-091223-AT001
Comment: HUDSON RIVER RAMP;COC091223-ANEA-01
Date Acquired: 12/29/2009 16:06:29
Lab Sample ID: AM22566
LRF ID: 09120184-02
Lab File ID: GC16-882-8

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WFF-WAFA-091223-AT001
Comment: HUDSON RIVER RAMP;COC091223-ANEA-01
Date Acquired: 12/29/2009 17:14:06
Lab Sample ID: AM22567
LRF ID: 09120184-03
Lab File ID: GC16-882-9

Concentration = 18.9 ng/L

Total Nanomoles = 0.080

Average Molecular Weight = 237.1

Number of Calibrated Peaks Found = 59

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

NOTE: Hudson River Bias Correction applied (v09/23/2004).
Bias Factors: Peak 5 (0.610); Peak 8 (0.360); Peak 14 (1.26);

Project Name: GC16_May_2009
Sample Set Name: GC16_122909B
Date Printed: 12/31/2009

Operating Conditions Gas Chromatography

User Name: Amy Jo Arndt
Injection Method: Splitless
Sample Size: 0.5 uL
Column Type: Capillary

Temperature Information

Column Temperature: Program
Injector Temperature: 300 °C
Detector Temperature: 300 °C

Column Temperature Information

Initial Temperature: 50 °C Hold: 2.5 min
Temperature Program: 15 °C/min
Intermediate Temperature: 150 °C
Temperature Program: 4.3 °C/min
Final Temperature: 220 °C Hold: 35.1 min

Column Information

Column ID: Agilent DB-1; 30 meter; 0.25 micron phase thickness
Material: Fused Silica
Length: 30 meter
Internal Diameter: 0.25 mm
Carrier Gas: Helium
Make-up Gas: Nitrogen
Flow Pressure: 25.6 psi
Make-up Flow: 65 mL/min
Split Ratio: None

Detector Information

Detector Name: Detector 1 GC16
Detector Type: ECD
Detector Range: 4

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: CCC Std 122 ng/mL
Comment: HUDSON RIVER RAMP;COC091223-ANEA-01
Date Acquired: 12/29/2009 18:21:44
Lab Sample ID: CCCS1229B
LRF ID: CCC Std 122 ng/mL
Lab File ID: GC16-882-10

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: LAB CONTROL SPIKE
Comment: HUDSON RIVER RAMP;COC091223-ANEA-01
Date Acquired: 12/29/2009 13:51:06
Lab Sample ID: AM22565L
LRF ID: LCS-66
Lab File ID: GC16-882-6

Type for Mixed Peak Deconvolution = S

Total Nanomoles = 0.734

Average Molecular Weight = 262.7

Number of Calibrated Peaks Found = 58

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*

CASE NARRATIVE

This data package (NEA SDG ID: 09120199) consists of 6 water samples received on 12/29/2009. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

Lab Sample ID	Client ID	Collection Date
AM22634	WFF-LOC5-091229-AT001	12/29/2009 11:08
AM22635	WFF-LOC5-091229-AT002	12/29/2009 11:08
AM22636	WFF-TIDA-091229-AT001	12/29/2009 10:20
AM22637	WFF-TIDA-091229-AT002	12/29/2009 10:20
AM22638	WFF-WAFA-091229-AT001	12/29/2009 12:25
AM22639	WFF-WAFA-091229-AT002	12/29/2009 12:25

Sample Delivery and Receipt Conditions

(1.) Northeast Analytical provided sample pickup service on 12/29/2009.

(2.) All samples were received at the laboratory intact and within holding times.

(3.) The following cooler temperature was recorded at sample receipt: 6.0 degrees Celsius. Please see Chain of Custody for details.

Total PCBs by Green Bay Method (1L)

Analysis for Total PCBs was performed by NEA SOP NE207_03. Samples were extracted by USEPA SW-846 Method 3535 Solid Phase Extraction. One-liter water samples were extracted by NEA SOP NE178_03. The following technical and administrative items were noted for the analysis:

(1.) Note: Hudson River Bias Correction applied (v09/23/2004) to GC Column peaks 5, 8, and 14 (which are comprised of congeners IUPAC 4 and 10; IUPAC 5 and 8; and IUPAC 15 and 18, respectively). Please see SOP NE207_03 for details.

(2.) Peak 17, Peak 21, Peak 57, and Peak 7 were observed in the Method Blank sample. All associated positive sample concentration results have been flagged (B) to denote the observed contamination.

Dissolved Total Organic Carbon

Analysis for Dissolved Total Organic Carbon was performed by NEA SOP NE128_06. The following technical and administrative items were noted for the analysis:

(1.) All quality assurance parameters were met for the analysis.

Particulate Organic Carbon

Analysis for Particulate Organic Carbon was performed by NEA SOP NE128_06. The following technical and administrative items were noted for the analysis:

(1.) All quality assurance parameters were met for the analysis.

Total Suspended Solids by SM 2540D

Analysis for Total Suspended Solids (TSS) was performed by SM 2540D (NEA SOP NE117). The following technical and administrative items were noted for the analysis:

(1.) All quality assurance parameters were met for the analysis.

Qualifier Summary

(1.) B-Denotes analyte observed in associated method blank at a concentration exceeding the MDL.
(2.) J-Denotes concentration result greater than the MDL but less than the PQL.
(3.) U-Denotes analyte not observed at a concentration greater than the MDL.

Number of Calibrated Peaks Found = 57

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: WFF-TIDA-091229-AT001
Comment: HUDSON RIVER RAMP;COC091229-ANEA-01
Date Acquired: 12/30/2009 18:46:57
Lab Sample ID: AM22636
LRF ID: 09120199-03
Lab File ID: GC16-883-7

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*

Project Name: GC16_May_2009
Sample Set Name: GC16_123009A
Date Printed: 12/31/2009

Operating Conditions Gas Chromatography

User Name: Amy Jo Arndt
Injection Method: Splitless
Sample Size: 0.5 uL
Column Type: Capillary

Temperature Information

Column Temperature: Program
Injector Temperature: 300 °C
Detector Temperature: 300 °C

Column Temperature Information

Initial Temperature: 50 °C Hold: 2.5 min
Temperature Program: 15 °C/min
Intermediate Temperature: 150 °C
Temperature Program: 4.3 °C/min
Final Temperature: 220 °C Hold: 35.1 min

Column Information

Column ID: Agilent DB-1; 30 meter; 0.25 micron phase thickness
Material: Fused Silica
Length: 30 meter
Internal Diameter: 0.25 mm
Carrier Gas: Helium
Make-up Gas: Nitrogen
Flow Pressure: 25.6 psi
Make-up Flow: 65 mL/min
Split Ratio: None

Detector Information

Detector Name: Detector 1 GC16
Detector Type: ECD
Detector Range: 4

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: CCC Std 122 ng/mL
Comment: HUDSON RIVER RAMP;COC091229-ANEA-01
Date Acquired: 12/30/2009 11:39:12
Lab Sample ID: CCCS1230A
LRF ID: CCC Std 122 ng/mL
Lab File ID: GC16-883-3

Type for Mixed Peak Deconvolution = S

Total PCBs in sample = 122 ng/mL

PCB Homolog Distribution

Homologs	Weight %	Mole %
Mono	11.48	16.93
Di	13.24	16.44
Tri	18.37	19.84
Tetra	21.66	20.70
Penta	7.99	6.77
Hexa	7.45	5.79

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: CCC Std 122 ng/mL
Comment: HUDSON RIVER RAMP;COC091229-ANEA-01
Date Acquired: 12/30/2009 22:09:44
Lab Sample ID: CCCS1230B
LRF ID: CCC Std 122 ng/mL
Lab File ID: GC16-883-10

Number of Calibrated Peaks Found = 102

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*
105(**200,**169)	*169*

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*
56 (78,**83,**112,108)	*108*
61 (**77,110,**148)	**77**
72 (**122,**131,133,142)	**122**
89 (**128,**162)	*162*

PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY
Sample Description: LAB CONTROL SPIKE
Comment: HUDSON RIVER RAMP;COC091229-ANEA-01
Date Acquired: 12/30/2009 16:31:42
Lab Sample ID: AM22636L
LRF ID: LCS-68
Lab File ID: GC16-883-5

Type for Mixed Peak Deconvolution = S

Number of Calibrated Peaks Found = 58

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)
37 (**44,**104)	*104*
48 (**66,**76,98,80,93,**95,102,**88)	*80,88,93*

[1] - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)
PK 40 (68) now elutes in PK 41 (68,96)
PK 86 (166) now elutes in PK 85 (166,178)
PK 97 (157) now elutes in PK 96 (157,202)

[2] - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

[3] - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

[4] - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

DB-1 Peak	Resolved Congener (IUPAC #)

Documentation of the condition of the samples at the time of their receipt and any exception to the laboratory's Sample Acceptance Policy is documented in the Sample Handling section of this submittal.

The samples were analyzed for particle size distribution by ASTM D4464. There were no exceptions to the method quality control criteria during the analyses of these samples.

Sample Delivery and Receipt Conditions

(1.) Northeast Analytical provided sample pickup service on 07/22/2009.

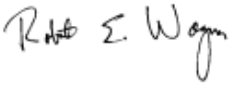
(2.) All samples were received at the laboratory intact and within holding times.

(3.) The following cooler temperatures were recorded at sample receipt: 13.8, 20.2 degrees Celsius; which is above limits. (Samples were collected and received at the laboratory on the same day and ice was present in the cooler).

Mass of Solids for Sediments

Mass of solids was performed by NEA Method SOP NE277_01.

Respectfully submitted,



Robert E. Wagner
Laboratory Director & Founder

Sample Delivery and Receipt Conditions

(1.) Northeast Analytical provided sample pickup service on 08/18/2009.

(2.) All samples were received at the laboratory intact and within holding times.

(3.) The following cooler temperature was recorded at sample receipt: 4.8, 3.4, 5.4 degrees Celsius. Please see Chain of Custody for details.

S:\Lims Data\0908\09080223\Package\CN_09080223_Rev00.doc

(4.) The original Chain of Custody had incorrect sample ID's and incorrect analysis requested. The corrected Chain of Custody was added as additional pages to the original Chain of Custody.

(5.) Grain size analysis was sub-contracted to Test America Burlington and the Results were sent directly from that lab to the client.

PCB Aroclor Analysis

Analysis for PCB Aroclors was performed by GEHR Method 8082. The following technical and administrative items were noted for the analysis:

(1.) The surrogates DCBP and TCMX were diluted out for several samples (NEA ID: AM13834, AM13836, AM13838, AM13840, AM13842, AM13844, AM13846, AM13848, AM13850, AM13852, AM13854, AM13856, AM13858, AM13860, AM13862, AM13864, and AM13866) due to the high concentration of PCB in the samples. Please see associated Form 2 for details.

Total Organic Carbon Analysis

Analysis for Total Organic Carbon was performed by EPA Lloyd Kahn Method for solid samples. The following technical and administrative items were noted for the analysis:

(1.) All quality assurance parameters were met for the analysis.

Mass of Solids for Sediments

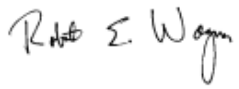
Analysis for Mass of Solids was performed by NEA Method SOP NE277_01.

(1.) All quality assurance parameters were met for the analysis.

Qualifier Summary

(1.) B-Denotes analyte observed in associated method blank at a concentration exceeding the MDL.
(2.) J-Denotes concentration result greater than the MDL but less than the PQL.
(3.) U-Denotes analyte not observed at a concentration greater than the MDL.

Respectfully submitted,



Robert E. Wagner
Laboratory Director & Founder

Sample Calculation

First Order (1/X) Weighted Linear Regression with intercept (Initial Calibration)

$Y = A + (B * x)$

Y = Response µV-sec (sum of 5 quant peaks)
A = Constant (intercept) µV-sec
B = First Order Coefficient (slope)
x = Solution Concentration (ng/mL)

For Aroclor 1221

A = 23.647089
B = 12.434647

$$X = \frac{Y - 23.647089}{12.434647}$$

For Sample NEA ID: AM13834

Aroclor 1221 Y = 7105.4574 µV * sec

$$X = \frac{7105.4574 - 23.647089}{12.434647} = 569.5224 \text{ ng/mL}$$

$$\text{Final Concentration} = \frac{(x)(v_t)(D.F.)(1/1000)}{(M)(\%solid/100)}$$

v_t = Extract Volume (mL)
D.F. = Analytical Dilution Factor
M = Wet weight (g)
% solid = % total solids

Sample: AM13834

$$\frac{(569.522424802248)ng/mL(10)mL(20)(1/1000\mu g/ng)}{(20.062)g(0.198)} = 29 \ \mu g/g(mg/Kg)$$
